The major in Statistics is designed to meet three goals: to introduce some of the central ideas of information and data science, to develop problem-solving ability by teaching students to combine creative thinking with rigorous reasoning, and to develop interdisciplinary skills by applying statistics to an application area of interest.

REQUIREMENTS (10 courses plus colloquium)

The major in Statistics consists of ten courses plus a colloquium requirement. The major includes courses in mathematics, computer science and statistics. Students interested in continuing their study of statistics in graduate school should strongly consider taking Math 350/351 in addition to the other requirements.

Mathematics (2 courses)

MATH 150 or 151 Multivariable Calculus or equivalent high school course

MATH 250 Linear Algebra

Except in unusual circumstances, students planning to major in statistics should complete the calculus sequence (MATH 130, 140, 150/151) before the spring of the sophomore year, at the latest. MATH 150 is a prerequisite for STAT 201 and MATH 250 is a prerequisite for STAT 346.
Computer Science (1 course)
CSCI 134 Intro to Computer Science or CSCI 135 Diving into the Deluge of Data or CSCI 136 Data Structures and Advanced Programming or some other course in the Computer Science Department with prior approval of the Math/Stat department.

Core Courses (4 courses)
- STAT 201 Statistics and Data Analysis, STAT 202 Introduction to Statistical Modeling or STAT 302 Applied Statistical Modeling
- STAT 346 Regression and Forecasting
- STAT 341 Probability
- STAT 360 Inferential Statistics

Continuation (2 courses)
Any two courses among the 300 or 400 level courses in the department with a STAT prefix.

Capstone Course (1 course)
The capstone course is a 400-level STAT course taken in the senior year. Although the specific methodological emphasis of the course may vary from year to year, an in-depth project with both a written report and an oral presentation is typically part of the capstone course.

Pass/Fail policies during the Academic Year 2020-2021
Information about the Department of Mathematics and Statistics Pass/Fail policies during the Academic Year 2020-2021 can be found here.

Colloquium Requirement
Participation in the Department Colloquium, in which each senior major presents a talk on a mathematical or statistical topic of their choice. Each major must also attend at least 20 colloquia (15 during the Academic Year 2020-2021), and up to 5 attendances may be counted in their junior year. Up to 5 colloquia in mathematics or computer science may also be counted. Students engaged in study away may petition the department in advance to count up to 5 suitable colloquia attendances from their study away program.

PLACEMENT
Students with an AP Stat score of 5 or 4 are placed in the advanced introductory course Stat 202.

NOTES
Substitutions, Study Abroad, and Transfer Credit: In some cases, and with prior permission of the Mathematics and Statistics Department, appropriate courses from other institutions may be substituted for the application and continuation requirements, but at least eight courses must be taken from the Department of Mathematics and Statistics at Williams.

These can, with prior permission, include courses taken away. Students with transfer credit should contact the department about special arrangements.

Double Counting: No course may count towards two different majors.

Early Senior Capstone Course: In exceptional circumstances, with the prior permission of the department, a student may be allowed to satisfy the Senior Capstone Course requirement in the junior year, provided that the student has completed at least three 300-level statistics courses before enrolling in the capstone course.

Planning Courses: Core courses are normally offered every year. Other 300 and 400 level statistics courses are offered on an irregular basis. Students should check with the department before planning far into the future.

Course Admission: Courses are normally open to all students meeting the prerequisites, subject to any course caps. Students with questions about the level at which courses are conducted are invited to consult department faculty.

FAQ
Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?
Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?
Course title and description, and complete syllabus including readings/assignments.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?
No.
Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. They have to be approved MATH/STAT courses.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. Colloquium requirement, Senior Seminar requirement.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. The highly cumulative structure of the major.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

None to date.

THE DEGREE WITH HONORS IN STATISTICS

The degree with honors in Statistics is awarded to the student who has demonstrated outstanding intellectual achievement in a program of study which extends beyond the requirements of the major. The principal considerations for recommending a student for the degree with honors will be: Mastery of core material and skills, breadth and, particularly, depth of knowledge beyond the core material, ability to pursue independent study of statistics, originality in methods of investigation, and, where appropriate, creativity in research.

