Winter Study -----

MUS 11 (W) I/O Fest 2022: The Music of Now

I/O Fest is the Williams College Music Department's annual student-centered festival of contemporary music and creative music making, comprising concerts, workshops, outreach, and study. Over the first two weeks of Winter Study student performers, composers, and sound artists engage in an intense period of rehearsal and study, culminating in four days of concerts and other events at the '62 Center and the Clark Art Institute. Throughout, students, guests, and audiences explore a world of new sounds and adventurous music, and discover new ways of making music and new modes of listening. For I/O Fest 2022, students enrolled in the Winter Study course will be immersed in all aspects of the festival including performing and/or composing, artistic planning, outreach, and production. As part of the artistic/administrative team students will learn practical skills that are applicable across a range of performing arts areas, and be directly involved in the creative and artistic decision making of the festival. Students involved in the outreach component will develop a curriculum based on musical themes from the festival and lead workshops with students in local elementary schools, culminating in a family concert at the Clark. Throughout, students will engage directly with visiting composers and performers. The first phase of the class will culminate with the presentation of the festival from January 13-16, 2022, after which students will participate in readings and discussion groups related to the social, musical, and cultural ideas featured in the festival and explore issues in contemporary performance practice. Other activities will include informal group sessions on musical topics such as free improvisation, graphic scores, and sound art and a trip to EMPAC in Troy, NY for a facility tour and a performance.

Requirements/Evaluation: final project in consultation with instructor; options include composing a work for the festival, performing a major work, or creating & leading a performance

Prerequisites: students must have relevant experience in musical performance, composition, or production Applicants should inquire with the instructor with any questions

Enrollment Limit: 30

Enrollment Preferences: students will be selected by the instructor if the course is overenrolled

Grading: pass/fail only

Materials/Lab Fee: none

Winter 2022

LEC Section: 01 MWR 10:00 am - 12:50 pm Matthew A. Gold

MUS 13 (W) Play Javanese Gamelan!

Javanese Gamelan is a vibrant, living tradition of gong-chime music from Central Java, Indonesia. Gamelan music features unique tuning systems,

intricate melodies, lively rhythms, and a strong sense of communal music-making. Students will have the opportunity to learn several instruments over the winter term. The group will play on a beautiful gamelan set crafted by Tentrem Sarwanto, a renowned Javanese gong-smith. The course culminates in a final performance and a brief essay on Javanese music.

Requirements/Evaluation: concert performance and short essay

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: preference will be given to graduating seniors and upperclass students

Grading: pass/fail only

Unit Notes: Phil Acimovic studied Javanese Gamelan in Surakarta, Indonesia for two years with master musicians Bp. Wakidi Dwidjomartono and Bp. Darsono Hadiraharjo. He has directed gamelans at Tufts University, Smith College, UC Davis, UC Santa Cruz, and the Mynah Music School.

Materials/Lab Fee: none

LEC Section: 01 MWF 10:00 am - 11:50 am Phil Acimovic

MUS 15 (W) Contemporary American Songwriting

Cross-listings: MUS 15 AMST 15

Primary Cross-listing

This course will focus on learning how to write and perform songs in classical contemporary style. Song styles that will be addressed include pop, rock, blues, country, folk and jazz. Topics addressed will include the evolution of song structure, how to create a lyric that communicates, vocal and instrument presentation, recording and performing techniques, publicity for events, and today's music industry. This class will culminate in a public performance of material written during the course. To successfully pass this course, students are required to create, edit, perform and possibly record two original songs in one of the above mentioned genres. These songs must be conceived during the course period (previously written material is not usable.) Students will be guided to create both music and lyrics. They may also be required to participate in a co-write session. One of these songs will be presented during the final performance, preferably by the student. Attendance at classes, feedback sessions, and final presentation is mandatory. Please note: this class meets every day. A short writing assignment will be passed in on the last day of class.

Requirements/Evaluation: final performance and a 2- to 3-page paper

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: at the discretion of the instructor

Grading: pass/fail only

Unit Notes: Singer/Songwriter Bernice Lewis has been teaching her Winter Study Course on performing and songwriting since 1995. She is also a published poet, a producer, and a sought after coach. She holds an M.Ed from the University of Massachusetts in Amherst.

Materials/Lab Fee: \$35 and cost of books

This course is cross-listed and the prefixes carry the following divisional credit:

MUS 15 AMST 15

Winter 2022

LEC Section: 01 M-F 10:00 am - 11:50 am Bernice Lewis

MUS 17 (W) The Lavender Blues: Queer Music Before World War II

Cross-listings: MUS 17 WGSS 17 THEA 17

Secondary Cross-listing

Some of the most famous American musical artists of the early twentieth century were not only "in the life"--meaning gay, bisexual, or transgender--but they sang about this life too. The most courageous of these artists? Women--queer white women and queer women of color. This course will introduce students to a little-known yet revolutionary moment in music history when pioneering artists sang boldly about sexual and gender fluidity and when

women's voices literally took center stage. Each week our sessions will be anchored with a particular star whose life and music will lead us thematically to so much more. We'll start in vaudeville with the male impersonators, move on to the early blues and come home with the Jazz Age. Among other things we'll listen to recordings, watch videos, discuss the power of lyrics and language, learn the antecedents of modern-day drag, find out the stories behind the songs, discover how these songs influenced (and reflected) audiences and explore how this music evolved over time. We will sing a bit too! (But no vocal experience required.) Throughout we'll uncover what queer music history--and queer female artists--have to tell us about masculinity, femininity, gender fluidity, cross-dressing, homosexuality, love, race, religion and... fun. Students will be expected to keep a journal of ideas and reflection and do outside reading and listening. For a final project they'll write a 10-page paper, give a 10-minute in-class performance, or complete a comparable creative project inspired by the music/artists learned.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: statement of interest

Grading: pass/fail only

Unit Notes: Sarah S. Kilborne is an acclaimed author, performance artist and LGBTQ activist. Her multidisciplinary work has been featured in The Washington Post, The Los Angeles Times, Slate, BuzzFeed, and other national media. Her one-woman show *The Lavender Blues: A Showcase of Queer Music Before World War II* has been honored by the Association of Performing Arts Professionals as one of the most exciting new works of recent years. Her website is: www.SarahKilborne.com.

Winter 2022

LEC Section: 01 Cancelled

MUS 20 (W) Getting to the Big Ideas

Cross-listings: MUS 20 ENGL 18 AFR 20 THEA 20 SPEC 20

Secondary Cross-listing

What is the central idea behind any creative enterprise and how does one discover it? What is the artistic inspiration that fuels the creative journey? In this course, we will attend to these questions through an unearthing of the collaborative process of creative discernment. Led by the Emmy-Award Producer and Williams Alumnus Frank Doelger '75 (*Rome*, *John Adams* and *Game of Thrones*), and in conversation with award-winning documentary filmmaker and Professor of Africana Studies Rhon Manigault-Bryant, students will consider multiple narrative forms as they take a deep dive into the big ideas that generate stories. The course is informed by the work of African American science fiction writer Octavia E. Butler (1947-2006). With her collection *Blood Child and Other Stories* as a springboard, and a dynamic scaffolding process, we will explore the manifold creative decisions that inform the transformation of stories from one medium to the other. Each week, student groups will tackle the logistics that drive the creative process, including character formation, animation, music, and storyline. They will develop stories as writers and designers (week one); directors and composers (week two) and producers (week three), and at the end of the course present a culminating project of their collaborative storytelling journey. That final project--the creation of a lookbook--visually tells the stories creatives in a format that is used throughout the television and film industries. Informed by the tutorial style 15 students will be placed into groups of 3, and together will design the lookbook. The entire class will meet twice per week from 11am to 1pm, and each trio will have their own individual meeting times with the instructor(s) for 1.5 hours between 11am and 3pm. Groups will also meet a minimum of 2 hours outside of organized class time. Experts throughout the film and television industries will be "zoomed" in at no additional cost to students.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: students will be selected to the ensure broadest sense of diversity and inclusion (race, gender, identity, etc) as well as diversity of major and field

Grading: pass/fail only

MUS 25 (W) Traditional Hawaiian Ukulele and Culture

The purpose of this travel course will be to study ukulele as well as traditional Hawaiian culture, music, dance, and language. Though the ukulele originated from Portugal, it came into its own in the Hawaiian Islands. It's there that instrument construction became an art form, and the local population embraced it musically. In recent years, the ukulele has been having a renaissance. There was a time when it was impossible to purchase one in a music store. Now, folks everywhere are purchasing this incredibly accessible instrument for themselves and for their children. It is uniquely suited to smaller bodies and a much easier introduction to music making than piano or guitar. That being said, most users are not learning traditional technique. In Hawaii, there are schools completely devoted to teaching this technique. We will go beyond the simple chord structures and dig into mastery and plan to learn several Hawaiian songs. We'll also take time to study local culture and visit some of the oldest family owned ukulele factories in the world.

Requirements/Evaluation: create a performance that includes at least one traditional as well as one original song on the ukulele; help promote and stage the community performance event

Prerequisites: some experience with a musical instrument, as well as the willingness to sing

Enrollment Limit: 8

Enrollment Preferences: prospective students will come to an information session, after which, individual interviews will be set up

Grading: pass/fail only

Unit Notes: Bernice Lewis has been teaching songwriting and performing as Artist Associate in Songwriting for over 3 decades. She is a national touring artist and has released seven recordings of original music. In 2008, she was awarded an Artist in Residence position by the National Park Service. Twenty-five years ago, she was invited to join The Ladies Auxiliary Ukulele Orchestra. She continues to teach and perform with her group. She has curated and produced nine ukulele festivals in Berkshire County.

Materials/Lab Fee: \$3,700

NEUROSCIENCE (Div III)

Chair: Professor Tim Lebestky

Advisory Committee

- Matt E. Carter, Associate Professor of Biology; affiliated with: Neuroscience Program; on leave Fall 2021
- Victor A. Cazares, Assistant Professor of Psychology; affiliated with: Neuroscience Program
- Amie A. Hane, Professor of Psychology, Chair of Public Health Program; affiliated with: Neuroscience Program, Public Health Program
- Tim J. Lebestky, Associate Professor of Biology, Chair of Neuroscience Program; affiliated with: Neuroscience Program
- Martha Marvin, Lecturer in Neuroscience
- Shivon A. Robinson, Assistant Professor of Psychology; affiliated with: Neuroscience Program
- Noah J. Sandstrom, Chair and Professor of Psychology; affiliated with: Neuroscience Program
- Heather Williams, William Dwight Whitney Professor of Biology; affiliated with: Neuroscience Program; on leave Spring 2022

Neuroscience is a rapidly growing interdisciplinary field concerned with understanding the relationship between brain, mind, and behavior. The interdisciplinary nature of the field is apparent when surveying those who call themselves neuroscientists. Among these are anatomists, physiologists, chemists, psychologists, philosophers, molecular biologists, computer scientists, linguists, and ethologists. The areas that neuroscience addresses are equally diverse and range from physiological and molecular studies of single neurons, to investigations of how systems of neurons produce phenomena such as vision and movement, to the study of the neural basis of complex cognitive phenomena such as memory, language, and consciousness. Applications of neuroscience research are rapidly growing and include the development of drugs to treat neurodegenerative disorders such as Alzheimer's disease and Parkinson's disease, the use of noninvasive techniques for imaging the human brain such as fMRI and near infrared optical imaging, and the development of methods for repair of the damaged human brain such as the use of brain explants and implants. Combining this wide range of approaches and research methods to study a single remarkably complex organ—the brain—and the behavioral outcomes of its activity requires a unique interdisciplinary approach. The Neuroscience Program is designed to provide students with the opportunity to explore this approach.

THE PROGRAM

The program in neuroscience consists of seven courses: The Cell (Biology 101); Introductory Psychology (Psychology 101); Neuroscience (Neuroscience 201); Topics in Neuroscience (Neuroscience 401); and three electives. Either Biology 101 or Psychology 101 must be taken prior to enrolling in the core course, Neuroscience (Neuroscience 201), which is the foundational neuroscience course and provides the background for upper-level electives in the concentration. Ideally, Neuroscience is taken the fall of the sophomore year. Electives are designed to provide in-depth coverage of specific areas within the field and many electives include laboratory experiences. At least one elective course is required from those designated as Group A (Neuroscience courses cross-listed with Biology). At least one elective course is required from those designated as Group B (Neuroscience courses cross-listed with Psychology). A third required elective may come from Group A or Group B offerings or it may come from Group C which consists of courses that are not cross-listed with neuroscience but include significant neuroscience content. Students may also petition the advisory committee to consider courses that are not listed among these groups including neuroscience-related courses that may be taken while studying abroad. Topics in Neuroscience (Neuroscience 401) is designed to provide an integrative culminating experience and is taken by all senior concentrators during the senior year.

THE DEGREE WITH HONORS IN NEUROSCIENCE

The degree with honors in Neuroscience provides students with the opportunity to undertake an original research project under the supervision of one or more of the Neuroscience faculty. In addition to completing the requirements of the Neuroscience Program, candidates for an honors degree must enroll in Neuroscience 493-W31-494 and write a thesis based on an original research project. Presentation of a thesis, however, should not be interpreted as a guarantee of a degree with honors. Students interested in pursuing a degree with honors should contact the Neuroscience Advisory Committee by winter study of their junior year.

STUDY ABROAD

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions). Securing syllabi is often difficult, so a discussion with the program Chair is certainly necessary. Under no circumstances should a student assume that a course taken at another institution will count toward the concentration.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

The program Chair and advisory committee will consider the course title, course description, and complete syllabus, including readings/assignments. Exams or other written work will also be considered. Written work may be requested if the course description suggests that it is only tangentially related to the field of neuroscience. Written work would, therefore, need to demonstrate that there was sufficient emphasis on neuroscience material.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

Yes. Generally there is a maximum of 2 credits that can be completed through a study abroad program.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. NSCI 201 and NSCI 401 can not generally be completed abroad. NSCI should be taken during the sophomore year if possible and includes a laboratory component that is rarely comparable in study abroad courses.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

NSCI 201 is only taught during the fall semester. As such, students planning to study away should plan to take it during the sophomore year.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

Some students (rarely) have failed to discuss the course in advance of their study abroad experiences. They may also have assumed that approval of a course by another department (e.g., Biology or Psychology) would necessarily mean that they would receive Neuroscience credit for the course. This is not necessarily the case.

NSCI 201 (F) Neuroscience

Cross-listings: BIOL 212 PSYC 212 NSCI 201

Primary Cross-listing

This course is designed to give an overview of the field of neuroscience progressing from a molecular level onwards to individual neurons, neural circuits, and ultimately regulated output behaviors of the nervous system. Topics include a survey of the structure and function of the nervous system, basic neurophysiology and neurochemistry, development, learning and memory, sensory and motor systems, and clinical disorders. Throughout the course, many examples from current research in neuroscience are used to illustrate the concepts being considered. The lab portion of the course will emphasize a) practical hands-on exercises that amplify the material presented in class; b) interpreting and analyzing data; c) presenting the results in written form and placing them in the context of published work; and d) reading and critiquing scientific papers.

Requirements/Evaluation: Evaluation will be based on participation in discussion groups, exercises, problem sets and quizzes performed in small groups, lab reports, two midterm exams, and a final exam.

Prerequisites: PSYC 101 or BIOL 101; open to first-year students only with permission of instructor

Enrollment Limit: 72

Enrollment Preferences: sophomores and Biology and Psychology majors

Expected Class Size: 72

Grading: yes pass/fail option, no fifth course option

Cross-listings: BIOL 311 NSCI 311

Secondary Cross-listing

This course will examine the functional organization of the mammalian brain, emphasizing both neuroanatomy and neurophysiology. How do specific populations of neurons and their connections encode sensory information, form perceptions of the external and internal environment, make cognitive decisions, and execute movements? How does the brain produce feelings of reward/motivation and aversion/pain? How does the nervous system regulate homeostatic functions such as sleep, food intake, and thirst? We will explore these questions using a holistic, integrative approach, considering molecular/cellular mechanisms, physiological characterizations of neurons, and connectivity among brain systems. Journal article discussions will complement course topics, providing experience in reading, understanding, and critiquing primary research papers. Writing an original literature review article will provide experience in expository writing and anonymous peer review. Laboratory sessions will provide experience in examining macroscopic and microscopic neural structures, as well as performing experiments to elucidate the structure and function of neural systems using classical and cutting-edge techniques.

Class Format: In Fall 2020, this course will be offered in a hybrid format, with in-person experiences for students on campus, as well as the ability to complete discussions/labs remotely. Exact details to be announced prior to the first day of the course.

Requirements/Evaluation: Class participation, completion of labs, literature review assignment, hour exams, a final exam

Prerequisites: BIOL 212 (same as PSYC 212 or NSCI 201) or BIOL 205

Enrollment Limit: 12

Enrollment Preferences: Biology majors and Neuroscience concentrators

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

NSCI 312 (F) Sensory Biology

Cross-listings: BIOL 312 NSCI 312

Secondary Cross-listing

How do animals sense properties of the physical world? How do they convert physical or chemical energy to a signal within a cell that carries information? How is that information represented? What are the limits on what can be sensed? We will look for answers to these questions by

investigating the molecular and cellular mechanisms of sensory transduction and how these mechanisms constrain the types of information that the nervous system encodes and processes. We will also ask how natural selection shapes the type of sensory information that animals extract from the world, and what adaptations allow some species to have "special" senses. Some of the examples we will consider are: bat echolocation (hair cells in the ear), detecting visual motion (amacrine cells in the mammalian retina), the constant reshaping of the olfactory system (chemical mapping of odors), what makes a touch stimulus noxious, and enhanced color vision (in birds, bees, and shrimp). Laboratory exercises will focus on the nematode *C. elegans*, an important model system, to explore and extend how we understand touch, temperature sensation, chemosensation, and light sensation.

Requirements/Evaluation: Four take-home exams, an independent research project (proposal, followed by results/discussion), presentation about a non-standard sensory system, short quizzes, and lab + class participation.

Prerequisites: BIOL 101 and either BIOL 212/NSCI 201 or BIOL 205

Enrollment Limit: 24

Enrollment Preferences: Preference to senior Biology majors who need a 300-level course; then to senior Neuroscience concentrators who need a Group A elective; then to Biology majors. Not open to students who have taken Biology 213.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Unit Notes: Does not satisfy the distribution requirement for the Biology major.

Distributions: (D3)

NSCI 313 (F) Opioids and the Opioid Crisis: The Neuroscience Behind an Epidemic

Cross-listings: NSCI 313 PSYC 313

Secondary Cross-listing

Opioid misuse, including addiction, has emerged as a major health epidemic in the United States. This course will explore the science of opioids as well as the historical and societal context surrounding their use and abuse. We will examine the neurobiological mechanisms through which opioids interact with pain pathways and reward circuits within the brain and we will explore how changes in these systems contribute to opioid tolerance, dependence, and addiction. We will consider how genetic, environmental and behavioral factors can powerfully influence these processes. Finally, we will consider alternative approaches to pain management as well as interventions for the treatment of opioid abuse. Students will be expected to design and conduct an empirical project related to the course material. Critical evaluation of peer-reviewed primary literature from animal and human studies will serve as a foundation for class discussions. Evaluation will be based on class presentations, participation in discussions and empirical projects, written assignments, and a poster presentation of the empirical project.

Requirements/Evaluation: class presentations, participation in discussions and empirical projects, five short position papers (approximately 2 pages double-spaced), an APA style empirical paper (approximately 20 pages double-spaced) and poster presentation of the empirical project.

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201)

NSCI 315 (F) Hormones and Behavior

Cross-listings: PSYC 315 NSCI 315

Secondary Cross-listing

In all animals, hormones are essential for the coordination of basic functions such as development and reproduction. This course studies the dynamic relationship between hormones and behavior. We will review the mechanisms by which hormones act in the nervous system. We will also investigate the complex interactions between hormones and behavior. Specific topics to be examined include: sexual differentiation; reproductive and parental behaviors; stress; aggression; and learning and memory. Students will critically review data from both human and animal studies. All students will design and conduct an empirical research project as part of a small research team.

Class Format: empirical lab course

Requirements/Evaluation: presentations and participation in discussions, approximately seven 1-2 page response papers, midterm, written (15-20 page) and oral presentation of the research project

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201)

Cross-listings: PSYC 319 NSCI 319 STS 319

Secondary Cross-listing

Neuroscience studies the brain and mind, and thereby some of the most profound aspects of human existence. In the last decade, advances in our understanding of brain function and in our ability to manipulate brain function have raised significant ethical challenges. This tutorial will explore a variety of important neuroethical questions. Potential topics will include pharmacological manipulation of "abnormal" personality; the use of "cosmetic pharmacology" to enhance cognition; the use of brain imaging to detect deception or to understand the ability, personality or vulnerability of an individual; the relationship between brain activity and consciousness; manipulation of memories; the neuroscience of morality and decision making. In addition to exploring these and other ethical issues, we will explore the basic science underlying them.

Requirements/Evaluation: six 5-page position papers and five 2-page response papers as well as participation in discussions

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201); or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 319 (D3) NSCI 319 (D3) STS 319 (D2)

Writing Skills Notes: In alternating weeks, each student in a tutorial pair will write a 5-page essay based on the assigned readings. Essays will be discussed during tutorial meetings and written feedback from the professor will be provided for each essay. At the end of the semester, students will choose one of their prior essays to revise as their final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

TUT Section: T1 TBA Noah J. Sandstrom

NSCI 322 (S) From Order to Disorder(s): The Role of Genes & the Environment in Psychopathology

Cross-listings: NSCI 322 PSYC 312

Secondary Cross-listing

This course examines how experimental methods in neuroscience can be used to understand the role of nature (genes) and nurture (the environment) in shaping the brain and behavior. In particular, we will explore how neuroscience informs our understanding of psychiatric disorders such as anxiety, depression, and schizophrenia. We will investigate the biological underpinning of these disorders as well as their treatments. Readings will include human studies as well as work based on animal models. Topics will include: the ways in which environmental and genetic factors shape risk and resiliency in the context of psychiatric disease, the neural circuits and peripheral systems that contribute to psychopathology, and the mechanisms through which interventions may act. In the laboratory component of the course, students will gain hands-on experience in using animal models to study complex behavior and their associated neural mechanisms.

Requirements/Evaluation: class presentations, participation in discussions, project proposal (5 pages), empirical project paper (5-7 pages), poster and poster presentation, participation in all phases of the empirical project research experience (experiment design, data collection, data graphing, data analysis) including oral and written presentation of key findings.

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201)

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

NSCI 342 (S) Neural and Hormonal Basis of Hunger

Cross-listings: BIOL 412 NSCI 342

Secondary Cross-listing

Hunger and satiety are highly regulated behavioral states that maintain energy homeostasis in animals. This course will focus on readings from the primary literature to track numerous recent advances in how the brain and endocrine systems regulate appetite. Topics include how organ systems communicate with the brain to regulate appetite, how different populations of neurons in the brain interact to regulate appetite, how brain systems that regulate appetite affect other behaviors, and how the neural and hormonal basis of hunger compare with brain systems that regulate other homeostatic systems such as thirst. By tracing the advances in appetite regulation within the past decade, we will also trace the advent of cutting-edge molecular, genetic, and optical-based tools that are transforming multiple fields within physiology and neuroscience. Students in this class will have the opportunity to improve skills in written and oral scientific presentation.

Requirements/Evaluation: written assignments, oral presentations, and participation

Prerequisites: BIOL 205 or BIOL/PSYC 212, or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: seniors who have not taken a 400-level course

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

Distributions: (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

NSCI 401 (F) Topics in Neuroscience

Neuroscientists explore issues inherent in the study of brain and behavior. The overall objective of this seminar is to create a culminating senior experience in which previous course work in specific areas in the Neuroscience Program can be brought to bear in a synthetic, interdisciplinary approach to understanding complex problems. The specific goals for students in this seminar are to evaluate original research and critically examine the experimental evidence for theoretical issues in the discipline. Topics and instructional formats will vary somewhat from year to year, but in all cases the course will emphasize an integrative approach in which students will be asked to consider topics from a range of perspectives including molecular, cellular, systems, behavioral and clinical neuroscience. Previous topics have included autism, depression, stress, neurogenesis, novel neuromodulators, language, retrograde messengers, synaptic plasticity, and learning and memory.

Requirements/Evaluation: participation in class discussion, presentation of research articles, three short research "preview" articles (500-1,000 words), one research review paper (2,000-3,000 words)

Prerequisites: open only to seniors in the Neuroscience program

Enrollment Limit: 20

Enrollment Preferences: Senior Neuroscience concentrators

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Unit Notes: required of all senior students in the Neuroscience program

NSCI 455 (S) Neural Regeneration

Cross-listings: NSCI 455 BIOL 455

Secondary Cross-listing

Injury to the human nervous system can cause lasting impairment, but non-mammalian animals have prodigious capacity to regenerate neurons,

regrow axons, and repair scars. What accounts for these differences? Regeneration can occur in multiple modes: replacement of injured neurons, repairs such as axonal regrowth to reconnect to a target structure, or repurposing existing neurons for new tasks through neural plasticity. We will explore the molecular foundations that underlie neuronal proliferation, neural plasticity, and inflammatory responses. We will consider the potential for translating these findings to inform treatments for humans who suffer from neural injury or neurodegenerative disease. Class discussions will focus on readings from the primary literature.

Class Format: Discussion, 3 hours per week

Requirements/Evaluation: Evaluation will be based on class participation, brief weekly responses, and four short research proposals.

Prerequisites: BIOL 212/NSCI 201 or permission of instructor.

Enrollment Limit: 10

Enrollment Preferences: Biology seniors who have not yet taken a 400 level course and Neuroscience senior concentrators who need a Group A elective.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Winter Study -----

NSCI 10 (W) The Neuroscience of Learning

An interactive and collaborative exploration of what neuroscience research reveals about how the brain learns and what factors can be influenced to facilitate successful learning. Topics include the neuroscience of attention, emotion, understanding, memory, and executive functions. Students will make connections to building their own learning processes and strategies as well how to apply these to teach others. Students will engage in evaluating primary neuroscience research articles using the medical model to evaluate validity. They will apply their understanding identify valid research related to learning and the brain. Small group discussions about the reading in class will include their interpretations of the research and potential applications to learning strategies and interventions. A final project will be a class presentation, on a topic of personal relevance to each student, where they will use the strategies they've learned about and experienced to promote learning in their classmates.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: no preference

Grading: pass/fail only

Unit Notes: Dr. Judy Willis combined her 15 years as a board-certified practicing neurologist with ten subsequent years as a classroom teacher to become a leading authority in the neuroscience of learning. Dr. Willis has written nine books and more than 100 articles for professional journals applying neuroscience research to successful teaching strategies. Dr. Willis travels nationally and internationally doing presentations on how the brain learns best.

Materials/Lab Fee: none

PHILOSOPHY (Div II)

Chair: Morris Professor of Rhetoric Jana Sawicki

- Melissa J. Barry, Professor of Philosophy
- Joseph L. Cruz, Professor of Philosophy; on leave Spring 2022
- Steven B. Gerrard, Mark Hopkins Professor of Philosophy
- Keith E. McPartland, Associate Professor of Philosophy; on leave Fall 2021
- Bojana Mladenovic, Professor of Philosophy
- Julie Pedroni, Lecturer in Philosophy; affiliated with: Ctr-Environmental Studies
- Jana Sawicki, Chair of Philosophy and Morris Professor of Rhetoric
- Justin B. Shaddock, Assistant Professor of Philosophy

To engage in philosophy is to ask a variety of questions about the world and our place in it—questions that we confront in our everyday lives or that underlie our ordinary practices. What is a good, meaningful, or happy human life (ethics and politics)? What do we owe non-human species and future generations (applied ethics/practical philosophy)? Does god exist? (metaphysics)? What can we know, and what makes a belief or statement true (epistemology)? Are there objective standards for judging works of art? Thus, philosophers also address questions relevant to many disciplines.

The program in philosophy is designed to aid students in thinking about such questions, by acquainting them with influential work in the field, past and present, and by giving them tools to grapple with these issues themselves. The program emphasizes training in clear, critical thinking and in effective writing. Most of our courses are offered as small seminars or tutorials in which students have multiple opportunities to develop skills in reasoning and writing interpretive and critical essays.

MAJOR

The Philosophy major consists of nine semester courses: three required courses and six electives. The required courses are: any 100-level philosophy course, Philosophy 201 (History of Ancient Greek Philosophy) or Philosophy 202 (History of Modern Philosophy), and Philosophy 401 (Senior Seminar). The six electives are structured by a distribution requirement. Students must take at least one course in each of three areas: Contemporary Metaphysics and Epistemology [M&E], Contemporary Value Theory [V], and History [H]. These requirements apply to majors in the Class of 2018 and after.

Courses taught in other departments at Williams or at other institutions will not count toward the distribution requirement (Williams-Exeter tutorials may count, however, with the approval of the Department Chair). Up to two cross-listed courses taught in other departments may count as electives toward the major. No more than one 100-level course may count toward the major (and one 100-level course is required for the major—*no exceptions*).

We recommend the following trajectory through the major:

By the end of the first year, take a 100-level philosophy course (this is typically the first step in the major) and one other philosophy course.

By the end of the second year, complete a 100-level philosophy course, Phil 201 or Phil 202, and at least one other philosophy course. (If you will be away for the whole of your junior year, you should complete at least five courses by the end of the second year, preferably six.)

By the end of the junior year, complete a 100-level philosophy course, Phil 201 or Phil 202, and at least four other philosophy courses.

Other recommendations: take at least one tutorial; distribute your six electives evenly across the three distribution baskets; take a logic course; and take both PHIL 201 and PHIL 202.

The Degree with Honors in Philosophy

The degree with honors in Philosophy is awarded to students who have demonstrated outstanding achievement in a program of study that extends beyond the requirements of the major. This additional required work can take the form either of a senior essay written over one semester plus winter study (maximum 40 pages) or a year-long thesis (maximum 75 pages). Students planning to pursue a degree with honors must first write a brief proposal after having consulted with an advisor, then submit the proposal to the Department in mid-March (before spring break) of the junior year. To be eligible for honors candidates must have GPAs of 3.6 or higher in their courses in philosophy at the end of the junior and senior years. A recommendation for graduation with honors will be made on the basis of the thoroughness, independence, and originality of the student's written work as well as their performance in a defense that will be organized by their advisor in consultation with the Chair.

STUDY AWAY

[The Williams-Exeter Programme at Oxford \(WEPO\)](#): the first full Oxford philosophy tutorial will count as the equivalent of two full-semester philosophy courses at Williams; the second full Oxford philosophy tutorial will count as the equivalent of one full-semester philosophy course at Williams, for a total of three Williams philosophy courses. Courses must be pre-approved by the Chair of the Philosophy Department, who will also determine which, if any, courses will count toward the philosophy major distribution requirements.

Courses taken in other Study Away programs: Students may petition the Philosophy Department for credit for philosophy courses taken at their Study Away institution. They should consult with the department Chair before they commit to a program. Final determinations will be made on the basis of the course syllabus and the quality of the student's written work for the course. Typically, courses taken while studying away will not fulfill distribution requirements for the philosophy major at Williams.

PHIL 100 (W) Philosophy of Sex (WS)

What is sex? Are the current biological explanations of human sexuality sufficient to explain the meaning that sex has in our lives? Is human sexuality subject to ethical evaluations? Should it be regulated by social customs and sanctions, by law, or should sexual choices and practices be left to individuals? In thinking about these broad questions, we will also consider some more specific ones: What is sexual orientation, and does it constitute a person's sexual identity? Are there pathological sexual desires and practices, and if so, how should we distinguish them from normal and healthy sexuality? Is anything wrong with adultery, promiscuity, polyamory, pornography, or with exchanging sex for money? What counts as consensual sex, and are all consensual sexual relationships ethically acceptable? The course will place special emphasis on developing the following skills: close, analytical reading; recognizing, reconstructing and evaluating claims, and reasons that support them; producing original ideas and arguments; participating in vigorous discussions in a respectful and reasonable manner; speaking and listening skills; and writing clear, polished, well-argued papers, generated through several revisions.

Class Format: The course will meet approximately 20 hours per week, Monday through Thursday, between 11am and 4pm; there will be an hour long lunch break. The course will consist of short lectures, substantive class discussions, one-on-one writing workshops, and tutorial-style meetings. There will be daily reading and writing assignments.

Requirements/Evaluation: Class preparedness and participation in discussions; frequent short writing assignments; a longer (4-5 pages) tutorial-style paper, developed through several revisions; a response to the tutorial partner's paper.

Prerequisites: Permission of a Dean.

Enrollment Limit: 18

Enrollment Preferences: Students who need to make up a deficiency. To be determined in consultation with the Dean's office.

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Unit Notes: This course is designed to count for both full semester, Winter Study, and Writing Skills credit. Once a dean approves enrollment, the Registrar's Office will register students in both PHIL 100 and PHIL 42.

Distributions: (D2) (WS)

Writing Skills Notes: Lectures and discussions about writing skills, from sentence-level to the overall structure of the paper and arguments that support its central claim. There will be detailed comments on student's short written assignments, some of which will be revised and resubmitted. The final tutorial-style paper will be revised several times. The course will include writing workshops for one or two students at a time.

Winter 2022

SEM Section: 01 MTWR 11:00 am - 4:00 pm Bojana Mladenovic

PHIL 104 (S) Philosophy and Tragedy

Tragedy and philosophy were two of the finest achievements of classical Athenian civilization, and each attempts to reveal to the reader something fundamental about our shared human condition. The worldview that underlies classical tragedy, however, seems markedly different from the one that we find in classical philosophy. While Plato and Aristotle differ on many points, they share the belief that the cosmos and the human place within it can be understood by rational means. Furthermore, they share the conviction that the most important components of a successful life are within the control of the individual human being. The picture that we find in the works of the tragedians, Aeschylus, Sophocles and Euripides is markedly different. The tragedians emphasize the ways in which the cosmos and our role in it resists any attempt to be understood, and emphasize the ways in which the success or failure of our lives often turns on things completely beyond our control. The view of the tragedians can lead to a thoroughgoing nihilism according to which --the best thing of all [for a human being] is never to have born-but the next best thing is to die soon (Aristotle's *Eudemus* as quoted in Nietzsche's *Birth of Tragedy*; see also Sophocles' *Oedipus at Colonus*)." Despite these rather grim pronouncements, tragic drama has continued to fascinate and educate generations. Furthermore, philosophers have continued to revisit the existential questions vividly raised by Greek tragedy. In this course, we will examine a number of Greek tragedies and philosophical writing on tragedy and the tragic. We will read the *Oresteia* and *Prometheus Bound* by Aeschylus, Sophocles' *Theban Cycle*, and the *Hippolytus*, *Bacchae* and *Philoctetes* by Euripides. As we read through these plays, we will also examine a number of philosophical works about tragedy. We will begin with Aristotle's *Poetics* and will continue with Hume's *Of Tragedy*, Hegel's various writings on tragedy, and Nietzsche's *The Birth of Tragedy*. If possible, we will arrange to see a live performance of a Greek

tragedy.

Requirements/Evaluation: five papers, five responses and a final paper in multiple drafts; each week one student will write a paper responding to the week's readings and the other student will write a response to that paper

Prerequisites: none; this tutorial is an appropriate first course in PHIL

Enrollment Limit: 10

Enrollment Preferences: first-year students

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Not offered current academic year

PHIL 109 (F) Skepticism and Relativism (WS)

Intellectually, we are ready skeptics and relativists. We doubt, we point out that no one can be certain in what she believes, and we are suspicious of declarations of transcendent reason or truth (unless they are our own). Emboldened by our confidence in skeptical arguments, we claim that knowledge is inevitably limited, that it depends on one's perspective, and that everything one believes is relative to context or culture. No domain of inquiry is immune to this destructive skepticism and confident relativism. Science is only "true" for some people, agnosticism is the only alternative to foolish superstition, and moral relativism and, consequently, nihilism are obvious. But is the best conclusion we can come to with respect to our intellectual endeavors that skepticism always carries the day and that nothing at all is true? In this tutorial, we will investigate the nature of skepticism and the varieties of relativism it encourages. Our readings will come primarily from philosophy, but will be supplemented with material from anthropology, physics, psychology, and linguistics. We will look at relativism with respect to reason and truth in general as well as with respect to science, religion, and morality. Along the way, we will need to come to grips with the following surprising fact. With few exceptions, thoroughgoing skepticism and relativism have not been the prevailing views of the greatest minds in the history of philosophy. Were they simply too unsophisticated and confused to understand what is for us the irresistible power of skepticism and relativism? Or might it be that our skepticism and relativism are the result of our own laziness and failure? Of course, this question cannot really be answered, nor is there any value in trying to answer it, and any "answer" will only be "true" for you. Right?

Class Format: This tutorial will convene remotely via Zoom video according to a fixed weekly schedule agreed upon by the instructor and the two tutorial participants at the beginning of the semester.

Requirements/Evaluation: participants will present substantial written work in the tutorial every other week, and will be responsible for commenting on their tutorial partner's work.

Prerequisites: none; this tutorial is an appropriate first course in PHIL.

Enrollment Limit: 8

Enrollment Preferences: first-year students; there is no need to write to the instructor indicating a special interest in the tutorial. If oversubscribed, students will be selected randomly.

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Students will write a tutorial essay every other week and will receive written feedback on composition and structure. Essays later in the semester will reflect the writing lessons of earlier in the semester.

Not offered current academic year

PHIL 114 (F) Freedom and Society (WS)

Freedom is widely held as one of our fundamental values. But how often do we ask: What is freedom? and Why do we value it? In the first unit of this course, we will consider the relationship between freedom and social order. Do our society's laws limit our freedom in order to make us safe? Or do our laws somehow enhance or enable our freedom? We will read Thomas Hobbes, John Locke, and Jean-Jacques Rousseau in seeking answers to these questions. We will then turn to some specific social forms in the second unit, and ask whether they promote or preclude our freedom. We will read Adam Smith and Karl Marx on capitalism, Simone de Beauvoir on gender, and Charles Mills on race.

Requirements/Evaluation: short weekly essays; longer midterm and final papers

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: first-years and sophomores

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Students will complete weekly 2-page essays, and receive regular feedback on their ability to formulate a thesis and adduce an argument in defending their thesis. In addition, students will write two 6-page essays -- each of which will build on their previous short essays -- as their midterm and final projects.

Attributes: JLST Interdepartmental Electives

Fall 2021

SEM Section: 01 TF 2:35 pm - 3:50 pm Justin B. Shaddock

PHIL 115 (S) Personal Identity (WS)

Through lectures, discussions, close readings and assigned writings, we will consider a variety of philosophical questions about the nature of persons, and personal identity through time. Persons are subjects of experiences, have thoughts and feelings, motivation and agency; a person is thought of as continuous over time, and as related to, recognized and respected by other persons. Thus, the concept of person plays a significant role in most branches of philosophy, e.g. metaphysics, epistemology, moral and political philosophy, philosophy of mind. Conceptions of person are equally important in science (especially in psychology), law, and the arts. Questions about persons are of central importance for a myriad of our theories and practices, and for the ways in which we live our lives. The aim of this course is to explore and evaluate a number of rival conceptions of persons and personal identity over time. Some of the questions which we will discuss are: What is a person? How do I know that I am one? What constitutes my knowledge of myself as a person, and does that knowledge differ in any significant respect from my knowledge of physical objects and of other people? Our starting and central question will be: **What makes me the particular person that I am, and how is my identity as this individual person preserved over time?** The course will place special emphasis on developing students' intellectual skills in close, analytical reading; reconstructing and evaluating claims and reasons that support them; producing original ideas and arguments, orally and in writing; responding to the claims and arguments presented in texts and in class; and writing clear, polished, well-argued papers.

Requirements/Evaluation: Class attendance, preparedness and participation; additional small group weekly meetings; 12 short writing assignments. No final paper and no exam.

Prerequisites: none; open to first year students

Enrollment Limit: 12

Enrollment Preferences: freshmen, sophomores, and philosophy majors who need a 100 level course to satisfy requirement for the major

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Students will write weekly short assignments (at most 1000 words long), six of which will be letter-graded (but only five best assignments will count for the final grade). All assignments will receive detailed comments on substance as well as on writing skills and strategies.

Not offered current academic year

PHIL 116 (F) Perception and Reality (WS)

This course is an introduction to philosophy through four major themes: The nature of the universe, the existence of gods, thought itself, and the mind/body problem. Throughout, we will appeal to reason and evidence in forming our best beliefs. Our discussions will range over historical and contemporary works in the Western tradition.

Requirements/Evaluation: active participation; four (5-6 page) essays

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Strong preference given to first-years and sophomores; there is no need to email the professor in advance to indicate a special interest in the course.

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Students will craft 4 six page essays, each with extensive comments on structure and composition with an eye toward developing their skills in philosophical writing.

Fall 2021

SEM Section: 01 MWF 11:00 am - 12:15 pm Joseph L. Cruz

PHIL 119 (S) Justice, Democracy and Freedom: Plato with Footnotes (WS)

This course addresses a central question in ethical and political philosophy: How can we live well with others given our interdependency? What social and political orders make a good life possible? What confers legitimacy on the powers of government and authority? In attempting to answer these questions we also engage related theoretical questions concerning democracy and freedom. We begin with readings from Plato's *Republic*, a seminal text in the history of philosophy that has exerted a powerful influence on nearly every subsequent attempt to answer these questions in the context of the Western philosophical tradition. We also consider other figures in the Western philosophical canon ("footnotes on Plato") and the challenges they present to Plato's conclusions about a just social and political order (egs. Aristotle, Machiavelli, Hobbes, Locke, Rousseau, Kant and Nietzsche, and more contemporary figures). Our principal focus will be on issues that continue to be of paramount importance in the world today, namely, democracy, justice and the meaning of freedom.

Class Format: Class participation will consist of various individual and group exercises designed to give students hands on experiences thinking on their feet, collaborating with others, etc.

Requirements/Evaluation: Seven short responses, 300-500 words each (first two are pass/fail), in which students will be asked to engage a particular part of the assigned text (egs., explaining what a passage means, drawing connections between different parts of the text, identifying an argument, responding to an argument, etc); two 6-page papers based on professors prompts; and class participation.

Prerequisites: None. Open to any student interested in the sources of our current understandings of justice, freedom and the strengths and weaknesses of democratic governance structures.

Enrollment Limit: 19

Enrollment Preferences: In the case of over enrollment preference will be given to majors, first years and sophomores

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Professor will provide detailed comments on short and long writing responses and provide occasional peer review opportunities, handouts and discussions of frequent types of errors, different possible approaches to writing and drafting, and the importance of editing and seeking the assistance of writing tutors. Students will be encouraged, but are not required, to make appointments to discuss ideas and drafts.

Spring 2022

SEM Section: 01 TR 11:20 am - 12:35 pm Jana Sawicki

PHIL 122 (F)(S) Philosophical Approaches to Contemporary Moral Issues (WS)

In this tutorial we will examine a number of prominent and controversial social issues, using our study of them both as an opportunity to better understand the moral dimensions of those issues in and of themselves, and to consider the ways in which selected classical and contemporary moral theories characterize and address those moral dimensions. Topics will depend to some extent on student interest, but are likely to include concerns

that fall under such headings as euthanasia, conscientious eating, abortion, the ethics of protest, and Covid-19. The course will use a case-based approach to examine these issues, and so in most weeks we will (1) read philosophical articles focused on a key concept or set of arguments central to the issue, and (2) consider in detail one morally complex case in which the concept or arguments have special application or relevance. In addition, we will devote several class meetings interspersed throughout the semester to reading foundational sources in ethical theory. Students will meet in trios with the instructor, rather than in pairs.

Class Format: Groups of three students (rather than the more conventional two students) will meet weekly with the professor.

Requirements/Evaluation: tri-weekly tutorial papers, oral commentaries, and tutorial discussion

Prerequisites: none; this course is suitable for first-year students

Enrollment Limit: 15

Enrollment Preferences: first-year students, then sophomores, then Philosophy majors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write four tutorial papers of 5-7 pages in length, one of which they will revise and submit at the end of the term. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

PHIL 123 (F) Objectivity in Ethics (WS)

Is morality simply a matter of opinion? In this course we'll examine several influential attempts to provide a rational foundation for morality, along with Nietzsche's wholesale rejection of these efforts. Readings will include work by Plato, Hobbes, Kant, Mill, Nietzsche, and contemporary authors.

Requirements/Evaluation: participation in discussion; short response papers; four 5-page papers, evenly spaced throughout the semester

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: first-years and sophomores, and students who need to fulfill their 100-level requirement for the philosophy major

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Four 5-page papers, evenly spaced throughout the semester. Students will receive timely comments on their writing skills, with suggestions for improvement.

Fall 2021

SEM Section: 01 TR 11:20 am - 12:35 pm Melissa J. Barry

PHIL 125 (F) Introduction to the Philosophy of Law (WS)

This tutorial, designed especially for first year students, is a philosophy course, not a prelaw course. We will examine basic questions in the philosophy of law: What is the relationship between law and morality? Why should one obey the law (if one should)? When, if ever, is paternalistic interference by the state into the lives of its citizens justified? We will look at civil disobedience and theories of legal interpretation. We will pay special attention to the first amendment and questions concerning free speech and hate speech. We will read classic works (such as John Stuart Mill, On Liberty and H. L. A.

Hart, The Concept of Law), contemporary articles, and United States Supreme Court cases.

Class Format: meeting with the instructor in pairs for an hour each week

Requirements/Evaluation: a 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and revise and re-write

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: first-year students

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: A 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and revise and re-write one of their papers. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Not offered current academic year

PHIL 126 (F) Paradoxes (WS)

There are three grains of sand on my desk. This is unfortunate, but at least there isn't a heap of sand on my desk. That would be really worrisome. On the other hand, there *is* a heap of sand in my backyard. I don't know how exactly how many grains of sand are in this heap, but let's say 100,000. My daughter removes one grain of sand. I don't know why, she just does. It seems like there is still a heap of sand in my backyard. In fact, it seems like you can't change a heap of sand into something that isn't a heap of sand by removing one grain of sand. Right? But now we have a problem. By repeated application of the same reasoning, it seems that even after she removes 99,997 grains of sand--I don't know what she wants with all this sand, but I'm starting to worry about that girl--there is still a heap of sand in my backyard. But three grains isn't enough for a heap. So there is not a heap in my backyard. Now I'm confused. Where did my reasoning go wrong?

What we have here is an example of the *sorites* paradox. It is a paradox, because I started with seemingly true statements and used valid reasoning to arrive at contradictory conclusions. We can learn a lot about logic, language, epistemology and metaphysics by thinking through and attempting to resolve paradoxes. In this class, we'll work together to think through some ancient and contemporary paradoxes. We'll also work on writing lucid prose that displays precisely the logical structure of arguments, engages in focused critique of these arguments, and forcefully presents arguments of our own. Other topics could include: Zeno's paradoxes of motion and plurality, the liar's paradox, the surprise-exam paradox, paradoxes of material constitution, *Newcomb's Problem*, and the *Prisoner's Dilemma*.

Class Format: The format of this class is different this year. The instructor will record 2-3 lectures per week which will be made available online. We will also have small tutorial-style meetings each week for which some students will write papers and others will comment on these papers. These tutorial-style meetings will be in-person or via zoom. Finally, there will be synchronous weekly meetings of the class as a whole for discussion and review.

Requirements/Evaluation: (i) Weekly small group papers (4-5 pages) or comments (1-2 pages) on papers of peers; (ii) Final term-paper (~10 pages) in multiple drafts; (iii) Active and informed participation in class discussions.

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: First and second year students. Prospective philosophy majors.

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Unit Notes: Meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Students will write a number of short papers and responses to papers of their peers. Both the content and the writing will be evaluated. These papers will focus on clear and precise presentation and evaluation of arguments. Each student will also write a final term-paper in multiple drafts. For the final paper, each student will develop a topic in consultation with the instructor and will do independent research. They will submit a first draft and will then revise that draft.

Not offered current academic year

PHIL 127 (S) Meaning and Value (WS)

What gives an individual life meaning? Pleasure? Success in fulfilling desires? Flourishing in ways distinctive to a rational agent or a human being (including, for example, developing rational capacities and self-mastery, succeeding in worthwhile projects, cultivating relationships, living morally, developing spiritually)? Can we be mistaken about how well our lives are going, or about what has value? What are the main sources of uncertainty here? Does the fact that our lives will end threaten their meaning? Can luck spoil an otherwise meaningful life? Can science contribute to our understanding of these issues? We'll examine these and related questions through historical and contemporary readings.

Class Format: This tutorial will meet on a fixed weekly schedule agreed to by the instructor and participants.

Requirements/Evaluation: Four or five tutorial papers (5-6 pages in length), five or six critiques (2-3 pages in length), and one rewrite.

Prerequisites: None. This tutorial is an appropriate first course in PHIL.

Enrollment Limit: 12

Enrollment Preferences: First-years and sophomores, and students who need to fulfill their 100-level requirement for the philosophy major

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Unit Notes: This course meets the 100-level PHIL major requirement.

Distributions: (D2) (WS)

Writing Skills Notes: Students will meet in pairs or trios for this tutorial. Each student will write a lead tutorial paper (5-6 pages in length) or a peer critique (2-3 pages) in alternating weeks. The instructor will provide timely comments on writing skills, with suggestions for improvement.

Spring 2022

TUT Section: T1 TBA Melissa J. Barry

PHIL 128 (S) Utopias and Dystopias (WS)

The touchstone of our course will be Plato's *Republic*: the first and perhaps greatest utopia as well as perhaps the greatest work in political philosophy. We will prepare for the *Republic* by reading two Socratic dialogues: the *Euthyphro* and the *Meno*. After several weeks on the *Republic* we will turn to Shakespeare's last play: *The Tempest*. From there it is a natural transition to Aldous Huxley's *Brave New World*.

Requirements/Evaluation: several short papers totaling at least twenty pages

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: first-years and sophomores

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Five 4 or 5 page papers, evenly spaced throughout the semester. Students will receive timely comments on their writing skills, with suggestions for improvement.

PHIL 201 (S) History of Ancient Greek Philosophy

Cross-listings: CLAS 203 PHIL 201

Primary Cross-listing

Very few people believe that everything is water, that we knew everything before birth, that philosophers ought to rule the state, or that the earth is at the center of the cosmos. Why then should we spend our time studying people who in addition to having these surprising beliefs have been dead for 2500 years? First of all, Greek thinkers, especially Plato and Aristotle, radically shaped the trajectory of western thought in every area of philosophy. No one can have an adequate understanding of western intellectual history without some familiarity with the Greeks, and we might think that an

understanding of our intellectual history can deepen our understanding of our own situation. More importantly, many of the thinkers that we will read in this class are simply excellent philosophers, and it is worthwhile for anyone interested in philosophical problems to read treatments of these problems by excellent philosophers. We will begin the course by looking briefly at some of the Presocratic philosophers active in the Mediterranean world of the seventh through fifth centuries BCE, and some of the sophists active in the fifth century. We will then turn to several of Plato's dialogues, examining Plato's portrayal of Socrates and his development of a new and profoundly powerful philosophical conception. Finally, we will examine some of Aristotle's works on metaphysics, epistemology and ethics, considering some of the ways Aristotle's thought responds to that of predecessors.

Class Format: The format of this class is going to be different this year. We will not have in-person lectures. Instead, approximately three 1-hour recorded lectures will be made available each week for students to watch. There will also be meetings of 3-4 students with the instructor each week for which some students will write papers and others will prepare comments. These will be either in-person or via zoom. Finally, there will be a synchronous zoom session each week for larger group discussion.

Requirements/Evaluation: (i) Students will write papers (4-6 pages) for the small groups meetings and will comment on the papers of their peers (1-2 pages); (ii) There will be two take-home exams including a comprehensive final exam; (iii) Active and informed participation in small group discussions.

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Philosophy and Classics Majors.

Expected Class Size: 15-20

Grading: no pass/fail option, yes fifth course option

Unit Notes: Philosophy majors must take either PHIL 201 or PHIL 202 (and are encouraged to take both)

PHIL 203 (F) Logic and Language (QFR)

Logic is the study of reasoning and argument. More particularly, it concerns itself with the difference between good and bad reasoning, between strong and weak arguments. We all examine the virtues and vices of good arguments in both informal and formal systems. The goals of this course are to improve the critical thinking of the students, to introduce them to sentential and predicate logic, to familiarize them with enough formal logic to enable

them to read some of the great works of philosophy, which use formal logic (such as Wittgenstein's *Tractatus*), and to examine some of the connections between logic and philosophy.

Class Format: discussion

Requirements/Evaluation: a midterm, a final, frequent homework and problem sets

Prerequisites: none

Enrollment Limit: 40/sect

Enrollment Preferences: Philosophy majors, seniors, juniors, sophomores, first-years in that order.

Expected Class Size: 40/sect

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The main part of the course is learning two formal languages of logic: sentential logic predicate logic

PHIL 209 (S) Philosophy of Science

Cross-listings: STS 209 PHIL 209

Primary Cross-listing

It is a generally held belief, in our time and culture, that science is the best source of our knowledge of the world, and of ourselves. The aim of this course is to examine the origins, grounds, and nature of this belief. We will analyze and discuss various accounts of scientific method, structure and justification of scientific theories, scientific choice, change, and the idea that scientific knowledge is progressive in a cumulative way. The course will begin with the "received view" of science, advanced by logical empiricists, which assumes the objectivity and the rationality of science and argues that induction is the main scientific method. We will then discuss philosophies of science which emerged out of various criticisms of this view - especially those of Popper, Lakatos, Kuhn and Feyerabend - and the challenges to the assumptions of scientific objectivity and rationality their works provoked. This discussion will lead us to the relativist and social-constructivist views developed within contemporary science studies. Finally, we will analyze the current debate about cognitive credentials of science and about proper approaches to the study of science, which came to be known as "the science wars."

Class Format: short lecture component in each class

Requirements/Evaluation: class attendance, preparedness and participation; two short assignments; three five pages long papers, the last of which will be the final paper, due a week after the end of classes

Prerequisites: one PHIL course, or two STS courses, or declared major in a natural science, or permission of the instructor

PHIL 211 (F) Ethics of Public Health (WS)

From questions about contact tracing apps to racial and age disparities in health risk and outcomes, the COVID-19 pandemic has foregrounded the importance of ethics as a key concern in public health policies and activities. Moreover, the ethical issues that are implicated in responses to the pandemic reflect the range of those manifested across the field of public health as a whole. In this course, we will survey the ethics of public health through the lens of the COVID-19 pandemic, investigating concepts and arguments that are central to the ethics of public health research and practice. For example, we will examine the ethics of disease surveillance, treatment and vaccine research, resource allocation and rationing, compulsion and voluntariness in public health measures, and social determinants of health outcomes, among other topics. To do this, we will need to become familiar with key ethical theories; think deeply about such concepts as privacy, paternalism and autonomy, exploitation, cost-benefit analysis and justice; and compare the function of these concepts in the context of the COVID-19 pandemic with the way they work in responses to other public health concerns.

Class Format: This class will be conducted remotely, via weekly synchronous tutorial meetings on Zoom or Google Meet.

Requirements/Evaluation: Biweekly 5-7 page papers, oral commentaries, and tutorial discussions.

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: declared and prospective Philosophy majors and Public Health concentrators, students with a specific curricular need for the course, and students with a high level of interest who are unlikely to have an opportunity to take the course in a future term

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Unit Notes: Public Health concentrators may use either PHIL 211T Ethics of Public Health or PHIL 213T Biomedical Ethics to fulfill their 3-elective requirement, but they may not use both courses to do so.

Distributions: (D2) (WS)

Writing Skills Notes: Students will write six biweekly papers of 5-7 pages in length, one of which they will revise and submit at the end of the term. In each of the tutorial papers students will describe and evaluate arguments in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

PHIL 212 (S) Ethics and Reproductive Technologies

Cross-listings: WGSS 212 PHIL 212 STS 212 SCST 212

Primary Cross-listing

In her groundbreaking book, *The Tentative Pregnancy*, Barbara Katz Rothman writes that "[t]he technological revolution in reproduction is forcing us to confront the very meaning of motherhood, to examine the nature and origins of the mother-child bond, and to replace--or to let us think we can replace--chance with choice." Taking this as our starting point, in this course we will examine a number of conceptual and ethical issues in the use and

development of technologies related to human reproduction, drawing out their implications for such core concepts as "motherhood" and "parenthood," family and genetic relatedness, exploitation and commodification, and reproductive rights and society's interests in reproductive activities. Topics will range from consideration of "mundane" technologies such as in vitro fertilization (IVF), prenatal genetic screening and testing, and surrogacy, to the more extraordinary, possibly including pre-implantation genetic diagnosis (PGD), post-menopausal reproduction, and post-mortem gamete procurement. Background readings include sources rooted in traditional modes of bioethical analysis as well as those incorporating feminist approaches.

Class Format: discussion

Requirements/Evaluation: active participation in class discussions, three or four short reflection papers, and two longer papers (5-7 and 7-10 pages)

Prerequisites: none, but introductory-level course in PHIL and/or WGSS recommended

Enrollment Limit: 19

Enrollment Preferences: WGSS and PHIL majors or prospective majors

PHIL 213 (S) Biomedical Ethics (WS)

Much like the construction of medical knowledge itself, it is from specific cases that general principles of biomedical ethics arise and are systematized into a theoretical framework, and it is to cases they must return, if they are to be both useful and comprehensible to those making decisions within the biomedical context. In this tutorial we will exploit this characteristic of biomedical ethics by using a case-based approach to examining core concepts of the field. The first portion of the course will be devoted to developing and understanding four moral principles which have come to be accepted as canonical: respect for autonomy, beneficence, nonmaleficence, and justice. The remainder of the course will consider key concepts at the core of medical ethics and central issues for the field, such as privacy and confidentiality, the distinction between killing and "letting die," and therapy vs. research. To this end, each week we will (1) read philosophical material focused on one principle or concept, and (2) consider in detail one bioethics case in which the principle or concept has special application or relevance. In some weeks, students will be asked to choose from a small set which case they would like to address; in others the case will be assigned.

Class Format: students will meet with the professor in pairs via Zoom for approximately 75 minutes per week, writing and presenting 5- to 7-page essays every other week, and commenting orally on partners' essays in alternate weeks

Requirements/Evaluation: bi-weekly papers, oral commentaries, and tutorial discussions

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: PHIL majors, PHLH concentrators, those who have a curricular need for the course, those who have been dropped from the course in previous semesters due to over enrollment

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write six tutorial papers of 5-7 pages in length, one of which they will revise and submit at the end of the term. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

Attributes: PHIL Contemporary Value Theory Courses PHLH Bioethics + Interpretations of Health

PHIL 216 (S) Philosophy of Animals

Cross-listings: ENVI 216 PHIL 216

Primary Cross-listing

Animals are and always have been part of human life. To name just a few ways: We treat animals as companions, as food, as objects of wonder in the wild, as resources to be harvested, as testing grounds for science, and as religious sacrifice. The abstract philosophical question before us is, *what are animals such that they can be all these things?* In this course we aim to engage that abstract question through two more focused projects. Firstly, we will try to understand the mental lives of non-human animals. Secondly, we will try to make sense of the moral dimensions of our relationship to animals. Throughout we will aim to fuse a rigorous scientific perspective with more humanistic themes and philosophical inquiry. Topics include sentience, animal cognition, language in non-human animals, empathy and evolution, the history of domestication, animal rights, cross-cultural views on animals, arguments against and for vegetarianism and veganism, the morality of zoos, hunting and fishing, and pets and happiness.

Class Format: This course is wholly remote and can only be taken synchronously (i.e., students will be expected to attend seminar on zoom during the scheduled time and no recording will be made).

Requirements/Evaluation: four 3-to-4 page papers and one 8-to-10 page final paper. In addition, students are required to attend remotely at least four talks in the speaker series associated with the course. These will be during the Friday course time slot. (When there is no speaker, there will not be class during that slot, so class itself will be solely on Mondays and Wednesdays.)

Prerequisites: none, though at least one course in philosophy is recommended.

Enrollment Limit: 16

Enrollment Preferences: students with at least one previous philosophy or cognitive science course; there is no need to email the professor in advance to indicate special interest in the course.

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Unit Notes: meets Contemporary Metaphysics & Epistemology requirement only if registration is under PHIL

PHIL 220 (F) Happiness

According to Aristotle the ultimate good is happiness---everything we desire we desire for the sake of happiness. Yet what is it to be happy? Should we value other things (say justice or passionate commitment and curiosity) over happiness? Are happiness and pleasure the same thing? Is happiness an emotional or mental state or is it a social construct? What do the social and psychological sciences have to teach us about happiness? Philosophy? Is the happy life a life of virtue? Does being virtuous guarantee happiness? How important are honor, money, love, work, friendship and our connections to others to our happiness? In this tutorial we will read from Ancient, modern and contemporary philosophical sources as well several relevant studies in the social sciences and positive psychology movement in order to engage questions concerning happiness.

Requirements/Evaluation: five 5-page papers and five 2-page papers

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: students interested in philosophy and/or happiness

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

PHIL 222 (F)(S) Minds, Brains, and Intelligent Behavior: An Introduction to Cognitive Science

Cross-listings: PSYC 222 PHIL 222 COGS 222

Secondary Cross-listing

This course will emphasize interdisciplinary approaches to the study of intelligent systems, both natural and artificial. Cognitive science synthesizes research from cognitive psychology, computer science, linguistics, neuroscience, and contemporary philosophy. Special attention will be given to the philosophical foundations of cognitive science, representation and computation in symbolic and connectionist architectures, concept acquisition, problem solving, perception, language, semantics, reasoning, and artificial intelligence.

Requirements/Evaluation: midterm and final exams, and weekly exercises

Prerequisites: PSYC 101 or any PHIL course or CSCI 134 or permission of instructor; background in more than one of these is recommended.

Enrollment Limit: 20

Enrollment Preferences: sophomore and first-year students, with additional preference given to students who satisfy more of the prerequisites.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Unit Notes: meets Contemporary Metaphysics & Epistemology requirement only if registration is under PHIL

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 224 (S) Marx, Nietzsche and Freud (WS)

Each of the controversial and provocative figures whom we will read in this course have exerted a tremendous influence in our understandings of what it means to be a modern subject. Each questioned the emancipatory effect of reason and freedom as well as idealist accounts of moral progress in human history. Each identified the limits, whether historical or innate, of our human capacity to know ourselves and our world, and to live harmoniously with others. All three have had a profound influence on literature, social theory, and critical theories of the 20th and 21st centuries. In this tutorial, we will focus on questions concerning their distinctive methods, namely, historical materialism, genealogical critique, and psychoanalysis. We examine key concepts such as: capitalism, alienation, false consciousness, the death of God, nihilism, the unconscious, ego, id, superego, and the death drive.

Class Format: We may devote one week of the semester to roundtable discussions.

Requirements/Evaluation: Bi-weekly papers, 2-3 page commentaries, and tutorial discussions.

Prerequisites: One of the following: 100-level Philosophy course or permission of instructor. Exposure to history of modern European philosophy and/or intellectual history will be very helpful.

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors or prospective majors and students with background and interest in modern philosophy and critical theories

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students write five or six 5-7 page tutorial papers. They each receive regular written and oral feedback to improve their ability to present clear and effective written arguments and interpretations.

Attributes: PHIL History Courses

Spring 2022

PHIL 225 (S) Existentialism

We will study the philosophical and literary works of Soren Kierkegaard, Friedrich Nietzsche, Jean-Paul Sartre, Simone de Beauvoir, and other Existentialist thinkers of the students' choosing. One of our guiding questions will be: What makes a thinker an "Existentialist"? The answer is not merely that they ask the question, "What gives meaning to a human life?" And, it's not merely that their answer invokes our freedom to determine our own identities. More than this, Existentialists emphasize the subjective relation we bear to our belief systems, moral codes, and personal identities. Existentialists investigate deeply irrational phenomena of human life, including anxiety, boredom, tragedy, despair, death, faith, sexuality, love, hate, sadism, masochism, and authenticity. And, Existentialists express their thought in philosophical treatises as often as in literary works. In this course we will seek to comprehend the dimensions in which Existentialism is a distinctive intellectual tradition.

Class Format: Students will meet in pairs or trios with the instructor for 60 minutes each week.

Requirements/Evaluation: Students will take turns as the lead writer one week, and the respondent the next. The week's lead writer will write a 5- to 6-page essay on the assigned reading, due 36 hours before the meeting. The week's respondent will write a 2-page essay on the leader's essay due at the time of the meeting. At the meetings, both students will present their essays and hold a discussion. Students will be evaluated cumulatively on their essays and contributions to discussion.

Prerequisites: none

Spring 2022

TUT Section: T1 TBA Justin B. Shaddock

PHIL 227 (F) Death and Dying (WS)

In this course we will examine traditional philosophical approaches to understanding death and related concepts, with a special focus on the ethical concerns surrounding death and care for the dying. We will begin with questions about how to define death, as well as reflections on its meaning and function in human life. We will move on to examine ethical issues of truth-telling with terminally ill patients and their families, decisions to withhold or withdraw life-sustaining treatments, the care of seriously ill newborns, physician-assisted suicide, euthanasia, and posthumous interests. In addition to key concepts of death, dying, and terminal illness, we will develop and refine notions of medical futility, paternalism and autonomy, particularly within the context of advance directives and surrogate decision making.

Class Format: discussion

Requirements/Evaluation: class attendance and participation, periodic short essays (3 or 4 total, 2-3 pages each), two mid-length papers (5-7 pages and 7-10 pages, respectively); possible experiential learning component

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: PHIL majors, PHLH and STS concentrators, and students with curricular need for the course.

Expected Class Size: 15-19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write periodic short papers (2-3 pages each), a midterm paper (5-7 pages) and a final paper (7-10 pages). Short papers focus on concepts, arguments, and writing skills needed in the midterm and final papers, in which students are expected to describe and evaluate arguments from assigned readings, and to present clear and effective arguments in support of their own ethical positions. Students receive feedback on all papers and have the opportunity to revise midterm and final papers.

Not offered current academic year

PHIL 228 (F) Feminist Bioethics (WS)

Cross-listings: PHIL 228 STS 228 WGSS 228

Primary Cross-listing

In this course we will explore the ways in which feminist approaches to moral thinking have influenced both the methodology and the content of contemporary bioethics. The first portion of the course will address the emergence of the "Ethics of Care," critically assessing its origins in feminist theory, its development within the context of the caring professions, and its potential as a general approach to bioethical reasoning. The second portion of the course will use feminist philosophy to inform our understanding of the ways in which gender structures the individual's interactions with the health care system. To do this we will explore topics that might traditionally be considered "women's issues" in healthcare, such as medicine and body image (e.g., cosmetic surgery, eating disorders), reproductive and genetic technologies, and research on women and their health care needs. In addition we'll also look at feminist analyses of topics that traditionally have not been regarded as "gendered," such as resource allocation and end of life issues.

Class Format: discussion

Requirements/Evaluation: active participation in class discussions; periodic short papers (2-3 pages); midterm and final paper (5-7 and 7-10 pages, respectively); and one oral presentation

Prerequisites: none, although previous coursework in WGSS is desirable

Enrollment Limit: 19

Enrollment Preferences: prospective and declared majors or concentrators in PHIL, WGSS, STS, and PHLH, especially those who need the course to satisfy major or concentration requirements

PHIL 231 (F) Ancient Political Thought

Cross-listings: PHIL 231 PSCI 231

Secondary Cross-listing

The core activity of this seminar is the careful reading and sustained discussion of selected works by Plato and Aristotle, but we will also engage such other thinkers as Epictetus and Augustine, and, from a political and theoretical point of view, selections from the Hebrew Bible and New Testament. Among the questions that we will address: What is justice? How can it be known and pursued? How is political power generated and exercised? What are the social and ethical prerequisites--and consequences--of democracy? Must the freedom or fulfillment of some people require the subordination of others? Does freedom require leading (or avoiding) a political life? What distinguishes that kind of life from others? What does it mean to be "philosophical" or to think "theoretically" about politics? Although we will attempt to engage the readings on their own terms, we will also ask how the vast differences between the ancient world and our own undercut or enhance the texts' ability to illuminate the dilemmas of political life for us.

Class Format: discussion

Requirements/Evaluation: three 7- to 8-page papers

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Political Science majors

PHIL 232 (F) Modern Political Thought

Cross-listings: PHIL 232 PSCI 232

Secondary Cross-listing

This course is a chronological survey of major works of political theory from the 16th to the 20th century. In discussions and writing, we will explore the diverse visions of modernity and of politics offered by such thinkers as Machiavelli, Hobbes, Locke, Rousseau, Marx, Mill, and Freud. They help us ask: What is freedom? Who is equal? Who should rule? With what limits and justifications? What form of government best serves the people? Who are the people, anyway? And on what grounds can we justify confidence in our provisional answers to such questions? Class will be primarily driven by discussion, often preceded by brief lectures. Attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

Class Format: Class meetings will be conducted remotely using zoom.

Requirements/Evaluation: three papers of 4-6 pages; class participation; brief informal writing tasks inside and outside of class meetings

Prerequisites: none; open to all

Enrollment Limit: 12

Enrollment Preferences: Political Theory concentrators, then Political Science majors

PHIL 235 (S) Morality and Partiality: Loyalty, Friendship, Patriotism (WS)

The aim of this tutorial is to critically examine the nature, importance, and ethical value of personal attachments and loyalties. Loyalty is frequently expected by family, friends and lovers, and demanded by institutions, religious, political and ethnic communities, as well as by the state. A person incapable of loyalty is often characterized as fickle, cold, self-serving and sometimes even pathological. However, the status of loyalty as a virtue has always been suspect: it has been argued that it is incompatible with impartiality, fairness and equality, and claimed that it is always exclusionary. So, some relationships with other people--such as friendships, familial ties, love, patriotism--seem to be ethically desirable, central to the quality of our lives, and yet prima facie in tension with the widely held belief that morality requires impartiality and equal treatment of all human beings. Are we ever justified in having more concern, and doing more, for our friends, family, community or nation? Does morality require that we always subordinate our personal relationships to universal principles? Is patriotism incompatible with cosmopolitanism, and if so, which of the two should we value? If loyalty is a virtue, what are the proper limits of its cultivation and expression?

Class Format: tutorial pairs will meet with the instructor for one hour a week, and on their own for another hour.

Requirements/Evaluation: tutorial attendance and participation; bi-weekly tutorial papers, each about 5 pages long (totaling 6 per student); bi-weekly oral responses to the paper of the tutorial partner

Prerequisites: none; open to first year students

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will get regular and detailed feedback on their writing skills, from word choice and sentence structure to overall structure of the paper.

Attributes: PHIL Contemporary Value Theory Courses

TUT Section: T1 TBA Bojana Mladenovic

PHIL 236 (F) Contemporary Ethical Theory (WS)

This course will examine central questions in normative ethics, including the following: Which features of actions are morally important and why (e.g., their motive, their intrinsic nature, or their consequences)? Which characteristics of persons give them moral status? How should moral equality be understood, and what is its foundation? When should we give morality priority over personal commitments and relationships, and why? What makes an individual's life go well? Are we capable of disinterested altruism, or are we motivated solely by self-interest? By which methods should we pursue these questions? We will examine these and related issues by looking in depth at contemporary defenses of consequentialist, deontological, and contractualist theories.

Class Format: This tutorial will meet remotely by Zoom on a fixed weekly schedule agreed upon by the instructor and participants.

Requirements/Evaluation: Six tutorial papers (5-6 pages in length) and six critiques (2-3 pages in length).

Prerequisites: at least one PHIL course or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Current and prospective philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating weeks, spaced evenly throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

PHIL 239 (S) The Ethics of Artificial Intelligence

Cross-listings: STS 239 PHIL 239

Primary Cross-listing

We will someday live alongside artificially intelligent beings who equal or exceed us. Commentators ranging from technology magnates to physics geniuses-not to mention decades of apocalyptic science fiction-have urged that that future is nothing short of an existential threat to human beings. Whether this is hyperbole or wise prognostication, it cannot be denied that the rise of AI will be a tectonic shift for culture, technology, and our fundamental sense of ourselves. When AI is fully realized, it is likely to be amongst the most important things to happen to our species. Some challenges we face are broad and about the future, though perhaps not the far future. How can we ensure that AI's will act morally? Is a world with AI's overall better or worse for us? How do we create legal and policy frameworks that cover a new kind of thinking being? If they are conscious, will AI's have dignity and rights? Other questions are pressing and immediate: Artificial intelligence techniques are used today to help decide whether someone gets a bank loan, is eligible to be released on bail, or in need of particular medical treatment. And right now there are autonomous vehicles deciding how to behave in traffic, and autonomous weapons capable of delivering lethal force. Is it moral for us to pass along these sorts of decisions to AI's?

What if they are biased, unbeknownst to us? What if they are more fair? In this course we will engage ethical questions surrounding the seeming inevitability of AI.

Class Format: mixture of lectures and discussion

Requirements/Evaluation: four short (3- to 4-page) writing assignments and a final essay (8-10 pages)

Prerequisites: none

PHIL 240 (F) Philosophy of Education

Cross-listings: PHIL 240 INTR 240

Primary Cross-listing

Why are you here? What do you expect to learn? How do you expect to learn? The College Mission Statement says that "Williams seeks to provide the finest possible liberal arts education by nurturing in students the academic and civic virtues, and their related traits of character." How have you already been taught the academic and civic virtues? Where have you been taught them? In school? On the sports field? At home? How did you develop your character? This first-year seminar will examine the philosophy of education through educational autobiographies: works that tell the story of a moral and intellectual education. Each book was chosen by and will be introduced by a professor from a different department, and then Professor of Philosophy Steve Gerrard will continue the discussion.

Requirements/Evaluation: several short papers

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: only first-year students

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 240 (D2) INTR 240 (D2)

Not offered current academic year

PHIL 241 (F) Contemporary Metaphysics

In this course, we will examine a number of issues in contemporary metaphysics through a discussion of the nature of kinds. The problem of universals has vexed philosophers at least since the time of Plato. Oscar is a dog and Annie is a dog. Oscar and Annie aren't identical but they have something in common; each of them is a dog, each of them belongs to a single kind and they share the property of being a dog. But what is going on here? We, at least most of us, are happy to say that Oscar and Annie exist. But is there a third entity that we need to countenance: the universal caninity? If we do think that there is such a thing as caninity, what sort of thing is it? If we don't, what accounts for the truth of our judgment that Oscar and Annie have something in common? Scientists often give explanations for the behavior of objects in terms of their properties. What role do properties play in causation, explanation and laws of nature? Finally there are different kinds of kind. Some kinds or properties seem to be pretty natural, e.g. being an electron or a dog. Other kinds seem to be less natural and seem somehow to be socially constructed, e.g. being a work of art, an American or a sausage. But are there really natural kinds? Can we, as Plato put it, "carve nature at the joints", or are all kinds constructed rather than discovered? Furthermore what is involved in the social construction of a kind? Finally, the nature and existence of some kinds is a hotly contested political matter. How should we think about racial kinds or about gender kinds? While we will be concerned to place our discussions of these issues in

historical context, most of the reading for the class will consist in articles written by contemporary philosophers.

Class Format: discussion

Requirements/Evaluation: one 10 page midterm paper and one 15 page final paper which will involve draft and revision, possible short response papers, and active participation in class

Prerequisites: one PHIL course; familiarity with formal logic helpful but not required; or permission of instructor

Enrollment Limit: 18

Expected Class Size: 10-15

Not offered current academic year

PHIL 243 (F) The Philosophy of Higher Education: College Controversies (WS)

What are the purposes of higher education? What are the purposes of liberal arts colleges in America? What should be the goals of Williams College? We will begin examining these questions by studying the history of controversies in American higher education, concentrating especially on debates about the curriculum. We will then turn to contemporary controversies such as campus free speech. Assigned works will include Booker T. Washington, *Industrial Education*, W.E.B. DuBois, *The Talented Tenth*, Frederick Rudolph, *Williams College 1793-1993: Three Eras, Three Cultures*, Michael S. Roth, *Beyond the University: Why Liberal Education Matters*, Allan Bloom, *The Closing of the American Mind*, Martha Nussbaum, *Cultivating Humanity*, William Deresiewicz, *Excellent Sheep: The Miseducation of the American Elite and the Way to a Meaningful Life*, Greg Lukianoff and Jonathan Haidt, *The Coddling of the American Mind: How Good Intentions and Bad Ideas Are Setting Up a Generation for Failure*, and Anthony T. Kronman, *The Assault on American Excellence*.

Class Format: This course is a tutorial. Students will meet in pairs with the instructor one hour per week. The default assumption is that this course will meet on-line. If the weather permits we could sometimes meet outside. If there is a reasonably sized well ventilated classroom we could occasionally meet there.

Requirements/Evaluation: A 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: I will be seeking a balance of interests and backgrounds; preference given to students who have taken at least one philosophy course

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: A 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

PHIL 244 (S) Environmental Ethics (WS)

Cross-listings: PHIL 244 ENVI 244

Secondary Cross-listing

What ethical standards should guide our individual and societal choices when those choices affect current and future environmental conditions? This course will introduce students to fundamental concepts, methods, and issues in environmental ethics. Initial tutorial meetings will focus on theoretical materials that will background later discussions and will include classic readings from the environmental ethics literature (e.g., Leopold, Taylor, Rolston). Subsequent sessions will pair readings about key concepts with specific cases that raise complex ethical issues, including the concept of moral standing and, e.g., people who do not yet exist, non-human individuals, species, and complex living systems; the concept of moral responsibility and complicity in environmentally damaging practices; the legitimacy of cost-benefit analysis as an environmental policy tool; and the valuation of

human lives.

Requirements/Evaluation: five essays (5-7 pages each) and five prepared oral responses to partners' essays; evaluation will be based on essays, oral responses, and quality of discussion

Prerequisites: ENVI 101 or one course in PHIL

Enrollment Limit: 10

Enrollment Preferences: declared and prospective Environmental Studies majors and concentrators

Expected Class Size: 10

PHIL 245 (F) Mind and Persons in Indian Thought

Cross-listings: ASIA 244 PHIL 245 REL 244

Secondary Cross-listing

In this course, we follow the Indian philosophical conversation concerning the self and the nature of consciousness, particularly as they are found in its various Yogic traditions. We start with some of the Hindu views about the self and the mind and consider their ethical implications. We then consider a range of Buddhist critiques of these views, focusing more particularly on the Madhyamaka, which radicalizes the critique of the self into a global anti-realist and skeptical stance. We also examine the Yogacara school, which offers a process view of reality focusing on the analysis of experience. We conclude by considering some of the later Hindu holistic views of the self as responses to the Buddhist critique. In this way we come to realize that far from being the irrational foil of "the West," Indian tradition is a rich resource for thinking through some of the central questions that have challenged philosophers in both traditions.

Class Format: discussion

Requirements/Evaluation: full attendance and participation, three short essays (6 pages each)

PHIL 248 (S) Free Speech and Its Enemies

The Williams College Mission statement says that "free inquiry requires open-mindedness, and commitment to community draws on concern for others". The question of this course is whether these values are in conflict. Does free inquiry clash with concern for others, or do they (or can they) work together? We will begin with John Stuart Mill's powerful defense of free speech in *On Liberty*, but will then investigate challenges to Mill's traditional liberalism from thinkers, such as Catharine MacKinnon, who believe that such rights are never neutral. Our subjects will include hate speech, press censorship, pornography, controversial art, sacrilegious speech and campus controversies. We will, undoubtedly, have to adjust the syllabus to respond to breaking international, national and local news. The course will, I hope, provide the students an opportunity and the tools to intellectually examine deeply emotional and contentious issues. This course is part of the John Hyde Teaching Fellowship.

Requirements/Evaluation: several short responses (including op-eds on current controversies) and longer final projects (a 12- to 15-page paper or equivalent work in other media)

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: seniors, then juniors, then sophomores

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

PHIL 250 (S) Philosophy of Economics (WS)

The status of economics as a predictive science has been most prominently brought into question, historically, by three unpredicted yet extremely important economic events: the Great Depression of the 1930s, stagflation of the 1970s, and bursting of the mortgage bubble in 2008. The issue of prediction was also raised by economist Donald McCloskey who, in 1988, asked his fellow economists, "If you're so smart, why ain't you rich?" Some critics find predictive failures of economists unsurprising, given the frequent reliance of the latter on assumptions known to be false (e.g., that economic agents are always selfish, have perfect information, and never make mistakes) and on models that unavoidably ignore potentially relevant factors. Perhaps, then, economics is not primarily a predictive science, but instead a descriptive, historical, and/or mathematical one. In this course, relying on works by economists and philosophers, we examine the status of economics as an academic discipline, focusing on its assumptions, methods, and results.

Requirements/Evaluation: six 6- to 8-page essays, six 2- to 3-page response papers, participation in discussions

Prerequisites: none

PHIL 251 (S) Offensive Art

Cross-listings: THEA 251 PHIL 251

Primary Cross-listing

Twenty-four centuries ago Plato argued for censorship of art. In the last century New York City mayor Rudy Giuliani attempted to shut down the Brooklyn Museum "Sensations" exhibit because he claimed it offended Christians, and the Cincinnati Contemporary Arts Center was prosecuted for exhibiting allegedly obscene photographs by Robert Mapplethorpe. Just recently, the magazine *The Nation* apologized for publishing Anders Carlson-Wee's poem adopting the voice of a homeless person, writing "We are sorry for the pain we have caused to the many communities affected by this poem." At Williams College a mural in The Log was temporarily boarded over, Herman Rosse's painting "Carnival of Life" was removed from

the '62 Center, and the Theater department cancelled the production of Aleshea Harris' *Beast Thing*. What should be done about offensive art? What is offensive art? Does it matter who is offended? Does offensive art harm? Is there a difference between being offended and being harmed? Is there a difference between cultural appropriation and cultural appreciation? What are the responsibilities of museum curators and theater producers when presenting art that might offend? Who gets to decide the answer to these questions; indeed, who gets to decide what questions to ask? We will attempt answers by studying classical works (such as Plato's *Republic* and John Stuart Mill's *On Liberty*), contemporary articles, and works of art in various media. *Trigger Warning*: all the works of art studied in this class will be chosen partly because they have offended a significant number of people. You are very likely to be offended by some of the art we discuss. This will be the only trigger warning for the class; if you don't want to be offended then this course is not for you. This course is part of the John Hyde Teaching Fellowship.

Requirements/Evaluation: several short responses (including op-eds on current controversies) and longer final projects (a 12- to 15-page paper or equivalent work in other media)

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: seniors, juniors, then sophomores in that order

PHIL 272 (S) Free Will and Responsibility (WS)

Cross-listings: PHIL 272 JLST 272

Primary Cross-listing

Our practice of holding people responsible seems justified as long as their choices are free. But when does a choice qualify as free? Must it be unaffected by any outside influences? If so, freedom may seem impossible since we're all deeply influenced by factors ranging from the general laws of nature to specific features of our genetic endowment and social environment (including religion, political ideology, and advertising). These affect not only our particular choices but also, more fundamentally, who we are and what we value. The real question, then, seems to be whether, and how, free choice is possible amidst all of these influences. We'll attempt to answer this question by examining recent philosophical work on the nature of free will and responsibility.

Class Format: This tutorial will meet remotely by Zoom on a fixed weekly schedule agreed to by the instructor and participants.

Requirements/Evaluation: Five tutorial papers (5-6 pages in length) and five critiques (2-3 pages in length)

Prerequisites: one PHIL course

Enrollment Limit: 10

Enrollment Preferences: current and prospective Philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 272 (D2) JLST 272 (D2)

Writing Skills Notes: Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating weeks, evenly spaced throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

Attributes: PHIL Contemporary Value Theory Courses

Not offered current academic year

PHIL 281 (S) Philosophy of Religion (WS)

Cross-listings: PHIL 281 REL 302

Primary Cross-listing

Our goal will be to determine how far reason can justify belief in God. We will examine well-known philosophical arguments for and against the existence of God (including the ontological argument, the cosmological argument, the teleological argument, the argument from religious experience, and the argument from evil). For each argument, we will first look at historically important formulations and then turn to contemporary reformulations. Our aim will be to identify and evaluate the strongest version of each argument. After working through these arguments, we will reflect more generally on the proper roles of reason and faith in justifying religious belief. Near the end of the semester, we'll also examine some evolutionary explanations of religious belief. Our tools in this course will be logic and reason, even when we are trying to determine what the limits of reason might be. Authors will include Plato, Anselm, Aquinas, Pascal, Paley, Hume, Kant, Kierkegaard, and several contemporary philosophers.

Class Format: students meet with instructor in pairs for an hour each week; emphasis will be placed on developing skills in reading, interpretation and oral argument as well as critical reasoning and writing

Requirements/Evaluation: five 5-page papers and five 2-page papers

Prerequisites: one PHIL course

Enrollment Limit: 10

Enrollment Preferences: current and prospective Philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 281 (D2) REL 302 (D2)

Writing Skills Notes: Five 5-page papers and five 2-page papers, evenly spaced throughout the semester. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Attributes: PHIL History Courses

Not offered current academic year

PHIL 288 (F) Embodiment and Consciousness: A Cross-Cultural Exploration

Cross-listings: REL 288 PHIL 288

Secondary Cross-listing

This course examines some of the central questions raised by the study of the consciousness: the place of intentionality, the role of emotions, the relation with the body, the nature of subjectivity, the scope of reflexivity, the nature of perceptual presence, etc. In confronting these difficult questions, we do not proceed purely theoretically but consider the contributions of various observation-based traditions, from Buddhist psychology and meditative practices to phenomenology to neurosciences. We begin by examining some of the central concepts of Buddhist psychology, its treatment of the mind as a selfless stream of consciousness, its examination of the variety of mental factors and its accounts of the relation between cognition and affects. We also introduce the practice of meditation as a way to observe the mind and raise questions concerning the place of its study in the mind-sciences. We pursue this reflection by examining the views of James, Husserl, Sartre and Merleau-Ponty, particularly as they concern the methods for the study of the mind and the relation between consciousness, reflexivity and the body. In this way, we develop a rich array of analytical tools and observational practices to further our understanding of the mind. But we also question the value of these tools based on first person approaches by relating them to the third person studies of the mind. In this way, we come to appreciate the importance of considering the biology on which mental processes are based and the light that this approach throws on the nature of consciousness. We conclude by considering the relation between first and third person studies of the mind, focusing on the concept of the embodied mind as a fruitful bridge between these different traditions.

Requirements/Evaluation: regular practice of meditation, a class presentation, a short essay (6-pages); a long final research paper (15 pages)

Prerequisites: any introduction to philosophy and at least two upper level courses in PHIL, at least one of which meets the Contemporary Metaphysics or Epistemology distribution requirement for the major, no exceptions;

Enrollment Limit: 18

Enrollment Preferences: Religion and Philosophy majors

Expected Class Size: 18

Grading: yes pass/fail option, no fifth course option

Unit Notes: there is no need to email the professor in advance to indicate interest in the course

Distributions: (D2)

PHIL 306 (S) The Good Life in Greek and Roman Ethics

Cross-listings: CLAS 306 PHIL 306

Primary Cross-listing

Most thoughtful human beings spend a good deal of time musing about how we ought to live and about what counts as a good life for a human being. The philosophers of ancient Greece and Rome were among the first thinkers to develop rigorous arguments in response to such musings. Much of the moral philosophy produced in Greece and Rome remains as relevant today as when it was written. In this course, we will examine some central texts in ancient Greek and Roman moral philosophy. We will begin by reading some of Plato's early dialogues and his Republic. We will then turn to Aristotle's Nicomachean Ethics. We will then examine writings in the Stoic and Epicurean traditions, as well as Cicero's *On the Ends of Good and Evil*. As we proceed through the course, we will look at the way in which each thinker characterizes happiness, virtue and the relation between the two. We will also pay close attention to the way in which each of these thinkers takes the practice of philosophy to play a key role in our realization of the good human life. This course is part of the Williams College program at the Berkshire County Jail and House of Corrections and will be held at the jail. Transportation will be provided by the college. The class will be composed equally of Williams students and inmates, and one goal of the course will be to encourage students from different backgrounds to think together about issues of common human concern.

Requirements/Evaluation: several short response pieces; a final paper of 10-15 pages

Prerequisites: none

Enrollment Limit: 9

Enrollment Preferences: juniors & seniors & students who can demonstrate an interest in the subject matter of the class; there will not be any preference purely on the basis of major; final selection for the course will be made on the basis of an interview with the instructor

Expected Class Size: 9

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 307 (F) Augustine's Confessions

Cross-listings: CLAS 307 PHIL 307 REL 303

Primary Cross-listing

No thinker has done more to shape the Western intellectual tradition than Augustine (354-430 CE), and no book displays Augustine's dynamic vision of reality more compellingly than the *Confessions*. Its probing and intimate reflections on the meaning of human life, the nature of God and mind, time and eternity, will and world, good and evil, love and sexuality have challenged every generation since Augustine's own. The seminar will be structured around a close, critically engaged reading of the *Confessions* (in English translation) and will give attention to its historical context and significance as well as to its philosophical and theological ideas. (There will be optional, supplementary opportunity to engage with the Latin text for interested students with some facility with Latin.)

Class Format: The course will be taught in a hybrid (partly in-person, partly remote) or wholly remote format--a final decision about format will be made in early September, prior to the first class. Class meetings (in whatever format) will consist primarily in student presentations and open, directed discussion of assigned readings.

Requirements/Evaluation: Regular reading assignments from the Confessions and related secondary literature. Weekly participation in online

discussion on Glow (15% of final grade); 3 class presentations (of various lengths and kinds) (20%); a short paper (maximum 1500 words) due around the middle of the semester (20%); a term paper in two drafts (maximum 3000 words) due near and the end of the semester (40%); preparation for and participation in class that shows thoughtful engagement with the assigned readings (5%).

Prerequisites: none

PHIL 308 (F) Wittgenstein's "Philosophical Investigations"

Bertrand Russell claimed that Ludwig Wittgenstein was "perhaps the most perfect example I have ever known of genius as traditionally conceived--passionate, profound, intense, and dominating." Wittgenstein's two masterpieces, the *Tractatus Logico-Philosophicus* and the *Philosophical Investigations*, stand like opposing poles around which schools of twentieth-century analytic philosophy revolve. The Wittgenstein of the *Tractatus* is known as the "earlier Wittgenstein," the Wittgenstein of the *Investigations* is known as the "later Wittgenstein." This course is an intensive, line-by-line study of the *Investigations*--one of the greatest (and thus, one of the most controversial) books in the history of philosophy. Aside from its overwhelming influence on 20th and 21st century philosophy and intellectual culture, any book which contains the remark, "if a lion could talk, we could not understand him," deserves serious attention.

Requirements/Evaluation: one short midterm paper (5-7 pages) and one longer final paper (12-15 pages)

Prerequisites: at least two Philosophy Courses, PHIL 202 highly recommended

Enrollment Limit: 19

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

Attributes: Linguistics PHIL History Courses

Not offered current academic year

PHIL 310 (F) Wittgenstein's Later Philosophy (WS)

Ludwig Wittgenstein (1889-1951) is probably the greatest philosopher of the 20th century. His later work, best known through posthumously published *Philosophical Investigations*, continues to influence contemporary thinking about language, mind, action, knowledge, ethics, religion, aesthetics, culture, and of course, philosophy itself. Understanding later Wittgenstein is thus vital for engaging in contemporary philosophy, but neither the interpretation nor the evaluation of his thought is straightforward or easy. Later Wittgenstein is a controversial, polarizing figure; but serious reading of his work is invariably intellectually enriching and fertile. This tutorial aims to provide students with the skills necessary for careful, serious and thorough reading of Wittgenstein's later philosophy. In the first part of the course, we will read Wittgenstein's *Philosophical Investigations*, one of the greatest books ever written. In the second part of the course, we will read *On Certainty*, and selections from other of Wittgenstein's posthumously published works: *Zettel*, *Philosophical Grammar*, *Remarks on the Philosophy of Psychology, Culture and Value*, *Lectures and Conversations on Aesthetics, Psychology and Religious Belief*, and *The Big Typescript*. Throughout the course, we will consult and discuss the important secondary literature on Wittgenstein, and analyze different philosophical presuppositions and goals that motivate particular readings. The central topics of the course will be: meaning, rule following, human languages; private experiences and other minds; intention and action; knowledge and skepticism; and especially, the methods and nature of philosophy.

Requirements/Evaluation: tutorial attendance and participation; bi-weekly tutorial papers, each about 5 pages long (totaling 6 per student); bi-weekly oral responses to the paper of the tutorial partner

Prerequisites: two Philosophy courses

Enrollment Limit: 10

Enrollment Preferences: preference will be given to students who already took a course on Wittgenstein, for example, PHIL 309

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write two short (about 800 words) seminar papers; five 5-7 pages long papers; five 2-3 pages long comments on their tutorial partner's papers; and a final paper (also 5-7 pages long) which will be a revision of one of the previously written papers. Students will get regular feedback from their tutorial partner and from the instructor on the substance of their work as well as on their oral and writing skills, with suggestions for improvement.

Attributes: Linguistics PHIL History Courses

Not offered current academic year

PHIL 312 (S) Philosophical Implications of Modern Physics (QFR)

Cross-listings: STS 312 PHYS 312 PHIL 312

Secondary Cross-listing

Some of the discoveries made by physicists over the last century seem to show that our common sense views are deeply at odds with our most sophisticated and best confirmed scientific theories. The course will present the essential ideas of relativity theory and quantum theory and explore their implications for philosophy. We will ask, for example, what these theories tell us about the nature of space, time, probability and causality.

Requirements/Evaluation: attendance, participation, problem sets, exams, six 1- to 2-page papers and a 12- to 15-page term paper

Prerequisites: MATH 140, high-school physics, and either a 200-level course in PHIL or a 100-level course in PHYS

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors and Physics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

PHIL 315 (F) Kant's Critique of Pure Reason

Kant's *Critique of Pure Reason* is perhaps the most significant text in the history of philosophy. It puts an end to the Early Modern traditions of Rationalism and Empiricism, and it stands at the beginning of both the Analytic and Continental traditions in contemporary philosophy. Love it or hate it, you cannot ignore it. In this course, we will study the most important and influential chapters of the *Critique* with the help of some secondary literature.

Class Format: This course will implement the tutorial format and be conducted remotely. Each week, students will watch a pre-recorded lecture given by the professor (asynchronously), and meet in pairs with the professor for roughly 75 minutes on Zoom (synchronously).

Requirements/Evaluation: Each week, students will complete the assigned readings, watch a lecture by the professor, write an essay, and meet in pairs with the professor. Students will take turns as the leader one week, and the respondent the next. The week's leader will write a 6-page essay on the assigned reading, due 48 hours before the meeting. The week's respondent will write a 2- to 3-page essay on the leader's essay due at the time of the meeting. At the meetings, both students will present their essays and hold a discussion about the readings. Students will be evaluated cumulatively on their essays and contributions to discussion.

PHIL 320 (F) Topics in Critical Theory: Subjection, Power, Freedom (DPE) (WS)

Any critical theory presupposes an account how both individual and social subjects come into being. Some critical theorists within the Frankfurt School tradition draw from upon ideas about the constitution of the subject developed in the early 19th century German philosophy of Hegel. According to Hegel, subjects are both historically and socially constituted; they are formed through their relations with other subjects. Hence, being with others, being dependent on others, is regarded as a key structuring feature of human existence. By the early 20th century, in the works of Freud, we encounter the idea of the intra-psychic features of subjects and the importance of understanding and regulating psychic forces both within and between subjects in order to adapt to the demands of living at any given time, born as we are both dependent upon and vulnerable to others. This raises the question whether a more complete account of the emergence of subjects must address both psychic, historical and social dimensions of subjectivity, the ways in which they are intertwined, and their importance for not only psychological well-being, but also relatively well-regulated socio-political relations. In this course we take up questions such as the following: What sorts of subjects do we find in modern Western societies? What are the forces, and the dynamics between forces (i.e., economic, technological, modes of communication, techniques of social control, biological, psychological) that make certain types of subjects possible influencing both their self-understandings and their forms of life? What role do emotional, irrational or unconscious forces play? To what extent do these myriad force relations limit, enable, or deform our participation as political citizens, and our capacity to transform and improve them? In our attempts to make headway in answering such daunting questions, we investigate recent debates in critical theory concerning subjection and resistance, intersubjective recognition and redistribution, social pathologies and the idea of a political unconscious. Readings will be drawn from recent work in the Frankfurt School and poststructuralist traditions of critical theory as well as anti-racist, anti-colonial, feminist and queer theories that draw upon them.

Class Format: We will schedule at least one seminar meeting during the semester. I will consult with students about the best time for this meeting.

Requirements/Evaluation: Evaluation will be based on written work (five 6-7 page papers, and five 2-3 page commentaries on your partner's papers) as well as the quality and level of preparation and intellectual engagement in our weekly meetings.

Prerequisites: Demonstrated background in history of modern philosophy (PHIL 202), modern political theory, or critical and social theories.

Enrollment Limit: 10

Enrollment Preferences: Preference will be given to philosophy majors and prospective majors and students with demonstrated interest and background in critical or social theories.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: Students will write five of 5-7 pages in length, one of which they will revise and submit at the end of the term. We will also meet in seminar once or twice during the semester. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own positions. Students will receive written and oral feedback on both the content and form of their papers and contributions in meetings.

Difference, Power, and Equity Notes: In this course we address power and domination, reflect on the difference between them, and treat power relations as not only an inevitable feature of any society, but as both enabling and constraining. In addition, the course will contain readings that address race, class, gender and the legacy of colonialism.

PHIL 321 (F) Introduction to Critical Theory (DPE) (WS)

Cross-listings: PHIL 321 WGSS 322

Primary Cross-listing

"Dare to know! Have courage to use your own reason—that is the motto of Enlightenment." Thus the 18th century German philosopher Immanuel Kant exhorts his contemporaries to muster the courage to cultivate their capacity for reason. Modern faith in the prospects of universal human dignity, rational autonomy, the rights of man, individual liberty, democracy, open scientific inquiry and social and political progress depend upon it. Yet from its inception and continuing into the 19th and 20th centuries we find the promise of Enlightenment challenged by colonialist expansion, the rise of nationalism and the persistence of racism, sexism, genocide, terrorism, and religious extremism as well as the emergence of wars of mass destruction, environmental degradation, and the potential for manipulation of populations by consumerist mass media. Can the promise of Enlightenment be redeemed? Should it be? Among the possible topics addressed will be: criticizing capitalism, alienation and objectification, progress and freedom, the entanglements of power and reason, radical liberalism, the future of democracy as well as post-structuralist, post-colonial, feminist and anti-racist critiques of the Frankfurt School. Readings may include historical as well as contemporary figures such as: Kant, Freud, Horkheimer, Adorno, Marcuse, Habermas, McCarthy, Honneth, Fraser, Amy Allen, Foucault, Ranciere, Achilles Mbembe, Judith Butler, Wendy Brown, Spivak, and Charles Mills, among others.

Class Format: students will work in pairs and meet for 75 minutes each week with the professor

Requirements/Evaluation: each student will write and present five 5- to 6-page paper every other week and a commentary on their partner's essay on alternate weeks; evaluations are based on written work as well as level of preparation and intellectual engagement in tutorial meetings

Prerequisites: PHIL 202, Kant course, or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors and students with background in political theory, feminist theory, or post-colonial theory

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

PHIL 326 (S) Foucault Now (DPE) (WS)

Cross-listings: WGSS 336 PHIL 326

Primary Cross-listing

If we think of Michel Foucault as engaged in writing histories, or genealogies, of his own present designed to undercut the sense of the obviousness of certain practices and ways of thinking, categorizing, and knowing, we can easily imagine that he might now be questioning different aspects of our contemporary "present" than the ones standardly associated with his name, namely, panopticons and surveillance, discipline, criminalization, the biopolitics of health, the normal and the abnormal, etc. In this course we address the question: How is the present we find ourselves living today different from the one that the author Foucault wrote about in the 1960s, 70s and early 80s before his untimely death in 1984? What differentiates today from yesterday? And what present practices and ways of thinking and knowing might be questioned using Foucault's tools, genealogy in particular, for resisting unnecessary constraints on freedom and the perpetuation of unnecessary suffering? What is his legacy today? In this tutorial you will read from a selection of Foucault's texts (books, lectures, interviews) in order to acquire a firm grasp of his method of "critique" and his way of looking at the interconnections between forms of power and the knowledge associated with particular disciplines. We will also read more recent work by scholars that draw on Foucault to address problems in today's present. Among the contemporary texts assigned might be the following: *Bernard Harcourt's Exposed: Desire and Disobedience in the Digital Age*, Saidiya Hartman's *Wayward Lives, Beautiful Experiments* (2019), Verena Ehrenbusch's *Terrorism: A Genealogy*, Cressida Heyes' *Anaesthetics*, Ladelle McWhorter's *Racism and Sexism in Anglo-America: A Genealogy*, and *Active Intolerance: Michel Foucault, The Prisons Information Group, and the Future of Abolition*, eds. Perry Zurn and Andrew Dilts.

Class Format: I will meet with students in a seminar format at various points throughout the semester. I have requested a class block for this reason.

Requirements/Evaluation: evaluation will be based on written work (six 5- to 6-page papers, and six 2-3 page commentaries on their partner's papers) as well as the quality and level of preparation and intellectual engagement in our weekly meetings.

Prerequisites: Relevant background in critical theory, social theory, political theory or philosophy.

Enrollment Limit: 10

Enrollment Preferences: I will give preference to philosophy majors and to upper class students with a demonstrated background in critical theories. Some sophomores may be eligible.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 336 (D2) PHIL 326 (D2)

Writing Skills Notes: This is a tutorial. Students will write five or six 5-6-page papers during the course of the the semester and receive significant feedback on each paper. At the end of each tutorial meeting the student is asked to reflect on how they would approach the paper differently if they were to rewrite it. In this version of the course, I may ask students to select one paper to revise as a final assignment.

Difference, Power, and Equity Notes: In this course we address power and domination, reflect on the difference between them, and treat power relations as not only an inevitable feature of any society, but as both enabling and constraining. Moreover, we will read material that uses Foucauldian tools to address contemporary issues involving sexism and racism, digital surveillance, and the abolition of prisons.

Attributes: PHIL History Courses

Not offered current academic year

PHIL 328 (S) Kant's Ethics

Although Kant initially planned for his magnum opus to comprise theoretical and practical chapters, his metaphysics and epistemology take up all of his *Critique of Pure Reason* while his ethics is spread out over a series of works--*Groundwork of the Metaphysics of Morals*, *Critique of Practical Reason*, *Religion within the Boundaries of Mere Reason*, and *The Metaphysics of Morals*. These latter writings of Kant's had a tremendous influence on the development of subsequent moral philosophy and indeed set the stage for contemporary discussions of the nature of practical reason, motivation, freedom, and morality. Our seminar will have two aims: (1) to reconstruct the single most compelling moral theory from Kant's various ethical writings, and (2) to trace the influence of Kant's ethics in contemporary philosophy.

Requirements/Evaluation: weekly seminar discussion questions; 8-10-page midterm paper; 12-14-page final paper

Prerequisites: two courses in PHIL (including a 100-level PHIL course; PHIL 201 or 202 recommended); or permission from the instructors

PHIL 332 (S) Aristotle's Metaphysics

Cross-listings: CLAS 332 PHIL 332

Primary Cross-listing

In this course we will study Aristotle's *Metaphysics* concentrating on books *gamma-theta*. Aristotle sets out to study being *qua* being, or what is insofar as it is. The thoughts that Aristotle expresses in these books were instrumental in setting an intellectual agenda that dominated western thought through the Middle Ages and provided the backdrop against which the modern philosophical tradition arose. Furthermore, many of the issues that Aristotle takes up in these books remain of central importance in contemporary philosophy. Our main goal in this course is to work our way through Aristotle's text which can be extremely daunting, and to reconstruct his central positions and his arguments for these positions. We will also read selections from the vast secondary literature on Aristotle's *Metaphysics*.

Requirements/Evaluation: discussion leadership, weekly short papers, term paper

PHIL 336 (F) Political Liberalism and its Critics (WS)

Political liberalism has been both celebrated and lamented. The philosopher John Rawls is widely credited with reviving liberalism in the late 20th century and providing its most persuasive defense. In this tutorial, we'll read portions of Rawls' major works, *A Theory of Justice* and *Political Liberalism*, and trace how his theory evolved in response to an array of critics, including libertarians, perfectionists, communitarians, feminist philosophers, and critical race theorists. Among other things, these critics challenged Rawls' interpretation and defense of the social contract framework, the ideals of freedom and equality, the content of principles of justice, political neutrality about the good, the nature of the self, the division between public and private spheres, and the distinction between ideal and non-ideal theory. We'll examine these criticisms in depth. If time permits, we'll also look briefly at some recent post-Rawlsian debates about the nature of distributive justice (e.g., luck vs. relational egalitarianism, or global justice).

Class Format: This tutorial will meet on a fixed weekly schedule agreed to by the instructor and participants.

Requirements/Evaluation: Six tutorial papers (5-6 pages in length) and six critiques (2-3 pages in length)

Prerequisites: Two PHIL courses (including a PHIL 100-level course), or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Current and prospective philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating weeks, evenly spaced throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

Attributes: PHIL Contemporary Value Theory Courses

Fall 2021

PHIL 337 (F) Justice in Health Care (WS)

Justice is a notoriously complex and elusive philosophical concept, the conditions of which are even more difficult to articulate within real world institutions and contexts than in the abstract. In this course we'll explore justice as a fundamental moral principle and as a desideratum of the US health care system. The first portion of the course will be devoted to considering general theories of justice as well as alternative conceptions of justice specifically within the health care context. While social justice and distributive justice are deeply intertwined in the health care context and we will discuss both, we will focus primarily on the concept of distributive justice. This theoretically oriented work will provide the background for subsequent examination of specific topics, which may include, among others: justice in health care financing and reform; justice in health care rationing and access to health care, with particular attention to the intersections of rationing criteria with gender, sexuality, race, disability, and age; justice in the procurement and allocation of organs for transplantation; obesity and personal responsibility for illness; and justice in medical research, including "double standards" for research conducted in low resource settings.

Requirements/Evaluation: biweekly papers, oral commentaries, and tutorial discussions

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: PHIL majors, PHLH concentrators, those with curricular need for the course, those who have been dropped from the course in previous semesters due to over enrollment, and those who are unlikely to have an opportunity to take the course in a later term

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write six tutorial papers of 5-7 pages in length, one of which they will revise and submit at the end of the term. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

PHIL 338 (F) Intermediate Logic (QFR)

Cross-listings: MATH 338 PHIL 338

Primary Cross-listing

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have taken PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

Requirements/Evaluation: problem sets and exams

Prerequisites: some class in which student has studied formal reasoning

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors; juniors and seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 338 (D3) PHIL 338 (D2)

Quantative/Formal Reasoning Notes: This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

Attributes: Linguistics

Not offered current academic year

PHIL 341 (S) Black Marxism: Political Theory and Anti-Colonialism (DPE) (WS)

Cross-listings: AFR 340 INTR 341 PSCI 373 PHIL 341

Secondary Cross-listing

The seminar involves a critical engagement with key African political leaders, theorists and liberationists. We will examine the Pan-African writings of: Cedric Robinson (*Black Marxism*); Walter Rodney (*How Capitalism Underdeveloped Africa*), Eric Williams (*Capitalism and Slavery; From Columbus to*

Castro); Frantz Fanon (*The Wretched of the Earth*); Malcolm X (*Malcolm X Speaks*); Amilcar Cabral (*Resistance and Decolonization; Unity and Struggle*); C. L. R. James (*The Black Jacobins*).

Requirements/Evaluation: Attend all classes. Papers are due 24 hours before the start of class. Participate in class discussions.

Prerequisites: None

Enrollment Limit: 19

Enrollment Preferences: Juniors and Seniors.

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

AFR 340 (D2) INTR 341 (D2) PSCI 373 (D2) PHIL 341 (D2)

Writing Skills Notes: Three thesis papers at five pages each (each receiving critical feedback from professor); one thesis paper revision with critical feedback from professor and peers, including one letter of revision explaining the student's revision process; one keyword glossary where students develop rigorous definitions of course key terms; one roundtable discussion based on the final paper.

Difference, Power, and Equity Notes: This course focuses on anti-colonial struggles against European powers. Research will include the concept of "internal colonies" in the US.

Not offered current academic year

PHIL 343 (S) What Philosophy Is: It's Methods, Aims and Values (WS)

Put simply, metaphilosophy is reflection on the nature of philosophy: Can it be defined? How is it different from science? What are its distinct methods? Does philosophy yield knowledge? What role does the history of philosophy play in the discipline? Why read the history of philosophy? Unsurprisingly, philosophers have proffered a variety of answers to these questions, prompting one philosopher to remark, half-jokingly, that "there are as many definitions of philosophy as there are philosophers." Thus, Plato described the philosopher as "the one who beholds all Time and all Being." Wilfrid Sellars regarded as uncontroversial the view that it is "an attempt to see how things, in the broadest possible sense of the term, hang together in the broadest possible sense of the term." Critical theorists regard philosophy as social and ideology critique. Some understand its aim to be to answer normative questions about the nature of truth, justice, goodness and rationality. Finally, there are those who do not think philosophy can contribute much at all to answering such questions and others who question its claims to universality given its associations with colonialism, racism, sexism, etc. In this tutorial we will read philosophical texts from a range of approaches in professional philosophy since the early 20th Century (Analytic, Pragmatist, Continental or European, and Public). Some of them explicitly engage meta-philosophical debates; others exemplify particular philosophical styles and methods. Our aim is to enrich our understanding of the discipline in order to evaluate its value and limitations.

Requirements/Evaluation: Evaluation will be based on the written work as well as the level of preparation and intellectual engagement in tutorial meetings. The professor will provide detailed comments on the first two papers, and all students have the option meeting with the professor after midterms to discuss strengths and areas they plan to work on in their final two papers.

Prerequisites: Two or three philosophy courses, or permission of instructor.

Enrollment Limit: 10

Enrollment Preferences: Preference will be given to majors and students who have had at least two, ideally three courses in philosophy.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: This is a tutorial. Students will write five 6-page papers and 2-3 page commentaries on alternate weeks. The instructor and the tutorial partner will comment extensively on each paper both orally and in writing. The aim of each tutorial meeting is enable the writer to imagine possible revisions.

TUT Section: T1 Cancelled

PHIL 350 (S) Emotions

Philosophy is often described as *thinking about thinking*: variously conceived inquiries into the nature, scope and limits of human reasoning have always been at its heart. Without challenging the centrality of such projects for philosophy, this tutorial will focus on a less emphasized, but equally essential aspect of our lives: emotions. What are emotions, and how should we think about them? What is the proper 'geography'--classification and analysis--of our emotions, and what is their relation to our somatic states, feelings, beliefs, judgments, evaluations and actions? Do we have any control over our emotions? Could we (individually and socially) educate and cultivate them? How are conscious and unconscious emotions related to a person's action, character, and her social world? In addressing these substantive questions, we will also consider which methodological approach--if a single one can be privileged--we should adopt for examining emotions. We will try to determine what is the scope and nature of an adequate theory of emotions, what are the desiderata for such a theory, and what should count as evidence in its favor. We will examine a variety of philosophical and scientific theories of emotion, as well as some issues concerning normative aspects of emotions: the role of emotions in a good life, and the concept of emotional maturity.

Class Format: The class will meet remotely only.

Requirements/Evaluation: Class attendance, preparedness and participation; weekly meetings with the tutorial partner outside of the class; five lead papers (5-7 pages) and five short response papers (2-3 pages).

Prerequisites: two philosophy courses.

Enrollment Limit: 10

Enrollment Preferences: philosophy majors and prospective majors, then psychology majors.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: PHIL Contemp Metaphysics + Epistemology Courses

PHIL 358 (S) Reasoning and Inference: The Philosophy of Logic (WS)

This is a course in the philosophy of logic. What, you may ask, is the philosophy of logic? In a logic class, we think about how to represent ordinary language and thinking within formal systems and how to prove various things within these systems. In a *philosophy of logic* class, we think about what we are doing when we do logic. An example might be helpful. You are psyched to be reading this course description right now. At least, let's assume that you are for the sake of argument. A number of things *follow from* this happy assumption. Here are a few: (i) You are psyched. (ii) You are reading. (iii) You exist. (iv) It is possible that you are reading. (v) Either you are reading or you are a fish. In the first part of this course, we are going to focus on what this *following-from* business amounts to, and ask whether there is a special sense of *following-from* that characterizes logic? We will also try to get more precise in our understanding of some of the key concepts in logic, such as contradiction, consistency, logical consequence, syntax and semantics. In the second part of the course, we will turn to the fundamental questions concerning the status and structure of logic. Logic is sometimes called the study of reason. But, is logic the study of how people *do* reason, or is it the study of how people *should* reason? Against the first, people often don't seem to reason very well. On the other hand, if logic is about how we should reason, what makes it the case that we should reason one way rather than another? What makes a theorem of logic true? For that matter, what are logical theorems even about? Should we revise logic in light of empirical discoveries in, for example, physics or psychology? If so, what are the constraints on good revisions? Logicians and mathematicians have done a good deal of work developing extensions of and alternatives to classical logic. Some philosophers have wondered, however, whether the notion of an alternative logic is even coherent. We will end the course with a discussion of some of these alternatives. Among the authors we will read are: Aristotle, Frege, Russell, Quine, Kripke, Putnam, Field and Fine.

Class Format: There are likely to be video presentations of formal material. There may also be help sessions for problem sets.

Requirements/Evaluation: Students will write five tutorial papers and five response papers. In addition, they will revise one of these papers in light of comments from their partner and the instructor. Finally, there may be some problem sets to solidify understanding of formal material.

Prerequisites: Although not strictly necessary, a prior course in logic or discrete mathematics will be very helpful. In any case, some comfort with formal reasoning will be assumed as we will be going through an accelerated presentation of logical systems.

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors. Students with a background and interest in formal reasoning.

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write 5 tutorial papers and 5 responses. The instructor and the respondent will attend both to the content and to the writing quality of the tutorial papers. Finally students will substantially revise one of their tutorial papers in consultation with the instructor.

PHIL 360 (F) The Political Thought of Frantz Fanon (WS)

Cross-listings: PSCI 370 PHIL 360 AFR 360 LEAD 360

Secondary Cross-listing

Martinican psychiatrist, philosopher, and revolutionary Frantz Fanon was among the leading critical theorists and Africana thinkers of the twentieth century. Fanon ushered in the decolonial turn in critical theory, a move calling on those both within and outside of Europe to challenge the coloniality of the age and to forge a new vision of politics in the postcolonial period. This course is an advanced seminar devoted to a comprehensive examination of Fanon's political thought. We will begin with an analysis of primary texts by Fanon and end by considering how Fanon has been interpreted by his contemporaries as well as activists and critical theorists writing today.

Requirements/Evaluation: attendance and participation, weekly online reading response papers, a class presentation, two 7-page essays, and one 20-page final research paper

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Africana Studies concentrators, Leadership Studies concentrators, and Political Science majors

Expected Class Size: 10

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSCI 370 (D2) PHIL 360 (D2) AFR 360 (D2) LEAD 360 (D2)

Writing Skills Notes: Students write weekly online reading response papers, two 7-page essays, and one 20-page final research paper. Students receive written feedback from me throughout, meet with me 1-on-1 to discuss 7-page essays to then revise/re-submit and also receive written feedback before final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

PHIL 364 (S) Mental Health and Illness: Philosophical Considerations

Cross-listings: STS 364 PHIL 364

Primary Cross-listing

This course will raise and discuss a number of philosophical questions concerning our current understanding of mental health and mental illness. We will begin by examining the general concepts of health and disease, and then apply them to human psychology. Throughout the course, our focus will be on the best theoretical and practical knowledge we now have to diagnose, explain, and alleviate mental illness. Some of the questions that we will discuss are: What is psychopathology and what are its causes? Is it possible to have systematic knowledge of subjective experience? If so, is that knowledge importantly different in kind or in rigor from the knowledge we gain through physics, chemistry or geology? Are there metaphysical and ideological assumptions in contemporary psychiatry, and if so, could and should they be avoided? What is the basis on which current psychiatric diagnostic manuals are organized? Is that principle of organization justifiable or not? Do particular case histories offer good explanations of psychopathology? In framing and answering these questions, we will discuss subjective experience (or phenomenology) of mental illness; holism vs. reductionism; functional, historical and structural explanations of psychopathology; theory formation, evidence, and the role of values in psychology and psychiatry; the diversity and disunity of psychotherapeutic approaches; relationship between knowers and the known; and relationship between theoretical knowledge in psychiatry and the practices of healing.

Requirements/Evaluation: several writing assignments, evenly spaced throughout the semester

Prerequisites: two philosophy courses; or one philosophy and one STS course; or consent of the instructor

Enrollment Limit: 20

Enrollment Preferences: students who took Philosophy of Science or Philosophy of Mind; Philosophy and Psychology majors

PHIL 379 (S) American Pragmatism

Cross-listings: PHIL 379 AMST 379

Primary Cross-listing

Along with jazz, pragmatism stands as the greatest uniquely American contribution to world culture. As the music wails in the background, we will study the classic pragmatists: William James, C. S. Peirce, and John Dewey. We will continue with the contemporary inheritors of the tradition: Cornel West, Richard Rorty, and Hilary Putnam. Although it has influenced both analytic and continental philosophy, pragmatism is a powerful third philosophical movement. Always asking what practical difference would it make, our authors investigate the central questions and disputes of philosophy, from epistemology and metaphysics to ethics and religion. Rather than seeing philosophy as an esoteric discipline, the pragmatic philosophers (with the possible exception of Peirce) see philosophy as integral to our culture and see themselves as public intellectuals.

Requirements/Evaluation: final paper, several short assignments

Prerequisites: at least two PHIL courses

Enrollment Limit: 25

Enrollment Preferences: Philosophy and American Studies majors, then seniors and juniors of any major

Expected Class Size: 12-15

Grading: yes pass/fail option, yes fifth course option

PHIL 388 (S) Consciousness

The nature of consciousness remains a fundamental mystery of the universe. Our internal, felt experience--what chocolate tastes like to oneself, what it is like to see the color red, or, more broadly, what it is like to have a first person, waking perspective at all--resists explanation in any terms other than the conscious experience itself in spite of centuries of intense effort by philosophers and, more recently, by scientists. As a result, some prominent researchers propose that the existence of consciousness requires a revision of basic physics, while others (seemingly desperately) deny that consciousness exists at all. Those positions remain extreme, but the challenge that consciousness poses is dramatic. It is at the same time the most intimately known fact of our humanity and science's most elusive puzzle. In this tutorial we will read the contemporary literature on consciousness. We will concentrate both on making precise the philosophical problem of consciousness and on understanding the role of the relevant neuroscientific and cognitive research. Tutorial partners will have an opportunity to spend the end of the semester working on a special topic of their choosing including, for instance, consciousness and free will, pain and anesthesia, consciousness and artificial intelligence, or disorders of consciousness.

Class Format: expect several short lectures by the instructor over the course of the semester where all the tutorial members convene

Requirements/Evaluation: participants will present substantial written work in the tutorial every other week, and will be responsible for commenting on their tutorial partner's work on off weeks

Prerequisites: any introduction to philosophy and at least two upper level courses in PHIL, at least one of which meets the Contemporary Metaphysics or Epistemology distribution requirement for the major, no exceptions; no need to email the professor in advance

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors, Neuroscience or Cognitive Science concentrators; open to sophomores; every effort will be made to pair students according to similar or complementary background

PHIL 401 (F) Senior Seminar: Philosophy of Art

In the first part of this course, we will discuss some of the central questions in the contemporary philosophy of art: What - or when - is art? What is involved in interpreting and understanding works of art? Is aesthetic experience a special kind of experience? What is the role of emotions in creating works of art and in responding to them? Artworks can be analyzed and evaluated from many points of view (for example: formally, culturally, or politically), and for many different purposes; should one analytic lens be privileged, and why? How should we think today about the central concepts of traditional aesthetics, such as *beauty* or *taste*, or about traditional claims, such as the medium specificity claim? How should we think about contemporary art? In the second part of the course, we will discuss specific problems of some different art forms (for example: literature, music, visual arts, architecture, film, performing arts).

Class Format: There will be two sections of this course, with 7-10 students in each. In addition to regular weekly 3 hours long meetings (M evenings or W afternoons), students will be required to attend 2-4 guest speaker events (virtual or in person), time to be determined in consultation with all participants.

Requirements/Evaluation: Class preparedness and participation; 10 weekly short response papers; Class presentation; Independent library research; A final paper, approximately 15 pages long.

Prerequisites: Limited to senior philosophy majors.

Enrollment Limit: 25

Enrollment Preferences: The seminar is required of all senior philosophy majors, and limited to them.

PHIL 10 (W) An Introduction to Political and Social Action

What does it mean to act and stand for what you believe in? How do you reason through hard choices with no good answer? How does that happen in the framework of nonprofits and politics? This course is an introduction to the reality of organizing, advocacy, and political action. Topics will include nonprofit operations, political campaigning, fundraising, and policy analysis. Coursework will combine class discussion and activities with out-of-class research, all designed to build a final portfolio. Expect six hours/week of in-class discussion with approximately twenty hours of outside research and reflection. Out-of-class work includes watching CSPAN or Congressional hearings related to your issue of choice, interviewing people impacted by your topic, and analyzing policies. Evaluation will be based on participation, weekly journal reflections, and completion of a two-part final portfolio.1.

Students identify an issue of interest at a State or Federal level. They recommend this be addressed by a 501(c)3 or 501(c)4 and provide a high-level strategy for doing so. Students indicate potential partner organizations and key legislators who would provide support or resistance. Students analyze at least one related Federal and State policy, writing a one-page memo for each. This information is further synthesized into a one-page recommendation as if it were being prepared to assist a participant of a Congressional roundtable. 2. Students prepare to run for elected office. This includes key issues, talking points, and public image. If there is interest the final day of class may be reserved for brief (5-minute) stump speeches and brief Q&A. Journal entries will be a tool for self-reflection.

Requirements/Evaluation: final project or presentation

Prerequisites: none; open to all students; students do not need to know their particular issue or area of interest before enrolling

Enrollment Limit: 10

Enrollment Preferences: statement of interest (a bit about yourself and your interest in the course)

Grading: pass/fail only

Unit Notes: Landon Marchant '20 has nearly ten years of intensive volunteer experience in activism, policy, and social change. They are currently serving as the Economic Impact Programs Manager at Minority Veterans of America, where they also advise the policy team on economic issues. Landon has written and spoken at length about transgender military service and veteran success. Their full-time role is the Global DE&I Analyst for ZX Ventures, Anheuser-Busch InBev's global innovation and investment division.

Materials/Lab Fee: none

LEC Section: 01 TR 6:00 pm - 8:00 pm Landon A. Marchant

PHIL 11 (W) Philosophy of Chess

Chess is one of the noblest and most fascinating of human endeavors. We will examine chess in many of its facets: its history, philosophy and literature. We will look at the art of chess and the art that chess has inspired. Above all, we will work together on improving our playing skills: we will study chess openings, middle games and endgames, and engage in continual tournament play. Evaluation will be based on class participation and problem assignments.

Requirements/Evaluation: evaluation will be based on class participation and problem assignments

Prerequisites: all students should know the rules of chess and be able to read chess notation

Enrollment Limit: 20

Enrollment Preferences: students will be selected according to playing strength, as indicated by USCF ratings, results in the College chess club, or other measures

Grading: pass/fail only

Materials/Lab Fee: none

Winter 2022

LEC Section: 01 TWR 1:00 pm - 3:50 pm Steven B. Gerrard

PHIL 25 (W) Eye Care and Culture in Nicaragua

We will spend nine days in Nicaragua, chiefly in the Atlantic Coast Autonomous Regions. Almost all of the days in those regions will be spent in clinics, where students-in conjunction with optometrists who volunteer their time for the trip-will administer eye exams, write prescriptions and distribute glasses. While in Nicaragua, the students will keep detailed journals that they will complete following their return to Williamstown. They will interact with Nicaraguans during the eye clinics, and will have opportunities for speaking with them during evenings. Students will also be required to attend organizational and training meetings and to complete a number of relevant readings prior to the trip.

Requirements/Evaluation: class participation and journals as described above, along with on-site observation of the students' participation in the eye clinics

Prerequisites: none, though it is helpful to include three to six students who are fluent in Spanish

Enrollment Limit: 12

Enrollment Preferences: students will submit applications indicating why they want to take the course

Grading: pass/fail only

Unit Notes: Alan White was professor of philosophy at Williams from 1986 through 2021. He is currently Mark Hopkins Emeritus Professor of Philosophy.

PHIL 42 (W) Philosophy of Sex

What is sex? Are the current biological explanations of human sexuality sufficient to explain the meaning that sex has in our lives? Is human sexuality subject to ethical evaluations? Should it be regulated by social customs and sanctions, by law, or should sexual choices and practices be left to individuals? In thinking about these broad questions, we will also consider some more specific ones: What is sexual orientation, and does it constitute a person's sexual identity? Are there pathological sexual desires and practices, and if so, how should we distinguish them from normal and healthy sexuality? Is anything wrong with adultery, promiscuity, polyamory, pornography, or with exchanging sex for money? What counts as consensual sex, and are all consensual sexual relationships ethically acceptable? The course will place special emphasis on developing the following skills: close, analytical reading; recognizing, reconstructing and evaluating claims, and reasons that support them; producing original ideas and arguments; participating in vigorous discussions in a respectful and reasonable manner; speaking and listening skills; and writing clear, polished, well-argued papers, generated through several revisions.

Class Format: The course will meet approximately 20 hours per week, Monday through Thursday, between 11am and 4pm; there will be an hour long lunch break. The course will consist of short lectures, substantive class discussions, one-on-one writing workshops, and tutorial-style meetings. There will be daily reading and writing assignments.

Requirements/Evaluation: Class preparedness and participation in discussions; frequent short writing assignments; a longer (4-5 pages) tutorial-style paper, developed through several revisions; a response to the tutorial partner's paper.

Prerequisites: Permission of a Dean.

Enrollment Limit: 18

Enrollment Preferences: Students who need to make up a deficiency. To be determined in consultation with the Dean's office.

Expected Class Size: 18

Grading: pass/fail only

Unit Notes: This course is designed to count for both full semester, Winter Study, and Writing Skills credit. Once a dean approves enrollment, the Registrar's Office will register students in both PHIL 100 and PHIL 42.

- Kate Wachala, Assistant Professor of Physical Education and Head Coach of Women's Crew

The instructional Physical Education Program at Williams is an integral part of the student's total educational experience. As a part of the liberal arts concept, the program develops the mind-body relationship, which is dependent upon the proper integration of physical and intellectual capacities. The main objective of the physical education program is to develop in each student an appreciation of physical fitness and wellness, and to expose them to a variety of activities that are suitable for lifetime participation.

Four credits of Physical Education represent one of the requirements for the College degree. There are five physical education units during the year. In the fall academic semester, there are two six-week physical education quarters. Winter Study is another unit, and there are two physical education quarters in the spring academic semester. Two different activities must be completed in the fulfillment of the requirement. Students must complete two physical education credits during the first year, all four physical education credits must be completed by the end of sophomore year if the student wishes to study abroad.

A schedule listing all courses offered is issued to every student before each quarter and Winter Study. Classes may vary according to availability of instructors and interest of students. More information can be found at athletics.williams.edu/physical-education.

The following courses are offered at various times during the year:

Aqua Fitness

Badminton

Basketball

Bicycling

Boot Camp

Bowling

Canoeing

Core and Conditioning

Dance (African, Ballet, Modern)

Diving

Erg Fitness

Figure Skating

Futsal

Golf

Hiking

Ice Climbing

Kayaking

Lifeguarding

Lifetime Sports

Mountain Biking

Muscle Fitness

Outdoor Living Skills

Pickle Ball

Pilates

Rape Aggression Defense (RAD)

Rock Climbing

Rowing

Running

Skiing (Alpine and Cross Country)

Snowboarding

Snowshoeing

Soccer

Spinning

Squash

Street Hockey

Swim for Fitness

Swimming

Telemarking

Tennis

Trail Crew

Volleyball

Weight Training

Wellness

Wilderness Leadership

Yoga

Zumba

ASTRONOMY & ASTROPHYSICS (Div III)

Chair: Professor Jay Pasachoff

- Kevin Flaherty, Lecturer in Astronomy and Observatory Supervisor; affiliated with: Physics Department
- Anne Jaskot, Assistant Professor of Astronomy and Associate of the Hopkins Observatory; affiliated with: Physics Department; on leave Fall 2021
- Jay M. Pasachoff, Chair and Field Memorial Professor of Astronomy, Director of the Hopkins Observatory

How long will the Sun shine? How do we discover Earth-like planets among the many exoplanets circling other stars? How did the universe begin and how has it evolved over its 13.8-billion-year history? How do we detect not only light but also gravitational waves from afar? Astronomy is the science that asks and tries to answer questions like these. We have come a long way toward understanding what makes the sky appear as it does and how the Universe behaves. The Astronomy Department offers courses for anyone who is interested in learning about the Universe, and who would like to be able to follow new astronomical discoveries as they are made. All courses in Astronomy satisfy the Division III requirement. The Astronomy major and the Astrophysics major (administered jointly with the Physics Department) are described below.

The beginning astronomy courses are offered on two levels. Astronomy 101, 102, 104, and 330-range courses are intended primarily for non-science majors and have no prerequisite. Astronomy 111 is designed for students with some exposure to physics. It has a prerequisite of one year of high school physics or permission of the instructor, and a co-requisite of Mathematics 140 or equivalent background in calculus.

Most of the astronomy courses take advantage of our observational and computational facilities including a 24-inch computer-controlled telescope with sensitive electronic detectors, and our own computer network for image processing and data analysis. The Astronomy Department site can be found at astronomy.williams.edu.

ASTRONOMY MAJOR

The Astronomy major is designed for students with an interest in learning about many aspects of modern astronomy, but who do not choose to take the most advanced physics and math courses of the astrophysics major. It is also appropriate as a second major for students concentrating in another field; in particular, combining an Astronomy major with a related major like Geoscience or Computer Science has been a fruitful path for some of our students. The Astronomy major emphasizes understanding the observed properties of the physical systems that comprise the known Universe, from the Sun and solar system, to the evolution of stars and star clusters, to the Milky Way Galaxy, to external galaxies and clusters of galaxies. Because some knowledge of physics and calculus is necessary to understand many astronomical phenomena, the Astronomy major requires the first two semesters each of the physics and calculus that are also required of Physics majors and Astrophysics majors.

There are several possible routes through the Astronomy major, depending on preparation and interest. Students considering a major in Astronomy should consult with members of the department early and often. A first-year student, if unsure about choosing between Astronomy and Astrophysics, may wish to take not only Astronomy 111 but also Physics 131, 141, or 151 and Mathematics 140 (if necessary) in the fall. Students who might place out of physics courses should read the section on placement under Physics.

Major Requirements for Astronomy

Astronomy 111 Introduction to Astrophysics OR Astronomy 101 Stars: From Suns to Black Holes and either Astronomy 102 The Solar System—Our Planetary Home OR Astronomy 104 The Milky Way Galaxy and the Universe Beyond

Two 200-level Astronomy courses (or additional 400-level Astronomy courses as substitutes)

Two 400-level Astronomy courses

Physics 131 Particles and Waves OR Physics 141 Particles and Waves—Enriched OR equivalent placement

Physics 142 Foundations of Modern Physics or Physics 151 Seminar on Modern Physics

Mathematics 140 Calculus II

Mathematics 150 Multivariable Calculus OR Mathematics 151 Multivariable Calculus OR equivalent placement

The total number of courses required for the Astronomy major is nine. A typical path through the major will begin with Physics 141, which is suitable for students with one year of high school physics and a background in calculus. However, students without high school physics may begin with Physics 131, and students entering with Advanced Placement in physics and/or math may obtain credit toward the major for the equivalent of Physics 142 and/or Mathematics 150 or 151 taken elsewhere. There are some aspects of astronomy that are closely related to chemistry or geosciences. In recognition of this, certain advanced courses in those departments can be accepted for credit toward the Astronomy major.

THE DEGREE WITH HONORS IN ASTRONOMY

The honors degree in Astronomy will be awarded on the basis of a senior thesis presenting the results of an original observational, experimental, or theoretical investigation carried out by the student under the direction of a faculty member in Astronomy. There are no specific grade requirements (other than College-wide requirements for remaining in good academic standing) for entry into the thesis research program; however, a student wishing to do a thesis should have demonstrated both ability and motivation for independent work in previous courses and in any earlier research involvement. Students doing theses will normally choose a topic and an advisor early in the second semester of their junior year and usually begin their thesis work during the summer. During the senior year, those students whose proposals have been approved will elect two courses and a winter study project in addition to the minimum requirements for the major. Preparation for the thesis will occupy at least one course (Astronomy 493) and the winter study project (Astronomy 031). At the end of the winter study period, the department will decide, in consultation with each student, whether to admit that student to honors candidacy. Both a written thesis and an oral presentation to faculty and fellow students are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill the requirements with unusually high distinction.

The department will be flexible with regard to the number and timing of courses devoted to thesis research within the general guidelines of two courses and a winter study project over and above the minimum major requirements and the written and oral presentations, especially in cases of students with advanced standing and/or summer research experience. Students considering unusual requests are urged to consult with potential advisors or the department chair as early as possible.

ASTROPHYSICS MAJOR

The Astrophysics major is designed for students who want a rigorous introduction to the field, and includes not only those who plan graduate study in astronomy, astrophysics, or a closely related area, but also those interested in a wide variety of careers. Astrophysics alumni are not only astronomers but also computer scientists, geologists, teachers, doctors, lawyers, business school professors, and so on. In recent years, many astrophysics majors have had a second major in fields as wide ranging as mathematics, computer science, geosciences, economics, English, and art history. This major emphasizes the description of the Universe and its constituents in terms of physical processes. Potential Astrophysics majors should consult early with members of the Astronomy and Physics Departments to determine their most appropriate route through the major. An essential ingredient in such students' undergraduate training is experience in physics and mathematics. Therefore, the major normally will begin in the first year a student is at Williams with Physics 131, 141, or 151 and Mathematics 140 or 150 or 151 in the fall. Physics 141 is recommended for students with one year of high school physics and a background in calculus. Students with very good background placing them out of Physics 142 and out of Mathematics 140 may choose to take Physics 201 and Mathematics 150 or 151 instead. Astronomy 111 will often be taken in the fall of the sophomore year; however, many students take it in the fall of their first year at Williams, along with physics and math. Students who might place out of physics courses should read the section on placement under Physics; those who place out of Physics 131 or 141 into Physics 142 or 151 should particularly consider taking Astronomy 111 in the fall of their first year.

In addition to the major courses described below, other courses in geosciences, mathematics, and computer science may also be appropriate.

Major Requirements for Astrophysics

Astronomy 111 Introduction to Astrophysics OR Astronomy 101 Stars: From Suns to Black Holes and either Astronomy 102 The Solar System—Our Planetary Home OR Astronomy 104 The Milky Way Galaxy and the Universe Beyond

Physics 131 Particles and Waves OR Physics 141 Particles and Waves—Enriched OR equivalent placement

Physics 142 Foundations of Modern Physics OR Physics 151 Seminar on Modern Physics

Physics 201 Electricity and Magnetism

Physics 202 Waves and Optics

Physics/Mathematics 210 Mathematical Methods for Scientists

Physics 301 Introductory Quantum Physics

Mathematics 150 Multivariable Calculus OR Mathematics 151 Multivariable Calculus

Three 400-level astronomy courses OR two 400-level astronomy courses and one of the following:

Astronomy 211 Astronomical Observing and Data Analysis

Physics 302 Statistical Physics

Physics 402T Applications of Quantum Mechanics

Physics 405T Electromagnetic Theory

Physics 411T Classical Mechanics;

Physics 418 Gravity

The total number of courses required for the Astrophysics major, an interdisciplinary major, is eleven. Students entering with Advanced Placement in physics and/or mathematics may obtain credit toward the major for the equivalent of Physics 141 and/or Mathematics 140 and/or 150 or 151 taken elsewhere, but at least 8 courses in astronomy, physics, and mathematics must be taken at Williams. There are some aspects of astrophysics that are closely related to chemistry or geosciences. In recognition of this relation, certain advanced courses in those departments can be accepted for credit toward the Astrophysics major on a two-for-one basis. It is not possible to double major in Astrophysics and Physics.

THE DEGREE WITH HONORS IN ASTROPHYSICS

The honors degree in Astrophysics will be awarded on the basis of a senior thesis presenting the results of an original observational, experimental, or theoretical investigation carried out by the student under the direction of a faculty member in Astronomy or Physics. There are no specific grade requirements (other than College-wide requirements for remaining in good academic standing) for entry into the thesis research program; however, a student wishing to do a thesis should have demonstrated both ability and motivation for independent work in previous courses and in any earlier research involvement. Students doing theses will normally choose a topic and an advisor early in the second semester of their junior year and usually begin their thesis work during the summer. During the senior year, those students whose proposals have been approved will elect two courses and a winter study project in addition to the minimum requirements for the major. Preparation for the thesis will occupy at least one course (Astrophysics 493) and the winter study project (Astrophysics 031). At the end of the winter study period, the departments will decide, in consultation with each student, whether to admit that student to honors candidacy. Both a written thesis and an oral presentation to faculty and fellow students are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill the requirements with unusually high distinction.

The departments will be flexible with regard to the number and timing of courses devoted to thesis research within the general guidelines of two courses and a winter study project over and above the minimum major requirements and the written and oral presentations, especially in cases of students with advanced standing and/or summer research experience. Students considering unusual requests are urged to consult with potential advisors or the department chairs as early as possible.

STUDY ABROAD

FAQ

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, and complete syllabus including readings/assignments.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

No.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. PHYS 301, a required course for the Astrophysics major, is only taught in the fall, and is difficult to replicate abroad, especially regarding the lab component.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

None to date.

ASTR 101 (F) Stars: From Suns to Black Holes

For the new era of "multimessenger astronomy" (not only light and its like but also particles from space and gravitational waves): What makes a star shine? For how long will the Sun keep shining and what will happen to it then? What are black holes and how can they form? How and what have we found out about the recently gravitational radiation resulting from two giant black holes merging and, with additional signals in the spectrum, from the merger of two neutron stars? What do we learn about the Sun from total solar eclipses? Astronomy 101, a non-major, general introduction to the part of contemporary astronomy that includes how stars form and die, will provide answers to these questions. We pay special attention to recent exciting discoveries, including regular briefings and current emails plus bonus coverage of NASA's Mars2020 to Mars with the participation of Williams alumni/ae. Topics include discoveries with the Hubble Space Telescope, missions to discover planets around other stars, the latest huge telescopes and some results; how astronomers interpret the light received from distant celestial objects; and the Sun as a typical star. We discuss how pulsars and black holes result from the evolution of massive stars and how supermassive black holes lurk in galaxies/quasars. We discuss the discovery of thousands of "exoplanets" around stars other than the Sun, validating our choice of topics. We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of and on the same level as Astr 102 (solar system)/104 (galaxies/cosmology); students who have taken those courses are welcome. Observing sessions will include remote use of the telescopes for nighttime observations and daytime observations of the Sun, mainly remotely but with on-campus possibilities. There will be five laboratories, available both in afternoon sessions on campus or remotely.

Class Format: lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration, available both in place and remotely. Planetarium and Roof-Observatory TAs will be available for consultation, in addition to the instructors, throughout the semester. This course is also available asynchronously.

Requirements/Evaluation: two hour tests, a final exam, an observing portfolio, and lab reports

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: first enrolled

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Unit Notes: non-major course

Distributions: (D3)

Fall 2021

LEC Section: 01 TR 9:55 am - 11:10 am Jay M. Pasachoff, Kevin Flaherty

LAB Section: 02 T 1:00 pm - 2:30 pm Kevin Flaherty

LAB Section: 03 T 2:30 pm - 4:00 pm Kevin Flaherty

LAB Section: 04 W 1:00 pm - 2:30 pm Kevin Flaherty

LAB Section: 05 W 2:30 pm - 4:00 pm Kevin Flaherty

ASTR 102 (S) Our Solar System and Others

What makes Earth different from all the other planets? What have NASA's Curiosity and Perseverance on Mars (with their alumni/ae participation!) found about that planet's past running water and suitability for life? How has knowledge about Pluto and Arrokoth beyond it been transformed by NASA's flybys and the associated ground-based studies with which Williams College faculty and students participated? Will asteroids or comets collide with the Earth again? What is a solar eclipse like and how do we prepare for the April 8, 2024, totality? What do we learn from the rare transits of Mercury and of Venus that Williams faculty and students have studied? What may the new James Webb Space Telescope reveal about exoplanets and their atmospheres? Astronomy 102, a non-major, general introduction to the part of contemporary astronomy that comprises the study of the solar system (and the systems of planets around other stars), will provide answers to these questions and more. We will cover the historical development of humanity's understanding of the solar system, examining contributions by Aristotle, Ptolemy, Copernicus, Galileo, Kepler, Newton, Einstein, and others. We will discuss the discovery of over 4000 exoplanets around stars other than the Sun. The course gives special attention to exciting discoveries of the past few years by space probes and by the Hubble Space Telescope and the Kepler/K2/TESS missions, as well as plans and hopes for NASA's James Webb Space Telescope (which launched in December 2021). We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of, and on the same level as Astronomy 101 (stars and

stellar evolution) and 104 (galaxies and cosmology), and students who have taken those courses are welcome.

Class Format: lecture (three hours per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration. A planetarium demonstration will also take place, available both in place and remotely. Planetarium and Roof-Observing TAs will be available for consultation, in addition to the instructors, throughout the semester. This course is also available asynchronously.

Requirements/Evaluation: two hour tests, a final exam, an observing portfolio, and lab reports

Prerequisites: none

Enrollment Limit: 48

Enrollment Preferences: first enrolled

Expected Class Size: 30

Grading: yes pass/fail option, no fifth course option

LAB Section: 05 M 2:30 pm - 4:00 pm Kevin Flaherty

ASTR 104 (S) The Milky Way Galaxy and the Universe Beyond

It has been less than a century since the Sun was discovered not to be at the center of the Milky Way Galaxy, and the Milky Way Galaxy was determined to be only one of countless "island universes" in space. A host of technological advances is enabling us to understand even more clearly our place in the universe and how the universe began. For example, the recently discovered "chirp" from gravitational radiation (reported in 2016) resulting from two giant black holes merging, and the "chirp" from two neutron stars merging, also producing light, radio and x-ray radiation, has opened a whole different way of observing the Universe from the traditional use of light and other forms of electromagnetic radiation. We are now therefore in the new era of multimessenger astronomy. Further, the Hubble Space Telescope and the Chandra X-ray Observatory bring exceptionally clear images over a wider range of the spectrum; their images are aiding astronomers to better understand the past and future of the Universe, and new infrared images are expected with the launch of the James Webb Space Telescope. Observations with those and other new telescopes on the ground and in space help to confirm and enlarge our understanding of the Big Bang. In addition, study of the early Universe (most recently from the Planck spacecraft) and large-scale mapping programs such as the Sloan Digital Sky Survey, the European Space Agency's Gaia, and the Dark Energy Survey. Astronomy 104, a non-major, general introduction to part of contemporary astronomy comprising the study of galaxies and the Universe, explores the answers to questions like: What is the Milky Way?; Why are quasars so luminous?; Is the Universe made largely of "dark matter" and "dark energy"?; What determines the ultimate fate of the Universe? How have studies of Cepheid variables and distant supernovae with the Hubble Space Telescope determine that the Universe is 13.8 billion years old and indicated that the Universe's expansion is accelerating? How significant is the current discrepancy between the age and expansion rate of the Universe as measured from supernova observations as opposed to measurements from the cosmic background radiation? We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of, and on the same level as Astronomy 101 and 102, and students who have taken those courses are welcome.

Class Format: lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration, available both in place and remotely. Planetarium and Roof-Observatory TAs will be available for consultation, in addition to the instructors, throughout the semester. This course is also available asynchronously. Current astronomical discoveries will be discussed at the beginning of each class and by email throughout the semester.

Requirements/Evaluation: two hour tests, a final exam, lab reports, and an observing portfolio

Prerequisites: none; not open to students who have taken or are taking ASTR 330

Enrollment Limit: 25

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Unit Notes: non-major course

Distributions: (D3)

Not offered current academic year

ASTR 107 (F) Astrobiology

Cross-listings: GEOS 107 ASTR 107

Secondary Cross-listing

Astrobiology is the study of the origin, evolution, and distribution of life in the universe. As such it is an inherently interdisciplinary field, incorporating all of the basic natural sciences: biology, chemistry, physics, astronomy, and the earth sciences, as well as aspects of philosophy, sociology, and engineering. Questions we will seek answers to in this class include: How, why, when, and where did life evolve on Earth, and what does that tell us about how it might evolve elsewhere? What are the chances that there is life on other planets and moons in our solar system, and why? Are there habitable planets elsewhere in the universe, and will we ever truly know if any of them contain life? We will approach these questions using a combination of lectures, activities, labs, homework assignments, and visits from some of the country's leading Astrobiology researchers. Examples of lab and homework activities include exploring our definition of life by making observations about living and non-living systems, examining evidence for ancient habitable environments in rocks, and modeling chemical fingerprinting tools used by Mars rovers. Assessment will be based on participation, quizzes, labs and homework assignments, and a final group project where students will present a mock NASA mission proposal. This course requires no previous experience in the sciences. This course is in the Sediments and Life group for the Geosciences major.

Class Format: Lectures will be partially flipped with student responsible for watching videos before class; class time will be split between short lectures, small group activities, and class discussions. Lab groups will meet in person every other week and have group project work on alternate weeks that may be done virtually or in person.

Requirements/Evaluation: Assessment will be based on participation, quizzes, labs and homework assignments, and a final group project where students will present a mock NASA mission proposal.

Prerequisites: none

Enrollment Limit: 46

Enrollment Preferences: first year and second year students, Geosciences majors

Expected Class Size: 46

Grading: yes pass/fail option, yes fifth course option

Unit Notes: This course counts towards the GEOS Group B Electives - Sediments and Life

Distributions: (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

GEOS 107 (D3) ASTR 107 (D3)

Attributes: GEOS Group B Electives - Sediments + Life

Fall 2021

LEC Section: 01 TR 9:55 am - 11:10 am Phoebe A. Cohen

ASTR 111 (F) Introduction to Astrophysics (QFR)

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies. ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes remotely to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

Class Format: The class has 6 afternoon labs. Nighttime observing sessions will occur throughout the semester.

Requirements/Evaluation: weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

Prerequisites: a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

Enrollment Limit: 28

Enrollment Preferences: potential Astronomy majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

Fall 2021

LEC Section: 01 TR 11:20 am - 12:35 pm Marek Demianski, Kevin Flaherty

LAB Section: 02 M 1:00 pm - 4:00 pm Kevin Flaherty

LAB Section: 03 R 1:00 pm - 4:00 pm Kevin Flaherty

ASTR 211 (S) Astronomical Observing and Data Analysis (QFR)

How do astronomers make scientific measurements for objects that are light-years away from Earth? This course will introduce the basics of telescopes and observations and will give students hands-on training in the techniques astronomers use to obtain, process, and analyze scientific data. We will discuss observation planning, CCD detectors, signal statistics, image processing, and photometric and spectroscopic observations. We will begin by focusing on ground-based optical observations and will move on to non-optical observations, both electromagnetic (e.g., radio waves, X-rays) and non-electromagnetic (e.g., gravitational waves, neutrinos). Throughout the course, students will use computational techniques to work with real astronomical data, taken with our 24" telescope and from data archives.

Class Format: discussion, computer lab work, and observing

Requirements/Evaluation: weekly problem sets, lab work, and observing projects

Prerequisites: MATH 150 or 151; prior experience with Unix and computer programming is helpful, but not required

Enrollment Limit: 14

Enrollment Preferences: Astronomy or Astrophysics majors

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course requires regular problem sets. Labs require computer programming and statistical and graphical analyses of data.

Spring 2022

LEC Section: 01 MR 1:10 pm - 2:25 pm Anne Jaskot, Kevin Flaherty

LAB Section: 02 W 1:10 pm - 3:50 pm Kevin Flaherty

ASTR 217 (S) Planets and Moons

Cross-listings: ASTR 217 GEOS 217

Secondary Cross-listing

This course examines the history and geology of the solar system. No two planets are exactly alike, and as we acquire more data and higher-resolution images, our sense of wonder grows. However, we can't hike around and hammer rocks on Venus or Titan, so we have to infer composition, form, texture and process from remotely-captured images and sparse chemical and spectral data. We will consider the origin of the solar system, the formation and evolution of planetary bodies, and the role of impacts, volcanism, tectonics and geomorphology in shaping them. We will summarize basic geological concepts of stratigraphy, structure and chronology and show how they can be applied off-world. We will review solar

system exploration, and will include planetary data in lab exercises. This course is in the Solid Earth group for the Geosciences major.

Requirements/Evaluation: Periodic short quizzes, reading journal, lab exercises, class participation

Prerequisites: any 100-level GEOS or any 100-level ASTR course, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Geosciences majors, Astronomy/Astrophysics majors, and sophomores

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

ASTR 217 (D3) GEOS 217 (D3)

Attributes: GEOS Group C Electives - Solid Earth

Not offered current academic year

ASTR 240 (F) Great Astronomers and Their Original Publications (WS)

Cross-listings: ASTR 240 STS 240 HSCI 240 LEAD 240

Primary Cross-listing

In this course we will study some of the greatest figures in astronomy and consider their leadership in advancing progress in the field. We will consider their lives and works, especially as represented by original copies of their books and other publications. These great astronomers include: 16th century, Nicolaus Copernicus (heliocentric universe); Tycho Brahe (best pre-telescopic observations); 17th century, Galileo (discoveries with his first astronomical telescope, 1610; sunspots, 1613; *Dialogo*, 1632); Johannes Kepler (laws of planetary motion, 1609, 1619); Johannes Hevelius and Elisabeth Hevelius (atlases of the Moon and of stars, 1647, and 1687); Isaac Newton (laws of universal gravitation and of motion, 1687); 18th century, Edmond Halley (*Miscellanea curiosa*, eclipse maps, 1715, 1724); John Flamsteed and Margaret Flamsteed (*Atlas Coelestis*, 1729); and William Herschel and Caroline Herschel (1781, 1798). Also, from more recent times in which original works are often articles rather than books: 20th century, Albert Einstein (special relativity, 1905; general relativity, 1916); Marie Curie (radioactivity); Cecilia Payne-Gaposchkin (hydrogen dominating stars, 1929), Edwin Hubble (Hubble's law, 1929); Vera Rubin (dark matter, 1970s); Jocelyn Bell Burnell (pulsar discovery, 1968); and 21st century: Wendy Freedman (Universe's expansion rate, 2000s). First editions will be available in Williams's Chapin Library of rare books, and facsimiles or digital copies will be provided for remote learning. We will also consider how such original materials are collected and preserved, and look at examples from the wider world of rarities, such as a leaf from the *Gutenberg Bible* (c. 1450) and a Shakespeare *First Folio* (1623, with a discussion of astronomical references in Shakespeare's plays). We evaluate a trove of books and papers about historic transits of Venus. We discuss matters of fraud and authenticity, especially the case of a purported *Sidereus Nuncius*, shown to be a modern construction. The course will be taught in collaboration between an astronomer and a rare books librarian, with remote lectures by experts from around the world.

Class Format: Meeting on campus in the Chapin Library classroom (Sawyer 452) or remotely; students who are not on campus can visit the original books at a later time/year.

Requirements/Evaluation: class participation, two 5-page intermediate papers, and a final 15-page paper; student choice of additional readings from a provided reading list

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: if overenrolled, preference by written paragraph of explanation of why student wants to take the course

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

ASTR 240 (D3) STS 240 (D2) HSCI 240 (D3) LEAD 240 (D3)

Writing Skills Notes: Comments on submitted papers will aid in writing skills

Attributes: LEAD Facets or Domains of Leadership

Not offered current academic year

ASTR 317 (S) Current topics in Planetary Geology (WS)

Cross-listings: GEOS 317 ASTR 317

Secondary Cross-listing

We will look in detail at geological processes on rocky and icy bodies of the Solar System. Each week will have a specific theme, and students will read a series of scientific articles on that topic. The readings will form the basis for writing and discussion. Areas to be investigated may include ice ages on Mars, the origin of Earth's moon, tectonics on Venus, chaos terrain on Europa, geysers on Enceladus, cryovolcanism on Triton, methane lakes on Titan, the viability of mining in the Asteroid Belt, and the prospects for life on other worlds. This course is in the Solid Earth group for the Geosciences major.

Class Format: Students meet with the professor weekly, in pairs, with one student writing each week and the other critiquing; and both engaging in detailed discussion of the readings.

Requirements/Evaluation: Evaluation is based on written papers, critiques, and discussion.

Prerequisites: GEOS/ASTR 217 (Planets and Moons); OR any two courses at 200-level or higher in Geosciences and/or Astronomy; OR permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Geosciences and Astronomy majors and prospective majors

Expected Class Size: 6

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

GEOS 317 (D3) ASTR 317 (D3)

Writing Skills Notes: This tutorial-style course focuses on writing, with 6 papers (5-7 pages) written bi-weekly throughout the semester, and partner critiques in alternate weeks.

Attributes: GEOS Group C Electives - Solid Earth

ASTR 330 (S) The Nature of the Universe

This course is a journey through space and time from the first fractions of a second after the Big Bang to the ultimate fate of the Universe billions of years into the future. Topics include the Big Bang and its remnant cosmic background radiation, cosmic inflation, conditions during the first three minutes, creation of the elements, stellar and galactic black holes, relativity, the detection of gravitational waves, galaxies and quasars, dark matter, and the formation of the large-scale structure of the Universe. We will explore current ideas about the fate of our Universe, including the acceleration of its expansion, and its implications for the end of time. Finally, we will consider the fantastic but serious theoretical proposal that ours is but one of countless universes existing within a *multiverse*.

Class Format: This is a remote course. Synchronous lectures and break-out discussions will take place during the scheduled class time. These lectures may be recorded for the benefit of students in substantially different time zones; these students will then schedule a separate small-group discussion time in consultation with the professor. Remote observing sessions will occur throughout the semester.

Requirements/Evaluation: two midterm exams, a small observing portfolio, occasional quizzes, and a final exam

Prerequisites: none

Enrollment Limit: 48

Enrollment Preferences: open only to juniors and seniors; closed to students who have taken or are taking ASTR 104, and closed to ASTR, ASPH, and PHYS majors; preference given to seniors

Expected Class Size: 25

Grading: yes pass/fail option, no fifth course option

Unit Notes: non-major course; course in the 33X sequence are meant as general education courses for students in all majors

Distributions: (D3)

Not offered current academic year

ASTR 336 (S) Science, Pseudoscience, and the Two Cultures

Cross-listings: LEAD 336 ASTR 336 HSCI 336

Primary Cross-listing

A famous dichotomy between the sciences and the humanities, and public understanding of them, was laid down by C. P. Snow and has been widely discussed, with ignorance of the second law of thermodynamics compared with ignorance of Shakespeare. In this seminar, we will consider several aspects of science and scientific culture, including how scientific thinking challenges the claims of pseudoscience. We will consider C. P. Snow and his critics as well as the ideas about the Copernican Revolution and other paradigms invented by Thomas Kuhn. We will discuss the recent "Science Wars" over the validity of scientific ideas. We will consider the fundamental originators of modern science, including Tycho, Kepler, Galileo, and Newton, viewing their original works in the Chapin Library of rare books and comparing their interests in science with what we now call pseudoscience, like alchemy. We will review the history and psychology of astrology and other pseudosciences. Building on the work of Martin Gardner in *Fads and Fallacies in the Name of Science*, and using such recent journals as *The Skeptical Inquirer* and *The Scientific Review of Alternative Medicine*, we consider from a scientific point of view what is now called complementary or alternative medicine, including both older versions such as chiropractic and newer nonscientific practices. We will discuss the current global-climate-change deniers and their effects on policy. We discuss vaccination policy. We consider such topics as GM (genetically modified) foods, the safety and regulation of dietary supplements, and the validity of government and other recommendations relevant to the roles of dietary salt, sugar, and fat in health. We consider the search for extraterrestrial intelligence (SETI) and reports of UFO's and aliens. We consider the possible effects that superstitious beliefs have on the general public's cooperation in vaccination programs and other consequences of superstition. We will discuss conspiracy theories such as those about the Kennedy assassination, in view of the 2017 release of many documents from the time and the recent book by Alexandra Zapruder, the granddaughter of the person whose on-the-spot movie documented the fatal shot. We also consider a range of dramas that are based on scientific themes, such as Tom Stoppard's *Arcadia* and Michael Frayn's *Copenhagen*.

Requirements/Evaluation: biweekly 5-page papers, participation in discussions, and a 15-page final paper

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: juniors and seniors and to those with backgrounds in science, history of science, or philosophy

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Unit Notes: non-major course; does not count toward ASPH, ASTR or PHYS major

ASTR 402 (S) Between the Stars: The Interstellar Medium (QFR)

The matter between the stars--the interstellar medium--tells the story of the past and future evolution of galaxies and the stars within them. Stars are accompanied by diffuse matter all through their lifetimes, from their birthplaces in dense molecular clouds, to the stellar winds they eject as they evolve, to their final fates as they shed their outer layers, whether as planetary nebulae or dazzling supernovae. As these processes go on, they enrich the interstellar medium with the products of the stars' nuclear fusion. Interpreting the emission from this interstellar gas is one of astronomers' most powerful tools to measure the physical conditions, motions, and composition of our own galaxy and others. In this course we will study the interstellar medium in its various forms, from cold, dense, star-forming molecular clouds to X-ray-emitting bubbles formed by supernovae. We will learn about the physical mechanisms that produce the radiation we observe, including radiative ionization and recombination, collisional excitation of "forbidden" lines, collisional ionization, and synchrotron radiation. Applying our understanding of these processes, we will analyze the physical conditions and chemical compositions of a variety of nebulae. Finally, we will discuss the evolution of interstellar material in galaxies across cosmic time. This course is observing-intensive. Throughout the semester students will work in small groups to design, carry out, analyze, and critique their own observations of the interstellar medium using remote observations and archival data.

Class Format: Tutorial meetings will be scheduled with the professor. Meetings may be held in-person, subject to classroom availability, or remotely. Students will also complete observing projects by controlling telescopes remotely and analyzing observations in astronomical databases.

Requirements/Evaluation: weekly problem sets, 10-page final paper, and observing projects

Prerequisites: ASTR 111 and PHYS 201 or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: juniors and seniors

Expected Class Size: 6

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: In this course, students will derive quantitative physical formulas, use these equations to calculate and compare physical properties, and generate and analyze graphical representations of data. They will also make and analyze measurements of astronomical data through observing projects.

Not offered current academic year

ASTR 404 (S) Unsolved Problems in Galaxy Evolution

In this tutorial, we will learn about galaxies and their evolution by focusing on some of the key mysteries astronomers are trying to solve. Questions may include: How do galaxies turn their gas supply into stars? Is there a universal initial mass function for star formation? What is the origin of multiple stellar populations in globular clusters? Why do some galaxies cease star formation? Which galaxies reionized the universe? We will discuss the nature of each unsolved problem, debate the theories proposed to answer it, and consider how future progress might be made.

Requirements/Evaluation: student's papers, responses to the partner's papers, and problem sets

Prerequisites: ASTR 111 and PHYS 142 or 151 or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Juniors and Seniors

Expected Class Size: 6

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

ASTR 412 (F) Heliophysics

Cross-listings: ASTR 412 PHYS 412

Primary Cross-listing

We study all aspects of the Sun, our nearest star. In addition to discussing our observations of recent eclipses and what has been learned about the solar atmosphere from eclipse research, we discuss the solar interior (including the Nobel-prize-winning solar neutrino experiment and helioseismology), the photosphere, the chromosphere, the corona, and the solar wind. We discuss the Sun as an example of stars in general. We discuss both theoretical aspects and observational techniques, including work at recent total solar eclipses. We discuss results from current spacecraft, including the Solar and Heliospheric Observatory (SOHO), the Solar Dynamics Observatory, the Sun Watcher (SWAP), and Hinode (Sunrise), and the newer GOES/UVSI (Solar Ultraviolet Imager) run by an alumnus as well as additional Total Solar Irradiance measurements from spacecraft. We will discuss the role of solar observations in confirming Einstein's General Theory of Relativity with the bending of light at the 1919, 1922, and 2017 total solar eclipses as well as gravitational redshift measurements in solar spectral lines, extending our discussion to the recent "chirp" of gravitational radiation reported from several colliding black holes and neutron stars observed with the Laser Interferometer Gravitational-wave Observatory (LIGO). We also discuss transits of Mercury across the face of the Sun, most recently on November 11, 2019. We highlight the 2004 and 2012 transits of Venus across the face of the Sun as observed from Earth, the first such transits of Venus since 1882, as well as our work in observing transits of Venus from Jupiter with the Hubble Space Telescope. We discuss plans for observing future total solar eclipses, including those of December 4, 2021, near or over Antarctica; October 23, 2023, in northwestern Australia; and April 8, 2024, over Mexico and a U.S. path from Texas to northern New England.

Requirements/Evaluation: biweekly tutorial presentations; biweekly response to colleagues' presentations

Prerequisites: ASTR 111 or a 200-level Physics course; or permission of the instructor

Winter Study -----

ASTR 13 (W) Meteorology inside and outside of total eclipses

We will discuss and use the meteorology station (temperature/pressure/wind) purchased jointly by the Astronomy Department and the Environmental Analysis Lab. Its first use was to measure the meteorological effects of the abrupt darkening of the solar radiation by a factor of a million during the 2017 total solar eclipse that swept across the United States, and we look forward to using it similarly during the October 2023 annular and April 2024 total eclipses in the U.S. In the meantime, we can set it up on campus and assess it and other local meteorological methods using both real-world weather events in addition to a variety of student-designed experimental weather scenarios. The instructor, Prof. Marcos Peñaloza-Murillo, is a Venezuelan atmospheric scientist who spent a Fulbright year and another academic year in the Astronomy Department at Williams from his home location in Mérida, Venezuela.

Requirements/Evaluation: Short paper and final project or presentation

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: A paragraph to express interest could be used

Grading: pass/fail only

Unit Notes: Marcos Peñaloza-Murillo, an atmospheric-physics professor emeritus from Venezuela, spent a Fulbright year and an additional year at Williams working with faculty and students on the response of Earth's atmosphere to the darkening caused by solar eclipses.

Materials/Lab Fee: none

ASTR 16 (W) An Infinity of Worlds: Planets and the Search for Life

Less than a generation ago, we wondered, as we had for millions of years before, whether there were any other planets at all. Now, we are privileged to be in the first generation of humans to know that many of the points of light dusting our night sky are host to orbiting worlds, some of which may be like our Earth. In this course, we will explore the techniques that are being used to discover these new worlds. We will make our own contributions to this great age of discovery, by using NASA spacecraft data to search for new planets. This course, aimed at non-majors, will deal with the science of planet hunting, the astounding diversity of planets known to exist, the emerging science of astrobiology, and the enduring question of "are we alone?" through works of science fiction and cutting-edge research.

Requirements/Evaluation: 10-page paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: If overenrolled, preference will be given to first-years and sophomores

Grading: pass/fail only

Unit Notes: Rob Wittenmyer '98 is Professor of astrophysics at the University of Southern Queensland in Australia. He is a veteran planet hunter with more than 85 published planet discoveries and is the Chief Investigator of the Minerva-Australis observatory which is NASA's key Southern ground support for the Transiting Exoplanet Survey Satellite.

Materials/Lab Fee: none

- Catherine Kealhofer, Assistant Professor of Physics
- Protik K. Majumder, Barclay Jermain Professor of Natural Philosophy
- Frederick W. Strauch, Chair and William Edward McElfresh Professor of Physics
- David R. Tucker-Smith, Halvorsen Professor for Distinguished Teaching and Research of Physics

What is light? How does a laser work? What is a black hole? What are the fundamental building blocks of the universe? Physics majors and Astrophysics majors study these and related questions to understand the physical world around us, from the very small to the very large. A physics student practices the experimental methods used to learn about this world and explores the mathematical techniques and theories developed to explain these physical phenomena. A Physics major or Astrophysics major serves as preparation for further work in physics, astrophysics, applied physics, other sciences, engineering, medical research, science teaching and writing, and other careers involving critical thinking, problem-solving, and insight into the fundamental principles of nature.

ASTROPHYSICS MAJOR

The Physics Department, in cooperation with the Astronomy Department, offers a major in Astrophysics. [More information about the Astrophysics major can be found on the Astronomy Department site.](#)

PHYSICS MAJOR

Introductory Courses

Students considering a major in physics should take both physics and mathematics as first-year students. Students typically begin with Physics 141 and Mathematics 150 or 151 (multivariable calculus); students who wish to begin with Physics 131 should consult with the department.

Physics 131 Introduction to Mechanics. This is designed as a first course in physics. It is suitable for students who either have not had physics before or have had some physics but are not comfortable solving "word problems" that require calculus.

Physics 141 Mechanics and Waves. Students in this course should have solid backgrounds in science and calculus, either from high school or college, including at least a year of high school physics.

The Department of Mathematics will place students in the appropriate introductory calculus course. The physics major sequence courses all make use of calculus at increasingly sophisticated levels. Therefore, students considering a Physics major should continue their mathematical preparation without interruption through the introductory calculus sequence (Mathematics 130, 140, and 150 or 151). Students are encouraged to take Physics 210 as early as possible.

ADVANCED PLACEMENT

Students with unusually strong backgrounds in calculus and physics may place out of Physics 141 and either: 1) begin with the special seminar course Physics 151 in the fall (typically followed by Physics 210 in the spring), or 2) begin with Physics 142 in the spring (possibly along with Physics 210). Students may take either 151 or 142 but not both. On rare occasions a student with an exceptional background will be offered the option of enrolling in Physics 201.

Placement is based on AP scores, consultation with the department, and results of a placement exam administered during First Days. The exam can also be taken later in the year by arrangement with the department chair. The exam covers classical mechanics, basic wave phenomena, and includes some use of calculus techniques.

REQUIREMENTS FOR THE MAJOR

A total of ten courses, nine in physics and one in mathematics, are required to complete the Physics major.

Required Physics Sequence Courses (7)

Physics 141 Mechanics and Waves

Physics 142 Foundations of Modern Physics

or Physics 151 Seminar in Modern Physics

Physics 201 Electricity and Magnetism

Physics 202 Waves and Optics

Physics 210 Mathematical Methods for Scientists

Physics 301 Quantum Physics

Physics 302 Statistical Mechanics and Thermodynamics

Required Mathematics Course (1)

Mathematics 150 or 151 Multivariable Calculus

Students entering with Advanced Placement in mathematics may obtain credit toward the major for the equivalent Mathematics 150 or 151 taken elsewhere.

Elective Courses (2)

At least two more physics courses above the 100 level (or other approved courses as noted below) must be taken, bringing the total number of courses for the major to ten.

Students who place out of Physics 141 must substitute one additional elective course, for a total of ten courses.

Students who place out of both Physics 141 and 142 and begin their studies in Physics 201 must substitute one additional elective course, for a total of nine courses.

Options

- Mathematics 209 or 309 may substitute for Physics 210.
- Astronomy 111 may count in place of Physics 141 if a student places out of 141 (see "advanced placement" above).
- An additional Astronomy or Astrophysics course above the introductory level that is acceptable for the astrophysics major may be counted.
- Two approved Division III courses may be substituted for one Physics course. Approval is on an individual basis at the discretion of the department chair.
- Honors work is in addition to completion of the basic major so Physics 493 and 494 do not count towards the ten courses in the major.

PREPARATION FOR ADVANCED STUDY

Students who wish to do graduate work in physics, astrophysics, or engineering should elect courses in both physics and mathematics beyond the minimum major requirements. The first-year graduate school curriculum in physics usually includes courses in quantum mechanics, electromagnetic theory, and classical mechanics that presuppose intermediate level study of these subjects as an undergraduate. Therefore, students planning graduate work in physics should elect all of the following courses:

Physics 402T Applications of Quantum Mechanics

Physics 405T Electromagnetic Theory

Physics 411T Classical Mechanics

ADVISING

Both majors and non-majors are encouraged to consult with the department chair or course instructors about course selections or other matters.

THE DEGREE WITH HONORS IN PHYSICS

The degree with honors in Physics will be awarded on the basis of a senior thesis presenting the results of a substantial experimental or

theoretical investigation carried out under the direction of a faculty member in the department. There is no rigid grade point average required for admission to the program or for the awarding of the degree with honors, but it is normally expected that honors students will maintain at least a B average in physics and mathematics. Students will normally apply for admission to the program early in the spring of their junior year and during senior year these students will normally elect Physics 493, W31, and 494 in addition to the usual requirements for the major. At the end of winter study, the department will decide whether the student will be admitted to honors candidacy. Both a written thesis and a colloquium presentation of the results are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill them with unusually high distinction.

Honors candidates will also be required to attend departmental colloquium talks.

STUDY ABROAD

The physics community is international in scope and a career in physics (or a related field) can provide many opportunities for travel and contact with individuals from outside the United States. The physics major at Williams is a carefully structured four-year program designed to prepare students who are so inclined for graduate study at leading research institutions. While it is possible to complete the major requirements in three years, such a major will not usually not lead to further study in the field. With careful early planning on the part of a student, and close consultation with the department chair, it is possible to complete a strong major and still study abroad provided the foreign institution can provide courses which reasonably substitute or supplement those in the Williams major program. Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Here are answers to frequently asked questions related to study abroad:

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

No.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. The laboratory component of Physics 301 serves as our "advanced lab course." Students often cannot get equivalent experience abroad and must take this when they return senior year (non-credit). Unless there has been a recent change, our own Oxford Program is one place students cannot get lab experience.

OPTIONS FOR NON-MAJORS

Many students want to take a self-contained and rigorous full-year survey of physics. For such students, the most appropriate sequence will be either Physics 131 or Physics 141 followed by Physics 132, depending on the student's background in science and mathematics (see Introductory Courses above). Either of these sequences satisfies the physics requirement for medical school.

The department also offers one-semester courses designed for non-majors, including Physics 107, Physics 108, and Physics 109.

PHYS 106 (F) Being Human in STEM (DPE)

Cross-listings: PHYS 106 GEOS 106 STS 106

Primary Cross-listing

This course combines academic inquiry and community engagement to investigate the themes of diversity and social climate within STEM (science, technology, engineering and mathematics) disciplines. Students will examine how diverse identities including but not limited to gender, race, disability,

sexuality, national origin, socioeconomic status, religion, and ethnicity shape the STEM experience both at Williams and nationally. We will ground our understanding through critical reading of primary scholarly research on topics such as implicit bias, identity threat, and effects of team diversity on excellence. From there, we will execute small group projects. Students will design, execute, and evaluate interventions that relate to the course goals and that have direct relevance to Williams students, faculty, and staff. For example, a student group could implement a survey of minoritized STEM students, or create a qualitative interview-based assessment of how socioeconomic status impacts students' abilities to participate in STEM fields. Course work includes weekly readings, reflective/opinion writing, in class discussion, and the development and presentation of a group project.

Class Format: class discussions, group project work (out of class time required)

Requirements/Evaluation: short response papers, class discussion participation, leading class discussions, group work, and final project

Enrollment Limit: 15

Enrollment Preferences: DIV III majors; statement of interest may be requested

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Unit Notes: does not count towards GEOS or PHYS major credit

Distributions: (D3) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 106 (D3) GEOS 106 (D3) STS 106 (D2)

Difference, Power, and Equity Notes: This course explicitly addresses the intersection of marginalized identities and the STEM experience. Students will learn how to critically address how issues such as gender, race, ethnicity, and disability impact participation in and the experience of STEM fields. For example, students will read and critique literature documenting bias in STEM fields, and will also learn about and create interventions that can address these biases.

Not offered current academic year

PHYS 107 (F) Spacetime and Quanta (QFR)

Quantum mechanics and Einstein's relativity both drastically altered our view of the physical world when they were developed in the early twentieth century. In this course we will learn about the central concepts that define relativity and quantum mechanics, along with some of the diverse phenomena the two theories describe. These investigations will prepare us to discuss developments in condensed matter: explaining what makes materials different along with discussing exotic effects like superconductivity and superfluidity. We will also discuss recent developments in cosmology, where observations have produced a surprising picture for the make-up of our universe. This course is intended for students whose primary interests lie outside of the natural sciences and mathematics. The mathematics used will be algebra and trigonometry.

Class Format: lecture twice a week and conference section once a week (20 per conference section)

Requirements/Evaluation: weekly problem sets, quizzes, two midterms, and a final exam, all with a significant quantitative component

Prerequisites: none

Enrollment Limit: 40

Enrollment Preferences: by seniority

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Not offered current academic year

Cross-listings: ENVI 108 PHYS 108

Primary Cross-listing

Energy use has skyrocketed in the United States and elsewhere in the world, causing significant economic and political shifts, as well as concerns for the environment. This course will address the physics and technology of energy generation, consumption, and conservation. It will cover a wide range of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating, and building lighting. Students will learn to compare the efficiencies and environmental impacts of various energy sources and uses.

Class Format: twice a week, occasional lab exercises, and a field trip to the college heating plant, all during class hours

Requirements/Evaluation: weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative

Prerequisites: high school physics, high school chemistry, and mathematics at the level of MATH 130

Enrollment Limit: 20

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 109 (F) Sound, Light, and Perception (QFR)

Light and sound allow us to perceive the world around us, from appreciating music and art to learning the details of atomic structure. Because of their importance in human experience, light and sound have long been the subject of scientific inquiry. How are sound and light related? How do physiology and neural processing allow us to hear and see the world around us? What are the origins of color and musical pitch? This course introduces the science and technology of light and sound to students not majoring in physics. We will start with the origins of sound and light as wave phenomena, and go on to topics including color, the optics of vision, the meaning of musical pitch and tone, and the physical basis of hearing. We will also discuss some recent technological applications of light, such as lasers and optical communications. The class will meet for two 75-minute periods each week for a variable mixture of lecture, discussion, and hands-on, interactive experiments.

Class Format: each student will attend one lecture plus one conference section weekly

Requirements/Evaluation: class participation, problem sets, in-class exams, oral presentations, and a final exam, all with a quantitative component

Prerequisites: none

Enrollment Limit: 40

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students signing up for the Thursday 2:35 PM conference section must also be available on Thursdays from 1:10-2:25 PM

Distributions: (D3) (QFR)

Not offered current academic year

PHYS 131 (F) Introduction to Mechanics (QFR)

We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.

Requirements/Evaluation: exams, labs, and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead

Enrollment Limit: 30

Enrollment Preferences: seniority

Expected Class Size: 60

Grading: yes pass/fail option, yes fifth course option

Unit Notes: PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a

Physics or Astrophysics major)

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This class will have weekly problem sets requiring substantial quantitative reasoning

Fall 2021

LAB Section: 03 T 1:00 pm - 4:00 pm Graham K. Giovanetti

PHYS 132 (S) Electromagnetism and the Physics of Matter (QFR)

This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics, radioactivity, and uses of radiation.

Class Format: lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately every other week

Requirements/Evaluation: weekly problem sets, labs, quizzes and exams

Prerequisites: PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)

Enrollment Limit: 22 per lab

Enrollment Preferences: sophomores

Expected Class Size: 60

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Significant homework, exams, quizzes requiring mathematical and physical reasoning.

PHYS 141 (F) Mechanics and Waves (QFR)

This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

Class Format: lecture, three hours per week; laboratory, three hours approximately every other week; conference section, one hour approximately every other week

Requirements/Evaluation: weekly problem sets, labs, three or more short quizzes/tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: high school physics and MATH 130 or equivalent placement, or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: first-year students and science majors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a

Physics or Astrophysics major)

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

PHYS 142 (S) Foundations of Modern Physics (QFR)

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires we rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of physics or as the basis for future advanced study of these topics.

Class Format: lecture, two hours weekly; problem-solving conference session, one hour weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and discussion of research literature (limit 10 per lab, 14 per conference section)

Requirements/Evaluation: weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151

Enrollment Limit: 14/C, 10/L

Enrollment Preferences: first-year students

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

Spring 2022

PHYS 151 (F) Seminar in Modern Physics (QFR)

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity has extended physics into the realm of high speeds and high energies and requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our notions of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course covers the same core material as PHYS 142 but in a small seminar format for students with strong prior preparation in physics.

Class Format: Two 50-minute lectures per week, one 50-minute conference section per week, one 3-hour lab per week

Requirements/Evaluation: class participation, weekly lab/conference assignments, weekly problem sets, final paper, two hour-exams and a final

exam;

Prerequisites: placement by the department (see "advanced placement" section in the description about the department). Students may take either PHYS 142 or PHYS 151 but not both

Enrollment Limit: 18

Enrollment Preferences: first-years

Expected Class Size: 18

Grading: yes pass/fail option, yes fifth course option

Unit Notes: this is a small seminar designed for first-year students who have placed out of PHYS 141

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: besides the final paper, all assignments in the course have a substantial quantitative component

Fall 2021

LAB Section: 04 W 1:00 pm - 4:00 pm Catherine Kealhofer

PHYS 201 (F) Electricity and Magnetism (QFR)

The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell's equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: problem sets, labs/conference section assignments, two take-home midterms, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151

Enrollment Limit: 10 per lab

Enrollment Preferences: prospective physics majors, then by seniority

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

PHYS 202 (S) Vibrations, Waves and Optics (QFR)

Waves and oscillations characterize many different physical systems, including vibrating strings, springs, water waves, sound waves, electromagnetic waves, and gravitational waves. Quantum mechanics even describes particles with wave functions. Despite these diverse settings waves exhibit several common characteristics, so that the understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. The rest of the course focuses on electromagnetic waves and in

particular on optical examples of wave phenomena. In addition to well known optical effects such as interference and diffraction, we will study a number of modern applications of optics such as short pulse lasers and optical communications. Throughout the course mathematical methods useful for higher-level physics will be introduced.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: problem sets, labs, in-class tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 201; co-requisite: PHYS/MATH 210 or MATH 209 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: sophomores

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course has substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

PHYS 210 (S) Mathematical Methods for Scientists (QFR)

Cross-listings: PHYS 210 MATH 210

Primary Cross-listing

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit: 50

Enrollment Preferences: sophomores and juniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

PHYS 234 (S) Introduction to Materials Science (QFR)

Cross-listings: GEOS 234 PHYS 234

Primary Cross-listing

Materials Science is the study of how the microscopic structure of materials--whether steel, carbon fiber, glass, wood, plastic, or mayonnaise--determines their macroscopic mechanical, thermal, electric, and other properties. Topics of this course include classifying materials; material structure; thermodynamics and phase transformations; material properties and testing; how solids bend, flow, and ultimately break; and how to choose the right material for design applications. Materials Science is a highly interdisciplinary field and as a result the course prerequisites are broad but also flexible. Interested students who are unsure about their preparation are strongly encouraged to contact the instructor.

Class Format: lecture (3 hours per week) plus three to four small-group laboratory sessions throughout the semester (to be scheduled with instructor)

Requirements/Evaluation: weekly problem sets, class participation, and midterm and final exams, all of which have a substantial quantitative component

Prerequisites: high school physics and chemistry, preferably at the AP level, and MATH 140 or AP Calculus (BC), and one 200-level PHYS, CHEM, or GEOS course; or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: based on students' scientific background and seniority

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: This course does not count toward the Geosciences major.

Attributes: MTSC Courses

Not offered current academic year

PHYS 301 (F) Quantum Physics (QFR)

This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics. After a brief discussion of historical origins of the quantum theory, we introduce the Schrodinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309

Enrollment Limit: 20

Enrollment Preferences: physics majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

PHYS 302 (S) Statistical Mechanics & Thermodynamics (QFR)

Macroscopic objects are made up of huge numbers of fundamental particles interacting in simple ways--obeying the Schrödinger equation, Newton's and Coulomb's Laws--and these objects can be described by macroscopic properties like temperature, pressure, magnetization, heat capacity, conductivity, etc. In this course we will develop the tools of statistical physics, which will allow us to predict the cooperative phenomena that emerge in large ensembles of interacting particles. We will apply those tools to a wide variety of physical questions, including the behavior of gases, polymers, heat engines, biological and astrophysical systems, magnets, and electrons in solids.

Class Format: lecture/discussion three hours per week and weekly laboratory work

Requirements/Evaluation: weekly problem sets, exams, and labs, all of which have a substantial quantitative component

Prerequisites: required: PHYS 201, PHYS/MATH 210 or MATH 309; recommended: PHYS 202, PHYS 301

Enrollment Limit: 10 per lab

Enrollment Preferences: physics majors

PHYS 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)

Cross-listings: MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

Secondary Cross-listing

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

Class Format: two afternoons of lab, with one hour of lecture, per week. In most weeks, we will meet one day for lecture discussions.

Requirements/Evaluation: lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

Prerequisites: BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

Enrollment Limit: 12

Enrollment Preferences: seniors, then juniors, then sophomores

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

Quantative/Formal Reasoning Notes: Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

Attributes: BIGP Courses BIMO Interdepartmental Electives

Not offered current academic year

PHYS 321 (S) Introduction to Particle Physics (QFR)

The Standard Model of particle physics incorporates special relativity, quantum mechanics, and almost all that we know about elementary particles and their interactions. This course introduces some of the main ideas and phenomena associated with the Standard Model. After a review of relativistic kinematics, we will learn about symmetries in particle physics, relativistic wave equations, Feynman diagrams, and selected applications of quantum electrodynamics, the weak interactions, and quantum chromodynamics. We will conclude with a discussion of spontaneous symmetry breaking and the Higgs mechanism.

Class Format: Hybrid

Requirements/Evaluation: weekly problem sets, a midterm exam, and a final exam

Prerequisites: PHYS 301

Enrollment Limit: 15

Enrollment Preferences: By seniority

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Exams and problem sets all have a significant quantitative component.

Not offered current academic year

PHYS 402 (S) Applications of Quantum Mechanics (QFR)

This course will explore a number of important topics in the application of quantum mechanics to physical systems, including perturbation theory, the variational principle and the semiclassical interaction of atoms and radiation. The course will finish up with three weeks on quantum optics including an experimental project on non-classical interference phenomena. Applications and examples will be taken mostly from atomic physics with some discussion of solid state systems.

Class Format: hybrid

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 301

Enrollment Limit: 10 per sec

Enrollment Preferences: Physics and Astrophysics Majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

TUT Section: T1 F 1:10 pm - 2:25 pm Frederick W. Strauch

PHYS 411 (F) Classical Mechanics (QFR)

This course will explore advanced topics in classical mechanics including the calculus of variations, the Lagrangian and Hamiltonian formulations of mechanics, phase space, non-linear dynamics and chaos, central-force motion, non-inertial reference frames (including implications for physics on a rotating Earth), and rigid-body rotations. Numerical and perturbative techniques will be developed and used extensively. We will also examine the ways in which classical mechanics informs other fields of physics. In addition to weekly tutorial meetings the class will meet once a week as a whole to discuss new material.

Class Format: hybrid

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, a final project, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 209

Enrollment Limit: 10/section

Enrollment Preferences: majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: weekly problem sets requiring substantial quantitative reasoning using analytical and numerical methods.

Not offered current academic year

PHYS 412 (F) Heliophysics

Cross-listings: ASTR 412 PHYS 412

Secondary Cross-listing

We study all aspects of the Sun, our nearest star. In addition to discussing our observations of recent eclipses and what has been learned about the solar atmosphere from eclipse research, we discuss the solar interior (including the Nobel-prize-winning solar neutrino experiment and helioseismology), the photosphere, the chromosphere, the corona, and the solar wind. We discuss the Sun as an example of stars in general. We discuss both theoretical aspects and observational techniques, including work at recent total solar eclipses. We discuss results from current spacecraft, including the Solar and Heliospheric Observatory (SOHO), the Solar Dynamics Observatory, the Sun Watcher (SWAP), and Hinode (Sunrise), and the newer GOES/UVSI (Solar Ultraviolet Imager) run by an alumnus as well as additional Total Solar Irradiance measurements from

spacecraft. We will discuss the role of solar observations in confirming Einstein's General Theory of Relativity with the bending of light at the 1919, 1922, and 2017 total solar eclipses as well as gravitational redshift measurements in solar spectral lines, extending our discussion to the recent "chirp" of gravitational radiation reported from several colliding black holes and neutron stars observed with the Laser Interferometer Gravitational-wave Observatory (LIGO). We also discuss transits of Mercury across the face of the Sun, most recently on November 11, 2019. We highlight the 2004 and 2012 transits of Venus across the face of the Sun as observed from Earth, the first such transits of Venus since 1882, as well as our work in observing transits of Venus from Jupiter with the Hubble Space Telescope. We discuss plans for observing future total solar eclipses, including those of December 4, 2021, near or over Antarctica; October 23, 2023, in northwestern Australia; and April 8, 2024, over Mexico and a U.S. path from Texas to northern New England.

Requirements/Evaluation: biweekly tutorial presentations; biweekly response to colleagues' presentations

Prerequisites: ASTR 111 or a 200-level Physics course; or permission of the instructor

Enrollment Limit: 10

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

ASTR 412 (D3) PHYS 412 (D3)

Fall 2021

TUT Section: T1 TBA Jay M. Pasachoff

PHYS 418 (S) Gravity (QFR)

This course is an introduction Einstein's theory of general relativity. We begin with a review of special relativity, emphasizing geometrical aspects of Minkowski spacetime. Working from the equivalence principle, we then motivate gravity as spacetime curvature, and study in detail the Schwarzschild geometry around a spherically symmetric mass. After this application, we use tensors to develop Einstein's equation, which describes how energy density curves spacetime. With this equation in hand we study the Friedmann-Robertson-Walker geometries for an expanding universe, and finally, we linearize Einstein's equation to develop the theory of gravitational waves.

Requirements/Evaluation: weekly problem sets, a midterm exam, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 301 or PHYS 405 or PHYS 411, or permission of instructor

Enrollment Limit: none

Enrollment Preferences: none

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: All problem sets and exams will have a substantial quantitative component.

Spring 2022

LEC Section: 01 TR 11:20 am - 12:35 pm David R. Tucker-Smith

PHYS 451 (F) Condensed Matter Physics

Condensed matter physics is an important area of current research and serves as the basis for modern electronic technology. We plan to explore the physics of metals, insulators, semiconductors, superconductors, and photonic crystals, with particular attention to structure, thermal properties, energy bands, and electronic properties.

Requirements/Evaluation: weekly readings and problem sets, and exams

Prerequisites: PHYS 301 (may be taken simultaneously); or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Physics majors

Expected Class Size: 4-6

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Attributes: MTSC Courses

Fall 2021

SEM Section: 01 MR 1:10 pm - 2:25 pm Daniel P. Aalberts

PHYS 493 (F) Senior Research: Physics

An original experimental or theoretical investigation is carried out under the direction of a faculty member in Physics, as discussed above under the heading of *The Degree with Honors in Physics*.

Prerequisites: permission of department; senior course

Winter Study -----

PHYS 10 (W) Light and Holography

This course will examine the art and science of holography. It will introduce modern optics at a level appropriate for a non-science major, giving the necessary theoretical background in lectures and discussion. Demonstrations will be presented and students will make several kinds of holograms in the lab. Thanks to a grant from the National Science Foundation, we have 7 well-equipped holography darkrooms available for student use. At the beginning of WSP, the class will meet for lecture and discussion three mornings a week and for lab 2 afternoons a week. The later part of the month will be mainly open laboratory time during which students, working in small groups, will conduct an independent project in holography approved by the instructor. Attendance at lectures and laboratory is required. Lectures will be in the morning, labs will be in the afternoon. A detailed schedule will be circulated to students who sign up for this course. Students who cannot attend the required sessions will be advised to select a different course as it is not possible to achieve a passing grade without being able to attend the classes and laboratories.

Requirements/Evaluation: attendance at all classes and labs, completion of 4 laboratory exercises, and a holography laboratory project (approved by the instructor); final poster presentation

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: preference to students with no physics above Physics 109; then seniors, juniors, sophomores and first-years

Grading: pass/fail only

Unit Notes: The course will be taught by John Lacy, a postdoctoral Research Fellow in Atomic Physics under Prof. Majumder. John read Natural Sciences at the University of Cambridge, earning an MSci and MA (Cantab), before gaining a Postgraduate Certificate in Intellectual Property Law from Queen Mary University of London. John worked as a Patent Attorney for a London IP Firm for nearly 2 years before doing a PhD in Quantum Technology from the University of Sussex.

Materials/Lab Fee: \$50

Winter 2022

LEC Section: 01 MWR 10:00 am - 11:50 am John H. Lacy

PHYS 12 (W) Drawing as a Learnable Skill

Representational drawing is not merely a gift of birth, but a learnable skill. If you wanted to draw, but have never had the time to learn; or you enjoy drawing and wish to deepen your understanding and abilities, then this course is for you. This intensive course utilizes traditional drawing exercises to teach representational drawing. By using simple techniques and extensive exercises you will develop your ability to accurately see and realistically represent the physical world. You will learn to draw a convincing portrait, interior, and still life. This course is designed to develop your powers of observation and teach creative problem solving abilities. Students need no previous artistic experience, just the willingness and desire to learn. Students will be expected to attend and participate in all sessions. They will also be required to keep a sketchbook recording their progress and complete a final project. Evaluations will be based on participation, effort, and development. No prerequisites. Enrollment limit: 18. If overenrolled, selection will be based on seniority. Cost: \$5 for materials. Meeting time: Tuesday and Thursday mornings from 10:00 until 12:45, with substantial additional independent student work. There will be an exhibition of coursework on the final day of Winter Study.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 18

Enrollment Preferences: seniority

Grading: pass/fail only

Unit Notes: Stella Ehrich is a professional painter whose work includes portraits, landscapes and still life subjects. She studied for seven years at Studio Simi in Florence, she holds an MFA in painting from Bennington College and a BFA from the Memphis Academy of Art.

Materials/Lab Fee: \$5

Winter 2022

LEC Section: 01 TR 10:00 am - 12:50 pm Stella Ehrich

PHYS 14 (W) Programming Quantum Computers

This course will introduce the basic concepts of quantum computing and provide experience with the programming language Qiskit, a Python-based software development kit that can interface with IBM Quantum computers. No programming or quantum experience is necessary, only a desire to tinker with code and learn a bit about qubits. Students will complete a series of lessons on quantum computing, then work on projects of their own, and write short (1 page) abstracts and/or give presentations summarizing their projects at the end of the course.

Requirements/Evaluation: short paper and final project or presentation

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: preference for first- and second-year students, with essays if necessary

Grading: pass/fail only

Unit Notes: Will Kirby '17 is a third-year PhD candidate in Physics at Tufts University, and an NSF graduate research fellow. His research focuses on quantum algorithms for quantum simulation, and he is excited to share some fun with qubits this Winter study!

Materials/Lab Fee: none

Winter 2022

LEC Section: 01 TR 10:00 am - 2:50 pm Will Kirby

PHYS 16 (W) The Science of Star Trek

Cross-listings: MATH 16 PHYS 16

Primary Cross-listing

Comprising thirteen motion pictures and six major television series, totaling over 500 hours of film, Star Trek has had a profound impact on pop culture and the scientific imagination. In this Winter Study course, we will board Star Trek as vehicle towards a critical discussion of science, technology, and their consequences to society. We will boldly question topics such as the nature of reality, the (uni/multi)verse according to quantum theory and general relativity, the origins of consciousness and the possibility and consequences of extraterrestrial and artificial intelligence. We will view select episodes and films from the franchise, discussing their basis in actual science and using them as a prism to understand issues facing us on Earth.

Requirements/Evaluation: short paper and final project or presentation

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: selection based on a small assignment and/or conversations with the instructors

Grading: pass/fail only

Materials/Lab Fee: none

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 16 PHYS 16

Winter 2022

LEC Section: 01 TR 1:00 pm - 3:50 pm Frederick W. Strauch

PHYS 18 (W) Wood and Woodturning

Cross-listings: PHYS 18 ARTS 18

Primary Cross-listing

Woodturning--the use of a lathe to sculpt cylindrically symmetric objects from wood--dates to antiquity, with turned objects appearing in furniture, architecture, and art through the ages. This course will introduce the basic concepts of woodturning, including lathe and tool safety, tool selection, and techniques for shaping both side grain and end grain. We will use gouges, chisels, and scrapers to turn a variety of projects like finger tops, carving mallets, bowls, pens, etc. from several different species of wood. Along the way we will also discuss topics related to woodworking such as forestry, invasive species, & the environment, metallurgy, sharpness and sharpening, and moisture and wood movement. We will meet for approximately 12 hours weekly for demonstrations and individual work on projects, with some additional reading required outside of class time. No previous experience is required; however, students with patience, good motor skills, and some imagination will find the course most rewarding. This course is open to both artistically and scientifically minded students.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 8

Enrollment Preferences: preference given to juniors, sophomores, and those who express the most and earliest interest by e-mail to Professor Doret

Grading: pass/fail only

Materials/Lab Fee: \$165

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 18 ARTS 18

Winter 2022

LEC Section: 01 M-F 1:00 pm - 3:50 pm Charlie Doret

PHYS 22 (W) Research Participation

Several members of the department will have student projects available dealing with their own research or that of current senior thesis students. Approximately 35 hours per week of study and actual research participation will be expected from each student.

Class Format: to be arranged with instructor

Requirements/Evaluation: students will be required to keep a notebook and write a 5-page paper summarizing their work

Prerequisites: permission of instructor

Enrollment Limit: 1-2

Enrollment Preferences: permission of instructor

Grading: pass/fail only

Winter 2022

POLITICAL ECONOMY (Div II)

Chair: Professor Darel Paul

Advisory Committee

- Jon M. Bakija, W. Van Alan Clark '41 Third Century Professor in the Social Sciences; on leave Spring 2022
- William M. Gentry, Professor of Economics; on leave Fall 2021
- Cathy M. Johnson, James Phinney Baxter III Professor of Political Science
- Sara LaLumia, Professor of Economics
- James E. Mahon, Woodrow Wilson Professor of Political Science
- James McAllister, Fred Greene Third Century Professor of Political Science; affiliated with: Leadership Studies Program
- Darel E. Paul, Professor of Political Science, Chair of Political Economy Program; affiliated with: Political Economy Program
- Sidney A. Rothstein, Assistant Professor of Political Science
- Lara D. Shore-Sheppard, Chair and Kimberly A. '96 and Robert R. '62 Henry Professor of Economics
- David J. Zimmerman, Professor of Economics and Orrin Sage Professor of Political Economy

The Political Economy major is designed to give students a grasp of the ways in which political and economic forces interact in shaping public policy. The major includes substantial study of the central analytical approaches in both Political Science and Economics and seeks to surmount the sometimes artificial barriers of specialization that may characterize either discipline taken by itself. Three of the required Political Economy courses undertake a conscious merging of the approaches in the two fields. These courses are designed by, and usually are taught jointly by, political scientists and economists. Political Economy 250 examines major theoretical texts in political economy and analyzes economic liberalism and critiques of economic liberalism in the context of current policy issues. Political Economy 401 examines contemporary issues in political economy in their domestic, comparative and international contexts. Political Economy 402 asks students to research and make proposals in policy areas of current importance. Background for the two senior courses is acquired through introductory courses in Economics and Political Science, a course in empirical methods, and elective courses in international, domestic and comparative economics, politics and policy.

Students in Political Economy 402 visit Washington, D.C. Sunday night through Wednesday of the first week of spring vacation to conduct interviews relating to their Political Economy 402 group projects. This is a course requirement and thus a requirement for the major.

MAJOR

The Political Economy major requires students to complete eleven (11) courses: two introductory courses each in Economics and Political Science; one empirical methods course; three core courses specific to the Political Economy Program; and three electives, one from each of three categories. In order to balance students' educations, majors must take at least one elective in Economics and one elective in Political Science; the third elective may come from either Economics or Political Science. In light of the public policy orientation of the program, all majors are also required to complete one course with a substantial experiential education component which is related to the making or effect of public policy. The purpose of the experiential education requirement is for the student to get out into the world and interact with people in cases where the stakes are real, often involving some element of community service or participation in the political process or in the making of or analysis of public policy, in order to learn something about public policy that one cannot get from a purely academic experience. This requirement must be fulfilled prior to taking POEC 402. It can be fulfilled through a regular semester-length course (which might also serve as an elective in the major), a winter study course, a study abroad academic internship, a winter study internship, or a summer internship. The chair distributes a list of approved experiential courses to majors at the beginning of each academic year. For an internship to satisfy the requirement, its focus must be the making or effect of public policy. Approval of the chair is required to use an internship to fulfill this requirement.

Two Introductory Economics Courses

ECON 110 Principles of Microeconomics

ECON 120 Principles of Macroeconomics

Two Introductory Political Science Courses

PSCI 201 Power, Politics, and Democracy in America

PSCI 202 World Politics: An Introduction to International Relations

or PSCI 203 Introduction to Political Theory

or PSCI 204 Introduction to Comparative Politics: State, Nation, and Democracy

One Empirical Methods Course

POEC 253 Empirical Methods in Political Economy

or ECON 255 Econometrics

Three Political Economy Program Courses

POEC 250/ECON 299/PSCI 238 Economic Liberalism and Its Critics

POEC 401 Contemporary Problems in Political Economy

POEC 402 Political Economy of Public Policy Issues

Three Elective Courses

Students must take at least one elective in Economics and at least one elective in Political Science; the third elective may come from either Economics or Political Science.

Please see the online catalog for up-to-date information on which courses are being offered in the current year.

CREDIT FOR COURSEWORK DONE ELSEWHERE

The three Political Economy Program courses (POEC 250, 401, and 402) must be completed at Williams without exception. Students are strongly encouraged to complete the empirical methods course (POEC 253 or ECON 255) and PSCI 201 at Williams, as versions of these courses offered elsewhere are usually highly imperfect substitutes that will not provide adequate preparation for the senior seminars; students may in rare cases be able to complete either of these requirements during study at another college or university (e.g. during study abroad), but only with prior permission from the chair. The three electives and other introductory courses in Political Science may be completed during study at another college or university (e.g. during study abroad) with permission of the chair. The general policy of the Program is to grant credit for one course per semester abroad and in extraordinary circumstances, credit for three courses for an entire year abroad. Students who score a 5 on the AP exam in Microeconomics, Macroeconomics, or Comparative Government and Politics may receive credit towards the major for the cognate introductory economics or political science course(s). Credit for A levels and IB exams in Economics and for introductory microeconomics and macroeconomics classes taken at other colleges and universities (subject to approval by the Economics department study away coordinator) is given consistent with the current policy of the Economics Department. Students whose economics department placement exam scores allow them to place out of ECON 110 and/or ECON 120 may receive credit towards the major for the corresponding class. No substitute higher-level coursework is required for majors receiving credit in this way, although it is certainly encouraged. Students cannot substitute AP credit for PSCI 201.

RECOMMENDED PROGRESSION THROUGH THE REQUIRED MAJOR COURSES

Students considering a major in Political Economy are encouraged to begin with ECON 110 and 120 and any one of PSCI 201, 202, 203, or 204 in their first year, as these courses are the prerequisites or co-requisites for POEC 250. Students should plan to complete both of their two required introductory PSCI courses during either the first or second year at Williams, as first- and second-year students get enrollment preference in these classes. Students should plan to take POEC 250 and POEC 253 (or ECON 255) during the sophomore and junior years, keeping in mind that both POEC 250 and POEC 253 are offered only in the fall, and that ECON 255 requires STAT 161, STAT 201, or STAT 202 as a prerequisite (STAT 101 will also serve as a prerequisite, but only if taken prior to the fall of 2018). POEC 401, taken fall of senior year, requires POEC 253 or ECON 255 as a prerequisite, so that prerequisite must be completed before the start of senior year. Students should also get started on their electives during sophomore and junior year.

THE DEGREE WITH HONORS IN POLITICAL ECONOMY

Due to the special demands of this interdisciplinary major, the only route to honors in Political Economy is the thesis. Seniors may pursue the honors thesis course (Political Economy 493-W31) during the fall semester and winter study period. The third course contributing to such an honors program would normally be an elective in Political Science or Economics taken during the junior year. This course, which may be one of the required electives, must be closely related, indeed must prepare the ground for the honors thesis.

Juniors in the Political Economy major with at least a 3.5 GPA in the program may apply for the honors thesis program by means of a written proposal submitted to the chair by the end of the first week after spring vacation. Written guidelines for such proposals are available in the chair's office and on the program website. The proposal should have been discussed with at least two faculty members, and at least one faculty advisor from each discipline must be solicited by the student prior to submission of the proposal.

Final decisions about admission to the honors program will be made in late May after spring grades become available.

To achieve the degree with honors in Political Economy, the thesis must be completed by the end of winter study period and be judged of honors quality by a committee consisting of the two advisors and a third reader. A thesis judged to be of particular distinction will qualify its author for the degree with highest honors.

STUDY ABROAD

Despite the fact that Political Economy requires more courses than the typical major, many Political Economy majors go abroad. Since POEC 250 and POEC 253 are offered in the fall, students considering spending only one semester abroad often find spring to be the better choice. Nonetheless, many students study away for the fall or the whole year. Students planning to be abroad in the fall should take POEC 250 in their sophomore year if at all possible. Similarly, it is necessary to plan ahead to find the best way to satisfy the empirical methods requirement (POEC 253 or ECON 255) before the fall of the senior year. The easiest major credits to obtain abroad are the electives in Political Science and Economics.

FAQ

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No, although because so many of the classes in the program are Williams-specific, there is an effective limit of 2-3.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. Only Economics or Political Science courses can be awarded credit, and they must satisfy one of the elective categories (or in rarer cases one of the ECON or PSCI intro requirements).

Are there specific major requirements that cannot be fulfilled while on study away?

Yes.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. The POEC major requires 3 specific POEC courses (250, 401, and 402), and one empirical methods course (POEC 253 or ECON 255). The POEC courses are only offered in a single semester (fall for 250, 253, and 401 and spring for 402), and 401 and 402 must be taken in the senior year. 253 can be replaced with ECON 255, which is offered in fall or spring, but ECON 255 has an additional prerequisite of STAT 161, STAT 201, or STAT 202 (STAT 101 can also serve as a prerequisite, but only if taken prior to the fall of 2018).. Studying abroad in POEC requires careful planning.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

No, but students have discovered upon reaching their destination that the course is different than described so were forced to change or not count the course.

POEC 214 (S) The Economics and Ethics of CO2 Offsets (WS)

Cross-listings: POEC 214 ENVI 212 ECON 214

Secondary Cross-listing

Some electric utilities and other CO2 emission polluters are allowed to purchase carbon offsets to achieve a portion of their mandated emissions cuts, in effect, to pay others to reduce carbon emissions in their stead. Some individuals, college and universities, and for-profit and non-profit institutions have chosen voluntarily to purchase carbon offsets as a way of reducing their carbon footprint. But do offsets actually succeed in reducing carbon emissions? What separates a legitimate offset from one that is not? How should we measure the true impact of an offset? How do carbon offsets compare to other policies for reducing carbon emissions in terms of efficiency, equity, and justice? Is there something inherently wrong about "commodifying" the atmosphere? Is there something inherently wrong about selling or buying the right to pollute? Should colleges and universities be using the purchase of offsets to achieve "carbon neutrality?"

Class Format: This tutorial will be taught remotely via Zoom meetings. Each student will be the tutorial partner of one other student, and each pair of tutorial partners will meet with the instructor for 75 minutes each week. Individual "office hour meetings" will also occur via Zoom meetings.

Requirements/Evaluation: a 5- to 7-page paper every other week; a 3-page written critique every other week; one re-write paper

Prerequisites: ECON 110 or the equivalent, permission of instructor

Enrollment Limit: 10

Enrollment Preferences: first-year students and sophomores intending to major in Economics and/or to major or concentrate in Environmental Studies

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

POEC 214 (D2) ENVI 212 (D2) ECON 214 (D2)

Writing Skills Notes: Each student will write five 5-7 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will write five 3-page critiques of their partner's papers. As the final assignment, each student will revise one of their five papers.

POEC 250 (F) Economic Liberalism and Its Critics

Cross-listings: ECON 299 PSCI 238 POEC 250

Primary Cross-listing

Economic liberalism holds that society is better off if people enjoy economic freedom. Its critics point to what they believe this position ignores or what it wrongly assumes, and hence, how it would make bad policy. This course explores the relationship between politics and economics by surveying influential works of political economy. Its first part examines major thinkers in relation to the historical development of capitalism in Western Europe and the United States: the classical liberalism of Adam Smith, Karl Marx's revolutionary socialism, and the reformist ideas of John Maynard Keynes. The second part considers mid-20th-century writers who revise and critique economic liberalism from a variety of perspectives, including Friedrich Hayek, Milton Friedman, Ronald Coase, Arthur Okun, and Albert O. Hirschman. The third part surveys significant recent contributions relevant to the themes of the course, with applications to current public policy issues, including topics such as: power relations and autonomy in the workplace; asymmetric information and social insurance; economic inequality and distributive justice; equality of opportunity; the economics of health care; positional goods and the moral foundations of capitalism; economic nationalism and new trade theory; behavioral economics; climate change and intergenerational equity; finance and financial crises; and rent-seeking. The combination of the historical focus of the early part of the course with discussion of modern policy issues and debates in the latter part of the course permits you to appreciate the ongoing dialogue between classical and contemporary views of political economy.

Class Format: This class uses a flipped classroom approach, where before each class meeting, students watch a lecture video, and sometimes write an essay or solve some problems on relating to the assigned reading and video, and then in-person class is devoted primarily to discussion.

Requirements/Evaluation: six short essays, several short homework assignments, and a final exam

Prerequisites: ECON 110 and 120 or equivalent; PSCI 201, 202, 203, or 204 (may be taken concurrently with POEC 250); open to non-majors

Enrollment Limit: 30

Enrollment Preferences: Political Economy majors and sophomores intending a Political Economy major

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

POEC 253 (F) Empirical Methods in Political Economy (QFR)

This course introduces students to common empirical tools used in policy analysis and implementation. The broad aim is to train students to be discriminating consumers of public policy-relevant research. The emphasis in the course is on intuitive understanding of the central concepts. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; random variables and distributions; statistical estimation, inference and hypothesis testing; and modeling using multiple regression, with a particular focus on understanding whether and how relationships between variables can be determined to be causal--an essential requirement for effective policy formation. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

Requirements/Evaluation: Problem sets, group project, midterm exam, final exam

Prerequisites: MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255

Enrollment Limit: 20

Enrollment Preferences: Political Economy majors, Environmental Policy majors and sophomores

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Unit Notes: does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.

POEC 280 (F) Silicon Valley: Digital Transformation and Democracy (WS)

Cross-listings: PSCI 280 STS 280 POEC 280

Secondary Cross-listing

Nearly every country in the world seeks to drive economic growth by promoting digital technologies. The universal model is Silicon Valley. In this tutorial, students will examine the origins of the Silicon Valley model and other countries' attempts to emulate it. Departing from "just so" stories of technological determinism, we take up the lens of comparative political economy to investigate the politics that allowed US tech firms to shape economic policy to meet their interests. It is no accident that tech became a symbol for economic growth in the 1970s, precisely when it also began to build powerful alliances in Washington. After investigating the origins of the Silicon Valley model, we trace attempts to adopt it in Europe and Asia, which highlight the model's political contingencies and some of the more salient conflicts over the tech sector. We focus on the ways in which the Silicon Valley model can threaten social welfare through economic inequality and precarious employment, and engage a variety of perspectives, including workplace ethnography, to examine these threats, as well as potential regulatory responses. The course concludes by considering what policies could be appropriate for supporting, while also regulating, the tech sector in the twenty-first century.

Requirements/Evaluation: Five 5-page papers; five 2-page responses; participation

Prerequisites: One introductory course in political science and/or permission of the instructor.

Enrollment Limit: 10

Enrollment Preferences: Preference will be given to sophomores or juniors majoring in a Division II field

POEC 287 (F) The Firm (DPE)

Cross-listings: PSCI 287 POEC 287

Secondary Cross-listing

The rise of gigantic tech firms--Google, Apple, Facebook, Amazon--has sparked widespread worries about the role of business power in capitalist democracy. Are these firms monopolies? How can they be better regulated? Should they be? This course studies the politics of business by centering analysis on the firm. From the perspective of the workplace, we investigate the firm as an arena of power, where workers and managers meet each other in continuous contests for control. From the perspective of the public sphere, we investigate the firm as an actor whose power maps uneasily onto the channels of democratic representation. Approaching the firm as both arena and actor in a number of capitalist democracies, we will compare the politics of business across different sectors, but will focus especially on tech and finance.

Requirements/Evaluation: Class participation; two 5- to 7-page essays; one presentation; one final essay

Prerequisites: One introductory course in political science and/or permission of the instructor

Enrollment Limit: 15

Enrollment Preferences: Preference will be given to sophomores or juniors majoring in a Division II field

POEC 289 (S) The welfare state in comparative perspective

Cross-listings: PSCI 289 POEC 289

Secondary Cross-listing

Modern life has, in some ways, become less risky. You are unlikely to be trampled by a mammoth. But social risk has not disappeared--you could lose your job, get into an accident, or find yourself plunged somehow into poverty. Most countries around the world have built elaborate institutions to ensure citizens' welfare by protecting some people from some risks, but not all people and not all risks. Moreover, these institutions vary considerably both over time and between countries. This course examines those institutions. Our goal is to explain how and why welfare states vary and why there is so much inequality in the distribution of risk. We will do so by investigating the different kinds of institutions that mediate risks throughout the lifecycle, from parental leave to old age pensions, and by comparing these institutions between different countries. While focusing primarily on the welfare states of Western Europe, we will also examine how the politics of social risk unfold around the world, extending our investigation to Africa, Asia, and Latin America. We will conclude by reflecting on what lessons the welfare state offers for managing this century's biggest social risk: climate change.

POEC 22 (W) Volunteer Income Tax Assistance

Cross-listings: POEC 22 ECON 22

Secondary Cross-listing

This experiential course provides students the opportunity to explore public policy through training and work as volunteer income tax preparers for low-income working people in North Adams, Massachusetts. By the end of the term, students will be IRS-certified volunteer income tax preparers. Students have the option of writing a 10-page analytic essay or serving as tax preparers for local clients of the Berkshire Community Action Council. The course will also offer an overview of the U.S. income tax and the role of the tax system in overall U.S. social policy, especially policy towards lower-income households. Coursework will consist of a series of classes and open lab sessions coordinated with the self-paced IRS "Link and Learn" online tax preparer training program. Class time will be spent discussing policy and program context as well as working through the online training program. A poverty simulation and Q&A sessions featuring guests from local social service organizations and the community will help orient students to the issues facing low-income families in the northern Berkshires. Note: This course satisfies the Political Economy Major Experiential Learning requirement.

Requirements/Evaluation: 10-page paper

- Mason B. Williams, Assistant Professor of Leadership Studies and Political Science; affiliated with: Political Science Department; on leave Fall 2021

Politics is most fundamentally about forging and maintaining community, about how we manage to craft a common destiny guided by shared values. Communities need a way to reconcile conflicts of interest among their members and to determine their group interest; they need to allocate power and to determine its just uses. Power may be used wisely or foolishly, rightly or cruelly, but it is always there; it cannot be wished away. Political science attends to the ways that social power is grasped, maintained, challenged, or justified. The contests over power and the values that it should be used to further give politics its drama and pathos. The effort to understand politics aims not only to describe and explain, but also to improve political life.

The Political Science major is structured to allow students either to participate in the established ways of studying politics or to develop their own focus. To this end, the department offers two routes to completing the major, each requiring nine courses. We invite students either to organize their major through the subfields that structure the discipline of political science (American politics, international relations, political theory, and comparative politics), or to develop individual concentrations reflecting their particular interests, regardless of subfields.

MAJOR

Subfield Concentration Route: Upon declaring a major, students choose one subfield: American politics, international relations, political theory, or comparative politics. The subfield concentration draws at least four (4) of the nine courses from one subfield including the appropriate core course from 201-204, two electives of the student's choice at the 200 or 300 level and the senior seminar (or an individual project) in the student's subfield. Students selecting political theory as their subfield concentration must take Political Science 231 or Political Science 232 as one of their four subfield courses, in addition to taking Political Science 203 and prior to taking Political Science 430. With permission of the department chair, students may take a senior seminar in a different subfield, providing they take a third elective in the subfield of concentration. In addition, students must take courses in two subfields outside the subfield of concentration to satisfy the breadth requirement (all methods courses also count toward the breadth

requirement). The faculty advisor must approve the student plan. All students must take at least one 300-level course and one research course to complete the major. (Most senior seminars are also research courses but, especially in political theory, not all are.) In addition, no more than two 100-level courses can count toward the major.

Individual Concentration Route: Alternatively, students may devise a concentration of their own. In this event, the student prepares a curricular plan in consultation with a faculty advisor, explaining the nature of the concentration and the courses the student will take. The individual concentration also requires nine (9) courses, with at least five (5) thematically linked courses constituting the concentration. Of these five courses, four are electives at the 200 or 300 level, including one from 201-204, and one is a senior seminar or individual project. In addition, students pursuing an individual concentration must take at least two other courses that illustrate breadth in political science. To complete the requirement, the student has their choice of any two other courses within the Political Science Department. The faculty advisor and the department chair must approve the student plan. All students must take at least one 300-level course and one research course to complete the major. (Most senior seminars are also research courses but, especially in political theory, not all are.) In addition, no more than two 100-level courses can count toward the major.

ADVISEMENT

When a student chooses to major in Political Science (usually at the end of the sophomore year), they may register with any Political Science faculty member. The registering faculty member will ask for preferences for a permanent faculty advisor and will assist undecided students in finding an advisor. In all cases, students will be paired by the beginning of junior year with an advisor who will continue with them through graduation.

COURSE NUMBERING

The course numbering used by the Political Science Department reflects the format and specialization of a course. The 100-level courses are designed to address political topics from multiple subfield perspectives; many are seminars designed for first-year students. The 200-level courses are divided between our core courses and our electives. The core courses, numbered from 201-204, serve as introductions both to the substance of politics and the subfields organizing the study of politics. The introductory subfield course must be completed before the senior year. The 200-level elective courses delve into political processes, problems and philosophies. 100-level and 200-level courses have no prerequisites. 300-level courses are more specialized and have prerequisites. 400-level courses are senior seminars offered for students in the major; senior seminars also are open to juniors and to non-majors if space permits. In general, the main subfield of non-core courses can be read from the middle digit of the course number: 0, 1 or 5 for American politics; 2 or 6 for international relations; 3 or 7 for political theory; 4 or 8 for comparative politics. Because the relevant course number is not available, and as some courses may not fit the subfields, please check the "attributes" entry to confirm how the course is categorized by the department.

WINTER STUDY PROJECT

The department welcomes relevant WSP 99 proposals that can make important contributions to the student's understanding of public affairs and politics. Majors, seniors, and students without previous WSP 99 experience have preference.

THE JUNIOR YEAR ABROAD

A major in Political Science can be readily and usefully combined with study off-campus. Generally, only one course taken per semester abroad in a program approved by the College may be counted toward the requirements for a degree in Political Science.

FAQ

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, though sometimes a syllabus may be needed. How much we need may depend on our familiarity with the institution or program.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

Yes. Typically we allow not more than one course per semester, or two per year, to count for major credit. In special circumstances, the chair may consider granting an exemption and allow an additional course.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No, although this depends on the course. If, after considering description and institution we feel it is not rigorous enough, we will not count it.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. We do not allow the senior seminar requirement to be fulfilled by study abroad.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

No. One such required course (either Ancient or Modern Political Thought for those specializing in political theory within the major) can be fulfilled by an appropriate study abroad course.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

When issues arise that's almost always because the student did not keep department adequately informed of evolving plans.

PREPARATION FOR GRADUATE STUDY

The Department recommends that students contemplating graduate school, especially if they plan to study fields outside political theory, take a course in research and quantitative methods, such as PSCI 300 or, if it is not taught, ECON/POEC 253.

THE DEGREE WITH HONORS IN POLITICAL SCIENCE

To become a candidate for honors the student must (1) apply in the second semester of the junior year, (2) submit a research proposal acceptable to the department's honors committee and for which an appropriate advisor is available, (3) have a record of academic excellence in Political Science. The last includes not only the student's cumulative GPA in Political Science, generally 3.5 or above, but also demonstrated research and writing skills, evidenced by one or two examples of graded work submitted along with the thesis proposal. Along with the successful completion of a high-quality thesis, the degree with honors in Political Science requires enrollment in the year-long senior thesis seminar, in addition to the other nine (9) courses of the regular major requirements.

ADVANCED STUDY IN AMERICAN POLITICS

The Department of Political Science provides the opportunity for an unusually gifted student to engage in an entire year's advanced research in American politics under singularly favorable conditions. Supported by income derived from an endowment fund, the student, designated the Sentinels of the Republic Scholar (after the name of the fund), receives a substantial research stipend to cover costs associated with the proposed project.

This unique research course (Political Science 481-W33-482) is designed to encourage the pursuit of excellence among the most talented Williams students of Political Science. Admission to it is awarded to the most distinguished candidate on the basis of demonstrated capacity for outstanding work and of the project's promise for creative contributions to the understanding of American politics, political institutions and thought.

PSCI 118 (F) Power to the People?

Popular unrest. The resurgence of authoritarian styles and practices in politics. Democratic collapse. Political tumult around the globe in recent decades has put elites, and others, on edge as young democracies have collapsed and longer standing ones appear to be stumbling. In the United States, basic stability and democratic expansion have been accompanied by increasing citizen distrust of institutions, growing social divisions, and contestation over basic citizenship rights. The current pandemic, related economic distress, and social protests have only sharpened the precarious state of U.S. democracy. Acute observers have long seen the U.S. as a harbinger of the promise and peril of modern democracies. What is the fate of democracy in the U.S.? What does that portend, if anything, for other democracies, or for the general principle of popular sovereignty--the idea that the people govern themselves? We investigate these and related questions, primarily through active, project-based group research activities, guided by political theory and empirical research in the social sciences. This class is extensively hybrid by design; it is largely remote with some in-person sessions. Remote sessions include substantial collaboration with a similarly structured first-year course being taught by a sociologist at the University of North Carolina. Williams and UNC students will work together in small groups and will present their project findings to both classes.

Requirements/Evaluation: active class participation, three 4-page essays, group assignments, and class presentation

Prerequisites: first-year students

Enrollment Limit: 15

Enrollment Preferences: first-year students

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Not offered current academic year

PSCI 120 (S) America and the World

Cross-listings: LEAD 120 GBST 101 PSCI 120

Primary Cross-listing

This course will help students understand the US role in the world. US wealth and military power force its leaders to make choices that no other leaders in the world confront. Students will learn to evaluate the decisions that US leaders have made on a wide range of difficult foreign policy issues, including: rising Chinese power; Russian moves in Ukraine; nuclear proliferation to Iran; terrorist threats; humanitarian disasters in Syria and Libya; and long-term challenges like climate change. We will not only describe American involvement in various international issues but also seek to understand the reasons why the US perhaps should or should not be involved, and we will see why such careful reasoning only sometimes gains traction in actual US foreign policy debates. Finally, we will assess whether US foreign policy decisions are coherent - that is, whether the US can be said to follow a "grand strategy." By the end of the course, students will develop their ability to think about foreign policy issues, improving their ability to participate in public life as engaged citizens.

Class Format: discussion

Requirements/Evaluation: short papers, class participation, and final exercise

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: first-years and sophomores

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Cross-listings: LEAD 125 PSCI 125

Secondary Cross-listing

This course introduces students to the major issues in the study of leadership, a central concept in the study of politics. The first part of the course will examine key theoretical problems that have occupied political thinkers from Plato and Confucius to Machiavelli and the American framers: What makes a leader successful? What kinds of regimes best serve to encourage good leaders and to constrain bad ones? What is the relationship between leadership and morality-can the ends justify the means? What functions does leadership fill, and what challenges do leaders face, in modern democratic states? The second half of the course will look at leaders in action, charting the efforts of politicians, intellectuals, and grassroots activists to shape the worlds in which they live. Case studies will include antislavery politics and the American Civil War; the global crises of the 1930s and 1940s; and the social movements of the 1960s and 1970s. In addition to active class participation, students will be expected to write a 5-page proposal for a research paper on a leader of their choice, a 10-page research paper, an in-class midterm exam, and a cumulative, in-class final exam.

Requirements/Evaluation: active class participation, 5-page research proposal, 10-page research paper, in-class midterm exam, and a cumulative in-class final exam

PSCI 126 (S) Religion, Politics, and Society: A Global Perspective (DPE)

Cross-listings: REL 126 GBST 101 PSCI 126

Secondary Cross-listing

In spite of predictions that religion would wither away in the face of modernization, even casual observation indicates that it remains a powerful force in contemporary political life. Our goal is to obtain an enhanced understanding and appreciation of the salience of religion in public life. The course will be divided into three parts. The first part focuses on different theoretical approaches to making sense of the relation between religion, politics, and society, discussing especially the concept of the 'secular' in Western thought and decolonial critique thereof. The second part will take a global perspective on the relation between religion and politics. We will discuss cases of Buddhism, Christianity (Catholicism and Protestantism), Confucianism, Hinduism, Islam (Sunni and Shi'a), and Judaism. The third part focuses on religion in the USA. Here, we will discuss the role of religion in American political culture, the relation of religion to the state, the relevance of religious interests and their political mobilization, religious minorities in the United States, and many other aspects of religion in the US society. Although the study of religion and politics raises a host of deep philosophical questions, the principal aim of the course is to understand how religion affects politics (and vice versa), rather than to explore the normative dimensions of questions raised by the interaction of these two forces.

Requirements/Evaluation: Class participation and three papers, in these proportions: 10% attendance; 20% participation; 20% first paper (7 pages); 30% second paper (8-10 pages); and 20% third paper (7 pages). No final exam.

PSCI 127 (S) America First? The Trump Era and the Future of World Politics

Cross-listings: LEAD 127 PSCI 127

Primary Cross-listing

"America First" was a slogan and a perspective on foreign policy adopted by isolationists like Charles Lindbergh in the 1930's. In the aftermath of Pearl Harbor and the Second World War, a strong bipartisan consensus emerged around the principles of liberal internationalism and "America First" perspectives were marginalized in American politics. However, with the election of Donald Trump, the American presidency is now in the hands of someone who proudly claims the America first mantle. This course provides a historical and theoretical context for understanding what is unique about President Trump's approach to American foreign policy in the 21st century. Particular attention will be devoted to the contrast between the views of Trump and those of the American foreign policy establishment over issues such as NATO, nuclear proliferation, Russia, immigration, terrorism, free trade, and conflicts in the Middle East.

Requirements/Evaluation: two analytical essays, short response papers, and final group project

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: potential political science majors and leadership studies concentrators (foreign policy track)

Expected Class Size: 20

PSCI 135 (F) Politics after the Apocalypse

Cross-listings: STS 135 PSCI 135

Primary Cross-listing

What shape will politics take after the apocalypse? Even before the coronavirus pandemic gave us reason to wonder if we are, in fact, living through an apocalypse, speculation about the end of the world and its aftermath pervaded recent television, movies, literature, philosophy, and critical theory. In this class we draw these works into conversation with political theories of the "state of nature" and "state of exception" to better understand what political possibilities are opened and foreclosed in times of crisis. What aspects of politics will endure the ravages of fire or pestilence? What new political realities might emerge on ground cleared by disaster? What does it say about pre-pandemic politics that we were so eager to consume stories of states falling and bands of survivors scraping together a nasty, brutish and short existence? And how will the unfolding pandemic change how we respond to these stories? Class will be driven primarily by discussion, typically introduced by a brief lecture.

Class Format: Class meetings will be conducted remotely using zoom.

Requirements/Evaluation: two 3-5 page papers, one short story (7-15 pages and including an explanatory cover letter), contributions to a class

project documenting and analyzing the pandemic, and class participation

Prerequisites: first- or second-year students, or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: first-year students

PSCI 160 (S) Refugees in International Politics (DPE) (WS)

Globally, refugees seem to create, and be caught up in, chronic crisis. This course evaluates how this can be--how a crisis can be chronic. We investigate who refugees are, in international law and popular understanding; examine international and national laws distinguishing refugees from other categories of migrants; evaluate international organizations' roles in managing population displacement; look at the way that images convey stereotypes; consider refugee camps in theory and example; and reflect on what exclusion, integration, and assimilation mean to newcomers and host populations. In whose interest is the prevailing system? Who might change it, and how?

Requirements/Evaluation: Ten essays: five lead, five response. The first two weeks' essay grades will be unrecorded.

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: first-year students, to be selected randomly from list of those enrolled.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: In addition to writing every week, students will have a chance work on specific skills cumulatively.

Difference, Power, and Equity Notes: This course examines the way in which home states categorize people and oppress some, producing refugees; the way that host states categorize people and oppress some, using immigration to shore up the prevailing ethnic hierarchy; and why we worry about some of these categories of oppression more than others.

PSCI 201 (F)(S) Power, Politics, and Democracy in America

Begun as an experiment over 200 years ago, the United States has grown into a polity that is simultaneously praised and condemned, critiqued and mythologized, modeled by others and remodeled itself. This course introduces students to the dynamics and tensions that have animated the American political order and that have nurtured these conflicting assessments. Topics include the founding of the American system and the primary documents (the Declaration of Independence, the Constitution, and the Federalist Papers), the primary institutions of national government then and now (Congress, the presidency, and the Supreme Court), and the politics of policy-making in the United States. We study structures, processes, key events, and primary actors that have shaped American political development. In investigating these topics, we explore questions such as these: How is power allocated? What produces political change? Is there a trade-off between democratic accountability and effective governance? How are tensions between liberty and equality resolved? Do the institutions produce good policies, and how do we define what is good?

Requirements/Evaluation: depending on the section, some combination of response papers, short-to-medium papers, exams, and class participation

Prerequisites: this is an introductory course, open to first-year students and sophomores; juniors and seniors may enroll only with the permission of instructor and under special circumstances

PSCI 202 (F)(S) World Politics: An Introduction to International Relations

World politics is often taken to be an arena of human interaction unto itself, where the concepts that serve us well in understanding domestic politics and our everyday public lives--democracy, law, morality, authority--are displaced by their opposites--rule by the strong, use of force, *raison d'etat*, anarchy. In particular, the discipline of International Relations claims special responsibility for analyzing and explaining this arena. But how different is world politics? We live in a world in which resolutions of the United Nations Security Council carry the aura of law and authority; human rights are held up as universal moral standards; international treaties regularly restrain supposedly sovereign states in regulating their domestic economies; and the vast majority of wars are now 'civil' ones. This course is about politics at the world scale and the myriad ways in which scholars and practitioners interpret and explain it. We start by covering international relations theories, and then turn to the international politics of war, peace, and globalization.

Requirements/Evaluation: two short papers; one medium midterm paper; scheduled final exam; class participation

PSCI 203 (F)(S) Introduction to Political Theory

Is politics war by other means? Is it merely a practical way to meet our needs? Or is it, rather, the activity through which citizens pursue justice and the good life? And what is justice? How can it be established and secured? Where does it apply? To whom? What are the powers and obligations of citizenship? Who decides? On what basis? Political theory addresses questions such as these as it investigates the fundamental problems of how people can, do, and ought to live together. The questions have sparked controversy since the origins of political thinking; the answers remain controversial now. This course addresses the controversies, drawing examples from struggles over such matters as racism, colonialism, revolution, political founding, economic order, and the politics of sex and gender, while focusing on major works of ancient, modern, and contemporary theory by such authors as Plato, Aristotle, Machiavelli, Hobbes, Rousseau, Mill, Marx, Nietzsche, Beauvoir, Arendt, Fanon, Rawls, Foucault, and Young. Themes may include power, authority, freedom, justice, equality, democracy, neoliberalism, feminism, and violence, though the emphases will vary from semester to semester.

Requirements/Evaluation: Three papers, class participation, and occasional informal writing/Glow posts.

Prerequisites: none; this is an introductory course, open to all, including first-year students

PSCI 204 (F)(S) Introduction to Comparative Politics

The comparative study of politics looks mainly at what goes on *inside* countries, the domestic dynamics of power and institutions and identities. The purpose is to deepen our understanding of politics. In this class we will consider a number of analytic concepts central to the study of politics generally--the state, legitimacy, democracy, authoritarianism, nationalism--to comprehend political processes and transformations in various parts of the world. We will focus particularly on three themes: what is democracy and how might it fail? Why do certain authoritarian regimes persist while others do not? How is national identity shaped by politics, and how is politics, in turn, shaped by nationalism?

Requirements/Evaluation: 2-3 short papers, a midterm and/or final exam

PSCI 206 (F) Dangerous Leadership in American Politics

Cross-listings: LEAD 206 PSCI 206

Primary Cross-listing

"Donald Trump, Hillary Clinton, Ted Cruz, Bernie Sanders. What do Americans want from their political leaders?". A common assumption is that those who do it well--whether in the presidency, the parties, social movements, organizations, or local communities--are just and legitimate agents of democratic change, and those most celebrated are those who have helped the country make progress toward its ideals. Yet to rest on this is too simple as it is, in part, an artifact of historical construction. Assessing leadership in the moment is complicated because leaders press against the bounds of political convention--as do ideologues, malcontents, and lunatics. Indeed, a central concern of the founders was that democracy would invite demagogues who would bring the nation to ruin. Complicating things further, the nature of democratic competition is such that those vying for power have incentive to portray the opposition's leadership as dangerous. How do we distinguish desirable leadership from dangerous leadership? Can they be the same thing? Many who today are recognized as great leaders were, in their historical moment, branded dangerous. Others, whose ambitions and initiatives arguably undermined progress toward American ideals, were not recognized as dangerous at the time. In this tutorial, we will explore the concept of dangerous leadership in American history, from inside as well as outside of government. What constitutes dangerous leadership, and what makes a leader dangerous? Is it the person or the context? Who decides? How do we distinguish truly dangerous leadership from the perception of dangerous leadership? Does dangerous describe the means or the ends of leadership? Does it matter? Is leadership that privileges desirable ends, such as justice or security, at the expense of democratic means acceptable? Is democratic leadership in service of "dangerous" goals acceptable, and what are these goals?

Requirements/Evaluation: six 5-page essays; six 2-page response papers; and one final 5-page rewritten essay

PSCI 207 (S) Approaches to Asian Studies

Cross-listings: ASIA 210 PSCI 207

Secondary Cross-listing

Home to over half of the world's population and to more than twenty of the world's largest cities, Asia has gained global prominence in recent years; the twenty-first century in fact has widely been deemed the 'Asian Century'. But what is Asia? And what does it mean to study this richly diverse region? This seminar will address these questions with the aim of introducing students to important theoretical topics and key concepts that are relevant to the comparative and critical study of Asia. One central concern will be to consider the different ways of understanding "Asia", both in terms of how the term and the region have been historically constituted; another will be to facilitate an understanding some of the salient factors (geography, belief systems, economy and polity)--past and present--that make for Asia's coherence and divergences; a third concern will be to unpack the troubled notions of "East" and "West" and re-center Asia within the newly emerging narratives of global interconnectedness. Beginning with the evolution of the field, this course will equip students with the methodological tools to critically navigate their own specific regional, inter-regional, or interdisciplinary tracks in the Asian Studies concentration.

Requirements/Evaluation: Two short papers (5-6); one longer final paper (10-15); discussion participation.

Prerequisites: At least one prior course related to Asia

Enrollment Limit: 20

Enrollment Preferences: Asian Studies concentrators; seniors; juniors; sophomores

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

PSCI 208 (F) Wealth in America (WS)

The pursuit of wealth is an important feature of American political identity, captured by the ideas of the American dream and the Protestant work ethic. The accumulation of wealth has been lauded as both a worthy individual activity and a vital component of the nation's public interest. Yet inequality in wealth may conflict with the political equality necessary for democratic governance and public trust, leading to concerns that we are sacrificing community, fairness, and opportunity for the benefit of a small portion of the population. This course focuses on questions about the public value of wealth and its accumulation, which have become more pressing now that the richest one percent of Americans own about 40 percent of privately held wealth. Some readings will be historical, particularly those focusing on American political thought and the politics of the Gilded Age. Most readings will focus on contemporary political debates about the accumulation, concentration, and redistribution of wealth.

Requirements/Evaluation: four 5-page papers and a final 10-page paper that is a revision and extension of a short paper

Prerequisites: none; not suitable for first-year students

Enrollment Limit: 19

Enrollment Preferences: Political Science majors with concentration in American politics and Political Economy majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Unit Notes: American concentration

Distributions: (D2) (WS)

Writing Skills Notes: Four 5-page papers, peer review, and a revision of extension of one of these papers into a 10-page paper at the end of the semester. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

PSCI 209 (S) Poverty in America

Cross-listings: WGSS 209 PSCI 209

Primary Cross-listing

Although some protest that the U.S. is heading toward European-style socialism, social welfare programs in the U.S. differ in important ways from those in other wealthy and democratic nations. This course focuses on the adoption and development of policies to address poverty and inequality in the U.S. The issues we will explore include: What is poverty, and how do Americans perceive its dangers to individuals as well as the political community? What economic, historical, and sociological theories have been advanced to explain poverty? Why has the U.S. adopted some approaches to reduce poverty but not others? What enduring political conflicts have shaped the U.S. welfare state?

Class Format: In spring 2021, this course will be taught remotely.

Requirements/Evaluation: class participation, two or three short papers, and a final paper

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: Political Science, Political Economy, and Women's, Gender and Sexuality Studies majors and concentrators in Public Health

PSCI 211 (S) Do the People Govern? U.S. Public Opinion and Mass Political Behavior

America's founding documents explicitly state that the will of the people is the authority upon which our government rests. But do the people actually govern, and should they? Pessimists point out that most Americans know very little about politics and lack coherent political views, are easily manipulated by media and campaigns, and are frequently ignored by public officials anyway. Optimists counter that, even if individuals are often ignorant and/or confused about politics, in the aggregate, the public sends a coherent signal to public officials, who usually carry out the public's general wishes. In addition to engaging this debate about what the public thinks about politics, we will also explore how people behave in the political realm. What are the forces that shape whether citizens pay attention to politics, vote, work on campaigns, protest, or engage in other types of political action? How do resource gaps tied to inequalities in society (such as race, class, and gender) influence political behavior? And how do institutions such as the media and campaigns encourage or discourage it?

Requirements/Evaluation: class participation, one to two short papers (5-7 pages), one medium paper (8-12 pages), an oral presentation, and a final exam

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Political Science majors

Expected Class Size: 20

PSCI 212 (S) From Tocqueville to Trump: Leadership and the Making of American Democracy (DPE)

Cross-listings: LEAD 205 PSCI 212

Secondary Cross-listing

America's founders didn't mean to create a democracy. But since the Revolution, leaders have been fighting to make real for all Americans the promise of government of, by, and for the people. In this course, we will look at how leaders have marshaled ideas, social movements, and technological changes to expand the scope of American democracy--and the reasons they have sometimes failed. We will examine how founders such as Benjamin Franklin and James Madison envisioned the relation between the people and the government; how workers, African Americans, and women fought to participate in American politics; and how globalization, polarization, and inequality are straining American democracy and political leadership in the 21st century. We will examine leadership to better understand American democracy--and vice versa. We will ask: What explains why some leaders have succeeded where others have failed? Have some periods of American democratic politics been more amenable to particular kinds of leadership than others? What makes American political leadership distinctive in international comparison? Who, exactly, has been permitted to participate in American politics, and on what terms? How has the relation between the governors and the governed changed over time, and what factors and events have shaped those relations? How has America's democratic experiment compared with (and interacted with) democracy

elsewhere in the world? Is America really a democracy at all?

Requirements/Evaluation: bi-weekly short writing assignments, term paper, midterm and final in-class exams

PSCI 214 (S) Racial and Ethnic Politics in America

Arguably, the dominant discourse in the presidency of Donald Trump and the battle to succeed him is about race. Race is connected to salient issues like immigration and police conduct; to politicians across the political spectrum; and (some argue) to virtually everything in American politics, including fundamental concepts that have no manifest racial content, like partisanship and the size and scope of government. We will evaluate the role of race as it relates to public opinion, political behavior, campaigns, political institutions, and public policy debates, with special attention devoted to the nature of racial attitudes. Most of the course will focus on the historical and contemporary relations between whites and African Americans, but we will also explore topics involving other pan-ethnic communities, particularly Latinos and Asian Americans.

Class Format: For spring 2021, this course will be taught remotely, with twice-weekly synchronous Zoom sessions as a class.

Requirements/Evaluation: class participation, one to two short papers (5-7 pages), one medium paper (8-12 pages), an oral presentation, and a final exam

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: poli sci majors first, seniors second, juniors third, sophomores fourth

PSCI 215 (S) Race and Inequality in the American City

Cross-listings: LEAD 215 PSCI 215

Primary Cross-listing

In the past half-century, American cities have gotten both much richer and much poorer. The making of "luxury cities" has gone hand-in-hand with persistent, concentrated poverty, extreme racial segregation, mass incarceration, and failing public services-social problems borne primarily by people of color. This course will examine the political underpinnings of inequality in American cities, with particular attention to the racialization of inequality. Among the topics we will cover are: the structures of urban political power; housing and employment discrimination; the War on Crime and the War on Drugs (and their consequence, mass incarceration); education; and gentrification. We will ask: How have city leaders and social movements engaged with urban problems? How have they tried to make cities more decent, just, and sustainable? Under what circumstances has positive leadership produced beneficial outcomes, and in what circumstances has it produced perverse outcomes? We will engage primarily with political science, but also with scholarship in other disciplines, including sociology, history, geography, and legal studies, all of which share an interest in the questions we will be exploring. Students will leave this course with a deeper understanding of contemporary urban problems, a knowledge of the political structures within which those problems are embedded, and a better sense of the challenges and opportunities leaders face in contemporary urban America.

PSCI 216 (F) American Constitutionalism I: Structures of Power

Cross-listings: PSCI 216 LEAD 216

Primary Cross-listing

How has the American Constitution been debated and understood over time? What is the relationship between constitutional and political change? This course examines the historical development of American constitutional law and politics from the Founding to the present. Our focus is on structures of power -- the limits on congressional lawmaking, growth of presidential authority, establishment of judicial review, conflicts among the three branches of the federal government, and boundaries between the federal and state and local governments. The specific disputes under these rubrics range from secession to impeachment, gun control to child labor, waging war to spurring commerce; the historical periods to be covered include the Marshall and Taney Court years, the Civil War and Reconstruction, the Progressive Era, the New Deal, the Warren Court, and the contemporary conservative ascendancy. Readings are drawn from Supreme Court opinions, presidential addresses, congressional debates and statutes, political party platforms, key tracts of American political thought, and secondary scholarship on constitutional development. Throughout the semester, our goal will be less to remember elaborate doctrinal rules and multi-part constitutional "tests" than to understand the changing nature of, and changing relationship between, constitutional power and constitutional meaning in American history.

Class Format: discussion

Requirements/Evaluation: three 5- to 7-page essays, a final exam, and class participation

PSCI 218 (S) The American Presidency

Cross-listings: PSCI 218 LEAD 218

Primary Cross-listing

Many argue that the presidency has been fundamentally changed by the tenure of Donald Trump. Is this right? To study the presidency is to study human nature and individual personality, constitution and institution, rules and norms, strategy and contingency. This course will examine the

problems and paradoxes that attend the exercise of the most powerful political office in the world's oldest democracy: Can an executive office be constructed with sufficient energy to govern and also be democratically accountable? What are the limits on presidential power? How much do we attribute the shaping of politics to the agency of the individual in the office and to what extent are politics the result of structural, cultural, and institutional factors? Are the politics of the presidency different in foreign and domestic policy? How are national security concerns balanced with the protection of civil rights and liberties? How is the office and purpose of the presidency affected by an economic order predicated on private capital? By the character of the occupant? Exploration of these and other questions will lead us to examine topics such as presidential selection, the bases of presidential power, character and leadership issues, congressional-executive interactions, social movement and interest group relations, and the media. Attention will focus largely on the modern presidency, though older historical examples will also be used to help us gain perspective on these problems.

Class Format: This course will be taught as a hybrid class, with a mixture of in-person and remote sessions for all students. The course will feature both seminar discussion and several small group research projects.

Requirements/Evaluation: three 5 to 7 page papers, small group projects, and class participation involving weekly writing

PSCI 220 (S) The U.S. and Afghanistan: A Post-Mortem (DPE)

Cross-listings: ASIA 208 GBST 208 PSCI 220 ASST 208 ANTH 208

Secondary Cross-listing

The United States attacked and defeated the Afghan Taliban regime over in the course of a few short weeks in 2001. Within a few years, the finality of that victory was brought into question as the Taliban regrouped and eventually reasserted itself as a formidable guerilla army that the U.S. military could not easily defeat. At the same time that it was facing a more difficult military challenge than anticipated, the United States got bogged down in the process of nation-building, as well as efforts at social reform. This course examines the history of American involvement in Afghanistan, beginning with the Cold War when the U.S. used Afghanistan as a test case for new models of political modernization and economic development. We will go on to discuss the U.S. support for Islamist political parties during the Soviet occupation of Afghanistan in the 1980s and the consequent rise of the Taliban, and the role of Afghanistan in the September 11th attacks and the "War on Terror" that followed. The course will conclude with a consideration of the impact and legacy of the two decades of nation-building and social reform carried out by the United States since 9/11.

Requirements/Evaluation: grading will be determined by class participation, two short essays, and a 15-page research paper

Prerequisites: none

PSCI 223 (F) International Law

International law embodies the rules that govern the society of states. It spells out who can be a sovereign state and how to become one, what states can do, what they cannot do, and who can punish transgressions. It also creates status used by other actors, such as international organizations, soldiers, national liberation movements, refugees, transnational air and sea shipping companies, and multinational corporations. International law is similar to domestic law, with one very crucial difference: it is not in theory enforced by a centralized, sovereign state. In most other respects, it is the same: it protects the status quo, including the distribution of power among its members; it spells out legitimate and illegitimate ways of resolving conflicts of interest; it is biased toward the powerful and legitimates their interests; it tells its members how to act to coordinate their interests and minimize direct conflict; some of it is purely aspirational, some of it necessary for survival. And like domestic law, it is enforced only some of the time, and then against the weak more than the strong. Yet, law is still where we look for justice and, perhaps, the legitimation of order.

Class Format: The lectures will be on Powerpoint slides that students can review at any time before class, as they do the readings. Synchronous class time will be devoted to discussion: clarifying, extrapolating, interpreting.