An honors program normally consists of two semesters (STAT 493 and 494) and a winter study (WSP 031) of independent research, culminating in a thesis and a presentation. During the Academic Year 2020-2021 the winter study requirement for the honors program in Statistics is waved. One of STAT 493 or STAT 494 can count as a continuation course, but not both. Neither counts as the 400-level senior capstone course.

An honors program in actuarial studies requires significant achievement on four appropriate examinations of the Society of Actuaries.

Highest honors will be reserved for the rare student who has displayed exceptional ability, achievement or originality. Such a student usually will have written a thesis or pursued actuarial honors. In all cases, the award of honors and highest honors is the decision of the Department.

STAT 101  (F)(S)  Elementary Statistics and Data Analysis  (QFR)

It is impossible to be an informed citizen in today's world without an understanding of data. Whether it is opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines, etc, we need to be able to interpret and gain information from statistics. This course will introduce the common methods used to analyze and present data with an emphasis on interpretation and informed decision making.

Requirements/Evaluation:  weekly homework, quizzes, exams, and a project

Prerequisites:  MATH 102 (or demonstrated proficiency on a diagnostic test)

Enrollment Limit:  50

Enrollment Preferences:  juniors and seniors

Expected Class Size:  35

Grading:  yes pass/fail option,  yes fifth course option

Unit Notes:  Students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202.

Distributions:  (D3)  (QFR)

Quantitative/Formal Reasoning Notes:  It is a quantitative course.

Attributes:  COGS Related Courses  PHLH Statistics Courses

Fall 2023

Spring 2024

LEC Section:  01  TF 1:10 pm - 2:25 pm  Xizhen Cai

STAT 161  (F)(S)  Introductory Statistics for Social Science  (QFR)
This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

Requirements/Evaluation: Weekly homework, quizzes, two midterms and a final exam (midterms include take-home components), and a data analysis project. Students will need to become familiar with the statistical software STATA.

Prerequisites: MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

Enrollment Limit: 40

Enrollment Preferences: Economics majors, sophomores

Expected Class Size: 40

Grading: yes pass/fail option, no fifth course option

Unit Notes: Students with calculus background should consider STAT 201. Students without any calculus background should consider STAT 101. Students with AP Stat 4 or 5 should consider Stat 202. Please refer to the placement chart on the Math&Stat department website for more information.

STAT 201  (F)(S)  Statistics and Data Analysis  (QFR)
Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science, is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, "Data, data, data! I can't make bricks without clay." In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

Requirements/Evaluation: weekly homework and projects, midterm exams, and a final exam.
Prerequisites: MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent
Enrollment Limit: 40
Enrollment Preferences: Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors
Expected Class Size: 40
Grading: yes pass/fail option, yes fifth course option
Unit Notes: Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Students will learn to choose, carry out, interpret, and communicate analyses of data.

STAT 202  (F)(S)  Introduction to Statistical Modeling  (QFR)
Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

Requirements/Evaluation: Homework problems; quizzes; exams; a final project (on a topic that interests you!). Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.
Prerequisites: MATH 140 and STAT 101/161/201/AP Statistics 4/5, or permission of instructor.
Enrollment Limit: 40
Enrollment Preferences: Prospective Statistics majors and more senior students
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Unit Notes: Students with a 4 on the AP Stats exam should contact the department for proper placement. Students with STAT 201 are strongly encouraged to take STAT 346 or other 300-level statistics electives.
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We’ll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

STAT 302  (S) Applied Statistical Modeling  (QFR)
Data may come from various sources and studies with different purpose of analysis. Statistical modeling provides a unified framework to embrace different data types, and focuses on the goals of understanding relationships, assessing differences and making predictions. We will explore different types of statistical models (linear regression, ANOVA, logistic regression etc), and focus on their conditions, the interactive modeling process, as well as the statistical inference tools for drawing conclusions from them. Throughout the course, real datasets will be modeled for interesting questions about the world, and the limitations will be addressed as well.
Requirements/Evaluation: weekly homework assignments, quizzes, exams and a course project.
Prerequisites: One of the following: i) STAT 201; ii) MATH 140 and STAT 101/161/AP Statistics 4/5; iii) Permission of instructor
Enrollment Limit: 19
**Enrollment Preferences**: Students interested in statistics who have background in calculus and intro stat. Students cannot take STAT 302 either simultaneously or after STAT 346.