Requirements/Evaluation: six quizzes, weekly Glow posts, two 4-page papers on assigned topics, one final project (video, audio, or paper), and one final exam

Prerequisites: None, although those who have not taken PSCI 202 at Williams will be required to do one additional small set of readings and a lecture, and pass a basic quiz based on them during the first week.

PSCI 224 (F) Neo-liberalism: What Is It and Why Does It Matter?

We live in the era of neo-liberalism. But what does this mean? This course will focus on neo-liberalism in comparative perspective, looking mainly at the US and Europe. It will consider how neo-liberalism is defined, the role of states in making and maintaining neo-liberalism, the centrality of markets to neo-liberal conceptions, and the kinds of politics that produced and are produced by neo-liberalism. Economically, the course will look at the institutional configuration of neo-liberalism, changes in economies, growing inequality, the financial crises, and prevalence of debt. Politically, the course will address changes in the role of government, what governments do and do not do, the growing influence of financial interests, the role of identities in mobilizing support for and legitimating governments, and the impact of these developments on the status of citizenship and democracy.

Requirements/Evaluation: three papers: one 3-page, one 5-page, and one 10-page paper

PSCI 227 (S) International Relations of the Middle East

Cross-listings: PSCI 227 LEAD 227

Primary Cross-listing

This is a course about the Middle East in international politics. The structure of the course combines political science concepts with a detailed survey of the region's diplomatic history. Classes will be taught remotely. The basic format of the course will be to combine brief lectures--either posted on the class website beforehand or given at the start of each class--with an in-depth discussion of each class session's topic. The goal of these discussions is to generate debates over the conceptual, historical, and policy significance of the subjects that we cover. Specifically, the first section of the course will cover the emergence of the Persian Gulf as an area of strategic importance in international politics; U.S. policy toward Saudi Arabia and Iran after World War II; the origins of the Arab-Israeli dispute; the June 1967 and October 1973 Middle East conflicts; Egyptian-Israeli peace; the Iranian Revolution and the Iran-Iraq War; the 1991 Persian Gulf War and its consequences; and the rise of Al Qaeda, Hezbollah, and Hamas. The second part of the course focuses on the Iraq War and its consequences; the rise of ISIS; the Arab Spring; Turkey's changing foreign relations; and the war in Syria. The last section of the course covers contemporary policy challenges confronting the Middle East.

Class Format: This course will be taught remotely. There will be brief lectures, which will be either put on the work website prior to class or given at the start of each class. But the class will mainly consist of in-depth, synchronous classroom discussions.

Requirements/Evaluation: class participation, two 6- to 8-page papers, final

PSCI 231 (F) Ancient Political Thought

Cross-listings: PHIL 231 PSCI 231

Primary Cross-listing

The core activity of this seminar is the careful reading and sustained discussion of selected works by Plato and Aristotle, but we will also engage such other thinkers as Epictetus and Augustine, and, from a political and theoretical point of view, selections from the Hebrew Bible and New Testament. Among the questions that we will address: What is justice? How can it be known and pursued? How is political power generated and exercised? What are the social and ethical prerequisites--and consequences--of democracy? Must the freedom or fulfillment of some people require the subordination of others? Does freedom require leading (or avoiding) a political life? What distinguishes that kind of life from others? What does it mean to be "philosophical" or to think "theoretically" about politics? Although we will attempt to engage the readings on their own terms, we will also ask how the vast differences between the ancient world and our own undercut or enhance the texts' ability to illuminate the dilemmas of political life for us.

Class Format: discussion

Primary Cross-listing

This course is a chronological survey of major works of political theory from the 16th to the 20th century. In discussions and writing, we will explore the diverse visions of modernity and of politics offered by such thinkers as Machiavelli, Hobbes, Locke, Rousseau, Marx, Mill, and Freud. They help us ask: What is freedom? Who is equal? Who should rule? With what limits and justifications? What form of government best serves the people? Who are the people, anyway? And on what grounds can we justify confidence in our provisional answers to such questions? Class will be primarily driven by discussion, often preceded by brief lectures. Attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

Class Format: Class meetings will be conducted remotely using zoom.

Requirements/Evaluation: three papers of 4-6 pages; class participation; brief informal writing tasks inside and outside of class meetings

Prerequisites: none; open to all

Enrollment Limit: 12

Enrollment Preferences: Political Theory concentrators, then Political Science majors

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)

PSCI 233 (F) Rastafari: Dread, Politics, Agency

Cross-listings: REL 261 AFR 299 PSCI 233

Secondary Cross-listing

The emergence of Rastafari in the twentieth century marked a distinct phase in the theory and practice of political agency. From its heretical roots in Jamaica, Garveyism, Ethiopianism, and Pan-Africanism, Rastafari has evolved from a Caribbean theological movement to an international political actor. This course investigates the political theory of Rastafari in order to develop intellectual resources for theorizing the concept of agency in contemporary Africana thought and political theory. We will analyze texts and audio-visual works on the political economy of late colonial Jamaica, core Rastafari thinking, political theology, the role of reggae music, the notion of agency, and the influence of Rastafari on global politics.

Requirements/Evaluation: attendance and participation, weekly reading e-response papers, two short essays, and a 12- to 15- page final paper

Prerequisites: none; open to all

Enrollment Limit: 15

Enrollment Preferences: Africana Studies concentrators and majors in Political Science and Religion

PSCI 234 (S) Freedom

We all want to be free--at least most of us say we do. The desire for political freedom is as old as the ancient world and as new as today's movements and liberation struggles. But what do we mean when we claim to want freedom? What institutions and social conditions make political freedom possible? For instance, do the claims of individual freedom conflict with those of community? With equality? With authority? Does freedom make us happy? Is it what we *really* want? And if it is, will we find it by engaging or turning away from politics? This course confronts these questions through readings drawn from a variety of classic and contemporary sources, including works of fiction, autobiography, journalism, law, philosophy and political theory, and social science. Our discussions will address such topics as activism and stoicism; equality and economic freedom; sexual freedom and gender politics; freedom of speech and religion; citizenship, migration, and cosmopolitanism; racism and colonialism; mass incarceration; and the uses and limits of state power. This course is part of a joint program between Williams' Center for Learning in Action and the Berkshire County Jail in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates and will be held at the jail. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Transportation will be provided by the college. *Please note the atypical class hours, Th. 4:45-8:30 pm*

Requirements/Evaluation: Class attendance and active participation, short essays, and a final paper.

Prerequisites: Not open to first-year students.

Enrollment Limit: 9

Enrollment Preferences: Final selection will be made on the basis of statements of interest solicited after pre-registration, and interviews with the instructor.

PSCI 235 (S) Survival and Resistance: Environmental Political Theory

Cross-listings: ENVI 235 PSCI 235

Primary Cross-listing

Contemporary struggles to reverse environmental destruction and establish sustainable communities have prompted some political theorists to rethink longstanding assumptions about politics and its relationship to nature. Does the environment have "rights"? What, if anything, is the difference between an ecosystem and a political community? Is democracy dangerous to the planet's health? Are environmental protections compatible with political freedom? How is the domination or conquest of nature connected with domination and conquest within human societies? What does justice demand in an age of climate change? In this class, we will consider the promise and limits of political theory to illuminate present day environmental crises and foster movements to overcome them. We will engage classic texts that helped to establish political theory's traditional view of nature as a

resource, as well as contemporary texts that offer alternative, ecological understandings of nature and its entwinements with politics. Class will be driven primarily by discussion. Students will have significant responsibility for setting the agenda for discussions through informal writing submitted prior to class. As a writing intensive course, attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

Requirements/Evaluation: formal and informal writing assignments and class participation

PSCI 238 (F) Economic Liberalism and Its Critics

Cross-listings: ECON 299 PSCI 238 POEC 250

Secondary Cross-listing

Economic liberalism holds that society is better off if people enjoy economic freedom. Its critics point to what they believe this position ignores or what it wrongly assumes, and hence, how it would make bad policy. This course explores the relationship between politics and economics by surveying influential works of political economy. Its first part examines major thinkers in relation to the historical development of capitalism in Western Europe and the United States: the classical liberalism of Adam Smith, Karl Marx's revolutionary socialism, and the reformist ideas of John Maynard Keynes. The second part considers mid-20th-century writers who revise and critique economic liberalism from a variety of perspectives, including Friedrich Hayek, Milton Friedman, Ronald Coase, Arthur Okun, and Albert O. Hirschman. The third part surveys significant recent contributions relevant to the themes of the course, with applications to current public policy issues, including topics such as: power relations and autonomy in the workplace; asymmetric information and social insurance; economic inequality and distributive justice; equality of opportunity; the economics of health care; positional goods and the moral foundations of capitalism; economic nationalism and new trade theory; behavioral economics; climate change and intergenerational equity; finance and financial crises; and rent-seeking. The combination of the historical focus of the early part of the course with discussion of modern policy issues and debates in the latter part of the course permits you to appreciate the ongoing dialogue between classical and contemporary views of political economy.

Class Format: This class uses a flipped classroom approach, where before each class meeting, students watch a lecture video, and sometimes write an essay or solve some problems on relating to the assigned reading and video, and then in-person class is devoted primarily to discussion.

Requirements/Evaluation: six short essays, several short homework assignments, and a final exam

Prerequisites: ECON 110 and 120 or equivalent; PSCI 201, 202, 203, or 204 (may be taken concurrently with POEC 250); open to non-majors

Enrollment Limit: 30

PSCI 241 (S) Meritocracy

Cross-listings: PSCI 241 SOC 241

Primary Cross-listing

Although fewer than 1% of Americans have a degree from the country's top 30 colleges and universities, 39% of Fortune 500 CEOs, 41% of federal judges, 44% of the writing and editorial staff at the *New York Times*, 64% of Davos attendees, and 100% of Supreme Court justices do. Is this a positive sign that the United States is governed by its most talented and capable members who have risen through hard work and equal opportunity? Or a negative one pointing to the power of a corrupt and self-selecting elite? This course explores the theme of meritocracy--rule by the intelligent--in comparative perspective. We will look at both old and new arguments regarding the proper role and definition of merit in political society as well as take the measure of meritocracy in present-day Singapore, France, and the United States. The course concludes with a focus on the current debate over American meritocracy and inequality.

PSCI 244 (F) Anti-Muslim Racism: A Global Perspective (DPE)

Cross-listings: PSCI 244 GBST 243 REL 247

Secondary Cross-listing

The racialization of Islam and Muslims has been constitutive to how they have been imagined in Europe and elsewhere. This course looks at how

difference works and has worked, how identities and power relationships have been grounded in lived experience, and how one might both critically and productively approach questions of difference, power, and equity. It goes back to the founding moments of an imagined white (at the beginning Christian) Europe and how the racialization of Muslim and Jewish bodies was central to this project, and how anti-Muslim racism continues to be relevant in our world today. The course will not only show how Muslims were constructed as subjects in history, politics and society from the very beginning of the making of Europe and the Americas to the end of the Cold War to the post-9/11 era. Rather, it also looks at how Muslims live through Islamophobia. It looks at processes of racialization of Muslims within the Muslim community and between Muslim communities, while also considering which agencies Muslims take to determine their own future. The course draws from anthropology, gender studies, history, political science, religious studies, postcolonial studies, decolonial studies, and sociology.

Requirements/Evaluation: Active class participation, two response papers, and a comprehensive, open-book and open-note final exam.

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Global Studies concentrators and Religion majors

PSCI 246 (F) The Politics of Capitalism

Must we choose between "socialism or barbarism?" A century after Rosa Luxemburg's challenge, it is clear that socialism did not win. Does this mean that we have descended to barbarism? Tracing the path of capitalist development in the rich democracies suggests a range of responses. Some states have developed robust institutions that provide for citizens' basic needs and check the power of business; others leave the poor threatened by starvation and workers exposed to exploitation. How and why has capitalism evolved in different forms in different countries? This course addresses the politics of capitalism by examining the struggles between social groups that lead to variation in distributional outcomes and economic performance.

The course concludes by investigating these struggles in light of contemporary challenges, in particular, transnational governance and technological change.

PSCI 247 (S) Political Power in Contemporary China

Cross-listings: ASST 249 PSCI 247 ASIA 249

Primary Cross-listing

The People's Republic of China has experienced rapid and extensive economic, social and cultural transformation over the past forty years. Its political system, however, is little changed. The Communist Party still monopolizes power and works hard to suppress organized opposition. Political dissent has taken various forms since 1979 but the regime has found ways to repress and divert it. Yet, in spite of the state's efforts, opposition and dissent continue to bubble to the surface. The course will review the political development of the PRC since 1949 and, then, focus on the dynamics of political contention and regime persistence since the Tiananmen Crisis of 1989.

Class Format: The class will be hybrid, with both online content and in-person discussion.

Requirements/Evaluation: two short papers and a final exam

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: Political Science and Asian Studies majors

PSCI 248 (F) The USA in Comparative Perspective (WS)

Politics in the USA is often considered unique and incomparable, and US political science separates the study of American politics from comparative politics. This course overcomes this divide, considering politics and society in the United States comparatively, from a variety of viewpoints and by authors foreign and American, historical and contemporary. Important topics include: the colonial experience and independence; race relations and the African diaspora; national identity and authoritarian populist nationalism; war and state-building; American exceptionalism, religion, and foreign policy; the role of political and economic institutions; and the origins and shape of the welfare state. (As the list suggests, the most common comparisons are with Latin America and Western Europe, but several of our authors look beyond these regions.)

Class Format: a lecture in the first week; then ten weeks of tutorial; then a discussion class in the final week

Requirements/Evaluation: five 5- to 6-page papers, five 1- to 2-page responses, and one 1-page essay for the final class

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: sophomores and students who have been denied enrollment in the course previously

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Assignments are graded and returned weekly. After each student has written one long paper and one response, professor meets with them individually to discuss the composition and presentation of each genre. For the final class, students bring a one-page response written in "E-prime," English without the verb "to be."

PSCI 250 (F) Political Psychology

This course will examine the role of psychology in politics. The goal is to develop a rich understanding of the foundations of public opinion and political behavior. We will examine the role of social identities, partisan affiliation, concrete interests, values, issues, and ideology in shaping opinion and behavior, as well as the role of external forces such as campaigns, the media, and political elites. Along the way, we will consider a number of longstanding questions in the study of politics, such as: is the public rational? What are the root causes of racism? How does racism influence political choices? Why do people identify with political parties? Why do people vote or engage in other types of political action? How does the mass media and campaigns influence public opinion?

Requirements/Evaluation: class participation, 1-2 short papers (5-7 pages), 1 medium paper (8-12 pages), an oral presentation, and a final exam

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: If the course over-enrolls, please give first enrollment preference to political science majors, followed by political economy majors.

Fall 2021

LEC Section: 01 TF 1:10 pm - 2:25 pm Matthew Tokeshi

PSCI 253 (S) The Tragedy of Venezuela

The recent history of Venezuela offers a window into many of the most important political and economic issues faced by people in developing countries. Why does an abundance of oil seem to solve some problems while often leading to perverse economic and political outcomes? How can democracy be made to work better for ordinary people? What does it mean for a government to be truly sovereign? How does corruption grow and what can we do about it? When should we leave important decisions to technocratic experts? What does it mean today to be progressive? The course first briefly reviews Venezuelan post-Independence history, with an emphasis on the post-1958 democratic settlement. It then explores more deeply the reasons for the breakdown of this settlement, the rise of Hugo Chavez, and the decay of the "21st Century Socialist" regime under Chavez and Maduro. Materials include biographies, documentary films, short videos, economic data, and news reports.

Class Format: discussion

Requirements/Evaluation: a map quiz and four short papers

Prerequisites: a course in comparative politics and a course in economics, or permission of the instructor

PSCI 258 (F) The Media and American Democracy

Cross-listings: PSCI 258 LEAD 258

Secondary Cross-listing

The course examines the relationship between the press and government, its watchdog function, how social media and the Internet are changing its role, the emergence of independent investigative bodies such as Pro Publica, and the myriad ways in which the press has helped shape American history, for better or worse. The course goes behind the headlines to examine the delicate interplay between government and press, peels back the familiar classics of American journalism, but also incorporates the current conflicts and tensions between the press and government. In the new age, how does the press define or redefine balance, neutrality, the quest for objectivity, and restraint. Who is a journalist, a once relatively easy question, but one now fraught with complexity? There has been a tectonic shift in the fundamental standards and practices of the press in recent years. What are those changes and how does it augur for the future of the press and democratic institutions?

Requirements/Evaluation: Several short papers, 10-15 page research paper.

PSCI 260 (F) Power, Feminist-Style (DPE) (WS)

Cross-listings: WGSS 260 PSCI 260

Secondary Cross-listing

This course examines one of the most important concepts in the analysis of sex and gender and efforts to envision sexual and gender justice; the concept of power; from multiple feminist perspectives. At the core of feminism lies the critique of inequitable power relations. Some feminists claim that power itself is the root of all evil and that a feminist world is one without power. Others portray the feminist agenda as one of taking power, or of reconstructing society by exercising a specifically feminist mode of power. In this course, we will look at feminist critiques of power, how feminists have employed notions of power developed outside of the arena of feminist thought, and efforts to develop specifically feminist ideas of power. Along the way, we will ask: Are some concepts of power more useful to feminism? Can certain forms of power be considered more feminist than others? How can feminist power be realized? Thinkers we will engage include Judith Butler, Audre Lorde, Catherine MacKinnon, Hannah Arendt, and Patricia Hill Collins.

Requirements/Evaluation: eight short writing assignments (ranging from 250 words to 750 words), drafting and revision of a 10 pg final essay

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Women's, Gender, and Sexuality Studies majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 260 (D2) PSCI 260 (D2)

Writing Skills Notes: This course aims to carefully unpack the writing process by focusing on particular elements of writing (summary, critical analysis) while also introducing students to tools they can use to improve their writing (freewriting). Short writing assignments like the proposal, outline, and abstract build on one another and culminate in a final essay that goes through the process of drafting and, after peer and teacher review, revision.

Difference, Power, and Equity Notes: This course requires students to focus on what power does and should look like from the perspective of difference, exploring the relationship between power and equity in the process. Students will reflect on and discuss the working of power in their own lives, why certain forms of power are more or less visible to particular groups, and how different ideas about power promote different interests in society at large.

PSCI 262 (F)(S) America and the Cold War

Cross-listings: HIST 261 PSCI 262 LEAD 262

Primary Cross-listing

This course examines the rise and fall of the Cold War, focusing on four central issues. First, why did America and the Soviet Union become bitter rivals shortly after the defeat of Nazi Germany? Second, was one side primarily responsible for the length and intensity of the Cold War in Europe? Third, how did the Cold War in Europe lead to events in other areas of the world, such as Cuba and Vietnam? Finally, could the Cold War have been ended long before the collapse of the Soviet Union in 1989? Political scientists and historians continue to argue vigorously about the answers to all these questions. We examine both traditional and revisionist explanations of the Cold War, as well as the new findings that have emerged from the partial opening of Soviet and Eastern European archives. The final section of the course examines how scholarly interpretations of the Cold War continue to influence how policymakers approach contemporary issues in American foreign policy.

Class Format: lecture/discussion

Requirements/Evaluation: one medium length paper, an in-class midterm and final exam, and a series of short assignments

PSCI 265 (S) The International Politics of East Asia

This course examines the political, economic, and cultural determinants of conflict and cooperation in East Asia. Throughout the semester, we will examine three distinct but inter-related aspects of international relations in East Asia: Security, economy, and culture by using some core concepts

and theoretical arguments widely accepted in the study of international relations. We will engage some of the central questions and issues in the current debate on East Asia. Do East Asian countries seek security and prosperity in a way fundamentally different from the Western system? Is there a single best way to maintain regional order and cooperation across regions? Will a strong China inevitably claim its traditional place under the sun? Will Japan continue to live as a nation with enormous economic power but limited military means? What is the choice for South Korea between security alliance with the United States and national reconciliation with the North? What should be done to dissuade the authoritarian regime in North Korea from acquiring nuclear capabilities and lead it to different paths toward national survival? By the end of the semester, you will gain both a general perspective and substantive knowledge on East Asian international politics.

Class Format: discussion

Requirements/Evaluation: midterm exam, team debate, take-home final exam, class participation and other assignments

PSCI 266 (S) The United States and Latin America (DPE)

This course examines the most important political and diplomatic divide in the Western Hemisphere. The first half is a historical survey of U.S.-Latin American foreign relations from the early Spanish American independence movements through the end of the Cold War and recent developments. We consider how this history confirms or undermines influential views about U.S. foreign relations and about international relations generally. We also compare historical U.S. foreign policy toward the hemisphere to U.S. policy toward the entire world after the Cold War. The second half covers the most important current issues in hemispheric relations: the rise of leftist governments in Latin America; the war on drugs; immigration and border security; and competition with China for influence. At the end we briefly reconsider current U.S. policies in historical perspective.

Class Format: more lecture in the first half, more discussion and several in-class debates in the second

Requirements/Evaluation: a map quiz, a 2-page paper, two 3-page papers, and either another 3-page paper and a regular final exam, or a 12-page research paper and a short final exam

Prerequisites: none

Enrollment Limit: 35

Enrollment Preferences: Political Science majors

PSCI 270 (S) The Politics of Waste

Cross-listings: ENVI 241 PSCI 242 PSCI 270

Primary Cross-listing

Waste is not just a fact of life, it is a political practice. To create and maintain political order requires devising collective means to pile up, bury, burn, or otherwise dispose of stuff deemed dirty or disorderly: waste management is regime management. In turn, our feelings of disgust for anything deemed waste shape political deliberation and action on environmental policy, immigration, food production, economic distribution, and much more. The very effort to define "waste" raises thorny political questions: What (or who) is disposable? Why do we find the visible presence of certain kinds of things or persons to be unbearably noxious? How should we respond to the fact that these unbearable beings persist in existing, despite our best efforts to eliminate them? What is our individual and collective responsibility for creating and disposing of waste? Serious inquiry into waste is rare in political theory and political science--perhaps understandably, given that the study of politics is shaped by the same taboos that shape politics. In this seminar we will openly discuss unmentionable topics and get our hands dirty (sometimes literally) examining the politics of waste. We will take notice of the erasure of waste in traditional political theory and work together to fill these gaps. To do so, we will draw on work in anthropology, critical theory, history, urban studies, and waste management science; representations of waste in popular culture; and experiences with waste in our lives. This course is part of a joint program between Williams' Center for Learning in Action and the Berkshire County Jail in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates and will be held at the jail. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Transportation will be provided by the college. *Please note the atypical class hours, Wed 4:45-8:30 pm*

Requirements/Evaluation: class attendance and participation, short essays, and a final paper

Prerequisites: not open to first-year students

Enrollment Limit: 9

Enrollment Preferences: final selection will be made on the basis of statements of interest solicited after pre-registration and interviews with the instructor

Expected Class Size: 9

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Cross-listings: REL 214 PSCI 271

Secondary Cross-listing

The First Amendment of the U.S. Constitution begins: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." What does "religion" mean in this formulation? Should "religion" be singled-out for exclusion from government? Are "religious" reasons ever legitimate reasons for laws, policies or popular political action? Should "religious" organizations be exempt from otherwise generally

applicable laws? Is "religion" good or necessary for democratic societies? In this course we will respond to these and related questions through an investigation of "religion" as a concept in political theory. Particular attention will be given to the modern liberal tradition and its critics. Coverage will range from modern classics to innovative contemporary arguments. Classics may include John Locke's *A Letter Concerning Toleration*, selections from Jean-Jacques Rousseau's *The Social Contract*, James Madison's *Memorial and Remonstrance Against Religious Assessments*, Immanuel Kant's *Religion Within the Boundaries of Mere Reason*, John Stewart Mill's *Three Essays On Religion*, and John Dewey's *A Common Faith*. More recent arguments may come from John Rawls, Alasdair MacIntyre, Nicholas Wolterstorff, Martha Nussbaum, Jeffrey Stout, Winnifred Sullivan, Brian Leiter and Andrew Koppelman.

Requirements/Evaluation: class participation, two short papers, a midterm take-home exam, and a final take-home exam

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: Religion majors, those interested in being Religion majors, and Political Science majors concentrating on Political Theory

Expected Class Size: 25

PSCI 273 (F) Politics without Humans?

Cross-listings: ENVI 273 STS 273 PSCI 273

Primary Cross-listing

Are human beings the only beings who belong in politics? And is political involvement a unique or defining aspect of what it means to be human? Such questions are increasingly complex as the boundaries of "the human" become blurred by the rise of artificial intelligence, robotics, and brain implants: shifting attitudes towards both animal and human bodies; and the automation of economic and military decisions (buy! sell! attack! retreat!) that used to be the prerogative of human actors. How do visions of politics without humans and humans without politics impact our thinking about longstanding questions of freedom, power, and right? Can and should the link between humans and politics survive in an age in which "posthuman" or "transhuman" entities become central characters in the drama of politics? This class will consider these questions through readings, films and artifacts that bring political theory into conversation with science fiction, popular literature on the so-called "singularity" (the merger of humans with computers), science and technology studies, evolutionary anthropology, "new materialist" philosophy, and feminist theory.

Requirements/Evaluation: three 5- to 7-page papers, regular Glow posts, class participation

Prerequisites: please note that this is an introductory-level course with no prerequisites; first-year students and those with no background in political theory are welcome, as are more experienced students

Enrollment Limit: 25

PSCI 280 (F) Silicon Valley: Digital Transformation and Democracy (WS)

Cross-listings: PSCI 280 STS 280 POEC 280

Primary Cross-listing

Nearly every country in the world seeks to drive economic growth by promoting digital technologies. The universal model is Silicon Valley. In this tutorial, students will examine the origins of the Silicon Valley model and other countries' attempts to emulate it. Departing from "just so" stories of

technological determinism, we take up the lens of comparative political economy to investigate the politics that allowed US tech firms to shape economic policy to meet their interests. It is no accident that tech became a symbol for economic growth in the 1970s, precisely when it also began to build powerful alliances in Washington. After investigating the origins of the Silicon Valley model, we trace attempts to adopt it in Europe and Asia, which highlight the model's political contingencies and some of the more salient conflicts over the tech sector. We focus on the ways in which the Silicon Valley model can threaten social welfare through economic inequality and precarious employment, and engage a variety of perspectives, including workplace ethnography, to examine these threats, as well as potential regulatory responses. The course concludes by considering what policies could be appropriate for supporting, while also regulating, the tech sector in the twenty-first century.

Requirements/Evaluation: Five 5-page papers; five 2-page responses; participation

Prerequisites: One introductory course in political science and/or permission of the instructor.

Enrollment Limit: 10

Enrollment Preferences: Preference will be given to sophomores or juniors majoring in a Division II field

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

PSCI 281 (S) Contemporary African Politics (DPE)

Cross-listings: GBST 281 PSCI 281

Primary Cross-listing

This course is an introduction to the contemporary politics of Africa, with the aim of sparking a life-long interest in the affairs of the region. Comprised of nearly 50 countries and home to over 1 billion people, sub-Saharan Africa is remarkable in its diversity, particularly in regards to a number of outcomes central to the study of political science: how do institutions of the past shape current dynamics of political competition and economic growth? Why are some countries stable democracies while others struggle with military coups or authoritarian rule? What sparks political violence and how can countries emerge from conflict? Our focus is both contemporary and comparative, organized thematically around common political experiences and attributes across the region. We begin with the legacies of colonialism, the slave trade, and the politics of liberation. We then interrogate dynamics central to political life in Africa over the 60 years since independence: the role of ethnic diversity in shaping competition, the prominence of patronage politics, and the evolution of elections. We next assess major dimensions that have historically shaped the study of African politics, including conflict and violence, economic development, and foreign aid. The final section takes a comparative approach to some of the most pressing issues in Africa today: health crises, migration and mobility, technological revolution, climate change, and the emerging power of women and youth.

Class Format: A typical class session will be about 60% lecture and 40% discussion

Requirements/Evaluation: Class Participation, Map Quiz, 3 short papers (5 pages)

Prerequisites: None.

Enrollment Limit: 25

Enrollment Preferences: all first-years and sophomores; those juniors and seniors majoring in political science or concentrating in Global Studies.

Expected Class Size: 25

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

PSCI 282 (F) Africanist Project to Black Consciousness

Cross-listings: PSCI 282 GBST 282

Primary Cross-listing

In 1957, when it was clear the African Nation Congress was unwilling to change its multiracialist and nonracialist language in favor of Africanist pronouncements, Robert Mangaliso Sobukwe left the party and became the editor of *The Africanist* newspaper. Two years later he formed the Pan-Africanist Congress. Similarly frustrated that the National Union of South African Students was dominated by white liberals, in 1968 Bantu Steve Biko helped form the black-only South Africa Students' Organization and, four years later, was the key figure in founding of the Black People's Convention, created to promote black consciousness ideas within the broader South African population. This course focuses on Sobukwe's Africanist project and Biko's Black Consciousness Movement, the strategies against apartheid they promoted, and the visions of a free South Africa they imagined.

Requirements/Evaluation: class participation; 3 two-page response papers; and a 10-12 final paper.

PSCI 285 (F) The Revolutionary Generation: Galaxy of Leaders

Cross-listings: LEAD 285 PSCI 285 HIST 354

Secondary Cross-listing

The American Revolution produced a galaxy of brilliant and creative statesmen and intellectuals: Washington, Hamilton, Jefferson, Madison, Adams. In this seminar, we will study their astounding accomplishments--a successful war of independence, a Constitution and Bill of Rights, enduring democratic political institutions, and a nascent party system. But mostly we will focus on their ideas, for they were thinking revolutionaries. We will examine in depth and in detail their superb writings, their letters and speeches as well as Madison and Hamilton's Federalist essays. We will also read recent interpretations of the founding generation by Gordon Wood, Joseph Ellis, Bernard Bailyn, and others.

Requirements/Evaluation: three papers, weekly class presentations, and active participation in all discussions

Prerequisites: none; courses in Leadership Studies or Political Theory or early American History are very helpful for admission to this seminar

Enrollment Limit: 12

Enrollment Preferences: students with a background in Leadership Studies, American History or American Political Science

PSCI 286 (F) Conservative Political Thought

Conservative thinkers claim to be leading an intellectual transformation away from the tired nostrums of liberalism. They see themselves as original, dynamic, serious. This course will read leading conservative political thinkers with a view to identifying their central tenets, both negative and positive. What is it that they oppose and support? What, if anything, defines contemporary conservative thinking? Is it a coherent body of thought, a doctrine, or a collection of disparate and conflicting thinkers? What is the relationship of thinkers who emphasize the market, order, and traditional values? And what are their views on diversity, citizenship, and race, and how do heterodox leftists fit with conservative critiques of managerial liberalism?

Requirements/Evaluation: Two 8-10 page papers and final exam

Prerequisites: Political Science Majors

Enrollment Limit: 15

Enrollment Preferences: Juniors/Seniors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

PSCI 287 (F) The Firm (DPE)

Cross-listings: PSCI 287 POEC 287

Primary Cross-listing

The rise of gigantic tech firms--Google, Apple, Facebook, Amazon--has sparked widespread worries about the role of business power in capitalist democracy. Are these firms monopolies? How can they be better regulated? Should they be? This course studies the politics of business by centering analysis on the firm. From the perspective of the workplace, we investigate the firm as an arena of power, where workers and managers meet each other in continuous contests for control. From the perspective of the public sphere, we investigate the firm as an actor whose power maps uneasily onto the channels of democratic representation. Approaching the firm as both arena and actor in a number of capitalist democracies, we will compare the politics of business across different sectors, but will focus especially on tech and finance.

Requirements/Evaluation: Class participation; two 5- to 7-page essays; one presentation; one final essay

Prerequisites: One introductory course in political science and/or permission of the instructor

Enrollment Limit: 15

Enrollment Preferences: Preference will be given to sophomores or juniors majoring in a Division II field

PSCI 288 (F) Transnational Political Movements

This course focuses on the international dimensions of when people demand political change. We explore transnational dynamics of contentious politics, including how international actors shape domestic campaigns for democracy, peace, and justice, as well as how global advocacy movements (e.g. climate change) are organized and mobilized. Building from an international relations framework, the course brings together a variety of texts, including documentaries, social media, and guest speakers working on the front lines of global advocacy (refugee rights, anti-colonial liberation struggles, and contemporary pro-democracy movements). We critically analyze how external actors and resources inform politics on the ground, both around the world and over time, as well as evaluate the normative implications of "foreign intervention."

PSCI 289 (S) The welfare state in comparative perspective

Cross-listings: PSCI 289 POEC 289

Primary Cross-listing

Modern life has, in some ways, become less risky. You are unlikely to be trampled by a mammoth. But social risk has not disappeared--you could lose your job, get into an accident, or find yourself plunged somehow into poverty. Most countries around the world have built elaborate institutions to ensure citizens' welfare by protecting some people from some risks, but not all people and not all risks. Moreover, these institutions vary considerably both over time and between countries. This course examines those institutions. Our goal is to explain how and why welfare states vary and why there is so much inequality in the distribution of risk. We will do so by investigating the different kinds of institutions that mediate risks throughout the lifecycle, from parental leave to old age pensions, and by comparing these institutions between different countries. While focusing primarily on the welfare states of Western Europe, we will also examine how the politics of social risk unfold around the world, extending our investigation to Africa, Asia, and Latin America. We will conclude by reflecting on what lessons the welfare state offers for managing this century's biggest social risk: climate change.

PSCI 291 (S) American Political Events

Scandals. Wars and assassinations. Contested elections, Supreme Court decisions, and constitutional amendments. As large as they loom in our daily experience and our historical memory, these sorts of events--concrete, discrete things that happen in and around the political world--are often underestimated as catalysts of political change. Indeed, in the study of American political development, we often look to complex processes and underlying causes as explanations for how and why ideas, institutions, and policies both emerge and evolve. Yet for all our focus on long-term and subtle causal mechanisms, events often serve as political turning points in ways that vary over time, last for extended periods of time, and are not always entirely predictable at the time. Beginning from the presumption that change often has proximate as well as latent causes, this tutorial focuses on events as critical junctures in American politics. Our concern with these events is not with why they happened as or when they did but, rather, with how they altered the American political order once they did--with how they caused shifts in political alignments, created demands for political action, or resulted in a reordering of political values. Over the course of the semester, we will look at ten different types of events, ranging from those that seem bigger than government and politics (economic collapse) to those that are the daily grist of government and politics (speeches), in each instance juxtaposing two different occurrences of a particular category of event. In so doing, we will seek to use controversial and consequential moments in

American politics as a window into deeper questions about political change and the narratives we tell about it.

Requirements/Evaluation: five 5-to 7-page essays, five 2- to 3-page critiques, and a final 4-page reflection

PSCI 306 (S) What is Power?

Cross-listings: REL 308 STS 308 SOC 308 PSCI 306

Secondary Cross-listing

What is power? Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures? What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or agency? Or ideology? This course begins with the observation that power is often described as a causal relation--an individual's power is supposed to equal their capacity to produce a change in someone else's behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: **critical theory about power** and **philosophy of science about cause and effect**. We will trace classic philosophical accounts of power and causation (in European and Chinese philosophy), as well as more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt, Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Hobbes, Hume, Locke, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, Sunzi, and Max Weber.

PSCI 308 (F) In Search of the American State

When Donald Trump campaigned in 2016 to "drain the swamp," he built on the idea held by Republicans since Ronald Reagan's 1981 pronouncement that "government is not a solution to our problem, government is the problem." Skepticism of government has deep roots and strong resonance throughout American political history. Despite this, national government has grown in scope and size for much of this history, including under both Democratic and Republican administrations. This tension over what government is doing and what it should be doing is only heightened in times of crisis, such as the moment the country is in now. This course explores the relationship between citizens and their government by examining the growth

of the American state in various arenas over time, as well as the assaults on government legitimacy in recent years. We will assess traditional theories about the weakness of the American state in light of arguments about the state as: regulator of family and "private" life, adjudicator of relations between racial and ethnic groups, manager of economic inequalities, insurer of security, and arbiter of the acceptable uses of violence and surveillance.

Class Format: This course will be taught remotely, in a quasi-tutorial style with students meeting with the instructor weekly in small discussion groups.

Requirements/Evaluation: Students will be responsible for writing three 5-page papers and three 2-page papers, and will also be asked to take responsibility for managing discussion and presenting work at different points in the semester.

PSCI 310 (F) New York City Politics from the Blackout to Bloomberg (WS)

Cross-listings: PSCI 310 LEAD 332 PSCI 332

Primary Cross-listing

This course examines New York City's political history from the 1970s to the present—a period during which the city underwent staggering economic and social changes. In the mid-1970s, New York was a poster child of urban crisis, plagued by arson and housing abandonment, crime, the loss of residents and jobs, and failing public services. By the early 21st century, the city had largely met these challenges and was once again one of the most diverse and economically vital places on earth—but also one marked by profound inequality. This course will examine how New Yorkers have contested core issues of capitalism and democracy—how those contests have played out as the city itself has changed and how they have shaped contemporary New York. Broad themes will include the city's role as a showcase for neoliberalism, neoconservatism, technocratic centrism, and progressivism; the politics of race, immigration, and belonging; the relation of city, state, and national governments; and the sources of contemporary forms of inequality. Specific topics will include policing, school reform, and gentrification. As the primary assignment in the course, students will design, research, and write a 20-page paper on a topic of their choice.

Requirements/Evaluation: active class participation, 2-page preliminary proposal, 10-page research proposal, 2-page peer feedback, 18- to 20-page research paper

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: Political Science majors and Leadership Studies concentrators

PSCI 311 (F) Congress

Cross-listings: LEAD 311 PSCI 311

Primary Cross-listing

Even before the pandemic, scholars, pundits, and the public thought Congress was in a state of crisis. Riven by polarized partisanship and gridlock, the most powerful assembly in the world seemed incapable of representing citizens and addressing problems. This seminar focuses on how Congress organizes itself to act as a collective body. In an organization comprised of equals, how and why do some senators and representatives acquire more power and authority than others? How does Congress act as an institution and not just a platform for 535 individuals? Why does Congress not act, especially when the U.S. confronts so many pressing problems, and how do legislators justify inaction? In what ways does this institution promote or hinder the legitimacy, responsiveness, and responsibility expected of a democratic governing institution?

Class Format: For fall of 2020, this class will be remote, with twice weekly synchronous discussion sessions. A few brief lectures will be put up on Glow to review before the relevant class section. Class discussion will draw on student questions posted on Glow as well as the process of developing and conducting original research.

Primary Cross-listing

From democracy to liberty, equality to community, foundational *ideas* -- about what makes for good government, about what constitutes the good society, about what is necessary to lead a good life -- define the American political tradition and consume the American political imagination. Designed not only to uncover these (sometimes melodious, sometimes cacophonous) values but also to place current ideological debates about them in a broader developmental context, this tutorial will offer a topical tour of American political thinking from the birth of nationalism in the colonial period to the remaking of conservatism and liberalism in the early twenty-first century. Utilizing primary source material ranging from presidential speeches to party platforms, newspaper editorials to novels, we will seek to interrogate -- reconciling where possible, distinguishing where necessary, interpreting in all instances -- the disparate visions and assessments of the American political experience offered by politicians, artists, intellectuals, activists, and ordinary citizens over the course of more than two centuries. Our focus, then, is nothing less than the story of America -- as told by those who lived it.

Class Format: For spring 2021, this course will be taught remotely, with a few synchronous seminar classes at the start and end of the course bookending weekly synchronous tutorial sessions.

PSCI 314 (F) How Change Happens in American Politics

Cross-listings: PSCI 314 LEAD 314

Primary Cross-listing

An unprecedented assault on the U.S. Capitol, the rise of white nationalism, a pandemic, a volatile economy, racial reckoning, and rapidly evolving environmental crises have all rocked American politics in the last year. What might we expect to come next? From the Founding to the present, the American political order has undergone cataclysmic and thoroughgoing transformations, yet it has also proven to be remarkably enduring. How can this be? Where do we find continuities and where upheavals? What accounts for the continuities, and what for the changes? What sorts of transformations have been possible, and who or what has made them possible? Finally, what are the costs of change (and of continuity)--and who pays them? The goal of this course is to assess American political change, or lack of, and to gain a sense of the role that political leaders have played in driving change. We will examine when and how individuals and leadership have mattered vis-à-vis broader historical and contextual factors, including economic developments, demographic change, war, and constitutional and institutional parameters. After examining general models of change and of leadership, we will consider specific case studies, such as civil rights for African-Americans, gender equality, labor advances, social conservatism, and populism. We will consider some of the complicated legacies of change. Finally, we will look at arguments that America has been "exceptional"--or, unlike other countries--as well as critiques of these arguments, to help us gain an understanding of future prospects for political transformation.

Requirements/Evaluation: participation in weekly meetings as well as weekly essays or critiques

Prerequisites: previous course in American politics or American history

Enrollment Limit: 10

Enrollment Preferences: Political Science majors and Leadership Studies concentrators

PSCI 315 (S) Parties in American Politics

Cross-listings: LEAD 315 PSCI 315

Primary Cross-listing

Is the American party system bankrupt? It has been said that parties are essential to democracy, and in the U.S., political parties have played a central role in extending democracy and organizing power. But their worth is a continuing subject of debate. Parties have been celebrated for linking citizens to their government and providing the coherency and unity needed to govern in a political system of separated powers. Yet they have also been disparaged for inflaming divisions among people and grid-locking the government. Other critics take aim at the two-party system itself, claiming that the major parties fail to offer meaningful choices to citizens. This course will investigate this debate over parties by examining their nature and role in American political life, both past and present. Throughout the course, we will explore such questions as: What constitutes a party? For whom do they function? How and why have they changed over time? Why a two-party system, and what role do third parties play? Is partisanship good or bad for democracy? For governance? What is the relationship between parties and presidents? How does partisanship become tribalism or hyper-partisanship, and can this be prevented? This semester, we will explore answers to these questions in a tutorial-style seminar format.

Class Format: This course will be taught remotely in a quasi-tutorial style format with students meeting with the instructor weekly in small discussion groups.

Requirements/Evaluation: Students will be responsible for writing three 5-page papers and three 2-page critiques. Students will also be asked to take responsibility for managing discussion and presenting work at different points in the semester.

Prerequisites: PSCI course at the 200 or 300 level or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Political Science majors

PSCI 316 (S) Policy Making Process

Politics as usual. It's a phenomenon we all love to hate. But what does it mean? When government policy is decided by politics, does that mean the policy is necessarily bad? Can we get rid of politics in policy making or improve on it somehow? What would "politics as unusual" look like anyway? This class examines the policy making process with particular emphasis on the United States: How do issues get defined as problems worthy of government attention? What kinds of alternatives are considered as solutions to these problems? Why do we end up with some policies but not others? Do certain kinds of processes yield better policies than others? How should we decide what constitutes a good policy?

Class Format: In spring 2021, this course will be taught remotely.

Requirements/Evaluation: several short papers, research paper, class participation

Prerequisites: one course in PSCI or permission of instructor

Enrollment Limit: 12

PSCI 317 (F) Environmental Law

Cross-listings: PSCI 317 ENVI 307

Secondary Cross-listing

We rely on environmental laws to make human communities healthier and protect the natural world, while allowing for sustainable economic growth. Yet, despite 40 years of increasingly varied and complex legislation, balancing human needs and environmental quality has never been harder than it is today. Environmental Studies 307 analyzes the transformation of environmental law from fringe enterprise to fundamental feature of modern political, economic and social life. ENVI 307 also addresses the role of community activism in environmental law, from local battles over proposed industrial facilities to national campaigns for improved corporate citizenship. By the completion of the semester, students will understand both the successes and failures of modern environmental law and how these laws are being reinvented, through innovations like pollution credit trading and "green product" certification, to confront globalization, climate change and other emerging threats.

Requirements/Evaluation: several short writing assignments, a term research project, and active participation in class

Prerequisites: ENVI 101 or permission of instructor

Enrollment Limit: 14

Expected Class Size: 14

Grading: no pass/fail option, yes fifth course option

PSCI 319 (F)(S) Marine Policy (DPE) (WS)

Cross-listings: MAST 351 ENVI 351 PSCI 319

Secondary Cross-listing

Coastal communities are home to nearly 40% of the U.S. population, but occupy only a small percentage of our country's total land area. Intense population density, critical transportation infrastructure, significant economic productivity, and rich cultural and historic value mark our coastal regions as nationally significant. But, coastal and ocean-based climate-induced impacts such as sea level rise, ocean warming and acidification pose extraordinary challenges to our coastal communities, and are not borne equally by all communities. This seminar considers our relationship with our ocean and coastal environments and the foundational role our oceans and coasts play in our Nation's environmental and economic sustainability as well as ocean and coastal climate resiliency. Through the lens of coastal and ocean governance and policy-making, we critically examine conflict of use issues relative to climate change, climate justice, coastal zone management, fisheries, ocean and coastal pollution and marine biodiversity.

Class Format: This class is taught only at Williams-Mystic in Mystic, Connecticut and includes coastal and near-shore interdisciplinary field seminars, and 10 days offshore.

Requirements/Evaluation: Weekly Readings; Class Participation; Small and large group strategy exercises (written and oral); Written Research Project: issues paper and draft research paper; Final Research Project: multiple formats available

Prerequisites: none

Enrollment Limit: 23

Enrollment Preferences: must be enrolled at Williams-Mystic in Mystic, Connecticut

Expected Class Size: 22

Grading: no pass/fail option, no fifth course option

Unit Notes: must be enrolled at Williams-Mystic in Mystic, Connecticut

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

MAST 351 (D2) ENVI 351 (D2) PSCI 319 (D2)

Writing Skills Notes: Each student will write one 3-5 page research issues paper and one 8-10 page draft research paper as well as a final project with written components equaling 5-8 pages. Each submission receives written feedback from the professor, including research guidance, input on grammar, structure, language, analysis. Students also receive verbal feedback in individual conferences to discuss research paper organization, analysis, structure and grammar as well as final project input.

Difference, Power, and Equity Notes: Coastal and ocean policy issues relating to climate change, coastal zone management, fisheries, ocean pollution and marine biodiversity impact environmental and climate justice. Students examine coastal governance while considering the disproportionate burdens on underrepresented populations in U.S. coastal communities caused by climate change and coastal policies. Students analyze multi-disciplinary evidence and work to strengthen their integrative, analytical, writing, and advocacy skills.

PSCI 320 (F) Heroes and Villains: Iconic Leadership and the Politics of Memory

Cross-listings: PSCI 320 LEAD 320

Secondary Cross-listing

Americans have been arguing intensely in recent years about how we should remember the leaders from our nation's past. Does Thomas Jefferson's statue belong on a university campus? Should college dorms be named for John C. Calhoun and Woodrow Wilson? Should Harriet Tubman's portrait replace Andrew Jackson's on the \$20 bill? In this course we will look at how people in the United States and elsewhere have used their leaders' images to hash out larger political issues of national identity, purpose, and membership. Why has historical commemoration gotten so contentious--or has it always been contentious? What's really at stake when we depict our leaders? How (if at all) should we reconcile contemporary morality with historical context in assessing the leaders from our past? To address these questions, we will study portrayals of some of the most famous leaders in American history--including Alexander Hamilton, Abraham Lincoln, and Martin Luther King, Jr. Our sources will include political speeches, literature, film, and journalism as well as monuments and museum exhibits; though our examples will be drawn mostly from the United States, our conceptual framework will be transnational. As a final assignment, students will write a 10-12 page paper examining the politics of memory for a leader of their choice.

Requirements/Evaluation: two short (5- to 6-page) essays and a 10- to 12-page research paper

Prerequisites: previous course in Leadership Studies, or Political Science, or permission of instructor

Enrollment Limit: 19

PSCI 321 (F) Immigration Politics in the U.S.

The U.S. Census Bureau estimates that non-Hispanic whites will no longer be the majority racial group in the U.S. by 2044. This demographic change is fueled by past and current immigration, and the politics surrounding American immigration policy have intensified as a result. Donald Trump's rise to the presidency was fueled in part by his pledge to build a wall between the U.S. and Mexico. Meanwhile, efforts to reform the nation's immigration laws

have been stuck in gridlock for years. How did we get to this point and what does the future hold? Why is immigration policy so contentious? What is at stake, and what do different groups believe to be at stake? To answer these questions, we will examine immigration from a multidisciplinary lens, but with special attention to immigration politics and policy. We will examine the history of immigration to the U.S. and the policies that have shaped it; recent developments in electoral and protest politics; the policy initiatives of the Trump administration, the Republican Congress, and state and local governments; and the incorporation of immigrants into U.S. society and politics, past and present.

Requirements/Evaluation: one 2- to 3-page paper; one 5- to 7-page paper; one oral presentation; one 15- to 20-page research paper; and class participation

PSCI 323 (F) Law and Politics of the Sea

The United Nations Convention on the Law of the Sea gathered into one place what most countries considered in 1982 to be scattered ancient laws about piracy, transit through other countries' territorial waters, jurisdiction over ships, and so forth. It also created ocean zones, with rules for each, and proposed a system for taxing firms that it licensed to exploit minerals on the high seas. This course explores the politics and practices that arise from UNCLOS. We first engage with the treaty's content and exclusions, next examine the incentives it provides states and criminals, and last assess the way that geopolitical and climate change create new opportunities and constraints for states, firms, international organizations, and activists. Cases include piracy, claims in the South China Sea, bonded labor, refugee quarantine, Arctic transit, and ocean pollution.

Requirements/Evaluation: three 6-page papers, longer final paper, class participation including weekly posts

Prerequisites: PSCI 202 or permission of instructor

PSCI 328 (F) Human Rights Claims in International Politics (WS)

For decades, people and countries have used "human rights" to advance their position, delegitimize their opposition, and lodge their interests in an unassailable political category. This research seminar investigates who uses this category, to what ends, and with what success. How people ground this concept--what they think its origin is--does matter, but evaluating those foundations is not our focus. Politics is our focus. Who gains and loses from the idea that people have human rights? Does the concept fit well with, and reinforce, some institutions and configurations of power, and make others difficult to sustain (or even to conceive)? Why not simply claim that something is an interest rather than also a right? How has "human rights" been deployed in international politics, and by whom? The class is divided into four sections. The first concentrates on common readings on these questions, and prioritizes discussion, explication, and hypothesis brainstorming. The second introduces social science methodology, covering hypotheses, literature reviews, and evidence while continuing half time with materials about human rights. The third emphasizes research design, allowing students to finalize their own project while bringing in primary sources such as original documents, debates, and data. The last quarter of class focuses on student projects, on integrating and revising research to produce a set of findings and an evaluation of their meaning. The course is designed to teach political science majors the nuts, and maybe also the bolts, of social science research.

Requirements/Evaluation: Class discussion, short writing, worksheets, peer reviews, drafts of various sections, final paper, final presentation

Prerequisites: Two classes in political science, at least one of which must be in international politics.

Enrollment Limit: 12

Enrollment Preferences: Political science majors

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (WS)

PSCI 329 Politics of the Powerless

American politics is often unequal, and well-organized advantaged interests tend to triumph. What do disadvantaged interests do in light of these power dynamics? Give up? Compromise? Struggle on? Why do relatively powerless interests sometimes win in American politics? Is it because they have an exceptional leader? A phenomenal strategy? Fortuitous events? This course examines the political dynamics of disputes in which disadvantaged interests push for major change. We will study past campaigns and then research and discuss contemporary reform efforts.

Requirements/Evaluation: class discussion, two short papers, and research paper

PSCI 330 (S) American Political Thought in Hemispheric Context

Cross-listings: PSCI 330 GBST 330

Primary Cross-listing

Actors living during the Age of Revolutions witnessed an astounding number of social, political, and cultural changes. In the short period between 1775 and 1830 more than thirty popular insurgency movements took control of the American hemisphere, most of them by organizing around the principles of republican politics. In this course, we study the peoples, demands, and visions that comprised the popular movements of the Age of Revolutions to reconstruct the canon *American Political Thought* in hemispheric context. This course emphasizes the comparative features of post-colonial movements in the Americas and centers the contributions of indigenous, raced, gendered, and ethnicized communities. The course schedule is divided into two sections. The first half of the class situates the political and theoretical problems of American Political Thought by engaging with scholarship on post-colonial movements, decolonial thought, democratic theory, and theories of popular rule. The second half of the course contextualizes these frameworks by putting them in conversation with studies of revolutionary change, popular imagination, and case studies on revolutionary movements throughout the Americas. Students are expected to engage in archival research, as well as work with both primary and secondary sources on the Age of Revolutions. The class will meet remotely and hold synchronous discussions.

Class Format: The class will meet remotely for synchronous lecture and discussions. Recorded class sessions will be uploaded for any students who cannot meet synchronously.

Requirements/Evaluation: Regular attendance, consistent class participation, three Glow posts, three two-page reflection papers, and a final research paper of 10-12 pages

Prerequisites: At least one prior course in political theory, social theory, history of the Americas (either the United States or Latin America), or permission of instructor.

Enrollment Limit: 12

Enrollment Preferences: Concentrators in political theory in Political Science, then majors or concentrators in Political Science, American Studies, Global Studies, and Latino/a Studies

PSCI 331 (F) The Politics of Algorithms

Cross-listings: STS 349 AMST 349 PSCI 331

Primary Cross-listing

Every day, you interact with or through computer algorithms. In ways often obscure to users, they structure communication or conduct in social media, education, healthcare, shopping, entertainment, dating, urban planning, policing, criminal sentencing, political campaigns, government regulation, and war. Moving from the emergence of cybernetics during World War II through such contemporary examples as facial recognition software, this seminar approaches algorithms as complex technological artifacts that have social histories and political effects. Asking *how* algorithms are political and what that tells us about politics today (particularly in the U.S.), we will consider how their design expresses forms of power and their deployment shapes ways of living. What behaviors do different algorithms solicit, reward, discourage, or stigmatize? What kinds of selfhood and relationships do they promote or thwart? How do various algorithms influence political partisanship and beliefs and intersect with existing hierarchies of race, class, gender, and sexuality? When inequities are built into a design, can that be addressed by rooting out "bias," or do such efforts miss something more inherent in the kinds of artifacts algorithms are or what they can be in a capitalist economy? Might developments in artificial intelligence transform our sense of the human or even threaten the species? Many of the seminar's themes, including democracy, power, inequality, judgment, deliberation, publicity, subjectivity, and agency, are central to political theory, but readings and course materials will also be drawn from such fields as media theory, surveillance studies, sociology, American studies, critical data science, film, and contemporary art. The course neither requires nor teaches any computer science skills.

Requirements/Evaluation: Class attendance and participation, regular short posts or exercises, and either three eight-page essays or one 8-page essay and one longer final paper.

Prerequisites: At least one course in political, cultural, or social theory or the critical study of science and technology, or permission of the instructor. Not open to first-year students.

Enrollment Limit: 15

Enrollment Preferences: Political Science and American Studies majors and STS concentrators; then qualified students from all other majors welcome, space permitting.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

PSCI 332 (S) The Body as Property (DPE)

From an ethical standpoint, human bodies are fundamentally different from objects that can be owned, acquired, and exchanged. Yet history furnishes

us with countless examples of laws, administrative rules, and social conventions that treat the human body as a form of property. The institution of slavery is a particularly egregious example. But there are other examples of treating the body as property that seem more ambiguous, or even benign: the employment contract in which bodily services are offered in exchange for payment; the feminist slogan "my body, my choice"; or even the every-day transfer of bodily properties into creative projects that then become part of the things people own --- chairs, tables, houses, music, art, and intellectual property. If it is not itself a form of property, how can we explain the use of the human body to acquire possessions, create wealth, and mediate the exchange of other kinds of property? These and other tensions between the concept of property and that of humanity will be the focus of this course. How is property defined, and how far should law go to erode or reinforce distinctions between property and humanity? Course readings focus on Locke, Hegel, Marx, and critical perspectives from feminist theory, critical theory, and critical legal studies (Cheryl Harris, Alexander Kluge, Oskar Negt, Carole Pateman, Rosalind Petchesky, and Dorothy Roberts, among others).

Class Format: Hybrid: Tutorial pairs with both students on campus will meet in person for the majority of our sessions (some weeks may be online). Pairs with one or both students learning remotely will meet exclusively online.

Requirements/Evaluation: five 5- to 7-page essays, five 2- to 3-page critiques, and a revised and extended 10- to 12-page final essay

Prerequisites: prior coursework in political theory, cultural theory, philosophy, or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Political Science majors (priority given to those concentrating in Political Theory); Justice & Law Studies concentrators (priority given to those with extensive JLST coursework).

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: The course fulfills the Difference, Power, and Equity (DPE) requirement by examining how, in the context of legally-sanctioned power relations, bodily differences are constructed, monetized, and used to generate wealth. Race, class, and gender inequalities are central to the analysis.

PSCI 333 (F) Asian/African American Cultural and Political Theory

Cross-listings: PSCI 333 AFR 344 AMST 325

Secondary Cross-listing

Contrasted as "model minorities" or "incorrigible minorities" Asian Americans and African Americans have been pitted against one another in social standing and political objectives. However, throughout the twentieth century, African/Asian solidarity and alliances existed in political movements and literary and cultural productions. From Ho Chi Minh's anti-lynching writing, the founding conference of the WIDF (Women's International Democratic Federation) in China in 1945, through the Bandung Conference, coalitions against U.S. wars in Southeast Asia, and alignments with Chinese anti-imperialist endeavors, black and Asian peoples have joined in international political formations. Contributions to theory include the writings and activism of Langston Hughes, W.E.B. Du Bois, Richard Wright, Robert Williams, Yuri Kochiyama, Grace Lee and Jimmy Boggs, Ishmael Reed, and Amiri Baraka; films of Bruce Lee; music of Fred Ho; revolutionary praxis of Mao Tse Tung's *Little Red Book* and his writings on art and society; the Marxism of the Black Panther Party; the Afro-futurism of Sun Ra and Samuel Delany; and contemporary "Afro-pessimism." Such cultural works depict futurities and possibilities for Black and Asian diasporas. This seminar examines theory, politics, literature, film, and music produced from and linked to twentieth-century movements against capitalism, racism, colonialism, and imperial wars to think through how Black and Yellow Power have shaped solidarity to challenge white supremacy and racial capitalism. **Requirements:** One midterm paper (5-6 pp.) = 30%; final paper/project (10-12 pp.) with a creative option = 50%; short response paper and GLOW posts = 10%; participation (attendance and class discussion) = 10% Course cap: 19 Priority given to AMST majors, Africana concentrators

PSCI 334 (S) Theorizing Global Justice

While economic exchanges, cultural convergence, and technological innovations have brought people in different parts of the world closer together than ever before, globalization has also amplified differences in material wealth and social inequalities. Ill health, inadequate sanitation, and lack of access to safe drinking water are increasingly common. Yet, more than ever before, the means exist in affluent regions of the world to alleviate the worst forms of suffering and enhance the well-being of the poorest people. How are we to understand this contradiction as a matter of justice? What is the relationship between justice and equality, and what do we owe one another in a deeply divided world? Course readings will engage your thinking on the central debates in moral philosophy, normative approaches to international political economy, and grassroots efforts to secure justice for women and other severely disadvantaged groups. Key theorists include Amartya Sen, Martha Nussbaum, John Rawls, Thomas Pogge, Nancy Fraser, Paul Farmer, Vandana Shiva, Majid Rahnema, and Enrique Dussel.

Class Format: discussion

Requirements/Evaluation: oral presentation, weekly blog posts, and three papers (3 pages, 7 pages and 8-10 pages)

PSCI 335 (F) Racial Equity, Liberal Democracy, and Democratic Theory (DPE)

In Ta-Nehisi Coates' best-selling book *Between the World and Me*, he says that in the wake of the non-indictment of former police officer Darren Wilson in the death of Michael Brown "I did not tell [my son] that it would be okay, because I have never believed it would be okay." With admissions like this, Coates stoked a long-standing debate about the prospects for racial equity in liberal democracies like the United States. In this course, we look at this debate, examining what black thinkers in particular have said about whether racial equity can be achieved in a liberal democracy founded on racial domination and why they come to the conclusions they do. Then, we examine what contemporary democratic theorists have had to say about how racial equity might be achieved and how they have sought to advance this goal through their writing. Can the strategies theorists propose and employ really aid in the advancement of racial equity? Which are more and less promising? We end by asking: Do anti-democratic means have to be employed to fully realize democracy? What anti-democratic means? Authors we will engage include Coates, bell hooks, Charles Mills, Melvin Rogers, Chris Lebron, Lawrie Balfour, and Danielle Allen.

Requirements/Evaluation: class facilitation, group reflections (three 4-page responses), book review (6-8 pages), final essay (12-14 pages)

Prerequisites: none

Enrollment Limit: none

Enrollment Preferences: Political Science majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This class centers sociological and political theoretical questions about race inequity and equity in a liberal democratic society. It features black writers' perspectives on inequity and equity. The course nurtures the skill of speaking across difference by requiring students to write responses as groups and encouraging deep student participation by making students class facilitators.

PSCI 337 (S) Visual Politics

Cross-listings: PSCI 337 ARTH 337

Primary Cross-listing

Even casual observers know that appearances matter politically and that the saturation of politics by visual technologies, media, and images has reached unprecedented levels. Yet the visual dimensions of political life are at best peripheral topics in contemporary political science and political theory. This seminar explores how our understanding of politics and political theory might change if visuality were made central to our inquiries. Treating the visual as a site of power and struggle, order and change, we will examine not only how political institutions and conflicts shape what images people see and how they make sense of them but also how the political field itself is visually constructed. Through these explorations, which will consider a wide variety of visual artifacts and practices (from 17th century paintings to the optical systems of military drones and contemporary forms of surveillance), we will also take up fundamental theoretical questions about the place of the senses in political life. Readings may include excerpts from ancient and modern theorists, but our primary focus will be contemporary and will bring political theory into conversation with other fields, particularly art history and visual studies but also film and media studies, psychoanalysis, cognitive science, and STS. Possible authors include Arendt, Bal, Belting, Benjamin, Browne, Buck-Morss, Butler, Clark, Connolly, Crary, Deleuze, Fanon, Foucault, Freedberg, Garland-Thompson, Hobbes, Kittler, Machiavelli, Mercer, Mitchell, Mulvey, Plato, Rancière, Sartre, Virilio, Warburg, and Zeki.

Requirements/Evaluation: regular, engaged class participation, several Glow posts, and three 7- to 8-page papers

Prerequisites: at least one prior course in political theory, cultural theory, visual studies, or art history; or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Political Science and Art History majors (including students in the grad program); then qualified students from all disciplines welcome, space permitting

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

PSCI 339 (F)(S) Politics in Dark Times: Hannah Arendt (WS)

Cross-listings: PSCI 339 JWST 339

Primary Cross-listing

Hannah Arendt (1906-75) bore witness to some of the darkest moments in the history of politics. Born a Jew in Germany, Arendt lived through--and reflected deeply on--two world wars, the rise of totalitarianism, and the detonation of the first atomic bomb. She narrowly escaped imprisonment by the Gestapo and internment in a refugee camp in Vichy France before fleeing to New York. Yet, in the face of these horrors, Arendt never lost her faith in political action as a way to express and renew what she called "love of the world." She wrote luminously about the darkness that comes when terror extinguishes politics and the shining, almost miraculous events of freedom through which politics is sometimes renewed. In this tutorial, we will investigate what Arendt's vision of politics stands to offer to those struggling to comprehend and transform the darkest aspects of the contemporary political world. Our time and Arendt's are similarly darkened by the shadows of racism, xenophobia, inequality, terror, the mass displacement of refugees, and the mass dissemination of lies. It may be tempting to conclude from these similarities--as some recent commentators have--that we are witnessing the return of "totalitarianism" as Arendt understood it. She would be the first to refuse to use inherited concepts as if they were keys to unlock the present. Her words and her example should impel us to reject shortcuts to authentic understanding, the "unending activity by which...we

come to terms with and reconcile ourselves to reality." We will turn to Arendt as an interlocutor, not a guide, as we seek to reconcile ourselves to the contingency and specificity of past and present political realities. And we will search her works and our world for embers of hope that even seemingly inexorable political tragedies may yet be interrupted by assertions of freedom in political action.

Requirements/Evaluation: five 5-page papers; five 2-page responses; participation

Prerequisites: a prior course in political theory, philosophy, or critical theory, or permission of the instructor

PSCI 340 (S) Why States Fail

This course considers the origins of political violence and state failure at the end of the 20th century. It seeks to address why there was a resurgence of political violence at the dawn of the 21st century. Toward that end, we begin by considering competing explanations of political violence (ethnicity, democratization, natural-resource endowments, and predatory elites). We then move on to the empirical section of the course in which we cover case studies of state failure in parts of Eastern Europe, Africa and the Middle East.

Class Format: discussion

Requirements/Evaluation: seminar participation, two oral presentations and a research paper proposal

Prerequisites: one of the following: PSCI 201, 202, 203, 204, 229, 243, 250, 254 or the permission of instructor

PSCI 342 (S) Beyond the welfare state

"Not me. Us" became a rallying cry of Bernie Sanders' presidential campaign in late 2019. Sanders' slogan reflects a vision of a robust welfare state, defined by a widespread commitment to solidarity, where citizens share social risks as well as economic rewards. But what role can the welfare state play in the twenty-first century? How have its constitutive institutions, from pensions to unemployment insurance, evolved since the post-war "Golden Age"? Is solidarity possible only in utopia, or can we realize it in the world as well? This course identifies the political conditions under which welfare states developed in the twentieth century, and examines how they have responded to globalization, immigration, digital transformation, and other contemporary challenges. If the welfare state has a future, it will look different from the past, but how? Taking up a handful of alternative paradigms,

from social investment to mutual aid, we will assess different trajectories of solidarity in the twenty-first century.

Class Format: Course will be fully remote, composed of three elements: (1) Asynchronous lectures, (2) Student discussion groups, (3) Synchronous class meetings

PSCI 343 (F) Democratic Erosion

Cross-listings: GBST 342 PSCI 343

Primary Cross-listing

A central tenet of political science is that once a country reaches a certain level of political and economic development, democracy will endure indefinitely. The contemporary moment calls on us to revisit this assumption. This course explores the causes and consequences of democratic erosion through the lens of comparative politics. We ask three central questions to inform our investigation: 1) What is democracy and its alternatives? 2) How do we identify democratic breakdown? and 3) What are strategies to counteract backsliding when it occurs? Importantly, this course is *not* intended as a partisan critique of any particular American politician or political party. Rather, it is designed to provide an opportunity to engage, critically and carefully, with claims about the state of democracy in the US and elsewhere; to evaluate whether those claims are valid; and, if they are, to consider strategies for mitigating the risk of democratic erosion here and abroad. Readings draw from academic scholarship, media commentary, and current events as they unfold. We will address both empirical and normative dimensions of the issues, as well as learn about examples of democratic erosion around the world from early 20th century until today. As a collaborative class taught at dozens of other colleges, the course enables you to engage in debates about democratic erosion with students throughout the US and around the world.

Class Format: As a hybrid course, the class will feature both in-person and online components. I will post 1-2 short lectures on GLOW to accompany assigned readings/media for the week. Our scheduled course time will be a mix of discussions, interactive learning exercises, and presentations. At least one class per week will be held in-person; whether the other class will be online or in-person will depend on a number of factors, including the distribution of students taking the course on campus or remotely.

Requirements/Evaluation: Active Class Participation, 3 Short Response Papers, Country Case Study (15-20 pages, written incrementally throughout semester) and Presentation.

Prerequisites: Prior coursework in political science or permission of instructor.

Enrollment Limit: 12

Enrollment Preferences: Political Science Majors, Global Studies Concentrators

PSCI 344 (S) Palestinian Nationalism

Palestinian Nationalism: This tutorial will cover the history, bases of support, objectives, and accomplishments and failures of Palestinian nationalism over the past century. It will address how the Palestinian nation has been defined, who has defined it, what factions and classes have controlled its organizations, and the reasons why it has failed to achieve its goals. The tutorial will address the evolution of Palestinian nationalism historically and

thematically, employing both primary and secondary sources. The readings will consist mostly of Palestinian authors, with an emphasis on documents, histories, and political analyses. Two questions will anchor the tutorial: how is the nation defined and what, if any, class interests are folded into various definitions?

Requirements/Evaluation: Read the assigned materials, write a 5-page paper every other week, and comment on the student's partner's paper in the other weeks.

Prerequisites: Political Science Majors and students with background in Middle East

Enrollment Limit: 10

Enrollment Preferences: Political Nationalism

PSCI 345 (S) The Meaning of Life and Politics in Ancient Chinese Thought

Cross-listings: ASIA 345 PSCI 345 ASST 345

Primary Cross-listing

How can we live a good life? What standards should we use to judge how political power is constituted and used? This class will involve students in close reading of, and exegetical writing about, core texts of ancient Chinese philosophy in English translation. The purpose is to gain an understanding of a number of different perspectives on life and politics, especially Confucianism, Legalism and Daoism. While the primary focus will be on the meaning of the texts in the context of their own times, contemporary applications of core concepts will also be considered. The class will begin with background readings, since no prior work in Chinese philosophy or history is assumed. Then the class will read significant portions of the following canonical works: *Yijing*, *Analects*, *Mencius*, *Daodejing*, *Zhuangzi*, and *Han Feizi*.

Class Format: The class will be hybrid with both online and in-person sessions.

Requirements/Evaluation: two 5-page papers and one 15-page paper

Prerequisites: none

PSCI 349 (S) Cuba and the United States (WS)

With the passing of the Castro brothers' regime on the horizon, we examine the long and deeply felt history of dependence and conflict between Cuba and its colossal neighbor to the north. It begins with the political economy of the colony, then covers the Cuba- US relationship from José Martí and 1898 through the Cold War to the present, emphasizing the revolutionary period. Tutorial topics include: sovereignty and the Platt Amendment; culture and politics; race and national identity; policies on gender and sexual orientation; social programs; political institutions; the post-Soviet "Special Period"; the evolution of the Cuban exile community in the US; and the fraught agenda of reform and generational transition. Materials include journalism, official publications, biographies, travel accounts, polemics, policy statements of the US government, and a wide range of academic works.

Class Format: a lecture in the first week; then ten weeks of tutorial; then a discussion class in the final week

Requirements/Evaluation: five 5- to 6-page papers, five 1- to 2-page responses, and one 1-page essay for the final class

Prerequisites: any course on Latin America or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Political Science majors

PSCI 351 (S) The New Left and Neoliberalism in Latin America (DPE)

Cross-listings: PSCI 351 GBST 351

Primary Cross-listing

Recent years have seen a resurgence of the political left in Latin America. This course seeks to understand the origins of this new left, the ideas and character of its protagonists, the neoliberal philosophy it opposes, and the arena of democratic politics it inhabits today. We first read polemics from both sides, before stepping back to consider Latin American political economy, including the twentieth-century left, from a more historical and analytical perspective. With this preparation, we then look more closely at major contemporary figures and movements in Venezuela, Bolivia, Mexico, Brazil, and other countries. After considering explanations of the rise of the left and assessments of its performance in power, we end our common readings by asking what it might mean today to be on the left in Latin America--or anywhere--both in policy and political terms.

Class Format: discussion then seminar

Requirements/Evaluation: three 3-page essays, a 1-page reflection paper, and a 12-page research proposal

Prerequisites: a course on Latin America and a course in Economics or permission of the instructor

Enrollment Limit: 15

PSCI 352 (F) Politics in Mexico (DPE)

Cross-listings: GBST 352 PSCI 352

Primary Cross-listing

Geography has decreed that the futures of Mexico and the United States will be tightly bound. Yet Mexico enters this future with a very different past, a distinctive political system, important cultural differences, and mixed feelings about its neighbor to the north. This course has four parts differing in content and format. The first is historical and mostly lecture. It considers several themes, including the slow emergence of a stable national state and the interplay between politics and economic change. In the second section, following a modified tutorial format, we consider politics and cultural policies around Mexican national identity in the twentieth century, looking at films, journalism, popular music, and cultural criticism. Topics include the politics of race; rapid urbanization, especially in the valley of Mexico; and the cultural impact of the turn toward the north, after 1990, in economic policy. Then, after a few discussion classes on migration, organized crime, political corruption, the COVID-19 pandemic, and other issues facing the current government of Andrés Manuel López Obrador, we turn to a seminar-style discussion of student research projects.

Class Format: lectures will be recorded for viewing before class sessions; four weeks of modified tutorials in pairs or small groups online; discussion classes to include in-person and online, in distinct sections if appropriate; online seminar

Requirements/Evaluation: map quiz; one three-page and three two-page essays; two one-page commentaries; and a seven- to eight-page research proposal, an early version to be presented to the class in online seminar

Prerequisites: some knowledge of Mexican history

Enrollment Limit: 15

Enrollment Preferences: Political Science majors and seniors

PSCI 357 (S) Leadership and the Anxieties of Democracy

Cross-listings: PSCI 357 LEAD 425

Secondary Cross-listing

This capstone course examines the challenges and opportunities facing political leaders in contemporary liberal democracies. We will begin by surveying institutional constraints confronting contemporary political leaders: globalization, sclerotic institutions, polarization, endemic racism, and a changing media environment, among others. Then, we will look at some important factors that shape how followers approach would-be leaders: inequality and economic precarity; identity and group consciousness; notions of membership, community, and hierarchy; and declining local institutions. While the course will focus primarily on the United States, our conceptual framework will be global; though our main interest will be contemporary, we will also examine previous eras in which democratic leadership has come under great pressure. Our primary questions will be these: Why does transformative leadership seem so difficult today? How does political leadership in the 21st century differ from leadership in earlier eras? What conditions are necessary to sustain effective leadership in the contemporary world? As a final assignment, students will craft an 18-20-page research paper on a topic of their choice related to the themes of the course.

Requirements/Evaluation: Seminar participation, research proposal, peer workshop, research paper, in-class research presentation

Prerequisites: LEAD 125 or permission of the instructor

PSCI 360 (S) Right-Wing Populism

After the fall of the Berlin Wall in 1989, the political scientist Francis Fukuyama famously declared "the end of history". From now on only liberal democracy, free market capitalism, and global integration had a future. Everything else—including political ideology, nationalism, conservative religion, and sovereignty—was consigned to the ash heap. Thirty years later the future looks seriously derailed. A right-wing populism marked by Brexit, Trump, Le Pen, and a host of 'far-right' political movements in the very heartland of democratic globalizing capitalism has shaken liberal certainties. This course is an investigation into contemporary right-wing populism in Europe and North America in its social, economic, and political context. We will discuss theories of right-wing populism's appeal from both Left and Right perspectives. We will also investigate cases of right-wing populism including France's National Rally and the Eric Zemmour phenomenon, Sweden's Sweden Democrats, Hungary's Fidesz, Poland's Law and Justice Party, and Trumpism, the alt-right and QAnon. Finally we will entertain right-wing populism as both a cause and a symptom of a crisis in liberal democracy.

Requirements/Evaluation: two short papers; one long term paper; discussion questions; class participation

PSCI 361 (F) The CIA and American Foreign Policy

Cross-listings: PSCI 361 LEAD 361 HIST 355

Primary Cross-listing

Despite an American aversion to espionage captured by Secretary of State Henry Stimson's oft-cited (yet unsubstantiated) remark, "Gentlemen don't read each other's mail," intelligence history in the United States dates back to the Revolutionary War. Still, it took the shock of Pearl Harbor for the United States to establish a permanent peacetime civilian intelligence service independent of another federal department--the Central Intelligence Agency. Since then, the agency and others which comprise the loose entity called the Intelligence Community (IC) have played a pivotal albeit intensely controversial role in US foreign and national security policies. Yet their roles and missions remain largely misunderstood and divisive, as attested to by recent debates surrounding the multiple investigations of the 9/11 tragedy, the flawed pre-war estimates of Iraq's Weapons of Mass Destruction (WMD) capabilities, the reporting on Benghazi, the Snowden revelations, and much more. This course seeks to provide greater understanding of the relationship between intelligence and US foreign and national security policy by examining the CIA's and IC's roles and responsibilities, illuminating their history alongside the history of America and the World, assessing their successes and failures, evaluating their reforms, and correlating their behavior and capabilities with US values and institutions.

Requirements/Evaluation: Midterm, several short papers, and a research paper.

Prerequisites: None

PSCI 364 (F) Noam Chomsky and the Radical Critique of American Foreign Policy

Noam Chomsky emerged as one of the most influential figures in the development of modern linguistics during the 1950's. However, since the Vietnam War, Chomsky has also established himself as perhaps the most influential critic of American foreign policy and the Washington national security establishment. This tutorial will examine his wide-ranging critique of American foreign policy over the last half century, focusing on his analysis of the role that he believes the media and academics have played in legitimizing imperialism and human rights abuses around the world. We will also explore the controversies and criticisms of his work from both the right and the left because of his political stance on issues ranging from the Arab-Israeli conflict to humanitarian intervention to free speech. Finally, we will also examine how Chomsky's views, largely considered to be radical for much of his life, have become far more mainstream over time.

Requirements/Evaluation: Students will write five 6-7 page papers over the course of the semester. On weeks that students are not writing the lead paper, they will write a 1-2 page critique of the essay submitted by their tutorial partner.

Prerequisites: One of the following courses is strongly recommended : PSCI 120, 127, 202.

PSCI 367 (S) Decolonizing International Relations (DPE)

Cross-listings: GBST 367 PSCI 367

Primary Cross-listing

The Oxford English Dictionary defines Decolonization as "the withdrawal from its colonies of a colonial power; the acquisition of political or economic independence by such colonies." The emergence of an international system of sovereign states--the core foundation of international relations--presumes the process of dismantling systems of domination, extraction, and exclusion ended long ago. However, there is increasing recognition that International Relations in all forms, including theory, research, and policy, continue to be structured by traditional paradigms of power (e.g. white, male, elite). This course begins with the premise that knowledge is embedded within, and often reproduces, power hierarchies. Thus, this class is organized as a collaborative investigation with the aims of: 1) examining how whiteness and other historically dominant perspectives shape International Relations theory and research areas; 2) expanding and improving our understanding of International Relations through different lenses (e.g. race, class, gender, disability, indigenous, queer, subaltern); and 3) exploring the implications of a more inclusive approach to International Relations, both within the classroom as well as contemporary decolonization movements in the US and around the world.

Requirements/Evaluation: Participation, 3 response/reflection papers, annotated bibliography

Prerequisites: One prior course in International Relations or permission of the instructor

Enrollment Limit: 15

Enrollment Preferences: Juniors and Seniors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

SEM Section: 01 TF 1:10 pm - 2:25 pm Elizabeth Iams Wellman

PSCI 369 (S) The Crisis of Leadership

Cross-listings: PSCI 369 LEAD 369

Secondary Cross-listing

It is now a commonplace that the liberal democracies of Europe and North America (and beyond) are facing a "crisis of leadership." In country after country, champions of cosmopolitan values and moderate reform are struggling to build sufficient popular support for their programs. These failures have created space for a politics of populism, ethno-nationalism, and resentment--an "anti-leadership insurgency" which, paradoxically, has catapulted charismatic (their critics would say demagogic) leaders to the highest offices of some of the largest nations on earth. In this course, we will seek to understand the challenges liberal, cosmopolitan leadership has encountered in the 21st century and the reasons why populist, nationalist leadership has proven resurgent. We will begin by examining institutional constraints facing political leaders: globalization, sclerotic institutions, polarization, endemic racism, and a changing media environment. Then we will look at some important factors which shape how followers approach would-be leaders: inequality and economic precarity; identity and group consciousness; notions of membership, community, and hierarchy; and declining local institutions. Our primary questions will be these: Why is transformative leadership so difficult today? How does political leadership in the 21st century differ from leadership in earlier eras? What conditions are necessary to sustain effective leadership in the contemporary world?

Requirements/Evaluation: class participation, regular response papers, research proposal, research paper; this is a research course; the primary written assignment will be a research paper which students will develop over the course of the semester

Prerequisites: none

Cross-listings: PSCI 370 PHIL 360 AFR 360 LEAD 360

Secondary Cross-listing

Martinican psychiatrist, philosopher, and revolutionary Frantz Fanon was among the leading critical theorists and Africana thinkers of the twentieth century. Fanon ushered in the decolonial turn in critical theory, a move calling on those both within and outside of Europe to challenge the coloniality of the age and to forge a new vision of politics in the postcolonial period. This course is an advanced seminar devoted to a comprehensive examination of Fanon's political thought. We will begin with an analysis of primary texts by Fanon and end by considering how Fanon has been interpreted by his contemporaries as well as activists and critical theorists writing today.

Requirements/Evaluation: attendance and participation, weekly online reading response papers, a class presentation, two 7-page essays, and one 20-page final research paper

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Africana Studies concentrators, Leadership Studies concentrators, and Political Science majors

Expected Class Size: 10

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSCI 370 (D2) PHIL 360 (D2) AFR 360 (D2) LEAD 360 (D2)

Writing Skills Notes: Students write weekly online reading response papers, two 7-page essays, and one 20-page final research paper. Students receive written feedback from me throughout, meet with me 1-on-1 to discuss 7-page essays to then revise/re-submit and also receive written feedback before final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

PSCI 372 (S) CAPSTONE: Sylvia Wynter, Black Lives, and Struggle for the Human

Cross-listings: PSCI 372 AFR 450

Secondary Cross-listing

How do we judge the value of life? What is the significance of death and arbitrary threats to our existence? Why probe modern notions of black and blackness? What defines optimism, pessimism, enslavement, freedom, creativity, and being human? Do black lives matter? This capstone seminar will explore these and related questions through an examination of the life and work of Jamaican novelist, playwright, cultural critic, and philosopher Sylvia Wynter. Methodologically interdisciplinary, the course shall examine written and audiovisual texts that explore Wynter's inquiries into the central seminar queries. We will study figures and movements for black lives whose geopolitics frame the milieu of Wynter's work. Our examination of intellectuals and activists, with their explicit and implicit engagements with Wynter, shall facilitate assessing the possibilities, challenges, and visions of black living. We will also explore the current implications of Wynter's thought for Africana political theory, Afro-futurism, social justice, human rights, and critiques of liberal humanism. In the latter half of the course, students will have the opportunity to design, conduct, and present their own final research projects.

Class Format: Remote format. This class will be taught synchronously primarily.

Requirements/Evaluation: attendance and participation; a 7-page midterm essay; class presentation; and a final research project

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Africana Studies concentrators and Political Science majors

Expected Class Size: 12

Writing Skills Notes: Three thesis papers at five pages each (each receiving critical feedback from professor); one thesis paper revision with critical feedback from professor and peers, including one letter of revision explaining the student's revision process; one keyword glossary where students develop rigorous definitions of course key terms; one roundtable discussion based on the final paper.

Difference, Power, and Equity Notes: This course focuses on anti-colonial struggles against European powers. Research will include the concept of "internal colonies" in the US.

Not offered current academic year

PSCI 375 (S) Modern Jewish Political Theory

Cross-listings: JWST 492 PSCI 375 REL 330

Secondary Cross-listing

By the late 19th century, Jews across Europe were faced with an urgent political problem. Amidst burgeoning national self-consciousness throughout the continent, despite the liberatory promises of the Enlightenment, Jews remained a vulnerable, segregated, and stigmatized minority population. Jews had to decide where to pin their hopes. Should they ally themselves with the liberals or the communists? Should they embrace nationalism or cosmopolitanism? Should they, perhaps, abandon Europe altogether and re-constitute themselves elsewhere? If so, should they focus their efforts on relocation to the historical land of Israel? Or could they go anywhere? Wherever they might go, should they aspire to build a modern Jewish nation-state, a semi-autonomous Jewish community, or some other arrangement? Should this coincide with the cultivation of a distinctively Jewish modern language? If so, should it be Hebrew or Yiddish? In this course we will assess various answers to these questions proffered by Jewish political thinkers in the modern period. We will pay particular attention to the construction of "Jews" and "Judaism" in these arguments. And we will ask persistently: what constitutes a "Jewish justification" for a political claim in modern Jewish political theory? Coverage will include: Jewish liberalism, political Zionism, Yiddishist autonomism, messianic quietism, and other views. We will read mostly primary sources, including texts by: Hermann Cohen, Theodore Herzl, Chaim Zhitlowsky, Franz Rosenzweig, Leo Strauss, Hannah Arendt, and many others.

Requirements/Evaluation: six short (1-2 pages) response papers; two 6- to 8-page papers, each analyzing a different view in depth; a final 18- to 20-page paper that incorporates the two previously submitted 6-8 page papers, but also compares the two views and adjudicates between them

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Religion majors, Jewish Studies concentrators, and Political Science students on the "Theory" track

Expected Class Size: 18

PSCI 377 (S) The Black Radical Tradition

Cross-listings: PSCI 348 AFR 348 PSCI 377 LEAD 348

Secondary Cross-listing

The black radical tradition is a modern tradition of thought and action begun after transatlantic slavery's advent. Contemporary social science and the humanities overwhelmingly portray it as a critique of black politics in the latter's liberal, libertarian, and conservative forms. This tutorial unsettles that framing, first by situating the black radical tradition as a species of black politics, and second through expanding the boundaries of black politics beyond the United States. Central to the black radical tradition's architecture are inquiries into the concepts of freedom, race, equality, rights, and humanism; meaning of "radical"; the national-transnational relationship; notions of leadership; status of global capitalism; the nexus of theory and praxis; and revolutionary politics. We begin with examinations of these central notions and debates, and then move to investigations of the political thought of four key late modern Afro-Caribbean and African-American thinkers within the tradition: Walter Rodney, Sylvia Wynter, Cedric Robinson, and Angela Davis.

Requirements/Evaluation: attendance; five 5-page essays, five 2-page critiques, and one 1-page essay for the final class

Prerequisites: none; open to all

Enrollment Limit: 10

Enrollment Preferences: Africana Studies concentrators, Leadership Studies concentrators, and Political Science majors

PSCI 382 (F) The Politics of Migration: Citizen, Immigrant, Alien, Refugee (DPE)

Currently 272 million international migrants live in a country different from where they were born, an increase of 78% since 1990. What are the social, economic, and political consequences of unprecedented global mobility in both destination countries and countries of origin? This class investigates one of the most polarizing and relevant issues of our time: the politics of migration. Throughout the semester we interrogate four themes central to migration politics: rights, representation, access, and agency. The course is organized with a focus on status: which "categories" of people (i.e. citizens, migrants, refugees) have differential access to rights, services, and representation and why. Drawing on political speeches, documentary films, humanitarian campaigns, and a variety of academic texts, we critically analyze how those categories are constructed, as well as the political work they do in making claims, justifying policies, and shaping public opinion. The class situates contemporary US migration policies within a global context and over time, placing the US case in conversation with considerations of migration politics and policies in countries around the world. As an experiential education course, we will (virtually) attend a US naturalization ceremony as well as interview officials from organizations working with migrants and refugees here and abroad.

Class Format: As a hybrid course, the class will feature both in-person and online components. I will post 1-2 short lectures on GLOW to accompany assigned readings/media for the week. Our scheduled course time will be a mix of discussions, interactive learning exercises, and presentations. At least one class per week will be held in-person; whether the other class will be online or in-person will depend on a number of factors, including the distribution of students taking the course on campus or remotely.

Requirements/Evaluation: Active class participation, 3 short papers (3 pages each), policy project (8-10 pages), and presentation.

Prerequisites: Prior course work in political science or global studies.

Enrollment Limit: 12

Enrollment Preferences: Political Science majors, Global Studies Concentrators.

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course examines the politics of migration with a focus on the power inherent within particular categorizations of people in relation to the state (i.e. citizens, migrants, aliens, refugees). We compare policies shaping the lives of migrants around the world, with particular considerations of how race, gender, age, and religion shape migration experiences (and migration policy). We focus on rights, access, and migrant agency throughout the course.

PSCI 386 (F) Identity Politics: Conflicts in Bosnia, Israel-Palestine, Northern Ireland, & South Africa

Identities have been either the stakes, or the guise taken by other kinds of conflicts, in Bosnia, Israel-Palestine, Northern Ireland, and South Africa for centuries. They have led to, or expressed, political divisions, clashing loyalties, and persistent and sometimes consuming violence. They also have produced attempts by both internal and external actors to resolve the issues. This research seminar will engage the origins of the conflicts and the role of identities in them, the role of disputes about sovereign power in creating and intensifying them, the strategies for reconciling them that are adopted domestically and internationally, the deals that have been struck or have not been struck to bring peace in these societies, and the outcomes of the various efforts in their contemporary politics. The course will begin by reading about both the general theoretical issues raised by conflicts in these "divided societies" and various responses to them. After familiarizing ourselves with what academic and policy literatures have to say about them, we then will read about the histories and contemporary politics in each society. With that as background, students will choose an aspect or aspects of these conflicts as a subject for their individual research.

PSCI 410 (S) Senior Seminar in American Politics: The Politics of Belonging

Although many people have described America as inclusive, political debates about belonging have often been contentious and hard-fought. This seminar will focus on the politics of belonging in America. What does it mean to be an American? If the U.S. is a nation of immigrants, why is immigration reform so difficult to achieve? Are legal citizenship and formal political rights sufficient for belonging? Or does full inclusion rest on the ability to exercise civil and social rights as well? Does income inequality threaten the political equality necessary for a strong democracy? As we

examine the debates over inclusion, we will consider different views about the relationship among political, civil, and social rights as well as different interpretations of American identity, politics, and democracy.

Requirements/Evaluation: class participation, short weekly writing assignments, two short papers, a 20-page research paper and presentation

Prerequisites: at least one course in American politics

Enrollment Limit: 14

Enrollment Preferences: senior Political Science majors with American Politics concentration

PSCI 412 (F) Senior Seminar: Interpretations of American Politics

American politics are in upheaval, and most Americans believe the country to be headed down "the wrong track." Yet assessments of what is at the heart of the country's problems vary. Many worry that the United States is threatened by anti-democratic actors intent on consolidating white nationalist power and corporate rule. Yet at the same time, others worry that the U.S. has abandoned the Anglo-Protestant traditions that made it strong and has entered a period of moral decay and decline. What are we to make of these different assessments? What do left and right see when they survey the nation, and why is what they see so different? Any diagnosis of contemporary maladies is premised on a vision of what a healthy functioning republic looks like. Our task in the seminar is to uncover and interrogate those visions. We will do this by exploring different interpretations of the American political order, each with its own story of narrative tensions and possible resolutions. We will then use our investigation of how different authors, and different traditions, understand the nation to help us assess contemporary politics and come to our own conclusions about what animates conflicts.

Requirements/Evaluation: brief weekly writing assignments; three short essays; and oral examination

Prerequisites: at least one course in American politics

PSCI 413 (S) Senior Seminar in American Politics: Polarized America

With red states and blue states, partisan divisions in Congress, and even disputes about wearing masks to protect against the coronavirus, few question the fact of a polarized America. But what is the polarization about and what caused it? Is it manufactured by a political elite using the rules of

the game to maintain power while ignoring the concerns of the people? Is it a capitalist strategy to divide the public in order to advance the interests of the wealthy corporate elite? Does it reflect a polity divided by racial and ethnic tensions with different visions of the nation's past and future? Does it reflect increased inequality in a fast-changing global economy? How can a government of separated institutions operate and come to collective decisions given this discord? Can the framers' vision of deliberative, representative government meet the challenges of a polarized polity?

Class Format: For fall of 2020, this course will be remote, with twice weekly online discussions. Students will submit discussion questions through Glow and those will be used to set the agenda for our conversations. Each student will be responsible for planning and leading one class meeting.

Requirements/Evaluation: class participation, weekly writing assignments, two short papers, final project

PSCI 420 (F) Senior Seminar: The Nuclear Revolution

Cross-listings: LEAD 420 PSCI 420 LEAD 330

Primary Cross-listing

This is a course about international politics in the nuclear age. In broad terms, it focuses on a very basic question: Does international politics still work essentially the same way as it did in the prenuclear era, or has it undergone a "revolution," in the most fundamental sense of the word? The structure of the course combines political science concepts and historical case studies, with the goal of generating in-depth classroom debates over key conceptual, historical, and policy questions. Classes will be taught remotely. The basic format of the course will be to combine very brief lectures with detailed class discussions of each session's topic. The course will begin--by focusing on the Manhattan Project--with a brief technical overview of nuclear physics, nuclear technologies, and the design and effects of nuclear weapons. The course will then examine the following subjects: the dropping of the atomic bombs on Japan; theories of the nuclear revolution; the early Cold War period; the development and implications of thermonuclear weapons; the Berlin and Cuban missile crises; nuclear accidents; nuclear terrorism and illicit nuclear networks; the future of nuclear energy; regional nuclear programs; preventive strikes on nuclear facilities; nuclear proliferation; and contemporary policy debates.

Class Format: This course will be taught remotely. All class discussions will be synchronous.

Requirements/Evaluation: class participation, three 8- to 10-page papers

PSCI 422 (S) Senior Seminar in Human Rights in International Politics and Law

Cross-listings: JLST 403 PSCI 420 PSCI 422

Primary Cross-listing

The idea that all humans have rights simply because they are human-independent of anything they might do or achieve-has transformed local and international politics, probably permanently. This concept's place in international politics, its strengths and limitations, depend on how people use it. Beginning with the 18th-century's transatlantic movement to abolish slavery, we will examine international movements and institutions that have affected what human rights mean, to whom, and where. Readings draw on philosophy, history, sociology, and international relations, but as a political science class we emphasize politics. Who benefits from the idea of universal human rights? Who loses? How does this idea about individual value liberate and entrap? Does this idea ultimately reinforce American hegemony, or plant the seeds of a non-American order?

Requirements/Evaluation: three lead essays, three critique essays, and one final essay

PSCI 423 (F) Humanitarianism as Ideology and Strategy

Since the mid-1980s, humanitarianism has been one dominant attitude that powerful countries, organizations and people have adopted with regard to poverty or disaster elsewhere. Humanitarianism aims at rescue, striving to keep people alive until some solution can be found. It aims not to address crises' causes nor to assist with solutions--which it considers political--just to keep human bodies alive. Critics contend that humanitarianism produces harm, provides structural incentives for people to do more or less than they need to, and deepens inequality between actors and targets. They contend

that it legitimates the status quo, in which such things are bound to happen. This course confronts humanitarianism as an ideology through reading its defenders and critics, and as a political strategy assessing its usefulness.

Class Format: three students start class discussion every day; one reads a short (4-page) essay and two read shorter (two-page) essays

Requirements/Evaluation: three longer essays, six shorter essays, constructive participation

Prerequisites: PSCI 202 and at least one elective in international relations

PSCI 431 Senior Seminar in Political Theory: Rethinking the Political

What is politics? The question, an important part of political theory at least since Socrates, has taken on renewed significance in recent years, as theorists have sought to rethink the political in response to twentieth century dictatorships and world wars; feminist, queer, anti-racist, post- and decolonial struggles; the transformations wrought by neoliberal globalization; the emergence of "algorithmic governance"; the recent resurgence of populist nationalism; and deepening recognition of climate crises. This seminar engages some of the major attempts at rethinking produced in the 20th and 21st centuries, particularly at those that, characterizing liberalism as masking structures of subordination and elements of conflict in political life, undervaluing the importance of citizen action and public space, or being ill-suited to altered technological and ecological conditions, seek to rework or move beyond it. In addition to those who argue for an expanded and emancipatory conception of politics, we will consider arguments against politics as primary path to improvement or focus of commitment. Authors read may include Schmitt, Strauss, Rawls, Arendt, Wolin, Rancière, Brown, Connolly, Hartman, Sharpe, Moten, Wynter, Sexton, Edelman, Muñoz, Coulthard, Simpson, Lazzarato, Haraway, Latour.

Requirements/Evaluation: Regular, engaged class participation; short Glow posts; one 6-8 page paper; one 10-12 page paper

Prerequisites: Junior or senior standing and two or more theory courses or consent of instructor. Non-majors with theory interests and backgrounds are welcome

Enrollment Limit: 15

PSCI 432 (S) Senior Seminar: Critical Theory

This course takes a critical look at the nexus of money and political power in the United States and world politics, using the concept of "racket society" to guide our inquiry. The theory of "rackets" was first put forward by Frankfurt School theorists in the 1940s as a way of analyzing linkages among organized crime, cartels, monopolies, corporate interests, and political institutions. Their project, which we will recreate in this course, was to trace the effects of the adaptation of the legal system (and other state institutions) to the conglomeration of capital and the concentration of wealth in a few hands. The flow of money offers insights into these deeper trends. Course readings begin with the work of Max Horkheimer, Theodor Adorno, Franz Neumann, Friedrich Pollock, and Herbert Marcuse, paying special attention to their discussion of the anti-democratic effects of money on political institutions. We will also look carefully at their critique of legal frameworks that protect the wealthy while criminalizing the poor. Although these concerns were not exclusive to the Frankfurt School, the approach they took had some unique features. Having fled Nazi Germany and re-established their research institute in exile the United States, Horkheimer and his colleagues brought an outsider-insider perspective to the problem. Among our questions are the following: How did the intellectual heritage of the Frankfurt School and their experiences in Germany shape their analysis of racket

society in 1940s America? Does the theory of rackets still have analytical power today? Given the massive expansion of the U.S. economy and the role of transnational capital in driving economic globalization in recent decades, what insights might the early Frankfurt School offer critics of anti-democratic tendencies in world politics today?

Requirements/Evaluation: regular class participation, short (1 pg) response papers, and drafts leading up to a 15-page final essay

Prerequisites: junior or senior standing required; in addition, prior coursework in political theory, cultural theory, philosophy, or permission of instructor

PSCI 440 (F) Challenges to Neoliberalism in the United States and Europe since the Financial Crisis

After emerging from the Cold War as the unrivaled model for capitalist societies, neoliberal capitalism has been subject to a series of challenges in the aftermath of the financial crisis of 2008-10. This seminar, after discussing briefly the institutions and logic of neoliberalism, will address recent challenges to it from both the left and the right in the United States and Europe. Specifically, the seminar will address the election of Donald Trump as president, the furor around Brexit in the United Kingdom and the authority of the European Union in Europe, and challenges to the hegemony of global finance and controversies around immigration in both the United States and Europe.

Requirements/Evaluation: in addition to participating in discussions about the readings, students are required to present to the class their written proposals for a research

Prerequisites: must be a senior Political Science major

Enrollment Limit: 15

Enrollment Preferences: Political Science majors specializing in the Comparative Politics subfield

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: PSCI Comparative Politics Courses

Not offered current academic year

PSCI 441 (S) Senior Seminar: The Liberal Project in Global Politics

Cross-listings: PSCI 441 PSCI 421

Secondary Cross-listing

The most powerful actors in global politics are liberal ones, and a liberal project around democratic states, international law and organizations, and free trade dominates the global agenda. This course is an investigation into this global liberal project, engaging both theory and practice. We will discuss signature liberal theorists both classic and current as well as some of their most notable critics. We will also attend to empirical evaluations of signature liberal efforts around democratization, human rights, and development. The course ends with a discussion of the successes and failures of the European Union as the principal embodiment of the liberal project today.

Requirements/Evaluation: 2-4 papers of 5-7 pages, several short oral presentations, daily discussion questions, 12-15 page final paper, class participation

Prerequisites: senior Political Science major or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: senior Political Science majors concentrating in International Relations or Comparative Politics

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

SEM Section: 01 MR 1:10 pm - 2:25 pm Darel E. Paul

PSCI 493 (F) Senior Thesis: Political Science

The senior major, having applied for and been accepted into the honors program during the second semester of the junior year, will devote the senior year to researching and writing a substantial and original work of scholarship, under the supervision of a faculty mentor to be assigned by the department. The final work will be submitted for evaluation by a committee made up of the faculty supervisor and two additional readers to be chosen by the department, in consultation with the supervisor. Thesis writers will not only work with their advisors but will participate in a weekly honors seminar supervised by a faculty member in political science. The seminar (which is one component of the 493-W31-494 designation and not a separate course) will provide a focused forum for the exchange of ideas among the honors students, who will regularly circulate sections of their theses-in-progress for peer review and critique. The faculty seminar leader's primary role is one of coordination and guidance.

Class Format: Course will be taught remotely

Requirements/Evaluation: Progress on thesis

Prerequisites: Writing an honors thesis in political science

Enrollment Limit: 12

Enrollment Preferences: Permission of instructor

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Winter Study -----

PSCI 12 (W) Adam Smith

Adam Smith has had enormous influence on the philosophy of economic life and on economic policy, especially in the English-speaking world. He was also surprisingly egalitarian, subtle, and occasionally witty. This course briefly surveys his most influential works. It concentrates on *The Theory of Moral Sentiments* and *The Wealth of Nations*, but will also include short selections from other writings, background reading about his biography and the world of the Scottish Enlightenment, and important contributions from the critical scholarly literature.

Requirements/Evaluation: 10-page paper

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: by demonstrated interest

Grading: pass/fail only

Materials/Lab Fee: \$10

PSCI 14 (W) JA SelCom: A Case Study in Selection Processes

In this course, we will work to build the next class of Junior Advisors! Together with JAAB and in coordination with members of The Dean's Office, we will interview applicants, discuss applications, and ultimately select the next class of JAs; SelCom members will learn from the intentional selection process, gaining interviewing (and interview) skills, an understanding of how candidates are considered and evaluated, and how to put together teams. Being a part of this selection process will give members the opportunity to use their voice to help shape the entry system; be a part of a social, collaborative team; learn and apply leadership, evaluation, and decision-making skills (which employers will love to see on your resume!); and work with a dynamic group to leave a meaningful legacy for next year's frosh!

Requirements/Evaluation: Attendance and active participation

Prerequisites: Anyone wanting to register for the SelCom Winter Study class needs to fill out this form:

https://docs.google.com/forms/d/e/1FAIpQLSeoQK_k73fHFH-OV6fVdUABTyIpEOtuSx2yBjTRR0kOef2E0Q/viewform

Enrollment Limit: 25

Enrollment Preferences: Sophomores, Juniors, and Seniors are encouraged to apply! Individuals applying to be a JA should not register.

Grading: pass/fail only

PSCI 15 (W) A Politics of Compassion for the 21st Century

Cross-listings: REL 15 PSCI 15

Secondary Cross-listing

Purpose: Here is a simple question: do you believe the American political system is working well today and will adequately address the country's needs in the 21st century? If not, what might a different model, a different attitude about politics and "who gets what in society," might look like. This course, offered by a political science professor who is also an ordained Zen Buddhist priest, explores a radical alternative based on the simple idea that if we are to survive and thrive as a global community in 100 years from now, we must move from a philosophy of "me" to one of "we." Based on the professor's 30 years of college-level political science teaching and over 40 years of a Zen Buddhist meditation practice, the course will explore a "Politics of Compassion," drawing from the teachings of the Buddha through the "Engaged Buddhists," such as the Dalai Lama, today. In addition to the historical and philosophical treatment of politics from a Buddhist point of view, we will practice Zen meditation on a daily basis. Regardless of one's particular religious, or non-religious, background, the course will provide a supportive opportunity to explore one's moral and political beliefs and at the end of the day ask oneself the proverbial question: what is my life really about? Is it about my ego in the form of making money and/or becoming famous, or is it about how to use my privileges and education to help alleviate suffering in the world? We will explore the issues of the climate crisis, poverty, race, sexism, violence, criminal justice, etc. in the process of reflecting on these questions.

Requirements/Evaluation: 10-page paper; all students will do a class presentation of their 10-page research paper

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: seniority: seniors, juniors, etc.

Grading: pass/fail only

Unit Notes: Tom Redden '77 is a political scientist and ordained Zen Buddhist priest, who is writing a book on 'Buddhist politics.' He holds a doctorate in political science and masters in education as well as 'Third World' Development Studies from the University of Geneva, Switzerland. He has lived and travelled all over the world, continues a 40-plus year daily meditation practice, and was voted Faculty of the Year five times by students at Southern Vermont College where he taught.

PSCI 17 (W) State Constitutions, State Courts, and Individual Rights

Cross-listings: JLST 17 PSCI 17

Primary Cross-listing

Most people are familiar with the idea that the federal constitution, as interpreted by the U.S. Supreme Court, can serve as an important (albeit controversial) tool for protecting individual rights. Cases involving rights to same-sex marriage, abortion, and gun ownership are just a few recent examples of the U.S. Supreme Court and the federal constitution taking center stage in battles over individual rights. But there is another, equally important, source of individual rights that is sometimes overlooked and understudied: state constitutions. Each state has its own constitution, which may contain different rights and protections from those in the federal constitution. In this class, we'll take a look at the role of state constitutions and courts in protecting individual rights and influencing federal constitutional interpretation. From assessing the constitutionality of compelled sterilization to protecting citizens from unreasonable searches and seizures, we'll examine the interplay between state and federal courts and constitutions. To do this, we'll work through 51 Imperfect Solutions: States and the Making of American Constitutional Law, by Judge Jeffrey S. Sutton (class of 1983). As a final project, students will choose a legal issue, evaluate its chances of success under the federal constitution and their home state constitution (or state constitution of their choosing), develop a basic litigation strategy aimed at achieving their objectives, and present that evaluation and strategy to the class.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: by seniority

Grading: pass/fail only

Unit Notes: Susan Yorke is an appellate attorney in the Bay Area and teaches at Berkeley Law. Erin Lagesen is a judge on the Oregon Court of Appeals. Both Susan and Erin went to Williams, where they double majored in English and Mathematics.

Winter 2022

LEC Section: 01 Cancelled

PSCI 18 (W) Media, Politics, and Power

The course engages students with short readings and videos presenting critical ideas about traditional and digital media and the formation of power. Students discuss and use those ideas to explore the political-economic relations of a chosen media channel--such as social media or entertainment (like Facebook, Twitter, YouTube, Spotify etc.) or news (like CNN, NewsMax, TheIntercept) or financial exchange (like BitCoin or RobinHood). Students first explore the contents, interfaces, or other interior aspects of their chosen media channel. Second, students will investigate the exterior relations of parent companies with government(s), markets, and social movements such as MAGA, white supremacy, Black Lives Matter, #MeToo and others. The class will meet for 3 hrs, 3 afternoons a week. An additional 6-10 hrs work on your own involves critically engaging media content and issues of media ownership. Early course sessions will discuss readings and videos on theory. Later sessions will involve students helping each other

look for patterns in the examples shared and for connections between the interior contents of media channels and the larger relations and strategies of media companies. Work outside of class will at times consist in consuming media and curating selections to share with the class. This requires at home work of viewing videos and/or reading articles or blogs or social media threads or examining web interfaces. From the material you review, you will choose examples for class discussion that you think may show political processes at work, such as construction of political ideologies or of race, gender, or other hierarchies. At other times, at home work will involve viewing videos (such as government hearings with CEOs, stockholder meetings, or investor calls, etc.) or reading news articles or other documents (annual reports, etc.). From these materials, students will select examples for class discussion that may show political-economic relations such as corporate market strategies, government-industry partnerships, or efforts to influence regulations. Through class discussions and presentations, students provide and receive mutual support enabling new views on media as product of, and means to, political struggle. Evaluation will be based on a final presentation in the form of a website, social media campaign, or PowerPoint presentation that can, at the student's choice, be publicly shared.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: instructor's discretion

Grading: pass/fail only

Unit Notes: James (he/him) is an activist and researcher and author of numerous studies on media, communication, and power. In addition to conducting research for political organizations and movements, his writing appears in Blackwell's International Encyclopedia of Communication, Editor & Publisher, TruthOut, and other publications. He was a campaign writer for US Rep. Bobby Rush and is currently a PhD candidate in the Communication department at UMass Amherst.

LEC Section: 01 MWF 1:00 pm - 2:50 pm James Owens

PSCI 21 (W) Fieldwork in Public Affairs and Private Non-Profits

This course is a participant-observation experience in which students work full-time for a governmental or nongovernmental (including voluntary, activist, and grassroots) organization or for a political campaign. Students may find placements in government and nonprofit organizations in which their work involves significant involvement with public issues. Examples include: town government offices; state or federal administrative offices (e.g., environmental agencies, housing authorities); interest groups that lobby government (e.g., ACLU, NRA); nonprofit organizations such as service providers or think tanks (e.g., Habitat for Humanity, Cato Institute); and grassroots, activist or community development organizations (e.g., Greenpeace or neighborhood associations). The instructors will work with each student to arrange a placement; such arrangements must be made in advance of the Winter Term. Students should first make their own contracts with an institution or agency. The instructors and members of the Political Science Department are available to help students find placements, if necessary. Each student's fieldwork mentor shall send a confirmation letter to the instructor verifying the placement and describing the nature of the work to be performed. During the session, students are responsible for keeping a journal of their experiences and observations. Additionally, students write final papers summarizing and reflecting upon the experience in light of assigned readings. A group meeting of all students will occur before winter study to prepare and after to discuss the experience. Every year, course instructors arrange for some distinct sections of this course to provide specialized fieldwork opportunities for small groups of students. In 2022, the following sections are being offered: 1. K-12 Curriculum Development, 2. Consulting for the Berkshire County Education Task Force, 3. Aga Khan Museum Remote Internship, 4. Carceral Reentry Research, 5. Spanish Language Community Education Projects, 6. Mindfulness Programming, 7. Social Media Consulting for the Berkshire Black Economic Council, 8. Food Safety and ServSafe Certification, 9. Art with Local Youth, 10. Public Education Re: Refugees, 11. Adult Basic Education & ESL Consulting, 12. Health Coach Pilot Program and Assessment. For more information on any of these options, see the PSCI 21 page of the Center for Learning in Action website:

PSCI 22 (W) LIFT: Learning Intervention for Teens

This mentorship-based course pairs Williams students with teenagers involved in the Berkshire County juvenile justice system. LIFT is an official Commonwealth of Massachusetts probation diversion program. This is a student-led course, sponsored by Pittsfield Chief of Police Mike Wynn '93 and Professor Cheryl Shanks, but entirely run by Williams students who have served as mentors or directors in the past. Our goal is to empower the teenagers through positive peer mentorship and allow them to take ownership of an independent project of the teen's choosing. The project and other course activities aim to cultivate initiative, creativity, focus, and skills in areas such as goal-setting, research, and communication, which the teenagers can then carry forward to their school, work, and home lives. The course culminates with a project presentation in which each mentor/mentee pair formally presents their work to an audience that includes professionals in the juvenile court system, state elected officials, chiefs of police, district attorneys, the teens' peers and families, and faculty and community members. Williams students are expected to attend trainings, meet with their teens three times a week, co-facilitate a final presentation, and keep a weekly journal detailing their meetings. Because LIFT is an after-school program, this course meets Tuesday through Thursday from 3:30-5:30pm. If you are interested in applying, please fill out this google form (<https://forms.gle/fS3KevZZ8jvhH2Tw5>) and register on PeopleSoft.

Requirements/Evaluation: final project or presentation and journal and weekly statements

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: students will be evaluated based on a statement of application, and the directors reserve the right to accept fewer than 10 applicants

Grading: pass/fail only

Unit Notes: Mike Wynn is the Chief of the Pittsfield Police Department and graduated from Williams in 1993.

Materials/Lab Fee: none

- Catherine B. Stroud, Associate Professor of Psychology; on leave Spring 2022
- Safa R. Zaki, Dean of the Faculty, Class of 1924 Professor of Psychology; affiliated with: Psychology Department

MAJOR

For the degree in Psychology, students must complete a minimum of nine courses as outlined below:

PSYC 101 Introductory Psychology

PSYC 201 Experimentation and Statistics

Three 200-level courses from the list below:

COGS/PHIL/PSYC 222 Minds, Brains, and Intelligent Behavior: An Introduction to Cognitive Science

NSCI 201/BIOL 212/PSYC 212 Neuroscience

PSYC 221 Cognitive Psychology

PSYC 232 Developmental Psychology

PSYC 242 Social Psychology

PSYC 252 Psychological Disorders

PSYC 272 Psychology of Education

Either PSYC 221 or 222, but not both, can count towards the three required 200-level courses.

Three 300-level courses from at least two of the areas listed below:

Area 1: Behavioral Neuroscience (courses with middle digit 1)

Area 2: Cognitive Psychology (courses with middle digit 2)

Area 3: Developmental Psychology (courses with middle digit 3)

Area 4: Social Psychology (courses with middle digit 4)

Area 5: Clinical Psychology (courses with middle digit 5)

Area 6: Other/Interdisciplinary Psychology (courses with middle digit 6)

Area 7: Educational Psychology (courses with middle digit 7)

At least one of these courses must be from among those carrying the format designation Empirical Lab Course.

One 400-level Psychology course.

Students who place out of Psychology 101 are still required to take nine courses to complete the major.

The department recommends that students take Psychology 201 in their sophomore year. The department requires that 201 be completed by the end of the junior year.

COURSE NUMBERING RATIONALE

As is the case in all departments, the first digit of a Psychology course number indicates the relative level of the course. Where appropriate, the second digit corresponds to the Areas listed above.

THE DEGREE WITH HONORS IN PSYCHOLOGY

Students who are candidates for honors need take only two 300-level courses from two different areas, but they must enroll in Psychology 493-W31-494 and write a thesis based on original empirical work. Presentation of a thesis, however, should not be interpreted as a guarantee of a degree with honors. Guidelines for pursuing the degree with honors are available from the department.

STUDY ABROAD

With some advance planning, studying abroad (especially for one semester) can easily be worked into the psychology major. To facilitate this, we recommend that students:

Meet with the Study Abroad advisor as soon as they decide that they are interested in studying abroad.

Take PSYC 201 (Experimentation and Statistics) in the sophomore year.

Think ahead to the 300-level courses they are interested in taking so that they can fulfill the 200-level prerequisites before they go away or, if possible, while they are away. In our experience, study abroad programs in the following places are most likely to offer psychology courses: England, Ireland, Scotland, Spain, Australia, New Zealand, Hawaii, and Scandinavia. Students should procure the descriptions of the psychology courses they are considering taking and bring them to their meeting with the advisor.

There are some costs to studying away, particularly for the year. This limits students' opportunity to choose the particular 300-level courses they would like to take and they must sometimes settle for those that are open, those which happen to be offered, or those for which they have the prerequisites, once they return in their senior year. Many students who are keen on psychology begin doing research with professors during their junior year, and for some this leads to an honors thesis in the senior year, summer research, etc. If you are going away for the entire year and do not make such connections with a professor ahead of time (i.e., before you go), you may lose out on some of these opportunities to deepen your involvement in the major on campus. On the other hand, studying abroad can be an invaluable learning experience, so you need to think carefully, in consultation with your advisor and/or the Study Abroad advisor, about the costs and benefits of it. Very occasionally, a student who just begins taking psychology courses late in the sophomore year and wishes to go abroad for the year finds that they are not able to do both, or is restricted in the choice of study-abroad programs.

FAQ

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, complete syllabus, including readings/assignments, and exams or other written work. In addition, the course content cannot overlap substantially with material already taken at Williams.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. Students are required to take at least one empirical project course (which includes a lab component and data collection). This must be completed at Williams.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. The empirical project course must be completed here (see answer to previous question above). Other major requirements that must be completed here are the Senior Seminar and our Statistics and Experimentation course (PSYC 201). On very rare occasions students have been given credit for PSYC 201 taken elsewhere, but this is extremely unlikely. Most institutions break the material up into two different courses, or don't include all of the components that we feel are an important foundation for the major.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. Students should be sure that have taken PSYC 201 PRIOR to their senior year at the latest. It is best to take it during sophomore year whenever possible.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

There have been instances.

PSYC 101 (F)(S) Introductory Psychology

An introduction to the major subfields of psychology: behavioral neuroscience, cognitive, developmental, social, and psychological disorders and treatment. The course aims to acquaint students with the major methods, theoretical points of view, and findings of each subfield. Important concepts are exemplified by a study of selected topics and issues within each of these areas.

Class Format: Lectures will be presented during the scheduled time. To complement the lectures, students will participate in two short discussions/laboratory experiences that will be offered at a variety of times outside the lecture period.

Requirements/Evaluation: five unit quizzes, a final exam, and two brief lab reports (or related brief reports, depending on the availability of labs)

Prerequisites: none

Enrollment Limit: 180

Enrollment Preferences: First-year students and sophomores

Expected Class Size: 180

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Attributes: NSCI Required Courses TEAC Teaching Sequence Courses

Fall 2021

LEC Section: 01 MWF 10:00 am - 10:50 am , Clarence J. Gillig, Noah J. Sandstrom

PSYC 127 (F) The Psychology of Success (WS)

This course will examine the psychology of success from a scientific perspective. After considering what success means, we will examine two broad influences on success: personality (e.g., intelligence, grit, and mental illness) and environment (e.g., schooling, parenting, and practice). We will talk about barriers to success, the search for success, and the cost of searching for success. Each week we will read a book or a set of articles (or possibly documentaries or podcasts). One partner will write a paper and the other will write a response. This course is not meant to make you more successful; the goal is to think critically about important issues, use evidence to make arguments, be skeptical, and practice writing and speaking in a convincing and engaging way.

Requirements/Evaluation: written work and discussion of that work; a five-page paper will be due every other week and a one-page response will be

required other weeks

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: highest priority will be given to incoming first-years followed by rising sophomores

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will submit a paper every other week (minimum 5 pages), and in alternate weeks they will write a response to their partner's paper. The instructor will provide detailed feedback on the papers.

Fall 2021

TUT Section: T1 TBA Nate Kornell

PSYC 158 (S) Freud: A Tutorial (WS)

Cross-listings: PSYC 158 HIST 485

Secondary Cross-listing

This tutorial is devoted to the systematic reading of the principal works of Sigmund Freud, one of the deepest, subtlest, and most influential thinkers of the last one-hundred years. Students will read Freud's work more or less chronologically, beginning with his writings on hysteria and concluding with his deeply pessimistic essay, *Civilization and Its Discontents*. In tutorial, we will consider the development of Freud's thought over the course of his professional life: his general psychological writings on the nature and functioning of the human psyche, his clinical writings on psychoanalysis as a form of treatment, and his cultural writings on art and artists, on the origin of human society, on religion, and on the relation of the individual to society and civilization. We will not be considering the relevance of Freud's ideas for purposes that transcend his own psychological agenda in the tutorial. Nor will we be much concerned with assessing whether Freud was "right" or "wrong" or whether his thought has clinical relevance today. Instead, we will seek to understand Freud as much as possible on his terms and not on ours, as a historical figure of originality, complexity and contradiction, whose thought deserves close reading and deep understanding within the context of Freud's thought itself.

Class Format: students will write and present orally six essays of 6-7 pages on assigned reading every other week; students not presenting an essay in a given week will be responsible for critiquing the presented essay

Requirements/Evaluation: student grades will be assigned only at the end of the semester based on their papers, their critiques, and their performance in tutorial discussion

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: juniors and seniors and History majors needing a 400-level seminar or tutorial to fulfill the requirements for a degree in History

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Unit Notes: fulfills History's 400-level graduation requirement

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 158 (D2) HIST 485 (D2)

Writing Skills Notes: As a tutorial, this course is by definition writing skills, both in terms of the number of papers that students will produce (six) and in terms of the focus on writing during every tutorial session. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Attributes: HIST Group C Electives - Europe and Russia

Not offered current academic year

PSYC 161 (F) Nonviolence and Positive Psychology

In this course we will explore the theory and practice of nonviolence in the context of research in Positive Psychology. Nonviolence means choosing not to threaten or injure others, and its practice requires cultivating personal qualities that enable such a choice. Positive Psychology refers to the scientific study of those qualities that enable people to live happy and fulfilling lives. We will begin by studying the history and moral theories of nonviolence. We will then evaluate the claims of those theories regarding the positive effects of nonviolence by discussing research on psychological benefits to the practitioner, attitude change in the adversary, and effects on the larger community. Topics will include self-control, empathy, forgiveness, tolerance, aggression, resisting violent assault, civil disobedience, and courage. Along the way we will introduce basic concepts in research design and interpretation of data to help us evaluate the research with a critical eye. This course is a part of a joint program between Williams' Center for Learning in Action and the Berkshire County Jail, in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Classes will be held at the jail, with transportation provided by the college. * Please note the atypical class hours, Tuesday, 4:45-8:30 pm.

Requirements/Evaluation: class attendance and participation, short essays, and a final paper

Prerequisites: not open to first-year students

Enrollment Limit: 9

Enrollment Preferences: selection will be based on student interviews

Expected Class Size: 9

Grading: yes pass/fail option, no fifth course option

Unit Notes: this class will include 9 Williams students and 9 inmates

Distributions: (D2)

Attributes: PSYC Area 6 - Other/Interdisciplinary Psychology

Not offered current academic year

PSYC 201 (F)(S) Experimentation and Statistics (QFR)

An introduction to the basic principles of research in psychology. We focus on how to design and execute experiments, analyze and interpret results, and write research reports. Students conduct a series of research studies in different areas of psychology that illustrate basic designs and methods of analysis. You must register for lab and lecture with the same instructor.

Requirements/Evaluation: research reports, exams, and problem sets

Prerequisites: PSYC 101; not open to first-year students except with permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

Expected Class Size: 16

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course has problem sets focused on experimental design and quantitative data analysis. Students will help design and conduct experiments, analyze the data, and report their findings.

PSYC 212 (F) Neuroscience

Cross-listings: BIOL 212 PSYC 212 NSCI 201

Secondary Cross-listing

This course is designed to give an overview of the field of neuroscience progressing from a molecular level onwards to individual neurons, neural circuits, and ultimately regulated output behaviors of the nervous system. Topics include a survey of the structure and function of the nervous system, basic neurophysiology and neurochemistry, development, learning and memory, sensory and motor systems, and clinical disorders. Throughout the course, many examples from current research in neuroscience are used to illustrate the concepts being considered. The lab portion of the course will emphasize a) practical hands-on exercises that amplify the material presented in class; b) interpreting and analyzing data; c) presenting the results in written form and placing them in the context of published work; and d) reading and critiquing scientific papers.