**Expected Class Size**: 15

**Grading**: yes pass/fail option, no fifth course option

**Distributions**: (D3) (QFR)

**Quantitative/Formal Reasoning Notes**: It is an intermediate statistics class with prerequisites that are QFR courses

*Not offered current academic year*

STAT 310 (F) Data Visualization (QFR)

This course is about preparing, visualizing, reporting and presenting different types of data. We will start with creating common plots (e.g., barcharts, histograms, density plots, boxplots, time series and lattice plots), but also discuss visualizing results of statistical models, such as linear or logistic regression models. We will use the ggplot library in R but then switch to the plotly library for interactive graphs with mouse-over and click events. Using R's shiny and DT libraries, we will learn how to create and publish web-apps and dashboards that explore datasets and support online filtering. We will end the class with creating web apps that contain multiple graphs or maps which react to user inputs (such as selecting which variables to plot) or provide real time monitoring of streaming data. Throughout, we will use version control software (Github) to organize and keep track of our code. This course will be taught in a semi-flipped style. While the instructor will introduce certain topics, students will often be responsible for reading material ahead of time and then work individually or in pairs to reproduce material or implement it on their own data.

**Requirements/Evaluation**: Grading will almost entirely be based on class participation, individual and team-work, project presentations and the student's portfolio.

**Prerequisites**: Stat 201/202/302; Good knowledge of R

**Enrollment Limit**: 15

**Enrollment Preferences**: Preference may be given to stats majors who need the course in order to graduate, but then random selection.

**Expected Class Size**: 15

**Grading**: no pass/fail option, yes fifth course option

**Distributions**: (D3) (QFR)

**Quantitative/Formal Reasoning Notes**: This course teaches how to organize and present data graphically, but also how to critique existing data visualizations.

*Not offered current academic year*

STAT 315 (S) Applied Machine Learning (QFR)

How does Netflix recommend films based on your viewing history? How does Facebook group its users and send out targeted ads? How did Google select from thousands of search terms to predict flu? Machine learning (ML) is a rapidly growing field that is concerned with algorithms and models to find patterns in data and solve these practical problems at the intersection between statistics, data science and computer science. This course provides a broad introduction to ideas and methods in machine learning, with emphasis on statistical intuitions and practical data analysis. Topics including regularized regression, SVM, supervised/unsupervised learning, text analysis, neural networks will be covered. Students will use R extensively throughout the course while getting introduced to some ML tools in Python.

**Class Format**: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Requirements/Evaluation**: weekly homework, one class project, and two or three exams

**Prerequisites**: MATH 140, and STAT 201/202, or equivalent; or permission of instructor. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Enrollment Limit**: 15

**Enrollment Preferences**: Seniors.

**Expected Class Size**: 15

**Grading**: yes pass/fail option, yes fifth course option

**Distributions**: (D3) (QFR)

**Quantitative/Formal Reasoning Notes**: This is a statistics class with a focus on mathematical, computational, and data analysis skills as well as appropriate practical application of analysis methods
STAT 319 (S) Statistical Computing (QFR)
This course introduces a variety of computational and data-centric topics of applied statistics, which are broadly useful for acquiring, manipulating, visualizing, and analyzing data. We begin with the R language, which will be used extensively throughout the course. Then we'll introduce a variety of other useful tools, including the UNIX environment, scripting analyses using bash, databases and the SQL language, alternative data formats, techniques for visualizing high-dimensional data, and text manipulation using regular expressions. We'll also cover some modern statistical techniques along the way, which are made possible thanks to advances in computational power. This course is strongly computer oriented, and assignments will be project-based.

Requirements/Evaluation: based primarily on projects, homework, and exams
Prerequisites: STAT 201 or 202 and CSCI 134, 135, or 136
Enrollment Limit: 30
Enrollment Preferences: juniors and seniors, Statistics majors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course uses statistical tools and programming techniques to acquire data, create visualizations, and make future predictions.

STAT 335 (S) Introduction to Biostatistics and Epidemiology (QFR)
Epidemiology is the study of disease and disability in human populations, while biostatistics focuses on the development and application of statistical methods to address questions that arise in medicine, public health, or biology. This course will begin with epidemiological study designs and core concepts in epidemiology, followed by key statistical methods in public health research. Topics will include multiple regression, analysis of categorical data (two sample methods, sets of 2x2 tables, RxC tables, and logistic regression), survival analysis (Cox proportional hazards model), and if time permits, a brief introduction to regression with correlated data.

Requirements/Evaluation: Evaluation will be primarily based on weekly assignments (regular homework or mini-projects), two midterm exams, and a final exam.
Prerequisites: Stat 201 or Stat 202, or permission of instructor (prior experience should include a working understanding of multiple linear regression, the basics of statistical inference, and R).
Enrollment Limit: 20
Enrollment Preferences: Statistics majors and prospective majors who have not yet taken Stat 346; public health concentrators
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Students will learn how to choose, implement, and interpret statistical analyses relevant to public health studies.
Attributes: PHLH Statistics Courses

Spring 2024
LEC Section: 01 MWF 8:30 am - 9:45 am Anna M. Plantinga

STAT 341 (F)(S) Probability (QFR)
Cross-listings: MATH 341
Secondary Cross-listing
The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide
applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

**Requirements/Evaluation:** homework, classwork, and exams

**Prerequisites:** MATH 150 and MATH 250 or permission of the instructor

**Enrollment Limit:** 50

**Enrollment Preferences:** Priority will be given to Mathematics majors and to Statistics Majors.

**Required Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 341(D3) STAT 341(D3)

**Quantitative/Formal Reasoning Notes:** This is a 300-level Math/Stat course.

---

**STAT 342 (S) Introduction to Stochastic Processes (QFR)**

Stochastic processes are mathematical models for random phenomena evolving in time or space. Examples include the number of people in a queue at time t or the accumulated claims paid by an insurance company in an interval of time t. This course introduces the basic concepts and techniques of stochastic processes used to construct models for a variety of problems of practical interest. The theory of Markov chains will guide our discussion as we cover topics such as martingales, random walks, Poisson process, birth and death processes, and Brownian motion.

**Requirements/Evaluation:** weekly homework/labs, classwork, and exams

**Prerequisites:** STAT 341

**Enrollment Limit:** 30

**Enrollment Preferences:** senior Statistics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is a statistics class with a focus on mathematical skills and translating real world phenomena into mathematical descriptions.

**Not offered current academic year**

---

**STAT 344 (F) Statistical Design of Experiments (QFR)**

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially e-commerce, are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We’ll explore the techniques used to plan experiments that are both efficient and statistically sound. We’ll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We’ll look at both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we’ll make extensive use of both R and JMP software to work with real-world data.

**Requirements/Evaluation:** Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!)

**Prerequisites:** STAT 161 or 201 or 202, or equivalent, and Math 140 or equivalent, or permission of instructor

**Enrollment Limit:** 20
Enrollment Preferences: Statistics majors, seniors, juniors, sophomores, first years

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Not offered current academic year

STAT 346 (F)(S) Regression Theory and Applications (QFR)

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is one of the most widely used methods for analyzing and predicting a response data and for understanding the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

Requirements/Evaluation: Weekly homework, theory and data analysis exams, final course project.

Prerequisites: MATH/STAT 341, MATH 250, and at least one of STAT 201 or 202. Or permission of the instructor.