Requirements/Evaluation: Evaluation will be based on participation in discussion groups, exercises, problem sets and quizzes performed in small groups, lab reports, two midterm exams, and a final exam.

Prerequisites: PSYC 101 or BIOL 101; open to first-year students only with permission of instructor

Enrollment Limit: 72

Enrollment Preferences: sophomores and Biology and Psychology majors

Expected Class Size: 72

Grading: yes pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

Distributions: (D3)

PSYC 222 (F)(S) Minds, Brains, and Intelligent Behavior: An Introduction to Cognitive Science

Cross-listings: PSYC 222 PHIL 222 COGS 222

Secondary Cross-listing

This course will emphasize interdisciplinary approaches to the study of intelligent systems, both natural and artificial. Cognitive science synthesizes research from cognitive psychology, computer science, linguistics, neuroscience, and contemporary philosophy. Special attention will be given to the philosophical foundations of cognitive science, representation and computation in symbolic and connectionist architectures, concept acquisition, problem solving, perception, language, semantics, reasoning, and artificial intelligence.

Requirements/Evaluation: midterm and final exams, and weekly exercises

Prerequisites: PSYC 101 or any PHIL course or CSCI 134 or permission of instructor; background in more than one of these is recommended.

Enrollment Limit: 20

Enrollment Preferences: sophomore and first-year students, with additional preference given to students who satisfy more of the prerequisites.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Unit Notes: meets Contemporary Metaphysics & Epistemology requirement only if registration is under PHIL

PSYC 232 (F)(S) Developmental Psychology

An introduction to the study of human growth and development from conception through emerging adulthood. Topics for discussion include prenatal and infant development, perceptual and motor development, language acquisition, cognitive development, and social and emotional development. These topics form the basis for a discussion of the major theories of human development, including those about early experience, neural plasticity, dynamic systems, information processing, social learning, attachment, parenting, and family systems.

Requirements/Evaluation: attendance and active class participation, 3 exams (2 midterms and final), and regular writing assignments

Prerequisites: PSYC 101

Enrollment Limit: 50

Enrollment Preferences: Preference will be given to sophomores and junior psychology majors and senior psychology majors who still need to fulfill a 200-level requirement.

Expected Class Size: 50

Grading: yes pass/fail option, yes fifth course option

PSYC 258 (S) Language and Literacy Development

Cross-listings: PSYC 258 JAPN 258

Secondary Cross-listing

Language is uniquely a human function and fundamental to one's participation in society. Children learn to talk in the first three years of life at an impressive speed. However, in order to successfully participate in academic and social life, it is critical for one to develop literacy skills. Learning to read is a multifaceted process that involves various cognitive resources. This course is an introduction to language development and literacy acquisition in first language and in a cross-linguistic environment including Japanese, Chinese and English. Linguistic concepts such as phonology,

syntax and morphology will be introduced as we discuss the acquisition processes. Questions to be addressed include: How does a child develop oral language from birth? How does a child learn the meaning of words? How is learning to talk and read similar or different across various languages? How is learning to read different from learning to speak? How "natural" is it to learn to read?

Requirements/Evaluation: active participation in the class discussion, weekly reaction paper, quiz, final paper

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Japanese, Chinese, Asian Studies, and Psychology majors

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Psychology majors, this course counts as a 200-level elective in psychology but does not count as one of the three 200-level courses for the major; for Asian Studies, Chinese, and Japanese majors, this course counts as a comparative requirement course

Attributes: Linguistics

Not offered current academic year

PSYC 272 (F) Psychology of Education

This course introduces students to a broad range of theories and research on education. What can developmental research tell us about how children learn? What models of teaching work best, and for what purposes? How do we measure the success of various education practices? What is the best way to describe the psychological processes by which children gain information and expertise? What accounts for individual differences in learning, and how do teachers (and schools) address these individual needs? How do social and economic factors shape teaching practices and the educational experiences of individual students? The course will draw from a wide range of literature (research, theory, and first-hand accounts) to consider key questions in the psychology of education. Upon completion of the course, students should be familiar with central issues in pre-college education and know how educational research and the practice of teaching affect one another.

Class Format: discussion

Requirements/Evaluation: two exams and a final project

Prerequisites: PSYC 101

Enrollment Limit: 50

Enrollment Preferences: Psychology majors and those who plan to become teachers

Expected Class Size: 50

Grading: no pass/fail option, no fifth course option

PSYC 312 (S) From Order to Disorder(s): The Role of Genes & the Environment in Psychopathology

Cross-listings: NSCI 322 PSYC 312

Primary Cross-listing

This course examines how experimental methods in neuroscience can be used to understand the role of nature (genes) and nurture (the environment) in shaping the brain and behavior. In particular, we will explore how neuroscience informs our understanding of psychiatric disorders such as anxiety, depression, and schizophrenia. We will investigate the biological underpinning of these disorders as well as their treatments. Readings will include human studies as well as work based on animal models. Topics will include: the ways in which environmental and genetic factors shape risk and resiliency in the context of psychiatric disease, the neural circuits and peripheral systems that contribute to psychopathology, and the mechanisms

through which interventions may act. In the laboratory component of the course, students will gain hands-on experience in using animal models to study complex behavior and their associated neural mechanisms.

Requirements/Evaluation: class presentations, participation in discussions, project proposal (5 pages), empirical project paper (5-7 pages), poster and poster presentation, participation in all phases of the empirical project research experience (experiment design, data collection, data graphing, data analysis) including oral and written presentation of key findings.

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201)

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

PSYC 313 (F) Opioids and the Opioid Crisis: The Neuroscience Behind an Epidemic

Cross-listings: NSCI 313 PSYC 313

Primary Cross-listing

Opioid misuse, including addiction, has emerged as a major health epidemic in the United States. This course will explore the science of opioids as well as the historical and societal context surrounding their use and abuse. We will examine the neurobiological mechanisms through which opioids interact with pain pathways and reward circuits within the brain and we will explore how changes in these systems contribute to opioid tolerance, dependence, and addiction. We will consider how genetic, environmental and behavioral factors can powerfully influence these processes. Finally, we will consider alternative approaches to pain management as well as interventions for the treatment of opioid abuse. Students will be expected to design and conduct an empirical project related to the course material. Critical evaluation of peer-reviewed primary literature from animal and human studies will serve as a foundation for class discussions. Evaluation will be based on class presentations, participation in discussions and empirical projects, written assignments, and a poster presentation of the empirical project.

Requirements/Evaluation: class presentations, participation in discussions and empirical projects, five short position papers (approximately 2 pages double-spaced), an APA style empirical paper (approximately 20 pages double-spaced) and poster presentation of the empirical project.

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201)

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Neuroscience concentrators

PSYC 315 (F) Hormones and Behavior

Cross-listings: PSYC 315 NSCI 315

Primary Cross-listing

In all animals, hormones are essential for the coordination of basic functions such as development and reproduction. This course studies the dynamic relationship between hormones and behavior. We will review the mechanisms by which hormones act in the nervous system. We will also investigate the complex interactions between hormones and behavior. Specific topics to be examined include: sexual differentiation; reproductive and parental behaviors; stress; aggression; and learning and memory. Students will critically review data from both human and animal studies. All students will design and conduct an empirical research project as part of a small research team.

Class Format: empirical lab course

Requirements/Evaluation: presentations and participation in discussions, approximately seven 1-2 page response papers, midterm, written (15-20 page) and oral presentation of the research project

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201)

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

PSYC 319 (S) Neuroethics (WS)

Cross-listings: PSYC 319 NSCI 319 STS 319

Primary Cross-listing

Neuroscience studies the brain and mind, and thereby some of the most profound aspects of human existence. In the last decade, advances in our understanding of brain function and in our ability to manipulate brain function have raised significant ethical challenges. This tutorial will explore a variety of important neuroethical questions. Potential topics will include pharmacological manipulation of "abnormal" personality; the use of "cosmetic pharmacology" to enhance cognition; the use of brain imaging to detect deception or to understand the ability, personality or vulnerability of an individual; the relationship between brain activity and consciousness; manipulation of memories; the neuroscience of morality and decision making. In addition to exploring these and other ethical issues, we will explore the basic science underlying them.

Requirements/Evaluation: six 5-page position papers and five 2-page response papers as well as participation in discussions

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201); or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 319 (D3) NSCI 319 (D3) STS 319 (D2)

Writing Skills Notes: In alternating weeks, each student in a tutorial pair will write a 5-page essay based on the assigned readings. Essays will be discussed during tutorial meetings and written feedback from the professor will be provided for each essay. At the end of the semester, students will choose one of their prior essays to revise as their final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

PSYC 322 (S) Concepts: Mind, Brain, and Culture

Every time we see something as a kind of thing, every time that we decide that an object is a cup rather than a glass, when we recognize a picture of a familiar face as a picture of ourselves, or even when we understand speech, we are employing categories. Most categorization decisions are automatic and unconscious, and therefore have the illusion of simplicity. The complexity of these decisions, however, becomes apparent when we attempt to build machines to do what humans perform so effortlessly. What are the systems in place that allow us this extraordinary ability to segment the world? Are they universal? How does conceptual knowledge differ across cultural groups? How do concepts affect our perception? How do the categories of experts differ from the categories of novices? Do children have the same kind of conceptual knowledge as adults? How are categories represented in the brain? In this course, we explore various empirical findings from cognitive psychology, cognitive neuroscience, and anthropology that address these questions.

Class Format: empirical lab course

Requirements/Evaluation: short papers, class presentation, and research paper

Prerequisites: PSYC 221 or 222 or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Cognitive Science concentrators

Expected Class Size: 16

PSYC 324 (S) Great Debates in Cognition

The field of cognition is filled with controversies about how the mind really works. For example, is there sufficient evidence for a system in vision that can become aware of things without actually "seeing" them? Is it necessary to assume that babies come into the world armed with innate linguistic knowledge? Are humans inherently rational? Can we make inference about the mind using neuroimaging? These debates, and others that we will consider, help fuel scientific discovery in cognition in interesting ways. In this class, we will consider some of these contemporary debates, weigh evidence on both sides, and discuss the implications for what we know about the mind.

Class Format: students will meet in pairs with the instructor for an hour each week

Requirements/Evaluation: weekly papers and oral arguments

Prerequisites: PSYC 221 or 222 or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and Cognitive Science concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

PSYC 328 (S) Cognitive Approaches to Visual Perception

Cross-listings: PSYC 328 COGS 328

Secondary Cross-listing

When you open your eyes, you immediately perceive your environment in great detail. Seeing is so quick and effortless that people mistakenly think that vision works like a camera. However, the reason it feels effortless is due to the tremendous amount of complex processes and computations that take place in your brain whenever you open your eyes. In this course, we will explore such processes from a computational perspective. How does cognitive psychology approach visual perception? What is the relationship between perception and cognition? How can we experimentally study visual consciousness? In addition to exploring such questions, we will also examine how our visual system processes certain visual features in our environment, such as motion, color, depth and shape.

Requirements/Evaluation: Class participation, weekly take-home quizzes, weekly short commentaries on readings, class presentation, individual 12- to 15-page final paper

Prerequisites: PSYC 221, COGS/PHIL/PSYC 222, or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Cognitive Science concentrators

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

PSYC 332 (F) Children's Mathematical Thinking and Learning

Are babies statistical experts? Will I ever be good at calculus? What are we born with and what do we learn? Before children are ever taught formal mathematics in a classroom, they are confronted with situations where they must use their informal understanding of geometry, space, and number to successfully navigate their environments. In this course we read and discuss both foundational and cutting-edge articles from neuroscience, cognitive science, education, and psychology to understand how humans bridge this gap between the informal and formal mathematical worlds. We will also tackle questions such as: How do culture and language affect numerical understanding? What are the sources of children's mathematical misconceptions? What are the effects of early environmental input or input deprivation on mathematical development? What do we know about gender differences in math achievement? How do stereotypes, prejudice, and math anxiety affect math performance? For your laboratory component, you will work with a small group of other students to develop an original research project that tests a specific hypothesis about children's mathematical thinking and learning. Data will be collected either online or in community schools, with the permission of parents, teachers, and children. Your results will be written-up in for your final paper, which will be in the style of an empirical journal article.

Class Format: community-based data collection in local schools

Requirements/Evaluation: class participation, discussion leader, weekly open-notes reading quizzes, individual 12- to 15-page final paper based on empirical group research project

Prerequisites: PSYC 201 and PSYC 232 or permission of the instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors, upperclassmen, students with a demonstrated interest in the course material

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

LAB Section: 02 R 1:00 pm - 4:00 pm Eliza L Congdon

PSYC 333 (S) Children's Minds (WS)

Humans stand out in the animal world for their capacity to develop ideas and consider those of other people. Where does this capacity come from, and how does it develop? Why do some people seem more inclined to consider ideas than others? What can schools do to foster the pursuit of ideas? Young children ask questions, tell stories, speculate, invent, and predict. By middle childhood, they are capable of constructing ideas about any number of complex topics: death, justice, infinity, and the nature of time, to name four. Yet by adolescence only some people are disposed to pursue ideas. We will examine data on children who collect objects (such as bugs or rocks) and information (about things like dinosaurs, contagion, and death), and examine the role such collections play in the capacity to construct ideas. We will consider research on how and when children puzzle over philosophical problems (for example, identity and fairness), how they learn to plan, their ability to learn from thought experiments, their emerging conception of what an idea is, and what they know about knowledge and its role in shaping beliefs and making decisions. We will also spend time looking at individual and cultural variation, as well as the influence of adults. We will read work in developmental, educational and cognitive psychology, as well as anthropology.

Requirements/Evaluation: Each week one member of the tutorial pair will write a 5-7 page essay answering a specific question, and the other member of the pair will write a response. The goal is for each student to write 5-6 papers, and 5-6 responses during the term.

Prerequisites: PSYC 232 or PSYC 272

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and those involved in the Program in Teaching

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS)

Writing Skills Notes: Students will receive extensive feedback on their writing each week, both from the professor and their partner. Further, students will have the opportunity to rewrite two of their papers in light of the feedback that they receive during the semester.

PSYC 334 (F) Defining and Disrupting the School-to-Prison Pipeline

Cross-listings: PSYC 334 AFR 318

Secondary Cross-listing

The school-to-prison pipeline describes a system of processes that pushes children out of school into jails and prisons. This course will explore the pipeline and the relationships between school, prison, and society. We will begin with the history and creation of the modern-day school-to-prison pipeline, focusing on the educational and public policies that encourage the criminalization of "others", with particular emphasis on folks of color and under-resourced communities. We will also look to firsthand accounts from those pushed into the pipeline to humanize the topic and engage in thoughtful and compassionate discussion. Together, we will define "school" and "prison", identifying how these definitions are aligned with the most current iteration of the pipeline, and how they can help us as we work to dismantle it.

Requirements/Evaluation: Assignments for the course include ongoing journal assignments, two 3-5 page papers, and a final project.

Prerequisites: None

Enrollment Limit: 20

Enrollment Preferences: Africana Studies concentrators and Psychology Majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

PSYC 335 (F) Early Experience and the Developing Infant

The period from conception to age three is marked by impressive rapidity in development and the plasticity of the developing brain affords both fetus and infant an exquisite sensitivity to context. This course delves into the literature that highlights the dynamic interactions between the developing fetus/infant and the environment. The course readings span a range of disciplines and cover a diversity of hot topics in the study of prenatal and infant development, including empirical research drawn from the developmental, neuroscience, psychopathology, and pediatric literatures.

Class Format: Classes will be held synchronously, live and in Zoom.

Requirements/Evaluation: active class participation, weekly three-page papers, two oral presentations (20 minutes each and using PowerPoint), and one final 10-12 page paper on an independent research topic related to course content

Prerequisites: PSYC 201, PSYC 212, and PSYC 232 or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: Psychology majors and Neuroscience concentrators

PSYC 337 (S) Critical Perspectives in Special Education

Cross-listings: AFR 324 PSYC 337

Secondary Cross-listing

What makes special education "special"? This course will explore the role, purpose, and function of special education in the United States. Given special education's assumption of dis/ability (Baglieri, 2012), we will also create collective and individual frameworks for discussing and deconstructing dis/ability. This course will examine history, policy, and pedagogy related to special education; we will also discuss how law and school practices have systemically and systematically excluded students of color from general education classrooms, leading to the overrepresentation of Black, Indigenous, and Latinx children in special education. We will listen to narratives shared by people with dis/abilities and our educational histories to understand how personal connections to special education influence our current beliefs and future practice.

Requirements/Evaluation: Assignments for the course include ongoing journal assignments, two 3-5 page papers, and a final project.

Prerequisites: None

Enrollment Limit: 20

Enrollment Preferences: Africana Studies concentrators and Psychology Majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

PSYC 338 (S) Inquiry, Invention and Ideas

Children tinker, explore and create, but some more than others, and under some conditions more than others. What leads children to investigate, invent and build their own ideas? We will examine the development of curiosity, invention, and the ability to have or construct an idea. We will also look at what accounts for individual differences between children, including the role of intelligence, creativity, social cues, and opportunity. We will look at how these processes unfold at home and in school, and discuss the educational implications of the research we read, and the research we conduct.

Requirements/Evaluation: three 3- to 5-page essays, two child observations and a 7- to 10-page final paper

Prerequisites: PSYC 101, and PSYC 232 or PSYC 272, or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: preference given to Psychology majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

PSYC 341 (S) Stereotypes, Prejudice, and Discrimination

Cross-listings: PSYC 341 WGSS 339

Primary Cross-listing

This course will examine social psychological theories and research that are relevant to the understanding of stereotypes, prejudice, and discrimination. We will take a variety of social psychological perspectives, emphasizing sociocultural, cognitive, personality, or motivational explanations. We will examine the impact that stereotypes and prejudice have on people's perceptions of and behaviors toward particular groups or group members and will explore a variety of factors that tend to exacerbate or weaken this impact. We also will consider some of the sources of stereotypes, prejudice, and discrimination and some of the processes through which they are maintained, strengthened, or revised. In addition, we will examine some of the effects that stereotypes, prejudice, and discrimination can have on members of stereotyped groups, as well as some implications of the social psychological research findings for issues such as education and business and government policies. A major component of this course will be the examination of classic and ongoing empirical research.

Class Format: empirical lab course

Requirements/Evaluation: weekly brief papers, oral reports, two longer papers

Prerequisites: PSYC 201 and 242

Enrollment Limit: 16

Enrollment Preferences: senior, then junior Psychology majors

PSYC 342 (F) Social Judgment

This course focuses on how people make judgments and decisions in their social lives and why they are sometimes biased and irrational in their choices. We will place a strong emphasis on exploring how ideas from the judgment and decision-making literature can aid in our understanding of social psychological phenomena, including planning for the future, understanding other people, and resolving interpersonal conflicts. We will also place an emphasis on people's judgments and decisions as they pertain to their happiness and well-being, exploring how concepts in the judgment and decision-making literature can help us to understand why certain types of outcomes are more satisfying than others and why people sometimes choose in ways that fail to maximize their well-being. As we explore these questions, we will survey a variety of methods and perspectives, ranging from classic social psychological experiments to techniques imported from behavioral economics and cognitive psychology.

Requirements/Evaluation: a series of short papers; two essay exams; written and oral report of a research proposal

Prerequisites: PSYC 242 and PSYC 201, or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Psychology majors

PSYC 346 (S) Environmental Psychology

Cross-listings: PSYC 346 ENVI 346

Primary Cross-listing

This is a course in social psychology as it pertains to the natural environment. We will consider how the environment influences aspects of human psychology (e.g., the psychological implications of humans' disconnect with nature), as well as how human psychology influences the environment (e.g., why some people engage in environmentally destructive behaviors despite holding proenvironmental attitudes). At the core of this course is an attempt to examine various ways in which research and theory in social psychology can contribute insights to understanding (and encouraging) environmentally responsible behavior and sustainable practices, both here at Williams and globally. Because human choice and behavior play such an important role in environmental problems, a consideration of human psychology may therefore be an important part of the solution.

Class Format: empirical lab course

Requirements/Evaluation: a series of papers, two essay exams, written and oral reports of research

Prerequisites: PSYC 242 recommended, PSYC 201, or a comparable course in statistics and research methodology, is also recommended.

Enrollment Limit: 16

Enrollment Preferences: Psychology majors, Environmental Studies majors, and Environmental Studies concentrators

Expected Class Size: 16

PSYC 349 (S) Psychology and Law (DPE)

This course focuses on applications of psychology to the administration of justice. Drawing from the areas of social, personality, cognitive, and developmental psychology, we will look critically at the processes of criminal justice. We will compare the law's informal theories of human behavior with what psychologists know on the basis of empirical studies. We will cover a number of contemporary topics including police-civilian interactions, custodial interrogations, false confessions and guilty pleas, forensic evidence, deception detection, eyewitness identifications, alibi generation and corroboration, repressed and recovered memories, and jury selection and decision-making. We will also discuss methodological issues associated with conducting research in psychology and law. In the laboratory component of the course, students will design and conduct their own empirical research projects based on course readings and topics. These semester-long projects will be conducted collaboratively in pairs or teams.

Class Format: empirical lab course

Requirements/Evaluation: attendance and active class participation, several brief (1-2 page) reading response papers, (2-3) class presentations, written/oral project proposal (4-5 pages), participation empirical project (experiment design, data collection, data visualization, data analysis, interpretation), final APA-style research paper (15-20 pages), oral presentation of the research project

Prerequisites: PSYC 201 and either PSYC 242 or PSYC 221

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

Expected Class Size: 16

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (DPE)

Difference, Power, and Equity Notes: We will explore the differing dynamics of power between legal actors and consider the psychological and structural factors that contribute to vulnerability, coercion, and inequality in the justice system. Through discussions of race, age, body, gender, disability, and stigmatized identities, this course will encourage students to challenge assumptions of objectivity and fairness in our legal system.

PSYC 352 (F) Clinical and Community Psychology

This course provides an overview of theory, methods, and professional issues in the fields of clinical and community psychology (and related fields). In addition to academic work (primary source readings and class discussions), students are encouraged to apply their experiences in academic psychology to field settings, and to use their fieldwork experience to critically evaluate theory and research. The course includes a supervised field-work placement arranged by the instructor in a local mental health or social service agency. **Students must complete a brief survey about their interests and schedule in order to place them in an agency. Students should email the instructor to obtain the survey as well as receive permission to register for this course.**

Requirements/Evaluation: field work (six hours per week), two 5-page position papers, and a 12- to 15-page final paper

Prerequisites: PSYC 252

Enrollment Limit: 15

Enrollment Preferences: senior, then junior, Psychology majors; you **MUST** have permission of instructor to register for this course

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Not offered current academic year

PSYC 353 (F) High-Risk Behaviors in Psychopathology: A Transdiagnostic Approach to Treatment and Research

This seminar will provide students with a comprehensive understanding of the science, study, and treatment of high-risk behaviors commonly seen in severe psychopathology. Course topics will include: alcohol and substance use, disordered eating, impulsivity (for example, in the context of bipolar and borderline personality disorder), and self-injurious thoughts and behaviors (SITBs). Readings will involve empirical studies and theoretical papers that have shaped the study of these behaviors and their relationship/presence in DSM-5 psychological disorders. Additionally, readings will include studies that have examined prevalence rates of these behaviors, current models of etiology, distal and proximal indicators of risk, assessment and safety planning, science-based interventions, cultural factors/issues of diversity and social justice, and ethical considerations in research and treatment. Students will evaluate published research based on theory, methodological rigor, ethical considerations, diversity/inclusion, and current gaps in the literature that contribute to difficulty in predicting, preventing, and treating high-risk behaviors in clinical practice. Students will write a detailed grant proposal, including a review of the relevant literature, based on a selected course topic and framed as a potential future research study that would address an existing gap in the literature.

Requirements/Evaluation: Attendance and active class participation, student-led discussions, 3 page grant proposal draft, 10-15 page final grant proposal with a brief oral presentation of the proposed project

Prerequisites: PSYC 201 and PSYC 252 or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Psychology majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

SEM Section: 01 MR 1:10 pm - 2:25 pm Stephanie J. Steele

PSYC 355 (S) Psychotherapy: Theory and Research

Psychotherapy is a young, barely 100-year old psychological endeavor which attempts to promote change and healing through social interaction. How

can it be that talking with a psychotherapist can help people change -- emotionally, cognitively, and/or behaviorally -- and how exactly does it help people achieve relief from psychological disorders and problems? In this course, we will study some of the key approaches to psychotherapy by examining in juxtaposition the theories and scientific research that surround them, as well as the sociocultural political contexts in which they evolve. This will be accomplished by a close reading and critical analysis of primary source theoretical papers, the "raw data" (videotapes and transcripts) of therapy sessions, case studies, and contemporary empirical research on the outcomes and change processes of psychotherapy. Students will learn how to evaluate the efficacy claims of both standard and new therapies and how to evaluate claims about the mechanisms by which those therapies work. Current controversies in psychotherapy and psychotherapy research will be addressed and debated as well. All students will design and conduct an empirical research project based on the course material.

Requirements/Evaluation: attendance and active class participation, weekly 2-3 page reading response papers, APA style research report and poster/oral presentation of the research project

Prerequisites: PSYC 201 and PSYC 252

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

PSYC 356 (F) The Science of Suicide and Related Psychopathology

The course will provide students with a comprehensive understanding of the science and study of suicide and related psychopathology (e.g., non-suicidal self-injury) in both clinical and community samples. Course topics will include prevalence across the lifespan, current models of etiology, distal and proximal indicators of suicide risk, risk assessment and safety planning, suicide prevention and science-based interventions, an exploration of cultural factors/issues of diversity and social justice, and current/future directions in this particular area of research and clinical practice. Readings will involve empirical studies and theoretical models that have shaped the study of suicidality, and recent studies that have taken a multidisciplinary approach (e.g., neuropsychological research; machine learning) to understanding suicide. Students will evaluate published research based on theory, methodological rigor, ethical considerations, diversity/inclusion, and current gaps in the literature that contribute to difficulty in predicting and preventing suicide. Students will design and conduct an empirical research project based on the course readings and topics discussed, such as analyzing existing data sets, examining media depictions/reporting, and/or conducting online surveys. These projects will be completed in pairs or teams.

Class Format: This course will be taught remotely; seminar discussions will occur synchronously twice/week to maximize the opportunity for active group participation of these pressing topics. Empirical labs will also occur synchronously each week; these labs are particularly well-suited to be adapted to remote instruction and will include full group discussions and activities, as well as "breakout" pair/group meetings to focus on empirical projects.

Requirements/Evaluation: attendance and active class participation, weekly 2-3 page reading response papers, student-led discussions (3 per student), a 4-5 page project proposal, a 15-20 page APA-style research paper, poster/oral presentation of the research paper

Prerequisites: PSYC 201 and PSYC 252 or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: Psychology majors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

PSYC 357 (F) Depression

This course will provide students with a comprehensive understanding of depression. Topics will include assessment, models of etiology and course, effective approaches to prevention and intervention, and depression in specific populations. Readings will expose students to seminal works in the field as well as current methods and research findings. Throughout the course, students will evaluate current research based on theory, methodological rigor, and potential impact on prevention and intervention efforts.

Requirements/Evaluation: class participation, five 2-page (double spaced) response papers, 2 class presentations, final paper (study proposal)

Prerequisites: PSYC 201; PSYC 252 recommended

Enrollment Limit: 19

Enrollment Preferences: Psychology majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Fall 2021

SEM Section: 01 MWF 11:00 am - 12:15 pm Catherine B. Stroud

PSYC 358 (F) Developmental Psychopathology: Trajectories of Risk and Resilience

Why do some youth develop psychopathology in the face of adversity whereas others do not? How do we define psychological disorders in youth? Is resilience a static trait, or can it be promoted? How do we prevent youth from developing psychopathology? In this course, students will address these and other questions using a risk and resilience framework that examines the interactions among multiple risk and protective factors in the pathway to psychopathology. Specifically, students will examine the interactions between individual characteristics (e.g., neurobiological, interpersonal, cognitive, and emotional factors) and environmental contexts (e.g., family, school, peer, early adversity, poverty) in the development of risk and resiliency. Application of etiological models and empirical findings to prevention and intervention approaches will be explored. Throughout the course, students will evaluate current research based upon theory, methodological rigor, and clinical impact.

Class Format: This course will be offered remotely. Each week the professor and the tutorial pair will meet for 60 minutes in a synchronous online meeting. The meetings will be scheduled between 9am and 4pm EST based upon student and professor availability. Attendance will be required at the weekly synchronous online meeting.

Requirements/Evaluation: six 5-page papers, six short response papers, and participation in discussions

Prerequisites: PSYC 252; PSYC 201 recommended

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and Public Health concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Attributes: PHLH Reproductive, Maternal and Child Health PSYC Area 5 - Clinical Psychology

Not offered current academic year

PSYC 359 (S) Anxiety: Responses to Danger, Both Real and Imagined

This is an advanced course on anxiety that takes an in depth look at the theory and research on the normative psychological processes that influence responses to danger, both real and imagined. Specifically, it examines the empirical research on psychological responses to traumatic experiences, such as combat, sexual assault, and natural and community disasters. Responses to perceived or imagined threats are also discussed as the underpinnings of such anxiety disorders as Panic Disorder, Generalized Anxiety Disorder, Social Phobia, Specific Phobia and OCD. Discussions focus on commonalities and differences in empirically supported treatments for anxiety disorders as well as controversies in the field.

Class Format: As many of our meetings will be held in-person as reasonably feasible. Students who are on-campus will be encouraged to attend the seminar in person. Those who are unable to attend in person will join remotely. Students will be required to meet with me in small groups prior to their presentation to review their presentation/discussion plan. These meetings will occur in person or remotely, depending on scheduling availability.

Requirements/Evaluation: Regular attendance and active class participation (whether in person or remote) - students will be randomly quizzed and/or asked to summarize or discuss material from the assigned readings and graded for their preparedness; midterm examination; one final 8-10 page literature review paper based on course content; one group presentation with discussion.

Prerequisites: PSYC 252

Enrollment Limit: 16

Enrollment Preferences: Psychology Majors; preference given to those with outstanding major requirements

Expected Class Size: 16

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

Attributes: PSYC Area 5 - Clinical Psychology

PSYC 372 (F) Advanced Seminar in Teaching and Learning

This advanced seminar will give students an opportunity to connect theory to practice. Each student will have a teaching placement in a local school, and participate in both peer and individual supervision. In addition, we will read a range of texts that examine different approaches to teaching, as well as theory and research on the process of education. What is the best way to teach? How do various theories of child development and teaching translate into everyday practices with students? Students will be encouraged to reflect on and modify their own teaching practices as a result of what we read as well as their supervision. Questions we will discuss include: What is the relationship between educational goals and curriculum development? What is the relation between substance (knowledge, skills, content) and the interpersonal dynamic inherent in a classroom setting? How do we assess teaching practices and the students' learning? What does it take to be an educated person?

Requirements/Evaluation: this course involves a field placement, weekly readings, as well as seminar discussion, supervision, and a graded journal

Prerequisites: PSYC 232 or PSYC 272 or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and those who plan to become teachers

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

PSYC 373 (F) Critical Issues in Learning and Teaching

In this seminar we will take a deep dive into several key topics in education. We will examine psychological research as well as a range of other materials (essays, film, recordings of children and personal experiences) to help answer a series of questions, including: Does the kind or quality of schooling have a measurable impact on children? How do you create curriculum? How does one conduct high quality classroom observations? What do good teachers have in common? What is the best way to help teachers get better at what they do? Can remote learning work well in K-12 settings?

Class Format: The course will be taught in a hybrid form (remotely for some and in person for others). Students will meet in small groups with the professor. Each group will meet for a tutorial-like session once a week. We will use students' papers as a jumping off point for our discussions.

Requirements/Evaluation: Regular class attendance and full participation (whether remote or in-person), five 5-page papers, and regular written responses to other students' papers. We will also do a variety of in-class activities that may require some independent preparation (gathering materials, or doing brief interviews) and some coordination with one another outside of class time.

Prerequisites: PSYC 232 or PSYC 272 or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: Psychology majors and those involved in the Program in Teaching

PSYC 401 (F) Psychology in Popular Discourse: A Critical Examination

This course considers several important contemporary topics from diverse psychological perspectives. These topics--which may include issues such as personal and external influences on success; technology and relationships; addiction--will be introduced via popular books, films, or podcasts, and we will analyze them more deeply with original research articles from across multiple approaches and sub-disciplines of psychology. A central goal in this course is for students to develop and apply the skills necessary to critically evaluate psychological ideas as they exist in the broader popular culture. The course will primarily be discussion based, and the students will lead these discussions.

Class Format: student-facilitated discussions

Requirements/Evaluation: participation in class discussions, choosing relevant research articles, and three position papers

Prerequisites: senior Psychology majors, or permission of instructor in rare cases

Enrollment Limit: 36(12/sec)

Enrollment Preferences: senior Psychology majors

Expected Class Size: 36

Grading: no pass/fail option, yes fifth course option

Distributions: (D3)

Not offered current academic year

PSYC 403 (F) The Psychology of Love

This seminar will examine psychological approaches to the study of attraction, affiliative bonds, attachment, and relationship health across the lifespan. These topics will be introduced via review articles, books, and films. Students will analyze these topics more deeply with presentations and student-led discussions of original research articles from across multiple perspectives and subdisciplines of psychology.

Class Format: Class will meet remotely in live, synchronous settings. Student discussion leaders will also meet with Professor over Zoom in advance of co-leading live, online discussions. Each class will begin with analysis of student-selected music that is used to generate a class playlist on Spotify. Movie nights will be held together as watch parties.

Requirements/Evaluation: participation in class discussion, selection and presentation of relevant empirical papers, three position papers

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: senior Psychology majors

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Distributions: (D3)

Not offered current academic year

PSYC 404 (F) Bias and Discrimination: Sources and Consequences

We often assume that our experiences reflect an objective reality, that the way we see the world is the way it really is. Yet research contradicts this notion, showing that our perceptual experiences are malleable and subjective. They are shaped by higher-order, top-down influences such as our cognitions, social groups, surroundings, motivations, emotions, and prior experiences. In this class, we will explore how subjective experiences and idiosyncratic categorizations of people into social groups directly influence social justice outcomes across varied domains. For example, how do these differences in our subjective experience influence the ways in which people relate to one another? What are the implications for fair treatment across multiple factions of society, including education, employment, health care, and criminal justice? Are there effective interventions and policies for reducing gender, racial, and ethnic bias? For promoting inclusivity? If so, why are they effective? To develop an evidence-based understanding of bias and discrimination, we will critically analyze source materials from popular press literature, films, books, and podcasts, as well as empirical research from across multiple approaches and sub-disciplines of psychology. The class format will be primarily discussion based and student-led.

Class Format: student-led discussions

Requirements/Evaluation: weekly brief thought questions, lead two class discussions, select and present relevant empirical papers, three papers (5-7 pages)

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: senior Psychology majors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Fall 2021

PSYC 405 (F) Why We Believe What We Believe

As scientists, we aspire to hold beliefs that are based in evidence. As humans, however, we are likely to embrace beliefs influenced by a variety of social, historical, cultural, political, racial and religious factors. In this class, we will explore the question of why we cling to certain beliefs, even in the face of significant contradictory evidence. For example, what assumptions do we make about strangers and why are we so convinced these

assumptions are correct? How does our culture affect our parenting choices and why do we hold on to them so fiercely? What assumptions do we make about the nature of memory, emotions and cognitions and are these assumptions valid? Are there "defensive moves" that we make when we are challenged racially, even when we are committedly antiracist? And, if so, why? In class, we will explore source material from popular culture: books, films, podcasts and popular press articles, and we will examine claims made about different belief systems. We will then critically evaluate these claims by exploring the available empirical psychological evidence. The format of this class is student-led discussions.

Requirements/Evaluation: Students will be required to develop and lead rigorous generative discussions with their classmates several times during the semester. In addition, students will be expected to actively participate in discussions and to write three 5-7 page position papers.

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: senior Psychology majors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Fall 2021

SEM Section: 01 MR 2:35 pm - 3:50 pm Nicole T. Harrington

PSYC 407 (F) Success and Failure

The theme of this psychology senior seminar will be success. We will discuss the path to personal success, including the relative importance of hard work, genetic talent, and luck; barriers to success like poverty and discrimination; the importance of parents, family, teachers, and friends; and what we really mean by success. For each topic we cover, we will read a book or watch a film, then delve deeper by reading and discussing scientific journal articles. Class meetings will be student-led discussions. You will write three or four 5-7 page papers. The larger goal will be to practice useful life skills such as how to lead and participate in a meeting (i.e., a class discussion), how to write engagingly and convincingly, and how to assess an argument skeptically and discuss it using evidence.

Class Format: student-led discussions

Requirements/Evaluation: participate in and lead class discussions, choose class reading assignments, and write essays

Prerequisites: senior Psychology majors or permission of instructor in rare cases

Enrollment Limit: 14

Enrollment Preferences: senior Psychology majors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

PSYC 408 (F) The Psychology of College

What happens to people while they're in college? Does it have an impact on people's core identity, the way they think, form relationships, or participate in society? Most people's ideas about the impact of college come from personal experience, and the strongly held views of journalists, filmmakers, college spokespeople, relatives and public figures. Those beliefs are often misguided. Yet research can help us develop an accurate picture of just what it is that college does and doesn't do. Drawing on films, popular books and articles, as well as research from across the subdisciplines within psychology, we will examine some of the most common beliefs, and then delve into the psychological evidence that supports or refutes them. Our goal will be to develop a scientifically-based understanding of the psychological impact of college, and redesign various features of college to reflect our conclusions. Empirical work on this topic presents unique methodological challenges, so we will also spend some time designing studies that overcome those challenges.

Requirements/Evaluation: weekly readings, leading two class discussions, and writing three 5-7 page papers

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: senior Psychology majors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Fall 2021

SEM Section: 01 TR 11:20 am - 12:35 pm Susan L. Engel

PSYC 412 (F) Feelings & Emotions: Shaping the Brain and Society

This course will explore what emotions are, the evolutionary origins of emotions, and the tools and techniques researchers use to study emotions both in humans and in animal models. We will examine how brain state(s) may underlie different emotions and challenge widely held notions about how an individual's emotion can influence behavior and social factors. Questions we will explore include: Is it better to be emotional or rational? What are 'gut feelings'? Are there gender differences in emotionality and, if so, what are their origins? Popular press literature and scientific studies will fuel student-led discussions as we seek to develop an evidence-based understanding of emotions and how they shape the world around us.

Class Format: This is a hybrid course. Students who are on-campus are encouraged to attend the seminar in person. This course will meet 2 (of the possible 3) days per week; those 2 days may vary on a weekly basis. Those who are unable to attend in person will join remotely. Students should expect several additional small group meetings outside the scheduled time period for additional discussions, to plan presentations, etc.

Requirements/Evaluation: Course requirements include weekly readings, leading two class discussions, and writing three 5-7 page papers, including at least one newspaper-ready op-ed.

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: Senior psychology majors

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

Not offered current academic year

PSYC 413 (F) The Resilient Mind

In this seminar, we will explore the psychological, environmental, and biological variables that shape an individual's response to stress and/or adversity. We will discuss how factors such as personality, coping style, social network/community, gender, brain mechanisms, and genes can influence one's ability to adapt and recover from a crisis. Students will critically examine depictions of resilience in popular literature and film, and employ empirical scientific articles from across multiple approaches and sub-disciplines of psychology to delve deeper into their analyses. Class meetings will be primarily discussion based and student-led, with the central goal of developing skills in forming and communicating evidence-based arguments.

Class Format: Class meetings will take place synchronously within the scheduled class period. Students will be able to attend class in-person or remotely via an online format.

Requirements/Evaluation: participating in and leading discussions, selection and presentation of relevant topics and readings, and three position papers (approximately 5-7 pages double-spaced)

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: senior Psychology majors

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

Not offered current academic year

PSYC 416 (F) Psychology of Nonviolence

In this course we will explore the theory and practice of nonviolence in the context of empirical research in Positive Psychology. *Nonviolence* refers to choosing not to threaten or injure others, and its practice requires cultivating personal qualities that enable such a choice. Positive Psychology refers to the scientific study of those personal qualities that enable people to live happy and fulfilling lives. We will begin by studying the history and moral theories of nonviolence. Using research from across the subdisciplines of psychology, we will then evaluate the empirical claims of those theories regarding psychological benefits of nonviolence to the practitioner, attitude change in the adversary, and effects on the larger community. An important focus of the course will be to critically assess the research methods and data analyses used in these studies. Topics will include self-control, empathy, forgiveness, tolerance, courage, aggression, resisting violent assault, and civil disobedience.

Class Format: class meetings will be primarily discussion-based and student-led

Requirements/Evaluation: Class attendance and participation, discussion leadership, literature searches for relevant empirical research papers, short papers in the form of research summaries, and a final paper in the form of an empirical research proposal.

Prerequisites: PSYC 201

Enrollment Limit: 14

Enrollment Preferences: Senior Psychology majors

Winter Study -----

PSYC 10 (W) Yoga, Mindfulness & Creativity

The greatest obstacle to any kind of creativity is distraction and/or stress. The goal of this course is to encourage students to unplug, refresh, and to feel reunited with their intuitive, creative selves. Exploring the correlation between mindfulness, yoga and creativity, students will participate in a minimum of three yoga classes per week, will visit 2-3 local museums, and provided it is open again post pandemic, will stay for two nights at the renowned yoga center Kripalu, in Stockbridge, MA, where students can take a variety of classes and workshops, and enjoy the benefits of being at a retreat. Primarily a yoga class, in this course students will meet 4-6 hours per week to practice yoga, pranayama (breathing techniques) and guided meditation. We will also participate in an evening mandala making workshop in which each student will create an individual work of art. In addition, we will punctuate each week with visits to local museums, where we will have a guided tour and discussion with museum curators on the subject of mindfulness and creativity, followed by ample time for slow observation, and in some cases, time to practice yoga within the galleries themselves. If Kripalu is closed, we will take an alternate day trip, possibly to the Peace Pagoda in Grafton, NY. From either Kripalu or the Peace Pagoda, we will participate in a mindful hike together. Lastly, there will be a required reading list, in-class discussion on related topics, and students will be asked to keep a journal on various open-ended prompts. The last week of the course, students will take turns sharing creative projects they have been working on. Examples might be leading a 10-minute guided meditation, sharing a drawing, painting or poem, or designing a self practice.

Requirements/Evaluation: short paper and final project or presentation

Prerequisites: interest in yoga, mindfulness, psychology, or art

Enrollment Limit: 15

Enrollment Preferences: preference will be given to seniors and to a balance among the other years

Grading: pass/fail only

Unit Notes: Mary Edgerton has taught yoga at Williams for many years, working with students, athletes, faculty & staff. She also offers classes to the Berkshire community and has recently worked with the Clark to create 3 online videos. Blending creative sequencing, safe attention to alignment, and focus on the breath, she aims to provide a safe space in which to unplug and de-stress. Mary completed her teacher training at Triyoga, London, and has done multiple advanced trainings at Kripalu.

Materials/Lab Fee: \$86 for course material costs and \$235 for one night at Kripalu

PSYC 11 (W) Here for the Right Reasons: Bachelor/ette Franchise & What It Can('t) Teach Us About Relationships

Cross-listings: PSYC 11 WGSS 11

Secondary Cross-listing

The Bachelor/ette TV franchise has been on the air for 19 years and 25 seasons, and has included 2 Ephs trying to find love. We will use the series as a lens to examine healthy relationships (romantic and friend): what stories are we told and do we create about how relationships form and deepen? What are the "right" and "wrong" reasons to be "on this journey"? How did first reality TV and now social media shape our notions of public and private in relationships? How do we have healthy relationships across identity differences? And of course, we will explore the meta-universe of the Bachelor/ette franchise: a media empire designed to tell straight, white love stories to an audience that is increasingly neither of those things and demanding more.

Requirements/Evaluation: regular short reflections and final project or presentation

Prerequisites: none

Enrollment Limit: 18

Enrollment Preferences: a short blurb asking about demonstrated interest

Grading: pass/fail only

Unit Notes: Meg Bossong '05 is the Director of Intimate Violence Prevention and Response at Williams. In that role, she works with student groups, colleagues, and the community to build a safer, more just, and thriving community free of intimate violence in its various forms, through prevention projects related to consent, healthy relationships, the built environment, and accountability. She is a regular viewer of The Bachelor/ette franchise, her problematic fav.

PSYC 12 (W) Introduction to Racial Literacy: Navigating Racial Stress For Healthier Minds and Relationships

Cross-listings: PSYC 12 AFR 12

Primary Cross-listing

Talking about race is *really hard*. This is true even when we know all of the "right" language; racial conversations are more *emotional* than they are intellectual. Sometimes, we dive in with the best intentions and then our racial stress gets in the way, causing us to misspeak, overreact, underreact, or freeze in a racial moment. These responses are all very human, *and* we all deserve to have healthier racial conversations with friends, family, colleagues, and the person we just met at the grocery store who has a lot of opinions they want to share with us! This course will introduce you to the theoretical and practical applications of racial literacy-the ability to read, interpret, and resolve racial stress (Stevenson, 2014). Developing strong skills in racial literacy allows us to navigate even the most stressful intrapersonal and interpersonal racial moments in personal and professional settings. Together, we will engage in racial storytelling, journaling, relaxation techniques, and debating, ending with roleplaying sessions to practice using our skills as we tackle stressors that cause the most racial anxiety. We will use personal stories as well as written, audio, and visual texts to practice reading and assessing racial stress, while developing "comeback lines" to directly address the racial tension at the center of the conflicts. In addition to attendance and various forms of in-class participation, you will be expected to keep a journal throughout the entire course. You will also share a reflection paper and a final project that describe your racial literacy journey as well as your plans for future racial literacy practice. We will meet twice a week for three-hour sessions, and you will be expected to complete assignments outside of class; these assignments are opportunities for practice and reflection as you build racial literacy skills. Anyone and everyone is welcome to join this course, regardless of background and/or personal experiences with race.

Requirements/Evaluation: short paper and final project or presentation

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: preference given to seniors

Grading: pass/fail only

Unit Notes: Dr. Jones' scholarship focuses on dis/ability and giftedness in the narratives of and about Black and Brown youth, the racialized school-to-prison pipeline, and racial literacy education in schools. She works with schools to heal relationships damaged by racial stress, and is the Distinguished Visiting Professor of Education at Williams College for the 2021-2022 school year. She graduated from Williams in 2008.

PSYC 13 (W) Designing for People

Cross-listings: PSYC 13 CSCI 13

Secondary Cross-listing

Many innovative products and entrepreneurial endeavors fail because they are not sensitive to the attitudes and behaviors of the people who interact with them. The fields of Human Factors and Design Thinking combine aspects of psychology with software development, behavioral economics, architecture, and other fields, to create products and processes that provide an easy, enjoyable, efficient and safe user experience. The course will provide students with a theoretical framework for analyzing usability, as well as practical experience with iterative design techniques, prototyping, and user testing and feedback. Students will demonstrate their understanding of Human Factors theory through short presentations and participation in class discussion. Students will work in small groups to identify a usability problem and design a solution which they will evaluate by heuristic analysis and a usability test with 8-10 human test subjects.

Requirements/Evaluation: short paper and final project or presentation

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: instructor seeks a diverse group of students with interests in design, psychology, human-computer interaction, and other fields

Grading: pass/fail only

Unit Notes: Rich Cohen '82 has designed communications, social networking and education applications used by over 100 million people and has conducted usability research on five continents.

Materials/Lab Fee: none

PSYC 15 (W) Ephquilts: An Introduction to Traditional Quilting

This studio course will lead the student through various piecing, appliqué and quilting styles and techniques, with some non-traditional methods included. Samples will be made of techniques learned, culminating in the completion of a sizeable project of the student's choosing (wall quilt or lap-size quilt). There will be an exhibit of all work (ephquilts), at the end of winter study. "Woven" into the classes will be discussions of the history of quilting, the controversy of "art" quilts vs. "traditional" quilts, machine vs. hand-quilting and the growing quilting market. Reading list: *Pieces of the Past* by Nancy J. Martin; *Stitching Memories: African-American Story Quilts* by Eva Ungar Grudin; *Sunshine and Shadow: The Amish and Their Quilts* by Phyllis Haders; *A People and Their Quilts* by John Rice Irwin; *Treasury of American Quilts* by Cyril Nelson and Carter Houck; *The Quilt: New Directions for an American Tradition*, Nancy Roe, Editor. Requirements: attendance of all classes (two field trips inc), a love of fabric, design and color, an enthusiasm for handwork, participation in exhibit. *Extensive time will be spent outside of class working on assigned projects.*

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: seniors, juniors, sophomores, first years

Grading: pass/fail only

Unit Notes: Debra Rogers-Gillig, one of the top quilters in New England, has been quilting for 40 years, and teaching classes and coordinating shows and exhibits for 25 years. She has received numerous prizes and awards from quilt shows in New York and New England and been published in quilt magazines.

Materials/Lab Fee: \$275

Attributes: EXPE Experiential Education Courses

Winter 2022

PSYC 17 (W) Intro to Art Therapy

This course will be a multi-modal introduction to the field of art therapy. Through art-making and the study of primary source materials, students will explore the historical contexts, theoretical models, and practical applications of art therapy. Questions students will tackle: Where is the line between pathology and typically functioning? What is the role of the therapist? How can the therapist be collaborators with their clients? Who is the expert, really? What is context? How does the therapist's context inform their practice? Students will learn about art therapy in practice with a variety of populations and techniques. In addition to understanding the theoretical framework of art therapy, students will engage in a heuristic study of the role art has played in their lives. This course will be a combination of lecture, discussion, guest speakers, audio-visual material, student presentations, and art experiential.

Requirements/Evaluation: short paper and final project or presentation

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: studio art majors and psychology majors will take priority

Grading: pass/fail only

Unit Notes: Kaye is a registered, board-certified art therapist. She has a BFA in Fiber and Material Studies from the Cleveland Institute of Art, and a MA in Art Therapy from the School of the Art Institute of Chicago. She founded ArtWorks, a community art studio in North Adams, where she teaches art classes and workshops for kids and adults, and runs a private practice. Kaye practices art therapy at BPI and is an Adjunct Professor in the graduate Art Therapy/Counseling program at Springfield College.

Materials/Lab Fee: none

Winter 2022

PSYC 18 (W) Call-In Walk-In Training for Peer Health

Cross-listings: PSYC 18 SPEC 18

Secondary Cross-listing

This course is the full training for students who would like to cover Call In Walk In shifts in the Peer Health Office (Paresky 212), and meets most weekday mornings. Students should either already be a member of Peer Health, or have an interest in joining Peer Health, as those students will get priority acceptance. Topics that we will cover include alcohol and other drug use; sex, STIs and contraception; rape, sexual assault and Title IX compliance; mental health; stress and sleep; healthy and unhealthy relationships, etc. Students will meet various on- and off-campus resources for referral. Outside of class work will include readings, video viewings, and information gathering for the final project.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: not applicable

Grading: pass/fail only

Unit Notes: Laini is a Health Educator at Williams College, focusing on substance abuse education and counseling, mental health awareness, sexuality education, and sleep. She has been at the college since 1997, and been the Peer Health Staff Advisor since 2006. She has an M.Ed.in Counseling Psychology with a specialty in addictions.

Materials/Lab Fee: none

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 18 SPEC 18

Winter 2022

LEC Section: 01 M-F 10:00 am - 11:50 am Laini Sporbett

PSYC 21 (W) Psychology Internships

Would you like to explore applications of psychology in the "real world?" This course gives students an opportunity to work full-time during Winter Study in a mental health, business, education, law or another setting in which psychological theories and methods are applied to solve problems. Students are responsible for locating their own potential internships whether in the local area, their hometowns, or elsewhere, and are welcome to contact the course instructor for suggestions on how to do this. In any case, all students considering this course must consult with the instructor about the suitability of the internship being considered before the Winter Study registration period. Please prepare a brief description of the proposed placement, noting its relevance to psychology, and the name and contact information of the agency supervisor. Before Thanksgiving break, the student will provide a letter from the agency supervisor which describes the agency, and the student's role and responsibilities during Winter Study. Enrolled students will meet the instructor before Winter Study to discuss matters relating to ethics and their goals for the course, and after Winter Study to discuss their experiences and reflections.

Requirements/Evaluation: a 10-page minimum final paper summarizing the student's experiences and reflections, a journal kept throughout the experience and the supervisor's evaluation.

Prerequisites: approval by Jeremy Cone is required

Enrollment Limit: 20

Enrollment Preferences: random selection

Grading: pass/fail only

Materials/Lab Fee: none

Attributes: EXPE Experiential Education Courses

Winter 2022

PSYC 22 (W) Introduction to Research in Psychology

This course provides a research opportunity for students who want to understand how psychologists ask compelling questions and find answers about behavior. Several faculty members, whose subfields include behavioral neuroscience, cognitive psychology, social psychology, clinical psychology, developmental psychology, and the psychology of education, will have student projects available. Since projects involve faculty research, interested students must consult with members of the Psychology Department before electing this course. In addition, students should discuss with faculty what the weekly time requirements will be.

Requirements/Evaluation: quality of research participation, student's lab journal, and either an oral presentation or a written 10-page report of the research project

Prerequisites: permission of faculty mentor

Enrollment Limit: POI

Enrollment Preferences: selection will be based on evaluation of departmental application and number of faculty available as mentors

Grading: pass/fail only

Materials/Lab Fee: none

PUBLIC HEALTH

Chair: Professor Amie Hane

Advisory Committee

- Amie A. Hane, Professor of Psychology, Chair of Public Health Program; affiliated with: Neuroscience Program, Public Health Program
- Kieran Honderich, Lecturer in Women's, Gender and Sexuality Studies; affiliated with: Public Health Program
- Marion Min-Barron, Lecturer

Public health seeks to understand, and also to protect and improve, health at the level of a community or population. Communities make decisions and allocate resources that, intentionally or not, fundamentally shape human life. For example, great reductions in sickness and early death have come from social interventions with relatively low financial cost, such as physically separating drinking water from sewage, or distributing aspirin, condoms, mosquito nets, vaccines or soap, or sharing new ideas about life's possibilities. The way a society is organized affects the way that social and scientific knowledge is distributed within it; access to that knowledge shapes health at the individual level. At its heart, the study of public health focuses on questions about relationships between science and society, and between reality and possibility: what effective public health policy is and how we can measure its effectiveness; what the relationship is, and ought to be, between research and policy; how we reconcile important moral and economic claims, or balance other values that compete with maximizing health; what counts as disease, over time and among cultures; how we think about cause and responsibility; what constitutes a healthy environment; how our fundamental beliefs determine our approaches to health decisions; and how such decisions ought to be made.

Requirements

Application to the concentration must be completed in the Spring of sophomore year. Applications are due during pre-registration. Application materials can be obtained on the public health website public-health.williams.edu by early April or by e-mailing the chair of the program. Due to excess demand for the concentration, applicants are not guaranteed admittance to the program. Depending on availability, a few students may be admitted in the Spring of Junior year with a mid-April deadline.

All students wishing to pursue the Area of Concentration should take this course early in their careers, preferably sophomore year. Students may petition the advisory committee to substitute a course taken in a study-abroad program focused on global health, providing that the course is equivalent in scope. However, students who plan to take advantage of this option should have taken at least two other courses from among the electives by the end of their sophomore year, and should recognize that those who lack a foundation in the core issues of the field may find it more challenging to prepare their proposal for admission to the concentration.

Statistics

Statistical analysis is at the heart of the quantitative tools necessary to study the health of populations. One course in statistics from the list below is required of all concentrators.

Elective Courses

Concentrators must take at least three electives, with at least two different prefixes, from the list below. Elective courses are grouped by category, but these clusters are not meant to constrain students to a single "track" within the program. Instead, each student is free to determine, with the guidance of an advisory committee member(s), a set of electives that provides an intellectually coherent exploration of their particular areas of interest within the field of public health. In choosing electives, students should consider the balance of breadth versus depth that will allow them to gain theoretical and methodological sophistication in one or more areas. Students may not substitute an independent study for any of these electives. Winter Study courses may not be counted towards the electives.

Experiential Component

Because many public health challenges cannot be fully appreciated until one has hands-on experience with real communities and actual populations, each concentrator must have at least one relevant field-based educational experience with a research component. This requirement may be met through participation in an approved study abroad program (see below), one of the Winter study courses marked with an asterisk, a WS99 project, or a not-for-credit summer or academic-year internship. In every case, the advisory committee must approve the project in advance. Please note that experiential component should address both the "public" and "health" in public health. Projects that center on clinical or lab or that do not have a meaningful health component will generally not satisfy the PH experiential requirement.

PHLH 402 (S) Senior Seminar in Public Health

The capstone seminar provides concentrators with the opportunity to reflect upon and synthesize their experiential learning in the context of

understanding gained from a cohesive set of elective courses, and through the lens of a variety of intellectual and disciplinary frameworks. A second goal is to give concentrators experience working in a multi-disciplinary team to address a real-world, and in many cases very daunting, public health problem. Students will read, discuss, and compose written reflections on primary source empirical papers addressing a range of issues and disciplines in the field of public health. For example, topics may include the social determinants of health, environmental health risks, and access to health care. Students will also be divided into three or four research teams to investigate a contemporary real-life issue in public health by designing a study; collecting and analyzing data; and disseminating findings by written report and formal oral presentation to the public health advisory committee faculty. The capstone course is required of all concentrators, but may be opened to other students with relevant experience at the discretion of the instructor and the advisory committee, if space permits.

Written Proposal

To be considered for admission to the Area of Concentration in Public Health, students must submit a written statement describing the portfolio of courses, study abroad, and experiential learning component(s) they intend to pursue. In this proposal, candidates for the concentration should describe their intellectual goals, and if relevant, how these relate to their professional goals. A fundamental purpose of the proposal requirement is to encourage the student to consider concretely how s/he will engage with socio-cultural, behavioral, policy, and/or biomedical aspects of population health. To this end, students should address whether a methodological or disciplinary emphasis ties their chosen courses together, and how the intended experiential component will relate to this set of questions. This proposal is due by the end of course registration period in the spring of the sophomore year, and should be prepared in consultation with a member of the advisory committee. Concentrators are required to revisit and update their proposal prior to registration in the spring of the junior year, and to provide documentation of their internship experience both prospectively and retrospectively. Please note electives will not be offered every year. Students should check the course catalog as they considering possible electives.

STUDY ABROAD AND INTERNSHIPS

Although not a requirement for the PH concentration, study abroad and/or overseas internships provide a crucial opportunity to engage with global health issues through field-based coursework and independent research projects. The Public Health program in coordination with the Study Abroad Advisor and the Office of Career Counseling will advise students on opportunities in these areas. In particular, students may want to consider one of the several Global Health options offered through SIT. One or more courses completed on an approved study abroad program can be counted toward the three elective courses, with permission of the Chair. You can find general study away guidelines for Public Health at public-health.williams.edu.

PHLH 201 (S) Dimensions of Public Health (DPE)

Public health is concerned with protecting and improving health at the level of a community or population. Although individual behavior is an essential element of public health, collective, rather than individual, outcomes are the focus of public health study. In this course we will survey the field of public health, introducing students to core concepts and methods that highlight the interrelationship of individual choice and social institutions with environmental and biological factors in producing health outcomes at the population level. We will develop these concepts and methods within the context of signal cases and public health crises, covering infectious disease epidemics and prevention, sexual health, and mental health.

Class Format: Course will be taught in person.

Requirements/Evaluation: two papers on a selected population or country and health issue, peer reviews and active contribution to class discussion, including on Glow

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: sophomores, potential Public Health concentrators

Expected Class Size: 14

Grading: no pass/fail option, yes fifth course option

Distributions: No divisional credit (DPE)

Difference, Power, and Equity Notes: This course fulfills the DPE requirement because of its central focus on the ways that difference and power shape health outcomes in the U.S. and internationally. It uses an interdisciplinary approach to explore issues including the historical relations between communities of color, healthcare providers, and public health practitioners; contestation over the role of markets and government in public health; and differing explanations for the patterns of race, class, etc., in health outcomes.

Attributes: PHLH Core Courses

Spring 2022

SEM Section: 01 MWF 8:30 am - 9:45 am Kiaran Honderich

SEM Section: 02 MWF 11:00 am - 12:15 pm Kiaran Honderich

PHLH 220 (F) International Nutrition (DPE) (WS)

Global malnutrition continues to represent one of the most challenging issues of international development. Problems of both under- and overnutrition beginning as early as in utero can detrimentally influence the health, development and survival of resource-limited populations. This course introduces students to the most prevalent nutritional issues through a food policy perspective and exposes them to a wide variety of interventions, policies and current debates in the field of international nutrition. In addition to exploring the multi-level programmatic approaches for the prevention and treatment of the related nutritional problems, students will gain exposure and experience in program design and program proposal writing. Readings will involve both real-world programmatic documents/evaluations as well as peer-reviewed journal articles. Examples will be drawn from Africa, Asia and Latin America.

Class Format: This class will be remote. Each week students will typically be asked to (1) watch a series of short lectures- think 10-15' clips, (2) read peer reviewed articles and post on discussion boards (3) attend synchronous meetings - both in small groups of and as a whole class during assigned class time. Instructor will also be available for one-on-one online meetings/check-ins.

Requirements/Evaluation: six 1-page essays, one final term paper (10-15 pages), one oral presentation, and active class participation

Prerequisites: PHLH 201 or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: Public Health concentrators

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: As a writing skills course, students will write six 1-page essays (each with an optional rewrite) which will help build the specific writing skills necessary for the final 10- to 15 page paper. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: This course exposes the issues of difference, power and inequity by exploring the unequal distribution of resources and power at the global, national and intra-national level within the international nutrition context. We will also critically engage with issues of power, cultural difference and related ethics in the context of international development and nutrition programming.

Attributes: PHLH Nutrition, Food Security+Environmental Health

Not offered current academic year

PHLH 250 (F) Qualitative Research Methods in Public Health

Qualitative methods provide the opportunity to add in-depth meaning and context regarding research on individuals and the environments of study. This course introduces students to qualitative research theory in Public Health and gives them the opportunity to 'practice' three qualitative research methods; (1) in-depth interviewing, (2) focus groups and (3) participant observation. Students will have the opportunity to pilot each of these three qualitative research methods, analyze a subset of the data via qualitative analysis software, and design a qualitative research study (including the research instrument). We will cover best practices in reporting qualitative results (for the purposes of peer-reviewed publication) and learn about the advantages and disadvantages of qualitative research in various domestic and international settings related to public health (such as nutrition, HIV and physical activity).

Requirements/Evaluation: three 1-page reflection papers, transcription/field notes of one qualitative method (5-7 pages), one research proposal (10-15 pages), and an oral presentation

Prerequisites: PHLH 201 or equivalent

Enrollment Limit: 19

Enrollment Preferences: Public Health concentrators

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

Attributes: PHLH Methods in Public Health

Not offered current academic year

PHLH 255 (S) Research Methods in Public Health

This course will introduce students to three common research methods utilized within Public Health: qualitative methods, survey methods and epidemiology. We will cover the basic research design process, integrating and comparing the qualitative methods of interviewing and focus groups, survey instrument design and pretesting as well as basic epidemiologic methods and concepts. Readings and discussions will engage with best practices in reporting these types of methods (for the purposes of peer-reviewed publication). Lastly, students will have the opportunity to design research instruments, pilot some of these methods, and analyze a subset of the data via analysis software. Students who have taken PHLH 250 should not enroll in PHLH 255.

Requirements/Evaluation: three 1-page reflection papers, development of two research instruments (3-5 pages), one critique of a journal article (5 pages), an oral presentation and active class participation

Prerequisites: PHLH 201 or equivalent AND at least one Statistics course

Enrollment Limit: 19

Enrollment Preferences: Public Health concentrators

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

Attributes: PHLH Methods in Public Health

Not offered current academic year

PHLH 310 (F) Equity in Health

Equity in health has been defined as inequalities in health outcomes based on irrelevant social characteristics. The Sustainable Development Goals and Agenda 2030 highlight equity in health as a main focus and key to achieving social sustainability. This course will introduce students to the concept of equity in health, and discuss the theoretical underpinnings of the pathways to unequal health outcomes. The social determinants of health

and how they translate to uneven outcomes will be explored and discussed. There will also be a special focus on gender and gender-based violence as a driver of ill health. How to reduce inequity in health will be discussed and debated. Readings will involve some of the classic texts on health equity as well as recent explorations of the area.

Requirements/Evaluation: weekly short reflection papers and one final paper (10-12 pages)

Prerequisites: PHLH 201 Dimensions of Public Health or Permission of Instructor

Enrollment Limit: 16

Enrollment Preferences: Public Health Concentrators

Expected Class Size: 16

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

Attributes: PHLH Reproductive, Maternal and Child Health PHLH Social Determinants of Health

Fall 2021

SEM Section: 01 TR 8:30 am - 9:45 am Mats Målqvist

PHLH 351 (F) Racism in Public Health (DPE)

In the face of a global pandemic and increased police brutality, states and counties across the nation are declaring racism a public health crisis. This push to identify systemic racism as a high priority in public health action and policy is an important symbolic and political move. It names the faults of histories, systems and institutions but also brings to the spotlight the individual and community responsibility to dismantle racism in the US. In this tutorial, we will examine racism in public health policy, practice and research through an investigation of several mediums of evidence and information, ranging from peer reviewed literature to news editorials, podcasts and documentaries. We will explore specific pathways by which racism functions in the disciplines of biostatistics, epidemiology, social & behavioral sciences, health policy & management and environmental health sciences while also examining the dynamics of power and history in research and community practice. We will also gain skills in speaking across differences and articulation of how our own perceptions and lived experiences of race and racism impact our study of public health. This tutorial will most likely elicit uncomfortable and hard conversations about race and requires an openness to self-reflection and the practice of articulation.

Requirements/Evaluation: bi-weekly tutorial papers, weekly journaling, oral commentaries and tutorial discussion

Prerequisites: PHLH 201

Enrollment Limit: 10

Enrollment Preferences: Public Health concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: In this course students will examine and critically examine the inequities and race based social and health injustices, and the ways racism infiltrates public health action and policy, both historically and currently. They will also refine their self reflection skills in understanding how their own positions of privilege and power, or lack thereof, inform their understanding of public health.

Spring 2022

PHLH 402 (S) Senior Seminar in Public Health

The capstone seminar provides concentrators with the opportunity to reflect upon and synthesize their experiential learning in the context of understanding gained from a cohesive set of elective courses, and through the lens of a variety of intellectual and disciplinary frameworks. A second goal is to give concentrators experience working in a multi-disciplinary team to address a real-world, and in many cases very daunting, public health problem. Students will read, discuss, and compose written reflections on primary source empirical papers addressing a range of issues and disciplines in the field of public health. For example, topics may include the social determinants of health, environmental health risks, and access to health care. Students will also be divided into small research teams to interact with local organizations and investigate a contemporary real-life issue in public health. The capstone course is required of all concentrators, but may be opened to other students with relevant experience at the discretion of the instructor and the advisory committee, if space permits.

Requirements/Evaluation: active seminar participation, written reflections, contribution to the team research project, and a 12- to 15-page final paper

Prerequisites: completion of at least four courses counting towards the PHLH concentration

Enrollment Limit: 12

Enrollment Preferences: senior Public Health concentrators; students who are not senior Public Health concentrators should contact the instructor

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: No divisional credit

Winter Study -----

PHLH 13 (W) Concluding your Experiential Component: Public Health Reflections

Because many public health challenges cannot be fully appreciated until one has hands-on experience working on public health issues with populations or communities, each Public Health concentrator must have at least one relevant field-based educational experience. This requirement is known as the Experiential Component (EC). This winter study course will serve as the final step in completing the EC requirement. Through in-person meetings and online discussion, students will be asked to critically reflect on their EC experience, write about their intellectual and emotional journey during their EC and discuss with classmates how this EC experience ties into previous Public Health courses and potential career and graduate educational goals. Students will meet in-person on Tuesday, January 4, 2021: 10-1pm and Tuesday, January 25, 2021: 10-1pm. For the weeks in between these two dates, students will engage in weekly online asynchronous discussions with their classmates.

Requirements/Evaluation: Students will be evaluated on class discussions, reflection papers and a 10-page paper which can be waived.

Prerequisites: PHLH 201 and completion of their Experiential Component internship/work experience.

Enrollment Limit: 25

Enrollment Preferences: Public Health concentrators who are Seniors will be given preference.

Grading: pass/fail only

Winter 2022

LEC Section: 01 T 10:00 am - 11:50 am Marion Min-Barron

PHLH 14 (W) Epidemiology in Real Time: Epidemic Investigation, Analysis, and Control from Athens to Wuhan

Cross-listings: PHLH 14 ANSO 14

Primary Cross-listing

Epidemiology is the basic science of public health. Unlike illness care activities, which address the health needs of individuals, public health addresses the needs of populations, and emphasizes prevention. The investigation of epidemics has contributed greatly to effective preventive strategies in human populations. The class will examine infectious disease outbreaks, as well as longer incubation, non-infectious disease epidemics generated by, for example, sports violence, specifically the relationship between concussion and sub-concussive head blows to the later development of chronic traumatic encephalopathy (CTE) and other types of chronic brain damage. In the process the class will see the emergence of research methodologies that enhance hypothesis testing, and make possible reliable observational studies in etiology and the natural history of disability and disease. It was said of William Farr, an English epidemiologist of the middle 19th Century, that he had the significant power of making numbers argumentative (and politically controversial!). As the class is exposed to both descriptive and analytical data relating, for example, to the current epidemic of athletic injury, it will be clear that change can be extremely fractious. In the case of prevention, we may agree with George Bernard Shaw who wrote in the preface to the "Doctor's Dilemma" that people prefer "absolution" to "exhortation"!

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: based on interview

Grading: pass/fail only

Unit Notes: Dr. Wright is medical epidemiologist who first worked with maternal and child health and family planning programs in Alabama and Georgia. Later, after training as an EIS officer at the CDC, he was a resident consultant to both the Sri Lankan and Thai Ministries of Public Health. Still later, he was a faculty member in the Robert Wood Johnson Medical School, in New Jersey.

Materials/Lab Fee: none

This course is cross-listed and the prefixes carry the following divisional credit:

PHLH 14 ANSO 14

Winter 2022

LEC Section: 01 Cancelled

PHLH 15 (W) The Human Side of Medicine During a Pandemic

This has been the year that has challenged--and crashed--many of our assumptions and practices in medicine and health care delivery. Health care professionals are both daunted and excited by these huge shifts. Our seminar will examine the DOCTOR/PATIENT RELATIONSHIP within this changing time. As both patients and possible future providers, I ask you to bring your lens as we study this new terrain. Get ready to hear from patients, physicians/other medical providers, administrators and policy makers as you begin to formulate your own thoughts about how best to train providers; how best to respect, to engage, and to care for patients; how best to be responsive to providers' concerns; and finally, how to reconcile on a systemic level the conflicting priorities that come from a range of stake holders. Though the terrain is much more complicated now, research has repeatedly demonstrated that an approach to health care delivery which combines both patient-centered understanding as well as technical proficiency has a big payoff--better diagnosis and treatment, improved patient compliance, and increased physician professional satisfaction. This class value active discussion, creative thinking and experimenting with new--and often intense--ideas.

Requirements/Evaluation: three short papers and final project/presentation

Prerequisites: experience in a health care setting is a plus, but all majors and class years are welcome

Enrollment Limit: 10

Enrollment Preferences: class balance and student interest

Grading: pass/fail only

Unit Notes: Sandey Goodbody is a practicing psychotherapist in DC. She has taught at the George Washington Univ. School of Medicine, worked at both the Institute of Medicine (National Academy of Medicine) and Catholic Univ. Sch of Social Service. Williams students have found this seminar lively and thought provoking.

Materials/Lab Fee: \$15

Winter 2022

LEC Section: 01 TWR 10:00 am - 11:50 am Sandra Goodbody

PHLH 16 (W) Addiction Studies and Diagnostics

The goal of this class is to help students develop an effective understanding of the definition, impact, and treatment of addiction. Students will be familiarized with the DSM-5, the text used to diagnose mental illness in the US. Speakers will tell their stories in their journey from addiction to recovery. Students will be expected to accurately diagnose the speakers according to the criteria in the DSM-5. I expect an active discussion in class on Jan. 24th and 26th. Finally, an extensive annotated bibliography and oral presentation will be presented in groups at the end of the course.

Requirements/Evaluation: short paper and final project or presentation

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: instructor's choice

Grading: pass/fail only

Unit Notes: Rick Berger just started his 35th year of recovery and began his journey as an undergraduate at Colgate University. He started the 1990's teaching English in schools in the US, South Korea, and Japan. Since completing a degree in Addiction Counseling at Hazelden Graduate School, he has worked as a therapist for out-patient and in-patient clinics here in Massachusetts and taught here at Williams and at UMass.

Materials/Lab Fee: none

Winter 2022

LEC Section: 01 MW 7:00 pm - 9:30 pm K. Richard Berger

PHLH 99 (W) Independent Study: Public Health

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

Class Format: independent study

Grading: pass/fail only

Winter 2022

IND Section: 01 TBA Amie A. Hane

QUANTITATIVE/FORMAL REASONING (QFR)

The Quantitative/Formal Reasoning (QFR) requirement is intended to help students become adept at reasoning mathematically and abstractly. The ability to apply a formal method to reach conclusions, use numbers comfortably, and employ the research tools necessary to analyze data lessens barriers to carrying out professional and economic roles. The hallmarks of a QFR course are the representation of facts in a language of mathematical symbols and the use of formal rules to obtain a determinate answer. Primary evaluation in these courses is based on multistep mathematical, statistical, or logical inference (as opposed to descriptive answers).

Prior to senior year, all students must satisfactorily complete ONE QFR course. Students requiring extra assistance (as assessed during First Days) are normally placed into Mathematics 100/101/102, which is to be taken before fulfilling the QFR requirement.

ASTR 111 (F) Introduction to Astrophysics (QFR)

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies. ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes remotely to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

Class Format: The class has 6 afternoon labs. Nighttime observing sessions will occur throughout the semester.

Requirements/Evaluation: weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

Prerequisites: a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

Enrollment Limit: 28

Enrollment Preferences: potential Astronomy majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

Fall 2021

LEC Section: 01 TR 11:20 am - 12:35 pm Marek Demianski, Kevin Flaherty

LAB Section: 02 M 1:00 pm - 4:00 pm Kevin Flaherty

LAB Section: 03 R 1:00 pm - 4:00 pm Kevin Flaherty

ASTR 211 (S) Astronomical Observing and Data Analysis (QFR)

How do astronomers make scientific measurements for objects that are light-years away from Earth? This course will introduce the basics of telescopes and observations and will give students hands-on training in the techniques astronomers use to obtain, process, and analyze scientific data. We will discuss observation planning, CCD detectors, signal statistics, image processing, and photometric and spectroscopic observations. We will begin by focusing on ground-based optical observations and will move on to non-optical observations, both electromagnetic (e.g., radio waves, X-rays) and non-electromagnetic (e.g., gravitational waves, neutrinos). Throughout the course, students will use computational techniques to work with real astronomical data, taken with our 24" telescope and from data archives.

Class Format: discussion, computer lab work, and observing

Requirements/Evaluation: weekly problem sets, lab work, and observing projects

Prerequisites: MATH 150 or 151; prior experience with Unix and computer programming is helpful, but not required

Enrollment Limit: 14

Enrollment Preferences: Astronomy or Astrophysics majors

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course requires regular problem sets. Labs require computer programming and statistical and graphical analyses of data.

BIMO 321 (F) Biochemistry I: Structure and Function of Biological Molecules (QFR)

Cross-listings: BIMO 321 BIOL 321 CHEM 321

Primary Cross-listing

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The in-person laboratory provides further opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays. A laboratory section will also be provided for remote students, which will examine similar topics and techniques through literature and data analysis.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quizzes, two midterm exams, a final exam, problem sets and performance in the laboratories including lab reports

Prerequisites: BIOL 101 and CHEM 251/255 and CHEM 155/256

Enrollment Limit: 16/lab

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 48

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

BIMO 321 (D3) BIOL 321 (D3) CHEM 321 (D3)

BIMO 322 (S) Biochemistry II: Metabolism (QFR)

Cross-listings: BIOL 322 BIMO 322 CHEM 322

Primary Cross-listing

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

Class Format: Lecture three hours per week and laboratory two hours per week.

Requirements/Evaluation: several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

Prerequisites: BIOL 101 and CHEM 251/255 or permission of instructor

Enrollment Limit: 60

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 60

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

BIOL 202 (F) Genetics (QFR)

Genetics, classically defined as the study of heredity, is today a multidisciplinary field whose principles provide critical insight and tools to most areas of biology and medicine. This course covers the experimental basis for our current understanding of the inheritance, structures, and functions of genes. It introduces approaches used by contemporary geneticists and molecular biologists to explore questions in areas of biology ranging from

evolution to medicine. A primary focus of the course is on students developing familiarity with problem solving, the logic and quantitative reasoning required to understand how genetic mechanisms lead to biological patterns. The laboratory part of the course provides an experimental introduction to modern genetic analysis as well as introductions to interpreting genetic reasoning in the primary research literature. Laboratory experiments include investigating chromosome structure using microscopy, integrating multiple streams of evidence to map a mutation to the genome, determining the structure of a DNA plasmid using molecular tools.

Class Format: Lecture: three hours per week, Lab: three hours per week.

Requirements/Evaluation: bi-weekly problem sets; weekly laboratory exercises and laboratory reports; three exams

Prerequisites: BIOL 101 and 102

Enrollment Limit: 120

Enrollment Preferences: students interested in the Biology major

Expected Class Size: 60

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course develops quantitative skills through solving problems. Students learn to apply basic calculations and logic to predict the outcomes of biological systems, for example, describing the likelihood that an individual will be affected by an inherited disease. Application of quantitative and logical analysis contributes to a large component of the in-class work and the graded material for the class, in the form of problem sets, exams, and data analysis for lab reports.

BIOL 203 (F) Ecology (QFR)

Cross-listings: ENVI 203 BIOL 203

Primary Cross-listing

This course combines lectures & discussion with field and indoor laboratory exercises to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to help students build skills in data analysis and scientific writing.

Class Format: Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

Requirements/Evaluation: pre-class quizzes, lab reports, two mid-term exams, and a final exam

Prerequisites: BIOL 102, or ENVI 101 or 102, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: students planning to pursue Biology and/or ENVI

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Unit Notes: satisfies the distribution requirement for the Biology major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 203 (D3) BIOL 203 (D3)

Quantative/Formal Reasoning Notes: Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

BIOL 222 (S) Essentials of Biochemistry (QFR)

This course will explore the biochemistry of cellular processes and contextualize these processes in healthy and diseased states. Lecture topics in this one semester course will include the structure and function of proteins (enzymes and non-enzymatic proteins), lipids, and carbohydrates. Lectures will also survey the major metabolic pathways (carbohydrates, lipids, and amino acids) with particular attention to enzyme regulation and the integration of metabolism in different tissues and under different metabolic conditions. In the discussion/laboratory component of the course a combination of primary literature, hypothesis-driven exercises, problem solving, and bench work will be used to illustrate how particular techniques and experimental approaches are used in biochemical fields.

Class Format: in-person lecture and lab

Requirements/Evaluation: Four exams, in-class discussion of papers, short writing assignments and lab reports.

Prerequisites: BIOL 101 and CHEM 156; not open to students who have taken BIOL 321 or BIOL 322

Enrollment Limit: 18

Enrollment Preferences: seniors who need to fulfill the biochemistry requirement for premedical school

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major; cannot be counted towards the biology major in addition to either BIOL 321 or BIOL 322; cannot be counted towards the BIMO concentration

Distributions: (D3) (QFR)

BIOL 305 (S) Evolution (QFR)

This course offers a critical analysis of contemporary concepts in biological evolution. We focus on the relation of evolutionary mechanisms (e.g., selection, drift, and migration) to long term evolutionary patterns (e.g., evolutionary innovations, origin of major groups, and adaptation). Topics include micro-evolutionary models, natural and sexual selection, speciation, the inference of evolutionary history, evolutionary medicine among others.

Requirements/Evaluation: independent research project, problem sets, participation in discussions and exams

Prerequisites: BIOL 202

Enrollment Limit: 22

Enrollment Preferences: Seniors and biology majors

Expected Class Size: 22

Grading: yes pass/fail option, yes fifth course option

Unit Notes: satisfies the distribution requirement for the Biology major

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: We will use mathematical models to study population genetics.

BIOL 337 (F) Evolutionary Ecology (QFR)

Evolutionary ecology is an interdisciplinary field that integrates concepts in genetics, adaptation, and ecology to understand how evolution operates in the context of ecological communities. This course provides an overview of the discipline including foundational concepts in evolutionary demography, phenotypic plasticity, and population genetics. It also explores how breakthroughs in these topics provide a framework for advances in our understanding of the evolution of reproductive timing and ageing, interspecific interactions (e.g. competition, predation), cooperation, and altruism. The course combines lectures, readings, in-class discussion, and a lab section that includes a mixture of field, computer, and lab projects. Laboratories will give students practical, hands-on experience in how to develop, plan, and carry out evolutionary ecology research from start to finish.

Class Format: lecture, 3 hours per week; laboratory and discussion, 3 hours per week

Requirements/Evaluation: Evaluation will be based on lab assignments, two exams and discussion participation.

Prerequisites: BIOL 102, BIOL 203 or equivalent

Enrollment Limit: 24

Enrollment Preferences: preference given to biology majors, seniors, and juniors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Unit Notes: Satisfies the distribution requirement for the Biology major

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Evolutionary ecology uses concepts in genetics and ecology to understand how the frequency of alleles in a population changes over time. These changes are formalized in equations that describe these processes. Students will gain experience in utilizing

these equations to describe, analyze, and predict the evolutionary outcome of ecological interactions for both theoretical and experimental purposes. Thus, the students will gain experience in solving systems of equations using algebra and in stat

CHEM 114 (S) The Science Behind Materials: Shaping the Past and Future of Society (QFR)

We are surrounded by materials. They have fulfilled human needs since ancient times. From Phoenician glass to flexible OLED displays, materials have impacted society and changed the way humans lead their lives. What makes materials the way they are? Why are some brittle while others are ductile? How can we design materials with specific properties that will solve tomorrow's problems? To answer these questions, we have to think about materials at the atomic scale, looking at how their smallest building blocks organize into specific structures. In this course, we will explore the relationships between structure, processing, and properties for a range of materials including metals, ceramics, polymers, and composites. We will talk about some of the cutting-edge research that materials scientists are working on today, concluding with an outlook to potential applications of emerging technologies.

Requirements/Evaluation: Weekly quizzes and problem sets, two exams, and oral presentations.

Prerequisites: not appropriate for CHEM, BIOL, PHYS majors, or for those who have taken CHEM 151, 153, or 155

Enrollment Limit: 20

Enrollment Preferences: juniors and seniors; not appropriate for CHEM, BIOL, PHYS majors, or for those who have taken CHEM 151, 153, or 155

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2022

CHEM 151 (F) Introductory Chemistry (QFR)

This course provides an introduction to chemistry for those students with little or no high school chemistry. Students will be introduced to concepts fundamental to studying matter at the molecular level. Principal topics include introductions to the nature of atoms and molecules, stoichiometry, solubility rules and equilibria, gas laws, chemical equilibrium, acid-base reactions, periodic relationships, chemical bonding, molecular structure, intermolecular forces, oxidation-reduction reactions, and related applications. Laboratory work comprises a system of qualitative analysis and quantitative techniques. The course provides preparation for further study of organic chemistry, biochemistry, physical and inorganic chemistry and is intended for students who are anticipating professional study in chemistry, in related sciences, or in one of the health professions, as well as for those students who are interested in exploring the fundamental ideas of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: electronic and written weekly problem set assignments, laboratory work and analysis, quizzes, two tests, and a final exam

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement); incoming first-year students are required to speak with a faculty member during First Days.

Enrollment Limit: 16/lab

Enrollment Preferences: first-year students; students who have studied chemistry for one or more years are directed to CHEM 153 or 155

Expected Class Size: 32

Grading: yes pass/fail option, no fifth course option

Unit Notes: CHEM 151 may be taken concurrently with MATH 102--see under Mathematics; CHEM 151 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

CHEM 153 (F) Concepts of Chemistry (QFR)

This course broadens and deepens the foundation in chemistry of students who have had typically one year of chemistry at the high school level. Most students begin study of chemistry at Williams with this course. Familiarity with stoichiometry, basic concepts of equilibria, and the model of an atom is expected. Principal topics for this course include kinetic theory of gases, modern atomic theory, molecular structure and bonding, states of matter, chemical equilibrium (acid-base and solubility), and an introduction to atomic and molecular spectroscopies. Laboratory periods will largely focus on experiment design, data analysis, literature, scientific writing, ethics, and other skills critical to students' development as scientists. There may also be the opportunity for some hands-on laboratory experience for students who are on-campus. The course is of interest to students who anticipate professional study in chemistry, related sciences, or one of the health professions, as well as to those who want to explore the fundamentals of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quantitative weekly problem set assignments, laboratory work and reports, hour tests, and a final exam

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement); incoming first-year students are required to speak with a faculty member during First Days.

Enrollment Limit: 35/lecture

Enrollment Preferences: incoming first year students also must speak with a faculty member during First Days

Expected Class Size: 70

Grading: yes pass/fail option, no fifth course option

Unit Notes: CHEM 153 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

CHEM 155 (F) Principles of Modern Chemistry (QFR)

This course is designed for students with a strong preparation in chemistry (including laboratory experience) in secondary school, such as provided by an Advanced Placement chemistry course (or equivalent) with a corresponding AP Chemistry Exam score of 5 (or a 6 or 7 on the IB Exam, or equivalent). Topics include chemical thermodynamics, kinetics, structure and bonding, coordination chemistry, electrochemistry and spectroscopy and their application to fields such as materials science, catalysis, environmental, biological, and medicinal chemistry. Laboratory periods will focus on hands-on skills, data representation and analysis, scientific writing, exploration of the scientific literature, and other skills critical to students' development as scientists. This course is designed for students who are anticipating further study in chemistry, related sciences, or one of the health professions, as well as for students who want to explore the fundamental ideas of chemistry as part of their general education.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: frequent short assignments in preparation for class, quantitative weekly problem sets, laboratory work and reports, an hour test, and a final exam

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement); incoming first-year students are required to speak with a faculty member during First Days.

Enrollment Limit: 16/lab

Enrollment Preferences: first year students and sophomores; incoming first year students also must meet with a faculty member during First Days

Expected Class Size: 32

CHEM 156 (S) Organic Chemistry: Introductory Level (QFR)

This course provides the necessary background in organic chemistry for students who are planning advanced study or a career in chemistry, the biological sciences, or the health professions. It initiates the systematic study of the common classes of organic compounds with emphasis on theories of structure and reactivity. The fundamentals of molecular modeling as applied to organic molecules are presented. Specific topics include basic organic structure and bonding, isomerism, stereochemistry, molecular energetics, the theory and interpretation of infrared and nuclear magnetic spectroscopy, substitution, elimination and addition reactions. The coordinated laboratory work includes purification and separation techniques, structure-reactivity studies, organic synthesis, IR and NMR spectroscopy, and the identification of unknown compounds.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quantitative problem solving, laboratory performance, three midterm exams, and a final exam

Prerequisites: CHEM 151 or 153 or 155 or placement exam or permission of instructor

Enrollment Limit: 40/lecture

Enrollment Preferences: Seniors, juniors, sophomores, first-year students

Expected Class Size: 100

Grading: no pass/fail option, no fifth course option

CHEM 322 (S) Biochemistry II: Metabolism (QFR)

Cross-listings: BIOL 322 BIMO 322 CHEM 322

Secondary Cross-listing

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

Class Format: Lecture three hours per week and laboratory two hours per week.

Requirements/Evaluation: several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

Prerequisites: BIOL 101 and CHEM 251/255 or permission of instructor

Enrollment Limit: 60

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 60

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

BIOL 322 (D3) BIMO 322 (D3) CHEM 322 (D3)

Quantative/Formal Reasoning Notes: The laboratory program is quantitative covering data analyses, numerical transformations, graphical displays.

CHEM 368 (S) Computational Chemistry and Molecular Spectroscopy (QFR)

This tutorial provides an introduction to the principles of computational quantum mechanics and their application to problems of chemical interest such as chemical bonding, chemical reactivity, and molecular spectroscopy. Emphasis is placed upon modern electronic structure calculations, their fundamentals, practical considerations, interpretation, and applications to current research questions. Under guidance in sessions and through independent work, students will use computational methods to explore assigned weekly research problems. The research results will be presented to and discussed with the tutorial partner at the end of each week.

Requirements/Evaluation: tutorial participation, presentations, and submitted papers

Prerequisites: CHEM 361 or equivalent background in Physics

Enrollment Limit: 10

Enrollment Preferences: Chemistry majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course fulfills the QFC requirement with problem sets for assignments in which quantitative/formal reasoning skills are practiced.

Spring 2022

CSCI 134 (F)(S) Introduction to Computer Science (QFR)

This course introduces students to the science of computation by exploring the representation and manipulation of data and algorithms. We organize and transform information in order to solve problems using algorithms written in a modern object-oriented language. Topics include organization of data using objects and classes, and the description of processes using conditional control, iteration, methods and classes. We also begin the study of abstraction, self-reference, reuse, and performance analysis. While the choice of programming language and application area will vary in different offerings, the skills students develop will transfer equally well to more advanced study in many areas. In particular, this course is designed to provide the programming skills needed for further study in computer science and is expected to satisfy introductory programming requirements in other departments.

Requirements/Evaluation: weekly programming projects, weekly written homeworks, and two examinations.

Prerequisites: none, except for the standard prerequisites for a (QFR) course; previous programming experience is not required

Enrollment Limit: 36(12/lab)

Enrollment Preferences: if the course is over-enrolled, enrollment will be determined by lottery

Expected Class Size: 36

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students with prior experience with object-oriented programming should discuss appropriate course placement with members of the department

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

Attributes: COGS Interdepartmental Electives

CSCI 136 (F)(S) Data Structures and Advanced Programming (QFR)

This course builds on the programming skills acquired in Computer Science 134. It couples work on program design, analysis, and verification with an introduction to the study of data structures. Data structures capture common ways in which to store and manipulate data, and they are important in the construction of sophisticated computer programs. Students are introduced to some of the most important and frequently used data structures: lists,

stacks, queues, trees, hash tables, graphs, and files. Students will be expected to write several programs, ranging from very short programs to more elaborate systems. Emphasis will be placed on the development of clear, modular programs that are easy to read, debug, verify, analyze, and modify.

Requirements/Evaluation: programming and written assignments, quizzes, examinations

Prerequisites: CSCI 134 or equivalent; fulfilling the Discrete Mathematics Proficiency requirement is recommended, but not required

Enrollment Limit: 60(12/lab)

Enrollment Preferences: if the course is over-enrolled, enrollment will be determined by lottery

Expected Class Size: 60

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course include regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 237 (F)(S) Computer Organization (QFR)

This course studies the basic instruction set architecture and organization of a modern computer. It provides a programmer's view of how computer systems execute programs, store information, and communicate. Over the semester the student learns the fundamentals of translating higher level languages into assembly language, and the interpretation of machine languages by hardware. At the same time, a model of computer hardware organization is developed from the gate level upward.

Requirements/Evaluation: weekly programming assignments and/or problem sets, quizzes, midterm and final exams

Prerequisites: CSCI 136

Enrollment Limit: 12 per lab

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2021

CSCI 256 (F)(S) Algorithm Design and Analysis (QFR)

This course investigates methods for designing efficient and reliable algorithms. By carefully analyzing the structure of a problem within a mathematical framework, it is often possible to dramatically decrease the computational resources needed to find a solution. In addition, analysis provides a method for verifying the correctness of an algorithm and accurately estimating its running time and space requirements. We will study several algorithm design strategies that build on data structures and programming techniques introduced in Computer Science 136. These include greedy, divide-and-conquer, dynamic programming, and network flow algorithms. Additional topics of study include algorithms on graphs and strategies for handling potentially intractable problems.

Requirements/Evaluation: Problem sets, midterm and final examinations

Prerequisites: CSCI 136 and fulfillment of the Discrete Mathematics Proficiency requirement

Enrollment Limit: 24

Enrollment Preferences: Preference will be given to students who need the class in order to complete the major. Ties will be broken by seniority (seniors first, then juniors, etc.).

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course will have weekly problem sets in which students will formally prove statements about the behavior and performance of algorithms. In short, the course is about applying abstract and mathematical reasoning to the study of algorithms and computation.

Fall 2021

LEC Section: 01 MWF 11:00 am - 11:50 am Marina Barsky

LEC Section: 02 MWF 12:00 pm - 12:50 pm Marina Barsky

Spring 2022

LEC Section: 01 MWF 10:00 am - 10:50 am Marina Barsky

CSCI 331 (F) Introduction to Computer Security (QFR)

This class explores common vulnerabilities in computer systems, how attackers exploit them, and how systems engineers design defenses to mitigate them. The goal is to be able to recognize potential vulnerabilities in one's own software and to practice defensive design. Hands-on experience writing assembly language and C code to inspect and modify the low-level operation of running programs is emphasized. Finally, regular reading and writing assignments round out the course to help students understand the cultural and historical background of the computer security "arms race."

Class Format: This course has twice-weekly lecture meetings as well as a weekly lab meeting.

Requirements/Evaluation: weekly reading responses, lab assignments, midterm exam, and final project

Prerequisites: CSCI 136 and CSCI 237

Enrollment Limit: 24(12/lab)

Enrollment Preferences: upper-level students

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course include regular and substantial problem sets and labs in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2021

LEC Section: 01 MR 2:35 pm - 3:50 pm Daniel W. Barowy

LAB Section: 02 W 1:10 pm - 2:25 pm Daniel W. Barowy

LAB Section: 03 W 2:35 pm - 3:50 pm Daniel W. Barowy

CSCI 334 (F)(S) Principles of Programming Languages (QFR)

This course examines the concepts and structures governing the design and implementation of programming languages. It presents an introduction to the concepts behind compilers and run-time representations of programming languages; features of programming languages supporting abstraction and polymorphism; and the procedural, functional, object-oriented, and concurrent programming paradigms. Programs will be required in languages illustrating each of these paradigms.

Requirements/Evaluation: weekly problem sets and programming assignments, a midterm examination, and a final examination

Prerequisites: CSCI 136

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course include regular and substantial problem sets and labs in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2021

LEC Section: 01 TR 9:55 am - 11:10 am Stephen N. Freund

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am Daniel W. Barowy

CSCI 357 (S) Algorithmic Game Theory (QFR)

This course focuses on topics in game theory and mechanism design from a computational perspective. We will explore questions such as: how to design algorithms that incentivize truthful behavior, that is, where the participants have no incentive to cheat? Should we let drivers selfishly minimize their commute time or let a central algorithm direct traffic? Does Arrow's impossibility result mean that all voting protocols are doomed? The overarching goal of these questions is to understand and analyze selfish behavior and whether it can or should influence system design. Students will learn how to model and reason about incentives in computational systems both theoretically and empirically. Topics include types of equilibria, efficiency of equilibria, auction design and mechanism design with money, two-sided markets and mechanism design without money, incentives in computational applications such as P2P systems, and computational social choice.

Requirements/Evaluation: weekly problem sets and/or programming assignments, two midterm exams, and a final project.

Prerequisites: CSCI 256

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will consist problem sets and programming assignments in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2022

LEC Section: 01 MR 2:35 pm - 3:50 pm Shikha Singh

CSCI 358 (F) Applied Algorithms (QFR)

This course is about bridging the gap between theoretical running time and writing fast code in practice. The course is divided into two basic topics. The first is algorithmic: we will discuss some of the most useful tools in a coder's toolkit. This includes topics like randomization (hashing, filters, approximate counters), linear and convex programming, similarity search, and cache-efficient algorithms. Our goal is to talk about why these efficient algorithms make seemingly difficult problems solvable in practice. The second topic is applications: we will discuss how to implement algorithms in an efficient way that takes advantage of modern hardware. Specific topics covered will include blocking, loop unrolling, pipelining, as well as strategies for performance analysis. Projects and assessments will include both basic theoretical aspects (understanding why the algorithms we discuss actually work), and practical aspects (implementing the algorithms we discuss to solve important problems, and optimizing the code so it runs as quickly as possible).

Requirements/Evaluation: Over the course of each week, there will be either an assignment or a mini-midterm. Assignments and mini-midterms have similar structure, with both a coding and problem set component, but mini-midterms will be weighted more heavily and must be completed individually. There will also be a take home final at the end of the year.

Prerequisites: CSCI 256 and CSCI 237

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2021

LEC Section: 01 MR 1:10 pm - 2:25 pm Samuel McCauley

CSCI 361 (F)(S) Theory of Computation (QFR)

Cross-listings: MATH 361 CSCI 361

Primary Cross-listing

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Class Format: Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

Requirements/Evaluation: online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination

Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor

Enrollment Limit: 24(12/con)

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 361 (D3) CSCI 361 (D3)

Quantative/Formal Reasoning Notes: This course include regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 370 (S) Machine Learning: Algorithms and Applications (QFR)

The course introduces students to the fascinating field of Machine Learning. Machine Learning is a subset of Artificial Intelligence which studies learning algorithms - the algorithms that once set up make it possible for a machine to learn on its own without being explicitly instructed. The first half of the course (Algorithms) covers basic Machine Learning algorithms and the Math behind them: Stochastic Optimizations, Decision Trees, Memory-based Reasoning, Bayesian Belief Networks, Clustering, Associations, and Neural Nets. We will follow the logic behind these algorithms and implement them in pure Python. Students are expected to have some background in Statistics and Linear Algebra, however all the required Math fundamentals will be provided in the form of short primers. The second part (Applications) is fully dedicated to solving real-life predictive problems in a series of extensive Data Science labs. We will use the implementation of the ML algorithms from the sklearn Python library. This exploratory activity culminates in an open-ended student project inspired by student interests. Students will be exposed to applications of Machine Learning to Science, Humanities and real-life. By the end of the course they will acquire a toolbox for exploring a modern world full of digital data and making their own discoveries. The ambitious far-reaching implicit objective includes developing interest in Math as a discovery tool, learning how to handle ambiguity, and better understanding and formalizing mental models of learning.

Requirements/Evaluation: Regular problem sets and/or programming labs; weekly quizzes; and a final project.

Prerequisites: Math 150/151, CSCI 256, and some fluency in the Python programming language. Recommended: MATH 250 and STAT 201 or above. This class cannot be taken by students who have completed CSCI 374.

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors.

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course includes regular and substantial assignments in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2022

LEC Section: 01 MR 1:10 pm - 2:25 pm Marina Barsky

CSCI 379 (F)(S) Causal Inference (QFR)

Does X cause Y? If so, how? And what is the strength of this causal relation? Seeking answers to such causal (as opposed to associational) questions is a fundamental human endeavor; the answers we find can be used to support decision-making in various settings such as healthcare and public policy. But how does one tease apart causation from association--early in our statistical education we are taught that "correlation does not imply causation." In this course, we will re-examine this phrase and learn how to reason with confidence about the validity of causal conclusions drawn from messy real-world data. We will cover core topics in causal inference including causal graphical models, unsupervised learning of the structure of these models, expression of causal quantities as functions of observed data, and robust/efficient estimation of these quantities using statistical and machine learning methods. Concepts in the course will be contextualized via regular case studies.

Requirements/Evaluation: Problem sets, programming exercises, empirical analyses, case studies, and a final project.

Prerequisites: CSCI 136, and either CSCI 256 or STAT 201/202.

Enrollment Limit: 24

Enrollment Preferences: Computer science majors and prospective majors.

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course heavily relies on discrete mathematics, algorithms, and elementary statistics. There will be regular assignments requiring rigorous quantitative or formal reasoning.

Attributes: COGS Interdepartmental Electives

CSCI 432 (S) Operating Systems (QFR)

This course explores the design and implementation of computer operating systems. Topics include historical aspects of operating systems development, systems programming, process scheduling, synchronization of concurrent processes, virtual machines, memory management and virtual memory, I/O and file systems, system security, os/architecture interaction, and distributed operating systems.

Requirements/Evaluation: several implementation projects that will include significant programming, as well as written homework, and up to two exams

Prerequisites: CSCI 237 and either CSCI 256 or 334

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will consist of substantial problem sets and/or programming assignments in which quantitative/formal reasoning skills are practiced and evaluated.

LAB Section: 03 M 2:35 pm - 3:50 pm Duane A. Bailey

ECON 110 (F)(S) Principles of Microeconomics (QFR)

This course is an introduction to the study of the forces of supply and demand that determine prices and the allocation of resources in markets for goods and services, markets for labor, and markets for natural resources. The focus is on how and why markets work, why they may fail to work, and

the policy implications of both their successes and failures. The course focuses on developing the basic tools of microeconomic analysis and then applying those tools to topics of popular or policy interest such as minimum wage legislation, pollution control, competition policy, international trade policy, discrimination, tax policy, and the role of government in a market economy.

Requirements/Evaluation: problem sets, quizzes, short essays, two midterms, final exam

Prerequisites: none

Enrollment Limit: 40

Enrollment Preferences: This course is required of Economics and Political Economy majors and highly recommended for those non-majors interested in Environmental Studies and Women's, Gender and Sexuality Studies.

Expected Class Size: 40

Grading: yes pass/fail option, no fifth course option

Unit Notes: The department recommends students follow this course with ECON 120 or with a lower-level elective that has ECON 110 as its prerequisite; students may alternatively proceed directly to ECON 251 after taking this introductory course.

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

Attributes: POEC Required Courses

ECON 120 (F)(S) Principles of Macroeconomics (QFR)

This course provides an introduction to the study of the aggregate national economy. It develops the basic theories of macroeconomics and applies them to topics of current interest. Issues to be explored include: the causes of inflation, unemployment, recessions, and depressions; the role of government fiscal and monetary policy in stabilizing the economy; the determinants of long-run economic growth; the long- and short-run effects of taxes, budget deficits, and other government policies on the national economy; the role of financial frictions in amplifying recessions; and the workings of exchange rates and international finance.

Requirements/Evaluation: Depending on instructor, may include: problem sets, short essays, quizzes, reading assignments, either one or two midterms, and a final exam.

Prerequisites: ECON 110

Enrollment Limit: 40

Enrollment Preferences: First-year students and sophomores.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

ECON 232 (F) Financial Markets, Institutions and Policies (QFR)

The focus of the course will be on how firms, financial markets, and central banks interact in the economy. Key questions addressed in the course include: How do firms allocate their resources to enhance their value? How are firms evaluated by the financial markets? How are asset prices determined, and how are these prices related to interest rates? Are financial markets efficient, and what are the implications of their efficiency or lack thereof? How does the financial system help with the management of risks faced by society? We will also study the role of the central bank (the Federal Reserve in the US), monetary policy, and government regulation and their impacts on financial decision making. Key questions include: How do central banks set monetary policy and how do those policies affect the economy and the financial decision-making process? How does monetary policy change when interest rates are (virtually) zero?

Class Format: There will be a mix of lecture and discussion.

Requirements/Evaluation: 5-7 Problem Sets, Quantitative Exercises, Group Paper, and Final Exam

Prerequisites: ECON 110 and ECON 120

Enrollment Limit: 25

Enrollment Preferences: Sophomore and Junior Economics majors

Expected Class Size: 25

Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: We will use mathematical models, graphs, and data analysis to understand financial decisions at the firm and economy-wide levels.

LEC Section: 01 TR 8:30 am - 9:45 am Neal J. Rappaport

ECON 251 (F)(S) Price and Allocation Theory (QFR)

A study of the determination of relative prices and their importance in shaping the allocation of resources and the distribution of income. Subjects include: behavior of households in a variety of settings, such as buying goods and services, saving, and labor supply; behavior of firms in various kinds of markets; results of competitive and noncompetitive markets in goods, labor, land, and capital; market failure; government policies as sources of and responses to market failure; welfare criteria; limitations of mainstream analysis.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets and multiple exams, including a final exam. They may also include one or more quizzes, short essays, collaborative projects, or presentations.

Prerequisites: ECON 110 and MATH 130 or its equivalent

Enrollment Limit: 30

Enrollment Preferences: Current or prospective Economics majors.

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: Course involves developing and analyzing mathematical models of real-world phenomena, grounded in tools like calculus and game theory. Students are assumed to be comfortable with topics from introductory calculus, including differentiation and integration.

ECON 252 (F)(S) Macroeconomics (QFR)

A study of aggregate economic activity: output, employment, inflation, and interest rates. The class will develop a theoretical framework for analyzing economic growth and business cycles. The theory will be used to evaluate policies designed to promote growth and stability, and to understand economic developments in the U.S. and abroad. Instructors may use elementary calculus in assigned readings, exams and lectures.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets and/or written assignments, midterm(s), and a final exam.

Prerequisites: ECON 110 and 120 and MATH 130 or its equivalent

Enrollment Limit: 30

Enrollment Preferences: Current or prospective Economics majors.

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

Fall 2021

LEC Section: 03 M 7:00 pm - 9:40 pm Peter L. Pedroni

ECON 255 (F)(S) Econometrics (QFR)

An introduction to the theory and practice of applied quantitative economic analysis. This course familiarizes students with the strengths and weaknesses of the basic empirical methods used by economists to evaluate economic theory against economic data. Emphasizes both the statistical foundations of regression techniques and the practical application of those techniques in empirical research, with a focus on understanding when a causal interpretation is warranted. Computer exercises will provide experience in using the empirical methods, but no previous computer experience is expected. Highly recommended for students considering graduate training in economics or public policy.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets, multiple exams, a group project, and possible additional assignments or quizzes.

Prerequisites: MATH 130, plus STAT 161, 201 or 202 (or equivalent), plus one course in ECON; STAT 101 will also serve as a prerequisite, but only if taken prior to the fall of 2018

Enrollment Limit: 30

Enrollment Preferences: Current or prospective Economics and Political Economy majors.

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Unit Notes: Students may substitute the combination of STAT 201 and 346 for ECON 255

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: Course teaches research tools necessary to analyze data.

ECON 345 (S) Growth Diagnostics (QFR)

Cross-listings: ECON 545 ECON 345

Primary Cross-listing

Evidence from across the developing world suggests that the "binding constraints" to economic growth can be remarkably heterogeneous--i.e., the growth potential of stagnating or underperforming economies may be unlocked in a large variety of ways. For instance, pre-reform China had been constrained by poor supply incentives in agriculture, whereas Brazil has been held back by an inadequate supply of credit, South Africa by poor employment incentives in manufacturing, El Salvador by insufficient production incentives in tradables, Zimbabwe by bad governance, and so forth. How can developing-country policymakers determine country-specific constraints like these, thus enabling them to pragmatically pursue a selected set of growth-promoting policies rather than attempting to implement a "laundry list" of reforms that are naively based on "best practice" rules-of-thumb? This course will serve as a primer on "growth diagnostics," an empirically-driven analytical framework for identifying the most binding constraints to economic growth in a given country at a point in time, thereby allowing policymakers to develop well-targeted reforms for relaxing these constraints while being cognizant of the nation's prevailing economic, political, and social context. The course will first build on the basic theories and empirics of economic growth to elucidate the diagnostic framework and will then employ a wide range of country-specific case studies to demonstrate how the framework can be operationalized for policy making. Throughout the semester, students will be required to work in groups, each representing a given developing or emerging-market economy, in order to build a growth diagnostic for their group's assigned country by the end of the course.

Requirements/Evaluation: extensive class participation, two short (5-page) papers, two 15-page team papers comprising a country growth diagnostic, and a team presentation on the diagnostic

Prerequisites: for undergraduates ECON 251, ECON 252, and either ECON 255 or STAT 346

Enrollment Limit: 19

Enrollment Preferences: CDE fellows and senior Economics majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 545 (D2) ECON 345 (D2)

Quantative/Formal Reasoning Notes: The course material will be draw heavily on mathematical and statistical models of economic growth and macroeconomic development, and students will be required to routinely develop mathematical models and/or conduct econometric analysis in their assignments.

Spring 2022

SEM Section: 01 TR 11:20 am - 12:35 pm Quamrul H. Ashraf

ECON 360 (S) Monetary Economics (QFR)

This course covers a range of theoretical and applied issues bearing on monetary policy as conducted in the U.S. and abroad. Topics to be covered include: the causes of inflation, how central banks manage interest rates, the channels through which monetary policy affects the economy, and the costs and benefits of imposing rules on the conduct of policy. The class will also touch on a number of current issues facing central banks, such as unconventional monetary policy and cryptocurrencies.

Requirements/Evaluation: Two exams, a research paper and/or class presentation

Prerequisites: ECON 252 and 255. Multivariate calculus (MATH 150 or 151) is recommended but not required

Enrollment Limit: 20

Enrollment Preferences: junior and senior Economics majors

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The course entails the use of mathematical economic models, the presentation of quantitative information, and the interpretation of statistical analysis.

Attributes: GBST Economic Development Studies Electives POEC International Political Economy Courses

Spring 2022

LEC Section: 01 MWF 8:30 am - 9:45 am Kenneth N. Kuttner

ECON 373 (F) The Economics of Immigration (QFR)

This course will explore migration across national borders from an economic perspective, with a focus on migration to the United States. Who migrates, and why? What are the impacts on the economies of the origin country and the destination country, and on migrants themselves? What policies shape immigration and enforcement of immigration law, and what are their impacts? What is the role of immigrants in the broader society? We will emphasize empirical analysis as a data-driven way of understanding the economics of immigration.

Class Format: Class will periodically meet in a small-group seminar format.

Requirements/Evaluation: Requirements: active participation, 3 empirical assignments, 2 short papers, 2 presentations, and a final 12-15 page paper.

Prerequisites: Econ 251 and Econ 255, or permission of instructor

Enrollment Limit: 25

Enrollment Preferences: Economics majors

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: This course will use quantitative tools of economics.

Fall 2021

LEC Section: 01 W 7:00 pm - 9:40 pm Tara E. Watson

ECON 378 (F) Long-Run Comparative Development (QFR)

The world today is marred by vast disparities in the standard of living, with about a 30-fold difference in real GDP per capita between the poorest and most affluent of nations. What are the causes of such differences in prosperity across countries? Are the origins of global inequality to be found in underlying differences among societies over the past few decades, the past few centuries, or the past few millennia? If contemporary differences in living standards have such "deep" historical roots, what scope exists for policies to reduce global inequality today? Can we expect inequality to be reduced through some natural process of macroeconomic development, or is it likely to persist unless acted upon by policy? This course will present a unified theory of economic growth for thinking about these and related questions. Examples of issues to be covered include: the Neoclassical growth model and its inefficacy for answering questions about development over long time horizons; Malthusian stagnation across societies during the pre-industrial stage of economic development; the importance of the so-called demographic transition and of human capital formation in the course of

industrialization; the persistent influence of colonialism, slavery, and ethnic fragmentation in shaping the quality of contemporary politico-economic institutions; and the enduring effects of geography on comparative development, through its impact on the emergence of agriculture in early human societies and its influence in shaping the composition of traits in populations across the globe.

Class Format: discussion

Requirements/Evaluation: problem sets, at least one exam, a research paper, and a class presentation

Prerequisites: ECON 251, ECON 252, and either ECON 255 or STAT 346

Enrollment Limit: 25

Enrollment Preferences: junior and senior Economics majors

Expected Class Size: 25

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The course material will draw heavily on mathematical and statistical models of economic growth and macroeconomic development. Students will be required to routinely develop and solve sophisticated mathematical models of economic growth, involving the rigorous application of solution concepts from constrained optimization and from optimal control theory. Students will also be required to perform some econometric analyses in their assignments.

ECON 387 (F) Economics of Climate Change (QFR)

Cross-listings: ECON 522 ENVI 387 ECON 387

Primary Cross-listing

This course introduces the economic view of climate change, including both theory and empirical evidence. Given the substantial changes implied by the current stock of greenhouse gases (GHGs) in the atmosphere, we will begin by looking at impacts on agriculture, health, income, and migration. We will consider the distribution of climate damages across poor and wealthy people, both within and across countries. Next we will study adaptation, including capital investments and behavioral changes. We will examine the sources of climate change, especially electricity generation and transportation, and think about optimal policies. Throughout the course we will discuss the limits of the economic approach, pointing out normative questions on which economic theory provides little guidance.

Requirements/Evaluation: problem sets, midterm, group presentation, final exam

Prerequisites: ECON 251, familiarity with statistics

Enrollment Limit: 30

Enrollment Preferences: Junior/Senior Economics majors and CDE fellows

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 389 (S) Tax Policy in Global Perspective (QFR)

Cross-listings: ECON 389 ECON 514

Secondary Cross-listing

Government policy is important for economic development. To finance their policies, governments must build the fiscal capacity to implement a tax system. In turn, fiscal capacity--the ability for the government to raise revenue--depends on economic development. This endogeneity between fiscal capacity and economic development creates challenges for tax policy in developing countries. Given these challenges, what types of taxes should countries use to raise revenues? How can governments build the fiscal capacity to generate revenue to finance critical services? This class explores tax policy from a global and comparative perspective. Because most students will be CDE fellows, we will emphasize tax policy issues, examples, and evidence that are pertinent to developing countries. However, tax policy lessons are universal so we will learn about tax policies in developed countries, especially issues relevant for transnational transactions. Topics addressed include: how economic principles can be applied to the efficiency and equity consequences of tax policies; how personal income taxes, corporate income taxes, and value-added taxes are designed and administered and how they influence the economy; ideas for fundamental tax reforms; the debate over progressive taxes versus "flat" taxes; how taxes affect incentives to save and invest; how market failures and administrative problems may influence the optimality of tax policy; the implications of global capital flows and corporate tax avoidance for tax policy; tax holidays and other special tax incentives for investment; empirical evidence on the influence of taxes on foreign direct investment, labor supply, and tax evasion; tax policy towards natural resources such as minerals and oil; case studies of efforts to reform tax administration and reduce tax evasion and corruption; taxes on land and property; taxes on imports and exports; presumptive taxation; and the informal economy and its implications for tax policy.

Requirements/Evaluation: midterm exam, several problem sets, two 10-page essays

Prerequisites: one public economics course or microeconomics course (ECON 504 or ECON 110), and one empirical methods course (POEC 253 or ECON 255, 502, or 503); students who have previously taken ECON 351 will not be enrolled

Enrollment Limit: 19

Enrollment Preferences: CDE students, but undergraduates with the prerequisites are welcome

Expected Class Size: 15-19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 108 (F) Energy Science and Technology (QFR)

Cross-listings: ENVI 108 PHYS 108

Secondary Cross-listing

Energy use has skyrocketed in the United States and elsewhere in the world, causing significant economic and political shifts, as well as concerns for the environment. This course will address the physics and technology of energy generation, consumption, and conservation. It will cover a wide range

of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating, and building lighting. Students will learn to compare the efficiencies and environmental impacts of various energy sources and uses.

Class Format: twice a week, occasional lab exercises, and a field trip to the college heating plant, all during class hours

Requirements/Evaluation: weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative

Prerequisites: high school physics, high school chemistry, and mathematics at the level of MATH 130

Enrollment Limit: 20

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

ENVI 203 (F) Ecology (QFR)

Cross-listings: ENVI 203 BIOL 203

Secondary Cross-listing

This course combines lectures & discussion with field and indoor laboratory exercises to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to help students build skills in data analysis and scientific writing.

Class Format: Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

Requirements/Evaluation: pre-class quizzes, lab reports, two mid-term exams, and a final exam

Prerequisites: BIOL 102, or ENVI 101 or 102, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: students planning to pursue Biology and/or ENVI

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Unit Notes: satisfies the distribution requirement for the Biology major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 203 (D3) BIOL 203 (D3)

Quantative/Formal Reasoning Notes: Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

ENVI 404 (F) Coastal Processes and Geomorphology (QFR)

Cross-listings: ENVI 404 MAST 404 GEOS 404

Secondary Cross-listing

Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces--wind, waves, storms, and people--that shape the coastal zone, as well as the geologic formations--sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs--that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

Class Format: lecture two times a week with a lab one time per week

Requirements/Evaluation: lab reports, tests, and an independent research project

Prerequisites: Either GEOS 104 or GEOS 210; or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: senior Geosciences majors, then juniors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: As a 400-level seminar, this capstone course is intended to build on and extend knowledge and skills students have developed during previous courses in the major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 100 (W) Mathematics Immersion: The Beauty of Numbers (QFR)

This course will be an introduction to logic and number theory, with emphasis throughout on mathematics as a way of thinking. Have you ever wondered what keeps your credit card information safe every time you buy something online Number theory! Number Theory is one of the oldest branches of mathematics. In this course, we will discover the beauty and usefulness of numbers, from ancient Greece to modern cryptography. We will look for patterns, make conjectures, and learn how to prove these conjectures. Starting with nothing more than basic high school algebra, we will develop the logic and critical thinking skills required to realize and prove mathematical results. Topics to be covered include the meaning and content of proof, prime numbers, divisibility, rationality, modular arithmetic, Fermat's Last Theorem, the Golden ratio, Fibonacci numbers, coding theory, and unique factorization. This course is meant to give you an appreciation for numbers and mathematics and to enhance your logical reasoning skills. Although most people will not use calculus or geometry in their jobs or everyday lives, mathematics enhances our abilities to think logically and reason effectively. This skill is useful in all aspects of life. Number theory, in particular, is a great area of mathematics that allows one to jump in right away without a lot of pre-requisite knowledge. We will look at examples, look for patterns, make conjectures, and we will spend a lot of time learning how to rigorously prove those conjectures.

Class Format: Students will attend lecture Monday - Thursday mornings from 10am - noon. In the afternoons, students will attend interactive math labs from approximately 1 - 3 pm Monday - Thursday.

Requirements/Evaluation: Evaluation will be based on daily homework and activities, exams, projects, and participation in class and math labs.

Prerequisites: Permission of a dean.

Enrollment Limit: 20

Enrollment Preferences: Students who need to make up a deficiency.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Unit Notes: This course is designed to count for both full semester, Winter Study, and QFR credit. Once a dean approves enrollment, the Registrar's Office will register students in both MATH 100 and MATH 40.

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: We will be proving theorems and learning mathematical logic.

Winter 2022

LEC Section: 01 MTWR 10:00 am - 12:00 pm MTWR 1:00 pm - 3:00 pm Allison Pacelli

MATH 130 (F)(S) Calculus I (QFR)

Calculus permits the computation of velocities and other instantaneous rates of change by a limiting process called differentiation. The same process also solves "max-min" problems: how to maximize profit or minimize pollution. A second limiting process, called integration, permits the computation of areas and accumulations of income or medicines. The Fundamental Theorem of Calculus provides a useful and surprising link between the two processes. Subtopics include trigonometry, exponential growth, and logarithms.

Requirements/Evaluation: Weekly homework and quizzes, 2 exams during the semester, and one final

Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test); this is an introductory course for students who have not seen calculus before

Enrollment Limit: 30

Enrollment Preferences: first-year students

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students who have previously taken a calculus course may not enroll in MATH 130 without the permission of instructor

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This a calculus course.

Fall 2021

LEC Section: 01 TR 9:55 am - 11:10 am Pamela E. Harris

LEC Section: 02 TR 11:20 am - 12:35 pm Pamela E. Harris

Spring 2022

LEC Section: 01 TR 8:30 am - 9:45 am Pamela E. Harris

MATH 140 (F)(S) Calculus II (QFR)

Calculus answers two basic questions: how fast is something changing (the derivative) and how much is there (the integral). This course is about integration, and the miracle that unites the derivative and the integral (the Fundamental Theorem of Calculus.) Understanding calculus requires in part the understanding of methods of integration. This course will also solve equations involving derivatives ("differential equations") for population growth or pollution levels. Exponential and logarithmic functions and trigonometric and inverse functions will also play an important role. This course is the right starting point for students who have seen derivatives, but not necessarily integrals, before.

Requirements/Evaluation: homework, quizzes, and/or exams

Prerequisites: MATH 130 or equivalent; students who have received the equivalent of advanced placement of AB 4, BC 3 or higher may not enroll in MATH 140 without the permission of instructor

Enrollment Limit: 50

Enrollment Preferences: based on who needs calculus the soonest

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students who have higher advanced placement must enroll in MATH 150 or above

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a math class

Fall 2021

LEC Section: 01 TR 9:55 am - 11:10 am Thomas A. Garrity

LEC Section: 02 TR 11:20 am - 12:35 pm Thomas A. Garrity

Spring 2022

LEC Section: 01 MWF 9:00 am - 9:50 am Steven J. Miller

MATH 150 (F)(S) Multivariable Calculus (QFR)

Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives, multiple integrals. There is also a unit on infinite series, sometimes with applications to differential equations.

Requirements/Evaluation: Problem sets and exams

Prerequisites: MATH 140 or equivalent, such as satisfactory performance on an Advanced Placement Examination

Enrollment Limit: 50

Enrollment Preferences: Preference will be given to prospective math and stats majors, or students who need this as a course to serve as a prerequisite for other courses.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students with the equivalent of advanced placement of AB 4 or above should enroll in MATH 150, students with a BC 3 or higher should enroll in Math 151 when it is being offered, and Math 150 otherwise.

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: mathematics

MATH 151 (F) Multivariable Calculus (QFR)

Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives and multiple integrals. The goal of the course is Stokes Theorem, a deep and profound generalization of the Fundamental Theorem of Calculus. The difference between this course and MATH 150 is that MATH 150 covers infinite series instead of Stokes Theorem. Students with the equivalent of BC 3 or higher should enroll in MATH 151, as well as students who have taken the equivalent of an integral calculus and who have already been exposed to infinite series. For further clarification as to whether MATH 150 or MATH 151 is appropriate, please consult a member of the math/stat department.