Enrollment Limit: 30

Enrollment Preferences: Statistics Majors

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

Fall 2023
LEC Section: 01 MWF 8:30 am - 9:45 am Anna M. Plantinga

Spring 2024
LEC Section: 01 TR 9:55 am - 11:10 am Xizhen Cai

STAT 355 (F) Multivariate Statistical Analysis (QFR)

To better understand complex processes, we study how variables are related to one another, and how they work in combination. In addition, we want to make inferences about more than one variable at a time. Elementary statistical methods might not apply. In this course, we study the tools and the intuition that is necessary to analyze and describe such datasets with more than multiple variables. Topics covered will include data visualization techniques for high dimensional data sets, parametric and non-parametric techniques to estimate joint distributions, techniques for combining variables and making inferences, and several classification and clustering algorithms.

Requirements/Evaluation: Homework, projects, quizzes, and exams.

Prerequisites: MATH 250, and STAT 346 or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Juniors/seniors

Expected Class Size: 10

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: It is an advanced statistics class with prerequisites that are QFR courses

Fall 2023
LEC Section: 01 TR 9:55 am - 11:10 am Xizhen Cai
Time series -- data collected over time -- crop up in applications from economics to engineering to transit. But because the observations are generally not independent, we need special methods to investigate them. This course will include exploratory methods and modeling for time series, including descriptive methods and checking for significance, and a foray into the frequency domain. We will emphasize applications to a variety of real data, explored using R.

Requirements/Evaluation: Evaluation is primarily based on quizzes and projects (on topics that interest you!). You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While most assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to live and online discussions, and working together with classmates on practice problems.

Prerequisites: STAT 346 (may be taken concurrently) or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Statistics majors, seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We’ll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Not offered current academic year

This course focuses on methods for analyzing categorical response data. In contrast to continuous data, categorical data consist of observations classified into two or more categories. Traditional tools of statistical data analysis (such as linear regression) are not designed to handle such data and pose inappropriate assumptions. We will develop methods specifically designed for modeling categorical data, with applications in the social and biological sciences as well as in medical research, engineering and economics. This course has two parts. The first part will discuss statistical inference for parameters of categorical distributions (Bernoulli, Binomial, Multinomial, Poisson) and for measures of association arising in contingency tables (difference and ratio of proportions and odds ratios). Inferential methods covered include Wald, score and likelihood ratio tests and confidence intervals, as well as the bootstrap. The longer second part will focus on statistical modeling of categorical response data via generalized linear models, with a heavy focus on logistic regression models with both quantitative and categorical predictors and their interactions. Model fitting and inference will be based on maximum likelihood and carried out via R.

Requirements/Evaluation: Weekly homework assignments consisting of exercises from the textbook as well as data analysis problems, carried out using R. Occasional short in-class quizzes at the beginning of class. One Midterm (with both in-class and take-home component). Final Project with presentation. Final exam. Homework accounts for roughly 15% of the grade, quizzes for another 15%, midterm (in-class and take-home combined) and final for about 30% each, and project for the remaining 10%.

Prerequisites: STAT 346: Regression and Forecasting

Enrollment Limit: 15

Enrollment Preferences: stats majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Students learn how to analyze data and communicate results.

Not offered current academic year

How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited
and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.

**Requirements/Evaluation:** Homework, Quizzes, Exams

**Prerequisites:** MATH 250, STAT 201 or 202, STAT 341

**Enrollment Limit:** 15

**Enrollment Preferences:** Statistics majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** A rigourous mathematical course laying the foundation for reasoning with data

---

**Fall 2023**

**LEC Section: 01**  MWF 11:00 am - 12:15 pm  Bernhard Klingenberg

**STAT 365 (S) Bayesian Statistics**  (QFR)

The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes’ Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.

**Requirements/Evaluation:** weekly homework and exams

**Prerequisites:** MATH/STAT 341 and STAT 346, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** juniors and seniors, Statistics majors, students who have taken STAT 360

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

---

**Spring 2024**

**LEC Section: 01**  Cancelled

**STAT 372 (S) Longitudinal Data Analysis**  (QFR)

This course explores modern statistical methods for drawing scientific inferences from longitudinal data, i.e., data collected repeatedly on experimental units over time. The independence assumption made for most classical statistical methods does not hold with this data structure because we have multiple measurements on each individual. Topics will include linear and generalized linear models for correlated data, including marginal and random effect models, as well as computational issues and methods for fitting these models. As time permits, we will also investigate joint modeling of longitudinal and time-to-event data. We will consider many applications in the social and biological sciences.