Requirements/Evaluation: homework, quizzes, and exams

Prerequisites: AP BC 3 or higher or integral calculus with infinite series

Enrollment Limit: 50

Enrollment Preferences: First-years, sophomores, and juniors

Expected Class Size: 45

Grading: yes pass/fail option, yes fifth course option

Unit Notes: MATH 151 satisfies any MATH 150 prerequisite; credit will not be given for both MATH 150 and MATH 151

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course builds quantitative skills

Fall 2021

LEC Section: 01 MWF 8:00 am - 8:50 am Colin C. Adams

LEC Section: 02 MWF 9:00 am - 9:50 am Colin C. Adams

LEC Section: 03 MWF 10:00 am - 10:50 am Colin C. Adams

MATH 200 (F)(S) Discrete Mathematics (QFR)

In contrast to calculus, which is the study of continuous processes, this course examines the structure and properties of finite sets. Topics to be covered include mathematical logic, elementary number theory, mathematical induction, set theory, functions, relations, elementary combinatorics and probability, and graphs. Emphasis will be given on the methods and styles of mathematical proofs, in order to prepare the students for more advanced math courses.

Requirements/Evaluation: The grade will be based on homework, quizzes and 4 exams.

Prerequisites: Calculus at the level of an AP course or Williams College Math 130 or 140. Students who have taken a 300-level or 400-level math course should obtain permission of the instructor before enrolling.

Enrollment Limit: 50

Enrollment Preferences: Preference given to first and second year students intending to major in mathematics or computer science.

Expected Class Size: 50

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course involves developing the formal mathematical language of logic and set theory. It also involves using quantitative tools to solve problems relating to combinatorics, probability, and other fields of discrete mathematics.

Fall 2021

LEC Section: 02 MWF 10:00 am - 10:50 am Lori A. Pedersen

MATH 210 (S) Mathematical Methods for Scientists (QFR)

Cross-listings: PHYS 210 MATH 210

Secondary Cross-listing

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit: 50

Enrollment Preferences: sophomores and juniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 210 (D3) MATH 210 (D3)

Quantative/Formal Reasoning Notes: This course will have weekly problem sets using advanced calculus methods

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am David R. Tucker-Smith

MATH 250 (F)(S) Linear Algebra (QFR)

Many social, political, economic, biological, and physical phenomena can be described, at least approximately, by linear relations. In the study of systems of linear equations one may ask: When does a solution exist? When is it unique? How does one find it? How can one interpret it geometrically? This course develops the theoretical structure underlying answers to these and other questions and includes the study of matrices, vector spaces, linear independence and bases, linear transformations, determinants and inner products. Course work is balanced between theoretical and computational, with attention to improving mathematical style and sophistication.

Requirements/Evaluation: homework and exams

Prerequisites: MATH 150/151 or MATH 200

Enrollment Limit: 40

Enrollment Preferences: Students who have officially declared a major that requires Math 250.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: In this course, students will engage in both quantitative and formal reasoning.

Attributes: COGS Related Courses

LEC Section: 02 MWF 11:00 am - 11:50 am Susan R. Loepp

MATH 303 (F) Introduction to Dynamics, p-Adics, and Measure (QFR)

At its most basic level a dynamical system consists of a set of points and a transformation or map acting on the set (i.e., sending points in the set to other points in the set). In this setting we can already ask about the existence, and prevalence, of periodic points (points that come back to themselves). One can also ask about the orbit of a point: the set of points that is obtained as one iteratively applies the transformation the point. An important dynamical notion that comes up here is that of chaos. The course will start by studying basic dynamical systems using notions from calculus. Then we will introduce the p-adic numbers and use them to study dynamical systems. The course will end with an exploration of the notion of measure and its connection with dynamical systems.

Requirements/Evaluation: Homework, class participation, exams.

Prerequisites: Math 250.

Enrollment Limit: 30

Enrollment Preferences: Juniors

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Mathematics

Fall 2021

LEC Section: 01 MWF 10:00 am - 10:50 am Cesar E. Silva

MATH 307 (S) Computational Linear Algebra (QFR)

Linear algebra is of central importance in the quantitative sciences, including application areas such as image and signal processing, data mining, computational finance, structural biology, and much more. When the problems must be solved computationally, approximation, round-off errors, convergence, and efficiency matter, and traditional linear algebra techniques may fail to succeed. We will adopt linear algebra techniques on a large scale, implement them computationally, and apply them to core problems in scientific computing. Topics may include: systems of linear and nonlinear equations; approximation and statistical function estimation; optimization; interpolation; data scraping; singular value decomposition; and more. This course could also be considered a course in numerical analysis or computational science.

Class Format: This course is taught in a flipped classroom format. Students read and watch lecture videos prior to each class session. The instructor uses class time for discussion and collaborative learning activities. This course will be a good fit for students with a strong interest in applied mathematics and a willingness to devote significant effort to learning/doing computer programming.

Requirements/Evaluation: Students will complete checkpoint quizzes, regularly assigned homework problems and projects, and reflective writing assignments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows the policy of "ungrading." Over the course of the semester, students will develop a rubric to assess their own learning and will evaluate themselves according to this rubric.

Prerequisites: MATH 250; COMP 134 or equivalent prior experience with computer programming (in any language)

Enrollment Limit: 30

Enrollment Preferences: Preference given to majors and prospective majors.

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course involves developing the formal mathematical language of linear algebra. It also involves using quantitative tools to solve problems relating to a wide range of applications in the physical and social sciences.

Spring 2022

LEC Section: 01 TR 8:30 am - 9:45 am Chad M. Topaz

MATH 308 (S) Mathematical and Computational Approaches to Social Justice (DPE) (QFR)

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial pair will carry out a substantial project in one of the following areas: criminal justice, education equity, environmental justice, health care equity, and inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science, mathematics, and computation.

Class Format: This is a research-based tutorial.

Requirements/Evaluation: To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows the policy of "ungrading." Over the course of the semester, students will develop a rubric to assess their own learning and will evaluate themselves according to this rubric.

Prerequisites: Across each tutorial pair: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

Enrollment Limit: 10

Enrollment Preferences: This is a tutorial and hence is capped at 10 students. Students interested in enrolling should contact the instructor as soon as possible. The instructor will ask for a brief statement of interest and selected other information.

Expected Class Size: 10

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (DPE) (QFR)

Difference, Power, and Equity Notes: Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

Quantative/Formal Reasoning Notes: Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

Spring 2022

TUT Section: T1 TBA Chad M. Topaz

MATH 309 (S) Differential Equations (QFR)

Ordinary differential equations (ODEs) frequently arise as models of phenomena in the natural and social sciences. This course presents core ideas of ODEs from an applied standpoint. Topics covered early in the course may include numerical solutions, separation of variables, integrating factors, and constant coefficient linear equations. Later, we will focus on nonlinear ODEs, for which it is usually impossible to find analytical solutions. Tools from dynamical systems will be introduced to allow us to obtain information about the behavior of the ODEs without explicitly knowing the solution.

Requirements/Evaluation: quizzes/exams, problem sets, participation

Prerequisites: MATH 150/151 and MATH 250

Enrollment Limit: 40

Enrollment Preferences: discretion of the instructor

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: 300-level mathematics course

Spring 2022

LEC Section: 01 MWF 12:00 pm - 12:50 pm Julie C. Blackwood

MATH 321 (S) Knot Theory (QFR)

Take a piece of string, tie a knot in it, and glue the ends together. The result is a knotted circle, known as a knot. For the last 100 years, mathematicians have studied knots, asking such questions as, "Given a nasty tangled knot, how do you tell if it can be untangled without cutting it open?" Some of the most interesting advances in knot theory have occurred in the last ten years. This course is an introduction to the theory of knots. Among other topics, we will cover methods of knot tabulation, surfaces applied to knots, polynomials associated to knots, and relationships between knot theory and chemistry and physics. In addition to learning the theory, we will look at open problems in the field.

Requirements/Evaluation: problem sets, midterms, a paper and a final exam

Prerequisites: MATH 250 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: seniors, junior, sophomores, first year

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a quantitative course.

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am Colin C. Adams

MATH 329 (F) Discrete Geometry (QFR)

Discrete geometry is one of the oldest and most consistently vibrant areas of mathematics, stretching from the Platonic Solids of antiquity to the modern day applications of convex optimization and linear programming. In this course we will learn about polygons and their higher-dimensional cousins, polyhedra and polytopes, and the various ways to describe, compute, and classify such objects. We will learn how these objects and ideas can be applied to other areas, from computation and optimization to studying areas of math like algebraic geometry. Throughout this course we will be engaging with mathematical work and literature from as old as 500 BCE and as recent as "posted to the internet yesterday."

Requirements/Evaluation: Problem sets, exams, and a final project

Prerequisites: MATH 200 or Math 250, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: Sophomores, juniors, and seniors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: All of the content in this course is quantitative or formal reasoning.

Fall 2021

LEC Section: 01 MWF 12:00 pm - 12:50 pm Ralph E. Morrison

MATH 335 (F) Decisions, Games, and Evolutionary Dynamics (QFR)

Given goals, options, and uncertainty, how does one make a rational choice? What happens when we interact with others who are also choosing? How might this play out over time? We will first cover the principles of decision theory including preference, uncertainty, utility, imperfect information, and rational choice. The majority of the course will be spent on the main topics of game theory: sequential games, bimatrix games, parlor games, Nash equilibria, bargaining, repeated games, Bayesian belief, and signaling. Applying these principles to populations that evolve over time through variation, selection, and copying, we will develop basic models of the dynamics of evolution.

Class Format: lecture

Requirements/Evaluation: Weekly homework, midterm exams, and a final.

Prerequisites: Math 150/151 and Math 250. Some background in probability and differential equations is highly recommended.

Enrollment Limit: 35

Enrollment Preferences: Math majors.

Expected Class Size: 35

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Lots of math.

Fall 2021

LEC Section: 01 MWF 11:00 am - 11:50 am Stewart D. Johnson

MATH 341 (F)(S) Probability (QFR)

Cross-listings: STAT 341 MATH 341

Primary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 150 and MATH 250 or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STAT 341 (D3) MATH 341 (D3)

Quantative/Formal Reasoning Notes: This is a 300-level Math/Stat course.

Fall 2021

LEC Section: 01 MWF 9:00 am - 9:50 am Steven J. Miller

Spring 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu

MATH 350 (F)(S) Real Analysis (QFR)

Real Analysis studies the theory behind calculus. We will first review properties of sets and basic logic. Then we will cover the real number system (What is a real number?), sequences of numbers, basic topology in the set of real numbers, metric spaces, continuity, differentiability, integration, series, and series and sequences of functions.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 250 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: Juniors and Seniors.

Expected Class Size: 30

Grading: no pass/fail option, yes fifth course option

Spring 2022

LEC Section: 01 MWF 11:00 am - 11:50 am Cesar E. Silva

MATH 351 (S) Applied Real Analysis (QFR)

Why is the product of two negative numbers positive? Why do we depict the real numbers as a line? Why is this line continuous, and what does that actually mean? More fundamentally, what is the definition of a real number? Real analysis addresses such questions, delving into the structure of real numbers and functions on them. Along the way we'll discuss sequences and limits, series, completeness, compactness, derivatives and integrals, and metric spaces. This course is excellent preparation for graduate studies in mathematics, statistics, and economics. Math 350 and Math 351 will cover the same material for the first part of the course. Math 350 will then delve deeper into the abstract structures of topological and metric spaces, while Math 351 will closely examine some foundational constructs from differential equations, probability, and optimization.

Class Format: Hybrid format. There may be class meetings; remote students will be fully accommodated.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 250 or permission of the instructor.

Enrollment Limit: 20

Enrollment Preferences: Seniors

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Math

Spring 2022

LEC Section: 01 MWF 12:00 pm - 12:50 pm Cesar E. Silva

MATH 355 (F)(S) Abstract Algebra (QFR)

Algebra gives us tools to solve equations. The integers, the rationals, and the real numbers have special properties which make algebra work according to the circumstances. In this course, we generalize algebraic processes and the sets upon which they operate in order to better understand, theoretically, when equations can and cannot be solved. We define and study abstract algebraic structures such as groups, rings, and fields, as well as the concepts of factor group, quotient ring, homomorphism, isomorphism, and various types of field extensions. This course introduces students to abstract rigorous mathematics.

Requirements/Evaluation: Problem sets and exams

Prerequisites: MATH 250 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: Students who have officially declared a major that requires Math 355.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: 300-level math course

MATH 361 (F)(S) Theory of Computation (QFR)

Cross-listings: MATH 361 CSCI 361

Secondary Cross-listing

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Class Format: Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

Requirements/Evaluation: online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination

Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor

Enrollment Limit: 24(12/con)

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 361 (D3) CSCI 361 (D3)

MATH 383 (F) Complex Analysis (QFR)

The calculus of complex-valued functions turns out to have unexpected simplicity and power. As an example of simplicity, every complex-differentiable function is automatically infinitely differentiable. As examples of power, the so-called "residue calculus" permits the computation of "impossible" integrals, and "conformal mapping" reduces physical problems on very general domains to problems on the round disc. The easiest proof of the Fundamental Theorem of Algebra, not to mention the first proof of the Prime Number Theorem, used complex analysis.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 350 or MATH 351 or permission of instructor

Enrollment Limit: 40

Enrollment Preferences: 40

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Quantative/Formal Reasoning Notes: Advanced mathematics course with weekly or daily problem sets.

Fall 2021

LEC Section: 01 MWF 11:00 am - 11:50 am Steven J. Miller

MATH 394 (S) Galois Theory (QFR)

Some equations--such as $x^5 - 1 = 0$ --are easy to solve. Others--such as $x^5 - x - 1 = 0$ --are very hard, if not impossible (using standard mathematical operations). Galois discovered a deep connection between field theory and group theory that led to a criterion for checking whether or not a given polynomial can be easily solved. His discovery also led to many other breakthroughs, for example proving the impossibility of squaring the circle or trisecting a typical angle using compass and straightedge. From these not-so-humble beginnings, Galois theory has become a fundamental concept in modern mathematics, from topology to number theory. In this course we will develop the theory and explore its applications to other areas of math.

Requirements/Evaluation: written homeworks and exams

Prerequisites: MATH 355

Enrollment Limit: 50

Enrollment Preferences: discretion of the instructor

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Spring 2022

LEC Section: 01 MWF 9:00 am - 9:50 am Thomas A. Garrity

MATH 401 (S) Functional Analysis (QFR)

Functional analysis can be viewed as linear algebra on infinite-dimensional spaces. It is a central topic in Mathematics, which brings together and extends ideas from analysis, algebra, and geometry. Functional analysis also provides the rigorous mathematical background for several areas of theoretical physics (especially quantum mechanics). We will introduce infinite-dimensional spaces (Banach and Hilbert spaces) and study their properties. These spaces are often spaces of functions (for example, the space of square-integrable functions). We will consider linear operators on Hilbert spaces and investigate their spectral properties. A special attention will be dedicated to various operators arising from mathematical physics, especially the Schrodinger operator.

Class Format: lecture

Requirements/Evaluation: weekly problem sets, two midterm exams, final exam

Prerequisites: MATH 350 or 351 or permission of instructor

Enrollment Limit: 40

Enrollment Preferences: Mathematics and Physics majors; seniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is an advance course in Mathematical Analysis.

Spring 2022

LEC Section: 01 MWF 10:00 am - 10:50 am Mihai Stoiciu

MATH 405 (S) Representation Theory and Special Functions (QFR)

Representation theory is at the heart of much of modern mathematics. It provides a link between ideas of symmetries, groups and matrices. It has applications from number theory to Fourier Analysis to elementary particle theory. In part, representation theory is a method for producing interesting functions. While not having a single definition, special functions are "functions that have names." Over the last few hundred years, scientists have needed to define and develop certain families of functions, in order to describe different physical phenomena. These families started to be named, and include Bessel functions, Hermite functions, Laguerre functions and more generally hypergeometric functions. In recent years it has been seen that these different types of functions are best understood through the lens of symmetry and in particular via representation theory. This course will be an introduction to representation theory, starting with finite groups, while at the same time being an introduction to special functions. Thus the course will be a mix of abstract algebra, matrices, calculus and analysis.

Requirements/Evaluation: By exams and homework

Prerequisites: Math 350 or Math 351, and Math 355

Enrollment Limit: 50

Enrollment Preferences: By instructor preference

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Spring 2022

LEC Section: 01 MWF 11:00 am - 11:50 am Thomas A. Garrity

MATH 411 (F) Commutative Algebra (QFR)

Commutative Algebra is an essential area of mathematics that provides indispensable tools to many areas, including Number Theory and Algebraic Geometry. This course will introduce you to the fundamental concepts for the study of commutative rings, with a special focus on the notion of "prime ideals," and how they generalize the well-known notion of primality in the set of integers. Commutative algebra has applications ranging from algebraic geometry to coding theory. For example, one can use commutative algebra to create error correcting codes. It is perhaps most often used, however, to study curves and surfaces in different spaces. To understand these structures, one must study polynomial rings over fields. This course will be an

introduction to commutative algebra. Possible topics include polynomial rings, localizations, primary decomposition, completions, and modules.

Requirements/Evaluation: homework and exams

Prerequisites: MATH 355 or permission of instructor

Enrollment Limit: 25

Enrollment Preferences: Math majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: It is a 400-level math course

Fall 2021

LEC Section: 01 MWF 9:00 am - 9:50 am Susan R. Loepf

MATH 435 (F) Chip-firing Games on Graphs (QFR)

Starting with a graph (a collection of nodes connected by edges), place an integer number of poker chips on each vertex. Move these chips around according to "chip-firing moves", where a vertex donates a chip along each edge. These simple and intuitive games quickly lead to challenging mathematics with applications ranging from dynamical systems to algebraic geometry. In this course we'll build up a mathematical framework for studying chip-firing games, drawing on linear algebra and group theory. We'll discover algorithms for winning these games, and study their complexity; and we'll prove graph-theoretic versions of famous results like the Riemann-Roch theorem. A key component of this course will be research projects that draw on open questions about chip-firing.

Requirements/Evaluation: Weekly homework for the first eight weeks, four quizzes spaced evenly throughout the semester, and a cumulative project worked on throughout the semester (10-20 pages)

Prerequisites: Math 250 and Math 355

Enrollment Limit: 25

Enrollment Preferences: Math majors who need the course to graduate

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Fall 2021

SEM Section: 01 MWF 10:00 am - 10:50 am Ralph E. Morrison

MATH 458 (S) Algebraic Combinatorics (WS) (QFR)

Algebraic combinatorics is a branch of mathematics at the intersection of combinatorics and algebra. On the one hand, we study combinatorial structures using algebraic techniques, while on the other we use combinatorial arguments and methods to solve problems in algebra. In this collaborative project-based course, students will select among the presented topics, develop research questions, and undertake original research in the field. Student assessment is based building positive and supportive collaborative working relationships with their peers, drafts of research project manuscript, and oral presentations.

Requirements/Evaluation: Drafts of manuscript, oral presentations, reflections, peer collaboration skills

Prerequisites: MATH 200 and MATH 355

Enrollment Limit: 25

Enrollment Preferences: Senior mathematics majors, students with programming experience, students with interests in algebra and combinatorics.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS) (QFR)

Writing Skills Notes: This course will require multiple revisions of a manuscript on the mathematical text and collaborative work. The final result will be a 10-20 page research article and the course will be designed as a writing intensive course.

Quantative/Formal Reasoning Notes: This is a mathematics course in the area of algebraic combinatorics and is a quantitative and formal reasoning course.

Spring 2022

SEM Section: 01 Cancelled

PHIL 203 (F) Logic and Language (QFR)

Logic is the study of reasoning and argument. More particularly, it concerns itself with the difference between good and bad reasoning, between strong and weak arguments. We all examine the virtues and vices of good arguments in both informal and formal systems. The goals of this course are to improve the critical thinking of the students, to introduce them to sentential and predicate logic, to familiarize them with enough formal logic to enable them to read some of the great works of philosophy, which use formal logic (such as Wittgenstein's *Tractatus*), and to examine some of the connections between logic and philosophy.

Class Format: discussion

Requirements/Evaluation: a midterm, a final, frequent homework and problem sets

Prerequisites: none

Enrollment Limit: 40/sect

Enrollment Preferences: Philosophy majors, seniors, juniors, sophomores, first-years in that order.

Expected Class Size: 40/sect

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The main part of the course is learning two formal languages of logic: sentential logic predicate logic

Attributes: Linguistics PHIL Contemp Metaphysics + Epistemology Courses

PHIL 312 (S) Philosophical Implications of Modern Physics (QFR)

Cross-listings: STS 312 PHYS 312 PHIL 312

Secondary Cross-listing

Some of the discoveries made by physicists over the last century seem to show that our common sense views are deeply at odds with our most sophisticated and best confirmed scientific theories. The course will present the essential ideas of relativity theory and quantum theory and explore their implications for philosophy. We will ask, for example, what these theories tell us about the nature of space, time, probability and causality.

Requirements/Evaluation: attendance, participation, problem sets, exams, six 1- to 2-page papers and a 12- to 15-page term paper

Prerequisites: MATH 140, high-school physics, and either a 200-level course in PHIL or a 100-level course in PHYS

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors and Physics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

PHYS 108 (F) Energy Science and Technology (QFR)

Cross-listings: ENVI 108 PHYS 108

Primary Cross-listing

Energy use has skyrocketed in the United States and elsewhere in the world, causing significant economic and political shifts, as well as concerns for the environment. This course will address the physics and technology of energy generation, consumption, and conservation. It will cover a wide range of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating, and building lighting. Students will learn to compare the efficiencies and environmental impacts of various energy sources and uses.

Class Format: twice a week, occasional lab exercises, and a field trip to the college heating plant, all during class hours

Requirements/Evaluation: weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative

Prerequisites: high school physics, high school chemistry, and mathematics at the level of MATH 130

Enrollment Limit: 20

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Fall 2021

LEC Section: 01 TR 11:20 am - 12:35 pm Henrik Ronellenfisch

PHYS 131 (F) Introduction to Mechanics (QFR)

We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.

Requirements/Evaluation: exams, labs, and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead

Enrollment Limit: 30

Enrollment Preferences: seniority

Expected Class Size: 60

Grading: yes pass/fail option, yes fifth course option

Unit Notes: PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This class will have weekly problem sets requiring substantial quantitative reasoning

PHYS 132 (S) Electromagnetism and the Physics of Matter (QFR)

This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics, radioactivity, and uses of radiation.

Class Format: lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately every other week

Requirements/Evaluation: weekly problem sets, labs, quizzes and exams

Prerequisites: PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)

Enrollment Limit: 22 per lab

Enrollment Preferences: sophomores

Expected Class Size: 60

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Significant homework, exams, quizzes requiring mathematical and physical reasoning.

LAB Section: 03 T 1:00 pm - 4:00 pm Frederick W. Strauch

PHYS 141 (F) Mechanics and Waves (QFR)

This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

Class Format: lecture, three hours per week; laboratory, three hours approximately every other week; conference section, one hour approximately every other week

Requirements/Evaluation: weekly problem sets, labs, three or more short quizzes/tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: high school physics and MATH 130 or equivalent placement, or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: first-year students and science majors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

PHYS 142 (S) Foundations of Modern Physics (QFR)

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires we rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of physics or as the basis for future advanced study of these topics.

Class Format: lecture, two hours weekly; problem-solving conference session, one hour weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and discussion of research literature (limit 10 per lab, 14 per conference section)

Requirements/Evaluation: weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151

Enrollment Limit: 14/C, 10/L

Enrollment Preferences: first-year students

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

PHYS 151 (F) Seminar in Modern Physics (QFR)

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity has extended physics into the realm of high speeds and high energies and requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our notions of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course covers the same core material as PHYS 142 but in a small seminar format for students with strong prior preparation in physics.

Class Format: Two 50-minute lectures per week, one 50-minute conference section per week, one 3-hour lab per week

Requirements/Evaluation: class participation, weekly lab/conference assignments, weekly problem sets, final paper, two hour-exams and a final exam;

Prerequisites: placement by the department (see "advanced placement" section in the description about the department). Students may take either PHYS 142 or PHYS 151 but not both

Enrollment Limit: 18

Enrollment Preferences: first-years

Expected Class Size: 18

Grading: yes pass/fail option, yes fifth course option

Unit Notes: this is a small seminar designed for first-year students who have placed out of PHYS 141

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: besides the final paper, all assignments in the course have a substantial quantitative component

Fall 2021

LAB Section: 04 W 1:00 pm - 4:00 pm Catherine Kealhofer

PHYS 201 (F) Electricity and Magnetism (QFR)

The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell's equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: problem sets, labs/conference section assignments, two take-home midterms, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151

Enrollment Limit: 10 per lab

Enrollment Preferences: prospective physics majors, then by seniority

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

PHYS 202 (S) Vibrations, Waves and Optics (QFR)

Waves and oscillations characterize many different physical systems, including vibrating strings, springs, water waves, sound waves, electromagnetic waves, and gravitational waves. Quantum mechanics even describes particles with wave functions. Despite these diverse settings waves exhibit several common characteristics, so that the understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. The rest of the course focuses on electromagnetic waves and in particular on optical examples of wave phenomena. In addition to well known optical effects such as interference and diffraction, we will study a number of modern applications of optics such as short pulse lasers and optical communications. Throughout the course mathematical methods useful for higher-level physics will be introduced.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: problem sets, labs, in-class tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 201; co-requisite: PHYS/MATH 210 or MATH 209 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: sophomores

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course has substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

PHYS 210 (S) Mathematical Methods for Scientists (QFR)

Cross-listings: PHYS 210 MATH 210

Primary Cross-listing

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit: 50

Enrollment Preferences: sophomores and juniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

LEC Section: 01 TR 9:55 am - 11:10 am David R. Tucker-Smith

PHYS 301 (F) Quantum Physics (QFR)

This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics. After a brief discussion of historical origins of the quantum theory, we introduce the Schrodinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial

quantitative component

Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309

Enrollment Limit: 20

Enrollment Preferences: physics majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Phys 301 relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

PHYS 418 (S) Gravity (QFR)

This course is an introduction Einstein's theory of general relativity. We begin with a review of special relativity, emphasizing geometrical aspects of Minkowski spacetime. Working from the equivalence principle, we then motivate gravity as spacetime curvature, and study in detail the Schwarzschild geometry around a spherically symmetric mass. After this application, we use tensors to develop Einstein's equation, which describes how energy density curves spacetime. With this equation in hand we study the Friedmann-Robertson-Walker geometries for an expanding universe, and finally, we linearize Einstein's equation to develop the theory of gravitational waves.

Requirements/Evaluation: weekly problem sets, a midterm exam, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 301 or PHYS 405 or PHYS 411, or permission of instructor

Enrollment Limit: none

Enrollment Preferences: none

POEC 253 (F) Empirical Methods in Political Economy (QFR)

This course introduces students to common empirical tools used in policy analysis and implementation. The broad aim is to train students to be discriminating consumers of public policy-relevant research. The emphasis in the course is on intuitive understanding of the central concepts. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; random variables and distributions; statistical estimation, inference and hypothesis testing; and modeling using multiple regression, with a particular focus on understanding whether and how relationships between variables can be determined to be causal--an essential requirement for effective policy formation. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

Requirements/Evaluation: Problem sets, group project, midterm exam, final exam

Prerequisites: MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255

Enrollment Limit: 20

Enrollment Preferences: Political Economy majors, Environmental Policy majors and sophomores

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Unit Notes: does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.

STAT 101 (F)(S) Elementary Statistics and Data Analysis (QFR)

It is impossible to be an informed citizen in the world today without an understanding of data and information. Whether opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines or consumer webdata, we need to be able to separate the signal from the noise. We will learn the statistical methods used to analyze and interpret data from a wide variety of sources. The goal of the course is to help reach conclusions and make informed decisions based on data.

Requirements/Evaluation: weekly homework, quizzes, exams, and a project

Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test)

Enrollment Limit: 50

Enrollment Preferences: juniors and seniors

Expected Class Size: 35

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students with MATH130 but no statistics should enroll in STAT161; students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161/201 should enroll in STAT 202.

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: It is a quantitative course.

STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)

This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

Requirements/Evaluation: students complete homework, quizzes, exams (including take-home exams), and a project. Students will need to get familiar with the statistical software STATA.

Prerequisites: MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

Enrollment Limit: 40

Enrollment Preferences: Economics majors, sophomores

Expected Class Size: 40

Grading: no pass/fail option, no fifth course option

Unit Notes: Students with calculus background should consider STAT 201 or 202. Students without any calculus background should consider STAT 101. Please refer to the placement chart on the Math&Stat department website for more information.

Distributions: (D3) (QFR)

STAT 201 (F)(S) Statistics and Data Analysis (QFR)

Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, "Data, data, data! I can't make bricks without clay." In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

Requirements/Evaluation: weekly homework and projects, midterm exams, and a final exam.

Prerequisites: MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent

Enrollment Limit: 45

Enrollment Preferences: Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors

Expected Class Size: 45

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Students will learn to interpret, choose, carry out, and communicate analyses of data.

STAT 202 (F)(S) Introduction to Statistical Modeling (QFR)

Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

Class Format: Class meetings will discuss questions from lecture, dive further into the material, and work on examples. You'll use chat and discussion boards to build community, study with classmates, and ask questions outside of class time. The professor and TAs will also offer optional synchronous office hours/review sessions.

Requirements/Evaluation: Homework problems; quizzes; a final project (on a topic that interests you!); midterm and final exams. You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.

Prerequisites: AP Statistics 4 or 5, or STAT 101, or STAT 161, or STAT 201, or permission of instructor

Enrollment Limit: 40

Enrollment Preferences: Prospective Statistics majors and more senior students

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students with a 4 on the AP Stats exam should contact the department for proper placement

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

STAT 319 (S) Statistical Computing (QFR)

This course introduces a variety of computational and data-centric topics of applied statistics, which are broadly useful for acquiring, manipulating, visualizing, and analyzing data. We begin with the R language, which will be used extensively throughout the course. Then we'll introduce a variety of other useful tools, including the UNIX environment, scripting analyses using bash, databases and the SQL language, alternative data formats, techniques for visualizing high-dimensional data, and text manipulation using regular expressions. We'll also cover some modern statistical techniques along the way, which are made possible thanks to advances in computational power. This course is strongly computer oriented, and assignments will be project-based.

Requirements/Evaluation: based primarily on projects, homework, and exams

Prerequisites: STAT 201 or 202 and CSCI 134, 135, or 136

Enrollment Limit: 30

Enrollment Preferences: juniors and seniors, Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses statistical tools and programming techniques to acquire data, create visualizations, and make future predictions.

Spring 2022

STAT 341 (F)(S) Probability (QFR)

Cross-listings: STAT 341 MATH 341

Secondary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 150 and MATH 250 or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STAT 341 (D3) MATH 341 (D3)

Spring 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu

STAT 342 (S) Introduction to Stochastic Processes (QFR)

Stochastic processes are mathematical models for random phenomena evolving in time or space. Examples include the number of people in a queue at time t or the accumulated claims paid by an insurance company in an interval of time t . This course introduces the basic concepts and techniques of stochastic processes used to construct models for a variety of problems of practical interest. The theory of Markov chains will guide our discussion as we cover topics such as martingales, random walks, Poisson process, birth and death processes, and Brownian motion.

Requirements/Evaluation: weekly homework/labs, classwork, and exams

Prerequisites: STAT 341

Enrollment Limit: 30

Enrollment Preferences: senior Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a statistics class with a focus on mathematical skills and translating real world phenomena into mathematical descriptions.

Spring 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Elizabeth M. Upton

STAT 344 (F) Statistical Design of Experiments (QFR)

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially, e-commerce are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

Requirements/Evaluation: Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).

Prerequisites: STAT 161, 201, 202, or equivalent, and Math 140 or equivalent, or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Statistics majors, seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2021

LEC Section: 01 MWF 12:00 pm - 12:50 pm Richard D. De Veaux

STAT 346 (F)(S) Regression Theory and Applications (QFR)

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear, logistic and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

Requirements/Evaluation: Weekly homework, midterm exam, final exam, end-of-year project.

Prerequisites: MATH 250, MATH/STAT 341 (may be taken concurrently) and at least one of STAT 201 or 202. Or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: Statistics Majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

Attributes: EVST Methods Courses

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am Elizabeth M. Upton

STAT 358 (S) Introduction to Categorical Data Analysis (QFR)

This course focuses on methods for analyzing categorical response data. In contrast to continuous data, categorical data consist of observations classified into two or more categories. Traditional tools of statistical data analysis (such as linear regression) are not designed to handle such data and pose inappropriate assumptions. We will develop methods specifically designed for modeling categorical data, with applications in the social and biological sciences as well as in medical research, engineering and economics. This course has two parts. The first part will discuss statistical inference for parameters of categorical distributions (Bernoulli, Binomial, Multinomial, Poisson) and for measures of association arising in contingency tables (difference and ratio of proportions and odds ratios). Inferential methods covered include Wald, score and likelihood ratio tests and confidence intervals, as well as the bootstrap. The longer second part will focus on statistical modeling of categorical response data via generalized linear models, with a heavy focus on logistic regression models with both quantitative and categorical predictors and their interactions. Model fitting and inference will be based on maximum likelihood and carried out via R.

Requirements/Evaluation: Weekly homework assignments consisting of exercises from the textbook as well as data analysis problems, carried out using R. Occasional short in-class quizzes at the beginning of class. One Midterm (with both in-class and take-home component). Final Project with presentation. Final exam. Homework accounts for roughly 15% of the grade, quizzes for another 15%, midterm (in-class and take-home combined) and final for about 30% each, and project for the remaining 10%.

Prerequisites: STAT 346: Regression and Forecasting

Enrollment Limit: 15

Enrollment Preferences: stats majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Students learn how to analyze data and communicate results.

Spring 2022

LEC Section: 01 TR 11:20 am - 12:35 pm Bernhard Klingenberg

STAT 360 (S) Statistical Inference (QFR)

How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.

Class Format: For the Spring 2021 semester, synchronous zoom lectures are planned, where the instructor uses Google's jamboard to interact with students

Requirements/Evaluation: Homework, Quizzes, Exams

Prerequisites: MATH 250, STAT 201 or 202, STAT 341

Enrollment Limit: 15

Enrollment Preferences: Statistics majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: A rigorous mathematical course laying the foundation for reasoning with data

Spring 2022

LEC Section: 01 TR 8:30 am - 9:45 am Bernhard Klingenberg

STAT 365 (F) Bayesian Statistics (QFR)

The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes' Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.

Requirements/Evaluation: homework and exams

Prerequisites: STAT 201 and MATH 150 and 250, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: juniors and seniors, Statistics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Fall 2021

STAT 442 (S) Statistical Learning and Data Mining (QFR)

In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

Class Format: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Requirements/Evaluation: weekly homework, exams and an end-of-term project

Prerequisites: STAT 346 or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an advanced statistics class involving theory and application of statistical methods to data.

Quantitative and Formal Reasoning

ASTR 111 (F) Introduction to Astrophysics (QFR)

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies.

ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes remotely to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

Class Format: The class has 6 afternoon labs. Nighttime observing sessions will occur throughout the semester.

Requirements/Evaluation: weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

Prerequisites: a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

Enrollment Limit: 28

Enrollment Preferences: potential Astronomy majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

Fall 2021

LAB Section: 03 R 1:00 pm - 4:00 pm Kevin Flaherty

LEC Section: 01 TR 11:20 am - 12:35 pm Marek Demianski, Kevin Flaherty

ASTR 211 (S) Astronomical Observing and Data Analysis (QFR)

How do astronomers make scientific measurements for objects that are light-years away from Earth? This course will introduce the basics of telescopes and observations and will give students hands-on training in the techniques astronomers use to obtain, process, and analyze scientific data. We will discuss observation planning, CCD detectors, signal statistics, image processing, and photometric and spectroscopic observations. We will begin by focusing on ground-based optical observations and will move on to non-optical observations, both electromagnetic (e.g., radio waves, X-rays) and non-electromagnetic (e.g., gravitational waves, neutrinos). Throughout the course, students will use computational techniques to work with real astronomical data, taken with our 24" telescope and from data archives.

Class Format: discussion, computer lab work, and observing

Requirements/Evaluation: weekly problem sets, lab work, and observing projects

Prerequisites: MATH 150 or 151; prior experience with Unix and computer programming is helpful, but not required

Enrollment Limit: 14

Enrollment Preferences: Astronomy or Astrophysics majors

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course requires regular problem sets. Labs require computer programming and statistical and graphical analyses of data.

Spring 2022

BIMO 321 (F) Biochemistry I: Structure and Function of Biological Molecules (QFR)

Cross-listings: BIMO 321 BIOL 321 CHEM 321

Primary Cross-listing

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The in-person laboratory provides further opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays. A laboratory section will also be provided for remote students, which will examine similar topics and techniques through literature and data analysis.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quizzes, two midterm exams, a final exam, problem sets and performance in the laboratories including lab reports

Prerequisites: BIOL 101 and CHEM 251/255 and CHEM 155/256

Enrollment Limit: 16/lab

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 48

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

BIMO 322 (S) Biochemistry II: Metabolism (QFR)

Cross-listings: BIOL 322 BIMO 322 CHEM 322

Primary Cross-listing

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

Class Format: Lecture three hours per week and laboratory two hours per week.

Requirements/Evaluation: several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

Prerequisites: BIOL 101 and CHEM 251/255 or permission of instructor

Enrollment Limit: 60

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 60

Grading: no pass/fail option, no fifth course option

BIOL 202 (F) Genetics (QFR)

Genetics, classically defined as the study of heredity, is today a multidisciplinary field whose principles provide critical insight and tools to most areas of biology and medicine. This course covers the experimental basis for our current understanding of the inheritance, structures, and functions of genes. It introduces approaches used by contemporary geneticists and molecular biologists to explore questions in areas of biology ranging from evolution to medicine. A primary focus of the course is on students developing familiarity with problem solving, the logic and quantitative reasoning required to understand how genetic mechanisms lead to biological patterns. The laboratory part of the course provides an experimental introduction to modern genetic analysis as well as introductions to interpreting genetic reasoning in the primary research literature. Laboratory experiments include investigating chromosome structure using microscopy, integrating multiple streams of evidence to map a mutation to the genome, determining the structure of a DNA plasmid using molecular tools.

Class Format: Lecture: three hours per week, Lab: three hours per week.

Requirements/Evaluation: bi-weekly problem sets; weekly laboratory exercises and laboratory reports; three exams

Prerequisites: BIOL 101 and 102

Enrollment Limit: 120

Enrollment Preferences: students interested in the Biology major

Expected Class Size: 60

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course develops quantitative skills through solving problems. Students learn to apply basic calculations and logic to predict the outcomes of biological systems, for example, describing the likelihood that an individual will be affected by an inherited disease. Application of quantitative and logical analysis contributes to a large component of the in-class work and the graded material for the class, in the form of problem sets, exams, and data analysis for lab reports.

BIOL 203 (F) Ecology (QFR)

Cross-listings: ENVI 203 BIOL 203

Primary Cross-listing

This course combines lectures & discussion with field and indoor laboratory exercises to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to help students build skills in data analysis and scientific writing.

Class Format: Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

Requirements/Evaluation: pre-class quizzes, lab reports, two mid-term exams, and a final exam

Prerequisites: BIOL 102, or ENVI 101 or 102, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: students planning to pursue Biology and/or ENVI

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Unit Notes: satisfies the distribution requirement for the Biology major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 203 (D3) BIOL 203 (D3)

Quantative/Formal Reasoning Notes: Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

BIOL 222 (S) Essentials of Biochemistry (QFR)

This course will explore the biochemistry of cellular processes and contextualize these processes in healthy and diseased states. Lecture topics in this one semester course will include the structure and function of proteins (enzymes and non-enzymatic proteins), lipids, and carbohydrates. Lectures will also survey the major metabolic pathways (carbohydrates, lipids, and amino acids) with particular attention to enzyme regulation and the integration of metabolism in different tissues and under different metabolic conditions. In the discussion/laboratory component of the course a combination of primary literature, hypothesis-driven exercises, problem solving, and bench work will be used to illustrate how particular techniques and experimental approaches are used in biochemical fields.

Class Format: in-person lecture and lab

Requirements/Evaluation: Four exams, in-class discussion of papers, short writing assignments and lab reports.

Prerequisites: BIOL 101 and CHEM 156; not open to students who have taken BIOL 321 or BIOL 322

Enrollment Limit: 18

Enrollment Preferences: seniors who need to fulfill the biochemistry requirement for premedical school

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major; cannot be counted towards the biology major in addition to either BIOL 321 or BIOL 322; cannot be counted towards the BIMO concentration

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The laboratory program is quantitative covering data analyses, numerical transformations, graphical displays.

BIOL 305 (S) Evolution (QFR)

This course offers a critical analysis of contemporary concepts in biological evolution. We focus on the relation of evolutionary mechanisms (e.g., selection, drift, and migration) to long term evolutionary patterns (e.g., evolutionary innovations, origin of major groups, and adaptation). Topics include micro-evolutionary models, natural and sexual selection, speciation, the inference of evolutionary history, evolutionary medicine among others.

Requirements/Evaluation: independent research project, problem sets, participation in discussions and exams

Prerequisites: BIOL 202

Enrollment Limit: 22

Enrollment Preferences: Seniors and biology majors

Expected Class Size: 22

Grading: yes pass/fail option, yes fifth course option

Unit Notes: satisfies the distribution requirement for the Biology major

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: We will use mathematical models to study population genetics.

BIOL 321 (F) Biochemistry I: Structure and Function of Biological Molecules (QFR)

Cross-listings: BIMO 321 BIOL 321 CHEM 321

Secondary Cross-listing

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The in-person laboratory provides further opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays. A laboratory section will also be provided for remote students, which will examine similar topics and techniques through literature and data analysis.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quizzes, two midterm exams, a final exam, problem sets and performance in the laboratories including lab reports

Prerequisites: BIOL 101 and CHEM 251/255 and CHEM 155/256

Enrollment Limit: 16/lab

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 48

BIOL 337 (F) Evolutionary Ecology (QFR)

Evolutionary ecology is an interdisciplinary field that integrates concepts in genetics, adaptation, and ecology to understand how evolution operates in the context of ecological communities. This course provides an overview of the discipline including foundational concepts in evolutionary demography, phenotypic plasticity, and population genetics. It also explores how breakthroughs in these topics provide a framework for advances in our understanding of the evolution of reproductive timing and ageing, interspecific interactions (e.g. competition, predation), cooperation, and altruism. The course combines lectures, readings, in-class discussion, and a lab section that includes a mixture of field, computer, and lab projects. Laboratories will give students practical, hands-on experience in how to develop, plan, and carry out evolutionary ecology research from start to finish.

Class Format: lecture, 3 hours per week; laboratory and discussion, 3 hours per week

Requirements/Evaluation: Evaluation will be based on lab assignments, two exams and discussion participation.

Prerequisites: BIOL 102, BIOL 203 or equivalent

Enrollment Limit: 24

Enrollment Preferences: preference given to biology majors, seniors, and juniors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Unit Notes: Satisfies the distribution requirement for the Biology major

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Evolutionary ecology uses concepts in genetics and ecology to understand how the frequency of alleles in a population changes over time. These changes are formalized in equations that describe these processes. Students will gain experience in utilizing these equations to describe, analyze, and predict the evolutionary outcome of ecological interactions for both theoretical and experimental purposes. Thus, the students will gain experience in solving systems of equations using algebra and in stat

CHEM 114 (S) The Science Behind Materials: Shaping the Past and Future of Society (QFR)

We are surrounded by materials. They have fulfilled human needs since ancient times. From Phoenician glass to flexible OLED displays, materials have impacted society and changed the way humans lead their lives. What makes materials the way they are? Why are some brittle while others are ductile? How can we design materials with specific properties that will solve tomorrow's problems? To answer these questions, we have to think about materials at the atomic scale, looking at how their smallest building blocks organize into specific structures. In this course, we will explore the relationships between structure, processing, and properties for a range of materials including metals, ceramics, polymers, and composites. We will talk

about some of the cutting-edge research that materials scientists are working on today, concluding with an outlook to potential applications of emerging technologies.

Requirements/Evaluation: Weekly quizzes and problem sets, two exams, and oral presentations.

Prerequisites: not appropriate for CHEM, BIOL, PHYS majors, or for those who have taken CHEM 151, 153, or 155

Enrollment Limit: 20

Enrollment Preferences: juniors and seniors; not appropriate for CHEM, BIOL, PHYS majors, or for those who have taken CHEM 151, 153, or 155

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

CHEM 151 (F) Introductory Chemistry (QFR)

This course provides an introduction to chemistry for those students with little or no high school chemistry. Students will be introduced to concepts fundamental to studying matter at the molecular level. Principal topics include introductions to the nature of atoms and molecules, stoichiometry, solubility rules and equilibria, gas laws, chemical equilibrium, acid-base reactions, periodic relationships, chemical bonding, molecular structure, intermolecular forces, oxidation-reduction reactions, and related applications. Laboratory work comprises a system of qualitative analysis and quantitative techniques. The course provides preparation for further study of organic chemistry, biochemistry, physical and inorganic chemistry and is intended for students who are anticipating professional study in chemistry, in related sciences, or in one of the health professions, as well as for those students who are interested in exploring the fundamental ideas of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: electronic and written weekly problem set assignments, laboratory work and analysis, quizzes, two tests, and a final exam

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement); incoming first-year students are required to speak with a faculty member during First Days.

Enrollment Limit: 16/lab

Enrollment Preferences: first-year students; students who have studied chemistry for one or more years are directed to CHEM 153 or 155

Expected Class Size: 32

Grading: yes pass/fail option, no fifth course option

Unit Notes: CHEM 151 may be taken concurrently with MATH 102--see under Mathematics; CHEM 151 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

CHEM 153 (F) Concepts of Chemistry (QFR)

This course broadens and deepens the foundation in chemistry of students who have had typically one year of chemistry at the high school level. Most students begin study of chemistry at Williams with this course. Familiarity with stoichiometry, basic concepts of equilibria, and the model of an atom is expected. Principal topics for this course include kinetic theory of gases, modern atomic theory, molecular structure and bonding, states of matter, chemical equilibrium (acid-base and solubility), and an introduction to atomic and molecular spectroscopies. Laboratory periods will largely focus on experiment design, data analysis, literature, scientific writing, ethics, and other skills critical to students' development as scientists. There may also be the opportunity for some hands-on laboratory experience for students who are on-campus. The course is of interest to students who anticipate professional study in chemistry, related sciences, or one of the health professions, as well as to those who want to explore the fundamentals of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quantitative weekly problem set assignments, laboratory work and reports, hour tests, and a final exam

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement); incoming first-year students are required to speak with a faculty member during First Days.

Enrollment Limit: 35/lecture

Enrollment Preferences: incoming first year students also must speak with a faculty member during First Days

Expected Class Size: 70

Grading: yes pass/fail option, no fifth course option

Unit Notes: CHEM 153 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

CHEM 155 (F) Principles of Modern Chemistry (QFR)

This course is designed for students with a strong preparation in chemistry (including laboratory experience) in secondary school, such as provided by an Advanced Placement chemistry course (or equivalent) with a corresponding AP Chemistry Exam score of 5 (or a 6 or 7 on the IB Exam, or equivalent). Topics include chemical thermodynamics, kinetics, structure and bonding, coordination chemistry, electrochemistry and spectroscopy and their application to fields such as materials science, catalysis, environmental, biological, and medicinal chemistry. Laboratory periods will focus on hands-on skills, data representation and analysis, scientific writing, exploration of the scientific literature, and other skills critical to students' development as scientists. This course is designed for students who are anticipating further study in chemistry, related sciences, or one of the health professions, as well as for students who want to explore the fundamental ideas of chemistry as part of their general education.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: frequent short assignments in preparation for class, quantitative weekly problem sets, laboratory work and reports, an hour test, and a final exam

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement); incoming first-year students are required to speak with a faculty member during First Days.

Enrollment Limit: 16/lab

Enrollment Preferences: first year students and sophomores; incoming first year students also must meet with a faculty member during First Days

Expected Class Size: 32

Grading: no pass/fail option, no fifth course option

Unit Notes: CHEM 155 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

CHEM 156 (S) Organic Chemistry: Introductory Level (QFR)

This course provides the necessary background in organic chemistry for students who are planning advanced study or a career in chemistry, the biological sciences, or the health professions. It initiates the systematic study of the common classes of organic compounds with emphasis on theories of structure and reactivity. The fundamentals of molecular modeling as applied to organic molecules are presented. Specific topics include basic organic structure and bonding, isomerism, stereochemistry, molecular energetics, the theory and interpretation of infrared and nuclear magnetic spectroscopy, substitution, elimination and addition reactions. The coordinated laboratory work includes purification and separation techniques, structure-reactivity studies, organic synthesis, IR and NMR spectroscopy, and the identification of unknown compounds.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quantitative problem solving, laboratory performance, three midterm exams, and a final exam

Prerequisites: CHEM 151 or 153 or 155 or placement exam or permission of instructor

Enrollment Limit: 40/lecture

Enrollment Preferences: Seniors, juniors, sophomores, first-year students

Expected Class Size: 100

Grading: no pass/fail option, no fifth course option

CHEM 368 (S) Computational Chemistry and Molecular Spectroscopy (QFR)

This tutorial provides an introduction to the principles of computational quantum mechanics and their application to problems of chemical interest such as chemical bonding, chemical reactivity, and molecular spectroscopy. Emphasis is placed upon modern electronic structure calculations, their fundamentals, practical considerations, interpretation, and applications to current research questions. Under guidance in sessions and through independent work, students will use computational methods to explore assigned weekly research problems. The research results will be presented to and discussed with the tutorial partner at the end of each week.

Requirements/Evaluation: tutorial participation, presentations, and submitted papers

Prerequisites: CHEM 361 or equivalent background in Physics

Enrollment Limit: 10

Enrollment Preferences: Chemistry majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course fulfills the QFC requirement with problem sets for assignments in which quantitative/formal reasoning skills are practiced.

CSCI 134 (F)(S) Introduction to Computer Science (QFR)

This course introduces students to the science of computation by exploring the representation and manipulation of data and algorithms. We organize and transform information in order to solve problems using algorithms written in a modern object-oriented language. Topics include organization of data using objects and classes, and the description of processes using conditional control, iteration, methods and classes. We also begin the study of abstraction, self-reference, reuse, and performance analysis. While the choice of programming language and application area will vary in different offerings, the skills students develop will transfer equally well to more advanced study in many areas. In particular, this course is designed to provide the programming skills needed for further study in computer science and is expected to satisfy introductory programming requirements in other departments.

Requirements/Evaluation: weekly programming projects, weekly written homeworks, and two examinations.

Prerequisites: none, except for the standard prerequisites for a (QFR) course; previous programming experience is not required

Enrollment Limit: 36(12/lab)

Enrollment Preferences: if the course is over-enrolled, enrollment will be determined by lottery

Expected Class Size: 36

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students with prior experience with object-oriented programming should discuss appropriate course placement with members of the department

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 136 (F)(S) Data Structures and Advanced Programming (QFR)

This course builds on the programming skills acquired in Computer Science 134. It couples work on program design, analysis, and verification with an introduction to the study of data structures. Data structures capture common ways in which to store and manipulate data, and they are important in the construction of sophisticated computer programs. Students are introduced to some of the most important and frequently used data structures: lists, stacks, queues, trees, hash tables, graphs, and files. Students will be expected to write several programs, ranging from very short programs to more elaborate systems. Emphasis will be placed on the development of clear, modular programs that are easy to read, debug, verify, analyze, and modify.

Requirements/Evaluation: programming and written assignments, quizzes, examinations

Prerequisites: CSCI 134 or equivalent; fulfilling the Discrete Mathematics Proficiency requirement is recommended, but not required

Enrollment Limit: 60(12/lab)

Enrollment Preferences: if the course is over-enrolled, enrollment will be determined by lottery

Expected Class Size: 60

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course include regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

Attributes: BIGP Courses

CSCI 237 (F)(S) Computer Organization (QFR)

This course studies the basic instruction set architecture and organization of a modern computer. It provides a programmer's view of how computer systems execute programs, store information, and communicate. Over the semester the student learns the fundamentals of translating higher level languages into assembly language, and the interpretation of machine languages by hardware. At the same time, a model of computer hardware organization is developed from the gate level upward.

Requirements/Evaluation: weekly programming assignments and/or problem sets, quizzes, midterm and final exams

Prerequisites: CSCI 136

Enrollment Limit: 12 per lab

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2021

LEC Section: 01 MWF 12:00 pm - 12:50 pm Kelly A. Shaw
LAB Section: 02 R 9:55 am - 11:10 am Kelly A. Shaw

LEC Section: 02 MWF 11:00 am - 11:50 am Kelly A. Shaw

CSCI 256 (F)(S) Algorithm Design and Analysis (QFR)

This course investigates methods for designing efficient and reliable algorithms. By carefully analyzing the structure of a problem within a mathematical framework, it is often possible to dramatically decrease the computational resources needed to find a solution. In addition, analysis provides a method for verifying the correctness of an algorithm and accurately estimating its running time and space requirements. We will study several algorithm design strategies that build on data structures and programming techniques introduced in Computer Science 136. These include greedy, divide-and-conquer, dynamic programming, and network flow algorithms. Additional topics of study include algorithms on graphs and strategies for handling potentially intractable problems.

Requirements/Evaluation: Problem sets, midterm and final examinations

Prerequisites: CSCI 136 and fulfillment of the Discrete Mathematics Proficiency requirement

Enrollment Limit: 24

Enrollment Preferences: Preference will be given to students who need the class in order to complete the major. Ties will be broken by seniority (seniors first, then juniors, etc.).

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course will have weekly problem sets in which students will formally prove statements about the behavior and performance of algorithms. In short, the course is about applying abstract and mathematical reasoning to the study of algorithms and computation.

Fall 2021

LEC Section: 01 MWF 11:00 am - 11:50 am Marina Barsky

Spring 2022

LEC Section: 01 MWF 10:00 am - 10:50 am Marina Barsky

CSCI 331 (F) Introduction to Computer Security (QFR)

This class explores common vulnerabilities in computer systems, how attackers exploit them, and how systems engineers design defenses to mitigate them. The goal is to be able to recognize potential vulnerabilities in one's own software and to practice defensive design. Hands-on experience writing assembly language and C code to inspect and modify the low-level operation of running programs is emphasized. Finally, regular reading and writing assignments round out the course to help students understand the cultural and historical background of the computer security "arms race."

Class Format: This course has twice-weekly lecture meetings as well as a weekly lab meeting.

Requirements/Evaluation: weekly reading responses, lab assignments, midterm exam, and final project

Prerequisites: CSCI 136 and CSCI 237

Enrollment Limit: 24(12/lab)

Enrollment Preferences: upper-level students

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course include regular and substantial problem sets and labs in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2021

LAB Section: 02 W 1:10 pm - 2:25 pm Daniel W. Barowy

LEC Section: 01 MR 2:35 pm - 3:50 pm Daniel W. Barowy

LAB Section: 03 W 2:35 pm - 3:50 pm Daniel W. Barowy

CSCI 334 (F)(S) Principles of Programming Languages (QFR)

This course examines the concepts and structures governing the design and implementation of programming languages. It presents an introduction to the concepts behind compilers and run-time representations of programming languages; features of programming languages supporting abstraction and polymorphism; and the procedural, functional, object-oriented, and concurrent programming paradigms. Programs will be required in languages illustrating each of these paradigms.

Requirements/Evaluation: weekly problem sets and programming assignments, a midterm examination, and a final examination

Prerequisites: CSCI 136

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course include regular and substantial problem sets and labs in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2021

LEC Section: 01 TR 9:55 am - 11:10 am Stephen N. Freund

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am Daniel W. Barowy

CSCI 357 (S) Algorithmic Game Theory (QFR)

This course focuses on topics in game theory and mechanism design from a computational perspective. We will explore questions such as: how to design algorithms that incentivize truthful behavior, that is, where the participants have no incentive to cheat? Should we let drivers selfishly minimize their commute time or let a central algorithm direct traffic? Does Arrow's impossibility result mean that all voting protocols are doomed? The overarching goal of these questions is to understand and analyze selfish behavior and whether it can or should influence system design. Students will learn how to model and reason about incentives in computational systems both theoretically and empirically. Topics include types of equilibria, efficiency of equilibria, auction design and mechanism design with money, two-sided markets and mechanism design without money, incentives in computational applications such as P2P systems, and computational social choice.

Requirements/Evaluation: weekly problem sets and/or programming assignments, two midterm exams, and a final project.

Prerequisites: CSCI 256

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will consist problem sets and programming assignments in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2022

LEC Section: 01 MR 2:35 pm - 3:50 pm Shikha Singh

CSCI 358 (F) Applied Algorithms (QFR)

This course is about bridging the gap between theoretical running time and writing fast code in practice. The course is divided into two basic topics. The first is algorithmic: we will discuss some of the most useful tools in a coder's toolkit. This includes topics like randomization (hashing, filters, approximate counters), linear and convex programming, similarity search, and cache-efficient algorithms. Our goal is to talk about why these efficient algorithms make seemingly difficult problems solvable in practice. The second topic is applications: we will discuss how to implement algorithms in an efficient way that takes advantage of modern hardware. Specific topics covered will include blocking, loop unrolling, pipelining, as well as strategies for performance analysis. Projects and assessments will include both basic theoretical aspects (understanding why the algorithms we discuss actually work), and practical aspects (implementing the algorithms we discuss to solve important problems, and optimizing the code so it runs as quickly as possible).

Requirements/Evaluation: Over the course of each week, there will be either an assignment or a mini-midterm. Assignments and mini-midterms have similar structure, with both a coding and problem set component, but mini-midterms will be weighted more heavily and must be completed individually. There will also be a take home final at the end of the year.

Prerequisites: CSCI 256 and CSCI 237

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2021

LEC Section: 01 MR 1:10 pm - 2:25 pm Samuel McCauley

CSCI 361 (F)(S) Theory of Computation (QFR)

Cross-listings: MATH 361 CSCI 361

Primary Cross-listing

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Class Format: Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

Requirements/Evaluation: online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination

Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor

Enrollment Limit: 24(12/con)

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 361 (D3) CSCI 361 (D3)

CSCI 370 (S) Machine Learning: Algorithms and Applications (QFR)

The course introduces students to the fascinating field of Machine Learning. Machine Learning is a subset of Artificial Intelligence which studies learning algorithms - the algorithms that once set up make it possible for a machine to learn on its own without being explicitly instructed. The first half of the course (Algorithms) covers basic Machine Learning algorithms and the Math behind them: Stochastic Optimizations, Decision Trees, Memory-based Reasoning, Bayesian Belief Networks, Clustering, Associations, and Neural Nets. We will follow the logic behind these algorithms and implement them in pure Python. Students are expected to have some background in Statistics and Linear Algebra, however all the required Math fundamentals will be provided in the form of short primers. The second part (Applications) is fully dedicated to solving real-life predictive problems in a series of extensive Data Science labs. We will use the implementation of the ML algorithms from the sklearn Python library. This exploratory activity culminates in an open-ended student project inspired by student interests. Students will be exposed to applications of Machine Learning to Science, Humanities and real-life. By the end of the course they will acquire a toolbox for exploring a modern world full of digital data and making their own discoveries. The ambitious far-reaching implicit objective includes developing interest in Math as a discovery tool, learning how to handle ambiguity, and better understanding and formalizing mental models of learning.

Requirements/Evaluation: Regular problem sets and/or programming labs; weekly quizzes; and a final project.

Prerequisites: Math 150/151, CSCI 256, and some fluency in the Python programming language. Recommended: MATH 250 and STAT 201 or above. This class cannot be taken by students who have completed CSCI 374.

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors.

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course includes regular and substantial assignments in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2022

LEC Section: 01 MR 1:10 pm - 2:25 pm Marina Barsky

CSCI 379 (F)(S) Causal Inference (QFR)

Does X cause Y? If so, how? And what is the strength of this causal relation? Seeking answers to such causal (as opposed to associational) questions is a fundamental human endeavor; the answers we find can be used to support decision-making in various settings such as healthcare and public policy. But how does one tease apart causation from association--early in our statistical education we are taught that "correlation does not imply causation." In this course, we will re-examine this phrase and learn how to reason with confidence about the validity of causal conclusions drawn from messy real-world data. We will cover core topics in causal inference including causal graphical models, unsupervised learning of the structure of these models, expression of causal quantities as functions of observed data, and robust/efficient estimation of these quantities using statistical and machine learning methods. Concepts in the course will be contextualized via regular case studies.

Requirements/Evaluation: Problem sets, programming exercises, empirical analyses, case studies, and a final project.

Prerequisites: CSCI 136, and either CSCI 256 or STAT 201/202.

Enrollment Limit: 24

Enrollment Preferences: Computer science majors and prospective majors.

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course heavily relies on discrete mathematics, algorithms, and elementary statistics. There will be regular assignments requiring rigorous quantitative or formal reasoning.

Attributes: COGS Interdepartmental Electives

CSCI 432 (S) Operating Systems (QFR)

This course explores the design and implementation of computer operating systems. Topics include historical aspects of operating systems development, systems programming, process scheduling, synchronization of concurrent processes, virtual machines, memory management and virtual memory, I/O and file systems, system security, os/architecture interaction, and distributed operating systems.

Requirements/Evaluation: several implementation projects that will include significant programming, as well as written homework, and up to two exams

Prerequisites: CSCI 237 and either CSCI 256 or 334

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will consist of substantial problem sets and/or programming assignments in which quantitative/formal reasoning skills are practiced and evaluated.

ECON 110 (F)(S) Principles of Microeconomics (QFR)

This course is an introduction to the study of the forces of supply and demand that determine prices and the allocation of resources in markets for goods and services, markets for labor, and markets for natural resources. The focus is on how and why markets work, why they may fail to work, and the policy implications of both their successes and failures. The course focuses on developing the basic tools of microeconomic analysis and then applying those tools to topics of popular or policy interest such as minimum wage legislation, pollution control, competition policy, international trade policy, discrimination, tax policy, and the role of government in a market economy.

Requirements/Evaluation: problem sets, quizzes, short essays, two midterms, final exam

Prerequisites: none

Enrollment Limit: 40

Enrollment Preferences: This course is required of Economics and Political Economy majors and highly recommended for those non-majors interested in Environmental Studies and Women's, Gender and Sexuality Studies.

Expected Class Size: 40

Grading: yes pass/fail option, no fifth course option

Unit Notes: The department recommends students follow this course with ECON 120 or with a lower-level elective that has ECON 110 as its

prerequisite; students may alternatively proceed directly to ECON 251 after taking this introductory course.

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

Attributes: POEC Required Courses

ECON 120 (F)(S) Principles of Macroeconomics (QFR)

This course provides an introduction to the study of the aggregate national economy. It develops the basic theories of macroeconomics and applies them to topics of current interest. Issues to be explored include: the causes of inflation, unemployment, recessions, and depressions; the role of government fiscal and monetary policy in stabilizing the economy; the determinants of long-run economic growth; the long- and short-run effects of taxes, budget deficits, and other government policies on the national economy; the role of financial frictions in amplifying recessions; and the workings of exchange rates and international finance.

Requirements/Evaluation: Depending on instructor, may include: problem sets, short essays, quizzes, reading assignments, either one or two midterms, and a final exam.

Prerequisites: ECON 110

Enrollment Limit: 40

Enrollment Preferences: First-year students and sophomores.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

ECON 232 (F) Financial Markets, Institutions and Policies (QFR)

The focus of the course will be on how firms, financial markets, and central banks interact in the economy. Key questions addressed in the course include: How do firms allocate their resources to enhance their value? How are firms evaluated by the financial markets? How are asset prices determined, and how are these prices related to interest rates? Are financial markets efficient, and what are the implications of their efficiency or lack thereof? How does the financial system help with the management of risks faced by society? We will also study the role of the central bank (the Federal Reserve in the US), monetary policy, and government regulation and their impacts on financial decision making. Key questions include: How do central banks set monetary policy and how do those policies affect the economy and the financial decision-making process? How does monetary policy change when interest rates are (virtually) zero?

Class Format: There will be a mix of lecture and discussion.

Requirements/Evaluation: 5-7 Problem Sets, Quantitative Exercises, Group Paper, and Final Exam

Prerequisites: ECON 110 and ECON 120

Enrollment Limit: 25

Enrollment Preferences: Sophomore and Junior Economics majors

Expected Class Size: 25

Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: We will use mathematical models, graphs, and data analysis to understand financial decisions at the firm and economy-wide levels.

Attributes: POEC Comparative POEC/Public Policy Courses

Fall 2021

LEC Section: 01 TR 8:30 am - 9:45 am Neal J. Rappaport

ECON 251 (F)(S) Price and Allocation Theory (QFR)

A study of the determination of relative prices and their importance in shaping the allocation of resources and the distribution of income. Subjects include: behavior of households in a variety of settings, such as buying goods and services, saving, and labor supply; behavior of firms in various kinds of markets; results of competitive and noncompetitive markets in goods, labor, land, and capital; market failure; government policies as sources of and responses to market failure; welfare criteria; limitations of mainstream analysis.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets and multiple exams, including a final exam. They may also include one or more quizzes, short essays, collaborative projects, or presentations.

Prerequisites: ECON 110 and MATH 130 or its equivalent

Enrollment Limit: 30

Enrollment Preferences: Current or prospective Economics majors.

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: Course involves developing and analyzing mathematical models of real-world phenomena, grounded in tools like calculus and game theory. Students are assumed to be comfortable with topics from introductory calculus, including differentiation and integration.

ECON 252 (F)(S) Macroeconomics (QFR)

A study of aggregate economic activity: output, employment, inflation, and interest rates. The class will develop a theoretical framework for analyzing economic growth and business cycles. The theory will be used to evaluate policies designed to promote growth and stability, and to understand economic developments in the U.S. and abroad. Instructors may use elementary calculus in assigned readings, exams and lectures.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets and/or written assignments, midterm(s), and a final exam.

Prerequisites: ECON 110 and 120 and MATH 130 or its equivalent

Enrollment Limit: 30

Enrollment Preferences: Current or prospective Economics majors.

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

ECON 255 (F)(S) Econometrics (QFR)

An introduction to the theory and practice of applied quantitative economic analysis. This course familiarizes students with the strengths and weaknesses of the basic empirical methods used by economists to evaluate economic theory against economic data. Emphasizes both the statistical foundations of regression techniques and the practical application of those techniques in empirical research, with a focus on understanding when a causal interpretation is warranted. Computer exercises will provide experience in using the empirical methods, but no previous computer experience is expected. Highly recommended for students considering graduate training in economics or public policy.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets, multiple exams, a group project, and possible additional assignments or quizzes.

Prerequisites: MATH 130, plus STAT 161, 201 or 202 (or equivalent), plus one course in ECON; STAT 101 will also serve as a prerequisite, but only if taken prior to the fall of 2018

Enrollment Limit: 30

Enrollment Preferences: Current or prospective Economics and Political Economy majors.

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Unit Notes: Students may substitute the combination of STAT 201 and 346 for ECON 255

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: Course teaches research tools necessary to analyze data.

ECON 345 (S) Growth Diagnostics (QFR)

Cross-listings: ECON 545 ECON 345

Primary Cross-listing

Evidence from across the developing world suggests that the "binding constraints" to economic growth can be remarkably heterogeneous--i.e., the growth potential of stagnating or underperforming economies may be unlocked in a large variety of ways. For instance, pre-reform China had been constrained by poor supply incentives in agriculture, whereas Brazil has been held back by an inadequate supply of credit, South Africa by poor employment incentives in manufacturing, El Salvador by insufficient production incentives in tradables, Zimbabwe by bad governance, and so forth. How can developing-country policymakers determine country-specific constraints like these, thus enabling them to pragmatically pursue a selected set of growth-promoting policies rather than attempting to implement a "laundry list" of reforms that are naively based on "best practice" rules-of-thumb? This course will serve as a primer on "growth diagnostics," an empirically-driven analytical framework for identifying the most binding constraints to economic growth in a given country at a point in time, thereby allowing policymakers to develop well-targeted reforms for relaxing these constraints while being cognizant of the nation's prevailing economic, political, and social context. The course will first build on the basic theories and empirics of economic growth to elucidate the diagnostic framework and will then employ a wide range of country-specific case studies to demonstrate how the framework can be operationalized for policy making. Throughout the semester, students will be required to work in groups, each representing a given developing or emerging-market economy, in order to build a growth diagnostic for their group's assigned country by the end of the course.

Requirements/Evaluation: extensive class participation, two short (5-page) papers, two 15-page team papers comprising a country growth diagnostic, and a team presentation on the diagnostic

Prerequisites: for undergraduates ECON 251, ECON 252, and either ECON 255 or STAT 346

Enrollment Limit: 19

Enrollment Preferences: CDE fellows and senior Economics majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 545 (D2) ECON 345 (D2)

Quantative/Formal Reasoning Notes: The course material will draw heavily on mathematical and statistical models of economic growth and macroeconomic development, and students will be required to routinely develop mathematical models and/or conduct econometric analysis in their assignments.

Spring 2022

SEM Section: 01 TR 11:20 am - 12:35 pm Quamrul H. Ashraf

ECON 360 (S) Monetary Economics (QFR)

This course covers a range of theoretical and applied issues bearing on monetary policy as conducted in the U.S. and abroad. Topics to be covered include: the causes of inflation, how central banks manage interest rates, the channels through which monetary policy affects the economy, and the costs and benefits of imposing rules on the conduct of policy. The class will also touch on a number of current issues facing central banks, such as unconventional monetary policy and cryptocurrencies.

Requirements/Evaluation: Two exams, a research paper and/or class presentation

Prerequisites: ECON 252 and 255. Multivariate calculus (MATH 150 or 151) is recommended but not required

Enrollment Limit: 20

Enrollment Preferences: junior and senior Economics majors

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The course entails the use of mathematical economic models, the presentation of quantitative information, and the interpretation of statistical analysis.

Attributes: GBST Economic Development Studies Electives POEC International Political Economy Courses

Spring 2022

LEC Section: 01 MWF 8:30 am - 9:45 am Kenneth N. Kuttner

ECON 373 (F) The Economics of Immigration (QFR)

This course will explore migration across national borders from an economic perspective, with a focus on migration to the United States. Who migrates, and why? What are the impacts on the economies of the origin country and the destination country, and on migrants themselves? What policies shape immigration and enforcement of immigration law, and what are their impacts? What is the role of immigrants in the broader society? We will emphasize empirical analysis as a data-driven way of understanding the economics of immigration.

Class Format: Class will periodically meet in a small-group seminar format.

Requirements/Evaluation: Requirements: active participation, 3 empirical assignments, 2 short papers, 2 presentations, and a final 12-15 page paper.

Prerequisites: Econ 251 and Econ 255, or permission of instructor

Enrollment Limit: 25

Enrollment Preferences: Economics majors

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: This course will use quantitative tools of economics.

Fall 2021

LEC Section: 01 W 7:00 pm - 9:40 pm Tara E. Watson

ECON 378 (F) Long-Run Comparative Development (QFR)

The world today is marred by vast disparities in the standard of living, with about a 30-fold difference in real GDP per capita between the poorest and most affluent of nations. What are the causes of such differences in prosperity across countries? Are the origins of global inequality to be found in underlying differences among societies over the past few decades, the past few centuries, or the past few millennia? If contemporary differences in living standards have such "deep" historical roots, what scope exists for policies to reduce global inequality today? Can we expect inequality to be reduced through some natural process of macroeconomic development, or is it likely to persist unless acted upon by policy? This course will present a unified theory of economic growth for thinking about these and related questions. Examples of issues to be covered include: the Neoclassical growth model and its inefficacy for answering questions about development over long time horizons; Malthusian stagnation across societies during the pre-industrial stage of economic development; the importance of the so-called demographic transition and of human capital formation in the course of industrialization; the persistent influence of colonialism, slavery, and ethnic fragmentation in shaping the quality of contemporary politico-economic institutions; and the enduring effects of geography on comparative development, through its impact on the emergence of agriculture in early human societies and its influence in shaping the composition of traits in populations across the globe.

Class Format: discussion

Requirements/Evaluation: problem sets, at least one exam, a research paper, and a class presentation

Prerequisites: ECON 251, ECON 252, and either ECON 255 or STAT 346

Enrollment Limit: 25

Enrollment Preferences: junior and senior Economics majors

Expected Class Size: 25

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The course material will draw heavily on mathematical and statistical models of economic growth and macroeconomic development. Students will be required to routinely develop and solve sophisticated mathematical models of economic growth, involving the rigorous application of solution concepts from constrained optimization and from optimal control theory. Students will also be required to perform some econometric analyses in their assignments.

ECON 387 (F) Economics of Climate Change (QFR)

Cross-listings: ECON 522 ENVI 387 ECON 387

Primary Cross-listing

This course introduces the economic view of climate change, including both theory and empirical evidence. Given the substantial changes implied by the current stock of greenhouse gases (GHGs) in the atmosphere, we will begin by looking at impacts on agriculture, health, income, and migration. We will consider the distribution of climate damages across poor and wealthy people, both within and across countries. Next we will study adaptation, including capital investments and behavioral changes. We will examine the sources of climate change, especially electricity generation and transportation, and think about optimal policies. Throughout the course we will discuss the limits of the economic approach, pointing out normative questions on which economic theory provides little guidance.

Requirements/Evaluation: problem sets, midterm, group presentation, final exam

Prerequisites: ECON 251, familiarity with statistics

Enrollment Limit: 30

Enrollment Preferences: Junior/Senior Economics majors and CDE fellows

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 522 (D2) ENVI 387 (D2) ECON 387 (D2)

Quantative/Formal Reasoning Notes: The course involves simple calculus-based theory and applied statistics.

ECON 389 (S) Tax Policy in Global Perspective (QFR)

Cross-listings: ECON 389 ECON 514

Secondary Cross-listing

Government policy is important for economic development. To finance their policies, governments must build the fiscal capacity to implement a tax system. In turn, fiscal capacity--the ability for the government to raise revenue--depends on economic development. This endogeneity between fiscal capacity and economic development creates challenges for tax policy in developing countries. Given these challenges, what types of taxes should countries use to raise revenues? How can governments build the fiscal capacity to generate revenue to finance critical services? This class explores tax policy from a global and comparative perspective. Because most students will be CDE fellows, we will emphasize tax policy issues, examples, and evidence that are pertinent to developing countries. However, tax policy lessons are universal so we will learn about tax policies in developed countries, especially issues relevant for transnational transactions. Topics addressed include: how economic principles can be applied to the efficiency and equity consequences of tax policies; how personal income taxes, corporate income taxes, and value-added taxes are designed and administered and how they influence the economy; ideas for fundamental tax reforms; the debate over progressive taxes versus "flat" taxes; how taxes affect

incentives to save and invest; how market failures and administrative problems may influence the optimality of tax policy; the implications of global capital flows and corporate tax avoidance for tax policy; tax holidays and other special tax incentives for investment; empirical evidence on the influence of taxes on foreign direct investment, labor supply, and tax evasion; tax policy towards natural resources such as minerals and oil; case studies of efforts to reform tax administration and reduce tax evasion and corruption; taxes on land and property; taxes on imports and exports; presumptive taxation; and the informal economy and its implications for tax policy.

Requirements/Evaluation: midterm exam, several problem sets, two 10-page essays

Prerequisites: one public economics course or microeconomics course (ECON 504 or ECON 110), and one empirical methods course (POEC 253 or ECON 255, 502, or 503); students who have previously taken ECON 351 will not be enrolled

Enrollment Limit: 19

Enrollment Preferences: CDE students, but undergraduates with the prerequisites are welcome

Expected Class Size: 15-19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 545 (S) Growth Diagnostics (QFR)**Cross-listings:** ECON 545 ECON 345**Secondary Cross-listing**

Evidence from across the developing world suggests that the "binding constraints" to economic growth can be remarkably heterogeneous--i.e., the growth potential of stagnating or underperforming economies may be unlocked in a large variety of ways. For instance, pre-reform China had been constrained by poor supply incentives in agriculture, whereas Brazil has been held back by an inadequate supply of credit, South Africa by poor employment incentives in manufacturing, El Salvador by insufficient production incentives in tradables, Zimbabwe by bad governance, and so forth. How can developing-country policymakers determine country-specific constraints like these, thus enabling them to pragmatically pursue a selected set of growth-promoting policies rather than attempting to implement a "laundry list" of reforms that are naively based on "best practice" rules-of-thumb? This course will serve as a primer on "growth diagnostics," an empirically-driven analytical framework for identifying the most binding constraints to economic growth in a given country at a point in time, thereby allowing policymakers to develop well-targeted reforms for relaxing these constraints while being cognizant of the nation's prevailing economic, political, and social context. The course will first build on the basic theories and empirics of economic growth to elucidate the diagnostic framework and will then employ a wide range of country-specific case studies to demonstrate how the framework can be operationalized for policy making. Throughout the semester, students will be required to work in groups, each representing a given developing or emerging-market economy, in order to build a growth diagnostic for their group's assigned country by the end of the course.

Requirements/Evaluation: extensive class participation, two short (5-page) papers, two 15-page team papers comprising a country growth diagnostic, and a team presentation on the diagnostic**Prerequisites:** for undergraduates ECON 251, ECON 252, and either ECON 255 or STAT 346**Enrollment Limit:** 19**Enrollment Preferences:** CDE fellows and senior Economics majors**Expected Class Size:** 19**Grading:** no pass/fail option, no fifth course option**Distributions:** (D2) (QFR)**This course is cross-listed and the prefixes carry the following divisional credit:**

ENVI 108 (F) Energy Science and Technology (QFR)**Cross-listings:** ENVI 108 PHYS 108**Secondary Cross-listing**

Energy use has skyrocketed in the United States and elsewhere in the world, causing significant economic and political shifts, as well as concerns for the environment. This course will address the physics and technology of energy generation, consumption, and conservation. It will cover a wide range of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating, and building lighting. Students will learn to compare the efficiencies and environmental impacts of various energy sources and uses.

Class Format: twice a week, occasional lab exercises, and a field trip to the college heating plant, all during class hours**Requirements/Evaluation:** weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative**Prerequisites:** high school physics, high school chemistry, and mathematics at the level of MATH 130**Enrollment Limit:** 20**Expected Class Size:** 20**Grading:** yes pass/fail option, yes fifth course option

ENVI 203 (F) Ecology (QFR)

Cross-listings: ENVI 203 BIOL 203

Secondary Cross-listing

This course combines lectures & discussion with field and indoor laboratory exercises to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to help students build skills in data analysis and scientific writing.

Class Format: Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

Requirements/Evaluation: pre-class quizzes, lab reports, two mid-term exams, and a final exam

Prerequisites: BIOL 102, or ENVI 101 or 102, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: students planning to pursue Biology and/or ENVI

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Unit Notes: satisfies the distribution requirement for the Biology major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 203 (D3) BIOL 203 (D3)

Quantative/Formal Reasoning Notes: Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

ENVI 404 (F) Coastal Processes and Geomorphology (QFR)

Cross-listings: ENVI 404 MAST 404 GEOS 404

Secondary Cross-listing

Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces--wind, waves, storms, and people--that shape the coastal zone, as well as the geologic formations--sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs--that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

Class Format: lecture two times a week with a lab one time per week

Requirements/Evaluation: lab reports, tests, and an independent research project

Prerequisites: Either GEOS 104 or GEOS 210; or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: senior Geosciences majors, then juniors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: As a 400-level seminar, this capstone course is intended to build on and extend knowledge and skills students have developed during previous courses in the major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 100 (W) Mathematics Immersion: The Beauty of Numbers (QFR)

This course will be an introduction to logic and number theory, with emphasis throughout on mathematics as a way of thinking. Have you ever wondered what keeps your credit card information safe every time you buy something online Number theory! Number Theory is one of the oldest branches of mathematics. In this course, we will discover the beauty and usefulness of numbers, from ancient Greece to modern cryptography. We will look for patterns, make conjectures, and learn how to prove these conjectures. Starting with nothing more than basic high school algebra, we will develop the logic and critical thinking skills required to realize and prove mathematical results. Topics to be covered include the meaning and content of proof, prime numbers, divisibility, rationality, modular arithmetic, Fermat's Last Theorem, the Golden ratio, Fibonacci numbers, coding theory, and unique factorization. This course is meant to give you an appreciation for numbers and mathematics and to enhance your logical reasoning skills. Although most people will not use calculus or geometry in their jobs or everyday lives, mathematics enhances our abilities to think logically and reason effectively. This skill is useful in all aspects of life. Number theory, in particular, is a great area of mathematics that allows one to jump in right away without a lot of pre-requisite knowledge. We will look at examples, look for patterns, make conjectures, and we will spend a lot of time learning how to rigorously prove those conjectures.

Class Format: Students will attend lecture Monday - Thursday mornings from 10am - noon. In the afternoons, students will attend interactive math labs from approximately 1 - 3 pm Monday - Thursday.

Requirements/Evaluation: Evaluation will be based on daily homework and activities, exams, projects, and participation in class and math labs.

Prerequisites: Permission of a dean.

Enrollment Limit: 20

Enrollment Preferences: Students who need to make up a deficiency.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Unit Notes: This course is designed to count for both full semester, Winter Study, and QFR credit. Once a dean approves enrollment, the Registrar's Office will register students in both MATH 100 and MATH 40.

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: We will be proving theorems and learning mathematical logic.

Winter 2022

LEC Section: 01 MTWR 10:00 am - 12:00 pm MTWR 1:00 pm - 3:00 pm Allison Pacelli

MATH 130 (F)(S) Calculus I (QFR)

Calculus permits the computation of velocities and other instantaneous rates of change by a limiting process called differentiation. The same process also solves "max-min" problems: how to maximize profit or minimize pollution. A second limiting process, called integration, permits the computation of areas and accumulations of income or medicines. The Fundamental Theorem of Calculus provides a useful and surprising link between the two processes. Subtopics include trigonometry, exponential growth, and logarithms.

Requirements/Evaluation: Weekly homework and quizzes, 2 exams during the semester, and one final

Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test); this is an introductory course for students who have not seen calculus before

Enrollment Limit: 30

Enrollment Preferences: first-year students

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students who have previously taken a calculus course may not enroll in MATH 130 without the permission of instructor

LEC Section: 01 TR 8:30 am - 9:45 am Pamela E. Harris

MATH 140 (F)(S) Calculus II (QFR)

Calculus answers two basic questions: how fast is something changing (the derivative) and how much is there (the integral). This course is about integration, and the miracle that unites the derivative and the integral (the Fundamental Theorem of Calculus.) Understanding calculus requires in part the understanding of methods of integration. This course will also solve equations involving derivatives ("differential equations") for population growth or pollution levels. Exponential and logarithmic functions and trigonometric and inverse functions will also play an important role. This course is the right starting point for students who have seen derivatives, but not necessarily integrals, before.

Requirements/Evaluation: homework, quizzes, and/or exams

Prerequisites: MATH 130 or equivalent; students who have received the equivalent of advanced placement of AB 4, BC 3 or higher may not enroll in MATH 140 without the permission of instructor

Enrollment Limit: 50

Enrollment Preferences: based on who needs calculus the soonest

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students who have higher advanced placement must enroll in MATH 150 or above

Distributions: (D3) (QFR)

MATH 151 (F) Multivariable Calculus (QFR)

Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives and multiple integrals. The goal of the course is Stokes Theorem, a deep and profound generalization of the Fundamental Theorem of Calculus. The difference between this course and MATH 150 is that MATH 150 covers infinite series instead of Stokes Theorem. Students with the equivalent of BC 3 or higher should enroll in MATH 151, as well as students who have taken the equivalent of an integral calculus and who have already been exposed to infinite series. For further clarification as to whether MATH 150 or MATH 151 is appropriate, please consult a member of the math/stat department.

Requirements/Evaluation: homework, quizzes, and exams

Prerequisites: AP BC 3 or higher or integral calculus with infinite series

Enrollment Limit: 50

Enrollment Preferences: First-years, sophomores, and juniors

Expected Class Size: 45

Grading: yes pass/fail option, yes fifth course option

Unit Notes: MATH 151 satisfies any MATH 150 prerequisite; credit will not be given for both MATH 150 and MATH 151

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course builds quantitative skills

Fall 2021

LEC Section: 01 MWF 8:00 am - 8:50 am Colin C. Adams

MATH 200 (F)(S) Discrete Mathematics (QFR)

In contrast to calculus, which is the study of continuous processes, this course examines the structure and properties of finite sets. Topics to be covered include mathematical logic, elementary number theory, mathematical induction, set theory, functions, relations, elementary combinatorics and probability, and graphs. Emphasis will be given on the methods and styles of mathematical proofs, in order to prepare the students for more advanced math courses.

Requirements/Evaluation: The grade will be based on homework, quizzes and 4 exams.

Prerequisites: Calculus at the level of an AP course or Williams College Math 130 or 140. Students who have taken a 300-level or 400-level math

course should obtain permission of the instructor before enrolling.

Enrollment Limit: 50

Enrollment Preferences: Preference given to first and second year students intending to major in mathematics or computer science.

Expected Class Size: 50

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course involves developing the formal mathematical language of logic and set theory. It also involves using quantitative tools to solve problems relating to combinatorics, probability, and other fields of discrete mathematics.

LEC Section: 01 MWF 9:00 am - 9:50 am Lori A. Pedersen

MATH 210 (S) Mathematical Methods for Scientists (QFR)

Cross-listings: PHYS 210 MATH 210

Secondary Cross-listing

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit: 50

Enrollment Preferences: sophomores and juniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 210 (D3) MATH 210 (D3)

Quantative/Formal Reasoning Notes: This course will have weekly problem sets using advanced calculus methods

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am David R. Tucker-Smith

MATH 250 (F)(S) Linear Algebra (QFR)

Many social, political, economic, biological, and physical phenomena can be described, at least approximately, by linear relations. In the study of systems of linear equations one may ask: When does a solution exist? When is it unique? How does one find it? How can one interpret it geometrically? This course develops the theoretical structure underlying answers to these and other questions and includes the study of matrices, vector spaces, linear independence and bases, linear transformations, determinants and inner products. Course work is balanced between theoretical and computational, with attention to improving mathematical style and sophistication.

Requirements/Evaluation: homework and exams

Prerequisites: MATH 150/151 or MATH 200

Enrollment Limit: 40

Enrollment Preferences: Students who have officially declared a major that requires Math 250.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: In this course, students will engage in both quantitative and formal reasoning.

MATH 303 (F) Introduction to Dynamics, p-Adics, and Measure (QFR)

At its most basic level a dynamical system consists of a set of points and a transformation or map acting on the set (i.e., sending points in the set to other points in the set). In this setting we can already ask about the existence, and prevalence, of periodic points (points that come back to themselves). One can also ask about the orbit of a point: the set of points that is obtained as one iteratively applies the transformation the point. An important dynamical notion that comes up here is that of chaos. The course will start by studying basic dynamical systems using notions from calculus. Then we will introduce the p-adic numbers and use them to study dynamical systems. The course will end with an exploration of the notion of measure and its connection with dynamical systems.

Requirements/Evaluation: Homework, class participation, exams.

Prerequisites: Math 250.

Enrollment Limit: 30

Enrollment Preferences: Juniors

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Mathematics

Fall 2021

LEC Section: 01 MWF 10:00 am - 10:50 am Cesar E. Silva

MATH 307 (S) Computational Linear Algebra (QFR)

Linear algebra is of central importance in the quantitative sciences, including application areas such as image and signal processing, data mining, computational finance, structural biology, and much more. When the problems must be solved computationally, approximation, round-off errors, convergence, and efficiency matter, and traditional linear algebra techniques may fail to succeed. We will adopt linear algebra techniques on a large scale, implement them computationally, and apply them to core problems in scientific computing. Topics may include: systems of linear and nonlinear equations; approximation and statistical function estimation; optimization; interpolation; data scraping; singular value decomposition; and more. This course could also be considered a course in numerical analysis or computational science.

Class Format: This course is taught in a flipped classroom format. Students read and watch lecture videos prior to each class session. The instructor uses class time for discussion and collaborative learning activities. This course will be a good fit for students with a strong interest in applied mathematics and a willingness to devote significant effort to learning/doing computer programming.

Requirements/Evaluation: Students will complete checkpoint quizzes, regularly assigned homework problems and projects, and reflective writing

assignments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows the policy of "ungrading." Over the course of the semester, students will develop a rubric to assess their own learning and will evaluate themselves according to this rubric.

Prerequisites: MATH 250; COMP 134 or equivalent prior experience with computer programming (in any language)

Enrollment Limit: 30

Enrollment Preferences: Preference given to majors and prospective majors.

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course involves developing the formal mathematical language of linear algebra. It also involves using quantitative tools to solve problems relating to a wide range of applications in the physical and social sciences.

Spring 2022

LEC Section: 01 TR 8:30 am - 9:45 am Chad M. Topaz

MATH 308 (S) Mathematical and Computational Approaches to Social Justice (DPE) (QFR)

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial pair will carry out a substantial project in one of the following areas: criminal justice, education equity, environmental justice, health care equity, and inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science, mathematics, and computation.

Class Format: This is a research-based tutorial.

Requirements/Evaluation: To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows the policy of "ungrading." Over the course of the semester, students will develop a rubric to assess their own learning and will evaluate themselves according to this rubric.

Prerequisites: Across each tutorial pair: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

Enrollment Limit: 10

Enrollment Preferences: This is a tutorial and hence is capped at 10 students. Students interested in enrolling should contact the instructor as soon as possible. The instructor will ask for a brief statement of interest and selected other information.

Expected Class Size: 10

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (DPE) (QFR)

Difference, Power, and Equity Notes: Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

Quantative/Formal Reasoning Notes: Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

Spring 2022

TUT Section: T1 TBA Chad M. Topaz

MATH 309 (S) Differential Equations (QFR)

Ordinary differential equations (ODEs) frequently arise as models of phenomena in the natural and social sciences. This course presents core ideas of ODEs from an applied standpoint. Topics covered early in the course may include numerical solutions, separation of variables, integrating factors, and constant coefficient linear equations. Later, we will focus on nonlinear ODEs, for which it is usually impossible to find analytical solutions. Tools from dynamical systems will be introduced to allow us to obtain information about the behavior of the ODEs without explicitly knowing the solution.

Requirements/Evaluation: quizzes/exams, problem sets, participation

Prerequisites: MATH 150/151 and MATH 250

Enrollment Limit: 40

Enrollment Preferences: discretion of the instructor

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: 300-level mathematics course

Spring 2022

LEC Section: 01 MWF 12:00 pm - 12:50 pm Julie C. Blackwood

MATH 321 (S) Knot Theory (QFR)

Take a piece of string, tie a knot in it, and glue the ends together. The result is a knotted circle, known as a knot. For the last 100 years, mathematicians have studied knots, asking such questions as, "Given a nasty tangled knot, how do you tell if it can be untangled without cutting it open?" Some of the most interesting advances in knot theory have occurred in the last ten years. This course is an introduction to the theory of knots. Among other topics, we will cover methods of knot tabulation, surfaces applied to knots, polynomials associated to knots, and relationships between knot theory and chemistry and physics. In addition to learning the theory, we will look at open problems in the field.

Requirements/Evaluation: problem sets, midterms, a paper and a final exam

Prerequisites: MATH 250 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: seniors, junior, sophomores, first year

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a quantitative course.

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am Colin C. Adams

MATH 329 (F) Discrete Geometry (QFR)

Discrete geometry is one of the oldest and most consistently vibrant areas of mathematics, stretching from the Platonic Solids of antiquity to the modern day applications of convex optimization and linear programming. In this course we will learn about polygons and their higher-dimensional cousins, polyhedra and polytopes, and the various ways to describe, compute, and classify such objects. We will learn how these objects and ideas can be applied to other areas, from computation and optimization to studying areas of math like algebraic geometry. Throughout this course we will be engaging with mathematical work and literature from as old as 500 BCE and as recent as "posted to the internet yesterday."

Requirements/Evaluation: Problem sets, exams, and a final project

Prerequisites: MATH 200 or Math 250, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: Sophomores, juniors, and seniors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: All of the content in this course is quantitative or formal reasoning.

Fall 2021

LEC Section: 01 MWF 12:00 pm - 12:50 pm Ralph E. Morrison

MATH 335 (F) Decisions, Games, and Evolutionary Dynamics (QFR)

Given goals, options, and uncertainty, how does one make a rational choice? What happens when we interact with others who are also choosing? How might this play out over time? We will first cover the principles of decision theory including preference, uncertainty, utility, imperfect information, and rational choice. The majority of the course will be spent on the main topics of game theory: sequential games, bimatrix games, parlor games, Nash equilibria, bargaining, repeated games, Bayesian belief, and signaling. Applying these principles to populations that evolve over time through variation, selection, and copying, we will develop basic models of the dynamics of evolution.

Class Format: lecture

Requirements/Evaluation: Weekly homework, midterm exams, and a final.

Prerequisites: Math 150/151 and Math 250. Some background in probability and differential equations is highly recommended.

Enrollment Limit: 35

Enrollment Preferences: Math majors.

Expected Class Size: 35

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Lots of math.

MATH 341 (F)(S) Probability (QFR)

Cross-listings: STAT 341 MATH 341

Primary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 150 and MATH 250 or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

Spring 2022

LEC Section: 01 MWF 11:00 am - 11:50 am Cesar E. Silva

MATH 351 (S) Applied Real Analysis (QFR)

Why is the product of two negative numbers positive? Why do we depict the real numbers as a line? Why is this line continuous, and what does that actually mean? More fundamentally, what is the definition of a real number? Real analysis addresses such questions, delving into the structure of real numbers and functions on them. Along the way we'll discuss sequences and limits, series, completeness, compactness, derivatives and integrals, and metric spaces. This course is excellent preparation for graduate studies in mathematics, statistics, and economics. Math 350 and Math 351 will cover the same material for the first part of the course. Math 350 will then delve deeper into the abstract structures of topological and metric spaces, while Math 351 will closely examine some foundational constructs from differential equations, probability, and optimization.

Class Format: Hybrid format. There may be class meetings; remote students will be fully accommodated.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 250 or permission of the instructor.

Enrollment Limit: 20

Enrollment Preferences: Seniors

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Spring 2022

LEC Section: 01 MWF 12:00 pm - 12:50 pm Cesar E. Silva

MATH 355 (F)(S) Abstract Algebra (QFR)

Algebra gives us tools to solve equations. The integers, the rationals, and the real numbers have special properties which make algebra work according to the circumstances. In this course, we generalize algebraic processes and the sets upon which they operate in order to better understand, theoretically, when equations can and cannot be solved. We define and study abstract algebraic structures such as groups, rings, and fields, as well as the concepts of factor group, quotient ring, homomorphism, isomorphism, and various types of field extensions. This course introduces students to abstract rigorous mathematics.

Requirements/Evaluation: Problem sets and exams

Prerequisites: MATH 250 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: Students who have officially declared a major that requires Math 355.

MATH 361 (F)(S) Theory of Computation (QFR)

Cross-listings: MATH 361 CSCI 361

Secondary Cross-listing

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Class Format: Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

Requirements/Evaluation: online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination

Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor

Enrollment Limit: 24(12/con)

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 383 (F) Complex Analysis (QFR)

The calculus of complex-valued functions turns out to have unexpected simplicity and power. As an example of simplicity, every complex-differentiable function is automatically infinitely differentiable. As examples of power, the so-called "residue calculus" permits the computation of "impossible"

integrals, and "conformal mapping" reduces physical problems on very general domains to problems on the round disc. The easiest proof of the Fundamental Theorem of Algebra, not to mention the first proof of the Prime Number Theorem, used complex analysis.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 350 or MATH 351 or permission of instructor

Enrollment Limit: 40

Enrollment Preferences: 40

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Quantative/Formal Reasoning Notes: Advanced mathematics course with weekly or daily problem sets.

Fall 2021

LEC Section: 01 MWF 11:00 am - 11:50 am Steven J. Miller

MATH 394 (S) Galois Theory (QFR)

Some equations--such as $x^5 - 1 = 0$ --are easy to solve. Others--such as $x^5 - x - 1 = 0$ --are very hard, if not impossible (using standard mathematical operations). Galois discovered a deep connection between field theory and group theory that led to a criterion for checking whether or not a given polynomial can be easily solved. His discovery also led to many other breakthroughs, for example proving the impossibility of squaring the circle or trisecting a typical angle using compass and straightedge. From these not-so-humble beginnings, Galois theory has become a fundamental concept in modern mathematics, from topology to number theory. In this course we will develop the theory and explore its applications to other areas of math.

Requirements/Evaluation: written homeworks and exams

Prerequisites: MATH 355

Enrollment Limit: 50

Enrollment Preferences: discretion of the instructor

Expected Class Size: 10

MATH 401 (S) Functional Analysis (QFR)

Functional analysis can be viewed as linear algebra on infinite-dimensional spaces. It is a central topic in Mathematics, which brings together and extends ideas from analysis, algebra, and geometry. Functional analysis also provides the rigorous mathematical background for several areas of theoretical physics (especially quantum mechanics). We will introduce infinite-dimensional spaces (Banach and Hilbert spaces) and study their properties. These spaces are often spaces of functions (for example, the space of square-integrable functions). We will consider linear operators on Hilbert spaces and investigate their spectral properties. A special attention will be dedicated to various operators arising from mathematical physics, especially the Schrodinger operator.

Class Format: lecture

Requirements/Evaluation: weekly problem sets, two midterm exams, final exam

Prerequisites: MATH 350 or 351 or permission of instructor

Enrollment Limit: 40

Enrollment Preferences: Mathematics and Physics majors; seniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Quantative/Formal Reasoning Notes: This is an advance course in Mathematical Analysis.

Spring 2022

LEC Section: 01 MWF 10:00 am - 10:50 am Mihai Stoiciu

MATH 405 (S) Representation Theory and Special Functions (QFR)

Representation theory is at the heart of much of modern mathematics. It provides a link between ideas of symmetries, groups and matrices. It has applications from number theory to Fourier Analysis to elementary particle theory. In part, representation theory is a method for producing interesting functions. While not having a single definition, special functions are "functions that have names." Over the last few hundred years, scientists have needed to define and develop certain families of functions, in order to describe different physical phenomena. These families started to be named, and include Bessel functions, Hermite functions, Laguerre functions and more generally hypergeometric functions. In recent years it has been seen that these different types of functions are best understood through the lens of symmetry and in particular via representation theory. This course will be an introduction to representation theory, starting with finite groups, while at the same time being an introduction to special functions. Thus the course will be a mix of abstract algebra, matrices, calculus and analysis.

Requirements/Evaluation: By exams and homework

Prerequisites: Math 350 or Math 351, and Math 355

Enrollment Limit: 50

MATH 411 (F) Commutative Algebra (QFR)

Commutative Algebra is an essential area of mathematics that provides indispensable tools to many areas, including Number Theory and Algebraic Geometry. This course will introduce you to the fundamental concepts for the study of commutative rings, with a special focus on the notion of "prime ideals," and how they generalize the well-known notion of primality in the set of integers. Commutative algebra has applications ranging from algebraic geometry to coding theory. For example, one can use commutative algebra to create error correcting codes. It is perhaps most often used, however, to study curves and surfaces in different spaces. To understand these structures, one must study polynomial rings over fields. This course will be an introduction to commutative algebra. Possible topics include polynomial rings, localizations, primary decomposition, completions, and modules.

Requirements/Evaluation: homework and exams

Prerequisites: MATH 355 or permission of instructor

Enrollment Limit: 25

Enrollment Preferences: Math majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Fall 2021

MATH 435 (F) Chip-firing Games on Graphs (QFR)

Starting with a graph (a collection of nodes connected by edges), place an integer number of poker chips on each vertex. Move these chips around according to "chip-firing moves", where a vertex donates a chip along each edge. These simple and intuitive games quickly lead to challenging mathematics with applications ranging from dynamical systems to algebraic geometry. In this course we'll build up a mathematical framework for studying chip-firing games, drawing on linear algebra and group theory. We'll discover algorithms for winning these games, and study their complexity; and we'll prove graph-theoretic versions of famous results like the Riemann-Roch theorem. A key component of this course will be research projects that draw on open questions about chip-firing.

Requirements/Evaluation: Weekly homework for the first eight weeks, four quizzes spaced evenly throughout the semester, and a cumulative project worked on throughout the semester (10-20 pages)

Prerequisites: Math 250 and Math 355

Enrollment Limit: 25

Enrollment Preferences: Math majors who need the course to graduate

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

MATH 458 (S) Algebraic Combinatorics (WS) (QFR)

Algebraic combinatorics is a branch of mathematics at the intersection of combinatorics and algebra. On the one hand, we study combinatorial structures using algebraic techniques, while on the other we use combinatorial arguments and methods to solve problems in algebra. In this collaborative project-based course, students will select among the presented topics, develop research questions, and undertake original research in the field. Student assessment is based building positive and supportive collaborative working relationships with their peers, drafts of research project manuscript, and oral presentations.

Requirements/Evaluation: Drafts of manuscript, oral presentations, reflections, peer collaboration skills

Prerequisites: MATH 200 and MATH 355

Enrollment Limit: 25

Enrollment Preferences: Senior mathematics majors, students with programming experience, students with interests in algebra and combinatorics.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS) (QFR)

Writing Skills Notes: This course will require multiple revisions of a manuscript on the mathematical text and collaborative work. The final result will be a 10-20 page research article and the course will be designed as a writing intensive course.

Quantative/Formal Reasoning Notes: This is a mathematics course in the area of algebraic combinatorics and is a quantitative and formal reasoning course.

Spring 2022

SEM Section: 01 Cancelled

PHIL 203 (F) Logic and Language (QFR)

Logic is the study of reasoning and argument. More particularly, it concerns itself with the difference between good and bad reasoning, between strong and weak arguments. We all examine the virtues and vices of good arguments in both informal and formal systems. The goals of this course are to

improve the critical thinking of the students, to introduce them to sentential and predicate logic, to familiarize them with enough formal logic to enable them to read some of the great works of philosophy, which use formal logic (such as Wittgenstein's *Tractatus*), and to examine some of the connections between logic and philosophy.

Class Format: discussion

Requirements/Evaluation: a midterm, a final, frequent homework and problem sets

Prerequisites: none

Enrollment Limit: 40/sect

Enrollment Preferences: Philosophy majors, seniors, juniors, sophomores, first-years in that order.

Expected Class Size: 40/sect

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

PHYS 108 (F) Energy Science and Technology (QFR)

Cross-listings: ENVI 108 PHYS 108

Primary Cross-listing

Energy use has skyrocketed in the United States and elsewhere in the world, causing significant economic and political shifts, as well as concerns for the environment. This course will address the physics and technology of energy generation, consumption, and conservation. It will cover a wide range of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating, and building lighting. Students will learn to compare the efficiencies and environmental impacts of various energy

sources and uses.

Class Format: twice a week, occasional lab exercises, and a field trip to the college heating plant, all during class hours

Requirements/Evaluation: weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative

Prerequisites: high school physics, high school chemistry, and mathematics at the level of MATH 130

Enrollment Limit: 20

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

Fall 2021

LEC Section: 01 TR 11:20 am - 12:35 pm Henrik Ronellenfitsch

PHYS 131 (F) Introduction to Mechanics (QFR)

We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.

Requirements/Evaluation: exams, labs, and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead

Enrollment Limit: 30

Enrollment Preferences: seniority

Expected Class Size: 60

Grading: yes pass/fail option, yes fifth course option

Unit Notes: PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This class will have weekly problem sets requiring substantial quantitative reasoning

Fall 2021

LAB Section: 03 T 1:00 pm - 4:00 pm Graham K. Giovanetti

LAB Section: 02 M 1:00 pm - 4:00 pm Graham K. Giovanetti

LEC Section: 01 MWF 11:00 am - 11:50 am Graham K. Giovanetti

PHYS 132 (S) Electromagnetism and the Physics of Matter (QFR)

This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics, radioactivity, and uses of radiation.

Class Format: lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately

every other week

Requirements/Evaluation: weekly problem sets, labs, quizzes and exams

Prerequisites: PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)

Enrollment Limit: 22 per lab

Enrollment Preferences: sophomores

Expected Class Size: 60

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Significant homework, exams, quizzes requiring mathematical and physical reasoning.

Spring 2022

LAB Section: 02 M 1:00 pm - 4:00 pm Frederick W. Strauch

LAB Section: 03 T 1:00 pm - 4:00 pm Frederick W. Strauch

PHYS 141 (F) Mechanics and Waves (QFR)

This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

Class Format: lecture, three hours per week; laboratory, three hours approximately every other week; conference section, one hour approximately every other week

Requirements/Evaluation: weekly problem sets, labs, three or more short quizzes/tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: high school physics and MATH 130 or equivalent placement, or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: first-year students and science majors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

Fall 2021

LAB Section: 02 M 1:00 pm - 4:00 pm Protik K. Majumder

PHYS 142 (S) Foundations of Modern Physics (QFR)

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires we rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system.

This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of

physics or as the basis for future advanced study of these topics.

Class Format: lecture, two hours weekly; problem-solving conference session, one hour weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and discussion of research literature (limit 10 per lab, 14 per conference section)

Requirements/Evaluation: weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151

Enrollment Limit: 14/C, 10/L

Enrollment Preferences: first-year students

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

LEC Section: 01 WF 11:00 am - 11:50 am Catherine Kealhofer

PHYS 151 (F) Seminar in Modern Physics (QFR)

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity has extended physics into the realm of high speeds and high energies and requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our notions of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course covers the same core material as PHYS 142 but in a small seminar format for students with strong prior preparation in physics.

Class Format: Two 50-minute lectures per week, one 50-minute conference section per week, one 3-hour lab per week

Requirements/Evaluation: class participation, weekly lab/conference assignments, weekly problem sets, final paper, two hour-exams and a final exam;

Prerequisites: placement by the department (see "advanced placement" section in the description about the department). Students may take either PHYS 142 or PHYS 151 but not both

Enrollment Limit: 18

Enrollment Preferences: first-years

Expected Class Size: 18

Grading: yes pass/fail option, yes fifth course option

Unit Notes: this is a small seminar designed for first-year students who have placed out of PHYS 141

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: besides the final paper, all assignments in the course have a substantial quantitative component

Fall 2021

CON Section: 03 M 7:00 pm - 7:50 pm Catherine Kealhofer

LAB Section: 04 W 1:00 pm - 4:00 pm Catherine Kealhofer

LEC Section: 01 WF 11:00 am - 11:50 am Catherine Kealhofer

CON Section: 02 M 11:00 am - 11:50 am Catherine Kealhofer

PHYS 201 (F) Electricity and Magnetism (QFR)

The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell's equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: problem sets, labs/conference section assignments, two take-home midterms, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151

Enrollment Limit: 10 per lab

Enrollment Preferences: prospective physics majors, then by seniority

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

Fall 2021

LAB Section: 03 W 1:00 pm - 4:00 pm David R. Tucker-Smith

LAB Section: 02 T 1:00 pm - 4:00 pm David R. Tucker-Smith

LEC Section: 01 MWF 10:00 am - 10:50 am David R. Tucker-Smith

PHYS 202 (S) Vibrations, Waves and Optics (QFR)

Waves and oscillations characterize many different physical systems, including vibrating strings, springs, water waves, sound waves, electromagnetic waves, and gravitational waves. Quantum mechanics even describes particles with wave functions. Despite these diverse settings waves exhibit several common characteristics, so that the understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. The rest of the course focuses on electromagnetic waves and in particular on optical examples of wave phenomena. In addition to well known optical effects such as interference and diffraction, we will study a number of modern applications of optics such as short pulse lasers and optical communications. Throughout the course mathematical methods useful for higher-level physics will be introduced.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: problem sets, labs, in-class tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 201; co-requisite: PHYS/MATH 210 or MATH 209 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: sophomores

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course has substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

LAB Section: 02 T 1:00 pm - 4:00 pm Graham K. Giovanetti

PHYS 210 (S) Mathematical Methods for Scientists (QFR)

Cross-listings: PHYS 210 MATH 210

Primary Cross-listing

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit: 50

Enrollment Preferences: sophomores and juniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 210 (D3) MATH 210 (D3)

Quantative/Formal Reasoning Notes: This course will have weekly problem sets using advanced calculus methods

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am David R. Tucker-Smith

PHYS 301 (F) Quantum Physics (QFR)

This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics. After a brief discussion of historical origins of the quantum theory, we introduce the Schrodinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309

Enrollment Limit: 20

Enrollment Preferences: physics majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Phys 301 relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

PHYS 302 (S) Statistical Mechanics & Thermodynamics (QFR)

Macroscopic objects are made up of huge numbers of fundamental particles interacting in simple ways--obeying the Schrödinger equation, Newton's and Coulomb's Laws--and these objects can be described by macroscopic properties like temperature, pressure, magnetization, heat capacity, conductivity, etc. In this course we will develop the tools of statistical physics, which will allow us to predict the cooperative phenomena that emerge in large ensembles of interacting particles. We will apply those tools to a wide variety of physical questions, including the behavior of gases, polymers, heat engines, biological and astrophysical systems, magnets, and electrons in solids.

Class Format: lecture/discussion three hours per week and weekly laboratory work

Requirements/Evaluation: weekly problem sets, exams, and labs, all of which have a substantial quantitative component

Prerequisites: required: PHYS 201, PHYS/MATH 210 or MATH 309; recommended: PHYS 202, PHYS 301

Enrollment Limit: 10 per lab

Enrollment Preferences: physics majors

Expected Class Size: 10 per lab

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

PHYS 312 (S) Philosophical Implications of Modern Physics (QFR)

Cross-listings: STS 312 PHYS 312 PHIL 312

Primary Cross-listing

Some of the discoveries made by physicists over the last century seem to show that our common sense views are deeply at odds with our most sophisticated and best confirmed scientific theories. The course will present the essential ideas of relativity theory and quantum theory and explore their implications for philosophy. We will ask, for example, what these theories tell us about the nature of space, time, probability and causality.

Requirements/Evaluation: attendance, participation, problem sets, exams, six 1- to 2-page papers and a 12- to 15-page term paper

Prerequisites: MATH 140, high-school physics, and either a 200-level course in PHIL or a 100-level course in PHYS

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors and Physics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Fall 2021

TUT Section: T1 F 1:10 pm - 2:25 pm Frederick W. Strauch

PHYS 418 (S) Gravity (QFR)

This course is an introduction Einstein's theory of general relativity. We begin with a review of special relativity, emphasizing geometrical aspects of Minkowski spacetime. Working from the equivalence principle, we then motivate gravity as spacetime curvature, and study in detail the Schwarzschild geometry around a spherically symmetric mass. After this application, we use tensors to develop Einstein's equation, which describes how energy density curves spacetime. With this equation in hand we study the Friedmann-Robertson-Walker geometries for an expanding universe, and finally, we linearize Einstein's equation to develop the theory of gravitational waves.

Requirements/Evaluation: weekly problem sets, a midterm exam, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 301 or PHYS 405 or PHYS 411, or permission of instructor

Enrollment Limit: none

Enrollment Preferences: none

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: All problem sets and exams will have a substantial quantitative component.

Spring 2022

POEC 253 (F) Empirical Methods in Political Economy (QFR)

This course introduces students to common empirical tools used in policy analysis and implementation. The broad aim is to train students to be discriminating consumers of public policy-relevant research. The emphasis in the course is on intuitive understanding of the central concepts. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; random variables and distributions; statistical estimation, inference and hypothesis testing; and modeling using multiple regression, with a particular focus on understanding whether and how relationships between variables can be determined to be causal--an essential requirement for effective policy formation. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

Requirements/Evaluation: Problem sets, group project, midterm exam, final exam

Prerequisites: MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255

Enrollment Limit: 20

Enrollment Preferences: Political Economy majors, Environmental Policy majors and sophomores

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Unit Notes: does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.

STAT 101 (F)(S) Elementary Statistics and Data Analysis (QFR)

It is impossible to be an informed citizen in the world today without an understanding of data and information. Whether opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines or consumer webdata, we need to be able to separate the signal from the noise. We will learn the statistical methods used to analyze and interpret data from a wide variety of sources. The goal of the course is to help reach conclusions and make informed decisions based on data.

Requirements/Evaluation: weekly homework, quizzes, exams, and a project

Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test)

Enrollment Limit: 50

Enrollment Preferences: juniors and seniors

Expected Class Size: 35

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students with MATH130 but no statistics should enroll in STAT161; students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161/201 should enroll in STAT 202.

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: It is a quantitative course.

STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)

This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

Requirements/Evaluation: students complete homework, quizzes, exams (including take-home exams), and a project. Students will need to get familiar with the statistical software STATA.

Prerequisites: MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

Enrollment Limit: 40

Enrollment Preferences: Economics majors, sophomores

Expected Class Size: 40

Grading: no pass/fail option, no fifth course option

Unit Notes: Students with calculus background should consider STAT 201 or 202. Students without any calculus background should consider STAT 101. Please refer to the placement chart on the Math&Stat department website for more information.

STAT 201 (F)(S) Statistics and Data Analysis (QFR)

Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped

back, "Data, data, data! I can't make bricks without clay." In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

Requirements/Evaluation: weekly homework and projects, midterm exams, and a final exam.

Prerequisites: MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent

Enrollment Limit: 45

Enrollment Preferences: Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors

Expected Class Size: 45

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Students will learn to interpret, choose, carry out, and communicate analyses of data.

STAT 202 (F)(S) Introduction to Statistical Modeling (QFR)

Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

Class Format: Class meetings will discuss questions from lecture, dive further into the material, and work on examples. You'll use chat and discussion boards to build community, study with classmates, and ask questions outside of class time. The professor and TAs will also offer optional synchronous office hours/review sessions.

Requirements/Evaluation: Homework problems; quizzes; a final project (on a topic that interests you!); midterm and final exams. You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.

Prerequisites: AP Statistics 4 or 5, or STAT 101, or STAT 161, or STAT 201, or permission of instructor

Enrollment Limit: 40

Enrollment Preferences: Prospective Statistics majors and more senior students

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students with a 4 on the AP Stats exam should contact the department for proper placement

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

STAT 319 (S) Statistical Computing (QFR)

This course introduces a variety of computational and data-centric topics of applied statistics, which are broadly useful for acquiring, manipulating, visualizing, and analyzing data. We begin with the R language, which will be used extensively throughout the course. Then we'll introduce a variety of other useful tools, including the UNIX environment, scripting analyses using bash, databases and the SQL language, alternative data formats, techniques for visualizing high-dimensional data, and text manipulation using regular expressions. We'll also cover some modern statistical techniques along the way, which are made possible thanks to advances in computational power. This course is strongly computer oriented, and assignments will be project-based.

Requirements/Evaluation: based primarily on projects, homework, and exams

Prerequisites: STAT 201 or 202 and CSCI 134, 135, or 136

Enrollment Limit: 30

Enrollment Preferences: juniors and seniors, Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses statistical tools and programming techniques to acquire data, create visualizations, and make future predictions.

Spring 2022

LEC Section: 01 TF 1:10 pm - 2:25 pm Daniel B. Turek

STAT 341 (F)(S) Probability (QFR)

Cross-listings: STAT 341 MATH 341

Secondary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 150 and MATH 250 or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STAT 341 (D3) MATH 341 (D3)

Quantative/Formal Reasoning Notes: This is a 300-level Math/Stat course.

Fall 2021

LEC Section: 01 MWF 9:00 am - 9:50 am Steven J. Miller

Spring 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu

STAT 342 (S) Introduction to Stochastic Processes (QFR)

Stochastic processes are mathematical models for random phenomena evolving in time or space. Examples include the number of people in a queue at time t or the accumulated claims paid by an insurance company in an interval of time t . This course introduces the basic concepts and techniques of stochastic processes used to construct models for a variety of problems of practical interest. The theory of Markov chains will guide our discussion as we cover topics such as martingales, random walks, Poisson process, birth and death processes, and Brownian motion.

Requirements/Evaluation: weekly homework/labs, classwork, and exams

Prerequisites: STAT 341

Enrollment Limit: 30

Enrollment Preferences: senior Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a statistics class with a focus on mathematical skills and translating real world phenomena into mathematical descriptions.

Spring 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Elizabeth M. Upton

STAT 344 (F) Statistical Design of Experiments (QFR)

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially, e-commerce are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

Requirements/Evaluation: Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).

Prerequisites: STAT 161, 201, 202, or equivalent, and Math 140 or equivalent, or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Statistics majors, seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2021

LEC Section: 01 MWF 12:00 pm - 12:50 pm Richard D. De Veaux

STAT 346 (F)(S) Regression Theory and Applications (QFR)

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables.

This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear, logistic and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

Requirements/Evaluation: Weekly homework, midterm exam, final exam, end-of-year project.

Prerequisites: MATH 250, MATH/STAT 341 (may be taken concurrently) and at least one of STAT 201 or 202. Or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: Statistics Majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am Elizabeth M. Upton

STAT 358 (S) Introduction to Categorical Data Analysis (QFR)

This course focuses on methods for analyzing categorical response data. In contrast to continuous data, categorical data consist of observations classified into two or more categories. Traditional tools of statistical data analysis (such as linear regression) are not designed to handle such data and pose inappropriate assumptions. We will develop methods specifically designed for modeling categorical data, with applications in the social and biological sciences as well as in medical research, engineering and economics. This course has two parts. The first part will discuss statistical inference for parameters of categorical distributions (Bernoulli, Binomial, Multinomial, Poisson) and for measures of association arising in contingency tables (difference and ratio of proportions and odds ratios). Inferential methods covered include Wald, score and likelihood ratio tests and confidence intervals, as well as the bootstrap. The longer second part will focus on statistical modeling of categorical response data via generalized linear models, with a heavy focus on logistic regression models with both quantitative and categorical predictors and their interactions. Model fitting and inference will be based on maximum likelihood and carried out via R.

Requirements/Evaluation: Weekly homework assignments consisting of exercises from the textbook as well as data analysis problems, carried out using R. Occasional short in-class quizzes at the beginning of class. One Midterm (with both in-class and take-home component). Final Project with presentation. Final exam. Homework accounts for roughly 15% of the grade, quizzes for another 15%, midterm (in-class and take-home combined) and final for about 30% each, and project for the remaining 10%.

Prerequisites: STAT 346: Regression and Forecasting

Enrollment Limit: 15

Enrollment Preferences: stats majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Students learn how to analyze data and communicate results.

Spring 2022

LEC Section: 01 TR 11:20 am - 12:35 pm Bernhard Klingenberg

STAT 360 (S) Statistical Inference (QFR)

How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited

and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.

Class Format: For the Spring 2021 semester, synchronous zoom lectures are planned, where the instructor uses Google's jamboard to interact with students

Requirements/Evaluation: Homework, Quizzes, Exams

Prerequisites: MATH 250, STAT 201 or 202, STAT 341

Enrollment Limit: 15

Enrollment Preferences: Statistics majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: A rigorous mathematical course laying the foundation for reasoning with data

Spring 2022

LEC Section: 01 TR 8:30 am - 9:45 am Bernhard Klingenberg

STAT 365 (F) Bayesian Statistics (QFR)

The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes' Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.

Requirements/Evaluation: homework and exams

Prerequisites: STAT 201 and MATH 150 and 250, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: juniors and seniors, Statistics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Fall 2021

LEC Section: 01 TF 1:10 pm - 2:25 pm Daniel B. Turek

STAT 442 (S) Statistical Learning and Data Mining (QFR)

In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

Class Format: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Requirements/Evaluation: weekly homework, exams and an end-of-term project

Prerequisites: STAT 346 or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is an advanced statistics class involving theory and application of statistical methods to data.

- Saadia Yacoob, Assistant Professor of Religion

MAJOR

The major in Religion is designed to perform two related functions: to expose the student to the methods and issues involved in the study of religion as a phenomenon of psychological, sociological, and cultural/historical dimensions; and to confront students with the beliefs, practices, and values of specific religions through a study of particular religious traditions. It is a program that affords each student an opportunity to fashion their own sequence of study within a prescribed basic pattern constructed to ensure both coherence and variety. Beginning with the class of 2016, the major in Religion will consist of at least nine semester courses as follows:

Required Sequence Courses

REL 200 Theories and Methods in the Study of Religion

One 300-level seminar or tutorial

REL 401 Senior seminar

Elective Courses

Six electives at the 100-, 200-, or 300-level (with a maximum of one 100-level class to count towards major).

In addition, each major will select a specialization route in the major in conversation with and with the approval of the department. The specialization will consist of at least four courses. There are two ways to meet this requirement. A major could fulfill the requirement by concentration in one of the College's coordinate programs or by designating four specialization courses that can be supported by the resources of the Religion department faculty and the College. In other words, these four courses might be from among the six electives and one 300-level seminar or tutorial or might include additional coursework from other programs and departments (whether cross-listed or not).

The major will culminate in a year-long senior project. The first semester will remain a seminar (REL 401) on a topic in the study of religion set by the faculty member in consultation with incoming seniors. The spring semester will consist of participation in a research colloquium (not a course taken for credit). In this colloquium, each senior major will present their individual research projects, begun in the senior seminar, drawing on their specializations and advised by members of the faculty.

For those who wish to go beyond the formally-listed courses into a more intensive study of a particular religious tradition, methodological trend, or religious phenomenon (e.g., ritual, symbol-formation, mysticism, theology, etc.), there is the opportunity to undertake independent study or, with the approval of the department, to pursue a thesis project.

The value of the major in Religion derives from its fostering of a critical appreciation of the complex role religion plays in every society, even those that consider themselves non-religious. The major makes one sensitive to the role religion plays in shaping the terms of cultural discourse, of social attitudes and behavior, and of moral reflection. But it also discloses the ways in which religion and its social effects represent the experience of individual persons and communities. In doing these things, the major further provides one with interdisciplinary analytical tools and cross-cultural experience and opens up new avenues for dealing with both the history of a society and culture and the relationships between different societies and cultures. What one learns as a Religion major is therefore remarkably applicable to a wide range of other fields of study or professions.

Students declaring Religion as a major will identify an area of specialization and link it to their senior seminar final paper and be expected to present it in a spring colloquium during their senior year.

THE DEGREE WITH HONORS IN RELIGION

The degree with honors in Religion requires the above-mentioned nine courses and the preparation of a thesis of 75+ pages with a grade of B+ or better. A thesis may combine revised work done in other courses with new material prepared while enrolled either in Religion 493-W31 or Religion W31-494. Up to two-thirds of the work in the thesis may be such revised work, but at least one-third must represent new work. The thesis must constitute a coherent whole either by its organizing theme or by a focus on a particular religious tradition. Candidates will also be expected to present the results of their thesis orally in a public presentation. Students who wish to be candidates for honors in Religion will submit proposals and at least one paper that may be included in the thesis to the department in the spring of their junior year. Students must normally have at least a 3.5 GPA in Religion to be considered for the honors program.

The chair will serve as advisor to non-majors.

STUDY ABROAD

The Williams College Religion Department encourages potential majors to study abroad in order to enhance their education and gain international perspectives on religious studies. There are many excellent study abroad opportunities offering students a variety of possible experiences: among them cultural immersion, field work, intensive language learning, independent study, participation in another educational system. Many of our majors study in the Williams College Oxford Program, but our majors also regularly pursue a semester or year-long study in other programs.

FAQ

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description. Sometimes a course title is sufficient, but for many courses we also need to see a description of some sort because the title is unclear.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. 3 courses: Religion 200, one 300-level Religion seminar or tutorial, and Religion 401 Senior Seminar.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. Make sure that they have or will be able to take REL 200, because it is offered only once a year.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

None to date.

REL 104 (S) Religious Conflict and Cooperation

Violent conflicts throughout the world are animated by religious rhetoric, driven by religious actors, and sanctioned by religious authorities. At the same time, religious and "interfaith" organizations are often prominent participants in peace advocacy and conflict resolution. What are the varieties of religious involvement in war and peace? What can we learn about "religion" from the conflicts and cooperative initiatives that are labeled "religious"? Does the modern nation-state increase the likelihood of religious conflict? Will 21st century globalization support more or less conflict and/or cooperation? We will investigate these and other questions through contemporary case studies. In some cases we will focus on conflicts over territory: the Temple Mount/Noble Sanctuary in Jerusalem, the Babri Mosque/Birthplace of Rama in Ayodhya, India, the Black Hills in South Dakota. But we will also study the rhetoric of Usama Bin Laden and the role of spirit possession in the formation of the Lord's Resistance Army in Uganda. Finally, we will consider efforts to end such conflicts peacefully and delegitimize militant groups. In each case, we will see how competition for control over what counts as "Judaism," "Hinduism," "religion," "religious," and so forth is central to these conflicts and to the goals of those who seek to resolve them. Along with primary and secondary sources related to each case study, we will also read theoretical works by authors that may include Mark Juergensmeyer, Samuel Huntington, Scott Appleby, Bruce Lincoln, Saba Mahmood, Olivier Roy, Ananda Abeysekara, Talal Asad, Tomoko Masuzawa, Elizabeth Shakman Hurd, and others.

Requirements/Evaluation: two short papers, an in-class mid-term exam, and a final paper or project

Prerequisites: none

Enrollment Limit: none

Enrollment Preferences: first-year students and potential Religion majors

Expected Class Size: 30

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)

REL 105 (F) Introduction to European Art Before 1700

Cross-listings: REL 105 ARTH 101

Secondary Cross-listing

A team-taught introduction to the art and architecture of Europe from the ancient Mediterranean to Baroque Italy. This course celebrates the glory of works of art as physical objects, to be viewed and contemplated, to be sure, but also often to be worshiped, worn, touched (even licked), held, exhibited, bought and sold, passed through or around, and lived in. To help students begin to appreciate how these works of art might have been understood by those who originally made and used them, the course sets its objects of study within a number of revealing historical contexts, from the social and the political to the philosophical and the art historical. To give students time with original works of art, our discussion-centered conferences use the wealth of art resources in Williamstown: the Clark Art Institute, the buildings and sculpture of the Williams College Campus, and the Williams College Museum of Art.

Class Format: This course has 2 components: lectures and conferences. The lectures will be twice or three times weekly, the conferences once per week. Both lectures and conferences will be held in person.

Requirements/Evaluation: Three shorter essays (one of which may be in the form of a take-home final exam), several quizzes, and engaged participation in conference sections

Prerequisites: none

Enrollment Limit: 60

Enrollment Preferences: Preference will be based on a short questionnaire, which students will be asked to complete if the course is over-enrolled.

Expected Class Size: 60

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

REL 108 (F) Technologies of Religious Experience

In 1962, ten Harvard Divinity School students received a capsule of white powder before Good Friday services. The powder was psilocybin, a psychedelic. One of them soon ran out of chapel to announce that the Messiah had arrived. Seven others reported profound mystical experiences, which they reported even years later as exerting continued influence on their life and work. Is psilocybin a technology for producing religious experience? Should religions find and employ technologies that engender religious feeling? Are such experiences any less true or authentic than ones that aren't technologically mediated? More humbly, how is a religious service experienced differently when it's viewed online or through a TV? How can an amulet, icon, or statue be used as a technology of religion? Drawing from a broad range of sources, this course will introduce students to the critical study of religion through its consideration of religious experience as both central to religious life and as (almost always) technologically mediated. The course thus aims to expose students to a wide variety of religions and technologies of religion, while simultaneously offering a them a chance to explore Technology Studies as one critical lens for studying religion and religious experience.

Requirements/Evaluation: short response papers, one longer non-research paper

Prerequisites: none

Enrollment Limit: none

Enrollment Preferences: Religion majors

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

Not offered current academic year

REL 109 Apocalypse (WS)

An end of days. A utopia to come. A great cosmic reversal of fortune. A revelation of truth that leads to radical transformation. Each of these themes and many more fall under the genre of imagination that we associate with the apocalypse. In order to understand the persistence and prevalence of apocalyptic imaginations, we will move back and forth through time. On the one hand, we will read the Book of Revelation in relationship to a selection of ancient Zoroastrian, Jewish, Greek, Christian, and Muslim texts identified with apocalyptic traditions. On the other hand, we will read these texts in relationship to and alongside select literature and movements of apocalypse in the U.S.A. We will pay particular attention to how apocalyptic imaginations reflect upon and interact with social structures of class, colonization, ethnicity, gender, race, and sexuality.

Requirements/Evaluation: grading will be based on participation, short P/F papers, a graded 3-page essay that will be revised, a 5-page second essay, and a final 7- to 10-page paper

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: first-years and sophomores preferred or Religion majors

Expected Class Size: 15

Grading:

Distributions: (D2) (WS)

Writing Skills Notes: As a WS course, grading will be based on short, weekly P/F papers, a graded 3-page essay that will be revised for credit, a 5-page second essay, and a final 7- to 10-page paper for which a draft will be peer reviewed. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Not offered current academic year

REL 110 (S) Religion in Everyday Life (WS)

When studying religions, people generally turn to studying scriptures, the life and teachings of the religion's founder, and the fundamental doctrines of the religion. What this approach does not allow us to understand, however, is the way that such religious traditions actually manifest themselves in the world. This course introduces students to an alternative approach to studying religion, by exploring the way these religions are lived and experienced by individuals and communities in a variety of contexts. We will see how religion intersects with people's lived experiences of gender, race, class, sexuality, and broader socio-cultural and political contexts. We will explore this approach to religion through an engagement with ethnography (the qualitative research method in the social-sciences generally described as "participant-observation"). Students will not only learn about the theory and practice of this methodology, but will also conduct their own ethnographic research project over the course of the semester. This will involve: designing a feasible project and research question, selecting local research sites and subjects, taking field-notes and conducting interviews, and finally analyzing data and writing an ethnographic essay.

Class Format: Semester-long community-based field research. Regular in-class peer-review exercises.

Requirements/Evaluation: regular reading responses, semester-long research project with frequent small assignments building up to the final product (class presentation and approximately 10-page paper)

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: first-year students and sophomores; students interested in Religious Studies

Expected Class Size: 10-12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will learn a specific mode of qualitative/ethnographic writing through a semester-long field-based project. This involves many scaffolded assignments of field-based research and writing, for which they receive very regular feedback from the instructor, as well as extensive peer-review exercises. There will be a number of readings on writing style and technique, as well as class discussion and workshopping activities. The final essay will itself be developed in multiple steps.

REL 126 (S) Religion, Politics, and Society: A Global Perspective (DPE)

Cross-listings: REL 126 GBST 101 PSCI 126

Secondary Cross-listing

In spite of predictions that religion would wither away in the face of modernization, even casual observation indicates that it remains a powerful force in contemporary political life. Our goal is to obtain an enhanced understanding and appreciation of the salience of religion in public life. The course will be divided into three parts. The first part focuses on different theoretical approaches to making sense of the relation between religion, politics, and society, discussing especially the concept of the 'secular' in Western thought and decolonial critique thereof. The second part will take a global perspective on the relation between religion and politics. We will discuss cases of Buddhism, Christianity (Catholicism and Protestantism), Confucianism, Hinduism, Islam (Sunni and Shi'a), and Judaism. The third part focuses on religion in the USA. Here, we will discuss the role of religion in American political culture, the relation of religion to the state, the relevance of religious interests and their political mobilization, religious minorities in the United States, and many other aspects of religion in the US society. Although the study of religion and politics raises a host of deep philosophical questions, the principal aim of the course is to understand how religion affects politics (and vice versa), rather than to explore the normative dimensions of questions raised by the interaction of these two forces.

Requirements/Evaluation: Class participation and three papers, in these proportions: 10% attendance; 20% participation; 20% first paper (7 pages); 30% second paper (8-10 pages); and 20% third paper (7 pages). No final exam.

Prerequisites: none

Enrollment Limit: 35

Enrollment Preferences: Global Studies concentrators and intended concentrators; Religion majors and intended majors

Expected Class Size: 25

Grading: no pass/fail option, yes fifth course option

Unit Notes: Core course for GBST

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

REL 133 (S) Buddhist Literature

Cross-listings: ENGL 147 ASIA 133 REL 133 ASST 133

Primary Cross-listing

This course introduces students to the diverse literary culture of Buddhist Asia. Through close readings of particular influential Buddhist texts, we will analyze not only what the texts say and mean, but also learn about the "social life" of these texts--i.e., what is the socio-historical context of these texts, who are the intended audience, what is the relationship of these texts with their particular communities, how do these communities engage with their texts, including how texts have been translated, taught, worshipped and ritualized. We will also explore the materiality of these texts, which is as diverse as the languages in which these texts are written. Alongside an exploration of materiality requires that we reflect on what counts as "text". Moreover, by sampling different genres of Buddhist texts (e.g., philosophical, historical, narrative, grammatical, cosmological, astrological, magical), we will discuss what makes them Buddhist and what makes them literary. The Lotus Sutra, the Heart Sutra, the *Dhammapada*, and Vessantara Jataka are just some of the texts we will study in this course. No prior knowledge about Buddhism is required.

Requirements/Evaluation: Attendance and active participation 20%; Short writing assignments 25% (i.e., a one-page, single-space, critical response based on the class reading x 5 total); Mid-term exam (in-class: identification terms and short essay) 25%; Final project and presentation 30% (the final grade includes initial consultation with the instructor regarding topic selection, annotated bibliography, project outline, final presentation, and final written report).

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: REL, ASST, and ENG majors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

REL 134 (S) Leaving the World Behind: The Literature of Reclusion (DPE) (WS)

Cross-listings: ANTH 134 CHIN 134 COMP 134 REL 134

Secondary Cross-listing

Living in a time of political and social turmoil, Confucius told his followers: "When the realm has the Way, show yourself; when it lacks the way, hide." Reclusion here is a moral choice, justified by the ethical decline of the state. But it could also be a mortal necessity in a period in which government service was a distinctly hazardous pursuit. In other contexts becoming a hermit could instead be figured as aesthetic stance meant to preserve one's artistic integrity against the dominant claims of society. This course looks at the literature of reclusion--living a life of seclusion from society--in a range of different cultures and periods, from ancient China to contemporary America. With sources that include poems, essays, novels, and films, we will investigate a set of issues surrounding radical seclusion. What different forms does reclusion take? Can one be a hermit without being completely separated from society? What is the relationship between hermits and the state--to what extent does one depend on the other? What are the philosophical and moral implications of eremitism? Is separating oneself from human society an inherently immoral act? What is the relationship

between reclusion and technology in the contemporary world? What is the nature of solitude and can it be experienced in a group (for example, in contemporary "intentional communities")? While most of our work will focus on textual analysis, there will be an experiential component to the course as well. Each student will design and implement their own experiment in (short-term) eremitism.

Class Format: experiential component

Requirements/Evaluation: tutorial papers, responses, and an individual project

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: first-year students, Chinese majors, Religion majors, Anthropology majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

ANTH 134 (D1) CHIN 134 (D1) COMP 134 (D1) REL 134 (D2)

Writing Skills Notes: Students will write a 5- to 7-page paper every other week for a total of five papers. On weeks in which they are not writing, they will critique their partner's paper. Papers will receive substantial writing-based feedback from both the instructor and partner.

Difference, Power, and Equity Notes: This course provides students with the opportunity to analyze the shaping of social differences and dynamics of unequal power. Acts of reclusion are often ways that individuals can challenge the dominance of the state and other structures of authority indirectly. Modes of reclusion can differ substantially depending on the social standing of the recluse. These are issues that we will examine in the course.

Not offered current academic year

REL 149 (F)(S) The Sacred in South Asia

Cross-listings: ANTH 249 ASIA 242 REL 149

Secondary Cross-listing

Is religious identity necessarily singular and unambiguous? The jinn - Islamic spirits born of fire - are sought out for their healing and other powers not only by Muslims in India, but by Hindus, Christians and Sikhs, as well. In parts of Bengal statues of the Hindu goddess Durga are traditionally sculpted by Muslim artisans. Buddhist pilgrimage sites in Sri Lanka contain tombs of Muslim Sufi saints and shrines of Hindu deities. South Asia - where a fifth of humanity lives - provides some of the most striking examples of pluralism and religiously composite culture in our contemporary world. Yet at the same time, strident religious majoritarianism has been a defining feature of the politics of India, Pakistan and Sri Lanka for decades, and haunts Nepal and Bangladesh as well. Are these two modes of religious being - pluralistic and composite on the one hand, singular and majoritarian on the other - reflective of two different conceptions of selfhood? What if we turn from questions of community and identity to questions of unseen power and the sacred? This course is an exploration of lived religion in South Asia. It is simultaneously a study of popular Hinduism, Buddhism and Islam and an introduction to the anthropology of religion. Centered on in-depth studies of popular sites of 'syncretic' ritual practice (shared across religious difference) as well as studies of mass mobilizations that seek to align the religious community with the nation, we approach from multiple angles what the sacred might mean in modernity.

Requirements/Evaluation: weekly (1 page) posts on readings, two short (5 page) papers, and one (12-14 page) final research paper.

Prerequisites: Interest in the topic!

Enrollment Limit: 20

Enrollment Preferences: Students in all fields of study are most welcome; if overenrolled, priority will be given to majors in Anthropology, Sociology, Religion and Asian Studies.

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

REL 166 (F) Being Muslim, Being American: American Muslim Literature in the 21st century (DPE)

Cross-listings: REL 166 AMST 166 COMP 166 ENGL 268

Primary Cross-listing

Islam and Muslims in the United States are the subject of extensive public scrutiny and media coverage in broader public discourses. It is less common, however, to hear Muslims' own voices speak about their lives, experiences, beliefs, and commitments. This course will take a literary approach to exploring American Muslims' own narratives about themselves, which will serve as an introduction to religion in contemporary U.S. culture. We will address questions such as: How do American Muslims attempt to fashion their identity in the wake of 9/11? What are the pressures and demands of American national belonging and cultural citizenship that Muslims must navigate? How are race, gender, ethnic heritage, and immigration definitive of Muslim experiences and self-understandings? How are Muslims approaching the tensions between communal belonging and individuality? What are the competing claims and contestations about authentic expressions of Islam? We will be engaging such themes through an analysis of popular memoirs, autobiographies, novels, short stories, poetry, films, and comedy.

Requirements/Evaluation: regular reading responses, short midterm essays, and final paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: First-year students and sophomores

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

REL 166 (D2) AMST 166 (D2) COMP 166 (D1) ENGL 268 (D1)

Difference, Power, and Equity Notes: This course will explore the intersections of power in American Muslim life, such as: Muslims as a religious minority in the context of the War on Terror; racial and ethnic differences in Muslim communities; immigration and national belonging; competing claims to religious authenticity and authority; and conflicting gendered norms. Students will learn to identify these multiple layers and configurations in the texts, and how to analyze their workings in nuanced multidimensional ways.

Fall 2021

SEM Section: 01 TR 9:55 am - 11:10 am Zaid Adhami

REL 168 (F) Making God Real

Is God real? Are Spirits? Divine messengers? What would it mean to say "yes" to any of these questions if we don't "believe" in supernatural beings at all? This course will explore how God(s), spirits, ancestors, and other super-human beings have been seen, heard, and felt by humans. Instead of rehearsing now tired debates between believers and skeptics, this class will combine cognitive sciences approaches to the study of religion with new perspectives on the nature of ontology--the nature of being--to examine how God and other super-human beings exist in and through their effects upon humans. From this perspective, we'll see how, even if God(s) and other supernatural beings don't exist in the heavens, they nevertheless act in this world through the ways that humans experience them. The puzzle for us will be, how do God(s), spirits, and/or divine messengers act? How do we feel, see, or hear beings that might not be there? What kind of reality do God(s) and spirits have in such scenarios? What is the nature of their being?

Class Format: Remote; synchronous learning

Requirements/Evaluation: Students will be required to take notes on course readings, write weekly or biweekly response papers, and submit a final essay at the end of the course.

Prerequisites: No prerequisites

Enrollment Limit: 15

Enrollment Preferences: Religion Majors, Seniors

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

REL 171 (S) Music and Spirituality: Cross-Cultural Perspectives

Cross-listings: REL 171 MUS 171

Secondary Cross-listing

How does the sacred sound? Across cultures and across millennia, music has served to enable, inspire, and express the spiritual life experiences of communities and individuals. Why is this so? In what contexts and through what means can making and hearing music reflect and produce spiritual experience? This team-taught course will take a comparative approach to exploring music's spiritual power, considering such areas as the function of music in ritual practices from various cultures and times, the use of music to tell sacred stories, music and dance in spiritual practice, and the role of music created in the face of death and its aftermath. Working from both musicological and ethnomusicological perspectives, we will explore the possibilities of sensory ethnography for better understanding the role of perception and the body in spiritual experiences with music. Our comparisons will draw from Western and world Christian traditions from medieval to modern times, and on conversations with musicians immersed in the music of other faith traditions (including Jewish, Hindu, and Muslim). We will explore connections between music and spirituality through a wide variety of repertoires, including plainchant and Renaissance sacred choral music; the music and dance of traditional West African religions like vodun and orisa; music from the Western classical tradition by such composers as Bach, Beethoven, and Messiaen; American hymnody and spirituals; gospel music in the U.S. and Africa; and selected artists from the world of jazz and popular music, such as John Coltrane and Leonard Cohen.

Requirements/Evaluation: class participation; class journal; presentation with annotated bibliography; ethnographic field study; final project with presentation

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: students with a demonstrated interest in music, religion, and/or anthropology/sociology

REL 200 (S) What is Religion? Theories and Methods in the Study of Religion

To explore the meaning of religion, this course will introduce the debates around which the discipline of religious studies has been constituted. At stake are questions such as: How does one go about studying religion? Is "religion" a cultural universal? What is religion's relationship to the "European Enlightenment"? to race? to science? to society? to secularism? to colonialism? to ethics? to politics? to violence? to sex? to freedom? Has religion changed fundamentally in modernity? And if so, what is its future?

Requirements/Evaluation: class participation, weekly short (max 2 page) writing assignments, a 5-page midterm paper, and a 10-page final paper

Prerequisites: none, although a previous course on religion is recommended

Enrollment Limit: 15

Enrollment Preferences: Religion majors and prospective majors

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

REL 201 (F) The Hebrew Bible

Cross-listings: JWST 201 COMP 201 REL 201

Primary Cross-listing

The Hebrew Bible is perhaps the single most influential work in the history of Western philosophy, literature, and art. But the overwhelming presence of the text in nearly every aspect of modern culture often obscures the sheer brilliance of its narrative technique as well as the complex interplay between law, history, prophecy, and poetry. This course offers a comprehensive introduction to the literary, historical, and theological aspects of the Hebrew Bible with an eye towards developing a sophisticated understanding of the text in its ancient context. Through the close reading of substantial portions of the Hebrew Scripture in translation and the application of various modern critical approaches to culture and literature, students will explore fundamental questions about the social, ritual, and philosophical history of ancient Israel, as well as the fundamental power of storytelling that has resonated across two millennia.

Class Format: discussion

Requirements/Evaluation: class participation, short written assignments, and two to three longer papers

Prerequisites: none

Enrollment Limit: 40

Enrollment Preferences: Jewish Studies concentrators, Religion and Comparative Literature majors

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

REL 202 (S) Moses: Stranger in a Strange Land

Cross-listings: COMP 214 REL 202 JWST 202

Primary Cross-listing

As chieftain, priest, prophet, and lawgiver all in one, Moses occupies the central place in the history of Israelite and Jewish leaders. However, he is a somewhat unlikely candidate for such an important role. He is God's chosen leader among the enslaved Israelites, but he is raised as an Egyptian prince. He is a spokesman for his people, but he is slow of speech. He is the lawgiver and first judge of his nation, yet he is quick-tempered and impatient. The story of the most revered figure in the Jewish tradition, who nevertheless remains an outsider to the very end, has fascinated commentators and inspired countless artistic and literary interpretations. This course will engage in a close study of the figure of Moses by examining the biblical narrative of his life and career from Exodus through Deuteronomy with an eye towards understanding the complex and often contradictory portrait of this self-described "stranger in a strange land." We will also examine some of the ancient legendary and folkloric accounts about Moses, as well as philosophical and allegorical treatments in Hellenistic Jewish, early Christian, and Muslim biographies. We will then proceed to investigate key modern reconfigurations and critiques of Moses in several genres, which may include renaissance visual depictions, literary works by Sigmund Freud, George Eliot, Thomas Mann, and Zora Neale Hurston, and even musical and cinematic renditions. *All readings are in translation.*

Requirements/Evaluation: class participation, short written assignments, and two or three longer papers

REL 203 (F) Judaism: Before The Law

Cross-listings: REL 203 JWST 101

Primary Cross-listing

This course introduces the academic study of Judaism through a humanistic exploration of "the Law" as a concept in Jewish thought and practice. Coverage will include the Law of Moses in the Hebrew Bible, the rabbinic distinction between "Oral Law" and "Written Law," medieval philosophical justifications for the Law, modern interpretations of the Law as Moral Law, Hasidic challenges to the centrality of the Law, and twentieth-century Jewish fiction that is haunted by a felt absence of the Law. Topics may also include the nature of rabbinic authority, methods of Jewish legal interpretation and innovation, and Jewish law as it pertains specifically to women, gentiles, idolaters, food consumption, and the Land of Israel. Course materials will include classical sources such as the Talmud and Midrash, modern philosophical texts by Franz Rosenzweig, Leo Strauss and Joseph Soloveitchik, Kafka's *The Trial* with his parable "Before The Law," Woody Allen's film *Crimes and Misdemeanors*, and ethnographic accounts of contemporary Jewish observance. *All readings will be in translation.*

REL 205 (S) Ancient Wisdom Literature

Cross-listings: JWST 205 CLAS 205 REL 205 COMP 217

Primary Cross-listing

The Biblical books of Proverbs, Ecclesiastes, and Job are often grouped together under the Hebrew category of *hokhmah*, 'wisdom.' Although these books are very different in content, they can all be interpreted as meditations on ethical and practical philosophy. In this way, they represent the Hebrew Bible's canonical embrace of a widespread Near Eastern literary phenomenon. From the instructional literature of Egypt and Mesopotamia to Greek didactic poetry and fables, ancient Mediterranean cultures offer a wide range of texts that engage the issues of personal behavior, leadership, and justice. Starting with the central wisdom books of the Hebrew Bible and moving through relevant material from the Apocrypha, New Testament, and the Egyptian and Babylonian traditions, this course will examine the literature of wisdom throughout the ancient world with an eye toward understanding its various social, political, and philosophical contexts. We will then consider the Greek wisdom tradition in such texts as Hesiod's *Works and Days*, Aesop's fables, and fragments from the pre-Socratic philosophers. Finally, we will explore the influence of these ancient sources on later expressions of wisdom in medieval European literature, as well as more recent examples such as Benjamin Franklin's *Poor Richard's Almanack*. *All readings are in translation.*

REL 206 (S) The Book of Job and Joban Literature

Cross-listings: REL 206 JWST 206 COMP 206

Primary Cross-listing

The Book of Job has often been described as the most philosophical book of the Hebrew Bible. The story of one man's struggle to understand the cause of his suffering and his relationship to God represents the finest flowering of the Near Eastern wisdom literature tradition. Through its exploration of fundamental issues concerning human suffering, fate and divinity, and the nature of philosophical self-examination, Job has served as a touchstone for the entire history of existential literature. At the same time, the sheer poetic force of the story has inspired some of the greatest artistic and literary meditations in the Western tradition. This course will engage in a close reading of the Book of Job in its full cultural, religious, and historical context with special attention to its literary, philosophical, and psychological dimensions. We will then proceed to investigate key modern works in several genres that involve Joban motifs, themes, and text both explicitly and implicitly. These texts will include Franz Kafka's *The Trial*, Archibald MacLeish's *J.B.*, Robert Frost's "Masque of Reason," Carl Jung's *Answer to Job*, and William Blake's *Illustrations to the Book of Job*. *All readings are in translation.*

Class Format: For the spring of 2021, this course will be taught online. The seminar will meet at the regularly scheduled time twice a week.

Requirements/Evaluation: Evaluation will be based on class participation, weekly short written assignments, and two longer papers.

Prerequisites: none

REL 207 (F) From Adam to Noah: Literary Imagination and the Primeval History in Genesis

Cross-listings: COMP 250 REL 207 JWST 207 CLAS 207

Primary Cross-listing

How long did Adam and Eve live in the Garden of Eden? What was the mark of Cain? Why did Enoch not die? Who was Noah's wife? How did Giants survive the Flood? These are only a few of the fascinating questions that ancient readers and interpreters of the Book of Genesis asked and attempted to answer. The first ten chapters of Genesis present a tantalizingly brief narrative account of the earliest history of humankind. The text moves swiftly from the Creation to the Flood and its immediate aftermath, but this masterful economy of style leaves many details unexplained. This course will explore the rich and varied literary traditions associated with the primeval history in the Genesis. Through a close reading of ancient noncanonical sources such as the Book of Enoch, Jubilees, and the Life of Adam and Eve, as well as Jewish traditions represented in Josephus, Philo, and Rabbinic literature and other accounts presented in early Christian and Gnostic texts, we will investigate the ways in which the elliptical style of Genesis generated a massive body of ancient folklore, creative exegesis, and explicit literary re-imagining of the early history of humankind. We will then turn to some continuations of these variant traditions in medieval literature, with particular attention to the material on the figures of Cain and Noah. *All readings are in translation.*

Class Format: For the fall of 2020, this course will be taught online. The seminar will meet at the regularly scheduled time twice a week.

Requirements/Evaluation: Class participation and several writing assignments.

Prerequisites: None.

REL 208 (S) Genesis: The Family Saga

Cross-listings: COMP 207 REL 208 JWST 208

Primary Cross-listing

The Book of Genesis has rightly been described as the masterpiece of Hebrew biblical narrative. In particular, the continuous tale that begins with Abraham and Sarah and extends four generations to the children of Jacob, Leah, and Rachel is one of the most extraordinary examples of literary artistry in any time or tradition. As one family wrestles with the promise of becoming a chosen people, the narrative explores themes of marriage, parenthood, sibling rivalry, land, violence, wandering, and, above all, the complex relationship between humanity and God. This course will examine those themes through a close reading of Genesis in translation, from Abraham and Sarah's first appearance on the scene to the death of Jacob. We will consider the text from multiple perspectives with an eye toward understanding the literary, philosophical, and psychological dimensions that continue to amaze and perplex readers to this day.

Requirements/Evaluation: class participation, a series of short writing assignments, and two longer papers

REL 209 (S) Jewish America

Cross-listings: REL 209 JWST 209

Primary Cross-listing

Who and what counts as "Jewish" in America? Does stand-up comedy have a distinctly Jewish pedigree? What about neoconservatism? How is it possible to answer such questions without falling into what David Hollinger has called the "booster-bigot trap"? How is it possible, that is, to avoid answers that uncritically celebrate "Jewish contributions" or perniciously suggest "Jewish influence"? This course will explore the various meanings of Jewishness in American culture as expressed by artists, rabbis, activists, intellectuals, boosters, bigots and others. We will seek to avoid the booster-bigot trap by focusing vigilantly on what is at stake wherever Jewishness is invoked, defined or ascribed. We will draw methodological support from scholars like Hollinger, Jonathan Freedman, Laura Levitt, Yuri Slezkine, Shaul Magid, Andrea Most and others. Particular attention will be given to the appearance of Jewish themes and involvement in popular culture and political action, as well as to Jewish American communal institutions, the everyday lives of Jewish Americans, and Jewish variations on American religion. Coursework will involve some historical, sociological and ethnographic readings, but will focus primarily on close analysis of films, literary fiction, stand-up comedy, political magazines, theological texts, and television shows. We may, for instance, watch films like *The Jazz Singer* (1927 and 1980), *Exodus* and *Annie Hall*; read John Updike's *Bech: A Book*, Philip Roth's *Operation Shylock* or Cynthia Ozick's *The Puttermesser Papers*; listen to the comedy of Mort Sahl, Lenny Bruce and Sarah Silverman; read from Henry Ford's *Dearborn Independent*, the *Menorah Journal* or *Commentary*; study works by Rabbis Stephen Wise, Abraham Joshua Heschel and Meir Kahane; and watch episodes of *Bridget Loves Bernie*, *Northern Exposure* and *Curb Your Enthusiasm*. We will also study arguments about the role and meaning of Jewishness in American secularization, "therapeutic culture," the civil rights movement, the sexual revolution, and feminism.

Requirements/Evaluation: class participation, two short papers, a midterm take-home exam, and a final paper interpreting an example of Jewishness in America chosen by the student

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: Religion majors, Jewish Studies concentrators, and students who are interested in either of these options

In this tutorial, students will investigate the rich artistic consequences -- in architecture, manuscript illumination, mosaic, sculpture, panel painting, fresco, metalwork, and other minor arts -- of European contact with the Eastern Mediterranean between approximately 300 and 1450 CE. From the beginnings of Christianity, pilgrims from Europe made the long journey to sacred sites in the Holy Land (extending across parts of present-day Egypt, Israel, Syria, and Turkey). When these sites became less accessible with the spread of Islam in the seventh century, Europeans sought to recreate the sites at home. Later, from 1095 onward, Christian Europeans attempted to reclaim and hold the Holy Land from non-Christians by force, through an ill-fated series of five major and several lesser "crusades." Over the centuries, before, during, and after the Crusades, exposure to the peoples, ideas, and cultures of the Eastern Mediterranean also came through trade and through the travel and settlement of non-Europeans in Europe itself, particularly in Spain, Sicily, and Venice. Together, through open discussion, we will explore artistic production within each of these different

cross-cultural contexts of East-West encounter. In the process, we will reflect on how art could function as a conduit for the exchange of ideas in the Middle Ages, and how it could be used both to negotiate and to intensify cultural difference.

Requirements/Evaluation: participation in discussion; five 5-7-page tutorial papers (one of which will be revised as a final writing assignment); five 1-2-page response papers

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: First- and second-year students, but open to all

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

REL 211 Christians versus Pagans: Ancient Egypt

This course explores the religious terrain of ancient Egypt in the Greek and Roman periods. Focused mostly on the rise of Christianity, this course asks big questions about what changes and what stays the same when major religious movements emerge in a place. What parts of Christianity were new to Egypt and were premised upon a rejection and displacement of Egyptian religious practices and beliefs? What parts of Egyptian religious life, rather than being replaced or transformed by Christianity, were adopted into Christianity? And what parts of Egyptian religious practice resisted Christianity? And how and where did it resist?

Requirements/Evaluation: 1-2 page weekly papers, final paper, participation

REL 213 (F) Patrons, Rituals, and Living Images in Japanese Buddhism

Cross-listings: ASIA 205 REL 213 ARTH 205

Secondary Cross-listing

This course introduces students to Buddhist art and architecture in Japan from its introduction in the sixth century through the present. We focus on the ways different communities--the imperial court, immigrant artists, monks, women, and commoners--employed and venerated Buddhist images for political legitimacy, personal salvation, and worldly benefit. This course also examines how Japanese Buddhist imagery became aestheticized in the early twentieth century and appropriated later in modern and contemporary visual cultures. Some of the topics to be discussed include the reception of continental styles of Buddhist sculpture, the relationship between mandalas and rituals, the role of women in developing Buddhist embroideries, and the Western reappraisal of Zen arts. Students will develop familiarity with the concepts and ideas underlying the production of Buddhist images and will gain foundational skills in analyzing the visual, material, and iconographic qualities of Japanese Buddhist art. For the final project, students will design a digital exhibition focused around one of the topics of the course.

Requirements/Evaluation: attendance, class participation, 4 reading and object response papers (2-3 pages), midterm, non-cumulative final exam, and digital exhibition project with an 8-10 minute presentation

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: First and second-year students, but open to all

REL 214 (F) Religion and the State

Cross-listings: REL 214 PSCI 271

Primary Cross-listing

The First Amendment of the U.S. Constitution begins: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." What does "religion" mean in this formulation? Should "religion" be singled-out for exclusion from government? Are "religious" reasons ever legitimate reasons for laws, policies or popular political action? Should "religious" organizations be exempt from otherwise generally applicable laws? Is "religion" good or necessary for democratic societies? In this course we will respond to these and related questions through an investigation of "religion" as a concept in political theory. Particular attention will be given to the modern liberal tradition and its critics. Coverage will range from modern classics to innovative contemporary arguments. Classics may include John Locke's *A Letter Concerning Toleration*, selections from Jean-Jacques Rousseau's *The Social Contract*, James Madison's *Memorial and Remonstrance Against Religious Assessments*, Immanuel Kant's *Religion Within the Boundaries of Mere Reason*, John Stewart Mill's *Three Essays On Religion*, and John Dewey's *A Common Faith*. More recent arguments may come from John Rawls, Alasdair MacIntyre, Nicholas Wolterstorff, Martha Nussbaum, Jeffrey Stout, Winnifred Sullivan, Brian Leiter and Andrew Koppelman.

Requirements/Evaluation: class participation, two short papers, a midterm take-home exam, and a final take-home exam

REL 215 (S) The New Testament: From Word to Book

Cross-listings: CLAS 215 REL 215

Primary Cross-listing

In this course, students will be introduced to the New Testament through an exploration of how the New Testament became a book and continues to be produced as a book. We will start by examining the letters of Paul--its earliest texts--in terms of the habits and traditions of ancient letter-writing. We will similarly place the other texts of the New Testament in the context of Greek, Roman, and Jewish literary traditions and conventions. As the semester moves forward, we will examine how the New Testament itself became a material object--a book--and how its changing material status shaped its meaning and functioning. We will see the New Testament transform from a library of separate scrolls and/or codices (a library which was occasionally bound together into a single codex), to a luxury object in the Middle Ages, to a cheap printed object in the wake of the printing revolution of the 19th century, to its modern life as both a highly marketed object and a searchable digital thing in online spaces and mobile apps.

Requirements/Evaluation: active participation and preparation, papers

REL 216 (S) Greek Art and the Gods

Cross-listings: ARTH 238 REL 216 CLAS 248

Secondary Cross-listing

In the *Iliad*, when the god Apollo is visualized, it is as a man, angry in his heart, coming down from the peaks of Olympus, bow and quiver on his shoulders, the arrows clanging as the god moves, "like the coming of night," to bring dogs, horses, and men to their deaths. By the end of the Classical period, one statue of the archer god depicted him as a boy teasing a lizard. In this course, we will examine the development of the images the Greek gods and goddesses, from their superhuman engagement in the heroic world of epic, to their sometimes sublime artistic presence, complex religious function, and transformation into metaphors in aesthetic and philosophical thought. The course will cover the basic stylistic, iconographical, narrative, and ritual aspects of the gods and goddesses in ancient Greek culture. The course will address in detail influential artistic monuments, literary forms, and social phenomena, including the sculptures of Olympia and the Parthenon; divine corporeality in poetry; the theology of mortal-immortal relations; the cultural functions of visual representations of gods, and the continued interest in the gods long after the end of antiquity. Readings assignments will include selections from Homer, Hesiod, Sappho, Aischylos, Euripides, Plato, Walter Burkert, Jean-Pierre Vernant, Nikolaus Himmelmann, Erika Simon, and Friedrich Nietzsche.

Class Format: discussion

Requirements/Evaluation: short writing assignments, midterm exam, final exam, final paper

Prerequisites: none

Enrollment Limit: 40

REL 217 (F) Religion and American Politics

Cross-listings: REL 217 HIST 257

Primary Cross-listing

In this course, students will explore the history of religion and American politics, from the colonial era to the present. In the process, they will tackle such questions as: Were Anglo-American colonies 'cities on a hill' or bastions of intolerance? Was the First Amendment designed to protect the state from religion, or religion from the state? Has American religion primarily served to justify the *status quo* or inspire revolutionary change? How have religious ethics shaped responses to racial, gender, and class inequality? How has religious conflict impacted civic unity and political polarization? What role *should* religion play in American political life? The course will cover such topics as: Anglo-colonial treatment of heretics and blasphemers;

the meaning of the First Amendment; religious conflict over slavery; state regulation of sexuality and polygamy; state treatment of religious minorities; the Scopes Trial and scientific modernity; Christian responses to industrial capitalism; theologies of civil disobedience and nonviolence; and 20th-century religious battles over school prayer, civil rights, the military draft, abortion, and democracy itself.

Requirements/Evaluation: Class participation; five informal response papers (350-450 words); two unit papers (4-6 pages); final paper (8-10 pages).

Prerequisites: None; open to all students.

REL 218 (F) Foundations of China

Cross-listings: REL 218 ANTH 212 GBST 212 HIST 214 ASIA 211 CHIN 214

Secondary Cross-listing

This course examines the foundational period of Chinese civilization, from the earliest evidence of human activity in the geographical region we now call China, through the end of the Han dynasty in the early third-century CE. This is the period that saw the creation and spread of the Chinese script (a writing system that would be the dominant one in East Asia for thousands of years), the teachings of Confucius (whose ideas continue to play a role in the lives of billions of people today), the construction of the Great Wall (which is not, as it turns out, visible from space), and the creation of the imperial bureaucratic system (that was, in essence, the progenitor of the modern bureaucratic state). We will proceed chronologically but focus on a set of thematic topics, including language and writing, religion and philosophy, art and architecture, politics and economics, and science and technology. While this course is entitled "Foundations of China," we will take a critical perspective on narratives, both Chinese and Western, that see Chinese history as an unbroken history of a single "civilization."

Requirements/Evaluation: short writing assignments (approximately 750-1000 words each), quizzes, a mid-term, and a final exam

Prerequisites: none

REL 219 (S) Judaism Under Ancient Greek and Roman Imperialisms

Cross-listings: CLAS 219 REL 219 JWST 219

Primary Cross-listing

How did ancient Greek and Roman empires shape the beginnings of Judaism? In this course, we will examine how Greek and Roman imperial

systems of identity, ethnicity, law, religion, and knowledge affected Judaism as a religious and cultural system. We will pay particular attention to the ways that Jews/Judaeans responded to these imperial pressures, especially as those responses articulated "hybrid" versions of Judaism that were informed both by resistance to imperial centers as well as the sheer hegemony of those cultural systems. The course thus uses (and introduces students to) postcolonial theory to study the history of Judaism under Greek and Roman empires. Readings for this course will include a wide array of ancient Jewish works, such as the books of Maccabees, Flavius Josephus, Philo of Alexandria, the Dead Sea Scrolls, and the Mishnah. The course will also include select readings from early Christian texts and postcolonial theory.

Requirements/Evaluation: active participation and preparation, papers

REL 221 (F) Technologies of Religion in the Early Christian World

Cross-listings: CLAS 221 REL 221

Primary Cross-listing

What is the relationship between religion and technology? How do various technologies affect the production and distribution of religious knowledge? Facilitate communication and interaction with the divine? Transform the religious self? In this course, we will look specifically at the uses and effects of technology on religion in the early Christian world. While focused most directly on the influence of technology on the development of early Christianity, the course will also explore the place of technology in coterminous movements: in "pagan" sacrifice, Neoplatonic divination, and Stoic practices of the self. By examining technologies of text production, sacrifice, memory, and the self, the course will shed light on early Christianity and its competing

religious and philosophical movements, as well as on the nature of technology's relationship to religion.

REL 222 (F) The Jewish Art of Interpretation

Cross-listings: JWST 222 REL 222 COMP 211

Primary Cross-listing

Turn it and turn it, for everything is in it. This famous rabbinic dictum offers an enigmatic yet comprehensive account of the principles that have defined the Jewish practice of interpretation for over two millennia. The imperative to keep a text, word, image, or concept in constant motion, in order to generate as many meanings and cross-meanings as possible, challenges us to transform the act of interpretation itself into a virtuosic craft or art that can engage the human imagination as diversely and powerfully as the creation of the works being interpreted. At the same time, emphasis on the dynamism between text and interpreter should dispel the notion that only expansive works have expansive meanings. If interpretation itself is an art, then even the shortest text can contain "everything" within it when it participates in that art. This course will engage students in a radical experiment in the art of interpretation. Through a deep encounter with a selection of miniature texts, ranging from ancient rabbinic proverbs and medieval fables to the modern parables and fragments of Franz Kafka, as well as folklore and jokelore from every period in Jewish history up to the present, we will develop an interpretive practice that combines analytic, critical, and creative principles in both written and oral contexts. The goal throughout is to explore interactively how the making of meaning is an integral part of the human experience.

Requirements/Evaluation: class participation, regular short written and oral assignments, and a final project

REL 223 (F) Revolt and Revelation in 20th-Century Americas

Cross-listings: AFR 228 AMST 228 REL 223 LATS 228

Secondary Cross-listing

Writing in 1971, Dominican priest and Peruvian theologian Gustavo Gutierrez asked "Is the Church fulfilling a purely religious role when by its silence or friendly relationships it lends legitimacy to dictatorial and oppressive government?" Such a question encapsulates the sometimes agonistic and other times deeply intertwined relationships between religious institutions, religious thought, and movements for political transformation in the 20th century Americas. This course examines those forms of "God-talk" broadly termed "liberation theologies" that responded to and challenged social relationships of class, colonization, race, culture, gender, sexuality, (dis)ability, and ecology. These theologies were borne out of and in turn deeply shaped struggles against oppressive regimes and structures in the Americas, and as such we will focus on some specific theological writings--such as those of Gutierrez--and their relationship to distinct social movements and struggles over land, economy, and political power, especially in Brazil, El Salvador, Perú, and the United States of America between 1960-2000.

Requirements/Evaluation: participation, short writing exercises, a 5- to 6-page take-home midterm essay, and an 8- to 12-page final review essay

REL 226 (F) Spiritual But Not Religious

Cross-listings: REL 226 ANTH 226

Primary Cross-listing

Today, more than one in five people in the United States identify as "none" when asked about their religious affiliation. Yet that does not mean that religious sentiment or spirituality is on the decline. On the contrary, talk of "spirituality" is more pervasive than ever in popular discourse. Increasingly Americans claim that they are "spiritual but not religious" or that they prefer "individual religion" over "organized religion." This course seeks to understand and investigate this phenomenon. What is the lived experience of being "spiritual but not religious"? What counts as spirituality? Is there a meaningful distinction between spirituality and religion? What does this distinction assume about the nature of organized religion? What is the history that led us to this ideology of individualized spirituality? And what are the social and political implications of this trend? We will explore these questions and study this phenomenon through an engagement with ethnography (the qualitative research method generally described as

"participant-observation"). Over the course of the semester, students will be expected to conduct an ethnographic research project within local communities in Williams College and Williamstown. Alongside our central readings on spirituality, we will also be studying some background in the theory and practice of this methodology. Throughout the semester, students will work together on developing the practical skills necessary to conduct an ethnographic project, and will be gradually executing their own individual projects. This will include: designing a feasible project and research question, selecting research sites and interlocutors, taking field-notes and conducting interviews, and finally analyzing data and writing an ethnographic essay.

Requirements/Evaluation: regular reading responses; semester-long research project with frequent small assignments building up to the final product (15- to 20-page paper)

Prerequisites: none

Enrollment Limit: 15

REL 228 (F) Zen and the Art of American Literature

Cross-listings: REL 228 ENGL 239 AMST 238

Secondary Cross-listing

Just one hundred years ago, few Americans knew the first thing about Buddhism. But in 2021, who hasn't heard of (or even tried) mindfulness or meditation? Buddhist ideas and practices now seem ubiquitous, available even in the form of smartphone apps like Headspace and Ten Percent Happier. In this class, we'll explore how Buddhism came to be the profoundly important cultural force in American life that it is today. We'll read some Buddhist American literary texts, like Ruth Ozeki's wondrous novel, *A Tale for the Time Being*. And we'll range far beyond the world of literature into other cultural domains in which Buddhism has had a deep impact, like environmentalism, psychotherapy, and Western attitudes towards death and dying. We'll also give special attention to the role that Buddhism is playing in the struggle for racial justice (from bell hooks to Black Lives Matter). And we'll engage in an experiential investigation of the benefits of incorporating contemplative practices like meditation into the classroom: students in the course will learn a variety of meditation techniques, and we'll spend some time each class practicing and reflecting upon those practices. Students will be expected to meditate outside of class as well (2-3 times per week). No prior experience with meditation is necessary. Just an open mind.

Class Format: This will be a lecture class, with little to no time in-class for discussion. To create opportunities for conversation and discussion, I will offer a substantial number of office hours each week as well as small discussion group meetings (of 15 students each) every other Sunday (the discussion group meetings will be optional).

Requirements/Evaluation: Since this is an experiential course, presence is essential and will be strictly required (so after two allowed absences, each subsequent absence will lower a student's final course grade by 1/3 of a letter grade: A- to B+, for example). Other requirements: short reading responses and free-writing exercises for each class meeting, a 3-4 page midterm essay and a final 8- to 10-page essay.

Prerequisites: none

Enrollment Limit: 85

Enrollment Preferences: Students who preregister should fill out an expression of interest form at <https://tinyurl.com/ZenAmLitSpring2022> by Nov. 9. Preference will first go to students dropped from the Fall 2021 section of ENGL 239 and then by class year (seniors first).

Or, "From 'Shark Tank' to 'Monk Cave': Business and Socially Engaged Buddhism". Television shows like Shark Tank, featuring a panel of potential investors who consider propositions from aspiring entrepreneurs, evinces that popular culture values only the making of profit. In such a capitalistic world, who are the "winners" and "losers"? What impact does a business/product have beyond its intended consumer benefits? What is the Buddhist response to business and commerce and its overall effects on individuals, society, and ecology? This course will challenge students to research, analyze, and devise resolutions for real world issues, by having students employ Buddhist solutions informed by concepts such as compassion, interconnectedness, and Socially Engaged Buddhism. Students will scrutinize the related concept of "structural violence". We will look at examples from Bhutan's "Gross Domestic Happiness", Thailand's "Sufficiency Economy", China's state-led religious charities under the name of "Humanistic Buddhism", as well as the ordination of trees. This course hopes to prepare students to be critical, rather than merely passive, world citizens, especially in the realm of business, and to be more conscious and aware of their everyday life choices and its impact on every aspect of society.

Requirements/Evaluation: attendance and active participation 20%; experiential exercises 25% (i.e., critical reflection that incorporates class readings with personal experience of the various experiential exercises conducted throughout the term: mainly, a 30-day social-media cleanse, and meditation sessions); Mid-term exam (in-class: identification terms and short essay) 25%; Final project and presentation 30% (the final grade includes initial consultation with the instructor regarding topic selection, annotated bibliography, project outline, final presentation, and final written report)

REL 233 (S) Islam and the West: A Clash of Civilizations?

"This idea that all religions share the same values is bulls**t and we need to call it bulls**t," the popular political commentator and critic Bill Maher has said on multiple occasions. "If you are in this religion [Islam], you probably do have values that are at odds [with American values]. This is what liberals don't want to recognize." Maher has acquired a reputation for making strong statements like this about the need for Americans (and liberals in particular) to stand up for their secular liberal values, which are in conflict with and superior to the values of Islam. Maher's comments are only one recent manifestation of a long line of pundits making such claims. This is best exemplified by Samuel Huntington's "Clash of Civilizations" thesis, which famously predicted that there would inevitably be a violent clash between the Islamic and Western Civilizations. This course investigates such ideas about the inherent conflict between Islam and the West. How should we understand the nature of Islamic and Western civilizations and the relation between them? What is the history of this relationship? What has given rise to these standard representations of Islam and Muslims? What are the political stakes and consequences of these representations? How should we understand the phenomenon of "Islamophobia"? We will explore these questions through an in-depth and critical investigation into the history of Euro-American nationalism and colonialism, the concepts of "civilizations" and "religions", the history of modern Islam, and the nature of Orientalism and secularism.

Requirements/Evaluation: regular reading responses, 5- to 6-page midterm essay, group social-media project (research-based, creating a video essay), final 7- to 8-page essay

Prerequisites: none

Enrollment Limit: 25

Expected Class Size: 20

REL 234 (F) What is Islam? (DPE)

Cross-listings: ARAB 234 REL 234 GBST 234 HIST 208

Primary Cross-listing

This course introduces students to Islam as a varied and contested historical tradition. The course will trace the historical development of Islam, focusing on religious and intellectual thought, political developments, and the practices and lived lives of Muslims. We will begin with situating the rise of Islam within the context of late antiquity, followed by an examination of the life of Muhammad, and the rise of Muslim empires. These developments will form the framework through which we investigate the theological, philosophical, legal, mystical, and literary writings of Muslims from the classical to the early modern periods of Islamic history. The main aim of the course is to develop a framework for understanding the historical developments through which Muslims have constructed ideas about normativity, authority, and orthodoxy in debates around Islam. Sources will include pre-modern historical and religious texts (in translation).

Requirements/Evaluation: reading responses, two essays, final exam

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Religion majors (or those considering Religion as a major), then Arabic Studies and History majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

ARAB 234 (D2) REL 234 (D2) GBST 234 (D2) HIST 208 (D2)

Difference, Power, and Equity Notes: This course looks role of power, in particular imperial and colonial power in the construction of religion. To that end, the course will explore how the rise of Muslim empires shaped the construction of pre-modern Islam and subsequently the role of European colonialism in shaping the emergence of modern Islam. This course will teach students critical tools in postcolonial theory about the relationship between power and the production of knowledge and the agency of the colonized.

REL 235 (S) The Garden in the Ancient World

Cross-listings: COMP 235 REL 235 CLAS 235 ENVI 232

Secondary Cross-listing

Drawing on the literature, art, and archaeology of ancient gardens and on real gardens of the present day, this course examines the very nature and experience of the garden and the act of gardening. Using a multi-disciplinary approach, we will explore the garden as a paradise; as a locus for philosophical discussion and religious encounter; as a site of labor, conquest, and resistance; and as a place for solace, inspiration, and desire. This course will be grounded in crucial readings from antiquity, such as the Hebrew Bible, Homer, Sappho, Cicero, Lucretius, Vergil, Horace, Columella, and Augustine, and in the perspectives of more modern writers, from Jane Austen and Tom Stoppard to contemporary cultural historian George McKay. Ultimately, our goal is to analyze conceptions and expressions of beauty, power, and love-in the garden. All readings are in translation.

Requirements/Evaluation: class participation, short written assignments, and a final project

REL 236 (S) Reading the Qur'an

Cross-listings: ARAB 236 REL 236 COMP 213 GBST 236

Primary Cross-listing

In the nearly 1500 years of Islamic history, the Qur'an has been a central source of spiritual insight, ethical and legal guidance, sacred stories, and theological principles. Considered the divine word of God, the Qur'an is central to devotional life. This course will explore the Qur'an as a text that is always in a state of production. We will focus significantly on close readings of the text of the Qur'an, in addition to pre-modern and modern Qur'anic exegesis. The course will begin with a historical account of the revelation and collection of the Qur'an, placing the form and content of the text in the context of 7th century Arab society and the life of the Prophet. We will then study Qur'anic commentaries to discuss how Muslims have drawn theological, legal, philosophical, and mystical meaning from the Qur'an. We will pose some of the following questions: What do the different exegetical methods tell us about the intertextual nature of the Qur'an? How have these shifting notions affected the meaning made from Qur'anic verses and passages? What role do interpretive communities play in determining what the Qur'an says? Lastly, through an exploration of the art of Qur'an recitation, calligraphy, and Qur'an manuscripts, we will explore the ways in which the Qur'an is also an object of devotion in Muslim life.

Requirements/Evaluation: class participation, weekly reading responses, 3- to 4-page midterm paper, and a final project with a media component and a 4- to 6-page analytical essay

Prerequisites: none

REL 237 (S) Islam in the United States: Race, Religion, Politics (DPE)

Cross-listings: REL 237 AFR 237 AMST 237

Primary Cross-listing

Malcolm X is one of the most iconic yet controversial figures in the black freedom struggle in the United States. He is also arguably the most prominent and influential Muslim in the history of the United States. His story and legacy powerfully illustrate the complex intersections of Muslim identity, political resistance, and national belonging. From the early period of "Black Muslim" movements represented by Malcolm X, to the current "War on Terror" era, American Muslims have faced a complex intersection of exclusions and marginalization, in relation to national belonging, race, and religion. Taking Malcolm X as our point of departure, this course examines how American Muslims have navigated these multiple layers of marginalization. We will therefore consider how the broader socio-political contexts that Muslims are a part of shape their visions of Islam, and how they contest these competing visions among themselves. In so doing, we will examine the complex relation between religion, race, and politics in the United States. Throughout the course, we will be engaging with historical and anthropological material, autobiographies, comics, documentaries, films, historical primary-source documents, and social media materials. The course fosters critical thinking about diversity by challenging assumptions of who Muslims are, what being American means, and what Islam is. It also focuses on the complex interaction of different dimensions of diversity, from religion to ideology, race, nationality, ethnicity, culture, gender, and language.

Requirements/Evaluation: regular reading responses, midterm essay, final exam/essay

Prerequisites: none

REL 238 (F) Islam and Reason (DPE)

In an essay on the "reality of Islam," the popular New Atheist writer, Sam Harris, concludes: "All civilized nations must unite in condemnation of a theology that now threatens to destabilize much of the Earth... It is time we realized that the endgame for civilization is not political correctness. It is not respect for the abject religious certainties of the mob. It is reason." These words forcefully express the common sentiment that the fanatical blind faith demanded by "mainstream Islam" poses a major threat to the so-called civilized world. Islam is thus seen as exemplifying the irrational dogmatism of religion par excellence. This course will critically examine such assumptions, by exploring how Muslim philosophers and theologians throughout the history of Islam have addressed a variety of questions, such as: Is faith compatible with reason and rationality? What is the relation between reason and scripture? What modes of perception, reasoning, and knowledge are involved in religious belief? What room is there for doubt, skepticism, and critique in Islam? We will explore these questions through an array of primary and secondary readings in Islamic theology, philosophy, mysticism, and ethics, as well as anthropological engagements with lived Islam. Through these explorations, we will also critically reflect on our own cultural assumptions about religious belief, the nature of reason and knowledge, and the politics and power-dynamics of reason and rationality.

Requirements/Evaluation: Regular discussion posts; Midterm essay; Final essay

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: Religion majors

Expected Class Size: 5-10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course requires students to engage deeply with a very different philosophical universe than that of the modern West. This is also meant to prompt a critical engagement with our own cultural and philosophical assumptions about reason, knowledge, and religious belief. Finally, we will also reflect on the politics and power-dynamics of reason and rationality, considering how dominant modes of thinking are designated as "reason" and others are relegated to being objects of critique.

REL 241 (F) History of Sexuality

Cross-listings: REL 241 HIST 292 GBST 241 WGSS 239

Primary Cross-listing

Is sexuality an immutable aspect of who we are or is it socially constructed? How have people understood sex and sexuality throughout history? Why does religion have any say in the sexual lives of individuals and society? What are sexual transgressions and why are they punished? Is sex a commodity that can be exchanged for money? Is sex political? This course will explore these questions through a historical approach, focusing in particular on the shifting understanding of sex and sexuality across historical time and different geographical regions. In investigating the category of sexuality, this course will push us to consider three key questions: 1) Is sexuality a useful category for historical analysis, 2) how have our assumptions regarding sexuality and sexual ethics taken shape and changed over time and 3) how do social, cultural, political, and economic conditions affect changing meanings of sexuality. Historical studies will be read in conjunction with different theoretical frameworks about sexuality. Reading historical accounts of sexuality alongside theoretical pieces will allow us to consider how historians construct an argument and the influence of theoretical frameworks in shaping scholarship. Some of the theorists we will read in the course include: Michel Foucault, David Halperin, Afsaneh Najmabadi, Valerie Traub, and Carla Freccero.

REL 242 (S) Women, Gender, and Sexuality in Islam (DPE)

Cross-listings: REL 242 WGSS 242 ARAB 242

Primary Cross-listing

The figure of the Muslim woman is an object of intense scrutiny in Western society. Claims that Muslim women are oppressed and the incompatibility of Islam and feminism abound. This course will consider women and gender roles in the Islamic tradition and how Muslim women have interpreted and negotiated these discourses. We will explore questions of masculinity, femininity, and sexuality across various historical periods as well as through contemporary Muslim feminist scholarship and literature (including film and novels). We will begin with insights into the politics of representing Muslim women, exploring how Muslim women are depicted in popular culture and media and ask the crucial question: do Muslim women need saving? We will then explore: how Muslim women have claimed religious authority through scriptural interpretation; how they have negotiated their position in Islamic law both historically and in contemporary Muslim societies; and the lives of pious women in Sufism--the mystical tradition of Islam. We will conclude with Muslim feminist scholarship and recent works on Islamic masculinities. Throughout the course, emphasis will be placed on the diversity of interpretations in Islam around women, gender, and sexuality and on Muslim women's own articulations about their religious identity and experiences. Some of the topics covered in this course include: marriage and divorce, slavery, modesty and veiling, and homosexuality.

Requirements/Evaluation: weekly discussion post, midterm essay, and final paper (6-8 pages)

Prerequisites: none

REL 243 (F) Islamic Law: Past and Present

Cross-listings: ARAB 243 WGSS 243 REL 243 HIST 302

Primary Cross-listing

From fear of the Shari'a to its implementation in so called "Islamic countries," Islamic law is perhaps best associated with draconian punishments and the oppression of women. Islamic law is ever present in our public discourse today and yet little is known about it. This course is designed to give students a foundation in the substantive teachings of Islamic law. Islamic law stretches back over 1400 years and is grounded in the Quran, the life example of the Prophet Muhammad, and juridical discourse. Teetering between legal and ethical discourse, the Shari'a moves between what we normally consider law as well as ethics and etiquette. The course will explore four key aspects of the law: its historical development, its ethical and legal content, the law in practice, and the transformation of Islamic law through colonialism and into the contemporary. Specific areas we will cover include: ritual piety, family and personal status law, criminal law, and dietary rules.

REL 244 (F) Mind and Persons in Indian Thought

Cross-listings: ASIA 244 PHIL 245 REL 244

Primary Cross-listing

In this course, we follow the Indian philosophical conversation concerning the self and the nature of consciousness, particularly as they are found in its various Yogic traditions. We start with some of the Hindu views about the self and the mind and consider their ethical implications. We then consider a range of Buddhist critiques of these views, focusing more particularly on the Madhyamaka, which radicalizes the critique of the self into a global anti-realist and skeptical stance. We also examine the Yogacara school, which offers a process view of reality focusing on the analysis of experience. We conclude by considering some of the later Hindu holistic views of the self as responses to the Buddhist critique. In this way we come to realize that far from being the irrational foil of "the West," Indian tradition is a rich resource for thinking through some of the central questions that have challenged philosophers in both traditions.

Primary Cross-listing

This tutorial considers India's multiple and intersecting identities, in relation to climate emergencies, resource scarcities, and ongoing struggles for power and status across very different parts of India. We examine the intersectional identities that produce solidarity and opposition within landscapes always already structured by power and inequity. How do communal and individual identities such as gender, class, caste, sexuality or religion shape social conflict and ongoing struggles for power in India today? We examine key moments in Indian history that that continue to produce social conflict and fluidity such as Partition, the riots in Gujarat, Hyderabad, and Delhi that have shaped the modern landscape of communal identity, as well as the contested border such as Ladakh as well as Jammu & Kashmir. Our readings will include ethnographic, sociological, historical fiction, and oral history. Students choose their own topics to delve into for final weeks of the semester.

Class Format: Meeting weekly in pairs with tutorial partner to discuss texts and student essays.

Requirements/Evaluation: weekly writing assignments and tutorial attendance every week

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: Majors in Anthropology, Sociology, Religion, Women's, Gender & Sexuality Studies, concentrators in Asian Studies, STS

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

REL 247 (F) Anti-Muslim Racism: A Global Perspective (DPE)

Cross-listings: PSCI 244 GBST 243 REL 247

Secondary Cross-listing

The racialization of Islam and Muslims has been constitutive to how they have been imagined in Europe and elsewhere. This course looks at how difference works and has worked, how identities and power relationships have been grounded in lived experience, and how one might both critically and productively approach questions of difference, power, and equity. It goes back to the founding moments of an imagined white (at the beginning Christian) Europe and how the racialization of Muslim and Jewish bodies was central to this project, and how anti-Muslim racism continues to be relevant in our world today. The course will not only show how Muslims were constructed as subjects in history, politics and society from the very beginning of the making of Europe and the Americas to the end of the Cold War to the post-9/11 era. Rather, it also looks at how Muslims live through Islamophobia. It looks at processes of racialization of Muslims within the Muslim community and between Muslim communities, while also considering which agencies Muslims take to determine their own future. The course draws from anthropology, gender studies, history, political science, religious studies, postcolonial studies, decolonial studies, and sociology.

Requirements/Evaluation: Active class participation, two response papers, and a comprehensive, open-book and open-note final exam.

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Global Studies concentrators and Religion majors

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

REL 249 (S) Anti-Semitism (DPE)**Cross-listings:** JWST 249 REL 249**Primary Cross-listing**

This course will investigate intellectual traditions, political movements, and cultural objects that portray Jews, Jewishness, or Judaism as essentially pernicious. We will analyze materials from a variety of times and places, including the ancient world, the medieval period, and the present day. We will assess the impact of anti-Semitism on the lives of Jews and non-Jews. But we will also read theoretical approaches to the study of anti-Semitism that raise key questions for our investigation. Where does the term "anti-Semitism" come from and how exactly should it be defined? Is anti-Semitism a continuous phenomenon that connects every claim of Jewish perniciousness, wherever it is alleged, for over two thousand years of human history? Or should every context be treated as fundamentally distinct, so that the claim of Jewish perniciousness is presumed to have a distinct meaning, origin, and purpose in each case? What motivates charges of Jewish perniciousness? What are the particular threats typically alleged to be posed by Jews, Jewishness, and Judaism? How do constructions of Jewish perniciousness fit with constructions of race, gender, ethnicity, religion, class, sexuality, and nationality in different times and places?

Requirements/Evaluation: Three 5-7 page papers, class participation**Prerequisites:** none**Enrollment Limit:** 15**Enrollment Preferences:** Jewish Studies concentrators, Religion majors, and students who have taken JWST 203**Expected Class Size:** 15**Grading:** no pass/fail option, no fifth course option**Distributions:** (D2) (DPE)**This course is cross-listed and the prefixes carry the following divisional credit:**

REL 250 (F) Scholars, Saints and Immortals: Virtue Ethics in East Asia**Cross-listings:** ASIA 250 REL 250**Primary Cross-listing**

In East Asian cultures, as in the United States, popular conceptions of morality typically take their shape, not from explicit rules, but from *moral paragons*--stylized figures that are said to embody a distinctive cluster of virtues. For example, American Christians invoke not only Jesus, but also a pantheon of "secular saints" as diverse as Martin Luther King Jr. and General Patton, George Washington and Cesar Chavez. This course will explore the cultural functions of moral paragons and philosophies of virtue in East Asia by introducing students to examples from Chinese and Japanese history, ranging from Confucian articulations of the ideal scholar-bureaucrat to Buddhist conceptions of the Bodhisattva to Taoist immortals. It will also address the history of ethical thought in East Asia, focusing particular attention on conceptions of "Virtue Ethics." This approach has come to be seen by some contemporary analytic philosophers as a way out of the impasse produced by ethical relativism and the loss of theological rationales for moral action. Readings will include Euro-American philosophers such as Nietzsche and MacIntyre as well as primary texts in translation by Chuang-tzu, Confucius, Shantideva and others. The fall 2021 iteration of the course will have a special focus with a few additional readings on idealized communities and political "utopias."

REL 254 (S) The Theory and Practice of Meditation in the Modern World

This course invites students to examine theoretically and experientially meditation. Throughout the course, we examine meditations belonging to various Buddhist traditions through our own practice. We study some of the manuals where these meditations are taught and connect these practices to some of the more important ideas of the tradition. In studying and practicing meditation, we follow a gradual approach, starting from the most basic practices to more advanced ones. We also connect the practices and ideas we consider with modern scientific approaches, examining practices such as mindfulness therapy and the practice of positive emotions from a psychological perspective. In the process, we re-contextualize Buddhist ideas by connecting them with modern approaches, particularly those inspired by biology, psychology and ecology. Throughout the course, students will keep a daily practice of meditation and record their experiences in a journal so as to be able to come to an informed understanding combining a theoretical grasp of the issues raised by meditation and their own personal appreciation.

Class Format: mixture of lecture, discussion, and practice of meditation

Requirements/Evaluation: full attendance and participation, regular practice of meditation, two middle-length essays, and a meditation journal

Prerequisites: none

REL 255 (F) Buddhism: Ideas and Practices

Cross-listings: ANTH 255 REL 255 ASIA 255

Primary Cross-listing

This course introduces students to Buddhism by examining its ideas and practices as they have taken place in actual social contexts rather than as disembodied textual objects. After examining the main ideas and narratives of the tradition, we turn our attention to Thailand where we examine how these ideas and narratives have shaped a whole range of practices, from meditation to shamanistic rituals. We then consider the transformations that Buddhism is undergoing in contemporary society, examining the rise of meditation movement, the changing role of monks and laity, the resurgence of the nun order, the rise of Buddhist social activism and the development of new Buddhist social philosophies. We ask questions such as: How can Buddhism adapt to a modern global consumerist society? What are the transformations involved in this process and the role that Buddhism can play in such a global society? Should Buddhists take advantage of the opportunities of this new global culture or should they adopt a critical stance toward its consumerist values?

REL 256 (F) Buddhism, Sex, & Gender: #MeToo Then and Now (DPE)

Cross-listings: ANTH 256 WGSS 256 REL 256 ASST 256 ASIA 256

Primary Cross-listing

This course considers the feminist voices that have been part and parcel of Buddhist practices, texts, and institutions for most of its 2500-year history. We will conduct a historical genealogy of Buddhist voices that illustrate the fluid and disruptive role of sex, gender, caste, and class in relation to individual behavior and social relations. How did the Buddha's inner revolution produce a set of practices that both reject and reinforce existing binaries and social hierarchies of sex and gender, and with what effects? We will trace a feminist voice that decries harassment, assault, and systemic sexism within Buddhist communities from the first female disciples (Theri) of the Buddha to the current #MeToo era of embattled toxic masculinity. Along the way, we explore a literary canon that contains misogyny and 'she devils' alongside a rich tapestry of female divinities, transgender fluidity, and female liberation. We pursue an intersectional analysis of Buddhist traditions and texts by considering the multiple forms of social hierarchy--gender, sexuality, race, and class--that Buddhism has attempted to transcend. We begin by considering three women in the Buddha's life--his mother (Maya), his stepmother/aunt (Gotami), and his wife (Yashodhara)--as well as the tales of the first enlightened Buddhist women whose topics include prostitution, patriarchy, sexism, and pathetic husbands, as well as their own decaying bodies and beauty. Our next theme is the myriad ways that gender is both produced and deconstructed in Buddhist discourses on enlightenment and the human body. Our final theme considers a range of monastic memoirs, including a Buddhist black nun who left Harvard to take ordination in Thailand, and a Dutchman who studied Zen in Japan. We close by examining the current debates in the U.S. and Asia that seek to combat systemic racism, sexism, and casteism in Buddhist traditions.

Requirements/Evaluation: class discussion, reading responses (3-4 pages), writing chat, final research paper (12 pages)

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Anthropology, Religion, Asian Studies, Women's, Gender and Sexuality majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

REL 257 (S) Tibetan Buddhism: Embodying Wisdom and Compassion

We begin by considering the basic ideas and practices of Tibetan Buddhist traditions and the ways in which the ideals of wisdom and compassion have shaped Tibetan culture. We then proceed to examine particular aspects of the tradition such as the role of the teacher or lama and their various manifestations, from the exotic figure of the tantric guru to that of the Dalai Lama, a charismatic world teacher engaged in both religious and political affairs. We also examine a wide range of lay and monastic practices, from the life of large monasteries and their unique culture to the practices of nuns and lay people. Throughout this course, we consider not just the variety of exoteric practice forms but also the esoteric tantric tradition that pervades Tibetan life. We examine the various meditative practices that revolve around this profound and often misunderstood tradition. In doing so, we do not consider tantra as just a set of strange practices sometimes revolving around sex and violence. Rather we examine how it manifests a philosophy of embodiment that has profound implications for thinking about who we are as human beings.

Class Format: discussion

REL 258 (F) American Conservatism

Cross-listings: HIST 378 REL 258

Secondary Cross-listing

This course traces the history of modern conservatism in the United States, from the early 20th century to the present. Students will examine the key ideas, leaders, and social movements that fueled and defined the rise of the modern right, broadly construed. In the process, they will go beyond electoral politics, exploring the relationship between conservatism and American life more broadly - especially in the realms of race relations, gender and sexuality, religion, and capitalism. Students will be asked to think historically, considering how the right rose from obscurity to political ascendance over the course of the 20th century. And they will be asked to engage theoretically, considering what (if anything) has defined conservatism in principle and in practice. In the process, they will examine such topics as Christian fundamentalism; anti-New Deal organizing; Cold War nationalism; the GOP's 'Southern Strategy;' law and order politics; anti-feminism and the culture wars; neoliberal economics; and neoconservative foreign policy.

Class Format: This course will be hybrid -- accessible to both on-campus and fully remote students. It is designed as a seminar, in which course meetings will revolve around synchronous discussion. Remote learners will be expected to digitally attend and participate in those meetings through

Zoom (or a similar program).

Requirements/Evaluation: Participation in group discussion; five response papers (300-400 words); two essays (4-6 pp); final research paper (8-10 pp).

Prerequisites: None, open to all students.

Enrollment Limit: 15

Enrollment Preferences: History and Religion majors.

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)

REL 259 (S) Ethics of Jewish American Fiction

Cross-listings: ENGL 259 JWST 259 REL 259

Primary Cross-listing

After the Second World War, Jewish American writers who wrote about Jewish characters and Jewish themes were increasingly celebrated as central figures in American fiction. Isaac Bashevis Singer, Bernard Malamud, Saul Bellow, Cynthia Ozick and Philip Roth are among those who gained prominence in this period. These writers were literary innovators and often addressed broad humanistic themes. But they also struggled with profound questions that arose in the postwar period about Jewishness, the legacy of the Holocaust, and what it means to be an American. In this course we will read the above authors and others. We will focus, in particular, on the distinctive ethical and political ideas, emotions, and aspirations that animate their work. The course will begin with a study of theoretical approaches that will provide the basis for our ethical criticism: we will read, for instance, Lionel Trilling, Wayne Booth, Martha Nussbaum, and Noël Carroll. Then we will delve into the fiction, following a trail that begins in the postwar period and continues in fictions by Erica Jong, Rebecca Goldstein, Michael Chabon, Gary Shteyngart, and others. Can we find a distinctive Jewish American ethics in Jewish American fiction?

Requirements/Evaluation: class participation, one take-home exam on theoretical approaches to ethical criticism; four short essays

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Religion majors, Jewish Studies concentrators, and English majors

Expected Class Size: 18

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)

REL 261 (F) Rastafari: Dread, Politics, Agency

Cross-listings: REL 261 AFR 299 PSCI 233

Secondary Cross-listing

The emergence of Rastafari in the twentieth century marked a distinct phase in the theory and practice of political agency. From its heretical roots in Jamaica, Garveyism, Ethiopianism, and Pan-Africanism, Rastafari has evolved from a Caribbean theological movement to an international political actor. This course investigates the political theory of Rastafari in order to develop intellectual resources for theorizing the concept of agency in contemporary Africana thought and political theory. We will analyze texts and audio-visual works on the political economy of late colonial Jamaica, core Rastafari thinking, political theology, the role of reggae music, the notion of agency, and the influence of Rastafari on global politics.

Requirements/Evaluation: attendance and participation, weekly reading e-response papers, two short essays, and a 12- to 15- page final paper

Prerequisites: none; open to all

Enrollment Limit: 15

Enrollment Preferences: Africana Studies concentrators and majors in Political Science and Religion

REL 262 (F) Time and Blackness

Cross-listings: AFR 208 AMST 208 REL 262

Secondary Cross-listing

The concept of time has been one of the most examined, yet least explicitly theorized, concepts in Africana Studies. While the field is saturated with historical studies and literary analyses that take up issues of cultural memory--which involves thinking about time--time itself has rarely the subject of sustained inquiry. This may be due to its abstractness as an idea, and the level of analysis its conceptualization demands, or because time in the Black experience cannot be understood outside of the meaning of race, which itself is not completely tangible. In this tutorial, "Time and Blackness," we will explore how Black writers across a number of genres--spiritual autobiography, fiction, memoir, literary criticism, and cultural theory--understand time, and create paradigms of time to organize their work. The following questions will structure our investigation: What are the constituent elements of time in Black writings? How does race shape the ways Black writers conceive the experience of time? And, finally, to what can we attribute the recent surge in explicit, theoretical examinations of "time and blackness"?

Requirements/Evaluation: assignments will include six 2-page response papers; two 5-page writing assignments; and a final, 10-page review essay on how time is understood in a genre of writing

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: concentrators in Africana Studies, majors in Religious Studies, and majors in American Studies

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

REL 263 (S) Giving God a Backbeat: Rap Music, Religion & Spirituality

Cross-listings: AFR 221 REL 263

Secondary Cross-listing

On the surface, religion and rap music may seem as if they have little in common. Yet, like other Black musical traditions such as spirituals and the blues, rap is rooted in African American religious traditions. In this course, we will explore the ways in which rap music intersects with the sacred and secular worlds. Through an examination of black religious traditions, lyrics, music videos, and digital media, we will unearth what Anthony Pinn calls the "spiritual and religious sensibilities" of rap music. Grounded in culture-centered criticism, we will investigate the rhetoric of rap and religion through

the theoretical ideas of Black Liberation Theology and hip-hop feminism.

Requirements/Evaluation: students will be evaluated on their class participation, Twitter threads, response papers, quizzes, and a final class group project

Prerequisites: none

REL 264 (F) Bodies, Genders, and Sexualities in the Early Christian World (DPE)

Cross-listings: REL 264 WGSS 264

Primary Cross-listing

What does it mean to be a woman or a man? To have body? A gender? A sexuality? In this course we will explore the ways in which bodies, genders, and sexualities were experienced and described in Mediterranean antiquity. Ancient experiences of and ideas about bodies, genders, and sexualities were often very different than those of the contemporary world. Nevertheless, because Greek and Roman antiquity and Christian beginnings often function as the imagined origins of "Western" (or European and American) "civilization," these ancient ideas about bodies, genders, and sexuality maintain an out-sized presence in current debates about the "normal" body, gender practices, and the contour of sexuality. With a focus on early Christianity, the course seeks, on the one hand, to introduce students to the early history of Christianity through an inspection of its pluriform discourses on the meaning and regulation of bodies, genders, and sexuality, even as it keeps an eye toward the modern legacy of these ideas. On the other hand, the course gives students the opportunity to be introduced to key questions and theories in Women's, Gender, and Sexuality Studies through the study of early Christianity and its environs

Requirements/Evaluation: weekly response papers, 5- to 6-page paper, 8- to 10-page paper

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: majors, student seniority by class

Expected Class Size: 19

Difference, Power, and Equity Notes: The course's focus on the production and use of difference in terms of bodies, genders, and sexualities, and how those putative differences were used to authorize the social distribution of power, qualify this course as meeting the DPE distribution requirement.

Not offered current academic year

REL 268 (F) Where are all the Jews? (DPE) (WS)

Cross-listings: REL 268 ARAB 363 COMP 363 JWST 268

Secondary Cross-listing

Until four decades ago, many Maghrebi and Middle Eastern cities and villages teemed with Jewish populations. However, the creation of the Alliance Israelite Universelle's schools (1830s), the establishment of the State of Israel in 1948, the decolonization process in the Maghreb and the Middle

East, and the Arab defeat in the Six-Day War accelerated the departure of Arab and Berber Jews from their homelands to other destinations, including France, Israel, Canada, the United States, and different Latin American countries. Arab and Berber Jews' departure from their ancestral lands left a socioeconomic and cultural void that Maghrebi and Middle Eastern cultural production has finally started to address, albeit shyly. The course will help students understand the depth of Jewish life in the Maghreb and the Middle East, and interrogate the local and global factors that led to their disappearance from both social and cultural memories for a long time. Reading fiction, autobiographies, ethnographies, historiographical works, and anthropological texts alongside documentaries films, the students will understand how literature and film have become a locus in which amnesia about Arab/Berber Jews is actively contested by recreating a bygone world. Resisting both conflict and nostalgia as the primary determinants of Jewish-Muslim relations, the course will help students think about multiple ways in which Jews and Muslims formed communities of citizens despite their differences and disagreements.

Class Format: The course will be offered both in-person and remotely. Students enrolled remotely are required to watch the recorded videos of the in-person sessions in order to stay abreast of the discussions that take place in the classroom and enrich their engagement with the materials assigned in the course.

Requirements/Evaluation: 400-word weekly, focused responses on Glow; a book review (600 words); two five-page papers as mid-terms; one ten-page final paper; one presentation.

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: students interested in critical and comparative literary, religious or historical studies.

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

REL 268 (D2) ARAB 363 (D1) COMP 363 (D1) JWST 268 (D2)

Writing Skills Notes: Students are required to present an outline of their papers before submitting a draft paper. The professor will give feedback on each written work to improve students' writing skills. Students are required to incorporate the feedback to improve their drafts before they become final. Students will receive detailed and consistent feedback about their writing in Arabic language. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: Students in this course will understand the historical process that lead to the disappearance of Arab/Berber Jews. Students also will work out alternative ways to grasp Jewish-Muslim relations beyond nostalgia and conflict. Finally, students enrolled in the course will grapple with and try to disentangle the complexity of Jewish-Muslim citizenship in both pre-colonial and postcolonial contexts.

REL 269 (F) Mindfulness Examined: Meditation, Emotion, and Affective Neuroscience (DPE) (WS)

Cross-listings: REL 269 STS 269 ASIA 269 ANTH 269

Primary Cross-listing

This course provides a social analysis of and practical engagement with mindfulness in the US today. It considers the modern applications of Buddhist meditation as a tool to improve awareness of the related processes of mind, behavior, and emotions within landscapes structured by racism, sexism, and other systemic inequalities. We consider how mindfulness relates to Buddhist discourses as well as the rapid rise of fields like contemplative neuroscience, affective neuroscience, and integrative neurobiology. How can mindfulness help people communicate more effectively--be they doctors or patients, teachers or students? How has the exploding research on mindfulness and meditation since 2000 help us understand the intersection of human emotions, behaviors, and relationships? We train in a variety of Buddhist meditation practices through the semester including forest bathing, mindfulness, compassion meditation, while unpacking the subjective experience of our minds and emotions first-hand. Students will be asked to train in mindfulness practices the entire semester while studying models of the mind developed by research in clinical and evolutionary psychology, affective neuroscience, and interpersonal neuroscience.

Requirements/Evaluation: weekly tutorial papers and discussion

Prerequisites: A prior class or some experience with meditation is recommended

Enrollment Limit: 10

Enrollment Preferences: ANTH, SOC, REL, ASST majors; PHLH, STS concentrators; seniors and juniors

Expected Class Size: 10

Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

REL 269 (D2) STS 269 (D2) ASIA 269 (D2) ANTH 269 (D2)

Writing Skills Notes: This class will involve weekly tutorial essays or oral responses, intensive written feedback on every essay, and a mid-semester 'writing chat' with the instructor.

Difference, Power, and Equity Notes: This class fulfills the Difference, Power, and Equity requirement because it will explore the ways that mindfulness can address the growing epidemic of anxiety, depression, and other mental health issues we find in the US today. We study mindfulness from an intersectional perspective and relate its benefits to intersecting inequities and intergenerational trauma in the US today.

REL 270 (F) Reading Jesus, Writing Gospels: Christian Origins in Context (WS)

Cross-listings: REL 270 COMP 263 CLAS 270

Primary Cross-listing

What were the religious and cultural landscapes in which Christianity emerged? How did inhabitants of the ancient Mediterranean world speak about the concept and significance of religion? How have scholars of early Christianity answered these questions? What are the implications of their reconstructions of early Christian history? The course is divided into four parts. The first part establishes the interpretive approach of the course. The second part of this course addresses these questions by examining the formation of Christianity from its origins as a Jewish movement until its legalization, using a comparative socio-historical approach. The third part of the course focuses on the earliest literature produced by the Jesus movement and consider it within a comparative framework developed in the first half of the course. The final part of the course emphasizes modern interpretations of Jesus and the Jesus movement; here we shall be examining how scholars make use of ancient materials to frame their arguments.

Class Format: lecture/discussion

Requirements/Evaluation: three 3-page papers (with revisions), one 5- to 7-page paper (that builds on one of the earlier 3 page papers), and a final paper (7-10 pages, that draws on some of the earlier writing in addition to new writing)

Prerequisites: none; open to all

Enrollment Limit: 19

Enrollment Preferences: sophomores, especially potential majors in Religion, Classics, and Comparative Literature

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

REL 270 (D2) COMP 263 (D2) CLAS 270 (D1)

Writing Skills Notes: Students will write a series of short essays, with required revisions, to develop their skills in close reading of ancient texts and interpretive analysis of modern scholarship about Christian origins. In each successive section of the course, writing from the prior unit will inform the subsequent papers.

REL 272 (F) Art of the Noble Path: Buddhist Material Culture Across Asia

Cross-listings: REL 272 ARTH 272 ASIA 272 ASST 272

Secondary Cross-listing

Buddhism has spread throughout Asia and beyond since its emergence in India in the 5th century BCE, providing a shared philosophical and cosmological framework for diverse cultures. Artistic expression, regional politics and cultural landscapes have been shaped by its remarkable influence. With patrons ranging from powerful monarchs and monks to merchants and tradespeople, Buddhist art has historically reflected the religion's social inclusivity. This course will survey the architecture, painting and material culture of Buddhism in Asia, tracing its influence in diverse media, from rock-cut architecture to Zen painting. A close reading of primary texts, such as architectural inscriptions in India, manuscripts from Tibet, and travelogues of Chinese pilgrims, will provide greater context for the artworks.

Requirements/Evaluation: 3 ten-minute quizzes, weekly Glow responses, a midterm, and a final exam

REL 274 (F) Ritual, Power and Transgression

Cross-listings: REL 274 ANTH 299

Secondary Cross-listing

The focus of this course is on the role of ritual in harnessing political power. In the first part of the semester, we examine some of the ways in which different cultures manufacture social order and political power through categories of inclusion and exclusion, clean and dirty, proper and improper, and licit and illicit. We will be particularly attuned to the ways in which these categories are performed through and maintained by rituals and how bodies are deployed in ritual spaces as instruments of persuasion and control. We will also look in depth at a variety of ritual forms, including scapegoating and sacrifice, and how they serve as engines of political control and protest, and we will examine the uses of dead bodies and memorials as vehicles for gaining and maintaining political power and the destruction and desecration of bodies and memorials as a form of political protest and dissent. Throughout the semester, we will be relating theoretical texts and historical cases to current political struggles in this country and abroad.

Class Format: The class will be taught remotely.

Requirements/Evaluation: class participation, biweekly responses to instructor prompts, three short (500 words) response papers, and one 10- to 12-page (2000-2400 words) research paper

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: ANSO and REL majors, open to first-years

REL 275 (S) Paul the Apostle: Then and Now

The Apostle Paul is the most important thinker in the history of Christianity. He wrote much of the New Testament and was one of the first to formulate and articulate the basic message of Christianity. In this course, we'll start by exploring Paul's writings in their original context, probing what his message would have meant for the inhabitants of the Roman Empire. Special attention will be paid to Paul's contribution to ancient debates about Judaism, conversion, and ethnic difference. In addition to examining the first contexts and meanings of his writings, we'll be especially interested in the legacy of Paul's writings on modern political thought in Europe and America in the 20th and 21st centuries. In this portion of the course, we'll see how Paul's influence has shaped current theories of citizenship, with or without the knowledge or consent of modern thinkers and societies. The course thus explores the original significance of Paul's thought as well as its hidden influence upon the political structures of secular modernity.

Requirements/Evaluation: four five-page papers, final paper, participation

Prerequisites: none

This course is cross-listed and the prefixes carry the following divisional credit:

REL 276 (D2) COMP 258 (D1)

Difference, Power, and Equity Notes: This course situates "gnosis" as a practical epistemological orientation used both to disrupt and challenge power arrangements deemed unjust and to empower those who are marginalized within dominant power structures. At the same time, the course interrogates "gnostic" epistemological claims as capable of being used to reinstall hierarchical power structures. Attention to power and equity and how difference is produced is at the center of the course.

Spring 2022

LEC Section: 01 MR 1:10 pm - 2:25 pm Denise K. Buell

REL 277 (F) Meditation and Modern American Life

Cross-listings: REL 277 ENGL 277

Secondary Cross-listing

The first English translation of a Buddhist text was published in the United States in 1844. At the time, few Americans knew the first thing about what Buddhism was, but now, a little over a century and a half later, Buddhist ideas and practices (meditation, in particular) can be found everywhere. In this class, we'll explore how Buddhism came to be the profoundly important cultural force in American life that it is today, looking particularly at the increasingly mainstream role of meditation in modern American life. We'll study how traditional Buddhist meditation practices were transmitted to the West, and then track the way those practices changed over time, as they were adapted to the radically new context of American culture. And we'll study the way meditation is impacting a wide array of cultural domains, including: literature, psychology, education, environmentalism, Western attitudes towards death and dying, and the fight against racism. A key part of the course will be an introduction to the theory and practice of meditation: we'll learn a variety of meditation techniques, and we'll spend a significant amount of time each class practicing and reflecting upon those practices. This course is a part of a joint program between Williams' Center for Learning in Action and the Berkshire County Jail, in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Classes will be held at the jail, with transportation provided by the college. *Please note the atypical class hours, Thursdays, 4:45-8:30 pm.*

Requirements/Evaluation: full attendance and participation; meditation 2-3 times a week outside of class; a meditation journal; and a final 10-page essay

Enrollment Limit: 18

Enrollment Preferences: final selection will be made on the basis of (a) statements of interest sent via email to brhie@williams.edu by June 26 and (b) brief interviews with the instructor.

Expected Class Size: 18

Grading: yes pass/fail option, no fifth course option

REL 278 (F) Buddhist Material Culture: Objects of Practice and Merit

Cross-listings: REL 278 ASIA 278 ASST 278

Primary Cross-listing

You've heard of the "material girl" (or boy), but what about the material Buddhist? This course encourages students to look beyond modernist ideals of Buddhism as a rational tradition of monks, monasteries and manuscripts, merely advocating mindfulness. In this course, we take Buddhist "stuff" (material culture) seriously. We explore what exactly is material culture, and what makes it Buddhist? If Buddhism is supposed to be a tradition that encourages non-attachment, then what is meant by "Buddhist material culture"? Shouldn't Buddhists be free of material things? Or, rather, who says they have to be? This course offers: (1) an introduction to the core concepts of Buddhism; (2) a brief overview of Material Religion, or the "material turn" in the study of religion; and (3) a preliminary exploration into the vast material- and spiritual worlds of Buddhist Asia, particularly China, Japan, Myanmar, Tibet, and Thailand. We begin by decolonializing Buddhism (think *mandala*, not only meditation; or ghosts and spirits, not just *sutra*). Next, we trace religious studies trends that privilege material investigations that acknowledge the agency of not only humans but also the agency of objects/things/stuff, and that emphasizes the dynamics among people, things, and spirits. We learn about these dynamics by looking closely at

Buddhist stuff. Things act upon us, and we (re)act upon them. They shape identity, create meaning, and maintain relationships. We will learn that things are never just things. They help us better understand what people do in Buddhism, not just what people believe. This course includes brief experiential components on Buddhist meditation and ritual. No prior experience in meditation or Buddhism is required. This course does not assume any previous background in Buddhism, Religion, Asian Studies, or Art History.

Class Format: This class is remote with a mix of synchronous and asynchronous requirements. Synchronous meetings are limited to once a week for roughly one hour (between 60-75 minutes). Many of our synchronous requirements will feature breakout sessions into small groups for intimate, peer exchanges, followed by discussions with the entire class. A few asynchronous sessions will require community-building with your peers through some form of work exchange or reflection related to the weekly topic.

Requirements/Evaluation: Attendance and active participation 25%; Short writing assignments 25% (one-page, single-space, critical response based on class reading x 4 total); Mid-term exam 25% (identification terms, short essay); Final project and presentation 25% (initial consultation with the instructor regarding topic selection, annotated bibliography and project outline, formal written report (4-5 single-space pages) , presentation, and final reflection)

Prerequisites: none

Enrollment Limit: 16

Enrollment Preferences: Religion and Asian Studies majors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

REL 279 (S) What is the Shari'a? Law, Power, and Ethics in Islam (DPE)

Discussions of the Shari'a or Islamic law in American public discourse conjure images of veiled women, girls barred from attending school, and public spectacles of flogging and stoning to death. Such a caricature of Islamic law as a medieval but draconian penal code elicits public fear and state suspicion. In the West, legislative measures are taken to curb the Shari'a's perceived threat to security, democracy, and human rights. On the other hand, Islamists seek to harness the Shari'a as an instrument of political legitimacy and authoritarian rule. Both instances reify the Shari'a in ways that erode its regional diversity, intellectual versatility, and socially embedded practices and modes of interpretation. This course offers an in-depth introduction to the Shari'a through an examination of major themes in its substantive content and historical evolution. While students will gain an integrated view of the Shari'a from its origins in 7th century Arabia to the modern era, our primary emphasis will be on the Shari'a's tumultuous relationship with liberal democracy and the secular nation-state. Students will probe the history of the Shari'a's present by pursuing a genealogical inquiry in two parts: (a) precolonial, and (b) postcolonial. Module (a) comprises Islamic legal theory, its scriptural sources, and the formation of schools of jurisprudence; Shari'a governance in the imperial age; and the institution of slavery. Module (b) covers colonial transformations and reforms; state-sponsored projects of restoration and codification; blasphemy and religious minorities; and gender and sexuality. Apart from learning substantive content through the course of our genealogical inquiry, students will also develop a theoretical foundation in anthropological approaches to the study of Islam as law (discursive tradition, symbolism, custom), power (sovereignty, discipline, biopolitics), and as ethics (subjectivity, self-cultivation, ordinary ethics).

Class Format: students will submit weekly responses to the readings; for each session two students will be assigned as leaders of the discussion who will be assisted by the instructor

Requirements/Evaluation: weekly reading responses (300 words): 20%; class participation: 15%; leading class discussion: 15%; 2 short essays (750 words each): 20%; research paper (3000 words): 30%

Prerequisites: none

Enrollment Limit: 19

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course exposes students to the diversity of Islamic legal interpretations on questions of gender, sexuality, and religious freedom across a variety of regions and cultures. Students gain a critical appreciation of how present-day authoritative readings of

Islamic law, its punitive practices and legalized forms of gender discrimination are sanctioned by patriarchal norms, the colonial construction of Islam as a scriptural religion, and regulatory powers of the modern state.

REL 280 (S) The Seeds of Divinity: Exploring Precolumbian Art & Civilization in a Museum Exhibit

Cross-listings: ARTH 281 ANTH 281 REL 280

Secondary Cross-listing

For all ancient civilizations, the gods were a powerful force, affecting all aspects of human lives and dominating ancient art. This course will explore concepts of divinity in five civilizations in Precolumbian Central America: Aztec, Maya, Zapotec, Teotihuacan, and Nayarit. The course examines how the broad concept of divinity is materialized in everyday life. We will query how the human body is used as the prism through which concepts about humanity, the human soul and the supernatural are perceived and depicted in the art of these civilizations. This is a project based course, and each student will study one or more art objects from these five civilizations, and consider how these objects could be presented in a museum exhibit.

REL 281 (S) Religion and Science

Cross-listings: STS 281 REL 281

Primary Cross-listing

In the last few years the deniers of religion such as Dennett and Dawkins have forcefully argued that recent scientific developments show the degree to which religion is irrelevant to a modern understanding of what it means to be human. Atran and Boyer have made a similar case, arguing that recent progresses in our understanding of human cognition demonstrate that religion is a purely natural phenomenon that has little if any value for human development. Theologians such as Haught and Polkinghorne have rejected these views, arguing that a proper understanding of scientific developments such as evolution and quantum mechanics suggests religiously relevant views of the universe and our place therein. This course considers these competing perspectives while offering critical reflections on the views and categories involved in these controversies. We also examine the works of reflective naturalists such as Bellah and Herrstein, who argue that far from showing the irrelevance of religious ideas and practices, the new mind and life sciences suggest a much more nuanced view according to which religion is both grounded in the natural world and central to the development of human culture. Hence, it cannot be easily discounted as irrelevant to a scientifically informed understanding of what it means to be human.

REL 283 (F) Religion and American Capitalism

Cross-listings: REL 283 HIST 383

Primary Cross-listing

Was Jesus a revolutionary socialist or a savvy salesman? Does capitalism bring prosperity to the virtuous or breed selfishness and sin? Shall the meek inherit the earth or should the hand of the diligent rule? Is it holier to renounce worldly wealth or crusade against poverty? These questions have long preoccupied religious believers, and their changing answers have transformed the history of American capitalism. This course invites students to study that history, from the early 19th century to the present. It will cover such topics as: utopian communes; the political economy of slavery; working-class religion and labor organizing; Christian and Jewish socialism; big business and the Prosperity Gospel; 'New Age' spirituality and the counterculture; and conservative Christianity in the age of Wal-Mart and Chick-Fil-A.

Class Format: This course will be hybrid -- accessible to both on-campus and fully remote students. It is designed as a seminar, in which course meetings will revolve around synchronous discussion. Remote learners will be expected to digitally attend and participate in those meetings through Zoom (or a similar program).

Requirements/Evaluation: Participation in group discussion; five response papers (300-400 words); two essays (4-6 pp); final research paper (8-10 pp).

Prerequisites: None; open to all students.

REL 284 (S) From the Battlefield to the Hermit's Cell: Art and Experience in Norman Europe (WS)

Cross-listings: REL 284 WGSS 284 ARTH 218

Secondary Cross-listing

This tutorial provides students with the chance to investigate in-depth three of the most astonishing works of art created during the entire Middle Ages: the Bayeux Tapestry (c.1077-1082), the Cappella Palatina (c.1130s-1166), and the Psalter of Christina of Markyate (1120s-1160s). Created within a hundred years of each other all within territories controlled by the Normans--a warrior dynasty that settled in northern France in the 10th century and then expanded north into England and south into Italy in the 11th and 12th centuries--each of these works is unprecedentedly ambitious in scale, dazzling in its material properties, and survives in its original wholeness, a rarity in the medieval world. Despite these similarities, however, each work is very different from the other two and so sheds light on very different aspects of Norman experience, across Europe. The Bayeux Tapestry, likely made by female embroiderers for a baronial hall, is a giant textile (over 70 meters long) that in gruesome and fascinating detail tells the story of the Norman invasion of England by William the Conqueror in 1066. The Cappella Palatina in Palermo, in turn, commissioned by King Roger II, is a royal chapel covered in sumptuous mosaics that reveals through its decoration and ritual the dynamic interaction of Islamic, Byzantine, and Latin Christian traditions in the multicultural Norman kingdom of Sicily in the 12th century. And the Psalter of Christina of Markyate, a large prayerbook made for the use of a female recluse in southern England, contains 40 full-page paintings and 215 decorated initials, a vast and inventive program of imagery that through its creative profundity helped reshape private devotional art and culture for centuries to come. Through their variety, then, these three objects--an embroidery, a building, and a book--give students insight into the rich array of concerns and aspirations, from the political to the spiritual and from the public to the private, that gave substance and meaning to 11th- and 12th-century European life, for women as well as men. What is more, these three remarkable works of art have been the focus of much interesting scholarship in recent years, so an exploration of some of that literature provides a compelling introduction to the discipline of art history itself, past and present.

Requirements/Evaluation: Participation in discussion; five 5-7-page tutorial papers; five 1-2-page response papers.

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: First years and sophomores, but open to all.

REL 285 (S) Haunted: Ghosts in the Study of Religion

Haunting offers a powerful way to speak about forces that affect us profoundly while remaining invisible or elusive. "What is it that holds sway over us like an unconditional prescription? The distance between us and that which commands our moves-or their opposite, our immobility-approaches us: it is a distance that closes in on you at times, it announces a proximity closer than any intimacy or familiarity you have ever known" (Avital Ronell, *Dictations: On Haunted Writing* [1986] xvi-xvii). The figure of the ghost has been developed by those seeking to grapple with the ongoing effects of modern slavery, colonialism, state-sponsored terrorism, the holocaust, and personal trauma and loss. Building upon the insights about memory, history, and identity that haunting has been used to address, this course will challenge you to explore the study of religion by way of its "seething absences." We shall ask how the study of religion has endeavored to address loss, trauma, and its persistent effects, what "holds sway" over various approaches to the study of religion, as well as how "religion" constitutes its own ghostly presence, haunting other domains.

Class Format: tutorial; meeting in pairs, each student will either write and present a paper or respond to their partner's paper

Requirements/Evaluation: two 1-page papers (written and presented), five 5-page papers, and five oral critiques (based on written notes) of their partner's paper; students will revise two papers

REL 286 (F) The Bible and Migration: Latinx Perspectives

Cross-listings: REL 286 LATS 285

Primary Cross-listing

This course seeks to understand migration in the current historical moment, around the globe but especially on the US border. The lenses through which we will explore migration include Religion, with special focus on the Christian Bible. We will explore instances of and reflections on migration in the Bible, as well as various interpretations of the Bible emerging today in debates over migration. The course will approach US migration from the perspective of Latinx communities in the US - historically, culturally, politically, and religiously. Readings will include: The Bible, monographs and essays on the Bible and Migration, especially from the perspectives of Latinx authors and thinkers.

Requirements/Evaluation: Participation in class discussions; two to three short essays (3-5 pages each) analyzing selected readings; a longer final research paper (7-10 pages) on an aspect of Bible and Migration of interest to the student defined in consultation with the professor.

Prerequisites: none

REL 288 (F) Embodiment and Consciousness: A Cross-Cultural Exploration

Cross-listings: REL 288 PHIL 288

Primary Cross-listing

This course examines some of the central questions raised by the study of the consciousness: the place of intentionality, the role of emotions, the relation with the body, the nature of subjectivity, the scope of reflexivity, the nature of perceptual presence, etc. In confronting these difficult questions, we do not proceed purely theoretically but consider the contributions of various observation-based traditions, from Buddhist psychology and meditative practices to phenomenology to neurosciences. We begin by examining some of the central concepts of Buddhist psychology, its treatment of the mind as a selfless stream of consciousness, its examination of the variety of mental factors and its accounts of the relation between cognition and affects. We also introduce the practice of meditation as a way to observe the mind and raise questions concerning the place of its study in the mind-sciences. We pursue this reflection by examining the views of James, Husserl, Sartre and Merleau-Ponty, particularly as they concern the methods for the study of the mind and the relation between consciousness, reflexivity and the body. In this way, we develop a rich array of analytical tools and observational practices to further our understanding of the mind. But we also question the value of these tools based on first person approaches by relating them to the third person studies of the mind. In this way, we come to appreciate the importance of considering the biology on which mental processes are based and the light that this approach throws on the nature of consciousness. We conclude by considering the relation between first and third person studies of the mind, focusing on the concept of the embodied mind as a fruitful bridge between these different traditions.

Requirements/Evaluation: regular practice of meditation, a class presentation, a short essay (6-pages); a long final research paper (15 pages)

REL 291 (S) Religion and the American Environmental Imagination

Cross-listings: SOC 291 ENVI 291 REL 291

Secondary Cross-listing

This course examines the relationship between religious and environmental thought in modern America. Exploring a broad range of practices and beliefs, we will examine the religious (and anti-religious) roots of contemporary environmental discourse. Rather than survey the environmental teachings of organized religious groups, our focus throughout will be on ambiguous, eclectic, and fascinating traditions of "eco-spirituality" and popular "nature religion." Where do these traditions come from? What is their relationship to science, to secularism, to politics, and to the search for environmental justice? Starting with the Transcendentalist movement of the 19th century, we will trace a roughly chronological line to the present, taking long detours into several modern religious trends and movements, including the revitalization and contestation of Native American religions, Wicca and neo-pagan ecofeminism, and evangelical Creation Care. Focusing on the writings of activists and radicals from a variety of religious backgrounds, our overarching question throughout the semester is one of the most critical we face in modern environmental thought: what is the relationship between spirituality and the just, sustainable society?

Requirements/Evaluation: a 15- to 18-page research paper and several shorter writing assignments

REL 292 (S) Religion and Politics in the Caribbean and the Diaspora: Puerto Rico and Cuba

Cross-listings: REL 292 LATS 253

Secondary Cross-listing

This course explores the role of religion in Caribbean history and politics, with a focus on Puerto Rico and Cuba. These Caribbean islands have lived out contested colonized histories and experiences, as well as diasporic realities on the US mainland. The US government and military have played a significant role in both since the turn of the last century, forcibly shaping their economies and politics. Religion, particularly the Protestant missionary enterprise since the US invasions in 1898, has also shaped histories and politics on the islands and throughout their diasporas. We will explore the role and impact of Protestant religion in these historically indigenous, African descendent, and Roman Catholic religious spaces, as well as how these religious engagements and theologies impacted migration and the creation of diasporic communities in the US. We will analyze the role of religion in

imperialist endeavors, as well as in solidarity movements. Puerto Rican and Cuban historical luminaries, such as Pedro Albizu Campos and Jose Marti, who struggled against Spanish colonialism in Puerto Rico and Cuba respectively, had not only political but religious visions for better prospects for their homelands. By understanding the intertwining of religion and politics in Puerto Rico, Cuba and their diasporic communities, we will have the tools to consider the implications for other Caribbean nations, such as the Dominican Republic, as well as other Latin American countries that have experienced US interventions and the creation of diasporic communities.

Class Format: This course will follow a discussion format, in which students are expected to come to class prepared to address the assigned readings, to have completed short assignments in preparation for discussions, to make presentations to the class, and/or to lead discussions.

Requirements/Evaluation: Evaluation in this course will be based on class participation, short 1 to 2-page writing assignments every other week based on readings and assigned videos/films; a five-page midterm essay on an aspect of Puerto Rican or Cuban political/religious reality discussed in class, and final 7-page research essay on a theme in the course agreed upon by student and professor.

REL 293 (S) Religion, Play, and Fantasy

Religion is sometimes described as separate from everyday life, a source of transcendence, offering practices that allow you to lose yourself and be absorbed into another level of consciousness, or a realm of supernatural forces. These could also be descriptions of "play." In this course we will explore the play element in culture and how it relates to what we usually describe as "religious." We will investigate video games, fantasy novels and films, Live Action Role-Playing, war reenactment, pop culture fandom, BDSM, festivals like Mardi Gras, and places that are "set apart" for play like Las Vegas. How do the ways that we play involve religious ideas like sin, redemption, supernatural forces of good and evil, canonization, countercultural community, tradition, submission, and purgation? Is play at the core of what we usually deem religious? What, for instance, is the play element in ritual, myth, and the devotional interpretation of texts? How important is play? Should we accept the conventional assumption that religion is more important than play? Is playing, perhaps, what we most want to do? Is playing what we would do if all of our practical needs were already met and we didn't have to do anything at all? In addition to exploring particular kinds of play, we will read theorists of play from a variety of disciplines, including: Johan Huizinga, Roger Caillois, Brian Sutton-Smith, Victor Turner, Donald Winnicott, Bernard Suits, Sam Gill, Robert Bellah, and Wendy Doniger. In a final paper, each student will have an opportunity to investigate in depth and interpret a particular form or instance of play that they choose.

Requirements/Evaluation: three short papers (3-5pages) and one final research paper or project

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: Religion majors

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

REL 294 (S) Paul and Early Christianity: Race, Empire, and the New Testament

In the Christian New Testament, 13 letters are attributed to "Paul" (out of a total of 27 documents that comprise the New Testament). These letters have been a rich source for a host of political and theological debates over the last two millennia, but in this course, we will examine them as

expressions of earliest Christianity's encounter with race, ethnicity, gender, and the ethics of a new religious movement, established in the midst of the oppressive Roman imperial order. Seven of these letters were almost certainly written by someone known to us as Paul of Tarsus. How Paul, a devout Jew, addressed controversial issues in his newfound communities, often in equally controversial ways, will guide our discussions of the role of religion and politics in his world as well as our own. Reading the letters of Paul and related documents in the New Testament, and interpretations of Paul over the centuries, including in modern scholarship, especially by African American, Asian American, and Latinx biblical scholars, theologians, artists, and thinkers will focus our study of religion and politics, ancient and modern.

Requirements/Evaluation: Students will prepare written and oral summaries of the letters (at least one per student) from their own perspectives in conversation with scholarly interpretation, as well as write short papers (two for the semester, 3-4 pages each) on relevant themes for today inherent in these ancient documents. There will also be a final, research paper (8-10 pages) examining race, ethnicity, gender, and/or politics -- then and now -- using several of the letters as sources for the written exploration.

Prerequisites: None

REL 297 (F) Theorizing Magic

Cross-listings: REL 297 COMP 289 ANTH 297

Primary Cross-listing

This is a course about magic. It is not about stage magic, sleight of hand, or the art of pulling rabbits out of hats. You will learn no card tricks. But instead we will learn about those people who believed in the reality of certain powers; from the ability to summon good or evil spirits, transform base metals into gold, predict the future, or manipulate matter by thought alone. The problem of how to theorize magic has long been a cause of concern for the natural and social sciences. Many a sociologist and anthropologist has imagined that belief in magic should have vanished with modernity (despite much evidence to the contrary). Meanwhile, philosophers of science have been long fascinated with the demarcation problem—figuring out grounds by which to distinguish legitimate sciences (like astronomy) from their magical or pseudoscientific cousins (like astrology). We will trace these discussions and problematize them by looking at the beliefs of self-defined witches and magicians. This should put us in a position to interrogate the construction of concepts of magic, science, and religion and show how the boundaries between these categories emerged historically. Topics to be discussed will include: the rationality of magic, the fine lines separating magic, science and religion, the persecution of witches, and the role notions of magic and superstition played in European modernization and colonization projects. The tutorial sessions will be customized to student interests, but texts will likely include selections from primary works in translation, such as Cornelius Agrippa's *Occult Philosophy*, Giordano Bruno's *On Magic*, Aleister Crowley's *Magick Liber Aba*, as well as selections from secondary literature, perhaps including Marcel Mauss, *A General Theory of Magic*, Max Weber, "Science as Vocation," Tanya Luhmann, *Persuasions of the Witches' Craft*, Thomas Kuhn, *The Structure of Scientific Revolutions*, Larry Laudan, "The Demise of the Demarcation Problem," E.E. Evans-Pritchard, *Witchcraft and Oracles*, and *Magic among the Azande*, and/or Kelly Hayes, *Holy Harlots: Femininity, Sexuality and Black Magic in Brazil*.

REL 301 (F) Social Construction (DPE)

Cross-listings: COMP 315 WGSS 302 REL 301 SOC 301 STS 301 SCST 301

Primary Cross-listing

"Social construction" can often seem like the great collegial insight. By now, you've all heard that categories such as race, gender, and sexuality are in some sense not part of nature, but instead are created and maintained socially or culturally. The idea of social construction has been vital to critical race theory and queer theory, and, in this course, we will push ourselves into philosophy of science to see whether or not these same insights apply to everything. If we know that "Whiteness," "heterosexuality," and "masculinity," for instance, are all socially constructed, we will ask if the same is true of "electrons," "money," "the solar system," and "climate change." Can it be that all of our reality is socially constructed? Or does social construction have limits? If so, what are they? We will also ask more fundamental questions, such as: What does it mean to say something is socially constructed? How does social construction relate to claims that an aspect of the world is "real" or "not real?" Is social construction a theory about language, power, culture, societies, human perceptions, or the limits of science? What kind of political, ethical, ontological, or epistemological work do theories of social construction do? We will begin with different accounts of the social construction of race, gender, and sexuality. In the second part of the course, we will dig deeper into philosophical debates about social construction as such. Then we will explore constructionism about natural science. In the last part of the course, we will change gears and explore look at cutting-edge work in the theory of social science aimed at explaining the construction and ontology of social worlds. The class will culminate in a project in which students will put their social construction theories into practice.

Requirements/Evaluation: regular attendance and participation, short weekly reflection papers, a 10-page research paper, and final project

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Religion majors, then majors from cross-listed departments

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

COMP 315 (D2) WGSS 302 (D2) REL 301 (D2) SOC 301 (D2) STS 301 (D2) SCST 301 (D2)

Difference, Power, and Equity Notes: Central to REL 301 will be an analysis of the social construction of race, gender, and sexuality. It will show how power and difference are tied up in their construction and maintenance of these categories. Students will be taught how to critically analyze race, gender, and sexuality as well as social construction as such. Students will also learn sophisticated tools for studying systems of social power and difference.

Attributes: PHIL Related Courses

REL 302 (S) Philosophy of Religion (WS)

Cross-listings: PHIL 281 REL 302

Secondary Cross-listing

Our goal will be to determine how far reason can justify belief in God. We will examine well-known philosophical arguments for and against the existence of God (including the ontological argument, the cosmological argument, the teleological argument, the argument from religious experience, and the argument from evil). For each argument, we will first look at historically important formulations and then turn to contemporary reformulations. Our aim will be to identify and evaluate the strongest version of each argument. After working through these arguments, we will reflect more generally on the proper roles of reason and faith in justifying religious belief. Near the end of the semester, we'll also examine some evolutionary explanations of religious belief. Our tools in this course will be logic and reason, even when we are trying to determine what the limits of reason might be. Authors will include Plato, Anselm, Aquinas, Pascal, Paley, Hume, Kant, Kierkegaard, and several contemporary philosophers.

Class Format: students meet with instructor in pairs for an hour each week; emphasis will be placed on developing skills in reading, interpretation and oral argument as well as critical reasoning and writing

Requirements/Evaluation: five 5-page papers and five 2-page papers

Prerequisites: one PHIL course

Enrollment Limit: 10

Enrollment Preferences: current and prospective Philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 281 (D2) REL 302 (D2)

Writing Skills Notes: Five 5-page papers and five 2-page papers, evenly spaced throughout the semester. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

REL 303 (F) Augustine's Confessions

Cross-listings: CLAS 307 PHIL 307 REL 303

Secondary Cross-listing

No thinker has done more to shape the Western intellectual tradition than Augustine (354-430 CE), and no book displays Augustine's dynamic vision of reality more compellingly than the *Confessions*. Its probing and intimate reflections on the meaning of human life, the nature of God and mind, time and eternity, will and world, good and evil, love and sexuality have challenged every generation since Augustine's own. The seminar will be structured around a close, critically engaged reading of the *Confessions* (in English translation) and will give attention to its historical context and significance as well as to its philosophical and theological ideas. (There will be optional, supplementary opportunity to engage with the Latin text for interested students with some facility with Latin.)

Class Format: The course will be taught in a hybrid (partly in-person, partly remote) or wholly remote format--a final decision about format will be made in early September, prior to the first class. Class meetings (in whatever format) will consist primarily in student presentations and open, directed

discussion of assigned readings.

Requirements/Evaluation: Regular reading assignments from the Confessions and related secondary literature. Weekly participation in online discussion on Glow (15% of final grade); 3 class presentations (of various lengths and kinds) (20%); a short paper (maximum 1500 words) due around the middle of the semester (20%); a term paper in two drafts (maximum 3000 words) due near and the end of the semester (40%); preparation for and participation in class that shows thoughtful engagement with the assigned readings (5%).

Prerequisites: none

REL 306 (F) Feminist Approaches to Religion (WS)

Cross-listings: WGSS 307 REL 306

Primary Cross-listing

What does feminist theory have to offer the study and practice of religion? How have participants in various religious traditions helped to produce and enact different kinds of feminist approaches to critique and transform religions? Feminisms and religions have a long though often troubled history of interconnection. In this course, we shall explore a range of feminist analyses that have either emerged out of particular religious contexts or have been applied to the study of religious traditions and practices. The course prioritizes attention to the intersections and interactions of gender, race, ethnicity, sexuality, and nationality (among other factors) with religion.

Requirements/Evaluation: weekly GLOW posts before class, one "position paper" for class discussion (3 pages), a research question with rationale for interest and potential action plan (1 page), exploratory research statement (2 pages), essay on interpretive approach to research project (3 pages), participation in writing workshop on 7-page early drafts of final papers, one 15-page final paper.

Prerequisites: none; open to all

Enrollment Limit: 15

Enrollment Preferences: Religion and Women's, Gender and Sexuality Studies majors have priority, and then students who have taken either REL 200 or WGSS 101.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (WS)

REL 308 (S) What is Power?

Cross-listings: REL 308 STS 308 SOC 308 PSCI 306

Primary Cross-listing

What is power? Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially

domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures? What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or agency? Or ideology? This course begins with the observation that power is often described as a causal relation--an individual's power is supposed to equal their capacity to produce a change in someone else's behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: **critical theory about power** and **philosophy of science about cause and effect**. We will trace classic philosophical accounts of power and causation (in European and Chinese philosophy), as well as more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt, Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Hobbes, Hume, Locke, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, Sunzi, and Max Weber.

Class Format: Remote

Requirements/Evaluation: critical annotations for every class, midterm review essay (4-6 pages), final essay (10-12 pages)

Prerequisites: None.

REL 309 (S) Scriptures and Race

Cross-listings: REL 309 AFR 309 LATS 309

Primary Cross-listing

This course focuses on the relationships between constructions of race in the post-1492 American world and "Christian scriptures." The big questions of the course examine the ways that contestations of power are intertwined with the making of, interpretation, and transformation of sacred texts. Both scriptures and race are conceptual constellations of human social imagination, and yet their conceptualization has often been embroiled in the hopes and traumas of everyday life in the Americas. How and why did these two terms come to have any relationship to each other? How and why do peoples engage "scriptures"? In what ways have "scriptures" informed how people imagine themselves, their communities, and their relationship to religious and racial "others"? How did "scriptures" and "race" inform each other in modern colonialisms and imperialisms? In this course, we will examine the ways that scriptures have been employed in order to understand and develop notions of race, and we will examine how ideas about and lived experiences of race have informed the concept of scriptures as well as practices of scriptural interpretation.

Requirements/Evaluation: participation, short writing exercises, a 5- to 8-page take-home midterm essay, and a 10- to 15-page final essay

REL 310 (F) Womanist/Black Feminist Thought

Cross-listings: WGSS 310 AFR 310 AMST 309 REL 310

Secondary Cross-listing

This course explores the genealogy and development of black feminist and womanist thought. We will investigate the expansion of womanist thought from a theologically dominated discourse to a broader category of critical reflection associated more commonly with black feminism, analyze the relationship between womanism and black feminism, and review the historical interventions of black feminism. As critical reflections upon western norms of patriarchy, heterosexism, and racism, womanism and black feminism begin with the assumption that the experiences of women of color--particularly black women--are significant standpoints in modern western society. Through the examination of interdisciplinary and methodological diversity within these fields, students will be introduced to key figures including Alice Walker, Zora Neale Hurston, and Katie Cannon, and will engage materials that draw from multiple fields, including, but not limited to, literature, history, anthropology, and religious studies.

REL 311 (S) Islam and the Critical Study of Secularism (DPE)

Cross-listings: ANTH 311 REL 311

Primary Cross-listing

Since the Iranian Revolution of 1979, successive Islamist movements have sought to transform Muslim states along religious lines. In Euro-American discourses on political Islam, such blatant disregard for the separation of religion and state is often seen as a tragic failure of secularization. Islam, in other words, is understood as a religion out of place in the modern world. While the global resurgence of religion in the face of much scientific and material progress has tempered scholarly enthusiasm for the secularization thesis, contemporary Islamic religiosity is increasingly viewed as an aberration from the regular course of history. Moreover, as scholars rewrite the script of secularization by unearthing modern secularism's European-Christian heritage, they unwittingly bolster a narrative of civilizational difference between Islam and the secular West. Our understanding of Islam is thus inextricably tied to its oppositional framing as the other of secularism. In this course, we will critically assess Euro-centric representations of Islam as created through canonical and critical discourses on secularism. Rather than assuming a natural opposition between Islam and secularism, we will examine the various modalities of power, institutional formations, habits of thinking, normative presuppositions, and cultural and visceral sensibilities that configure their agonistic relationship. This examination amounts to deconstructing the very category of the secular in its cognitive and sensory dimensions. To accomplish this task, we will rely on the work of Talal Asad and his interlocutors in Religious Studies, Anthropology, Continental Philosophy, Postcolonial Studies, and Comparative Literature. The course content is divided into 2 modules. Module A: "Theorizations" will examine Euro-centric theories of secularism and problematize their portrayals of Islam as an intrinsically asecural religion. In Module B: "Secularism Beyond Europe," we will read postcolonial critiques of secularization and examine its alternative trajectories in non-European contexts. Crucially, we will shift from a conventional emphasis on the state by comparing Islamic and secular disciplines of subject formation. By the end of the course, students will be able to appreciate how secular legal, political, and cultural institutions have re-defined religion in the modern world. Further, they will be able to discern the ways in which contemporary Islamic movements are both responses to and manifestations of a global secular condition.

Class Format: This course will be conducted online in its entirety and will rely on a combination of synchronous and asynchronous modes of learning. The synchronous component will consist of weekly class meetings via Zoom. A discussion leader will be assigned once a week to present on the week's readings and lead class discussion. The asynchronous component will consist of weekly reading responses (500 words each), 2 essays (1,000

words each), and a final paper (2,500 words)

Requirements/Evaluation: Weekly Reading Responses (500 words each): 30%; 2 Essays (1,000 words each): 20%; Attendance and Class Participation: 10%; Term Paper (10 double-spaced pages/2,500 words): 40%. Note: Out of the 13 weekly reading responses, you can choose to skip a maximum of 3

Prerequisites: None.

Enrollment Limit: 19

Enrollment Preferences: Juniors and seniors.

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

ANTH 311 (D2) REL 311 (D2)

Difference, Power, and Equity Notes: This course will sensitize students to the intractable difficulties of securing religious freedom, diversity, and tolerance under secular law. Students will gain a nuanced historical understanding of the role of Islam as a political force in postcolonial Muslim societies and its implications for religious minorities. Notably, they will understand how religiously motivated forms of violence and oppression are often deeply imbricated with secular power and institutions.