**Requirements/Evaluation:** Weekly homework, midterm exams, a final exam, and a data analysis project

**Prerequisites:** STAT 346 (and an appropriate introductory statistics course, typically STAT 201 or 202)

**Enrollment Limit:** 20

**Enrollment Preferences:** junior and senior Statistics majors

**Expected Class Size:** 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: The course will cover a variety of statistical analysis methods for longitudinal data.
Attributes: PHLH Statistics Courses

Not offered current academic year

STAT 397 (F) Independent Study: Statistics
Directed independent study in Statistics.
Prerequisites: permission of department
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)

Fall 2023
IND Section: 01 TBA Bernhard Klingenberg

STAT 398 (S) Independent Study: Statistics
Directed independent study in Statistics.
Prerequisites: permission of department
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)

Spring 2024
IND Section: 01 TBA Richard D. De Veaux

STAT 440 (S) Categorical Data Analysis (QFR)
This course focuses on methods for analyzing categorical response data. Traditional tools of statistical data analysis for continuous response data are not designed to handle such data and pose inappropriate assumptions. We will develop methods specifically designed to address the discrete nature of the observations and consider many applications in the social and biological sciences as well as in medicine, engineering and economics. The first part of the course will discuss statistical inference for parameters of categorical distributions and arising in contingency tables. The longer second part will focus on statistical modeling via generalized linear models for binary, multinomial, ordinal and count response variables, using maximum likelihood.
Requirements/Evaluation: Class participation and performance on exams, homework, and a project.
Prerequisites: STAT 346 and STAT 360
Enrollment Limit: 15
Enrollment Preferences: seniors and statistics majors
Expected Class Size: 12
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Arguing with data.
Attributes: PHLH Statistics Courses

Spring 2024
LEC Section: 01 Cancelled

STAT 441 (F) Information Theory and Applications
What is information? And how do we communicate information effectively? This course will introduce students to the fundamental ideas of Information Theory including entropy, communication channels, mutual information, and Kolmogorov complexity. These ideas have surprising connections to a fields as diverse as physics (statistical mechanics, thermodynamics), mathematics (ergodic theory and number theory), statistics and machine learning (Fisher information, Occam's razor), and electrical engineering (communication theory).

Requirements/Evaluation: Weekly homeworks, midterm(s), final exam.
Prerequisites: Math/Stat 341; Math 150 or 151; or permission of instructor.

Enrollment Limit: 30
Enrollment Preferences: Seniors; mathematics and statistics majors.
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)
This course is cross-listed and the prefixes carry the following divisional credit:
STAT 441(D3) CSCI 441(D3) MATH 441(D3)
Not offered current academic year

STAT 442 (F) Statistical Learning and Data Mining (QFR)
In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

Class Format: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.
Requirements/Evaluation: class participation, weekly homework, exams and an end-of-term project
Prerequisites: MATH/STAT 341 and STAT 346, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is an advanced statistics class involving theory and application of statistical methods to data.

Fall 2023
LEC Section: 01    TF 1:10 pm - 2:25 pm    Shaoyang Ning

STAT 458 (F) Generalized Linear Models- Theory and Applications (QFR)
This course will explore generalized linear models (GLMs)--the extension of linear models, discussed in Stat346, to response variables that have specific non-normal distributions, such as counts and proportions. We will consider the general structure and theory of GLMs and see their use in a range of applications. As time permits, we will also examine extensions of these models for clustered data such as mixed effects models and generalized estimating equations.