REL 312 (F) The Mughal Empire: Power, Art, and Religion in India

Cross-listings: GBST 312 REL 312 ASIA 312 ASST 312 HIST 312

Secondary Cross-listing

Established in the early 1500s, the Mughal Empire was one of the grandest and the longest to rule the Indian subcontinent for over three hundred years. Commanding unprecedented resources and administering a population of 100 to 150 million at its zenith--much larger than any European empire in the early modern world--the Mughals established a centralized administration, with a vast complex of personnel, money, and information networks. Mughal emperors were also political and cultural innovators of global repute. Moreover, while the Mughal dynasty was brought to an end with British colonial rule over India in 1857, the Mughal administrative structures and cultural influences continued to have a lasting impact on the British and later Indian states that followed. Centered around the intersection of the themes of power, patronage of art and architecture and religion, this course will ask: What factors contributed to the durability of the Mughal Empire for three centuries? How did global trade and innovations in taxation contribute to its wealth and stability? How did this dynasty of Muslim monarchs rule over diverse, and largely non-Muslim populations? How did they combine Persian cultural elements with regional ones to establish an empire that was truly Indian in nature? How were the Mughals viewed in their contemporary world of gunpowder empires like the Safavids of Persia and the Ottomans of Turkey? Readings will include the best of the recent scholarship on this vastly influential empire and a rich collection of primary sources, including emperor's memoirs, accounts of European travelers, and racy biographies, which will allow students make their own analysis. They will also have the opportunity to interpret paintings (some of which are held in the WCMA collections) and architecture. They will also discuss how the Mughals are remembered in South Asian film and music.

REL 314 (S) Racial and Religious Mixture (DPE)

Cross-listings: REL 314 LATS 327 AFR 357 AMST 327

Secondary Cross-listing

The very term "mixture" implies that two or more distinct substances have been brought together. Distinctions of race and religion are social fictions; yet, the lived ramifications of these social fictions involve tense struggles over the boundaries of racial and religious communities. These boundaries are not just ideas but also practices. In the history of the Americas, mixed racial and religious identities and experiences have more often been the result of violent clashes than romantic encounters. Still, the romanticization of the New World as a geography that makes such mixtures possible reaches back to the earliest days of Spanish conquest in the Americas. This course critically reconsiders varying ways that racial and religious mixtures have been imagined, defined, challenged, negotiated, and survived under imaginative and legal rubrics of mestizaje, creolization, transculturation, passing, syncretism, religious hybridity, and mixed race studies.

Class Format: mostly discussion

Requirements/Evaluation: participation, short writing exercises, a 3-page first essay, a 5- to 8-page second essay, and a 10- to 14-page final paper

Prerequisites: none

REL 315 (F) Gender and Sexuality in Buddhism

This course introduces students to the core concepts of Buddhism, as well as historical Buddhist perspectives on gender equality, homosexuality and queerness, the body (masculine, feminine, androgynous), birth (literally and figuratively), sex, contraception, abortion, and clerical marriages throughout Buddhist Asia. We will investigate these issues through close readings of specific sections of the Buddhist canon, alongside secondary sources. Is Buddhism equitable regarding these issues? Does it depend on how one interprets texts? In addition to scriptural interpretations of these issues, we will explore socio-cultural developments beyond the text, including recent challenges to traditional interpretations. In this course, students will sample case studies that include an exploration of: pre-modern South Asian ideals of masculinity; the gender transformation of the bodhisattva *Avalokitesvara* or *Guanyin* in China; love and grief; birth and fertility; abortion and ritual aftermath in contemporary Japan; the struggle for official recognition of Buddhist nuns in contemporary Thailand; as well as mindfulness practices for racial equality. Finally, this course includes brief experiential components on Buddhist meditation and ritual. No prior knowledge about Buddhism is required.

Class Format: This class is remote with a mix of synchronous and asynchronous requirements. Synchronous meetings are limited to once a week for roughly one hour (between 60-75 minutes). Many of our synchronous requirements will feature breakout sessions into small groups for intimate, peer exchanges, followed by discussions with the entire class. A few asynchronous sessions will require community-building with your peers through some form of work exchange or reflection related to the weekly topic.

Requirements/Evaluation: Attendance and active participation 25%; Short writing assignments 25% (one-page, single-space, critical response based on class reading x 4 total); Mid-term exam 25% (identification terms, short essay); Final project and presentation 25% (initial consultation with the instructor regarding topic selection, annotated bibliography and project outline, formal written report (4-5 single-space pages) , presentation, and final reflection)

REL 316 (F) Social Ontology

Cross-listings: STS 316 REL 316

Primary Cross-listing

What is society? What is the social world made of? The obvious answer--individual people--was for a long time dominant in the social sciences. Indeed, many theorists argued that there was no such thing as society distinct from individual humans and their intentional actions. While this mode of theorizing had some advantages, it has recently fallen out of vogue because of its inability to explain group norms, institutions, corporations, and other collectives. Explanations at the individual level are not necessarily incorrect, but rather philosophers have increasingly come to see them as incomplete. Society seems to more than an aggregate of individuals. Hence, philosophers have increasingly turned to questions of social ontology and produced fresh theories about the nature of the fundamental constituents of the social world. We will explore this research, but with the added intuition that looking beyond humans to other social animals can provide a fresh theoretical vantage. **We will set out from the idea that the social world is composed not just out of humans, but also out of materialized signs produced by social animals** (e.g., a no-smoking sign or an ant's chemical trail). This seminar will offer an advanced survey of current debates about the ontology, methodology, and aims of the humanities and social sciences. We will address questions such as: *Is there a difference between explaining and understanding social actions? Should explanation in the humanities and social sciences follow the model of explanation in the natural sciences, or are there peculiarities about social phenomena that demand a different approach? What are social structures, practices, norms, institutions? How might social structures exist over and above individuals? Do social groups have agency in their own right? What are social kinds and what is their relationship to natural kinds? How do debates in the social sciences look different if we attend to other social animals and their materialized signs?* Course readings will come from a variety of areas including: sociology, semiotics, feminist theory, philosophy of science, and philosophy of mind. When possible, we will supplement these with readings on research into animal behavior.

Requirements/Evaluation: Attendance and participation. Weekly critical responses/comments. 10-12 page final research paper.

REL 319 (S) Milton's Paradise Lost

Cross-listings: REL 319 ENGL 315

Secondary Cross-listing

If you know anything about John Milton, you probably think of him as some blind guy who wrote a really long poem about the Bible. It's hard to shake the feeling that Milton is the fustiest of English poets--dull, pious, brilliant and all, and not someone you would read if you didn't have to. But then what are we to make of the following? The first piece that Milton wrote that was read widely throughout Europe was a boisterous defense of the English Revolution. Milton was most famous in his lifetime as the poet who went to bat for the Puritan insurgents--the poet who came right out and said that the king looked better without his head. Of all the major English poets, Milton is the revolutionary. So a course on Milton is by necessity a course on literature and revolution. We will read *Paradise Lost*, widely regarded as the greatest non-dramatic poem in English, and a few other books to help us prepare for that big one. Some questions: How did the mid-seventeenth century, probably the most tumultuous decades in the history of modern Britain, transform the culture of the English-speaking world? What is the relationship between literature and the state or between literature and radical politics? Is there a poetics of revolution? How can a poet who seems to be writing for Sunday school--about God and Adam and Eve and the serpent--really have been writing about rebellion all along?

Requirements/Evaluation: one 6- to 8-page paper, one 10- to 12-page paper, informal weekly writing assignments, and active seminar participation

Prerequisites: a 100-level ENGL course, or a score of 5 on the AP English Literature exam, or a score of 6 or 7 on the Higher Level IB English exam.

REL 321 (F) Happy Holidays! A Comparative History of Commemorations and Festivals

Cross-listings: REL 321 HIST 411 ARAB 411

Secondary Cross-listing

What do our holidays tell us about ourselves and our societies? This seminar in religious, political and cultural history is in two parts. In the first half, we will explore the major holidays and festivals that emerged in the Middle East among the three monotheistic religions (Judaism, Christianity, and Islam). It will examine how certain events became ritualized and then spread to different parts of the globe and were adapted to specific cultural situations. We will consider the role of myth and commemoration and how various religious holidays are celebrated in different ways around the world. The second part of the seminar focuses on secular holidays with particular attention to the Modern Middle East. Which events are commemorated and how and what are the political implications of these celebrations?

Requirements/Evaluation: several short response papers and a 20- to 25-page final paper

REL 330 (S) Modern Jewish Political Theory

Cross-listings: JWST 492 PSCI 375 REL 330

Primary Cross-listing

By the late 19th century, Jews across Europe were faced with an urgent political problem. Amidst burgeoning national self-consciousness throughout the continent, despite the liberatory promises of the Enlightenment, Jews remained a vulnerable, segregated, and stigmatized minority population. Jews had to decide where to pin their hopes. Should they ally themselves with the liberals or the communists? Should they embrace nationalism or cosmopolitanism? Should they, perhaps, abandon Europe altogether and re-constitute themselves elsewhere? If so, should they focus their efforts on relocation to the historical land of Israel? Or could they go anywhere? Wherever they might go, should they aspire to build a modern Jewish nation-state, a semi-autonomous Jewish community, or some other arrangement? Should this coincide with the cultivation of a distinctively Jewish modern language? If so, should it be Hebrew or Yiddish? In this course we will assess various answers to these questions proffered by Jewish political thinkers in the modern period. We will pay particular attention to the construction of "Jews" and "Judaism" in these arguments. And we will ask persistently: what constitutes a "Jewish justification" for a political claim in modern Jewish political theory? Coverage will include: Jewish liberalism, political Zionism, Yiddishist autonomism, messianic quietism, and other views. We will read mostly primary sources, including texts by: Hermann Cohen, Theodore Herzl, Chaim Zhitlowsky, Franz Rosenzweig, Leo Strauss, Hannah Arendt, and many others.

Requirements/Evaluation: six short (1-2 pages) response papers; two 6- to 8-page papers, each analyzing a different view in depth; a final 18- to 20-page paper that incorporates the two previously submitted 6-8 page papers, but also compares the two views and adjudicates between them

Prerequisites: none

REL 332 (F) Islam and Feminism

Cross-listings: WGSS 334 REL 332 ARAB 332

Primary Cross-listing

This course examines the relationship between feminism and Islam, focusing particularly on Islamic feminist scholarship. We will take a genealogical approach to our study of Islamic feminism tracing the different discourses that have informed and shaped the field. The first part of the course will begin with a critical examination of orientalist and colonial representations of Muslim women as oppressed and in need of liberation. We will then explore Muslim responses to such critiques that were entwined with nationalist and independence movements. This historical backdrop is critical to understanding why the question of women and their rights and roles become crucial to Muslim self-understanding and Islamic reform. The second part of the course will focus on major intellectuals and thinkers who have influenced Islamic feminism. Finally, the last part of our course will explore the

breadth of Islamic feminist literature, covering the following themes: 1) feminist readings of scripture; 2) feminist critiques of Islamic law; and 3) feminist theology.

Requirements/Evaluation: weekly responses, four 2- to 3-page essays

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Religion, Arabic Studies, Women's, Gender and Sexuality Studies, History majors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

REL 333 (S) The Politics of Myth

Myths animate ethical and political life. Shared stories that function as sources of justification and motivation are reflected in our anxieties and aspirations, in how we talk, and in how we perform our identities. These are stories about the origins of our world, the founding of the political order, the forging of groups, the menace of enemies, the triumph of heroes, the ultimate destiny of humankind. In this course, we will explore the meaning of "myth" in our ethical and political lives. We will read and discuss a wide range of approaches to myth. For instance, readings may include works by Plato, medieval Jewish and Islamic philosophers, Friedrich Nietzsche, Georges Sorel, Ernst Cassirer, and Walter Benjamin. Particular attention will be given to a set of mid-twentieth century theorists of myth who have had an especially strong impact on the meaning of myth in American popular culture: Carl Jung, Mircea Eliade, and Joseph Campbell. We will assess the enduring resonance of their ideas and explore new opportunities to think critically and imaginatively about myth in this tradition, reading works by Wendy Doniger, Jeffrey Kripal, and other contemporary scholars in religious studies. These theoretical explorations will serve to enrich our efforts, throughout the course, to uncover the myths that animate our own lives. We will explore *our myths* through sustained introspection, interpretations of popular culture, and opportunities for myth-criticism and myth-making. Thus, in addition to the critical analysis of myths and myth theories, students will have the opportunity to play creatively with the possibilities of myth. The course will culminate in a final creative project engaging with the idea of myth.

Requirements/Evaluation: Two 5-7 page papers and either a final annotated creative project or a final 7-10 page paper.

Prerequisites: None

Enrollment Limit: 18

Enrollment Preferences: Religion majors and students who have taken a course in the Religion department.

REL 334 (S) Imagining Joseph

Cross-listings: REL 334 JWST 334 COMP 334 ANTH 334

Secondary Cross-listing

Beloved son, rival brother, faithful servant, dreamer, seer, object of desire, lover, husband, bureaucrat, Joseph is one of the most fully-limned and compelling figures in the Jewish, Christian, and Muslim scriptural traditions. The story of Joseph unfolds over fourteen chapters in the Hebrew Bible, and is the subject of the fourth longest sura in the Qur'an. Through millennia, the story of Joseph has inspired a wealth of interpretations, commentary, apocrypha, re-tellings, and back-story, including an apocryphal book of scripture about Joseph and his wife, Asenath, Sufi poetry about Joseph and Zuleikha (Potiphar's wife), a trilogy by the 20th century German novelist Thomas Mann, a musical by Andrew Lloyd Weber, and many expressions in Western visual art. The course will explore these various expressions, looking to them for the ways in which Joseph has captured the imaginations of peoples and cultures across time and space. The course will be organized as a collaborative seminar in which the class will read the foundational scriptures together, followed by thematic discussions to which students will contribute insights from their own readings of particular peripheral texts. Students will learn the pleasures of close and intense exegetical reading in approaching the Hebrew Bible and Qur'an, as well as the more expansive pleasures of linking post-scriptural expressions together.

Requirements/Evaluation: 3- to 5-page weekly response papers; 15-page final paper; class participation

Prerequisites: none

REL 335 (S) The Meaning of Diaspora and the Jews of Europe (WS)

Cross-listings: REL 335 HIST 434 JWST 434

Secondary Cross-listing

Dispersion, exile, migration, statelessness are all aspects of diaspora. In the study of diasporic peoples and cultures, the Jews have long figured as the archetype. As a result, Jewish political figures, intellectuals, social activists and scholars have played a central role in discussions of the meaning of diaspora, including debates about its political and social implications, economic value, and cultural significance. In the first half of the semester, in discussions of common readings, we will examine various historical interpretations of Jews' diasporic existence from the nineteenth century to the present and its implications for humanitarianism. Beginning in the first half of the semester and with greater intensity in the second half of the semester, you will conduct independent archival research on some aspect of the history of the Jewish diaspora using the digitized archives of the American Jewish Joint Distribution Committee that will culminate in a twenty-plus-page paper. In the second half, the seminar will continue to meet weekly as a research colloquium, to provide a forum for you to present your research and drafts in progress and to give feedback on fellow students' work. In this seminar, we are not merely studying history; you are actually doing history. That is to say, you will be more than students of history in this course: you will become historians in your own right. Over the semester, you will learn how to pose historical questions; to engage critically with readings beyond summarizing them; to synthesize an enormous amount of source material; and to learn how to write more clearly. By the end of the semester, the goal is for each student to produce a polished research paper based on substantial engagement with archival sources and relevant secondary literature that will serve as a capstone to your coursework at Williams or as a potential jumping-off point for future research projects, including a senior thesis in History or Jewish Studies.

Requirements/Evaluation: class participation, several short papers, oral presentations, and a 20-page research paper

REL 338 (F) Transhumanism: Religion, Technoscience, Obsolescence

Cross-listings: HSCI 338 SOC 338 STS 338 REL 338

Secondary Cross-listing

This interdisciplinary seminar invites students to pursue sociohistorical analysis and sustained critical discussion of the transhumanist movement and its overriding aims: the augmentation, transformation, and eventual transcendence of human biological constitution; the realization, through speculative technoscientific means, of an enhanced or even "postbiological existence"--a "posthuman condition," "Humanity 2.0." Through close readings of primary historical documents, transhumanist texts, scholarship on transhumanism, works of science-fiction film, literature, and popular culture, we will position the movement as an empirical conduit through which to explore the sociohistorical conditions under which transhumanist ideas and practices have emerged, circulated, and taken up residence. To that end, we will consider the ties of transhumanism to eugenics and massive investments in pharmaceuticals, anti-aging medicine, and so-called "GNR" technologies (i.e. genetics, nanotechnology, and artificial intelligence and robotics); the movement's affinities with neoliberalism and what some have pointed to as transhumanism's racialized subtext of whiteness. We will furthermore devote considerable attention to the technological singularity, the figure of the cyborg, mind-uploading, space colonization, and cryonic suspension, all of which, like transhumanism broadly, suggest that science and technology have in some sense come to operate as powerful channeling agents for the very sorts of beliefs, practices, and forms of association that theorists of secularization expected modernity to displace. Lastly, throughout the course of the seminar we will take transhumanism as a provocation to think broadly and seriously about religion, technology, embodiment, and ways of being human.

REL 340 Science, Religion, and the (post)colony: Critical approaches to the global history of knowledge (DPE)

Histories of science and religion have been deeply intertwined with colonial and postcolonial history. Colonial claims to legitimacy were often rooted in perceptions of scientific and technological superiority, and colonial expansion often marched in lockstep with missionary activity and forced conversions. In the process, race and human difference emerged as concepts at the intersection of scientific and religious discourses and was forged within the colonial framework. This colonial history of science and religion impacted how scientific and religious thought, practices and institutions developed through the period of decolonization and into today. Similarly, the attendant history of race and human difference continues to influence postcolonial and contemporary discourses around race, ethnicity, identity and migration. In this course, we will trace key moments in the history of science and religion and their relation to coloniality. We will start in the sixteenth century with the rise of modern European empires, move into the height of modern colonialism, indigenous genocides and chattel slavery, and trace decolonization from the middle of the nineteenth into today. Throughout, we will investigate how science and religion emerged as concepts, practices and institutions, and how these narratives impacted, and were impacted by colonial expansion and history. We will pay particular attention to questions of race, gender, sexuality and human difference as key concepts and practices that emerged at the intersections of science, religion and (post)colonialism

Requirements/Evaluation: 2 response papers (3-5pages each) + final project (could be a 10-15p paper or creative project of any kind)

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Concentrators, followed by seniors and juniors

Expected Class Size: 15

Grading:

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: The course addresses questions of race, gender, sexuality and human difference as seen through the history

of science, technology and medicine. Students will creatively engage with critical race theory, postcolonial theory and queer theory. They will also investigate human suffering as a category that provides a deeper understanding of difference, diversity and equality.

Not offered current academic year

REL 348 (S) Religion and Reason

In his most famous and provocative book, *The End of Faith*, the "New Atheist" author Sam Harris very forcefully brings our attention to the dangerous clash between faith and reason, lamenting humanity's willingness to suspend reason in favor of religious beliefs. This represents a pervasive trend of thought in the modern world that sees religion as being diametrically opposed to reason and rationality. This course is an in-depth investigation of this notion through the lenses of philosophy, theology, anthropology, and history, asking questions such as: What is reason, and what counts as a rational belief? Are there other grounds that might make one justified in holding a belief? What is the nature of religious belief or faith? Is religious belief uniquely irrational? What gave rise to this discourse on religion? We will be reading primary and secondary materials representing a variety academic disciplines, intellectual traditions, and geographic contexts.

REL 352 (S) Mystic Spirituality in Black Women's Social Justice Activism: Brazil-USA

Cross-listings: AFR 352 REL 352 WGSS 352

Secondary Cross-listing

This course examines the meanings and manifestations of mystic spirituality in the lives and work of selected Black women artists/activists in the USA and Brazil. The writings of Lucille Clifton (poet), Rosemarie Freeney Harding (activist and counselor) and Makota Valdina Pinto (activist and Candomblé ritual elder) are key texts for our exploration of the uses of mystic sensibilities and Afro-Atlantic ritual traditions--such as dreams and visions, prayer, divination, sacred dance, healing rites and other forms of unmediated intimate encounter with the sacred--as resources for creativity, community organizing, self-care and as aspects of political and social critique in African American and Afro-Brazilian contexts. The methodology of the course blends historical, literary and womanist approaches in an investigation of the conjunctions of spiritual practice and activism in the experience of women in the Afro-Atlantic diaspora.

Requirements/Evaluation: class participation, 2-3 short papers (5-7 pages) and a final project

REL 354 (S) Friedrich Nietzsche: Philosophizing with a Hammer

Cross-listings: REL 354 COMP 351

Primary Cross-listing

In one of his last major writings, *Twilight of the Idols (Götzen-Dämmerung, 1889)*, Friedrich Nietzsche described his project as an attempt to sound out

various established philosophical truths or intellectual "idols," saying, "they will be touched here with a hammer as with a tuning fork, these are the oldest, most convinced, puffed-up, and fat-headed idols you will ever find...And also the most hollow." To be sure, Nietzsche directed his often combative prose against everything from traditional religion to philosophy itself. Nietzsche is one of the most frequently cited and most frequently misunderstood philosophers of our current era. By reading Nietzsche's writings in context, this course will attempt to liberate Nietzsche from his later reputation. We will think with and sometimes against Nietzsche, focusing on his notions of religion, mythology, power, morality, and enlightenment, and we will pay special attention to his reflections on the limits of reason/knowledge. Along the way, students will get a new sense of Nietzsche's most famous theoretical formulations including "the death of God," the *Übermensch*, and the split between Dionysian/Apollonian modes of thought.

REL 355 (S) Foucault: Confessions of the Flesh

Cross-listings: REL 355 STS 355 COMP 359

Primary Cross-listing

The French philosopher, historian, and social critic, **Michel Foucault** (1926-1984) has had a massive influence across a range of disciplines. Indeed, in 2019, Google Scholar ranked Foucault as **the number one most highly cited scholar in the Humanities and Social Sciences**. While many of his contemporaries have faded in importance, Foucault's writings on power, madness, the history of sexuality, and the structures of domination and governmentality have become central to the theoretical canon of a range of academic disciplines. To be a scholar in the humanities today is often to be in Foucault's shadow. But despite the many references to his work, Foucault is frequently misunderstood and subsequent scholars often attribute to him positions he would have repudiated. Now almost forty years after his death, his work is also long overdue for a reappraisal as we come to understand Foucault better as a person and especially as the final, and posthumous, volume of his History of Sexuality, ***Confessions of the Flesh***, has only just appeared and been translated into English. In this course we will mainly read Foucault supplemented with occasional contextual readings. Although we will touch on his earlier writings, this seminar will emphasize his middle-to-late period (beginning with ***The Archaeology of Knowledge***) and including selections from his later monographs, lectures, interviews, and short writings. It will culminate in the unfinished intellectual and political project that occupied Foucault in his last days. We will think with and often against Foucault, focusing primarily on questions of power, knowledge, truth, and addressing his later emancipatory gesture toward "technologies of the self." We will also appraise the methodologies that Foucault described as "archaeology" and "genealogy." We will historicize Foucault in his life and cultural context and ask how much of his arguments still apply today. What blind-spots did he have? Which of his ideas are worth consolidating and which need repudiating? How might we go beyond Foucault?

Difference, Power, and Equity Notes: Law is seen as both a repressive and liberatory force. In taking a critical approach to the nature of law and legal interpretation, this course prepares students to think about the language of "rule of law," "order," and "justice" as a complex relationship between law and power.

Not offered current academic year

REL 374 (S) Mysticism: Vision, Writing, History (WS)

Cross-listings: REL 374 COMP 352 ENGL 374

Secondary Cross-listing

The promise of God's real presence in the world lies at the heart of Christianity as a messianic and scriptural faith. But mystics, who seek out and bear witness to their own experiences of the divine, have often been viewed with suspicion by church and state authorities. At stake in these confrontations between orthodoxy and the individual witness are questions of knowledge and power. To whom does God speak, who speaks for God, and how can anyone, whether mystic or priest, be certain? We will learn how these questions have inflected certain passages in the history of Christian belief and practice: the flourishing culture of mystical writing by medieval women, the efforts of some Protestant sects to distribute authority more horizontally, and early modern philosophers' criticisms of prophecy and fanaticism. But our deepest concerns will be literary and aesthetic. What modes of writing did mystics use to express what was, in fact, inexpressible? What role did visual art play in visionary experience? And how has mysticism influenced the work two of the twentieth century's most significant theorists of language, Ludwig Wittgenstein and Jacques Derrida?

Requirements/Evaluation: biweekly 5-page papers, biweekly 2-page response papers, thoughtful participation in class discussions

Prerequisites: a 100-level ENGL course, or a score of 5 on the AP English Literature exam, or a score of 6 or 7 on the Higher Level IB English exam

REL 376 (F) Islam and Capitalism (DPE)

Islam and Capitalism are two widely debated and yet increasingly elusive phenomena of our contemporary age. This course offers a chronological and thematic study of the conceptual and material entanglements between Islam and Capitalism. The mere juxtaposition of Islam and Capitalism is beset with conceptual difficulty and anachronism: can Islam be conceived as a religion proper given the Shari'a's extensive regulation of commercial life? Is faith in the providence of free markets akin to religious belief? Are Islam and Capitalism universal goods, or are they isomorphic to distinct cultures? Does the simultaneous rise of Islamic banking and "halal" consumerism signal a revolt against capitalist modernity, or does it mark the domestication of religion by forces of the market? How do Islamic conceptions of socioeconomic justice and ecological preservation respond to the environmental crises of Capitalism and the Anthropocene? We will explore these questions and address their underlying assumptions from within the disciplinary frameworks of History, Anthropology, and Religious Studies. In terms of theory, students will comprehend key debates and methodological approaches to the broader study of religion and capitalism, including formal resemblances between theological concepts and theorizations of the market; the analytical purchase of binary oppositions between religion (enchantment) and economics (rationality); the cultural embeddedness of markets versus their formalistic autonomy; postcolonial critiques of corporate sovereignty and neoliberalism; and, finally, economic/ecological assemblages and "religious economies." In addition to harnessing theoretical tools of analysis, students will also acquire substantial knowledge of the Shari'a, its commercial laws, institutions, and contracts by studying the history of commerce in Muslim societies from 7th-century agrarianism to contemporary Islamic finance. The diverse topics, regions, and periods covered in the course are organized into 5 modules: (1) theoretical concepts in religion and economics; (2) the Shari'a and Islamic commercial law; (3) commerce in medieval Islam; (4) modernity, colonialism, and industrial capitalism; and, finally, (5) globalization, modern Islamic finance, and environmentalism.

Class Format: This course will be conducted online in its entirety and will rely on a combination of synchronous and asynchronous modes of learning. The synchronous component will consist of weekly class meetings via Zoom. A discussion leader will be assigned for each session and, depending on enrollment, students will be separated into break-out sessions to facilitate group discussion. The asynchronous component will consist of weekly reading responses, the mid-term, and final paper.

Requirements/Evaluation: Weekly Reading Responses (approx. 300 words): 20%; Class Participation (based on a weekly assignment of in-class discussion leaders): 20%; Take-home Midterm Exam (5 double-spaced pages/1250 words max.): 20%; Term Paper (10 double-spaced pages/2500 words max.): 40%

Prerequisites: There are no prerequisites for enrollment. However, an elementary exposure to the history of economic thought will be useful.

Enrollment Limit: 19

Enrollment Preferences: Seniors

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course examines trajectories of capitalism--beyond its isomorphic relationship with Western culture--in the Muslim world. It offers a critical perspective on economic inequality and underdevelopment in postcolonial Muslim states and their historical linkages with extractive/settler colonialism. Students explore connections between petrodollar capitalism, climate change, exploitation of migrant labor in the Arabian Gulf, and the fight for regional domination through proxy religious wars.

REL 412 (F) Gandhi: History, Ideas and Legacy (WS)

Cross-listings: REL 412 LEAD 412 ASIA 412 ASST 412 GBST 412 HIST 496 LEAD 322

Secondary Cross-listing

This course studies the life, work, and ideas of M.K. Gandhi (1869-1948), one of the most influential thinkers of the non-western world. Gandhi is well known today for his philosophy of non-violent resistance and its application in India's freedom struggle as well as his influence on the work of leaders like Martin Luther King and Nelson Mandela. Hailed as the 'father of the Indian nation', however, Gandhi is not only known for his political ideas but also for his deep engagement with aspect of everyday human behavior and morality: truth, vegetarianism, sex and celibacy, to name just a few of his obsessions which contributed to making his broader philosophy. It is this commitment to a morally pure life that earned him the title of 'Mahatma' or Great Soul in India. This tutorial will focus on three key aspects of Gandhi: his ideas of peaceful protest as means of social and political change, his contemplations on moral philosophy, and on his legacy in modern India and the world. Students will read a combination of Gandhi's own writings as well as journal articles, monographs and films. The course will probe questions such as: What was the context and nature of Gandhian nationalism? Did it help to integrate the Indian nation? Was Gandhi truly a Great Soul, a saint or a shrewd politician? In what ways is Gandhi received and remembered by the Indian nation today? How does understanding a figure like Gandhi facilitate our understanding of modern nationalism, citizenship and political action?

Class Format: REMOTE. This tutorial will be taught remotely but will otherwise follow the usual tutorial format of weekly hour-long meetings, pairing students who will alternatively write papers and critiques each week.

Requirements/Evaluation: 5-7-page essays or 2-page critique due each week and a final report (3-4 pages) at the end of the semester.

Prerequisites: None, except students who have taken HIST488T will not be permitted to take this class.

Enrollment Limit: 10

Enrollment Preferences: Senior history majors and students who have previously taken HIST221. Students who have previously taken HIST488T

will not be permitted to take this class.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

REL 421 (S) Picturing God in the Middle Ages

Cross-listings: REL 421 ARTH 421

Secondary Cross-listing

How did medieval Europeans imagine their God and how did they give what they imagined pictorial form? How were these pictures used, both in public and in private life, and why? Paying particular attention to the function and experience of medieval works of art, this seminar will examine the evolution of images of God, in both the Eastern and Western halves of Europe, and the problems these images often generated. Through readings and class discussion, the course will investigate, among other specific topics: the varied attitudes toward the representability of God in Judaism, Islam, and Christianity; the impact of the Roman cult of the emperor and of images of the dead on the earliest portraits of Christ; the cult of the icon, concerns over idolatry, and the destruction of images; ideas about spiritual versus physical vision and their influence on the making and viewing of pictures; the relationship of sacred images to relics, the Eucharist, and other aspects of Christian ritual; and the pictorial exploration of both the torture and sexuality of Christ. Students will also pursue an individual research project, in which they will examine in greater depth a specific depiction of divinity of their choosing, in light of what we have considered together in the seminar.

Class Format: Class will meet online at first but may shift to in-person if circumstances allow

Requirements/Evaluation: class participation, oral presentation, one short paper (2-3 pages), final research paper (15-20 pages)

Prerequisites: none

Enrollment Limit: 10

Cross-listings: COMP 422 ARTH 422 REL 422

Secondary Cross-listing

How have scholars interpreted and classified terms such as "Islamic art" and "Muslim culture," and how have these classifications affected the interpretation of the arts in South Asia? There are different points of view regarding what constitutes as "Islamic" art and culture. Is an imperial wine cup with "God is Great" inscribed on it an "Islamic" object? How is an erotic epic narrating the romance of a Hindu prince understood as embodying the principles of Muslim devotion? This interdisciplinary seminar, focusing on South Asian Muslim devotional culture as articulated through the material culture, the arts of the book, architecture, and poetry, will navigate these questions from two perspectives. The first is to understand how Muslim devotional cultural expression in South Asia circumscribes and interprets itself. The second viewpoint is that of scholarship and the various interpretive

voices that have framed the field over the last century.

Requirements/Evaluation: class participation, 2-page response papers on class readings, leading class discussion, final 15-20-page research paper

REL 12 (W) Civil Disobedience

Cross-listings: HIST 12 REL 12

Secondary Cross-listing

Are citizens obligated to obey unjust laws? When are they justified in breaking them? Is civil disobedience an effective political strategy? Does it matter, or is bearing witness against injustice enough? And who gets to determine whether a law is 'unjust' in the first place? Such questions have long bedeviled those looking to transform our world. In this course, students will grapple with their many answers. In a seminar-style format, we will explore case studies of civil disobedience in the United States, reflecting on the history of its theory and practice. In the process, we will pay particular attention to how religion has shaped civil disobedience in the U.S. context. Sources will include classic texts, films, and guest speakers. We will meet two mornings per week, for a total of six hours. Students will be evaluated based on their participation and a final project.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: in order of seniority, with a preference for History and Religion majors

Grading: pass/fail only

REL 15 (W) A Politics of Compassion for the 21st Century

Cross-listings: REL 15 PSCI 15

Primary Cross-listing

Purpose: Here is a simple question: do you believe the American political system is working well today and will adequately address the country's needs in the 21st century? If not, what might a different model, a different attitude about politics and "who gets what in society," might look like. This course, offered by a political science professor who is also an ordained Zen Buddhist priest, explores a radical alternative based on the simple idea that if we are to survive and thrive as a global community in 100 years from now, we must move from a philosophy of "me" to one of "we." Based on the professor's 30 years of college-level political science teaching and over 40 years of a Zen Buddhist meditation practice, the course will explore a "Politics of Compassion," drawing from the teachings of the Buddha through the "Engaged Buddhists," such as the Dalai Lama, today. In addition to the historical and philosophical treatment of politics from a Buddhist point of view, we will practice Zen meditation on a daily basis. Regardless of one's particular religious, or non-religious, background, the course will provide a supportive opportunity to explore one's moral and political beliefs and at the end of the day ask oneself the proverbial question: what is my life really about? Is it about my ego in the form of making money and/or becoming famous, or is it about how to use my privileges and education to help alleviate suffering in the world? We will explore the issues of the climate crisis, poverty, race, sexism, violence, criminal justice, etc. in the process of reflecting on these questions.

Requirements/Evaluation: 10-page paper; all students will do a class presentation of their 10-page research paper

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: seniority: seniors, juniors, etc.

Grading: pass/fail only

Unit Notes: Tom Redden '77 is a political scientist and ordained Zen Buddhist priest, who is writing a book on 'Buddhist politics.' He holds a doctorate in political science and masters in education as well as 'Third World' Development Studies from the University of Geneva, Switzerland. He has lived and travelled all over the world, continues a 40-plus year daily meditation practice, and was voted Faculty of the Year five times by students at Southern Vermont College where he taught.

REL 16 (W) Experiments in Mindfulness and Art Museums

Cross-listings: REL 16 ARTH 16

Primary Cross-listing

Vietnamese Buddhist Thích Nhất Hạnh said, "Always there is the opportunity to live our life fully. When we drink water, we can be aware that we are drinking water. When we walk, we can be aware that we are walking." It could be added: When we view and create art, we can be aware that we are viewing and being creative. How can we learn to become more alert and conscious to our surroundings and then apply these skills so we can enjoy a fuller, more vivid experience of life? Using MASS MoCA's contemporary art exhibitions, we will explore how objects can bring us to the present and urge us to slow down and be aware of their embedded messages. This experiential course takes place at MASS MoCA twice weekly for 3 hours each session. Students will work with MASS MoCA's director of education and curator of Kidspace to experiment with "ArtInSight," the museum's three-pronged pedagogy that includes arts-based conversations, mindfulness-based insight activities, and art-making exercises to deepen connections to the art on view and to one's own creativity. Guest artists and yogis will be brought in to further explore mindfulness and the arts. While this is a great opportunity for art/art history and religion majors, students are not required to already have mindfulness or art-making practices. Rather, a goal of this course is to collectively try out socio-emotional mindfulness skills that can be useful in our everyday life to become more stress resilient, have more meaningful interpersonal connections, and nurture compassion towards ourselves and others. In addition to being fully engaged in hands-on class activities and discussions, we will read a selection of aesthetics philosophy, and Buddhist and secular mindfulness texts. For a final project, we will design mindfulness-based gallery experiments that can be conducted at the MASS MoCA.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: preference will be given to art and religion majors, juniors and seniors

Grading: pass/fail only

Unit Notes: Laura Thompson, Ed.D. is MASS MoCA's director of education and curator of Kidspace. She is a long term meditator and incorporates mindfulness into her work and family life; has conducted many mindfulness-based art training programs; and has designed the museum's signature education pedagogy ArtInSight that includes meditation practices.

REL 23 (W) Gaudino Fellowship: Immersive Engagement and Reflection

Cross-listings: REL 23

Primary Cross-listing

The Gaudino Fund is offering Gaudino Fellowships for a group of 2 to 4 students during Winter Study 2022, based upon a proposed domestic or foreign collaborative project. Student teams should organize their proposed projects around two main components: direct encounter with otherness and self-reflection. Projects will be evaluated on whether they subject the students to "uncomfortable learning", i.e. having an experience that challenges and perhaps alters one's view of what it is to live a good life and the group's commitment to incorporate separate home stays for each fellow as part of their project, either joint or separate work/engagement internships, and a structure to facilitate collaborative action and learning. The team selected will be guided and overseen by the Gaudino Scholar who will conduct appropriate preparatory discussions and follow-up sessions to optimize and help students articulate lessons learned from the overall experience. The intent of the program is to open the student to an understanding (of both the familiar and unfamiliar), and to a development of empathy, that could not be achieved without the fellowship experience. N.B. Although this

course is housed in Religion, projects are not limited to religion. Each prospective team needs to meet with the Gaudino Scholar as early as possible, but no later than September, and submit their group application by September 30, 2021. Application guidelines can be found at winterstudy.williams.edu. Each student is expected to write a short (3-4 page) self-reflection before leaving for the WSP, keep a journal of their experience, as well as write a 8-10 page paper by the end of the Winter Study period reflecting on the WSP experiences and what has changed in the student's perceptions and beliefs from the opening essay. They will also meet the other members of the team on a weekly basis during Winter Study and regularly update the Gaudino Scholar by email and/or Skype calls. The team that receives the Gaudino Fellowship will give a brief presentation to the Board about their experience at the Board's spring meeting in April. The team whose project is approved will receive the Gaudino Fellow designation. In addition, students on Financial Aid will receive Gaudino funding from a minimum of 50% to a maximum of 90% of the budget for the project up to \$2,500, as determined by the Financial Aid office. No additional funding for students' projects will be provided by the College.

FRENCH

Chair: Professor Brian Martin

Professors: B. Martin, K. Pieprzak; Assistant Professors: S. Saint-Just; Visiting Assistant Professor: K. Levine; Teaching Associates: Saléna Martine Zina El Arage, Samia Toorawa

MAJOR—French Language and Literature

The French major seeks to provide training in literary and cultural analysis and linguistic expression through the study of selected texts from the French-speaking world. Emphasis is placed on the changes in form and subject matter from the early modern period to the contemporary era.

The major consists of nine courses. One of these courses must be the 400-level senior seminar during the student's final year at the College.

Students entering the major program at the 200-level may, with the permission of the Department, choose as part of their major program, one course in Art History, History, Philosophy, Comparative Literature or other subjects that relate to and broaden their study of French. Students entering the major program at a very advanced level may, in some cases and with the permission of the Department, include two such courses in their major program.

Working with the major advisor, the student will formulate a curricular plan that will ensure balance and coherence in courses taken. Such balance and coherence will be based on the above areas of literary and cultural investigation. Prospective majors should discuss their program with the major advisor by the end of their sophomore year. This is especially imperative for students who are planning to spend a part or all of their junior year in France.

Inasmuch as all courses in French assume the active participation of each student in discussions conducted in the foreign language, regular attendance at class meetings is expected.

MAJOR—French Studies

The major in French Studies is an interdisciplinary program that provides students with the opportunity to acquire skills and knowledge embracing the cultural, historical, social, and political heritage of France and the Francophone world. The program allows for an individualized course of study involving work in several departments and the opportunity to study abroad.

Students electing the French Studies major should register with the French Studies faculty advisor during their sophomore year. At that time, they should submit a feasibility plan that articulates their projected program.

The French Studies major consists of ten courses satisfying the following requirements:

at least five RLFR courses in French language, literature, film, or culture;

the RLFR senior seminar during the student's final year at the College;

Electives: The remaining courses needed to complete the major must be drawn from at least three different departments and relate primarily to an aspect of the cultures, histories, societies, and politics of France and the Francophone world. These courses will be selected in consultation with members of the Department of Romance Languages. Appropriate electives might include:

AFR 360 Political Thought Frantz Fanon

ARTH 254 Manet to Matisse

HIST 390 Haitian and French Revolutions

RLFR 101-450 All courses in French and Francophone language, literature, film, and culture

THE DEGREE WITH HONORS IN FRENCH

Students majoring in French may apply to be admitted to the Honors Program in French upon demonstrating the following: (1) fluency of spoken and written language; (2) potential for successful independent research, as demonstrated by strong performance in advanced-level coursework; (3) interest and motivation; and (4) overall quality and feasibility of the proposal.

By May 15th of their junior year, candidates will have found a thesis advisor, and given the Department a three- to five-page proposal and a preliminary bibliography. (In some cases, and upon consultation with the Department, candidates will have the option to choose a second reader in addition to their primary advisor; for example, when the thesis is interdisciplinary enough in nature that it requires the expertise of an additional reader). This proposal will be discussed by the Department; by June 1st, the candidate will be informed whether they can proceed with the thesis, and if so, what changes need to be made to the focus and scope of the project. The summer before the senior year will be spent reading, researching (in relevant archives or with field work), and compiling a more detailed bibliography.

Upon their return to Williams, candidates will devote to their theses two semesters of independent study (beyond the nine courses required for the major) and the winter study period of their senior year (493-W31-494). The thesis will be written in French and will usually not be shorter than fifty pages. By the end of the Fall semester, students will normally have a clear outline of the project, have done substantial research, and produced the draft of at least the first half of the project. During January this draft will be suitably rewritten and edited with a view to a final version, while the candidates will also begin work on remaining chapters.

Candidates will submit what they have written to the department on the last day of Winter Study.

On the Tuesday of the first week of the spring semester candidates will make a presentation of the project at a departmental colloquium in French. The thesis will be promptly discussed and evaluated to determine whether or not the student should continue in the honors program. The second semester of independent thesis work will be spent writing more chapters, as well as revising, rewriting, and polishing the project where necessary. The completed thesis in its final form will be due on April 25th. At the end of the Spring term, the student will present and defend the final project before members of the Department and others by invitation. The grade will be awarded once members of the Department have consulted after the defense.

THE CERTIFICATE IN FRENCH

The Certificate in French Language and Cultures consists of a sequence of seven courses for which the student must earn a cumulative grade average of B or higher.

For students with no prior study of French, the course sequence will consist of RLFR 101-102, RLFR 103, RLFR 104, and three additional courses, with at least one of these at the 200-level or higher taken at Williams. For students starting the sequence at RLFR 103 or higher, six additional courses must be taken, including at least three French courses at the 200-level or higher. For these students starting at French 103 or higher, two electives may be taken in other departments: one elective should be in French or Francophone culture (art, literature, theatre, music) and the other in French or Francophone civilization (history, political science, philosophy).

PLACEMENT

A placement test in French is administered at Williams at the opening of the fall semester. Incoming first-year students who register for any French course above the 101 level must take this test, regardless of their previous preparation.

STUDY ABROAD

We encourage all students of French to complement their courses at Williams with the life-changing experience of studying abroad in a Francophone country. In particular, French majors and certificate students are strongly advised to complete part of the requirements for the major or certificate by studying abroad, for either a semester or a year. Most study abroad programs require applicants to have completed a fifth-semester French course in college (French 105) or higher before they go abroad. Credit for up to a total of 4 courses towards the major or certificate can be granted for either a semester or a full year abroad, at the discretion of the Romance Languages Department. Students who are planning to get credit for their study abroad courses should meet with a French faculty member in advance, to review the courses they intend to take abroad. Normally, only courses that focus on French language or Francophone literature, history, politics, art, and culture may be counted towards the major or certificate. The final assignment of course credit will be authorized in consultation with the student's French advisor, once the student has returned to Williams. Such credits can only be determined by review of course format, course materials, and evidence of satisfactory academic performance; students should thus provide not only their study abroad transcript, but retain course materials (including syllabi, papers, exams, and other projects) for potential review back at Williams. While students can gain credit for 100-, 200-, and 300-level courses during their time abroad, the 400-level senior seminar must be taken during the senior year at Williams. Early planning is essential: Students interested in studying abroad are strongly urged to attend the yearly Francophone Study Away Information Session (held each October) during their first year or sophomore year. Students will receive credit for only those study abroad programs recommended and approved by the Dean of Study Away and the Romance Languages Department. Williams has long-term affiliations with the following programs: Hamilton College (Paris), Sweet Briar College (Paris), CUPA (Paris), Middlebury College (Paris), Wellesley College (Aix-en-Provence), Boston University (Grenoble), and both SIT and CIEE (in Morocco, Senegal, and Madagascar). For more on all approved study-abroad programs, see the webpages for the French program (french.williams.edu) and Study Away (study-away.williams.edu/programs). Finally, the Department does not administer proficiency exams (for study abroad, fellowships, or job applications) to students who have not completed a French course at Williams; and most study abroad programs will not accept students who have not taken any college courses in French (at Williams) prior to their application. Students should thus plan well ahead (as early as their first year and sophomore year) to take appropriate courses at Williams, before applying for and taking part in study abroad programs in the Francophone world.

RLFR 101 (F) Introduction to French Language and Francophone Cultures (DPE)

This year-long course offers a complete introduction to the French language and is designed to help you become fully conversant in French by focusing on four fundamental language skills: listening, speaking, reading, and writing. Through daily practice, class activities, interactive discussion,

listening exercises, written work, reading assignments, and active engagement with music, video, and film, you will quickly gain confidence and increasing facility with your abilities to speak and understand both spoken and written French. In addition, our study of grammar, vocabulary, and communication skills will be organized around an engaging and dynamic introduction to a variety of French-speaking cultures around the world, from France and Belgium, to Québec and Martinique, to Sénégal and Morocco. *Conducted in French.*

Requirements/Evaluation: active class participation, workbook exercises and compositions, chapter tests, midterms, and final exams

Prerequisites: none; for students who have never formally studied French; students who have previously studied French (in any formal course, at any level) must take the French Placement Test in late August or early September

Enrollment Limit: 18

Enrollment Preferences: all are welcome, but if over-enrolled, preference will be given to first-year and second-year students and those with compelling justification for admission

Expected Class Size: 18

Grading: yes pass/fail option, no fifth course option

Unit Notes: RLFR 101-102 is a year-long course; credit granted only if both semesters (RLFR 101 and 102) are taken. RLFR 101-102 students must also take the French Winter Study Course.

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: Through its focus on French and Francophone cultures around the world, this course enables students to gain both linguistic and cultural proficiency, and to engage with the great diversity of colonial and post-colonial cultures, histories, and identities in France and Belgium, Québec and Martinique, Sénégal and Morocco.

Fall 2021

SEM Section: 01 M-F 9:00 am - 9:50 am Brian Martin

RLFR 102 (S) Introduction to French Language and Francophone Cultures

This year-long course offers a complete introduction to the French language and is designed to help you become fully conversant in French by focusing on four fundamental language skills: listening, speaking, reading, and writing. Through daily practice, class activities, interactive discussion, listening exercises, written work, reading assignments, video-observations, and film-viewing, you will quickly gain confidence and increasing facility with your abilities to speak and understand both spoken and written French. In addition, our study of grammar, vocabulary, and communication skills will be organized around an engaging and dynamic introduction to a variety of French-speaking cultures around the world, from France and Belgium, to Québec and Martinique, to Sénégal and Morocco. *Conducted in French.*

Class Format: This class meets 5 times a week from M-F. Students are required to attend class from Monday to Friday.

Requirements/Evaluation: participation, online homework, mid-semester and final projects, short writing assignments

Prerequisites: RLFR 101, or by Placement Test, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Preference will go to first- and second-year students and those with compelling justification for admission. Statement of interest solicited if overenrolled.

Expected Class Size: 18

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Spring 2022

LEC Section: 01 M-F 9:00 am - 9:50 am Katarzyna M. Pieprzak

RLFR 103 (F) Intermediate Studies in French Language and Francophone Cultures

As a continuation of French 101-102, this dynamic first-semester intermediate course is designed to help you improve your French, while at the same time learning more about French and Francophone cultures, politics, literature, and film. Through the active study and daily practice of listening, speaking, reading, and writing in French, you will: continue developing your communication skills and learn to express your opinions and ideas; improve your command of spoken and written French through a revision of important grammatical structures; strengthen your reading and writing skills

in order to prepare you for further study of literary texts; and develop an increased vocabulary and cultural appreciation of French-speaking cultures around the world.

Requirements/Evaluation: participation, homework, mid-semester and final projects, short writing assignments

Prerequisites: RLFR 101-102, or by Placement Test, or permission of instructor

Enrollment Limit: 18

Enrollment Preferences: Preference will go to first and second year students. Statement of interest solicited if overenrolled.

Expected Class Size: 18

Grading: yes pass/fail option, no fifth course option

Unit Notes: students should seriously consider taking RLFR 103 AND 105 if they intend to enroll in more advanced French literature courses at the 200-level and above, or if they anticipate studying in France or a Francophone country during their junior year

Distributions: (D1)

RLFR 104 (S) Intermediate French II: Advanced Intermediate Studies in French

As a continuation of French 103, this course will help students gain greater fluency in French, through an exploration of French and Francophone literature, film, media, politics, and culture. With a focus on listening, speaking, reading, and writing, students will review advanced grammar expand their vocabulary, gain greater confidence, and both discuss and debate central questions in the social, political, and cultural landscape of French-speaking communities in Europe, Africa, and the Caribbean.

Class Format: Both sections of 104 will convene three times per week: two sessions with the instructor, and one session with the TA with an emphasis on speaking practice in small groups. Small group TA meetings for both sections will be scheduled at agreed-upon times once enrollment is established.

Requirements/Evaluation: short weekly readings, participation, online homework, three quizzes, three writing assignments and one final project.

Prerequisites: RLFR 103, or by placement test, or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Preference will go to students who have taken 103 in Fall 2020. Statement of interest solicited if overenrolled.

Expected Class Size: 19

Grading: yes pass/fail option, no fifth course option

LEC Section: 02 Cancelled

RLFR 105 (F) Advanced French: Advanced Studies in French Language and Francophone Culture

In this French course, we will read and examine literary texts from the twelfth to the 19th centuries, and films from the twentieth and twenty-first centuries. In order to analyze them, we will briefly situate them in their social and historical contexts. These works will help us better understand contemporary France and explore France's colonial past. We will also learn how to write a short research paper in French in the form of an explication de texte. While the themes, authors, time periods will vary, our approach will remain the same. The three themes love, fear, and France's colonial past will be the course's organizing principles. A small section of our course will be devoted to grammar revisions in order to continue to improve our reading and language skills. Conducted in French

Requirements/Evaluation: class participation, grammar exercises, 2 five-page papers, 1 presentation

Prerequisites: RLFR 104, placement exam, or by permission of instructor

Enrollment Limit: 12

Enrollment Preferences: All are welcome, but if overenrolled, preference will be given to first- and second-year students and French major and certificate students. If necessary, a statement of interest will be solicited.

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

LEC Section: 02 TF 2:35 pm - 3:50 pm Sophie F. Saint-Just

RLFR 106 (S) Advanced French: Danger and Desire in French Film and Fiction (DPE)

Cross-listings: RLFR 106 COMP 107

Primary Cross-listing

This is an advanced course in French language designed to help you improve your speaking, comprehension, reading, and writing, through the dynamic study of short literary texts and films focusing on danger and desire in nineteenth-, twentieth-, and twenty-first-century France. Through active discussion and debate, textual and cinematic analysis, grammatical review, and careful writing and revision, you will improve your command of spoken and written French, strengthen your ability to express complex ideas, expand your vocabulary, and deepen your understanding of French fiction, film, and culture. This is an ideal course to prepare for study abroad or for more advanced coursework in French literature and cinema. As a focus for improving your French, we will examine a broad range of texts and films on danger and desire in France from 1820 to 2020, with an emphasis on passion and ambition, infatuation and seduction, betrayal and vengeance, courage and cruelty, warfare and resistance. Works to include nineteenth-century texts by Chateaubriand, Duras, Balzac, Mérimée, Flaubert, Maupassant, Zola; twentieth-century texts by Colette, Camus, Sartre, Beauvoir, Duras, Ernaux, Guibert, Quint, Lindon, Vilrouge; and twenty-first-century films by Caron, Ozon, Ducastel, Martineau, Dercourt, and Becker. Conducted in French.

Requirements/Evaluation: active class participation, grammar exercises, two short papers, midterm, and final paper

Prerequisites: Exceptional performance in RLFR 104; successful performance in RLFR 105; or by placement test; or permission of the instructor.

Enrollment Limit: 16

Enrollment Preferences: All are welcome, but if over-enrolled, preference will be given to French majors and certificate students; and those with compelling justification for admission.

Expected Class Size: 16

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLFR 106 (D1) COMP 107 (D1)

Difference, Power, and Equity Notes: This course centers on a critical examination of difference, power, and equity in French film & fiction. The content examines the effects of class, ethnicity, gender, and sexuality on social inequalities among rich & poor, soldiers & civilians, nations & colonies, men & women. The course employs critical tools to teach students how to articulate and interrogate social injustice, through reading, viewing, discussion, writing, and revision.

Spring 2022

SEM Section: 01 TR 9:55 am - 11:10 am Brian Martin

RLFR 108 (S) Voyages Francophones: Alienation and Self-Discovery in Contemporary Literature and Film

This is an advanced course in French language designed to help you improve your speaking, listening comprehension, reading, and writing, through the dynamic study of literary texts and films focusing on the themes of alienation and self-discovery in the late twentieth- and early twenty-first-century Francophone world. Through active discussion and debate, textual and cinematic analysis, grammatical review, and careful writing and revision, you will improve your command of spoken and written French, strengthen your ability to express complex ideas, expand your vocabulary, and deepen your understanding of French-language fiction, film, and culture. This is an ideal course to prepare for study abroad or for more advanced coursework in

French language and cinema. As a focus for improving your French, we will examine a broad range of texts and films on the themes of alienation and self-discovery-especially in the context of immigration and coming of age-as they are represented in texts from France, Québec, and the Caribbean.

Requirements/Evaluation: class participation, grammar exercises, group discussion leading, two short papers, and final project

Prerequisites: exceptional performance in RLFR 104; successful performance in RLFR 105; or by placement test; or permission of the instructor

Enrollment Limit: 20

Enrollment Preferences: French Majors and certificate students

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Attributes: FMST Related Courses

RLFR 202 (F) War and Resistance: Two Centuries of War Literature in France (1800-2015) (DPE)

Cross-listings: RLFR 202 COMP 292 WGSS 201

Primary Cross-listing

In 1883, Maupassant called on his fellow war veterans and writers to join him in speaking out against warfare and violence, crying "Let us dishonor war!" From the Gallic Wars against Caesar (during the first century BC) to recent terrorist attacks in France (at the opening of the twenty-first century), the French literary tradition is rich in texts that bear witness to war and speak out against its monstrous inhumanity. While war literature in France can be traced back to ancient and medieval texts on Vercingétorix, Charlemagne, William the Conqueror, and Joan of Arc, this course will focus specifically on literary representations of war during the nineteenth- and twentieth-centuries, from the Napoleonic Wars, to the First and Second World Wars, to the Algerian and Cold Wars, and the "War on Terror." Discussions will examine the impact of war on soldiers and civilians, patriotism and pacifism, history and memory; the implications of war as invasion and conquest, occupation and resistance, victory and defeat; the relationship of war to gender, sexuality, and ethnicity; and the role of war in colonialism and genocide. Readings to include novels, short stories, and poems by Balzac, Stendhal, Hugo, Rimbaud, Daudet, Maupassant, Zola, Cocteau, Wiesel, Duras, Camus, and Fanon. Films to include works by Resnais, Renoir, Carion, Jeunet, Malle, Angelo, Pontecorvo, and Duras. *Conducted in French.*

Requirements/Evaluation: active class participation, midterm exam, and two to three papers (of 3-5 pages each)

Prerequisites: exceptional performance in RLFR 105; successful performance in RLFR 106; or by French placement exam; or by permission of instructor

Enrollment Limit: 16

Enrollment Preferences: French majors and certificate students; Comparative Literature majors; Women's, Gender and Sexuality Studies majors; and those with compelling justification for admission

Expected Class Size: 16

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLFR 202 (D1) COMP 292 (D1) WGSS 201 (D1)

Difference, Power, and Equity Notes: This course focuses on a critical examination of difference, power, and equity in French war literature and film. Through the study of war (as invasion and conquest, occupation and resistance, colonialism and genocide), the course thus challenges students to examine the effects of class, race, religion, ethnicity, gender, and sexuality in narratives on war and violence, and on survival and resistance.

Fall 2021

SEM Section: 01 MW 11:00 am - 12:15 pm Brian Martin

RLFR 205 (S) On Strike: Workers and Revolutions in the French Republic

The recent "yellow vests" (*gilets jaunes*) protests in France have attracted international attention to the experiences of French workers. Yet these protests are only the latest example in a series of workers' movements that have shaped French identity. From the revolutions of 1830 and 1848, to the Popular Front of the 1930s, to the general strike that fueled the events of May 1968, workers have played a significant role in determining France's

sociocultural values and political orientation. In this course, we will study representations of workers in literary and filmic texts dating from the late nineteenth century to the present. We will consider how depictions of the worker have evolved amid changing sociocultural conditions in France: for instance, the arrival of immigrants from such countries as Spain, Italy, and Portugal, and later from the Maghreb; the entry of women into the workforce; the disappearance of the rural farm worker, or *paysan*; the creation of a nuclear power grid; and deindustrialization. Finally, we will examine how the memory of workers is preserved in twenty-first-century France. *Conducted in French.*

Requirements/Evaluation: class participation, reaction papers, group discussion leading, and a final project

Prerequisites: strong performance in RLFR 105; RLFR 106; another RLFR 200-level course; placement exam; or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French Majors and certificate students

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

RLFR 206 (F) The Outsider in French & Francophone Film Adaptations of Literary Texts (DPE)

In this course students will examine the figure of the outsider (queer, black, woman, intruder, loner) in several French and Francophone literary texts and their film adaptations and will explore questions such as: how are such outsiders translated onto the screen? To what extent does outsider status help maintain, challenge, or reveal hegemonic discourse? In what ways do non-Western and Western filmmakers (re)cast power and privilege through the figure of the outsider in their film adaptations (of Western canonical texts)? Students will read original French and Francophone literary texts and apply theories of film adaptation to their analyses.

Requirements/Evaluation: three response papers, one short essay on film adaptation, one video essay with a student partner

Prerequisites: students should have taken RLFR 105 or above, or placement test, or by permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Comparative Literature majors, Africana Studies concentrators, French majors and certificates

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: This course fulfills the DPE requirement because it focuses via the figure of the outsider on power dynamics (based on sexual identity race, class, gender) between cultural producers, in literary texts and their film adaptations.

RLFR 207 (F) Urban Ecologies of the French-Speaking World: Sustainability and the City in the 21st Century

In the twenty-first century, urban populations around the world have continued to grow, all while the climate crisis has become ever more urgent. The fact that more than 55% of Earth's inhabitants live in urban settings today means that cities will be important actors in the fight against climate change moving forward. In this course, we will examine how cities from the French-speaking world (including in North America, Europe, and Africa, as well as along the Pacific Rim) are enacting solutions for sustainable living in their midst. Taking a cultural studies approach, we will examine a variety of sources--including literature, videos and films, press articles, government documents, academic analyses, websites, and artistic productions, among others--to understand the challenges each of these cities faces and the solutions each has introduced. In so doing, we will study how site-specific realities, such as (eco)tourism, the legacy of colonialism and imperialism, relations with indigenous populations, and inequalities (such as those of race, sex, gender expression, class, age, and ability), are interwoven with questions of sustainable development and ecological living. *Conducted in French.*

Class Format: Remote. This will be a remote course available to all students, whether they are on campus or completing coursework 100% remotely. We will convene synchronously via web-conferencing multiple times per week, with an emphasis on discussion in small groups. There will be many opportunities for all course members to interact via a series of varied online activities both during and in-between our synchronous sessions.

Requirements/Evaluation: participation, 3 reactions papers, 1 group presentation, final project

Prerequisites: successful performance in RLFR 106 or another RLFR 200-level course; or by placement test; or permission of the instructor

Enrollment Limit: 12

Enrollment Preferences: All are welcome, but if overenrolled, preference will be given to French majors and certificate students; and those with compelling justification for admission.

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

RLFR 208 (S) Queens, Crusaders and Cannibals: Gender, Race and Religion in Medieval and Renaissance France

The intersection of gender, race, and religion is at the heart of contemporary political and social debates. How to build a nation and how to live together were also key questions for Medieval and Renaissance writers. In this introductory course in Early Modern Literature, we will study how literary works from the 11th to the 16th centuries represented conflicting debates on gender, race, and religion, from the Crusades opposing Christians and Muslims, to the Wars of Religion opposing Catholics and Protestants. We will explore how these concepts were intertwined in courtly love poems and chivalric novels in Europe, and how they were redefined in "humanist" writings and travel narratives during the European colonization of the Americas. Through an investigation of epic poems, allegories, tales, sonnets, novels, travel narratives, and essays by Marie de France, Christine de Pisan, Pierre de Ronsard, Louise Labé, François Rabelais, Michel de Montaigne and Marguerite de Valois, students will compare cultural, political, and ideological debates in Early Modern France with 21st-century questions on racism, sexism and discrimination.

Requirements/Evaluation: Active participation, weekly written responses (1 page), 2 oral presentations (5 min), and final project.

Prerequisites: Exceptional performance in RLFR 105, strong performance in RLFR 106, or by Placement Test, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French majors and French certificate students, and those with compelling justification for admission

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

RLFR 210 (F) Scientific Selves: Medicine, Technology, and Identity in Early Modern France

Cross-listings: STS 211 RLFR 210

Primary Cross-listing

The early modern period has long been associated with scientific discovery and shifting ideology in France. From Copernicus on, thinkers such as René Descartes, Blaise Pascal, and Antoine Lavoisier helped advance the Scientific Revolution, which led to medical and technological breakthroughs, as well as important advances in our understanding of the world and our solar system. This course examines the role that France played in pursuing such discoveries, as well as the ways newfound knowledge impacted notions of belonging and alterity. How did the Scientific Revolution and French colonization lead to the creation of social, cultural, and medical "others"? How did scientific discourse permeate verbal and visual expression and depict those who did not fit into normative paradigms of gender, sexuality, ability, ethnicity, belief, and culture? What avenues for self-expression and definition were available to those whom society excluded? What parallels can we see with twenty-first-century questions of political activism, social justice, sciences, and technology? To explore these questions, we will analyze literary texts, visual representations, and historical documents, such as medical treatises, scientific diagrams, and texts on new technologies. *Conducted in French.*

Requirements/Evaluation: active class participation, written reflections, quizzes, mid-semester presentation, and final paper

Prerequisites: strong performance in RLFR 105; RLFR 106; another RLFR 200-level course; placement exam; or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French Majors and certificate students

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 211 (D1) RLFR 210 (D1)

Not offered current academic year

RLFR 211 (F) Explorers, Missionaries, Colonizers: French Travel Narratives in the Age of Discovery (DPE)

Often referred to in European history as the "Age of Discovery" or the "Age of Exploration," the 15th and 16th centuries saw the rise of overseas exploration from Europe to the Americas, Asia and Africa. These travels both contributed to the expansion of the known world for Europeans and also laid the foundations for commercial routes and colonisation. French travelers played a key role in this process and documented their journeys in detailed narratives. After reading short excerpts of earlier works that built the travel narrative genre, such as Ibn Battuta's Travels and Marco Polo's Book of Marvels, we will read longer excerpts from Jacques Cartier's Brief narration of the Navigation to the Islands of Canada, Jean de Léry's History of a Voyage to the Land of Brazil, Pierre Belon's Voyage to the Levant, and study the maps that were created during this time period. We will analyze the representation of the journey itself, the descriptions of the lands traveled to and their inhabitants, and also the enunciation of the goals of such travels. We will see how a rhetoric of fascination, wonder and curiosity is intertwined with economical, political and religious agendas. There is no "official" travel narrative written by a woman in this time period: we will wonder why and study the representation of women in these texts. Conducted in French.

Class Format: Remote. This will be a remote course available to all students, whether they are on campus or completing coursework 100% remotely. We will convene synchronously via web-conferencing multiple times per week, with an emphasis on speaking practice in small groups. There will be many opportunities for all course members to interact via a series of varied online activities both during and in-between our synchronous sessions.

Requirements/Evaluation: Participation, weekly readings, online homework, one-page written responses or audio-recorded responses every two weeks, presentation of a visual document, final project.

Prerequisites: Exceptional performance in RLFR 105, strong performance in RLFR 106, or by Placement Test, or Permission of the Instructor.

Enrollment Limit: 12

Enrollment Preferences: If overenrolled, preference given to French Majors & French Certificate Students, and those with compelling justification for admission (statement of interest required).

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: This course qualifies for a DPE requirement because it addresses the early history of French colonization. The 15th and 16th century travel narratives we will focus on will allow students to critically engage with the first interactions of French people with indigenous populations and inhabitants of the Americas, Africa and India, with the religious and commercial projects undertaken by France vis-à-vis these territories, and with the racial and power dynamics that structure these narratives.

RLFR 212 (S) Scandalous News: Media and Transgression in Pre-Revolutionary France

Today's twenty-four-hour news cycle bombards us with scandalous stories. On our smartphones, tablets, and screens, personal transgressions and their political consequences loom large. In this constant state of media immersion, scandal and its communication have come to define our time. Yet centuries ago in Pre-Revolutionary France, scandalous news played an even more crucial role, in a society centered on obedience to monarchy and monolithic institutions. In this course, we will consider how institutionalized codes of gender, social class, and religion shaped individual identity, how those who broke from these codes created individual autonomy, and how the scandals they caused were communicated to others. To pursue these questions, we will analyze literature, journalism, and legal texts that document scandalous figures and compare these early modern scandals with those of the twenty-first century.

Requirements/Evaluation: active class participation, written reflections, quizzes, mid-semester presentation, and final paper

Prerequisites: strong performance in RLFR 105; RLFR 106; another RLFR 200-level course; placement exam; or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French Majors and certificate students

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

RLFR 214 (S) Everything New is Old Again: Legacies of Medieval France

In the twelfth century, the French language shifted from a mostly ephemeral spoken language to a language that deserved to be written down. Authors began recording stories that had only been told aloud, and readers of Latin begin translating classical literature for French-speaking audiences. This huge burst of creative expression remade popular culture in ways that we can still recognize today--if we know what to look for. In this course, we will explore how our twenty-first-century passion for memes on TikTok and other social media has similar roots in twelfth-century tastes, and how the literature and culture of medieval France have shaped what we now think of as literature and pop culture. We will explore four major themes: the reinvention and adaptation of classical literature, the invention of modern romantic love, the introduction of King Arthur, and hilarious short fiction (also known as twelfth-century memes). Readings to include love poetry, short narratives both funny and serious, and longer texts about adventure and love. *Conducted in French.*

Requirements/Evaluation: active class participation, midterm paper, class presentation, and final project

Prerequisites: strong performance in RLFR 105; successful performance in RLFR 106; or by French placement exam; or by permission of instructor

Enrollment Limit: 16

Enrollment Preferences: French majors and certificate students; and those with compelling justification for admission

RLFR 215 (F) The French Adventure: Word, Sound, and Image in the Digital Age

The French Adventure examines celebrated French literary texts (from the Middle Ages to Modernity) that draw on the theme of adventure, putting them into dialogue with their graphic novel and filmic adaptations (from the twentieth and twenty-first centuries). This course seeks to explore the phenomena of word (written or spoken), image (still or moving), and sound, as well as their interactions in today's environment of multimedia and digital immersion. Why have we seen an explosion of graphic novels and films depicting French literary classics in recent decades? How can these visual and audiovisual renderings enhance our appreciation for and understanding of written texts, and what aspects of the written word remain untranslatable to the world of the image? To address these questions, we will study a series of literary texts that depict historical moments from the late Middle Ages, to Absolute Monarchy, to the Belle Époque. From our visual vantage point of the twenty-first century, we will gain familiarity with the defining figures and events that these texts represent, from the fifteenth to the twentieth centuries. At the same time, we will interrogate the French-language graphic novel adaptations of each text, as well as portions of American-made filmic representations to consider questions of *patrimoine*, visual culture, and (trans)national identity. *Conducted in French.*

Requirements/Evaluation: active class participation, reading journal (with written reflections), quizzes, discussion leading, and final paper

Prerequisites: successful performance in RLFR 105, RLFR 106, or another RLFR 200-level course; or by placement test; or permission of the instructor

Enrollment Limit: 20

Enrollment Preferences: all are welcome, but if over-enrolled, preference will be given to French majors and certificate students; and those with compelling justification for admission

RLFR 220 (S) Fairy Tales: Love and Politics at the Sun King's Court

This course explores the literary and historical development of love and politics in 17th-century France. These two motifs dominated courtly life at

Versailles during the reign of Louis XIV, the Sun King. Since cultural and artistic creations tend to dialogue with social circumstances, the literature of this time period--which critics have sometimes called the "Grand Siècle"---develops different schools of thought on the interactions between politics and love. Some authors approached these interactions from an idealistic or innocent perspective, while others had a more pessimistic or realistic outlook. Together, we will examine why and how each trajectory formed while also investigating the roles of literary genre and authorial gender. As part of our explorations, students will compose their own, original fairy tales and will also adapt a written tale into an in-class theatrical performance. *Conducted in French.*

Requirements/Evaluation: active class participation, quizzes, a midterm paper, an original fairy tale, an in-class performance of the fairy tale in groups

Prerequisites: successful performance in RLFR 105, RLFR 106, or another RLFR 200-level course; or by placement test; or permission of the instructor

Enrollment Limit: 20

Enrollment Preferences: all are welcome, but if over-enrolled, preference will be given to French majors and certificate students; and those with compelling justification for admission

RLFR 224 (S) Sexuality and Seduction in Nineteenth and Twentieth-Century France (DPE)

Cross-listings: RLFR 224 WGSS 224

Primary Cross-listing

In 1857, both Flaubert's *Madame Bovary* and Baudelaire's *Les Fleurs du mal* were put on trial for sexual indecency and "crimes against public morality." In 1868, *Le Figaro* attacked Zola's novel *Thérèse Raquin* as "putrid literature" for its depiction of adultery, murder, and scandalous sexuality in nineteenth-century Paris. A century later, Gide, Proust, Colette, and Duras continued to shock French readers with their extraordinary novels on male and female homosexuality, intergenerational lovers, and biracial relationships. In this course, we will examine a broad range of issues on sexuality and seduction in nineteenth- and twentieth-century French literature, including eroticism and desire, love and betrayal, marriage and adultery, prostitution and fetishism, gay and lesbian identities, cross-dressing and gender representation, exoticism and colonial (s)exploitation. Readings to include novels, shorts stories, and poems by Chateaubriand, Constant, Duras, Balzac, Flaubert, Baudelaire, Zola, Maupassant, Barbey d'Aureville, Gide, Proust, Colette, Duras, and Guibert.

Requirements/Evaluation: active class participation, two shorter papers, a midterm, and a longer final paper

Prerequisites: exceptional performance in RLFR 105, successful performance in RLFR 106 or 107, or by French placement exam, or by permission of instructor

Enrollment Limit: 18

Enrollment Preferences: French majors and certificate students, Women's, Gender, and Sexuality Studies majors, and those with compelling justification for admission; if the course is overenrolled, students will submit an online form

Expected Class Size: 18

Grading: yes pass/fail option, no fifth course option

RLFR 225 (F) Remembering the Great War: The First World War in Literature and Film (DPE)

Cross-listings: RLFR 225 COMP 224

Secondary Cross-listing

From 1914 to 1918, the First World War ravaged Europe and slaughtered millions of soldiers and civilians from across the globe. Known as the "war to end (all) war(s)," World War I set the stage for an entire century of military conflict and carnage. New technologies led to unprecedented violence in the trenches, killing and wounding as many as 41 million soldiers and civilians. Beyond the slaughter at the front, the Great War also led to the global influenza pandemic that claimed up to 50 million lives, and the Armenian genocide that presaged the later atrocities of the Holocaust. The war also led to massive political transformation, from the Irish Rebellion and Russian Revolution, to the collapse of the German, Russian, Austro-Hungarian, and Ottoman Empires, and the redrawing of national borders across Europe and the Middle East. Even the end of the war with Treaty of Versailles lay the groundwork for new animosities that would lead to the Second World War just two decades later. However, the First World War also inspired great social change, from the emergence of the United States as a global leader and the founding of the League of Nations, to growing discontent with colonial rule in Asia and Africa, and greater power for women whose wartime labor influenced the post-war passage of their right to vote in countries across Europe and North America. To honor the centenary of the Great War in 2018, we will examine texts and films that bear witness to the suffering and courage of soldiers and civilians, and consider the legacy of the war in the twentieth- and twenty-first centuries. Readings to include memoirs and novels by Barbusse, Barker, Brittain, Cocteau, Graves, Hemingway, Jünger, Remarque, Wharton, Woolf; poetry by Apollinaire, Brooke, Mackintosh, McCrae, Owen, Sassoon; films by Attenborough, Boyd, Carion, Chaplin, Jeunet, Ozon, Renoir, Trumbo, Walsh, Weir; and archival materials on the roles of Williams students and faculty during the First World War. *Readings and Discussions in English.*

Requirements/Evaluation: active class participation, two shorter papers (4-5 pages), a midterm, and a longer final paper (6-8 pages)

Prerequisites: none

Enrollment Limit: 18

Enrollment Preferences: all are welcome, but if the course is overenrolled, preference will be given to Comparative Literature majors and French majors and certificate students; if the course is over-enrolled, students will submit a form online

Expected Class Size: 18

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLFR 225 (D1) COMP 224 (D1)

Difference, Power, and Equity Notes: As the course description explains, this course centers on a critical examination of difference, power, and equity during WWI. The content examines the effects of class, race, ethnicity, gender, and sexuality on social inequalities among soldiers & civilians, nations & colonies, men & women. The course also employs critical tools to teach students how to articulate and interrogate the social injustices of the Great War, from reading & discussion, to analytical essays & archival investigation.

Not offered current academic year

RLFR 226 (S) Black France/France Noire (DPE)

Cross-listings: AFR 226 RLFR 226

Primary Cross-listing

On the eve of the new millennium, the year 1998 saw the emergence in France of "Black studies à la française" (Ndiaye). Inspired, in part, by the 150th anniversary of the 1848 abolition of slavery, the French black minority "made itself more visible" (Faes and Smith). This course examines a wide range of discursive practices through which athletes, artists, authors, politicians, activists, and scholars amplified their voices in the French hexagone. It retraces the rise of these discourses and how they assert, reframe, and establish blackness as a legitimate field of knowledge and a space of affirmation and contestation. Following a study of the interwar period (1918-1939), when the work of "negritude women" (Sharpley-Whiting) such as "afro-latinité" spurred the negritude movement, we will discuss publications, documentaries, and seminal moments of protest in the early twenty-first century. Course material may include works by Suzanne Césaire, Jane and Paulette Nardal, Aimé Césaire, Frantz Fanon, Achille Mbembé, Françoise Vergès, Pascal Blanchard, Nicolas Bancel and Sandrine Lemaire, Pap Ndiaye, Gaston Kelman, Rokhaya Diallo, Alice Diop, Léonora Miano, and Fabienne and Véronique Kanor. *Conducted in French.*

Requirements/Evaluation: response papers, midterm paper, TV show, colloquium

Prerequisites: RLFR 201, 202, or 203, or by permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French and Africana Studies concentrators

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AFR 226 (D2) RLFR 226 (D1)

Difference, Power, and Equity Notes: This course satisfies the DPE requirement because it focuses on "the shaping of social differences, dynamics of unequal power, and processes of change" through the lenses of historical colonial legacies, race, gender, citizenship among other questions.

Not offered current academic year

RLFR 228 (S) Introduction to French and Francophone Film

Cross-listings: RLFR 228 COMP 298

Primary Cross-listing

In this course, we watch and examine seminal French and Francophone films. Starting with early French cinema and silent movies of the end of the nineteenth century, we continue with landmark films from the 1920s, '30s and '40s. World War II serves as a point of rupture to explore how the advent of Francophone film parallels postcolonial theory. Throughout the semester, we discuss film as spectacle, the emergence of narrative forms, innovative technical practice and their connection to aesthetics. We also look at the role of film in addressing larger questions that include acts of rebellion, decolonization, the radical rejection of societal values, colonialism, dislocation, alienation, French collaboration during the German occupation, and the intersection of history and biography, as well as migration, in between-ness, and transnationalism. Films from the Lumière brothers, Méliès, Guy-Blaché, Vigo, Truffaut, Sembene, Mambety, Malle, Varda, Palcy, Peck, and Sissako. Conducted in French.

Requirements/Evaluation: response papers, midterm paper, TV show, colloquium

Prerequisites: RLFR 201, 202, or 203, or by permission of instructor

Enrollment Limit: 15

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

RLFR 229 Black Outside the U.S.

This course explores multiple ways Black identity evolves, adapts and is experienced differently depending on location. Students analyze Black experience in the U.S., France and Senegal through a range of texts from books and social media to music and film. One key aspect of the course is a study abroad trip to Senegal, which increases cultural awareness through experiential learning. This combination of textual learning with experiential knowledge exemplifies how language, religion, gender, geography, and performance shape one's racial identity. In the first section of the course, students investigate Black experience in the U.S., focusing on such topics as the one-drop rule, racial profiling and where mixed people fit within Black/White tensions. The second section highlights the politics of language in France. Students explore how words like "Black," "noir" and "race" have strong political connotations in France and spur both resistance to and alliance with Black American civil rights history. In the third part of the course, students visit Dakar, Senegal, and analyze Blackness through their own observations and encounters. Their trip insights jumpstart the final focus of the course on Senegal. Students investigate the influence of French colonialism on Black identity in Senegal, which makes the two geographical experiences of Blackness very different but still forever linked.

Class Format: seminar, the course includes a required spring break trip to Dakar, Senegal, which is no additional cost to students

Requirements/Evaluation: evaluation will be based on class participation, short weekly reading responses, two 4-5 page papers, a presentation based on the spring break trip, and a final presentation including a short 2-page report

Prerequisites: none

Enrollment Limit: 8

Enrollment Preferences: students who have taken other AFR courses, Francophone speakers and students

Expected Class Size: 8

RLFR 238 (S) *Le Moyen Âge en images: Decoding the Middle Ages*

This seminar investigates questions of visual culture and textual analysis in the Middle Ages. Although different from today's multimedia and digital environment, the Middle Ages boasted its own form of visual culture that will enable us to draw meaningful connections between medieval literature and history and modern-day debates on gender and sexuality. To explore these connections, we will study literary texts from the 12th-16th centuries in modern French translation, making comparisons to *bandes dessinées* that seek to visualize each text from a twenty-first-century perspective. We will investigate the points of overlap and divergence between the original texts and accompanying comics to ask why and how today's artists are returning to the literature and culture of the Middle Ages, especially in a time of globalization and technological immersion. For example: How might our findings inform our outlook on international politics, as well as gender-based forms of activism, such as the #MeToo movement, among other forms of social and political engagement? *Conducted in French*

Class Format: Remote. This will be a remote course available to all students, whether they are on campus or completing coursework 100% remotely. We will convene synchronously via web-conferencing multiple times per week, with an emphasis on discussion in small groups. There will be many opportunities for all course members to interact via a series of varied online activities both during and in-between our synchronous sessions.

Requirements/Evaluation: active class participation, essays, online homework assignments, mid-semester presentation: une bande dessinée, and final paper

Prerequisites: successful performance in RLFR 106 or another RLFR 200-level course; or by placement test; or permission of the instructor

Enrollment Limit: 12

Enrollment Preferences: all are welcome, but if over-enrolled, preference will be given to French majors and certificate students; and those with compelling justification for admission

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

RLFR 260 (F) *Francophone Graphic Novels* (DPE)

Cross-listings: RLFR 260 COMP 260

Primary Cross-listing

In this class we will read contemporary graphic novels and *bandes dessinées* from Côte d'Ivoire, Morocco, Guadeloupe, Lebanon, France, and Québec to analyze how they approach subjects such as colonial history, migration and discrimination, gender and sexuality, and representations of disability and the racialized body. We will pay particular attention to the visual form and the critical theory of the graphic novel to further understand why this hybrid genre has become so popular and widespread, and how it is shaping conversations about difference and power in the Francophone world. *Conducted in French.*

Requirements/Evaluation: weekly 1-page response papers, two short 4-5-page papers, presentation and final 7-8-page research paper

Prerequisites: RLFR 105, 106, by placement or by permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French majors and certificate students, Comparative Literature majors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLFR 260 (D1) COMP 260 (D1)

Difference, Power, and Equity Notes: The readings in this course focus on French colonial and Francophone postcolonial history, contemporary migration, and structures of discrimination built on race, religion, gender, and ableism in the French-speaking world. We will explore how graphic novels in their hybrid visual/verbal forms propose different ways of shaping the dynamics and the discourse of difference and power.

Fall 2021

SEM Section: 01 TR 11:20 am - 12:35 pm Katarzyna M. Pieprzak

RLFR 300 (S) The *Banlieue* in Literature, Music, and Film (DPE) (WS)

Cross-listings: RLFR 300 AFR 339 COMP 336

Primary Cross-listing

The *banlieue* looms large in the French collective imagination. From its origins in medieval law, the term *banlieue* at the end of the 20th century has taken on multiple, at times overlapping, but almost exclusively negative meanings. It designates a peripheral geographical space often in contrast to its city center, social exclusion, "urban culture"--as in Hip Hop-produced within that space, and last but not least the symbolic bias through which its inhabitants are viewed (Vieillard-Baron). In this course, we will examine various constructions of the *banlieue* in French music, a manifesto, film, blogs, and literature to focus on the analytical, contestatory and affirmative dimensions of these narratives. Two decades after the film *La haine*, and ten years after the riots, how are filmmakers, artists, authors, and scholars of the *banlieue* reimagining and reframing the *banlieue*? What do current depictions of *banlieues* in the French media tell us about the State, French politics, and the state of French politics? What do "*banlieue* films" and "*banlieue* lit" tell us about the *banlieue*? In this course, conducted in French, we will read, watch, and listen to various constructions of the *banlieue* in French music, film, and literature to focus on the contestatory and affirmative dimensions of these narratives.

Requirements/Evaluation: 3 thesis five-page research papers, 2 start-of-the-class brief presentations, active participation to in-class discussions and mini-conference on the *banlieue* (class final project).

Prerequisites: RLFR 105 and above

Enrollment Limit: 14

Enrollment Preferences: French majors and certificate students, Africana and Comparative literature students

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

RLFR 300 (D1) AFR 339 (D2) COMP 336 (D1)

Writing Skills Notes: To hone their research and writing skills (and prepare for their conference on the *banlieue*), students will write three research papers (with thesis statement and subheadings) from which they will receive professor feedback.

Difference, Power, and Equity Notes: This course, *Banlieue in Lit, Music, Film* fosters difficult but carefully framed conversations about race, class, gender, citizenship, housing segregation, discursive practices, immigration and belonging in contemporary France and how identities and power relationships are expressed in *banlieue* film, literature and French hip hop music.

RLFR 302 (S) Monsters of the Renaissance

Where did monsters appear before comics and blockbusters? Before cinematic ghosts, vampires, and zombies, the French Renaissance popularized the Scythian Lamb, the Monk Fish, the Monopod, the Wind-Eaters from the Island of Ruach, and the mythic giants Gargantua and Pantagruel. The Latin word *monstrum* referred to a prodigy that did not fit the laws of nature. Thus, the monster not only generated wonder, curiosity, and fear, but both challenged and disrupted normative social values. In this course, students will analyze novels, travel narratives, medical treatises, essays, and epic

poems from 16th-century France, when writers, doctors, and travelers developed a critical reflection on monstrosity in order to deal with otherness. This encompassed fantastic creatures, non-human beings, and natural phenomena, as well as people whose gender, race, religion, and bodies deviated from established norms. In this course, students will think critically about race, gender, and disability, and study the complexities of fear, disgust, wonder, and fascination. Readings to include classical texts by Homer and Ovid, medieval texts like the Legend of Saint George and the Dragon, and Renaissance texts by Francois Rabelais, Jean de Léry, Marguerite de Navarre, Ambroise Paré, Michel de Montaigne, and Agrippa d'Aubigné.

Requirements/Evaluation: active participation, weekly written responses, midterm exam and final project

Prerequisites: exceptional performance in RLFR 106, or an RLFR 200-level course, or by Placement Test, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French majors and French certificate students, and those with compelling justification for admission

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Distributions: (D1)

Not offered current academic year

RLFR 305 (F) Where We Are & Where We Go: Spaces & Places of Contemporary France

How do people in France give meaning to the spaces they inhabit or move through? What does it mean to be from "here" or "there"? Through contemporary French literature and cultural analysis, we will explore these questions in the urban landscapes of major French cities, including Lyon, Marseilles, Nantes, and Angoulême. We will focus on literary representations of the home, the street, the park, the grocery store, and the train, and discuss the ways videos, press articles, photographs, and websites depict neighborhoods, festivals, and street theater. We will also examine a variety of theories that will help us conceptualize urban space and interpret these literary and cultural texts on city life in contemporary France. Readings to include texts by Annie Ernaux, Patrick Modiano, Leïla Sebbar, Didier van Cauwelaert, Yasmina Reza, Jean Rolin, Marie Darrieussecq, and Xavier Houssin. *Conducted in French.*

Requirements/Evaluation: class participation, several short essays (1-2 pages), midterm essay (5 pages), digital mapping project, and final oral presentation (based on midterm)

Prerequisites: strong performance in RLFR 106 or 107; a RLFR 200-level course; another RLFR 300-level course; or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French majors & certificate students; those with compelling justification for admission; seniors returning from study abroad (Francophone countries) particularly welcome

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Distributions: (D1)

Not offered current academic year

RLFR 309 (F) Contemporary Short Stories from North Africa

Cross-listings: AFR 307 RLFR 309

Primary Cross-listing

Short stories are the vibrant center of the literary landscape in North Africa today. Written in French, Arabic and sometimes Amazigh languages, short stories provide timely interventions in political and social discourse. In this course, we will read short stories that use humor and satire to address the effects of globalization on local communities, that experiment with language to portray war and revolution, and that seek to create a new space for the discussion of gender. We will also analyze films, sociological texts and Moroccan, Algerian and Tunisian online newspapers in order to explore contemporary transformations of life in North Africa. Readings by Maïssa Bey, Abdelfattah Kilito, Zeina Tabi, Mohamed Zafzaf, Ahmed Bouzfour, Soumaya Zahy and Fouad Laroui among others. *Conducted in French.*

Class Format: discussion

Requirements/Evaluation: active class participation, weekly response papers, two short papers, an oral presentation and a final paper

Prerequisites: RLFR 201, 202 or 203 or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French majors and those with compelling justification for admission

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:

Attributes: GBST African Studies Electives

Not offered current academic year

RLFR 313 (S) Tropical Ecologies: Francophone Caribbean Literature and the Environment (DPE)

Cross-listings: AFR 313 RLFR 313 ENVI 311

Primary Cross-listing

The lushness of the mangroves, the flora and fauna of tropical landscapes, the intricacy of the rhizome, the flow of great rivers, the crashing waves of the Atlantic, the heights of mountainous lands, and expanse of the plateau--the natural world is an important site of Caribbean art in general and, more specifically, the francophone Caribbean novel of the 20th and 21st centuries. Applying eco-criticism to the field of francophone Caribbean literature, the goal of this class is to examine the ways that fiction explores the relationship between human activity and the environment. How does the novel inhabit Caribbean ecologies and topographies? How does it represent nature? In what ways do Caribbean texts meditate on nature and culture together or against one another? As the earthquake in Haiti demonstrated in 2010 with calamitous force, and the cycles of Caribbean hurricanes have shown over the years, natural disaster is also a political crisis. In view of this, we will also consider the legacies of slavery and colonialism in terms of class, gender and race politics. This investigation of the dynamics of natural and cultural phenomena will also have a theoretical frame rooted in critical texts of Caribbean of literary and political movements such as *Indigenisme*, *Négritude*, and *Créolité*. Conducted in French.

Class Format: This will be a remote course available to all students, whether they are on campus or completing coursework 100% remotely. We will convene synchronously via Zoom multiple times per week, with an emphasis on discussion and small group work. Students are also required to attend a monthly colloquium featuring renowned Caribbean scholars and participate in online activities both during and in-between our synchronous sessions.

Requirements/Evaluation: Students will be required to submit four 2-page position papers that incorporate critical readings with analysis of the books being read in their entirety; each student will also be responsible for making a twenty-five minute oral presentation on a critical/theoretical area related to class readings and discussion; the semester will conclude with a 6-8 page research paper to include footnotes and a bibliography. Attendance is mandatory and active, and informed class participation is required of all students. In addition, students are asked to come up with discussion questions three times throughout the semester.

Prerequisites: Successful performance in RLFR 105 or 106; or a previous RLFR 200-level or 300-level course; or by placement test; or permission of the instructor.

Enrollment Limit: 12

Enrollment Preferences: All are welcome, but if over-enrolled, preference will be given to French majors and certificate students; and those with compelling justification for admission.

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AFR 313 (D1) RLFR 313 (D1) ENVI 311 (D1)

Difference, Power, and Equity Notes: As the course description show, this course critically examines difference, power, and equity in the Francophone Caribbean. The content focuses on race and ethnicity, slavery and colonialism, ecology and environmental disaster, and their effects on Caribbean histories, peoples, and cultures. The course teaches students how to critically investigate racial, cultural, and environmental in/justice(s), through texts, films, discussion, debate, and writing.

Not offered current academic year

RLFR 315 (F) Nature in Crisis: The Classification Craze and The Rise of Museums

Cross-listings: RLFR 315 ENVI 314

Primary Cross-listing

This course examines how understandings of nature evolved dramatically (and at times unsettlingly) from the 17th through the early 20th centuries and how this instability prompted a desire to classify and control natural phenomena. To analyze these issues, we will likewise consider the rise of modern museums, as well as the accompanying acts of classification and curation. We will consider how literary and philosophical texts from the aforementioned time periods depict nature, how real-world interactions with nature led to the creation of (illustrated) taxonomies, how colonization inflected notions of the natural world and also museum exhibits, and finally, how the cabinet of curiosities and later, the museum, provided a space in which to display and analyze nature's more unusual treasures. As part of our explorations, we will build a virtual exhibit of our own to reflect our understanding of nature today and our engagement with concepts of nature from previous eras. Conducted in French. Counts as an Envi Humanities Elective for the Envi Concentration.

Class Format: Remote. This will be a remote course available to all students, whether they are on campus or completing coursework 100% remotely. We will convene synchronously via web-conferencing multiple times per week, with an emphasis on discussion in small groups. There will be many opportunities for all course members to interact via a series of varied online activities both during and in-between our synchronous sessions.

Requirements/Evaluation: participation, online homework, essays, mid-semester presentation, final class project (virtual exhibit)

Prerequisites: exceptional performance in RLFR 106, or an RLFR 200-level course; or by placement test; or permission of the instructor

Enrollment Limit: 12

Enrollment Preferences: All are welcome, but if over-enrolled, preference will be given to French majors and certificate students; and those with compelling justification for admission.

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

RLFR 316 (S) Paris on Fire: Incendiary Voices from the City of Light (1830-2015)

Cross-listings: WGSS 315 RLFR 316

Primary Cross-listing

During the 1830s, Balzac described Paris as a "surprising assemblage of movements, machines, and ideas, a city of one hundred thousand novels, the head of the world," but also characterized the French capital as a "land of contrasts," a "monstrous wonder," a "moral sewer." Similarly, writers from Hugo to Zola have simultaneously celebrated Parisian elegance and condemned the appalling misery of Paris's urban poor. Since 1889, Paris has been fêted as the "City of Light" for its Enlightenment legacy, its Eiffel Tower modernity, and its luminous urban energy, captured in countless paintings, photographs, and film. However, Paris is also the historical site of revolution, resistance, and riots. From revolutionary revolt (1830, 1848, 1871), to wartime resistance (1870, 1914-18, 1940-44), to reformist and race riots (1968 and 2005), Paris has repetitively sparked with incendiary passion and political protest. As fires raged during the riots in 2005, many heard the echo of Hitler's ominous 1944 question, "Is Paris burning?" and asked: why was Paris burning again at the dawn of the twenty-first century? And following the recent terrorist attacks in Paris in 2015, many wonder what lies ahead for the City of Light. To answer these questions, we will examine the social, political, and literary landscape of Paris during the nineteenth and twentieth centuries, from urbanization and modernization, to occupation and liberation, to immigration and globalization. Readings to include poetry, short stories, and novels by Hugo, Balzac, Baudelaire, Maupassant, Verne, Zola, Apollinaire, Colette, Duras, Perec, Rochefort, and Charef. Films to include works by Clair, Truffaut, Godard, Minnelli, Clément, Lelouch, Luhrmann, Kassovitz, Besson, and Jeunet. *Conducted in French.*

Requirements/Evaluation: active class participation, midterm exam, and two to three papers

Prerequisites: strong performance in RLFR 106 or 107; a RLFR 200-level course; another RLFR 300-level course; or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French majors and certificate students; Women's, Gender, and Sexuality Studies majors; and those with compelling justification for admission

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

RLFR 360 (S) Repairing a Broken World: Intro to North African Contemporary Art (DPE)

Cross-listings: ARTH 460 COMP 361 ARAB 360 RLFR 360 ARTH 560

Primary Cross-listing

How do artists respond to a world in crisis? How does visual art engage violent histories, injured bodies, social injustice and ecological disaster? In this course we will explore the political and ethical concept of repair as it emerges in the work of contemporary North African visual artists. Repair is both a material and symbolic transformational practice of putting together something that is torn or broken. It is never complete, nor does it redeem a history of harm or violence. Rather repair is an invitation: a bringing of people, histories, objects, buildings, feelings and geographies into relation with one another in order to link worlds that have been splintered and separated. It is also a call to imagine other futures. North African contemporary artists have deeply engaged in this type of repair work, attending to colonial history, economies of extraction and environmental damage, race and slavery, housing inequity, gender identity and broken transmission of memory. We will dive into the work of individual artists as well as collectives while reading theoretical texts about broken-world thinking, reparative epistemology, alternative archives, and material reparations.

Class Format: Conducted in English. All students have the option of reading selected texts in either French or English. Students taking the course for RLFR credit will read selected texts in French, participate in occasional French discussion sessions, and write the mid-term paper in French. Grad Art Students will occasionally meet as a group with the instructor and will write a longer final paper.

Requirements/Evaluation: For undergrads: Active participation, weekly glow posts, 5-page mid-term paper, 12-page final paper and presentation. For grad students: Active participation, weekly glow posts, 5-page mid-term paper, and 20-page final paper and presentation.

Prerequisites: For RLFR students, any RLFR 200-level course or above, or by permission of instructor.

Enrollment Limit: 18

Enrollment Preferences: If over-enrolled, preference will be given to RLFR, ARAB, ARTH and COMP majors, and only 4 spots will be offered to Grad Art students.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

ARTH 460 (D1) COMP 361 (D1) ARAB 360 (D1) RLFR 360 (D1) ARTH 560 (D1)

Difference, Power, and Equity Notes: This course critically examines art work that engages colonial history, economies of extraction and environmental damage, race and slavery, housing inequity, gender identity.

Spring 2022

SEM Section: 01 Cancelled

RLFR 410 (F) Senior Seminar: Movement and Migration (DPE)

How do movement and migration produce and disrupt constructions of identity, home, and the nation? In the context of movement and migration, how is place imagined, experienced and remembered? What are the relationships between movement and containment, flight and freedom? Over the course of the semester, we will examine literary texts, film and visual art from French-speaking communities that focus on: the immigration experience in France, the construction of a Francophone Atlantic identity, internal migration between rural and urban spaces, clandestine migration between Africa and Europe, population displacement due to war, and the possibility of creating portable or nomadic places of memory. Works by Chamoiseau, Glissant, Diome, Condé, Maffre, Pineau, and Binebine among others. *Conducted in French.*

Requirements/Evaluation: Weekly 1-page response papers, 5-page mid-term paper and a final 10-page research paper and presentation.

Prerequisites: Any 200-level RLFR course, or by permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Senior French majors and students completing the certificate in French, but open to advanced students of French.

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: Students will explore how literature, film and art narratives on migration and movement challenge (and also sometimes replicate) discourses of exclusion and structures of discrimination based on race and ethnic identity and gender. While the course focuses on French-speaking communities and people, we will think broadly about difference and power as they relate to movement, flight and freedom.

Fall 2021

SEM Section: 01 TF 1:10 pm - 2:25 pm Katarzyna M. Pieprzak

RLFR 412 (F) Senior Seminar: Nineteenth-Century French Novel: Desperate Housewives and Extreme Makeovers

Cross-listings: WGSS 408 RLFR 412

Primary Cross-listing

In 1834, Balzac wrote that "Paris is a veritable ocean. Sound it: you will never know its depth." The same can be said of the French nineteenth-century novel and its boundless ability to echo the past and illuminate the present. From the Romanticism of Stendhal and Hugo, and the Realism of Balzac and Flaubert, to the Naturalism of Zola and Maupassant, the novel became a forum for examining illicit sexuality, institutional misogyny, social injustice, criminal passions, revolutionary struggles, and Parisian pleasures in nineteenth-century France. Characters such as the imprisoned housewife Emma Bovary, the reluctant revolutionary Jean Valjean, the social-climbing lover Julien Sorel, the ambitious undergraduate Rastignac, and the domestically-abused Gervaise became synonymous with France's turbulent social and political landscape from the 1830s to the 1880s. And as recent film adaptations make clear, these desperate housewives and extreme makeovers continue to haunt our twenty-first century present. Reinterpreted by such actors as Gérard Depardieu, Isabelle Huppert, Uma Thurman, Claire Danes, and Jennifer Aniston, the nineteenth-century novel continues to sound out the scandalous and sensational depths of our own century. Readings to include novels by Balzac, Stendhal, Hugo, Flaubert, Maupassant, Zola. Films to include adaptations by Clément, Berri, August, Arteta, Lelouch, Chabrol. Conducted in French.

Requirements/Evaluation: active class participation, midterm exam, and two to three papers

Prerequisites: a 200-level or 300-level RLFR literature course at Williams; advanced coursework during study abroad; or by permission of the instructor

Enrollment Limit: 16

Enrollment Preferences: French majors and certificate students; Women's, Gender, and Sexuality Studies majors; Comparative Literature majors; and those with compelling justification for admission

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 408 (D2) RLFR 412 (D1)

Not offered current academic year

RLFR 414 (S) Senior Seminar: Coming of Age: French and Francophone Childhood and Adolescent Film (DPE)

Cross-listings: RLFR 414 COMP 414

Primary Cross-listing

Like the bildungsroman in literature, the coming of age story is a genre in itself in cinema. In this senior seminar, we will watch, discuss, and analyze French and Francophone childhood and adolescent narrative films whose protagonists bring into focus larger issues such as racial discrimination, class, gender, sexual identity, social mobility, repression from the state, regime change, delinquency, justice, bereavement, and human trafficking. We will watch seminal films by Euzhan Palcy, the Dardennes brothers, Céline Sciamma, Férid Boughédir, François Truffaut, Michel Ocelot, Claude Pinoteau, Abdellatif Kéchiche, Laurent Cantet, and Raoul Peck.

Requirements/Evaluation: three, three-page response papers; thesis statement, methodology, and works cited list on one page; one script of a video essay

Prerequisites: 200-level RLFR courses

Enrollment Limit: 19

Enrollment Preferences: French and Comparative Literature majors and certificate students

Expected Class Size: 10

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLFR 414 (D1) COMP 414 (D1)

Difference, Power, and Equity Notes: This course qualifies for a Difference, Power, and Equity requirement because the films we focus on racial inequality, class, gender, sexual identity, post slavery society in the Caribbean, lack of social mobility, repression from the state, regime change, delinquency, justice, bereavement, and human trafficking.

Not offered current academic year

RLFR 416 (S) Liberté, Égalité, Fraternité? Questioning Inclusion in French Literature and Culture (DPE)

"Liberté, Égalité, Fraternité" is the national motto of France and of the Republic of Haïti. It finds its origin in the French Revolution but was institutionalized as the official symbol of the Republic in 1880. In this course, we will study literary texts and historical documents to explore these three terms, their cultural and philosophical meaning, their institutional definitions and their application in French society. Who gets to be free throughout French history? If equality is a Republican principle, what about equity? Could fraternity be replaced by a more inclusive term referring to more than one gender? Readings will include texts of multiple genres from the 16th to the 21st century addressing class, race and gender (Michel de Montaigne, Marie de Gournay, Voltaire, Montesquieu, Victor Hugo, Aimé Césaire, Léonora Miano, Paul B. Preciado), one short film, as well as other historical documents such as the "Code Noir," the "Déclaration des droits de la Femme et de la Citoyenne," the "Décret d'Abolition de l'Esclavage" and the "Constitution" of the Fifth Republic.

Class Format: Remote. This will be a remote course available to all students, whether they are on campus or completing coursework 100% remotely. We will convene synchronously via web-conferencing multiple times per week, with an emphasis on discussion in small groups. There will be many opportunities for all course members to interact via a series of varied online activities both during and in-between our synchronous sessions.

Requirements/Evaluation: Active participation, weekly readings, weekly posts on GLOW, weekly audio recordings, one presentation of a visual document (narrated PowerPoint), multiple steps towards final project: recording a podcast in French [this project, as well as the rest of the course, will take into account accessibility needs and can be modified accordingly].

Prerequisites: Any 200-level or 300-level RLFR literature course at Williams; advanced coursework during study abroad; or by permission of the instructor

Enrollment Limit: 14

Enrollment Preferences: French majors and certificate students in their senior year; if overenrolled: statement of interest required.

Expected Class Size: 14

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: This course addresses the discrepancy between the values promoted by the national French motto and their actual application in French society throughout history. Students will investigate how inclusion within the French nation varies according to race, class, gender, sexuality and ability. They will explore the history of French Republican concepts of inclusion such as universalism and "laïcité" as well as their divisive and excluding potential.

RLFR 511 (F) Intensive French Grammar and Translation

This course is designed to offer students a thorough and systematic review of sentence structures and grammar to develop a reading knowledge of French. Through this intensive study, students will learn to decipher the subtleties of the written language, and as they become more confident they will start translating a variety of short excerpts. Students are also expected to learn and develop a wide lexical range centered on art history and criticism, but not limited to it.

Class Format: classes meet twice weekly and are conducted in English

Requirements/Evaluation: class participation, papers, a midterm, and a final examination

Prerequisites: a strong interest and need to learn French

Enrollment Preferences: although this course is to serve the needs of students enrolled in the Graduate Program in the History of Art, undergraduates may enroll by permission of the instructor

Grading: pass/fail option only

Distributions: (D1)

Not offered current academic year

RLFR 512 (S) Readings in French Art History and Criticism

This course is designed to provide Graduate Program students and interested others with knowledge of French acquired through translation and interpretation. The core of this course is based on the reading and translating of a variety of critical works covering different periods and genres in the field of art history. The material read will be analyzed in form and content, translated or summarized, in order to develop the skills and understand the techniques necessary for reading French accurately. Grammar will be reviewed in context.

Requirements/Evaluation: evaluation is based on class participation, papers, a midterm, and a final examination

Prerequisites: RLFR 511 or permission of instructor; undergraduates are welcome with permission of instructor

Grading: pass/fail option only

Distributions: (D1)

Not offered current academic year

Winter Study -----

RLFR 13 (W) Creative Portraiture in the Darkroom

Cross-listings: RLFR 13 ARTS 13

Primary Cross-listing

In this course, we will revisit the boundaries between self-portraiture and portraiture. Working in pairs, students will both practice being a model and a photographer: they will pose as a model for their classmates and assist a classmate in creating a self-portrait. In addition, using as a point of departure Hippolyte Bayard's photograph Self-Portrait as a Drowned Man, one of the first self-portraits in the history of photography, students will learn how to use the view camera (the large format camera used during the invention of photography in 1839 and still in use today). We will also study the characteristics of film photography, specifically, light, chemicals, sensitive media, and negative and use them as tools to make creative portraits in the darkroom. By the end of the course, students will have learned to shoot with a 4 x 5 view camera and have practiced with manipulations in the darkroom in order to create unique portraits. Each student will exhibit their work as a triptych in an exhibition. Be aware that this class requires an average of 10 weekly lab or studio hours outside of regular classes.

Requirements/Evaluation: short paper and final project or presentation

Prerequisites: knowledge of black and white analog photography is preferred, but not required

Enrollment Limit: 10

Enrollment Preferences: Art majors then random

Grading: pass/fail only

Unit Notes: Documentary photographer Daniel Goudrouffe, who describes himself as a photographer-author, creates compelling visual narratives about the complexity of life in the Caribbean and its diaspora. His archive of the contemporary Caribbean equally enables a public reckoning with the impact of slavery and colonialism in the region. In 2017, his images were showcased at Les Photaumnales in Beauvais, France and at the Biennale Internationale des Rencontres Photographiques de Guyane.

Materials/Lab Fee: \$120

This course is cross-listed and the prefixes carry the following divisional credit:

ROMANCE LANGUAGES (Div I)

ITALIAN

Chair: Professor Brian Martin

Visiting Assistant Professor: M. Monserrati

The study of Italian in the target language encourages students to gain a deep appreciation of the language, culture and literature through active participation and meaningful experience with the culture on its own terms. Italian courses at Williams are therefore conducted exclusively in Italian in order to enhance and reinforce the emotive and cognitive involvement of the students as they are introduced to the Italian world-view in a lively and natural manner. Students desirous of more contact with Italian are encouraged to attend the weekly Italian Table in the designated college dining hall. More information can be found at cflc.williams.edu/italian.

RLIT 101 (F) Elementary Italian

This course is designed for beginners. Its goal is to give students the opportunity to develop a basic oral/aural and reading/writing proficiency in Italian. During the semester, you will be given training in grammar, pronunciation, aural-oral skills, reading, and writing in Italian by studying a wide range of communication patterns and real-life situations. At the end of the semester, you will be able to use Italian to talk about yourself, describe your family, town, friends, and discuss your interests. You will also be able to talk in Italian about the present and past events and converse with your peers about your daily activities. Your listening skills will allow you to understand short dialogues and conversations, watch clips from mainstream Italian films, and write short compositions. *Conducted entirely in Italian.* The course is taught in person.

Class Format: five hours a week with the professor

Requirements/Evaluation: participation, homework, compositions, quizzes, an oral exam, oral presentation, midterm and final exams

Prerequisites: none; not open to those who have had one year or more of high school Italian

Enrollment Limit: 20

Enrollment Preferences: instructor will prioritize on the basis of study abroad plans and year at Williams

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Unit Notes: students registered for RLIT 101-102 are required to attend and pass the sustaining program during Winter Study; credit granted only if both semesters (RLIT 101 and 102) are taken

Distributions: (D1)

Fall 2021

SEM Section: 01 M-F 10:00 am - 10:50 am Michele Monserrati

RLIT 102 (S) Elementary Italian

This course is designed for beginners who already have some basic knowledge of Italian. Its goal is to give students the opportunity to review and expand their oral/aural and reading/writing proficiency in Italian. During the semester, you will continue to learn grammar, vocabulary, pronunciation while improving your aural-oral skills, reading, and writing in Italian. The instructor will present you with a wide range of communication patterns and real-life situations to achieve these goals. At the end of the semester, you will be able to use Italian to talk about yourself, your life, describe your town and history, dreams and interests, and express your opinion on complex topics. You will also be able to talk in Italian about the present, past, and future events and express doubts and hopes. You will understand more complex conversations and clips from mainstream Italian films and write more extended compositions. *Conducted entirely in Italian.*

Class Format: This will be an hybrid course. Students will meet four times a week with me and once a week with the TA in small groups of 2-3 students.

Requirements/Evaluation: participation, homework, compositions, quizzes, an oral exam, oral presentation, midterm and final exams

Prerequisites: RLIT 101; not open to those who have had one year or more of high school Italian

Enrollment Limit: 20

Enrollment Preferences: instructor will prioritize on the basis of study abroad plans and year at Williams

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Unit Notes: students registered for RLIT 101-102 are required to attend and pass the sustaining program during the winter study period; credit granted only if both semesters (RLIT 101 and 102) are taken

Distributions: (D1)

RLIT 105 (F) Pathway to Proficiency

The course taught in Italian aims primarily to fine-tune the student's speaking, reading, and writing ability while introducing the formal study of Italian culture and society by analyzing short literary texts, articles, films, and plays. This course will also explore Italy's lesser-known cultural and natural sites in an attempt to highlight what Italy has to offer in terms of eco-friendly and sustainable tourism and cultural diversity. In the wake of *Black Lives Matter's* quest for social justice, a part of this course will be dedicated to Italian black writers and artists to explore how the Italian colonial past affects Italy's racial discourse and the construction of its national identity. Students will review and expand the previous semesters' grammar structures to achieve a higher level of fluency and sophistication in language production. Italian 105 is intended for study-abroad returnees and other advanced speakers; students who have been particularly successful in Italian 101-102 are also encouraged to enroll. The course is taught in person.

Requirements/Evaluation: oral presentations, midterm and final exams, tests, compositions, participation

Prerequisites: RLIT 101/102 or by permission of the instructor

Enrollment Limit: 15

Enrollment Preferences: Students from 101/102 classes, as well as study-abroad returnees.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

THE MAJOR IN SPANISH

Students who major in Spanish can expect to acquire linguistic fluency along with in-depth knowledge of the cultures of Spain and Latin America. Through the study of the major writers and historical events of the Spanish-speaking world, our program offers training in literary analysis and linguistic expression, as well as a deep appreciation of Hispanic civilizations.

The major consists of nine courses above the 102 level. In exceptional circumstances, the Department may decide to accept RLSP 101-102 for the Spanish major. One of the nine courses must be the 400-level senior seminar taken during the student's final year at the College; another must be a course that substantially focuses on literature or cultural texts produced before 1800. Students entering at the 200-level may, with the permission of the Department, choose as part of their major program one course not conducted in Spanish but offered by faculty in Romance Languages or another Department or Program, such as Latino/a Studies, Comparative Literature, History, etc., provided that the subject matter relate to and broaden their study of Spanish. Students entering at a very advanced level may, in some cases and with the permission of the Department, include two such courses in their major program. Working with a member of the Spanish faculty, the student will formulate a curricular plan that will ensure balance and coherence in courses taken prior to declaring a major in Spanish. This is especially imperative for students who are planning to spend a part or all of their junior year in Latin America or Spain.

THE DEGREE WITH HONORS IN SPANISH

Students majoring in Spanish may apply to be admitted to the Honors Program in Spanish upon demonstrating the following: (1) fluency of spoken and written language; (2) potential for successful independent research, as demonstrated by strong performance in advanced-level coursework; (3) interest and motivation; and (4) overall quality and feasibility of the proposal. Two routes are available to those who wish to apply for the degree with honors.

The first of these involves the writing of a senior thesis.

By May 15th of their junior year, candidates will have found a thesis advisor, and given the Department a three- to five-page proposal and a preliminary bibliography. (In some cases, and upon consultation with the Department, candidates will have the option to choose a second reader in addition to their primary advisor; for example, when the thesis is interdisciplinary enough in nature that it requires the expertise of an additional reader).

This proposal will be discussed by the Department; by June 1st, the candidate will be informed whether they can proceed with the thesis, and if so, what changes need to be made to the focus and scope of the project. The summer before the senior year will be spent compiling a more detailed bibliography and reading.

Upon their return to Williams, candidates will devote to their theses two semesters of independent study (beyond the nine courses required for the major) and the winter study period of their senior year (493-W31-494). The thesis will be written in Spanish and will usually not be shorter than fifty pages. By the end of the Fall semester, students will normally have a clear outline of the project, have done substantial research, and produced the draft of at least the first half of the project. During January this draft will be suitably rewritten and edited with a view to a final version, while the candidates will also begin work on remaining chapters.

Candidates will submit what they have written to the department on the last day of Winter Study.

On the Tuesday of the first week of the spring semester candidates will make a presentation of the project at a departmental colloquium in Spanish. The thesis will be promptly discussed and evaluated to determine whether or not the student should continue in the honors program. The second semester of independent thesis work will be spent writing more chapters, as well as revising, rewriting, and polishing the project where necessary. The completed thesis in its final form will be due on April 25th. At the end of the Spring term, the student will present and defend the final project before members of the Department and others by invitation. The grade will be awarded once members of the Department have consulted after the defense.

The second route is a group of three clearly related courses (offered by the Department of Romance Languages or by other departments, such as History, Art, Philosophy, English, etc.), only one of which may be counted in the nine courses comprising the major. One of the courses will be an Independent Study (plus senior year WSP 30) in the spring of the senior year, at the end of which the student will write an essay that synthesizes the

content of the three related courses. Students may apply for this route by November 2 of the senior year.

In the case of both routes to the degree with honors, the department's recommendation for graduation with honors will be based on the originality and thoroughness of the finished project.

THE CERTIFICATE IN SPANISH

The Certificate in Spanish Language and Culture consists of a sequence of seven courses for which the student must earn a cumulative grade average of B or higher. Those so interested should express their intent to the chair of the department by March 1 or earlier.

For students with no prior Spanish background, the course sequence will consist of Spanish 101-102, Spanish 103 and 104, and three courses in Spanish above the 104 level, with at least one of these courses at the 200-level or higher taken at Williams. If the student starts out the sequence at Spanish 103, in addition to the three courses in Spanish beyond the 104 level (including a 200-level course or higher), two electives may be taken in other departments. One elective should be in Spanish or Latin-American cultural history (art, literature, drama, music) and the other in Spanish or Latin-American intellectual, political, or social history. Spanish 200, 201, or 208 can be counted for the elective requirement.

Electives may be considered from a variety of departments and programs. However, students should consult with the chair of Romance Languages before making any enrollment decisions.

PLACEMENT

Students come to study Spanish at Williams with a wide range of backgrounds and prior experiences. Some will have studied Spanish for many years in high school and earlier. Others will have grown up speaking Spanish with family and friends but had little opportunity to study the language at school. Others have lived in Spanish-speaking countries or otherwise studied in immersive contexts. And for others, Spanish is a brand-new language that they are eager to begin learning.

Whatever your previous experience with Spanish, *¡Bienvenida! ¡Bienvenido!* We are glad to have you with us. In order to figure out the most appropriate point of entry, we ask that all students who wish to begin their study of Spanish in the new academic year take the department's placement exam when it is offered during First Days. The only students who don't need to take the placement exam are those who qualify as "true beginners," those with no previous experience of Spanish and for whom 101-102 is obviously the right choice. Everyone else should take the placement test. After you do, the Registrar's Office will notify you of the level and/or course the Spanish faculty have recommended for you. You should free to reach out to the department chair, your recommended instructor, or any other faculty member if you have questions or concerns about your placement.

STUDY ABROAD

Spanish majors, as well as non-majors interested in further exposure to the language and the culture, are strongly encouraged to study in Spain or Latin America for either a semester or a full year. We recommend that you start planning for study abroad as early as possible, and that you speak to our faculty early on to go over the many possible destinations and programs available to you. In recent years, Williams students have studied in such varied and far-flung locations as Buenos Aires, Havana, Lima, Barcelona, and Madrid. Those who are interested in Madrid may wish to consider the Hamilton College program, with which we maintain consortial ties. Credit for up to four courses can be granted at the discretion of the Department for study overseas. Those four courses count towards the certificate or the major in Spanish. Students interested in study abroad should consult with a member of the department at their earliest convenience.

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, provisional approval can be granted (students should be sure to contact the department for details).

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, and complete syllabus, including readings/assignments. If it is a program we are familiar with, the course title and description are enough. If it is a new program/new type of course we need all the available materials (syllabus, assignments, etc.).

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

Yes. Four maximum.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. They have to be courses that focus on language, culture, history, or politics of the target language/culture.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. Our Senior Seminars are required for the major.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study

away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

No.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

This hardly ever happens but could happen if a student doesn't seek out pre-approval from a faculty member.

RLSP 101 (F) Elementary Spanish

This course focuses on grammar, elementary composition, practice in conversation, and reading of easy modern prose. It is taught by the intensive oral method.

Requirements/Evaluation: participation, regular homework exercises, quizzes, a midterm, and a final exam.

Prerequisites: This course is for students who have no previous background in Spanish.

Enrollment Limit: 15

Enrollment Preferences: None. However students with two or more years of High School Spanish are normally not eligible.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Materials/Lab Fee: Textbook.

Distributions: (D1)

Fall 2021

SEM Section: 01 M-F 10:00 am - 10:50 am Aroline Hanson

RLSP 102 (S) Elementary Spanish

This course focuses on grammar, elementary composition, practice in conversation, and reading of easy modern texts. It is taught by the intensive oral method.

Class Format: The class meets five hours a week; students will complete workbook and lab exercises weekly.

Requirements/Evaluation: Daily preparation and participation, regular homework assignments, and frequent tests

Prerequisites: RLSP 101; this course is for students who have studied less than two years of Spanish in secondary school

Enrollment Limit: 14

Enrollment Preferences: Students who have completed RLSP 101 in the Fall of 2021.

Expected Class Size: 14

Grading: no pass/fail option, no fifth course option

Unit Notes: Students in RLSP 101-102 are normally required to attend and pass the sustaining program during the winter study period only if both semesters (RLSP 101 and 102) are taken. In 2021-22 WS activities are highly encouraged and announced via GLOW.

RLSP 103 (F) Intensive Intermediate Spanish

RLSP 103 (F) Intensive Intermediate Spanish. This course is a continuation of Spanish 101-102. It is designed to help students improve their proficiency in each of the major skill-groups (listening, speaking, reading and writing) while providing an introduction to the cultures of the Spanish-speaking world. Classroom activities and homework are designed to increase vocabulary and improve your ability to handle daily life in a Spanish-speaking country, to express your views on complex subjects such as art and politics, and to increase your knowledge of the cultural traditions of Latin America and Spain. Film screenings and readings in Hispanic literature, culture and politics will provide material for in-class

discussion and some writing assignments. This course provides the linguistic and cultural training that is necessary to engage the diverse Spanish-speaking communities of Latin America, Spain and the US; it will help to prepare students for further literary and cultural studies as well as provide skills that are increasingly essential in fields such as medicine, law, and education. **Conducted in Spanish.**

Class Format: Class meets four hours a week: three times with the professor (either in the morning or at noon) and one time in the afternoon with the TA.

Requirements/Evaluation: Regular attendance and active in-class participation, workbook exercises and weekly compositions, quizzes, midterm and final exams.

Prerequisites: RLSP 101-102 or by Spanish placement exam

Enrollment Limit: 20

Enrollment Preferences: If the course is over-subscribed, priority will be given to first-year students and others with a demonstrable commitment to study of Spanish.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D1)

CON Section: 04 TBA Carolina Melgarejo-Torres

RLSP 104 (S) Intensive Intermediate Spanish, Upper Level

This course is a continuation of Spanish 103. During the spring semester we resume our work to expand your proficiency in each of the major skill-groups (listening, speaking, reading and writing) while increasing familiarity with the vibrant cultures of the Spanish-speaking world. Students in both sections of RLSP 104 can once again expect to sample a variety of written and audiovisual media -- poems and short fiction, essays, journalism, blogs and film -- to deepen their understanding of Hispanic cultures. However, Section 1 will have a more distinct focus on cinema: we will watch a series of classic and contemporary films and develop the specialized vocabulary and skills needed to analyze them in class discussions and student writing. Regardless of which section you are in, students in Spanish 104 can expect to write regularly and to meet with their professor, teaching associate and classmates in varying combinations for four hours each week. This course is designed to prepare students for further literary and cultural studies in Spanish -- including the challenges of study abroad -- and to hone communication skills that are increasingly essential in professional fields such as medicine, law, and education. *Pasajes Lengua* and its accompanying *Cuaderno de Práctica* will once again serve as our primary texts. Conducted in Spanish. For students who have not taken Spanish 103 at Williams, the departmental placement exam is required for enrollment in 104.

Class Format: Students will spend 4 hours per week in class in engagement with their Professor, Teaching Associate (TA), and classmates. In addition to the regular MWF classes with their Professor, students will meet for one additional hour per week with the TA. As will be explained in the course syllabus and at the first class meeting, this additional hour with the TA will take place at a time (to be decided during the first weeks of class) that is mutually beneficial for the TA and students.

Requirements/Evaluation: Weekly 1- to 2-page compositions, daily homework and class participation, oral reports, unit exams and a final exam.

Prerequisites: RLSP 103 or by Spanish placement exam

Enrollment Limit: 20

Enrollment Preferences: If the course is over-subscribed, priority will be given to first-year students and others with a demonstrable commitment to study of Spanish.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

RLSP 105 (F) Advanced Grammar, Composition, Conversation

In this course students will refine their knowledge of Spanish grammar and vocabulary towards further fluency in speaking and writing. The focus of the class is grammar through active engagement with relevant cultural, literary, and political materials centered for the most part on Spain. Students will produce regular grammar and composition exercises as well as oral reports.

Class Format: students must participate in TA sessions once a week.

Requirements/Evaluation: regular grammar and composition assignments, a mid-term, a final exam, occasional quizzes, oral reports; active participation and regular attendance required.

Prerequisites: RLSP 104, or results of the Williams College Placement Test, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: first-year students, potential majors

RLSP 107 (F) Advanced Grammar and Conversation

How is Spanish language relevant to my academic field? What linguistic and cultural resources should I acquire to effectively communicate my academic interests in this language? How do I prepare for a professional presentation in Spanish? What are the limitations of the academic language at the moment of interacting with people in the community? The Advanced Grammar course 107 will provide cultural and linguistic resources to address the questions above and other common concerns that students have around their proficiency and skills to communicate effectively. This course focuses on helping students to advance their cultural and communicative skills in Spanish, as they share their professional interests with other students. The class will discuss four general topics -medicine, history and human rights, art, and environmental issues-, which will create the context for students to conduct oral presentations and activities around their own academic fields. Another important emphasis of the course will be to connect students' professional interests to current issues of social justice in USA, Latino America and other world countries. To expand their cultural and linguistic knowledge, participants will prepare two different types of oral activities for the class: formal-academic presentations and non-formal activities that use colloquial registers. The RLSP 107 course will require a constant and committed collaboration between participants.