Requirements/Evaluation: Weekly homework consisting of theoretical exercises and data analyses carried out in R. Short frequent quizzes and one midterm (with an in-class and take-home component). Final project and final exam.
Prerequisites: STAT 346, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: Seniors and Statistics majors
Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Not offered current academic year

STAT 465 (S) Bayesian Statistics (QFR)

Prior knowledge being constantly updated by empirical observations -- the essence of Bayesian thinking provides a natural, intuitive, and more importantly, mathematically sounded, probabilistically principled way to characterize the process of learning. With some of its key ideas formulated based on Bayes' Theorem dating back to 18th century, Bayesian inference is one of oldest schools of statistics (more than a century earlier than the Frequentist!). Yet it was not until the recent developments in sampling algorithms and computational powers that Bayesian inference gained its revival. Bayesian, and Bayesian-based methods, with their flexibilities in modeling (generative) process of data, interpretability with posterior probability statements, and coherent principles to incorporate empirical evidence a priori, have played key roles in modern data analysis, especially for those "big data" with enhanced complexity and connectivity. This course is designed to provide students a comprehensive understanding to what is Bayesian and the how's and why's. Students will be introduced to classic Bayesian models, basic computational algorithms/methods for Bayesian inference, as well as their applications in various fields, and comparisons with classic Frequentist methods. As Bayesian inference finds its roots and merits particularly in application, this course puts great emphasis on enhancing students' skills in statistical computation (mostly with R) and data analysis.

Requirements/Evaluation: Homework, exams, and project

Prerequisites: MATH/STAT 341, STAT 346, and STAT 360, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: seniors, Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Winter Study  -------------------------------

STAT 11  (W) Introduction to Statistical Analysis of Network Data
Networks are everywhere in our connected world, from social networks like facebook and twitter, to information networks like citation and coauthors, from biological network like neural and ecological networks, to technological networks like internet connections or power grids. In recent years, there has been an explosion of network data. How do we learn and represent information from these data? In this course, you will see examples from different types of networks. We will learn how to organize, visualize and describe network data using proper tools in R. Additionally since things are connected in networks, we will explore statistical methods to overcome this challenge with dependent data. Tentatively coursework includes 2-3 class
meetings per week for lectures and hands-on computer labs. Students will finish a final project analyzing a network dataset of their interest and share their findings in written or oral form.

Requirements/Evaluation: class participation, lab assignment, final project (short paper or oral presentation)

Prerequisites: one introductory statistic course (STAT 201 or STAT 202) or permission of the instructor

Enrollment Limit: 10

Enrollment Preferences: Students with a statistics background and prior experience working with R

Expected Class Size: NA

Grading: pass/fail only

Winter 2024

LEC Section: 01 Cancelled

STAT 12 (W) Data for the Public Good: Uses and Abuses of Data in Society

This class, accessible to statisticians and non-statisticians alike, will explore some of the many uses (and abuses) of data, statistics, and algorithms in society. We will discuss topics such as how our view of the world both informs and is formed by the data we collect and present; how to understand data in context; how algorithms intended to reduce bias have in several situations---criminal justice, credit and insurance, employment, and more---had the opposite effect of perpetuating human biases; and ways in which we might work with data more ethically and responsibly. We will meet three times a week for two-hour sessions as a group. Students will be asked to complete readings in advance and write short reflections before each class. The class will also involve a final project in which students investigate the use of data or statistics in an area of their choice and present their findings to their classmates (orally, through a short paper, or through designing a website).

Requirements/Evaluation: readings and written reflections; class participation; final project resulting in a presentation, short paper, or student-designed website

Prerequisites: an introductory statistics course (Stat 101/161/201/202) or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: short application form/statement of interest, with priority given to having a group of students with diverse (prospective) majors and levels of experience in statistics

Expected Class Size: 15

Grading: pass/fail only

Winter 2024

SEM Section: 01 Cancelled

STAT 30 (W) Senior Project: Statistics

To be taken by candidates for honors in Statistics other than by thesis route.

Class Format: senior project

Grading: pass/fail only

Winter 2024

HON Section: 01 TBA Cesar E. Silva

STAT 31 (W) Senior Honors Thesis

Statistics senior honors thesis.

Class Format: thesis

Grading: pass/fail only

Winter 2024
STAT 99 (W) Indep Study: Statistics

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

Class Format: independent study
Grading: pass/fail only

Winter 2024