Class Format: Students should expect to meet with the professor three times per week during the scheduled class hours. One hour of practice with the TA will be added at agreed-upon times once the enrollment is fully established.

Requirements/Evaluation: Regular grammar and composition assignments, a mid-term exam and a final project; intense reading, active participation and regular attendance required.

Prerequisites: RLSP 104, placement exam results, permission of instructor or Department Chair

Enrollment Limit: 20

Enrollment Preferences: Spanish majors and certificate students, current and potential.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

RLSP 200 (S) Advanced Grammar and Composition through Literature

This course is designed for advanced students who wish to further polish and refine their grammatical, lexical, and writing skills in Spanish. The course may be taken immediately after 105, by placement exam results, or even after students have begun to sample the Department's literature and culture offerings at the 200- and 300-level. Classic works of short fiction by celebrated Latin American authors such as Gabriel García Márquez and Julio Cortázar will be discussed; selected Latin American films will be viewed as well. For written and oral assignments: weekly essays, in-class presentations, and language-laboratory activities. *Conducted in Spanish.*

Class Format: In-person. Discussion.

Requirements/Evaluation: a weekly essay based on the stories read in class, written lab exercises, participation in the grammatical and literary discussions, quizzes, a mid-term and a final

Prerequisites: RLSP 105, any course 201+, placement exam or permission of instructor

Enrollment Limit: 12

RLSP 201 (F)(S) The Spanish Labyrinth

How can you learn to separate the stereotypical images of Spain from reality? How can we talk about one "Spain", when the country a complex composite of ancient and diverse cultural remnants mixed with recent influxes of immigrants and separatist movements? How has the vulnerable peninsula survived centuries of violent upheavals and divisiveness; dramatic economic rises and collapses? How has the Covid-19 pandemic affected Spain's health system, demographics, and international economy? This course aims to offer students a strong foundation in Spanish issues, whether they have already spent time abroad, or hope to do so in the future. In this course we will approach Spain by studying examples of its literary and artistic production, from periods of brilliant cultural exchange, and times of censorship, repression, and crisis. Some topics of focus will be the Inquisition, the Civil War, contemporary Spain's obsession with its own recent past, and its uncertain future as it begins to recover from the effects of Covid. Secondary texts will also be provided for historical and socio-political background and reference. *Conducted in Spanish.*

Requirements/Evaluation: Conducted entirely in Spanish, Active regular participation in class discussions. Each student will give one presentation and, on a separate occasion, also be a discussion leader. Two short writing assignments (2-3 pp) and one final essay (10-12 pp). Remote office hours will be scheduled with individual students at different points in the semester to help each one with questions, approaches to homework and class participation, and to go provide additional feedback and practice for writing and oral expression.

Prerequisites: RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Spanish majors and certificate candidates

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

RLSP 202 (S) Introduction to the Analysis of Literature in Spanish (WS)

This course is intended for students who are considering a major in Spanish, including those who have recently completed RLSP 105, 107, or 200.

Using a textbook, *Aproximaciones al estudio de la literatura hispánica*, we will study the fundamentals of genre analysis while reading selected works of prose, poetry, and drama from Latin America and Spain. In addition to studying the principles and techniques of literary analysis, this course will continue to develop your speaking, oral, writing, and reading comprehension skills. *Conducted in Spanish.*

Class Format: Students are expected to be active participants at all scheduled class meetings, which will be used for discussion and collaborative analysis of literary texts.

Requirements/Evaluation: Assignments will include four essays (from 4 to 6 pages each); a number of short writing assignments; a mid-term and a final exam; and consistent preparation and class participation.

Prerequisites: RLSP 105, 107, 200, 209, or placement exam results indicating readiness for a 200-level course

Enrollment Limit: 20

Enrollment Preferences: first- and second-year students who are considering the major in Spanish

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (WS)

Writing Skills Notes: Each student will write four essays on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

Spring 2022

SEM Section: 01 MWF 12:00 pm - 12:50 pm Carlos Macías Prieto

RLSP 203 (F) From Modernismo to El Boom de la Novela

A survey of some of the leading imaginative writers of Ibero America. Readings will begin with the modernista poets and go on to include fiction of Mexico by Rulfo, a wide sampling of verse by Pablo Neruda, and narratives of the "Boom" period by authors such as Borges, Cortázar, Lispector, and García Márquez. *Conducted in Spanish.*

Class Format: In-person.

Requirements/Evaluation: Response journals, three 6- to 8-page papers, a mid-term and final exam, and class participation.

Prerequisites: RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: Seniors, juniors, and then sophomores

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

RLSP 204 (S) Hispanic/Bilingual Communities in USA: language and identity

"Hispanic/Bilingual Communities in USA: language and identity" is a course for Heritage Learners with two different profiles: those who have acquired Spanish at home and those who have been learning the language at school. Students' own sense of affective connection with the language through their families will guide our reflection on Spanish as a social component that unifies multiple Hispanic communities in the USA. We will also discuss the dialectal, sociolectal and generational differences between the members of those speaking communities, and the implications of considering these groups as homogenous. The course will address the role that media, institutions and cultural products play in preserving and (re)defining Spanish in the USA. We will review the language and its variation through TV programs, music, magazines, and literature. Heritage Learners already have an important foundation of linguistic knowledge that prepares them for interaction in Spanish. In this course they will be asked to further extend their resources through constant grammar and vocabulary practice. The course requires writing reports and larger texts, and the reading of an important amount of specialized texts in Spanish. Many of the daily activities will require teamwork. The course will meet 2 times per week: M, W, 1 hour 15

minutes per session. Students who have taken Spanish 209 can also register for this course.

Requirements/Evaluation: Evaluation will be based on class participation, daily assignments, essays, projects and one parcial exam.

Prerequisites: None

Enrollment Limit: 12

Enrollment Preferences: sophomores, juniors, majors, or concentrators.

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D1)

Not offered current academic year

RLSP 205 (F) The Latin-American Novel in Translation (DPE)

Cross-listings: RLSP 205 COMP 205

Primary Cross-listing

A course specifically designed to enable students who have no knowledge of Spanish to read and discover those Latin-American authors who, in the twentieth century, have attracted world-wide attention. Among the texts to be discussed: Borges, Labyrinths; Cortázar, Blow-up and Hopscotch; Lispector, the Hour of the Star lesser works by Fuentes and Puig; and by Nobel Prize-winner Gabriel García Márquez, One Hundred Years of Solitude. Conducted in English

Requirements/Evaluation: class participation, two brief papers, a midterm, and a final exam

Prerequisites: none

Enrollment Limit: 22

Enrollment Preferences: Spanish majors, Latina/o Studies concentrators

Expected Class Size: 22

Grading: yes pass/fail option, yes fifth course option

Unit Notes: does not carry credit for the Spanish major or the certificate

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLSP 205 (D1) COMP 205 (D1)

Difference, Power, and Equity Notes: This course offers students an opportunity to read some major works of fiction that have challenged the *¿canon¿* of European and American literature. Through the readings, class members will understand that great literature comes not only from London or Paris, from the U.S. or Russia. Several of these novels, moreover, directly challenge European and Western cultural hegemony and make an implicit claim for the legitimacy of Latin American cultural concerns.

Attributes: GBST Latin American Studies Electives

Not offered current academic year

RLSP 206 (S) Latin-American Civilizations

An introduction to the multiple elements constituting Latin-American culture. Class assignments include readings from selected Latin-American essayists and screenings of classic films. Particular focus on the conflict between local and foreign cultural traditions. Areas to be considered: Spanish Catholicism, the influence of European liberalism and U.S. expansion, the Indian and African contribution, and the cultural impact of social revolution in Mexico and Cuba. *Conducted in Spanish.*

Class Format: In-person

Requirements/Evaluation: two essays on assigned topics, response journals, one oral presentation, active discussion of the ideas and the facts presented in class, a midterm, and a final

Prerequisites: RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: Juniors, sophomores, first-years.

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

SEM Section: 01 MWF 12:00 pm - 12:50 pm Carlos Macías Prieto

RLSP 211 (S) A Survey of Spanish Literature from the 11th to the 17th Centuries

This course will introduce the student to some of the major works of Spanish literature from its beginnings through the Golden Age. We will study the historical context in which the works were written as well as the literary history of the periods in question. Students will learn methods of textual analysis through readings of relevant literary criticism. Readings will include selected canonical prose, poetry, and drama of the periods; special emphasis will be given to the myth of the coexistence of three religions in Iberia and the often misguided idea of dividing this literature into the categories of 'medieval' and 'Renaissance'. *Conducted in Spanish.* This course fulfills the pre-1800 requirement for the Spanish major

Requirements/Evaluation: evaluation will be based on class participation, short paper assignments, and a final paper

Prerequisites: RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

RLSP 214 (S) "Ecologismo": Literature, Culture and the Environment in Latin America (DPE)

Cross-listings: RLSP 214 ENVI 218

Primary Cross-listing

How have Latin American authors and artists responded to environmental concerns, from the logging and rubber booms that threatened the Amazon in the early 20th century to contemporary global warming? How do the realities of Latin American societies--including massive disparities of wealth and poverty; the cultural and political impacts of the region's indigenous populations; and the complex histories of colonialism, dependency and neoliberalism--inform Latin American responses to environmental issues? How does Latin America's environmental imaginary differ from those of the U.S. and Europe? In this course we will explore these issues and more through literature and other cultural texts from Latin America. We will consider short stories and novellas by authors including Horacio Quiroga (Uruguay), Luis Sepúlveda (Chile), Mempo Giardinelli (Argentina), and Ana Cristina Rossi (Costa Rica); poetry by Esthela Calderón (Nicaragua), Juan Carlos Galeano (Colombia), Homero Aridjis (Mexico); the paintings of Tomás Sánchez (Cuba); and feature films as well as shorter documentaries. In Spanish.

Requirements/Evaluation: brief response papers, as well as three 5- to 7-page essays based on close-readings of literary and cultural texts

Prerequisites: RLSP 105, placement exam results, or permission of the instructor

Enrollment Limit: 19

Enrollment Preferences: Spanish and Environmental Studies majors

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLSP 214 (D1) ENVI 218 (D1)

Difference, Power, and Equity Notes: This course is inspired by and organized around Arturo Escobar's notion of "the political ecology of difference:" our work throughout the semester aims to understand the myriad ways in which "difference"--economic, ecological, and cultural--informs Latin American responses to environmental degradation.

Attributes: ENVI Humanities, Arts + Social Science Electives

Not offered current academic year

RLSP 216 (S) Latin American Environmental Literature and Cultural Production (DPE)

Cross-listings: RLSP 216 ENVI 233

Primary Cross-listing

This foundational course explores a wide array of ecocultural texts from Latin America, ranging from accounts of Europeans' first arrival to the crisis of mass extinction and anthropogenic climate change today. In between we consider an eclectic mix of styles and genres, including poetry, essays, prose fiction and speeches produced by a varied group of cultural agents. We read classic texts by canonical figures (José Martí's "Our América," the *Popol vuh*), which take on new meaning in the current context, as well as some little-known gems of ecological consciousness. Readings and discussion trace connections between environmental thought and the region's long and multi-layered history of colonialism, and students are encouraged to develop their own positions by responding to some of the leading theoretical discourses that animate the field of Latin American ecocriticism: decolonial and creole ecologies, ecofeminism, transcultural materialism, and postdevelopment. Conducted in English.

Class Format: This class will be fully remote. Students are expected to be active participants at all scheduled class meetings; there may be some additional asynchronous activities.

Requirements/Evaluation: Students will write and revise three formal essays over the course of the semester. There will also be shorter written assignments and intermittent discussion-leading.

Prerequisites: None.

Enrollment Limit: 15

Enrollment Preferences: Preference given to students majoring in Spanish or Environmental Studies.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLSP 216 (D1) ENVI 233 (D1)

Difference, Power, and Equity Notes: This course meets the goals of the DPE requirement in that it focalizes the current environmental crisis through the long history of political, economic and cultural struggles in Latin America. We examine the genealogies of environmental culture, tracing the emergence of ecofeminism, for example, through generations of writers. We also examine the phenomenon of creolization and its relationship to the environmental cultures of Latin America's originary peoples.

Attributes: ENVI Humanities, Arts + Social Science Electives EVST Culture/Humanities

RLSP 220 (S) Women on the Verge

Cross-listings: RLSP 220 WGSS 222

Primary Cross-listing

From the early twentieth century to the present day, the radical changes in the lives of Spanish women have clearly reflected the tug of war between progress and tradition in recent Spanish history. The dramatic upheavals in Spanish politics have marked and transformed the lives of women to such a great extent that one can often gauge the political and social climate of any given historical moment by considering how the role of women was defined by the law, the Catholic church, education, and other social and political institutions. Using literary and historical texts as well as films and graphic materials, this course will look at the transformations in the public and private lives of Spanish women during the following periods: the turn of the century, the Second Republic, the Spanish Civil War, the Franco years, and the transition to democracy.

Prerequisites: RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Spanish and Comparative Literature majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

RLSP 228 (S) Velázquez, Goya, and Picasso

Cross-listings: ARTH 228 RLSP 228

Primary Cross-listing

This course will provide an introduction to three major Spanish painters--Velázquez, Goya, and Picasso--who lived and worked, respectively, in the 17th, 18th, 19th and 20th centuries. Though these painters are world famous, they are rarely studied comparatively, and in the context of their Spanish artistic roots. The syllabus will cover the historical and social contexts in which they started working, and how they followed, and departed from, artistic conventions of the time. Through specific paintings, we will consider the historical evolution of the artists' relationship to their patrons and subjects, from the elite status of Velázquez within the royal court, to Goya's dramatic rise with the reigns of Charles III, and Charles IV, and his subsequent exile to France. Picasso was free of royal patronage and also lived in France, yet despite this freedom he remained deeply connected to the themes and concerns of his Spanish artistic predecessors. In addition to key paintings including Velázquez's "Las Meninas" and other royal portraits, Goya's "Maja Desnuda" and his series "The Disasters of War," Picasso's "Guernica," and his own 20th century reinterpretation of "Las Meninas," we will focus on the artists' shared subjects of portraits and war, and consider the following issues: How does the role of the Spanish artist change over the periods covered? How did the artist exercise his freedom whilst under the scrutiny of the court and the Catholic Church? How were these painters' lives and work shaped by key historical events such as the Inquisition, Napoleon's invasion of Spain, or the Spanish Civil War? How does the work of art evolve in its role from private royal commission to public display in museums open to all? We will read short literary pieces from each period, primary materials such as letters and other documents, and historical and critical works. All readings will be in English. Knowledge of Spanish is encouraged, but not required.

Requirements/Evaluation: 3- to 5-page weekly assignment

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: first-year students and sophomores

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

RLSP 230 (F) Mexican Literature and Cultural Production (DPE) (WS)

This course will offer a survey of the rich and varied cultural production of Mexico, from the pre-Hispanic past to the present. Students will explore a variety of literary genres (pre-Hispanic poetry, creation stories and songs; chronicles of conquest; short works of prose fiction and novels; and modern poetry and essays) as well as other kinds of cultural production within a framework of historical contextualization and formal analysis. The course meets twice per week and it is taught remotely. *Conducted in Spanish.*

Requirements/Evaluation: Each student will write three 4- to 5-page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version. Excellent preparation, active and engaged participation in class discussions.

Prerequisites: RLSP 105, placement exam results, permission of instructor.

Enrollment Limit: 19

Enrollment Preferences: Spanish majors and certificate students, current and potential; LATS concentrators

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE) (WS)

Writing Skills Notes: Each student will write three 4- to 5-page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

Difference, Power, and Equity Notes: This course will introduce students to the rich and varied cultural production of Mexico across time and space. It will highlight the often marginalized and neglected intellectual histories of indigenous peoples and other minoritized sectors of Mexican society. As such, students will acquire critical tools to examine and understand the rich and varied cultural production of Mexico.

RLSP 251 (F) Somos Sur: US-Mexico-Central American Borderlines (WS)

What are borderlands? How have they been created? How do they affect the life of those who cross or are being crossed by these borders? This course focuses on the cultural production that explores US-Mexico-Central American borderlands and the diverse policies and practices that (re)create and (re)image these borders. In consideration of some of the dictatorships in Central America, the NAFTA agreement and post 9/11 policies, as well as war zones and the drug war; we will explore the concepts of citizenship, migration, nationalism, and (in)visibility in its intersection with gender, racial positioning, and social class. Drawing upon cultural studies, feminist theory, history, and ethnography we will examine materials such as photography, installation art, journalism, literature, film, and music. This interdisciplinary approach aims to shed light on the causes and consequences of the political, cultural, and economic narratives involved in our current understanding of these fronteras. This class is conducted in Spanish; readings will be in both English and Spanish.

Requirements/Evaluation: essays, oral presentation, participation

Prerequisites: RLSP 105, placement exam results, permission of the instructor or the Department Chair

Enrollment Limit: 19

Enrollment Preferences: Spanish majors

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (WS)

Writing Skills Notes: Weekly short (less than 1000 words) papers, alternatively letter-graded and graded P/F; at least three letter-graded papers will be revisions of a P/F paper; and final 5 pages long paper, which is a revision and expansion of the last weekly paper.

Not offered current academic year

RLSP 259 Violent States, Violent Subjects: Nation-Building and War in 19th Century Latin America (DPE) (WS)

Although the massive, mechanized wars of the 20th century often overshadow earlier conflicts, the 19th century was also a period of widespread bloodshed in Latin America. First, of course, came the carnage of the Independence Wars, which was followed by decades of civil war (Mexico, Argentina, Peru, Uruguay, Colombia, Venezuela) and two bitter international wars--the Paraguayan War (1864-1870) and the Pacific War (1879-1883)--each of which would have a lasting impact on the countries involved. The restoration of peace brought economic development and new opportunities for dominant groups, but also the return of some of the most violent practices of the colonial period: indigenous peoples were conquered, their lands settled by whites or used for grazing cattle, and blacks (often despite the official abolition of slavery) met with new forms of exclusion, exploitation, and physical violence. In this tutorial we will explore the literary links between some of the violent conflicts listed above and the foundation of national identities in Latin America, reading texts that probe the social and ethical implications of State-sponsored violence. Issues to be explored include militarism and the development of nationalism; genocide and the national community; torture, truth and testimony; and the notion of 'civilization.' We will read one or two key precursors and a variety of 19th century texts that may include works by Juan Francisco Manzano, Esteban Echeverría, Ricardo Palma, Rosa Guerra, Dorotea Duprat de Lassere and Juan Crisóstomo Centurión, and Lucio V. Mansilla. In addition, we will read a few contemporary texts, written in the aftermath of the late-20th century dictatorships in the Southern Cone, that actively reflect on the long history of State-sponsored violence in Latin America (Ricardo Piglia, Diamela Eltit, Augusto Roa Bastos). Students will work in trios throughout the semester, each group meeting with the instructor once a week. Each week one of the students will present a 5-page paper on the assigned reading and one will be designated the official respondent, whose job is to lead a discussion of the paper. The third member of the group will turn in a revision of the previous week's paper. Prerequisites: one 200-level RLSP course or permission of instructor. Heritage learners, international students and second-language learners are all heartily welcome. Conducted in Spanish.

Class Format: Conducted in Spanish.

Requirements/Evaluation: Each student will write and revise a minimum of three five-page papers during the course of the semester. Students will be evaluated on the basis of their preparation for each tutorial meeting as evidenced by the quality and frequency of their engagement with the material, including their classmates' written work. Essays will be graded after they have been revised and submitted to the professor.

Prerequisites: Any 200-level Spanish course.

Enrollment Limit: 12

Enrollment Preferences: Priority given to Spanish majors.

Expected Class Size: 12

Grading:

Distributions: (D1) (DPE) (WS)

Writing Skills Notes: Students will practice writing throughout the semester, and will receive abundant feedback on their written work from their tutorial partners and the instructor. We are altering the tutorial format from the standard duos to trios of students, so that students will have ample opportunity to revise their written work.

Difference, Power, and Equity Notes: This course focuses on issues of diversity, power and privilege within the internal and regional constitution of Latin American countries. We will read with an awareness of some of the ways that differences of race, class, nationality and gender may be mobilized in times of conflict, and consider how the collective narratives that are constructed and imposed in the aftermath tend to deal with those conflicts.

Attributes: GBST Latin American Studies Electives

Not offered current academic year

RLSP 264 (S) Outcasts of the Lettered City: Nation-Building and the Margins in 19th Century Latin America (DPE) (WS)

Bandits, vagabonds, runaway slaves, and unruly women. Defeated soldiers. Afro-Colombian rivermen. Indigenous Americans and their white captives. Latin American cultural production of the 19th century is conventionally studied in terms of the urban intellectuals' projects of nation-formation in the

aftermath of the long struggle for independence from Spain. This course examines that process from the outside, considering instead a series of literary and other writings that represent the marginalized others of the desired nation-state, the women and men, many of them Afro-descended, Indigenous and mixed race, who found themselves excluded from the new national community--or who preferred a life on the pampas, deep in the jungle, or somewhere else outside the confines of bourgeois society. Primary readings will be selected from among the following: Simón Rodríguez, *American Societies in 1828*, Juan Francisco Manzano, *Autobiography of a Slave*; Domingo F. Sarmiento, *Facundo. Civilization and Barbarism in the Argentine Republic*; José Hernández, *Martín Fierro*; Flora Tristán, *Peregrinations of a Pariah*; Juan Crisóstomo Centurión, *Viaje nocturno*, Federico Gamboa, *Santa*; Candelario Obeso, *Popular Songs of My Land*; Cirilo Villaverde, *Cecilia Valdés*, Lucio V. Mansilla, *Excursion to the Ranquel Indians*. We will also read a number of critical essays by leading scholars in the field of 19th century Latin American literature.

Requirements/Evaluation: Students will write and revise approximately 20 double-spaced pages, in Spanish, over the course of the semester. Students will also prepare 10-15 minutes responses to their classmates' work. We will read 100-150 pages of Spanish prose each week and well as critical essays, which will often be in English.

Prerequisites: Any 200-level course with an RLSP prefix or permission of instructor.

Enrollment Limit: 12

Enrollment Preferences: Spanish majors and potential Spanish majors.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (DPE) (WS)

Writing Skills Notes: This course is conducted as a tutorial. The number of students in each unit (pairs or triplets) depends on how many students enroll, but whatever our structure turns out to be, each student can anticipate multiple opportunities to write and revise their individual essays in response to feedback from their classmate and professor, as well as to serve as the respondent offering feedback other students' work. Thus we emphasize editing and revision as essential parts of the writing process.

Difference, Power, and Equity Notes: This course examines structures of exclusion in 19th century Latin America -- the reproduction and perpetuation of socio-economic and institutional structures based on racial, gendered and class-based hierarchies established during the colonial era -- and the spaces that historical individuals have been able to occupy within and around them.

Spring 2022

RLSP 274 (S) Women's Contemporary Cultural Production in Latin America (DPE)

Cross-listings: RLSP 274 COMP 286 WGSS 275

Primary Cross-listing

In Latin America, women have been largely displaced as historical subjects and reduced, in many ways, to symbolic figures or icons whose trajectories have been depicted as essential to the construction of diverse social projects within the context of patriarchal nation-states. Each country has formed a specific idea of what a woman is, and can be, through its cultural production, and this constant erasure/objectification has led to a complex problematic when it comes to addressing women as cultural producers. Keeping this in mind, in this course we will explore the concept of "Woman" as a representation and women as cultural producers in contemporary Latin America. We will address intersections of race/ethnic positioning, sexual identity, and social class to explore their role in the reception and understanding of the work of these female artists. Through the analysis of varied cultural production, the syllabus will present an interdisciplinary approach to the contributions of female artists to the cultural representation of race/ethnicity, masculinity, femininity, violence, sexuality, gender identity, nationalism, citizenship, and social movements. We will explore the work of artists such as Sara Castrejón, Nahui Ollin, Citlali Fabián, Amparo Dávila, Alejandra Pizarnik, Rosario Castellanos, Reina Roffé, Ana Tijoux, Lucrecia Martel, Chavela Vargas, Graciela Iturbide, Celia Cruz, Lucía Puenzo, Cecilia Barriga, Cristina Rivera Garza, María Novaro, Cristina Peri Rossi, Maruch Sántiz Gómez, Leonora Carrington, and Maris Bustamante, among others. In addition, we will read theoretical texts on diverse subjects corresponding to each specific cultural product.

Requirements/Evaluation: essays (7-8 pages), weekly written reports, oral presentation, active and engaged class participation

Prerequisites: RLSP 105, placement exam results, permission of instructor or Department Chair

RLSP 280 (S) From Roma to Yalhalhj: Race and Identity Politics Through Contemporary Mexican Cultural Production (WS)

In 2017, the National Institute of Statistics in Mexico (INEGI) used for the first time a color palette to measure individuals' skin tone. The study showed that "Mexicans who were classified by the interviewers as having darker skin tones tend to have lower levels of education and are worse off economically than their lighter-skinned counterparts" (Zizumbo and Flores, 2017). Raising controversy among those who would like to think of Mexico as a post-racial nation and those who recognize social inequality and discrimination on the basis of skin tone, the debate resonates in the way Mexican citizenship and cultural identity are both represented in mainstream media, even with the intention of showing diversity. The prevalent whitewashing dominating mass media in Mexico extends from advertisements to films, promoting an image of wealth and education intrinsically related to not only skin tone but also with race/ethnic positionality and gender. This course will explore the representation of these variables and their intersections through the analysis of photography, films, novels, paintings, reality shows, telenovelas, advertising campaigns, and music videos. In addition, we will take into account questions of representation, agency, and visibility addressed by cultural producers from pueblos originarios who do not consider themselves Mexican citizens. This class will be conducted in Spanish.

Requirements/Evaluation: essays, oral presentation, participation

RLSP 303 (S) Cervantes' "Don Quijote"

A close study, in Spanish, of one of the most influential and early European novels. Don Quijote by Miguel de Cervantes (1547-1616 C.E) was a hit in its day in the seventeenth century, and has not ceased to influence artists and thinkers since. Moving between humorous and serious tones, Cervantes takes on several issues in the Quijote: the point of fiction in real life, the complications of relationships between men and women, the meaning of madness, the experience of religious co-existence, the shapes of friendship, and the task of literary criticism, just to name a few. We will read the book in a fine unabridged edition, and set it in several relevant contexts to better understand its original intellectual horizon as well as the reasons for its continuing relevance.

Class Format: discussion conducted in Spanish

Requirements/Evaluation: active participation, two short papers, and a final project in close consultation with the instructor

Prerequisites: any RLSP 200-level literature class taken at Williams, or permission of the instructor

Enrollment Limit: none

Enrollment Preferences: Spanish and Comparative Literature majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Unit Notes: this course fulfills one of the requirements for the Spanish major

Distributions: (D1)

Not offered current academic year

RLSP 307 (F) The Short Stories of Miguel de Cervantes

We will conduct a close study of the collection of short stories known as *Las novelas ejemplares* written by Miguel de Cervantes (1547-1616 CE). The stories, though not as famous as *Don Quijote*, are as innovative and dynamic as the author's best-known novel. We will set them in the context of the political and artistic landscape of Spain in the early part of the 17th century to better understand their nature and function. In particular, we will pay attention to how social and individual identities are shaped in the stories, and the ways in which our own assumptions about identity work alongside those of these texts.

Class Format: Conducted in Spanish.

Requirements/Evaluation: Regular attendance and active participation; two short essays or four reaction papers; one final project of 8-10 pages or the equivalent in close consultation with the instructor.

Prerequisites: Any RLSP 200-level class taken at Williams, or results of the placement test, or permission of instructor.

Enrollment Limit: 18

Enrollment Preferences: Preference given to Spanish and COMP majors.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Fall 2021

SEM Section: 01 MWF 10:00 am - 10:50 am Leyla Rouhi

RLSP 308 (S) Survey of Colonial Latin American Literature from 1492 to the Early 19th Century (DPE) (WS)

This course will focus on major works of Spanish American literature from 1492 through the first part of the 19th century. Readings will include narrative texts such as *Cartas de relación*, chronicles of conquest, religious texts, and indigenous annals, as well as poetry and drama. While many of the texts will focus on colonial Mexico, we will also study texts from Central and South America. We will focus on the historical contexts and formal aspects of these works, and study methods of textual analysis that are particularly relevant to these texts via selected critical readings. Special attention will be given to colonial encounters and the clash of cultures that produced new identities and textualities under Spanish colonial rule. The course meets twice per week and it is taught remotely. *Conducted in Spanish.*

Requirements/Evaluation: Each student will write three 4-6 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version. Excellent preparation and class participation.

Prerequisites: One RLSP course at the 200-level or above or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Spanish majors

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE) (WS)

Writing Skills Notes: Each student will write three 4-6 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

Difference, Power, and Equity Notes: This course will highlight intellectual production of indigenous peoples of the Americas under Spanish colonial rule. It will explore the new identities and textualities that emerge as a result of the encounter and subsequent conquest of the Americas. As such, students will gain critical skills to analyze and understand a diversity of Spanish-American colonial texts from the 16th century to the early 19th century.

Attributes: GBST Latin American Studies Electives

Not offered current academic year

RLSP 319 (S) Dictatorship and the Latin-American Novel (DPE)

Military dictatorship is among the most crucial factors in Latin-American society and history, and some of the continent's leading novelists have taken it upon themselves to depict the experience in their work. In this course we will examine both the fact of dictatorship itself and the diverse representation thereof in Spanish-American fiction. Novels by García Márquez, Vargas Llosa, Poniatowska, and Tomas Eloy Martínez will be closely studied. Students will also read *Absalom! Absalom!* by Faulkner, whose influence on Latin-American authors' techniques of representation has been decisive and profound.

Class Format: In-person.

Requirements/Evaluation: three 8-page papers, response journals, an oral report, a final 3-page paper, and class participation

Prerequisites: RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: Spanish majors, Latina/o Studies concentrators

Expected Class Size: 5-10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: This course focuses on the ultimate sort of power--namely, military dictatorship. And it focuses on the historical fact of such a phenomenon within the U.S. political sphere of influence--Latin America. To study dictatorship and its depiction in literature is a means of understanding the nature of that power imbalance and of taking a first step toward some sense of equity.

SEM Section: 01 MR 2:35 pm - 3:50 pm Gene H. Bell-Villada

RLSP 388 (S) La Regenta: Masculinity in Crisis in Nineteenth-Century Spain

This seminar is an in-depth study of arguably the most remarkable Spanish novel of the nineteenth century: *La Regenta* (1885) by Leopoldo Alas (alias Clarín, 1852-1901). We will spend the semester living with the most eccentric, repressed, confused, sometimes arrogant, and sometimes humble inhabitants of the fictional city of Vetusta (based on the real city of Oviedo) and immerse ourselves in Spanish history and culture through a story of adultery. In the grand tradition of nineteenth-century novels about fallen women, *La Regenta* in fact reveals the seamy underside of society, the profound anxieties of masculinity and identity formation, as well as where our biases and assumptions about both successful and failed relationships come from today.

Class Format: This class will be taught remotely but synchronously.

Requirements/Evaluation: Active and meaningful participation, short assignments, one final project.

Prerequisites: Any Spanish 200-level class taken at Williams, or results of the Williams Placement Test, or permission of Instructor.

Enrollment Limit: 20

Enrollment Preferences: Spanish and Comparative Literature Majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

RLSP 401 (F) Climate Changes (Latin America): Aesthetics, Politics, Science

Cross-listings: RLSP 401 ENVI 301

Primary Cross-listing

In her 2007 book, *In Catastrophic Times: Resisting the Coming Barbarism*, philosopher Isabelle Stengers offers a chilling observation: "we are more badly equipped than ever for putting to work the solutions defined as necessary" to avoid the most devastating effects of global warming--the extinction of 25 to 75% of existing species; an increase in sea levels that will drown island nations and coastal cities; the breakdown of agricultural systems,

leading to widespread famine; and the recurrence of powerful hurricanes and other so-called "natural" disasters. All of this, as Stengers and others point out, will create human upheaval, conflict and suffering on an unprecedented scale. This senior seminar examines works of literature, art and film that Latin Americans have produced in response to the catastrophic times in which we live. We will discuss the political, economic, and cultural histories that have led to our present moment, including neoliberalism, dictatorship, and the rise and fall of the leftwing Pink Tide. Through works of new and experimental fiction, poetry, film, performance and visual art, we will consider the lives and work of environmental activists, including Berta Cáceres and others who were murdered because of their outspoken opposition to extractive capitalism, examine the struggle for the decolonization of environmental knowledge, an epistemological battle increasingly waged on behalf of all living things, and experience the politics of mourning for the hundreds of thousands of life-forms disappearing from the planet. Cultural texts to be explored throughout the semester may include: *La vorágine* (José Eustasio Rivera, Colombia, 1924); *Distancia de rescate* (Samanta Schweblin, Argentina, 2014); *Lo que sueño Sebastián* (Rodrigo Rey Rosa, Guatemala, 1995); *Serras da desordem* (Andrea Tonacci, Brazil, 2006); *Boi Neón* (Gabriel Mascaro, Brazil, 2015); *American Fork* (George Handley, USA, 2018).

Requirements/Evaluation: rigorous preparation and participation in class discussions, oral presentations and discussion-leading, response papers, one 5- to 7-page paper and one 15- to 20-page paper

Prerequisites: one 300-level course in the department, evidence of a successful direct-enroll experience at a local university in Latin America or Spain, or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: senior Spanish majors; after that, priority will be given to ENVI majors with a strong command of Spanish

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Unit Notes: this is the senior seminar required for all Spanish majors

Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:

RLSP 403 (F) Senior Seminar: Early Modern Love and Marriage

We might think that love is a natural human feeling and marriage its happiest consequence, but in fact these two conditions are among the most carefully constructed phenomena in any society, highly dependent on time period and place. In this senior seminar we will focus on pre-modern Iberia to study the many manifestations and constructions of love (and marriage), several of which continue to influence definitions of both to this day. We will look at sacred, profane, family, and married love through treatises, medical writings, plays, short stories, poems. Our theoretical underpinnings will come from reflections on love from the time period under consideration as well as contemporary critiques of love and marriage. Primary sources will include early lyrical traditions, the poetry of King Alfonso X, the works of Santa Teresa, Lope de Vega, Calderón de la Barca, Cervantes, among others. Conducted in Spanish.

Requirements/Evaluation: regular presentations, two to three short papers, one research paper preceded by class presentation, active participation and regular attendance required

Prerequisites: any 300-level RLSP course or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: senior Spanish majors and Comparative Literature seniors with Spanish focus

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D1)

Not offered current academic year

RLSP 404 (F) Spain's Tale of Two Cities: Madrid and Barcelona (DPE)

The ancient rivalries between Madrid and Barcelona may be best known because of their internationally watched soccer teams, but there's much more to the story than meets the eye in a stadium. Barcelona, immortalized for world audiences in George Orwell's classic *Homage to Catalonia* (1938), has a complicated political and cultural history. Catalans have a fascinating and unique culture and language. Their identity has often been cause for

political unrest in their relationship with the rest of Spain, and even amongst Catalans themselves. In recent years, tensions with Spain's capital, Madrid, home to the central government and the Royal family, have filled headlines and divided politicians and even families. In this senior seminar we will focus on these two cities in their own right, and explore the counterpoints between them. We will consider the historical roots of lesser known aspects of Catalan culture and identity in order to tease out some of the myriad perspectives that are at play in Spain today. Materials will come from many different media: historical pieces, music, art and architecture, classic novels and films, recent fiction and essays by second generation authors who have been raised by immigrant parents in both cities, and media pieces. We will also invite cultural observers and players to be guest speakers and help us stay up to date as we follow this ever evolving relationship that keeps journalists and politicians on tenterhooks.

Class Format: Remote Instruction.

Requirements/Evaluation: This course will be conducted entirely in Spanish. Students will be expected to participate actively in weekly online classes. There will be two short writing assignments of 3-5 pp. Each student will prepare a presentation for one of our class meetings, and be a discussion leader for part of another meeting. Students will be expected to schedule remote office hours with me individually, and to work on an independent research project towards the end of the semester which will culminate in a final paper of 10-15 pp.

Prerequisites: Students should be seniors on the road to fulfilling their degree requirements for the Spanish major.

Enrollment Limit: 11

Enrollment Preferences: Senior Spanish Majors. This is the 20-21 Senior Seminar for the Spanish Major.

Expected Class Size: 10

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: This course fulfills the DPE requirement because it compares two rival cities and the struggles for power between a majority (Spanish) and minority (Catalan) culture and language. We will also read texts by first generation authors for whom Spanish and Catalan are dominant but secondary languages and cultures. The syllabus seeks to offer a multiplicity of perspectives in order to help students critically engage with centuries-old patterns of difference and exclusion.

Not offered current academic year

RLSP 405 (F) Alternative American Literatures: From the Indigenous Chronicle to the Latin American & Chic. Novel (DPE) (WS)

Do the Americas have a common literature? If so, is it possible to trace their roots and continuity from the colonial era to the present? Literary critic Martin Lienhard suggests that it is indeed possible to trace the origin of a literature common to Latin America from the colonial era and into present by focusing on what he calls "alternative literatures"--literatures that relativize the importance of Europeanized and Creole literatures and valorize the richness of oral traditions in the Americas. Such literatures, he asserts, are closely tied to marginalized sectors of society. In this course, we will take Lienhard's concept of "alternative literatures" as a point of departure to pursue our own examinations of how these "alternative literatures" are constituted. While the primary aim of this course is to focus on the writings of Latin American authors, we will end by exploring the relationship between "alternative" Latin American literatures and Chicana/o/x literatures. Readings will include narrative texts such as *Cartas de relación*, chronicles of conquest, religious texts, indigenous annals, poetry, and drama, as well as contemporary Latin American and Chicana/o/x novels.

Requirements/Evaluation: Four essays, class presentations, active participation, and regular attendance required

Prerequisites: any 300-level RLSP course or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Senior Spanish Majors.

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE) (WS)

Writing Skills Notes: Each student will write four 4-6 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

Difference, Power, and Equity Notes: This course will highlight intellectual production of indigenous peoples of the Americas under Spanish colonial rule as well as the writings of more contemporary minority authors of Latin America. It will explore the new identities and textualities that emerge as a result of the encounter and subsequent conquest of the Americas. As such, students will gain critical skills to analyze a diversity of Spanish-American colonial texts from the 16th century as well as more contemporary narrative texts.

J. Cassidy (on leave in the Spring).

LANGUAGE STUDY

The department provides language instruction to enable students to acquire all five linguistic skills: understanding, speaking, reading, writing, and culture. Russian 101-W88-102 covers the basics of Russian grammar. Russian 151 through 252 offer additional instruction in grammar and vocabulary acquisition, and provide extensive practice in reading and conversation.

STUDY ABROAD

The department strongly encourages students who want fluency in Russian to spend a semester or year studying in Russia or one of the former Soviet republics. Students generally apply to one of several approved foreign study programs. Russian 152 or the equivalent and junior standing are normally prerequisite for study abroad.

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

No, generally not until after a student returns and can provide course material for review (e.g. completed work such as exams, portfolios, lab reports and the like).

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

In Addition to course title and description, we always have a conversation with our students about the actual work they completed since sometimes syllabi are vague, or not followed with complete thoroughness.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

Yes, four courses.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

No, the only candidate for this would be the Senior Seminar, and it has never been an issue.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

No.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

None to date.

LITERATURE AND CULTURE IN TRANSLATION

The department regularly offers courses on Russian literature, culture, and politics in English for those students who have little or no knowledge of Russian, but who wish to become acquainted with Russian literary, cultural, and social history.

THE CERTIFICATE IN RUSSIAN

To enhance a student's educational and professional profiles, the Certificate in Russian offers a useful tool for using the language in a wide variety of disciplines. The sequence of language and culture courses is designed to supplement a student's major at Williams by enabling the student to expand their knowledge in a related field.

Students who enter Williams with previous training in Russian may substitute more advanced courses for all the 100-level courses; they can also be exempted from up to two of the required courses. Thus, in order to earn a certificate a student must take no fewer than five courses (including three courses in Russian) after enrolling at Williams. The student must achieve proficiency at the level of a B in RUSS 251 or the equivalent.

Required Courses

101

102

103 or 151

104 or 152

one additional course conducted in Russian

Elective Courses

at least one course on Russian cultural history

at least one course on Russian intellectual, political, or social history, or post-Soviet economics

THE MAJOR

The Russian major offers students an interdisciplinary approach to the intellectual and cultural history of Russia and the former Soviet republics. Students complete the major by combining courses in Russian language and literature with courses in history, political science, music, economics, and art. The major requires a minimum of ten courses of which at least six must be conducted in Russian, at least two must be at the 300-level, and one at the 400-level. In addition, students may take up to four related courses offered by other departments and taught in English.

Examples of appropriate courses in other departments are:

HIST 241 Imperial Russia

SOC 248 Post-Soviet Paradoxes

HIST 337 After Stalin: Soviet History

PSCI 286 Russian Politics and Foreign Policy under Vladimir Putin

Students selecting the major must typically complete Russian 104 or 152 (or the equivalent) by the end of the junior year. Majors will normally be expected to take the 400-level seminar offered in their senior year, even if they have previously taken another version of it. Russian majors may receive major credit for summer language study (in consultation with the department) and for as many as four courses taken during study abroad.

THE DEGREE WITH HONORS IN RUSSIAN

At the beginning of the second semester of the senior year, students may nominate themselves to candidacy for the degree with honors. By the end of the junior year at the latest, however, they will have established in consultation with the department their qualifications for embarking on the project, the pattern of study to be followed, and the standards of performance.

Students earn a degree with honors by submitting a senior thesis (493-W31-494) of honors quality.

RUSS 101 (F) Elementary Russian I

An introduction to contemporary standard Russian, this course provides opportunities to acquire basic proficiency in all five language skills--listening comprehension, speaking, reading, writing, and culture--through immersion, intensive use of authentic materials, and a strong emphasis on the spoken word in all class activities. Greater emphasis is placed on writing in the second semester. For students who already know some Russian, consultation with the department is required before registering for any Russian language course in the sequence 101 through 252.

Class Format: class meets five times a week

Requirements/Evaluation: active class participation, completion of all assignments, regular quizzes, a written and oral final exam.

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: first-and second-year students; students expressing an interest in the Russian major or certificate

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students registered for RUSS 101-102 are required to attend and to pass the sustaining program during the winter study period; credit granted only if both semesters (RUSS 101 and 102) are taken.

RUSS 140 (S) Crime and Punishment in Russian History (WS)

Cross-listings: HIST 140 RUSS 140

Secondary Cross-listing

For centuries, people have used crime in Russia and the Russian state's response to crime as lenses through which to examine Russian history and the Russian experience. This tutorial will follow in this tradition, but will adopt a more critical approach to question how or if crime and deviance can speak to the nature of the Russian state and its relationship to Russian society writ large. To answer this question, we will read a combination of original historical sources and recent scholarship that cover the entirety of Russian history: from the creation of the first legal code in Medieval Muscovy to the publication of Alexander Solzhenitsyn's Gulag Archipelago in 1962 and beyond. By semester's end, students will have developed an understanding of both the major historical actors and events in Russian criminal and legal history, and the intellectual debates that they sparked among contemporaries and present day scholars alike.

Requirements/Evaluation: a student either will write and present orally a 3- to 5-page essay on the assigned readings or will be responsible for offering an oral critique of their partner's work

Prerequisites: first-year or sophomore standing; juniors or seniors with permission of instructor

Enrollment Limit: 10

Enrollment Preferences: first-year students, and then sophomores who have not previously taken a 100-level seminar

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

HIST 140 (D2) RUSS 140 (D2)

Writing Skills Notes: Each student will write five 5-to-7-page papers on which the instructor will provide written feedback regarding grammar, style, and argument. Each student will write five 3-page critiques of their partners' papers. As the final assignment, each student will revise one of their five papers. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

This course develops all five skills--listening comprehension, speaking, reading, writing, and culture--for students who have completed at least one year of college-level Russian. Coursework includes a systematic review of Russian grammar, as well as an examination of a variety of authentic materials from Russian and Soviet culture, current events, and daily life. Intermediate students will concentrate on expanding their vocabulary, while more advanced students will focus on reading and writing about unabridged texts in Russian. Students who complete the yearlong sequence of RUSS 151 and RUSS 152 should be well prepared to undertake study abroad in Russia and are encouraged to do so. Each year this course is custom-designed to meet the needs of those students who enroll, so that both intermediate and advanced students can benefit from taking RUSS 151 and/or RUSS 152 more than once, which may be done with the permission of the instructor.

Class Format: the class meets four hours a week, three with the professor and the fourth with the Russian Teaching Associate (time to be arranged)

Requirements/Evaluation: active class participation, completion of all assignments, quizzes, and a final exam

Prerequisites: RUSS 151 or permission of instructor

Enrollment Limit: none

Enrollment Preferences: none

Expected Class Size: 4-6

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

RUSS 201 (F) Advanced Russian I

This course continues to develop all five skills--conversation, listening comprehension, reading, culture, and writing--for students who have completed at least two years of college-level Russian or the equivalent. Coursework includes the study of higher-level Russian grammar, as well as an examination of a variety of materials--print and other media--from Russian and Soviet culture, current events, history, and the arts.

Requirements/Evaluation: regular attendance, active class participation, completion of daily homework, 2-3 short essays, and 2-3 in-class written exercises

Prerequisites: Russian 152 or 104 or the equivalent, consult with the instructor if unsure

Enrollment Limit: 15

Enrollment Preferences: Russian majors and students of Russian language, history, and culture

Expected Class Size: 5

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

RUSS 203 (F) Nineteenth-Century Russian Literature

Cross-listings: COMP 203 RUSS 203

Primary Cross-listing

This course will introduce you to some of the most influential literary texts of the nineteenth-century Russian literature that became moral, ideological, and aesthetic touchstones for *all* later periods of Russian culture. We will study the works of Pushkin, Gogol, Lermontov, Turgenev, Chernyshevsky, Dostoevsky, Tolstoy, and Chekhov with attention to their thematic and aesthetic preoccupations, socio-political and philosophical contributions, and historical contexts. Topics of particular interest include Russia's national and imperial identity; Russia's experiment in Westernization; questions of religion and science; the fluctuating meanings of social class and rebellion. By the end of this course, you will have acquired a basic understanding of the history, aesthetics, and politics of nineteenth-century Russian literary culture, as well as its broader legacy. You will have strengthened your reading and writing skills through training to read primary texts closely and analytically. All readings are in English.

Requirements/Evaluation: participation, reading responses on Glow, one presentation, one short paper, final research paper

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: students majoring or considering a major in Russian or Comparative literature

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

RUSS 204 (S) To See the Past: Russian and Soviet Cinema on History

Cross-listings: RUSS 204 GBST 204 COMP 204

Primary Cross-listing

This course surveys Soviet and Russian cultural history of the 20th- and 21st-centuries through the history of the cinematic medium. We will watch and analyze key films of this period--films by Eisenstein, Vertov, Tarkovsky, Muratova, Balabanov, Zviagintsev, and Fedorchenko among others--from a double perspective. On the one hand, we will study the cultural and historical contexts of the Soviet Union and Russia; on the other hand, we will learn the formal and stylistic aspects of the cinematic medium as it developed historically (from silent, to sound, to color, to digital etc.). From this double perspective, we will try to answer a larger question that underlies this course: What kind of historical thinking can we learn through cinema as a medium? In other words, we will take cinema neither simply as a direct reflection of state ideology nor as pure aesthetic form or entertainment for the masses. Rather, we will approach the films of this period as audio-visual texts that are rich in historical content and require our informed and attentive interpretation.

Class Format: The class meets synchronously on campus twice a week. Remote students will be able to join each synchronous session via zoom. Synchronous sessions will consist of discussion and visual analysis of short clips. All films and reading materials will be available online.

Requirements/Evaluation: For each class you'll watch 1 or 2 film(s) and read typically 1 article under 20 pages. You will submit short viewing response before each class. Additionally, there will be short viewing or creative assignments to familiarize students with formal aspects of film. Evaluation will be based on participation, one presentation, short sequence analysis, and final paper or video essay

Prerequisites: none, open to all students

Enrollment Limit: 15

Enrollment Preferences: declared or prospective Russian or Comparative Literature majors, Russian Certificate seekers, Global Studies concentrators

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

RUSS 213 (F) Why do Pussies Riot and What is "Homosexual" Propaganda? Gender and Sexuality in Putin's Russia (DPE)

Cross-listings: COMP 257 GBST 213 WGSS 214 RUSS 213

Primary Cross-listing

Since Vladimir Putin's rise to power, the media has highlighted events in Russia that at first glance resemble oddly sexualized jokes. At the same time that the Kremlin has reinstated authoritarian policy reminiscent of the Soviet Union, the Western press has chronicled Putin's topless vacations in Siberia, protests by the feminist collectives Pussy Riot and Femen, a 2011 ban on women's lacy underwear, federal legislation from 2013 prohibiting "homosexual" propaganda, and a 2017 court decision that outlawed a meme of Putin as a "gay clown." This course examines the Putin regime's ongoing attempts to police gender expression and private sexual behavior, as well as how Russian citizens' performance of gender and sexuality has changed in the past twenty years. We will consider gender and sexuality as distinctive features of Putinism, which have contributed to a biopolitical turn in official policy and inspired resistance and protest among Russian feminists and queers. *All readings will be in English, and all films will have English subtitles.*

Requirements/Evaluation: active participation in class discussions, several response papers, two short papers (3-5 pages each), and a final project

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Those majoring in Russian and/or WGSS, as well as Global Studies concentrators.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Not offered current academic year

RUSS 218 (S) Extreme Persuasions: The Far Right in the United States and Russia (DPE) (WS)

Cross-listings: RUSS 218 AMST 219 WGSS 217

Secondary Cross-listing

The purpose of this course is to explore the unexpected recent confluence of the American and Russian far-right movements, among advocates for

authoritarianism in both countries who have traditionally understood the 'other' superpower to be an implacable enemy. How have nationalist movements in the United States come to see the Russian Federation as a vanguard for 'whiteness' and traditional masculinity in European identity, overturning the perception of Russia as a racial Other that was prevalent among American conservatives during the Cold War? What are the affinities between the imperial and openly patriarchal aspirations of Putinism and the goals of American religious Reconstructionism, with its interpretation of the Confederacy as a God-given model for racial separatism and gender complementarianism? We will discuss repressive historical legacies and homophobia in both countries, devoting particular attention to debates about protest art and the removal of monuments, and to movements that situate themselves in opposition to neoliberal forms of ethno-nationalism.

Requirements/Evaluation: On average, there will be 100 pages of reading per week. Over the course of the semester, students will be required to view three films, which will be discussed in class. Class participation counts for 25% of the course grade; each of the first three response papers, 15%; the term paper, 25%; the in-class presentation of the term paper, 5%.

Prerequisites: None

Enrollment Limit: 19

Enrollment Preferences: Majors and concentrators in AMST, Russian, and Women's and Gender Studies.

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

RUSS 218 (D2) AMST 219 (D2) WGSS 217 (D2)

Writing Skills Notes: The written work is comprised of three response papers (5-7 pages each), a rough draft of the term paper (8-10 pages) that will be ungraded but extensively commented upon, and the term paper itself (10-15 pages). Each student to discuss their writing strategies prior to the deadlines for the essay assignments. For the essays, students may choose from among a range of prompts, or design a topic of their own.

Difference, Power, and Equity Notes: Students will use the assigned readings as points of departure for analyzing and responding to traditionalist configurations of gender and ethno-nationalism in the United States and the Russian Federation. Particular attention will be devoted to the proliferation of different conceptions of power and privilege in both countries, and to ways in which a parsing of them may facilitate an engagement with the arguments of far right movements while retaining the concept of social justice.

Attributes: AMST Critical and Cultural Theory Electives

Not offered current academic year

RUSS 219 (S) Cults of Personality (WS)

Cross-listings: COMP 215 RUSS 219

Primary Cross-listing

First uttered by Soviet leader Nikita Khrushchev in 1956, the phrase "cult of personality" was formulated to discredit the hero-worship that accompanied Joseph Stalin's iron-fisted rule of the Soviet Union. Since then, the phrase has gained currency as a condemnation of a variety of seemingly all-powerful leaders in oppressive political regimes, including China's Mao Zedong, Iran's Ayatollah Khomeini, and the ruling Kim family in North Korea. In this course, we will examine the phenomenon of the cult of personality from a variety of perspectives, beginning with the cult surrounding Stalin and ending with that of Vladimir Putin. Our course material will encompass scholarship from multiple disciplines, including history, sociology, political science, cultural and media studies, as well as artistic expression typically labeled propaganda in literature, the visual arts, and film. Although our course will begin in the Soviet Union and end in contemporary Russia, we will explore how the cult of personality has been adapted and updated for different cultural and political purposes in fascist Germany and Spain, China, Iran, North Korea, and Cuba. *All readings will be in English, and all films will have English subtitles.*

Class Format: remote

Requirements/Evaluation: completion of weekly reading and writing assignments, as well as active engagement during tutorial sessions

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: first-year students

RUSS 232 (S) Phantasmagoria, Madness, and the Absurd in Russian Literature and Film

Cross-listings: RUSS 232 COMP 271

Primary Cross-listing

In one of Nikolai Gogol's most famous stories, a man wakes up one day to find that his own nose has left his face and taken on a life of its own. This situation, which we might label bizarre or absurd, just as easily shows how reality often fails to meet our expectations and even suggests that the story's leading character might have gone mad. But what then is insanity? Likewise, one of Dostoevsky's socially marginal characters contemplates the fact that only sick people see ghosts, which, in his opinion, "only proves that ghosts cannot appear to anyone but sick people, not that they themselves do not exist." This course aims to analyze the rich tradition, typified by Gogol and Dostoevsky, of the absurd, the fantastic, and madness in Russian literature and film of the 19th-21st centuries. Addressing the aesthetic, historical, and political circumstances that nurtured this tradition in Russian literature and cinema, our course material will explore new dimensions of reality, point out the many paradoxes and absurdities of human existence, and question our perceptions, as well as the assumption that we are sane. Close analysis of literary and cinematic texts will lead us to a broader discussion of the relationship between reality and representation, as well as the notions of the absurd and madness. Authors/directors will include Alexander Pushkin, Nikolai Gogol, Fyodor Dostoevsky, Anton Chekhov, Mikhail Bulgakov, Lyudmila Petrushevskaya, Andrey Tarkovsky, and Kira Muratova, among others. All readings will be in English, and all films will have English subtitles.

Requirements/Evaluation: class attendance and participation; two analytical papers (3-5 pages); leading class discussion; a creative assignment; an oral presentation; a final paper (6 pages)

Prerequisites: none

Enrollment Limit: none

Enrollment Preferences: none

Expected Class Size: 10

RUSS 240 (S) The Soviet Experiment

Cross-listings: RUSS 240 HIST 240

Secondary Cross-listing

In 1917, the former Russian Empire became the site of the world's first socialist revolutionary government and the twentieth century's largest multiethnic state. Over the next quarter century, the Soviet Union witnessed the rise of one of history's most violent dictatorships, an apocalyptic war that claimed upwards of 26 million lives, and communist expansion into Eastern Europe and the decolonizing world. It also became the site of vibrant and optimistic utopian cultural projects, flights into space, bitter and hilarious political satire, and a society that was, for the most part, economically equal. Then in 1991, everything fell apart. This course will survey the origins, life, and collapse of the Soviet Union, paying particular attention to the ideas that shaped its development, the mark its architects' and leaders' policies left both at home and abroad, and the impact it had on the people who lived and didn't live to tell the tale.

Class Format: Format: seminar; Each week, students will watch a pre-recorded asynchronous lecture that will provide context for the readings due that week. Students will be assigned to a small group of no more than 8 students which will "meet" with the instructor for a weekly, tutorial-style discussion on Zoom.

Requirements/Evaluation: active class participation, two short essays (3-5 pages), one in-class midterm, and one take-home final exam

Prerequisites: none

RUSS 241 (F) Imperial Russia: State and Society between Europe and Asia

Cross-listings: RUSS 241 HIST 241

Secondary Cross-listing

Russia. The name alone evokes wonder, fear, romance, and history itself. Over the past ten centuries, the territory that we now call the Russian Federation has witnessed dramatic transformations that underwrote its transition from feudal backwater to global superpower. Its journey from tribalism to imperialism, feudalism to autocracy, agrarianism to industrialization, monarchism to parliamentarianism, Orthodox Christianity to revolutionary atheism, left a mark not just on the collective Russian conscious, but on a world that has grown accustomed to viewing Russia as a site for ideas, projects, and processes both exemplary and tragic. How did Russian state power borrow and depart from west European norms? How did foreign and domestic norms contribute to the creation of a "Russian" identity? How did Russian elites and ordinary people resist, collaborate with, or develop an apathy towards the Russian state, and to what success? This course will seek to answer these questions through a survey of Russian Imperial history from its founding in Kievan Rus' in the 10th century to the October Revolution of 1917.

Class Format: Each week, students will watch a pre-recorded asynchronous lecture that will provide context for the readings due that week. Students will be assigned to a small group of no more than 5 students which will "meet" with the instructor for a weekly, tutorial-style discussion on Zoom.

Requirements/Evaluation: class attendance and participation, two short papers (3-5 pages), ~80 pages of reading a week, one take-home midterm exam essay and one take-home final exam essay

Prerequisites: none, open to all students

Enrollment Limit: 15

Enrollment Preferences: History majors.

Cross-listings: RUSS 348 SOC 248 GBST 247 RUSS 248 GBST 347 SOC 348

Secondary Cross-listing

Critics and apologists of Soviet-style socialism alike agree that the Soviet ideology was deeply egalitarian. Putting aside for a moment the very reasonable doubts about how justified this perception actually was, it is still worth asking, how did people who lived in the world in which differences in rank, class, gender or ethnicity were not supposed to matter, make sense of their postsocialist condition, one in which new forms of difference emerged, and old ones assumed greater prominence? And how do these encounters with difference impact current events, such as the Russia-Ukraine conflict or the persistent tensions between East and West Germans? This tutorial will examine new dilemmas through ethnographic

studies and documentary films that aim to capture in real time the process of articulating and grappling with newly discovered divides. We will focus especially closely on Russia, but will also read studies on East Germany, Bulgaria, Poland, Latvia and Ukraine. This course fulfills the DPE requirement by exploring comparatively the ways in which people in different countries made sense of the social, cultural and political heterogeneity of the postsocialist condition.

Class Format: The course will meet remotely for the most part, although in-person meetings with the appropriate precautions may be arranged at the tutorial partners' and instructor's discretion.

Requirements/Evaluation: 5-page paper every other week, written comments on the partner's paper in alternate weeks

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: Anthropology, Sociology, and Russian majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

RUSS 275 (S) Russian and Soviet Cinema

Cross-listings: COMP 287 RUSS 275

Primary Cross-listing

In this course, we will survey over a hundred years of Russian and Soviet film to explore how cinema has reflected and, at times, created the country's most important historical events and cultural myths. We will pay close attention to Russian filmmakers' varied reactions to Hollywood cinema, as well as to the lively body of cinema theory that these reactions generated. Our survey will begin in the pre-Revolutionary era and include representative films from the time of the Bolshevik Revolution, Stalinism and World War II, the Thaw and Stagnation, Glasnost, and the Putin era. In addition to studying films by *auteur* filmmakers, such as Sergei Eisenstein, Andrei Tarkovsky, and Aleksandr Sokurov, we will watch movies made for the masses, which have helped to form Russians' understanding of their country and themselves. All readings will be in English and all films will be viewed with English subtitles

Requirements/Evaluation: completion of all viewing and reading assignments, active participation in class discussions, two short papers, and a final research project

RUSS 305 (F) Dostoevsky: The Riddle of the Self and the Other

Cross-listings: RUSS 305 COMP 305

Primary Cross-listing

This course offers a comprehensive survey of Fyodor Dostoevsky's literary and intellectual legacy. We will read his major works including *Notes from Underground*, *Crime and Punishment*, *Demons*, *The Brothers Karamazov* and a selection of celebrated short works. Close textual analysis will be accompanied by a discussion of aesthetic, philosophical, and psychological aspects of Dostoevsky's oeuvre. The problem of the self-other relationship in the artistic, philosophical and religious contexts of Russia and Western Europe is one of the key themes that we will trace in this course. More broadly we will look into the problems of the modern individual and modernity in the times of Dostoevsky as well as in our times. All readings are in English translation.

Class Format: This will be a hybrid course for in-person and remote students. We will meet in small groups (4-5 students) once a week synchronously (in-person with students who are on campus, and via zoom with students who are enrolled remotely) and will have variety of asynchronous activities (viewing short lectures, writing reading responses, participating in written and video discussion forums)

Requirements/Evaluation: Participation, reading responses in the form of blog posts, three short papers, final project

Prerequisites: none, open to all students

Enrollment Limit: 15

Enrollment Preferences: RUSS and COMP majors, and Russian Certificate-seekers

Expected Class Size: 15

RUSS 306 (S) Rise and Shine with Tolstoy

Cross-listings: RUSS 306 COMP 306

Primary Cross-listing

Prepare to alternately fall in love and lock horns with this illustrious nineteenth-century Russian author. He is worth it. Whether searching for the meaning of life, interrogating what it means to love another human being or struggling with religious faith, Tolstoy was a busy, busy man and a prolific writer. This course will examine his life and major works in the broader context of Western intellectual history. Readings will include his two great novels, *War and Peace* and *Anna Karenina*, as well as a number of shorter works, such as *The Cossacks* and *The Death of Ivan Ilych*. We will also consider some of Tolstoy's aesthetic and religious writing as we examine his constant, rich, and at times surprising development as one of the greatest artists and thinkers of the 19th-century.

Requirements/Evaluation: timely completion of all reading assignments, active and substantive class participation, discussion leading, 4-5 short essays, and a final project

Prerequisites: none

RUSS 331 (S) The Brothers Karamazov

Cross-listings: COMP 331 ENGL 371 RUSS 331

Primary Cross-listing

Widely hailed as one of the greatest novels ever written, Dostoevsky's *The Brothers Karamazov* contains a series of enigmas, not the least of which is precisely who murdered the Karamazov father. In addition to exploring the shared guilt of all four of the brothers Karamazov in the crime of patricide, Dostoevsky poses the most probing questions of his day: Are families tied together merely by blood or by deeper spiritual bonds? Is religious faith possible in an age of reason, science, and technology? Can man's earthly laws ever carry out divine justice? Is humanity prepared to bear the burden of responsibility that comes with freedom? This tutorial will spend an entire semester exploring Dostoevsky's masterwork, and we will read a variety of secondary sources alongside *The Brothers Karamazov*, including history, philosophy, and literary theory. Our goal will be to understand Dostoevsky's answers to these so-called "accursed questions" through the unique artistic form of *The Brothers Karamazov*.

Requirements/Evaluation: completion of weekly reading and writing assignments, as well as active engagement during tutorial sessions

Prerequisites: at least one 200-level literature class

RUSS 337 (F) After Stalin: Soviet History from "Thaw" to Collapse

Cross-listings: HIST 337 RUSS 337

Secondary Cross-listing

When Joseph Stalin died in 1953, the crowd of people that gathered to view his embalmed body on Moscow's Red Square grew so large, it provoked a stampede that killed nearly 500 people. This moment embodies the uncertainty and challenges that ordinary citizens and state officials faced when they imagined what a post-Stalin future might bring to the Soviet Union. For all the suffering that his rule inflicted on the Soviet people, Stalin remained for many a reliable constant in a life dominated by revolution and war. Stalin's successors faced a classic dilemma: how to reform and breathe new life into a system without disturbing the foundation it needs to stand intact? Despite superpower status and some stunning achievements at home and abroad, the fault lines in Soviet society ran deep. This course will consider the experiences that grew out of the uncertainty that emerged after Stalin's death. We will examine how the "Soviet experiment" evolved - politically, legally, socially, culturally - once the last of the original Bolshevik revolutionaries left the Kremlin. What opportunities did the post-Stalin moment open up for political elites, members of the professional class, the intelligentsia, and citizens from Soviet republics and satellite states? What obstacles did they face, and how successful were they at overcoming them? In what ways did the spirit of the October and Stalinist Revolutions persist or erode from 1953 until 1991? Most importantly, how did the "children of the revolution" participate in, check out of, or contest the socialist system whose birth their parents witnessed first hand? After all, more generations experienced the Soviet Union without Stalin as their leader than generations who only knew a life with the "Vozhd" in power. Through secondary and primary source readings, we will attempt to recover the voices of those whose lives both shaped and were shaped by the nearly four decades after Joseph Stalin's death.

RUSS 341 (F) Collapse: The Fall and Afterlife of the Soviet Union

Cross-listings: HIST 341 RUSS 341

Secondary Cross-listing

On Christmas Day 1991, Mikhail Gorbachev ended two things: his tenure as President of the Soviet Union, and the Soviet Union itself. In the years that followed, the Soviet Union's fifteen national republics splintered overnight into more than a dozen nation states along uneven and highly contested ethnic lines. In Russia, Boris Yeltsin assumed office as the first president of the Russian Federation, and without delay, began to institute radical economic and social reforms. Under his watch, the country privatized national industry, cut the state budget, and courted foreign multinational businesses. The world most commonly used to describe Russia in the early 1990s is "disappear": money, jobs, food, and people. The very things that Soviet-style socialism had committed itself to providing for started to vanish as a result of invisible and market forces. Russian nationalism replaced Soviet internationalism as a guiding national idea. This course will explore what emerged in the spaces left empty after Soviet-style socialism's demise in three parts. The first part of the semester will examine the origins of the Soviet Union's collapse and its breakup into fifteen successor states. The second part of the semester will survey the political, economic, and social processes that followed the collapse. Finally, the third part of the course will focus on Putin's ascendancy to the presidency and its consequences for Russian citizens at home and Russia's image abroad. Three themes will occupy a prominent place in the course: political-economy, nationalism, and identity. By semester's end, students will have acquired the content and analytical literacy to place the former Soviet Union in its specific historical context and identify multiple sources of causation that may help explain Russia's transition from socialism to capitalism to Putinism during the past quarter century.

Class Format: Each week, students will watch a pre-recorded asynchronous lecture that will provide context for the readings due that week. Students will be assigned to a small group of no more than 5 students which will "meet" with the instructor for a weekly, tutorial-style discussion on Zoom.

Requirements/Evaluation: active class participation, three short essays (3-5 pages), and one long essay (10-12 pages)

Prerequisites: None

Enrollment Limit: 15

Enrollment Preferences: History majors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

RUSS 345 (S) Bagging the Monsters : Tolstoy's Other Prose

War and Peace and *Anna Karenina*, which Henry James famously described as "baggy monsters," are works that are immediately identified with Leo Tolstoy, a giant of nineteenth-century Russian literature. But Tolstoy wrote so much more! From short works of adult fiction, to stories for children, pedagogical essays, political tracts, aesthetic treatises, and philosophical musings. He produced variously and prodigiously throughout his life and that's not even counting his fascinating diaries and personal correspondence. Our course readings will probe this exceptional variety with the goal of understanding the scope of Tolstoy's thinking in greater depth. All readings and discussion will be in Russian.

Class Format: This is a hybrid upper-level seminar that can be taken in-person or online.

Requirements/Evaluation: Active and substantive class participation, leading discussion, weekly short writing assignments, and 1-2 longer writing pieces of 4-5 pages.

Prerequisites: Three years of college Russian or the equivalent. Students who have not taken Russian language at Williams must consult the instructor.

Enrollment Limit: 10

Enrollment Preferences: Russian majors and certificate seekers, then comparative literature majors.

Expected Class Size: 5

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

RUSS 401 (F) Senior Seminar: Queer Russia (DPE)

This seminar explores queerness as both a cultural concept and social reality in Russia and the Soviet Union from the nineteenth century to the present. We will begin with the history of LGBTQ+ Russians, as well as an overview of texts produced by queer writers, in the Russian Empire and Soviet Union. We will then investigate queerness in post-Soviet Russia, where non-normative sexuality has become a hotly contested political concept over the past three decades. In addition to reading texts and viewing films by and about LGBTQ+ Russians, we will examine the genesis, implementation, and impact of the 2013 ban on "homosexual propaganda," which has placed homophobia at the center of national identity in the Russian Federation. We will also read theoretical works to help us understand not only the unique formations and expressions of queerness in Russia, but also how local Russian queerness plays out on the global stage.

Requirements/Evaluation: completion of all reading and viewing assignments, preparation for and active participation in class discussions, two 4-5 page papers, and a final 20-minute presentation based on students' independent research

Prerequisites: RUSS 252 or the permission of the instructor

Enrollment Limit: 10

Enrollment Preferences: those majoring in Russian or pursuing a Certificate in Russian

Expected Class Size: 5

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: This seminar explores how gender and sexuality have been conceptualized and experienced in Russia with a particular emphasis on how non-normative gender and sexuality have become tools in the struggle for social and political power in post-Soviet Russia. Our exploration of queerness in Russia over the past two centuries will help students to develop critical skills for assessing how gender and sexuality are currently conceptualized in the United States.

Winter Study -----

RUSS 25 (W) Williams in Georgia

Cross-listings: RUSS 25 SPEC 25

Primary Cross-listing

Williams has a unique program in the Republic of Georgia, which offers students the opportunity to engage in three-week internships in a wide variety of fields. Our students have helped in humanitarian relief organizations like Save the Children, interned in journalism at *The Georgian Times*, taught unemployed women computer skills at The Rustavi Project, documented wildlife, studied with a Georgian photographer, done rounds at the Institute of Cardiology, and learned about transitional economies at the Georgian National Bank. In addition to working in their chosen fields, students experience Georgian culture through museum visits, concerts, lectures, meetings with Georgian students, and excursions. We will visit the sacred eleventh-century Cathedral of Svetitskhoveli and the twentieth-century Stalin Museum, see the birthplace of the wine grape in Kakheti, and explore the region where Jason sought the Golden Fleece. Participants are housed in pairs with English-speaking families in Tbilisi, Georgia's capital city. Students will submit weekly reports on their work while in the country (6 pages in total or the equivalent in another medium), as well as an overall reflection (4 pages or the equivalent in another medium) upon their return from Georgia.

Requirements/Evaluation: weekly reports on their work while in Georgia (6 pages in total or equivalent in another medium); overall reflection (4 pages or equivalent in another medium) upon return

Prerequisites: none; knowledge of Georgian or Russian is not required

Enrollment Limit: 8

Enrollment Preferences: interested students must attend an informational meeting and submit a short essay about their interest in the course

Grading: pass/fail only

Materials/Lab Fee: \$3,002.50

SCIENCE AND TECHNOLOGY STUDIES (Div II)

Chair: Professor Jason Josephson Storm

Advisory Committee

- Matt E. Carter, Associate Professor of Biology; affiliated with: Neuroscience Program; on leave Fall 2021
- José A. Constantine, Assistant Professor of Geosciences
- Laura D. Ephraim, Associate Professor of Political Science; on leave Fall 2021
- Ezra D. Feldman, Visiting Assistant Professor of English; affiliated with: Science & Technology Studies, Graduate Program-Art History
- Laura J. Martin, Assistant Professor of Environmental Studies and Faculty Affiliate in History; affiliated with: History Department; on leave Spring 2022
- Bojana Mladenovic, Professor of Philosophy
- Eli Nelson, Assistant Professor of American Studies
- Jason Josephson Storm, Professor of Religion, Chair of Science & Technology Studies; affiliated with: Science & Technology Studies

Science and Technology Studies (STS) is an interdisciplinary program concerned with science and technology and their relationship to society. The community of scholars in the Williams STS program apply methods from diverse disciplines. They seek to illuminate the historical, social, cultural, ethical, and political dimensions of science and technology. By bridging humanities, social sciences, science, and technology, our program seeks to build relationships across campus.

The STS program at Williams takes a broad umbrella approach to the discipline. Topics include: sociology of knowledge production; philosophy of science; history of science and technology; the economics of research and development; science and public policy; technology and the environment; scientometrics; interactions between humans and technology; science fiction and other artistic depictions of science and technology; boundaries between pseudo-science, religion, and science; and the broader ethical issues evoked by science and technology.

Science and Technology Studies concentrators must complete a total of **six courses**. Five of these must have the STS prefix. Students must take: Introduction to STS; Senior Seminar; and three electives, of which at most two can originate in the same department. In addition, Science and Technology Studies concentrators must complete one course with a laboratory or field work component in natural, social, or computer science; this course may also satisfy one of the divisional distribution requirements.

Students may petition the Chair for recognition of a course as an STS course even if it is not cross-listed in STS. The petitions will be approved or denied on a case-by-case basis.

The program is administered by a chair and an advisory committee of faculty who teach in the program. Students who wish to enroll normally register with the chair by the fall of their junior year.

STUDY ABROAD

FAQ

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Complete syllabus and course description, including readings/assignments.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

No.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. Be sure to check record of enrollment in classes with laboratory or fieldwork components to satisfy program.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

None to date.

STS 101 (S) STEM's Empire: A Critical Introduction to Science and Technology Studies (DPE)

Who follows the science? The COVID-19 pandemic has upended many's beliefs in the rationality of scientific enterprise, exposing the institutions, power dynamics, and inequalities that shape its constitution. Meanwhile, the "tech fix" approach to ending the pandemic solely through vaccination has produced staggering death tolls compared to non-pharmaceutical interventions like masking, social distancing, and contact tracing implemented in places such as Liberia, Rwanda, and the Asia-Pacific, which have contained COVID-19 with relative success. As feminist and postcolonial scholars have long told us, the power of science often operates through division, producing dichotomies such as West/non-West, modern/traditional, global/local, developed/underdeveloped, and science/non-science. It is inextricably linked to the colonial conquest of territories, bodies, and minds. In this course, we will explore scientific practice and the production of scientific knowledge through the metaphor of empire: How might we understand scientific claims to truth, knowing that colonial relations of power are still embedded in our identities and institutions, and in the hegemonies that shape our world? We will explore this question by engaging with feminist and postcolonial critiques of science, studying controversies over the environment, medicine, indigenous knowledge, diversity in STEM, and other topics. We will pay particular attention to the situated processes out of which claims to the universal or global are made, asking who is left out of making such claims as well. An introductory course, students will be exposed to key debates in STS and learn critical tools for analyzing science and technology in an unequal but interconnected world.

Requirements/Evaluation: Several short response papers, mid-term paper, final project

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: first-years and sophomores

Expected Class Size: 14

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course will demonstrate how issues of power shapes the practices of empiricism.

Spring 2022

SEM Section: 01 TR 11:20 am - 12:35 pm Shoan Yin Cheung

STS 102 (F) Breeding Controversy: Technologies and Ideologies of Population Control (DPE)

Cross-listings: WGSS 103 STS 102

Primary Cross-listing

What is "good breeding?" For whom is birth control "liberating?" This course traces the surprising ways that concepts of population growth and decline from the natural sciences come to inform social discourses on "overpopulation" in the twentieth and twenty-first centuries. Science and politics mix to decide: who should be able to reproduce--and, consequently, who might not be born--so that some may live more prosperously? By studying the history of eugenics movements, contraceptive technologies in the context of development, and the racialized cultures of reproductive medicine, we will analyze how scientific ways of thinking about human lives reflect and reproduce social inequities. We will use the tools of feminist technoscience studies to understand how science, culture, power, and politics intersect to create new technologies of "selection" that are far from natural. New literatures in critical race STS, black feminist thought, and critical theory will inform our discussions.

Requirements/Evaluation: Weekly paper or response and in-class debate.

Prerequisites: None.

Enrollment Limit: 10

Enrollment Preferences: Freshmen. If over-enrolled, students will submit a short paragraph stating their interest in the course.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 103 (D2) STS 102 (D2)

Difference, Power, and Equity Notes: This course will demonstrate how scientific knowledges also reflect biases organized along lines of social difference, including race, gender, class and nation. Readings in critical race theory will give students a deeper appreciation of these issues.

Attributes: PHLH Reproductive, Maternal and Child Health

Fall 2021

TUT Section: T1 TBA Shoan Yin Cheung

STS 106 (F) Being Human in STEM (DPE)

Cross-listings: PHYS 106 GEOS 106 STS 106

Secondary Cross-listing

This course combines academic inquiry and community engagement to investigate the themes of diversity and social climate within STEM (science, technology, engineering and mathematics) disciplines. Students will examine how diverse identities including but not limited to gender, race, disability, sexuality, national origin, socioeconomic status, religion, and ethnicity shape the STEM experience both at Williams and nationally. We will ground our understanding through critical reading of primary scholarly research on topics such as implicit bias, identity threat, and effects of team diversity on excellence. From there, we will execute small group projects. Students will design, execute, and evaluate interventions that relate to the course goals and that have direct relevance to Williams students, faculty, and staff. For example, a student group could implement a survey of minoritized STEM students, or create a qualitative interview-based assessment of how socioeconomic status impacts students' abilities to participate in STEM fields. Course work includes weekly readings, reflective/opinion writing, in class discussion, and the development and presentation of a group project.

Class Format: class discussions, group project work (out of class time required)

Requirements/Evaluation: short response papers, class discussion participation, leading class discussions, group work, and final project

Enrollment Limit: 15

Enrollment Preferences: DIV III majors; statement of interest may be requested

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Unit Notes: does not count towards GEOS or PHYS major credit

Distributions: (D3) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 106 (D3) GEOS 106 (D3) STS 106 (D2)

Difference, Power, and Equity Notes: This course explicitly addresses the intersection of marginalized identities and the STEM experience. Students will learn how to critically address how issues such as gender, race, ethnicity, and disability impact participation in and the experience of STEM fields. For example, students will read and critique literature documenting bias in STEM fields, and will also learn about and create interventions that can address these biases.

Not offered current academic year

STS 115 AIDS: The Disease and Search for a Cure

Since the discovery of the human immunodeficiency virus (HIV-1) in 1983, modern techniques of molecular biology have revealed much about its structure and life cycle. The intensity of the scientific investigation directed at HIV-1 is unprecedented in history. We now know more about this virus than any other known pathogen. However, the early optimism concerning the prospects for an effective AIDS vaccine has now waned and HIV strains that are resistant to drug therapies are common. We are now three decades into the AIDS pandemic and the World Health Organization estimates that there are more than 34 million HIV-infected persons worldwide. After an introduction to chemical structure, we examine the molecular biology of the HIV virus, the molecular targets of anti-HIV drugs, and the prospects for a cure. We look at how HIV-1 interacts with the human immune system and

discuss prospects for developing an effective HIV vaccine.

Class Format: three hours per week

Requirements/Evaluation: problem sets, a midterm, quizzes, a final exam, and a presentation/discussion

Prerequisites: none; designed for the non-science major who does not intend to pursue a career in the natural sciences

STS 135 (F) Politics after the Apocalypse

Cross-listings: STS 135 PSCI 135

Secondary Cross-listing

What shape will politics take after the apocalypse? Even before the coronavirus pandemic gave us reason to wonder if we are, in fact, living through an apocalypse, speculation about the end of the world and its aftermath pervaded recent television, movies, literature, philosophy, and critical theory. In this class we draw these works into conversation with political theories of the "state of nature" and "state of exception" to better understand what political possibilities are opened and foreclosed in times of crisis. What aspects of politics will endure the ravages of fire or pestilence? What new political realities might emerge on ground cleared by disaster? What does it say about pre-pandemic politics that we were so eager to consume stories of states falling and bands of survivors scraping together a nasty, brutish and short existence? And how will the unfolding pandemic change how we respond to these stories? Class will be driven primarily by discussion, typically introduced by a brief lecture.

Class Format: Class meetings will be conducted remotely using zoom.

Requirements/Evaluation: two 3-5 page papers, one short story (7-15 pages and including an explanatory cover letter), contributions to a class project documenting and analyzing the pandemic, and class participation

Prerequisites: first- or second-year students, or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: first-year students

Attributes: PSCI Political Theory Courses

Not offered current academic year

STS 142 (F) AlterNatives: Indigenous Futurism and Science Fiction (DPE)

Cross-listings: AMST 142 STS 142

Secondary Cross-listing

Indigenous people occupy a paradoxical position in time. On one hand, as survivors of genocide and occupation, they are already post-apocalyptic, occupying what many Indigenous thinkers argue is "our ancestor's dystopia." On the other hand, Indigenous people are relegated to the past in settler and colonial discourses, which, in relying heavily on notions of contact, authenticity, and vanishing, preclude Indigenous peoples from not only futurity, but from modernity and associated visions of science and technology too. This tutorial explores how Native science fiction imagines and enacts futurity from this paradoxical Indigenous temporality. Looking across numerous national and transnational Indigenous contexts, in addition to different kinds of media, including short stories, novels, visual art, video games, films, and online platforms like second life, this tutorial foregrounds the ways in which science fiction functions as a mode of Indigenous theory, knowledge production, and claiming of not only the future but of the past and present, as well. Pairing media readings with works in science fiction and Indigenous studies, we will explore the role of indigeneity in the founding and tropes of European and settler science fiction, Native "slipstream" and eco SF, post-post-apocalyptic thinking, space travel and frontiers, Native pessimism, and

Indigenous technologies and epistemologies cast into the future. We will pay careful attention to the political stakes of these narratives and expression for Indigenous sovereignty and self-determination.

Requirements/Evaluation: attendance and participation, weekly 2- to 4-page written responses to class readings, short fiction prompts, and your partner's writing

Prerequisites: permission of instructor

Enrollment Limit: 10

Enrollment Preferences: American Studies majors and Science and Technology Studies concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AMST 142 (D2) STS 142 (D2)

Difference, Power, and Equity Notes: This course will underscore the ways in which structures like race, gender, sexuality, and colonialism are deeply imbedded in every form of cultural production, and will highlight how imagining the future otherwise has real impact and import in the lives and political existence colonized people.

Attributes: AMST Arts in Context Electives AMST Comp Studies in Race, Ethnicity, Diaspora

Not offered current academic year

STS 153 (S) Androids, Cyborgs, Selves (WS)

Cross-listings: STS 153 ENGL 153

Secondary Cross-listing

In this expository writing course, we will analyze and argue about how near-human and partly human bodies appear in fiction and film. When do these bodies improve the spaces in which they appear? When do they threaten them? How are they gendered, how are they raced, and why? What do they desire? Authors in different cultural and technological contexts have imagined not-quite-human selves for different ends and in different ways.

Together we will develop our ideas on these topics in clear, strong prose. We will also ask how artists have cast human identities into foreign materials and media, and study the distortions and revelations that result. During museum visits at WCMA, students will use examples of self-portraiture, electrified bodies, and aspirational bodies to explore the representation, imitation, and abstraction of selves. Because this is an expository writing seminar, we will spend half or more of our class time discussing and practicing writing skills.

Requirements/Evaluation: five response papers (500 words); four essays (1200-1500 words, each in two drafts); class participation

Prerequisites: none

Enrollment Limit: 12

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 153 (D2) ENGL 153 (D1)

Writing Skills Notes: This expository writing course is dedicated to facilitating real improvement in students' written work. Students write five response papers and four five-page essays (in two drafts) over the course of the semester, receiving substantial instructor feedback on all. Students will practice: drafting, revising, and responding to critique; writing appropriately for given occasions and audiences; grounding their writing in close, analytical reading; and acknowledging sources.

Not offered current academic year

STS 208 (S) Designer Genes (DPE) (WS)

Cross-listings: WGSS 208 ENGL 208 STS 208 AMST 206

Secondary Cross-listing

In this course, we explore cultural texts that attempt to come to terms with--or exploit--the revolution in contemporary genetics with a particular focus

on gender, race, class, and sexuality. The mapping of the human genome in 2001 opened incredible opportunities for medicine, law, and society, but it also, as Alice Wexler has written, "opened a vast arena for contests of power over what it means to be human, who has the power to define what is normal, [and] who has access to what resources and when." Wexler was writing before the final sequencing of the human genome. Now we have CRISPR technology, ushering in a new, more pressing set of ethical concerns. We are currently in the midst of a "global race to genetically modify humans," as the anthropologist Eben Kirksey has documented in his new book *The Mutant Project*. How will we come to define the human? Who gets to decide? Our writers and filmmakers make clear that genetic medicine cannot be thought apart from a profit-driven American health care system or family and gender dynamics. Joanna Rudnick's documentary *In the Family*, for instance, explores the personal and political issues associated with hereditary breast cancer and the patenting of genes. Octavia Butler's Afro-futurist novel *Dawn* explores black female sexuality, reproduction, and the survival of the species in her character's encounter with a genetically enhanced alien species. The film *Gattaca* shows us a fully realized dystopian society where genetically modified humans are the norm--a society that now "has discrimination down to a science." The transgender artist Tamara Pertamina, on the other hand, "hopes to decolonize the science of genetic engineering," as Kirksey has written, with her performance artist projects. Our texts come from a number of different genres, including the memoir, science fiction, film, documentary, art, and non-fiction writing at the intersections of science, medicine, philosophy, anthropology, and law.

Requirements/Evaluation: Two short analysis papers (4-5 pages), digital humanities Story Map assignment/art analysis, discussion posts (5 pages), short presentation, longer final researched paper/project (8-10 pages).

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Women's, Gender, and Sexuality Studies, American Studies, English majors

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 208 (D2) ENGL 208 (D1) STS 208 (D2) AMST 206 (D2)

Writing Skills Notes: Writing skills taught through a series of assignments evenly spaced throughout the semester: weekly p/f discussion posts; two four-to-five-page graded papers; one descriptive digital assignment (the Story Map); and a final researched paper (8-10 pages)--written in stages. Students receive critical feedback on written assignments through conferences and Google Docs and on final graded assignments within one week with sufficient time between assignments to improve the next.

Difference, Power, and Equity Notes: This course asks students to think deeply about questions of social justice in the context of the revolution in modern genetics. Race, class, gender, and sexuality all play a role in who has access to new life-saving technologies, and how these technologies are used. This course employs critical tools (feminist and queer theory, ethics' case studies, close reading) to help students question and articulate the social injustices at play in scientific research and bioengineering.

STS 209 (S) Philosophy of Science

Cross-listings: STS 209 PHIL 209

Secondary Cross-listing

It is a generally held belief, in our time and culture, that science is the best source of our knowledge of the world, and of ourselves. The aim of this course is to examine the origins, grounds, and nature of this belief. We will analyze and discuss various accounts of scientific method, structure and justification of scientific theories, scientific choice, change, and the idea that scientific knowledge is progressive in a cumulative way. The course will begin with the "received view" of science, advanced by logical empiricists, which assumes the objectivity and the rationality of science and argues that induction is the main scientific method. We will then discuss philosophies of science which emerged out of various criticisms of this view - especially those of Popper, Lakatos, Kuhn and Feyerabend - and the challenges to the assumptions of scientific objectivity and rationality their works provoked. This discussion will lead us to the relativist and social-constructivist views developed within contemporary science studies. Finally, we will analyze the current debate about cognitive credentials of science and about proper approaches to the study of science, which came to be known as "the science wars."

Class Format: short lecture component in each class

Requirements/Evaluation: class attendance, preparedness and participation; two short assignments; three five pages long papers, the last of which will be the final paper, due a week after the end of classes

Prerequisites: one PHIL course, or two STS courses, or declared major in a natural science, or permission of the instructor

Enrollment Limit: 19

Enrollment Preferences: Philosophy majors and prospective majors, then Div III majors.

STS 210 (S) Networks of Power: Technology in Human Affairs

Cross-listings: STS 210 SOC 210

Secondary Cross-listing

Do we control our technologies, or do our technologies control us? This course will explore different philosophies of technological progress, particularly the constructivist and determinist theories, by examining major technological systems that shaped modern society, such as the telegraph system, the electric grid, radio and television broadcasting, and the internet. Each of these innovations entailed the construction of a complex network designed to serve a mix of public and business interests, and each resulted in wide-ranging and often unforeseen changes to people's lives. Guided by pertinent readings in the history and philosophy of technology, we will look critically at the forms and consequences of technological change, seeking answers to a series of complex and important questions: Is the course of technological progress an inevitable byproduct of scientific and engineering advances, or is it contingent on social and political circumstances and choices? Does technological change reinforce the social and political status quo or challenge it? Are technological and social progress synonymous, or is there a tension between the two? One of the goals of the course will be to provide students with a more informed and critical perspective on the technological upheavals that continue to shape society today.

Class Format: hybrid

Requirements/Evaluation: attendance and participation, team assignments, two in-class exams, one 15-page seminar paper

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 210 (D2) SOC 210 (D2)

Not offered current academic year

STS 211 (F) Scientific Selves: Medicine, Technology, and Identity in Early Modern France

Cross-listings: STS 211 RLFR 210

Secondary Cross-listing

The early modern period has long been associated with scientific discovery and shifting ideology in France. From Copernicus on, thinkers such as René Descartes, Blaise Pascal, and Antoine Lavoisier helped advance the Scientific Revolution, which led to medical and technological

breakthroughs, as well as important advances in our understanding of the world and our solar system. This course examines the role that France played in pursuing such discoveries, as well as the ways newfound knowledge impacted notions of belonging and alterity. How did the Scientific Revolution and French colonization lead to the creation of social, cultural, and medical "others"? How did scientific discourse permeate verbal and visual expression and depict those who did not fit into normative paradigms of gender, sexuality, ability, ethnicity, belief, and culture? What avenues for self-expression and definition were available to those whom society excluded? What parallels can we see with twenty-first-century questions of political activism, social justice, sciences, and technology? To explore these questions, we will analyze literary texts, visual representations, and historical documents, such as medical treatises, scientific diagrams, and texts on new technologies. *Conducted in French.*

Requirements/Evaluation: active class participation, written reflections, quizzes, mid-semester presentation, and final paper

Prerequisites: strong performance in RLFR 105; RLFR 106; another RLFR 200-level course; placement exam; or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: French Majors and certificate students

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 212 (S) Ethics and Reproductive Technologies

Cross-listings: WGSS 212 PHIL 212 STS 212 SCST 212

Secondary Cross-listing

In her groundbreaking book, *The Tentative Pregnancy*, Barbara Katz Rothman writes that "[t]he technological revolution in reproduction is forcing us to confront the very meaning of motherhood, to examine the nature and origins of the mother-child bond, and to replace--or to let us think we can replace--chance with choice." Taking this as our starting point, in this course we will examine a number of conceptual and ethical issues in the use and development of technologies related to human reproduction, drawing out their implications for such core concepts as "motherhood" and "parenthood," family and genetic relatedness, exploitation and commodification, and reproductive rights and society's interests in reproductive activities. Topics will range from consideration of "mundane" technologies such as in vitro fertilization (IVF), prenatal genetic screening and testing, and surrogacy, to the more extraordinary, possibly including pre-implantation genetic diagnosis (PGD), post-menopausal reproduction, and post-mortem gamete procurement. Background readings include sources rooted in traditional modes of bioethical analysis as well as those incorporating feminist approaches.

Class Format: discussion

Requirements/Evaluation: active participation in class discussions, three or four short reflection papers, and two longer papers (5-7 and 7-10 pages)

Prerequisites: none, but introductory-level course in PHIL and/or WGSS recommended

Enrollment Limit: 19

Enrollment Preferences: WGSS and PHIL majors or prospective majors

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Unit Notes: meets Contemporary Value Theory requirement only if registration is under PHIL

STS 213 (S) Race, Gender, and the Alien Body: Octavia Butler's Science Fiction

Cross-listings: STS 213 WGSS 213 AFR 213

Secondary Cross-listing

Science fiction is a genre well known for its ability to envision new realities, and Octavia E. Butler (1947-2006) is among the most highly regarded science fiction writers. Butler's uncanny ability to imagine the future anew and to merge those ruminations with her experiences as an African American woman provide powerful commentary on--and often disrupt--modern understandings of race, gender, and human embodiment. We will explore questions such as: What role does 'gender' play in Butler's fiction? How does Butler's treatment of the 'alien' cause us to reconsider what it means to be human? How does Butler incorporate 'race' and the concept of 'other' into her fiction, and how do these techniques help us situate contemporary discussions of a post-race society? We will examine the relationship between Butler's visions for the future and what her narratives of future worlds invariably suggest about the present. We will read key texts including the best-selling text *Kindred* (1979), the haunting dystopian novel *Parable of the Sower* (1994), the popular vampire text *Fledgling* (2005), and the collection *Bloodchild and Other Stories* (1996). We will also explore contemporary engagement with Butler's work including the relationship between the main character from her book *Dawn* (1987), and Henrietta Lacks, the African American woman from whom the immortal cell line (HeLa) used for medical research derives. This tutorial will engage Octavia Butler's work broadly, and with particular attention to how the concepts 'race,' 'gender,' 'alien' and 'body' are interrogated in her writings.

Requirements/Evaluation: attendance, paired weekly reflection/response papers, a 5- to 7-page creative writing assignment, and a final essay of 10 pages

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: students with interests and/or prior coursework in Africana Studies and Women's, Gender, and Sexuality Studies

Expected Class Size: 10

STS 214 (S) Understanding Social Media

Cross-listings: STS 214 SOC 212

Secondary Cross-listing

Over just the last twenty years--beginning with Friendster and MySpace and continuing through Facebook and Twitter, Snapchat and Instagram--the rise of social media has had a profound influence on the way we live. It has given a new rhythm to our daily routines, shaped the way we inform ourselves and converse with others, and transformed media and entertainment, politics and public discourse, and many other aspects of culture. This seminar course will undertake a broad and critical examination of social media, looking at it from historical, economic, legal, social, and phenomenological perspectives. The topics addressed will include social media's effects on self-image and self-formation, its influence on protest movements and political campaigns, its use as a conduit for news and propaganda, and the way commercial interests and technical characteristics have shaped its design and use. Through pertinent readings and lively discussions, and drawing on students' own experiences with social media, the course will illuminate social media's benefits and drawbacks while providing a foundation for thinking about possible legal, regulatory, and personal responses to this far-reaching and still unfolding social phenomenon.

Class Format: hybrid

Requirements/Evaluation: attendance and participation, team assignments, two 5-page writing assignments, final exam

Prerequisites: none

Enrollment Limit: 15

STS 215 (F) Viral Inequality: Power and Difference in Pandemics (DPE)

Cross-listings: GBST 217 STS 215

Primary Cross-listing

From contested data to controversial containment strategies, the shape and course of pandemics are influenced at every level by the question: *Who matters? Whose lives* are prioritized and protected? *Whose expertise* is made actionable, and why? Focusing on the uneven distribution of risk and care during pandemics, this course explores how global health emergencies are not states of exception, but rather events that lay bare the priorities and interests of their host societies. Our investigation into pandemics--including Black Death, cholera, "Spanish" flu, HIV/AIDS, Ebola and novel coronaviruses--will provide a critical entry point into understanding the social, political, and economic processes that shape health interventions and outcomes, and their divergences along lines of social difference. We will ground our discussion and analysis using key concepts in Science & Technology Studies, while drawing from critical medical anthropology, disability studies, theories of capitalism and disaster studies to enrich our conversation.

Class Format: Online seminar

Requirements/Evaluation: Several short essays and reflection papers

Prerequisites: None, open to all students

Enrollment Limit: 12

Enrollment Preferences: If overenrolled, preference will be given to first-years and sophomores

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

GBST 217 (D2) STS 215 (D2)

Difference, Power, and Equity Notes: This course takes an intersectional approach to understanding how global pandemics unfold. It will emphasize how power dynamics and social differences shape responses to, and outcomes of, health emergencies. Readings in social and critical race theory are designed to give students a deeper appreciation of these issues.

Attributes: PHLH Social Determinants of Health

Not offered current academic year

STS 221 (F) History of Photography

Cross-listings: STS 221 ARTH 221

Secondary Cross-listing

This lecture course will examine the history of photography from its beginnings in the 1830s to the present, from the first grainy black and white images to the work of contemporary artists using cutting-edge photographic technologies. We will examine photographs used for documentary, scientific, and aesthetic purposes, and we will trace the medium's emergence and acceptance as a fine art. We will also explore photography's physical and conceptual characteristics as a medium, paying particular attention to its uniquely intimate and frequently contested relationship to "the real." By the end of the course, students will have a broad understanding of photography as a unique medium within the history of art and knowledge of the theoretical frameworks that developed alongside that history.

Requirements/Evaluation: three to four short papers, quizzes, online presentations.

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: art history majors

Expected Class Size: 14

Grading: yes pass/fail option, no fifth course option

STS 226 (F) The Art of Natural History (WS)

Cross-listings: STS 226 ARTH 229

Secondary Cross-listing

The scientific revolutions of the eighteenth and nineteenth centuries fundamentally changed the way the natural world was seen and celebrated, classified and organized, displayed and manipulated. New discoveries in the natural sciences and competing theories of evolution intertwined with shifting conceptions of natural history, of nature, and of humankind's proper place within it. This course will investigate the links between art and natural science. It will seek to understand the crucial role of the visual arts and visual culture in the study and staging of natural history from the eighteenth century to the present. We will pursue the questions that preoccupied the artists themselves. How should an artist react to new ecological insights? What is the proper artistic response to newly discovered flora and fauna? What is the role of aesthetics in the communication of knowledge? How are those aesthetics connected to ethics? How might a drawing of a plant convey information that is different from that of a photograph or a glass model of a plant? How might a theatrical diorama frame a scientific idea in a way that is different from a bronze statue? Students will seek to understand the myriad connections between seeing, depicting, and knowing, to question long-held assumptions about the division between "objective" science and "subjective" art, and to recognize that art has the ability not only to interpret, disseminate, and display scientific knowledge, but to create it as well.

Class Format: There will be field trips if travel is allowed.

Requirements/Evaluation: Five 5 page essays, five 1-2 page responses to partner's essays, critical conversation.

Prerequisites: None.

Enrollment Limit: 8

Enrollment Preferences: Sophomores with an interest in art history, art studio, ecology, environmental studies, and science and technology studies, juniors with these same interests, then art history majors, and science and technology majors, in that order.

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 226 (D1) ARTH 229 (D1)

Writing Skills Notes: This course will require students to write a short paper or a critical response to their partner's paper each week. Students will receive critical feedback on both form and content from their professor and from their peers.

STS 227 Death and Dying (WS)

In this course we will examine traditional philosophical approaches to understanding death and related concepts, with a special focus on the ethical concerns surrounding death and care for the dying. We will begin with questions about how to define death, as well as reflections on its meaning and function in human life. We will move on to examine ethical issues of truth-telling with terminally ill patients and their families, decisions to withhold or withdraw life-sustaining treatments, the care of seriously ill newborns, physician-assisted suicide, euthanasia, and posthumous interests. In addition to key concepts of death, dying, and terminal illness, we will develop and refine notions of medical futility, paternalism and autonomy, particularly within the context of advance directives and surrogate decision making.

Class Format: discussion

Requirements/Evaluation: class attendance and participation, periodic short essays (3 or 4 total, 2-3 pages each), two mid-length papers (5-7 pages and 7-10 pages, respectively); possible experiential learning component

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: PHIL majors, PHLH and STS concentrators, and students with curricular need for the course.

Expected Class Size: 15-19

Grading:

Distributions: (D2) (WS)

Writing Skills Notes: Students will write periodic short papers (2-3 pages each), a midterm paper (5-7 pages) and a final paper (7-10 pages). Short papers focus on concepts, arguments, and writing skills needed in the midterm and final papers, in which students are expected to describe and evaluate arguments from assigned readings, and to present clear and effective arguments in support of their own ethical positions. Students receive feedback on all papers and have the opportunity to revise midterm and final papers.

STS 228 (F) Feminist Bioethics (WS)

Cross-listings: PHIL 228 STS 228 WGSS 228

Secondary Cross-listing

In this course we will explore the ways in which feminist approaches to moral thinking have influenced both the methodology and the content of contemporary bioethics. The first portion of the course will address the emergence of the "Ethics of Care," critically assessing its origins in feminist theory, its development within the context of the caring professions, and its potential as a general approach to bioethical reasoning. The second portion of the course will use feminist philosophy to inform our understanding of the ways in which gender structures the individual's interactions with the health care system. To do this we will explore topics that might traditionally be considered "women's issues" in healthcare, such as medicine and body image (e.g., cosmetic surgery, eating disorders), reproductive and genetic technologies, and research on women and their health care needs. In addition we'll also look at feminist analyses of topics that traditionally have not been regarded as "gendered," such as resource allocation and end of life issues.

Class Format: discussion

Requirements/Evaluation: active participation in class discussions; periodic short papers (2-3 pages); midterm and final paper (5-7 and 7-10 pages, respectively); and one oral presentation

Prerequisites: none, although previous coursework in WGSS is desirable

Enrollment Limit: 19

Enrollment Preferences: prospective and declared majors or concentrators in PHIL, WGSS, STS, and PHLH, especially those who need the course to satisfy major or concentration requirements

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Unit Notes: meets Contemporary Value Theory requirement only if registration is under PHIL

STS 229 (F) The Panopticon: Surveillance, Power, and Inequality (DPE)

Cross-listings: STS 229 SOC 228

Secondary Cross-listing

Surveillance is built into the very fabric of modern life. From CCTV cameras, to supermarket loyalty cards, to the massive gathering of personal data on social media sites, people participate in today's "surveillance societies" just by doing everyday activities. This course uses the metaphor of the "Panopticon" as a doorway to engagement with traditional and new forms of surveillance. First described by philosopher and social theorist Jeremy Bentham, the Panopticon is a physical structure that enables one observer to see all inhabitants without those inhabitants knowing when they are being observed. In *Discipline and Punish*, Michel Foucault famously expanded thinking on the Panopticon as a metaphor for the "disciplinary" power that lies at the heart of inequality in modern society. Since Bentham and Foucault's time, however, surveillance technologies have changed significantly. To what extent does the concept of the Panopticon give us purchase on today's surveillance societies? How does watching people with new digital and algorithmic surveillance technologies shape the exercise of power and, in turn, (re)produce forms of inequality? Can privacy, convenience, and safety ever be truly balanced? Topics include: the historical origins and expansion of surveillance in modern societies, the emerging total surveillance state in Baltimore City, and whether social media is turning us all into self-surveillance addicts.

Class Format: This class will be taught online only with both synchronous and asynchronous components. Students will be asked to attend one synchronous video meeting per week. The asynchronous portion will involve discussion of readings and video lectures.

Requirements/Evaluation: participation, reading responses, midterm essay, final paper

Prerequisites: none

Enrollment Limit: 16

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 229 (D2) SOC 228 (D2)

Difference, Power, and Equity Notes: This course explores how power is distributed unequally through the mechanism of surveillance technologies, particularly in regard to racial and class differences. Among other topics, it will consider the concrete case of surveillance in Baltimore City and the question of if and when surveillance is appropriate there, given the city's ongoing crisis of citizen and police violence. Students will discuss police surveillance in a context shaped by racial segregation and class inequality.

Not offered current academic year

STS 231 (S) Africa and the Anthropocene (DPE)

Cross-listings: STS 231 ENVI 231 AFR 231

Secondary Cross-listing

Despite its low contributions to global carbon emissions, the continent of Africa is predicted to experience some of the worst effects of climate change. This interdisciplinary course investigates the causes and consequences of this troubling contradiction. It positions the African continent as an important site for understanding how legacies of empire, racial and gendered inequality, resource extraction, and capital accumulation impact contemporary global environmental politics. Students will engage theoretical texts, reports from international organizations, films, novels, and web-based content. Topics include: humanism/post-humanism; migration and displacement; representations of conflict; and sustainable development.

Requirements/Evaluation: Assignments include: short written commentaries, current event analysis, presentations, and a final analytical essay

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Environmental Studies majors and concentrators

Expected Class Size: 19

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 231 (D2) ENVI 231 (D2) AFR 231 (D2)

Difference, Power, and Equity Notes: Africa and the Anthropocene considers inequity in environmental politics from the vantage of the African continent. Through selected readings and classroom discussions students will tackle questions of power, racial and gendered difference, empire, and economic stratification. The course contributes to the DPE requirement by helping students to develop skills to better analyze abiding challenges in global society.

STS 235 (F) Innovation, Gender, and Sustainable Development (DPE)

Cross-listings: WGSS 235 STS 235 SCST 235

Secondary Cross-listing

Technological innovation is vital for communities, businesses and nations seeking to adapt to a globalized, competitive world. But any innovation also has impacts on all three dimensions of sustainability: the ecological, the economic, and the social. For example, such impacts may either exacerbate or mitigate gender inequalities. This course uses a gender studies lens to study innovation in the development of sustainable practices in the present and for the future. We will look at the impact of gender stereotypes on innovation, including the co-construction of gender and technology. Since the course is taught by a visiting scholar from Sweden, a particular focus will be the EU's policy of "Gender Mainstreaming" which requires all proposed policies to be assessed for their impact on gender inequality. The course looks at technical development as necessary and valuable, while investigating power relations and taken-for-granted views embedded in the particular forms it takes. The course will rely largely on analysis of case studies, and students will be encouraged to apply the analytic tools of the course to develop US-based case studies of their own.

Class Format: combination of lecture and discussion

Requirements/Evaluation: reading journal, mid-term exam, and a final research project

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Women's, Gender and Sexuality Studies majors, Environmental Studies majors, students who have taken WGSS 101

Expected Class Size: 10

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 235 (D2) STS 235 (D2) SCST 235 (D2)

Difference, Power, and Equity Notes: The course focuses specifically on tools for analyzing the potential differential impacts of sustainable development projects along gender lines.

Not offered current academic year

STS 236 (F) Aesthetics of Automation: From the Mechanical Turk to A.I.

In this course we will study the changing aesthetics of automation in European and North American cultural contexts from the 18th century to the present. We will also explore the wider cultural and material effects of automation (as imagined and as implemented) upon public and private spheres, craftsmen and courts, wage-laborers, artists, and inventors. The objects we examine will be as various as the dulcimer-playing android presented as a gift to Marie Antoinette, IBM's Deep Blue, and singer-actor Janelle Monae's android alter-ego, Cindi Mayweather. Our primary sources will consist of visual representations in print and film as well as literary and commercial writing; our secondary sources will consist of essays in aesthetic theory, cultural studies, science and technology studies, and the history of technology.

Requirements/Evaluation: mid-term and final essays, an annotated bibliography, discussion participation, and brief in-class writing exercises.

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: STS concentrators

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

STS 239 (S) The Ethics of Artificial Intelligence

Cross-listings: STS 239 PHIL 239

Secondary Cross-listing

We will someday live alongside artificially intelligent beings who equal or exceed us. Commentators ranging from technology magnates to physics geniuses-not to mention decades of apocalyptic science fiction-have urged that that future is nothing short of an existential threat to human beings. Whether this is hyperbole or wise prognostication, it cannot be denied that the rise of AI will be a tectonic shift for culture, technology, and our fundamental sense of ourselves. When AI is fully realized, it is likely to be amongst the most important things to happen to our species. Some challenges we face are broad and about the future, though perhaps not the far future. How can we ensure that AI's will act morally? Is a world with AI's overall better or worse for us? How do we create legal and policy frameworks that cover a new kind of thinking being? If they are conscious, will AI's have dignity and rights? Other questions are pressing and immediate: Artificial intelligence techniques are used today to help decide whether someone gets a bank loan, is eligible to be released on bail, or in need of particular medical treatment. And right now there are autonomous vehicles deciding how to behave in traffic, and autonomous weapons capable of delivering lethal force. Is it moral for us to pass along these sorts of decisions to AI's? What if they are biased, unbeknownst to us? What if they are more fair? In this course we will engage ethical questions surrounding the seeming inevitability of AI.

Class Format: mixture of lectures and discussion

Requirements/Evaluation: four short (3- to 4-page) writing assignments and a final essay (8-10 pages)

Prerequisites: none

STS 240 (F) Great Astronomers and Their Original Publications (WS)

Cross-listings: ASTR 240 STS 240 HSCI 240 LEAD 240

Secondary Cross-listing

In this course we will study some of the greatest figures in astronomy and consider their leadership in advancing progress in the field. We will consider their lives and works, especially as represented by original copies of their books and other publications. These great astronomers include: 16th century, Nicolaus Copernicus (heliocentric universe); Tycho Brahe (best pre-telescopic observations); 17th century, Galileo (discoveries with his first astronomical telescope, 1610; sunspots, 1613; *Dialogo*, 1632); Johannes Kepler (laws of planetary motion, 1609, 1619); Johannes Hevelius and Elisabeth Hevelius (atlases of the Moon and of stars, 1647, and 1687); Isaac Newton (laws of universal gravitation and of motion, 1687); 18th century, Edmond Halley (*Miscellanea curiosa*, eclipse maps, 1715, 1724); John Flamsteed and Margaret Flamsteed (*Atlas Coelestis*, 1729); and William Herschel and Caroline Herschel (1781, 1798). Also, from more recent times in which original works are often articles rather than books: 20th century, Albert Einstein (special relativity, 1905; general relativity, 1916); Marie Curie (radioactivity); Cecilia Payne-Gaposchkin (hydrogen dominating stars, 1929), Edwin Hubble (Hubble's law, 1929); Vera Rubin (dark matter, 1970s); Jocelyn Bell Burnell (pulsar discovery, 1968); and 21st century: Wendy Freedman (Universe's expansion rate, 2000s). First editions will be available in Williams's Chapin Library of rare books, and facsimiles or digital copies will be provided for remote learning. We will also consider how such original materials are collected and preserved, and look at examples from the wider world of rarities, such as a leaf from the *Gutenberg Bible* (c. 1450) and a Shakespeare *First Folio* (1623, with a discussion of astronomical

references in Shakespeare's plays). We evaluate a trove of books and papers about historic transits of Venus. We discuss matters of fraud and authenticity, especially the case of a purported *Sidereus Nuncius*, shown to be a modern construction. The course will be taught in collaboration between an astronomer and a rare books librarian, with remote lectures by experts from around the world.

Class Format: Meeting on campus in the Chapin Library classroom (Sawyer 452) or remotely; students who are not on campus can visit the original books at a later time/year.

Requirements/Evaluation: class participation, two 5-page intermediate papers, and a final 15-page paper; student choice of additional readings from a provided reading list

STS 243 (F) Epidemic! A Critical History of Medicine, Science and Power (DPE)

The world after COVID won't look the same. It has disrupted our lives and laid bare the racial, gendered and economic inequalities in our health system, and the deficiencies of political and public health institutions, as it continues to claim more victims. For centuries, communicable diseases ravaged different communities and led to massive mortality and morbidity. The death toll disrupted social organizations, destroyed families and communities, and challenged medical institutions and State authority. Medical thought and practice struggled to make sense of contagion, disease factors and treatment; State authorities were faced with demands to intervene, protect and support the sick, all while its own institutions were ravaged by diseases; race, gender, sexuality and other human differences were deployed to justify why some died more, and to show that, for the State, some lives mattered more than others. In this course, we trace how epidemics influenced the history of medicine, science and technology, and how they impacted social structures around the world. We ask about the meaning of contagion, how medical and scientific thought understood diseases. We investigate the history of quarantines and isolations. We ask about race, gender and sexuality and their place in the making of epidemics, and we investigate the history of colonialism and its connection to changing disease landscape. Tracing epidemics from the nineteenth century plagues to COVID, the course investigates the place of epidemics and contagion in medical and scientific thought, how they relate to race, gender, sexuality and colonialism, and how they changed and shaped the world we live in.

Class Format: The class will be hybrid with once a month F2F meeting outside. All other meetings will be conducted remotely

Requirements/Evaluation: 2 response papers (3-5pages each) + final project (could be a 10-15p paper or creative project of any kind)

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Concentrators, followed by seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: The course addresses how epidemics, and the way medical and political institutions dealt with them, were shaped by issues of race, gender, sexuality and human difference, and how epidemics in turn impacted perception of race, gender and sexuality. Students will engage with a number of theories and methods related to difference, such as critical race theory, postcolonial theory and queer theory.

Not offered current academic year

STS 250 (F) Environmental Justice (DPE)

Cross-listings: STS 250 ENVI 250

Secondary Cross-listing

How are local and global environmental problems distributed unevenly according to race, gender, and class? What are the historical, social and economic structures that create unequal exposures to environmental risks and benefits? And how does inequity shape the construction and distribution of environmental knowledge? These are some of the questions we will take up in this course, which will be reading and discussion intensive. Through readings, discussions, and case studies, we will explore EJ in both senses. Potential topics include: toxics exposure, food justice, urban planning, e-waste, unnatural hazards, nuclearism in the U.S. West, natural resources and war, and climate refugees. Occasionally, community leaders, organizers, academics, and government officials will join the class to discuss current issues.

Requirements/Evaluation: several short essays, final essay

Prerequisites: ENVI 101 or permission of the instructor

Enrollment Limit: 12

Enrollment Preferences: juniors, seniors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 250 (D2) ENVI 250 (D2)

Difference, Power, and Equity Notes: This course will explore how unequal power leads to environmental injustice. Specifically, we will analyze how local and global environmental problems are distributed unevenly according to race, gender, and class. This is a service-based learning course, and students will hone skills to address environmental injustices.

STS 251 Science and Militarism in the Modern World (WS)

In 1961, United States President Dwight D. Eisenhower warned of the global dangers of what he called the "military-industrial complex." In this course, we will interrogate the military-scientific complex, or the imbrication of militarism and scientific knowledge. This tutorial takes up a number of environmental themes, including the role of environmental science within military campaigns, conservation and environmental racism, nuclear waste and ecological contamination. Surveying conflicts from World War II through the present-day War on Terror, this course will investigate how environmental scientists, politicians, soldiers, activists, and artists have grappled with the intertwined legacies of science and militarism. Students will engage a range of textual materials including books, films, photographs, and news reports.

Requirements/Evaluation: Course requirements include bi-weekly response papers (5-7 pages) and tutorial discussions.

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: ENVI and STS majors and concentrators

Expected Class Size: 10

Grading:

Distributions: (D2) (WS)

Writing Skills Notes: Over the course of the semester, students will write 5 papers (5-7 pages each). They will receive bi-weekly detailed feedback on their writing from the professor and their tutorial partner. This feedback will include advice on strengthening their argumentation and use of textual evidence, as well as grammar and usage suggestions/corrections. Students will be graded on the portfolio of papers, with specific attention to how they have incorporated feedback in each subsequent paper.

STS 261 (F) Science and Militarism in the Modern World

Cross-listings: STS 261 ENVI 261

Secondary Cross-listing

In 1961, United States President Dwight D. Eisenhower warned about the global dangers of what he called the "military-industrial complex." In this course, we will interrogate the military-scientific complex, or the imbrication of militarism and scientific knowledge. Surveying conflicts from World War II through to the present-day War on Terror, this course will consider how empire, networks of expert knowledge, resource extraction, environmental contamination, and land degradation have shaped the modern world. Students will engage a range of textual materials including books, films, photographs, and news reports. Course requirements include weekly writing assignments and participation in small group discussions.

Class Format: This course adopts a tutorial model. Students will be divided into 5 groups of 2. Each week the groups will meet with me. Each pair will include one "presenter," who shares a 4-6 page paper responding to the week's theme, and one "respondent," who will offer a 2-3 page response to the presenter's paper. The roles of presenter and respondent will alternate each week. Each student will produce 5 papers as "presenter" and 5 papers as "respondent."

Requirements/Evaluation: Each student will produce five (4-6 page) papers as "presenter" and five (2-3 page) papers as "respondent." Grades will be issued based on the portfolio of papers and active participation in discussions.

STS 269 (F) Mindfulness Examined: Meditation, Emotion, and Affective Neuroscience (DPE) (WS)

Cross-listings: REL 269 STS 269 ASIA 269 ANTH 269

Secondary Cross-listing

This course provides a social analysis of and practical engagement with mindfulness in the US today. It considers the modern applications of Buddhist meditation as a tool to improve awareness of the related processes of mind, behavior, and emotions within landscapes structured by racism, sexism, and other systemic inequalities. We consider how mindfulness relates to Buddhist discourses as well as the rapid rise of fields like contemplative neuroscience, affective neuroscience, and integrative neurobiology. How can mindfulness help people communicate more effectively--be they doctors or patients, teachers or students? How has the exploding research on mindfulness and meditation since 2000 help us understand the intersection of human emotions, behaviors, and relationships? We train in a variety of Buddhist meditation practices through the semester including forest bathing, mindfulness, compassion meditation, while unpacking the subjective experience of our minds and emotions first-hand. Students will be asked to train in mindfulness practices the entire semester while studying models of the mind developed by research in clinical and evolutionary psychology, affective neuroscience, and interpersonal neuroscience.

Requirements/Evaluation: weekly tutorial papers and discussion

Prerequisites: A prior class or some experience with meditation is recommended

Enrollment Limit: 10

Enrollment Preferences: ANTH, SOC, REL, ASST majors; PHLH, STS concentrators; seniors and juniors

Expected Class Size: 10

Grading: yes pass/fail option, no fifth course option

STS 272 (S) The History and Mythology of Chinese Scripts

Cross-listings: STS 272 CHIN 272 COMP 272

Secondary Cross-listing

Written scripts using what are most often called "Chinese characters" have an attested history of over 3000 years and have been used all over the world to represent a range of different languages. In this course we will examine the history and development of Chinese characters from their earliest extant examples on sacrificial animal bones to their often amusingly misguided use for contemporary tattoos. We will look at historical evidence and mythology, carefully constructed grammatological studies and wild orientalist imaginings. Some topics will include: comparisons between the development of Chinese characters and other written scripts, the relationship between Chinese characters and the languages of China, the use of Chinese characters to write non-Chinese languages, Chinese characters in art and calligraphy, theories of connections between Chinese characters and Chinese philosophy and literature, issues of education and literacy, and the future of Chinese characters in the digital age.

Class Format: discussion

Requirements/Evaluation: quizzes, short writing assignments, a midterm, and a final exam

STS 273 (F) Politics without Humans?

Cross-listings: ENVI 273 STS 273 PSCI 273

Secondary Cross-listing

Are human beings the only beings who belong in politics? And is political involvement a unique or defining aspect of what it means to be human? Such questions are increasingly complex as the boundaries of "the human" become blurred by the rise of artificial intelligence, robotics, and brain implants: shifting attitudes towards both animal and human bodies; and the automation of economic and military decisions (buy! sell! attack! retreat!) that used to be the prerogative of human actors. How do visions of politics without humans and humans without politics impact our thinking about longstanding questions of freedom, power, and right? Can and should the link between humans and politics survive in an age in which "posthuman" or "transhuman" entities become central characters in the drama of politics? This class will consider these questions through readings, films and artifacts that bring political theory into conversation with science fiction, popular literature on the so-called "singularity" (the merger of humans with computers), science and technology studies, evolutionary anthropology, "new materialist" philosophy, and feminist theory.

Requirements/Evaluation: three 5- to 7-page papers, regular Glow posts, class participation

Prerequisites: please note that this is an introductory-level course with no prerequisites; first-year students and those with no background in political

theory are welcome, as are more experienced students

STS 276 Music and the Internet

Since the release of Napster in 1999, the Internet's relationship with music has been sometimes elevating and sometimes adversarial. While it has granted listeners access to broad music libraries and musicians access to large audiences, the Internet has also exposed listeners to legal action, taxed artists with dwindling royalties, and disrupted and reshaped the recording and publishing industries. This course examines how the Internet has affected music at every level, from its creation to its distribution and consumption. Topics will include music written for online spaces, musical performances that take place online, music and online gaming, live music that refers to the Internet, the financial and philosophical background of music file formats, changing notions of musical ownership, censorship of music online, music's place in memes, and the user experience in (and attitudes toward music projected by) services like iTunes, YouTube, Spotify, and musically.

Class Format: discussion

STS 280 (F) Silicon Valley: Digital Transformation and Democracy (WS)

Cross-listings: PSCI 280 STS 280 POEC 280

Secondary Cross-listing

Nearly every country in the world seeks to drive economic growth by promoting digital technologies. The universal model is Silicon Valley. In this tutorial, students will examine the origins of the Silicon Valley model and other countries' attempts to emulate it. Departing from "just so" stories of technological determinism, we take up the lens of comparative political economy to investigate the politics that allowed US tech firms to shape economic policy to meet their interests. It is no accident that tech became a symbol for economic growth in the 1970s, precisely when it also began to build powerful alliances in Washington. After investigating the origins of the Silicon Valley model, we trace attempts to adopt it in Europe and Asia, which highlight the model's political contingencies and some of the more salient conflicts over the tech sector. We focus on the ways in which the Silicon Valley model can threaten social welfare through economic inequality and precarious employment, and engage a variety of perspectives, including workplace ethnography, to examine these threats, as well as potential regulatory responses. The course concludes by considering what policies could be appropriate for supporting, while also regulating, the tech sector in the twenty-first century.

Requirements/Evaluation: Five 5-page papers; five 2-page responses; participation

Prerequisites: One introductory course in political science and/or permission of the instructor.

Enrollment Limit: 10

Enrollment Preferences: Preference will be given to sophomores or juniors majoring in a Division II field

TUT Section: T1 TBA Sidney A. Rothstein

STS 281 (S) Religion and Science

Cross-listings: STS 281 REL 281

Secondary Cross-listing

In the last few years the deniers of religion such as Dennett and Dawkins have forcefully argued that recent scientific developments show the degree to which religion is irrelevant to a modern understanding of what it means to be human. Atran and Boyer have made a similar case, arguing that recent progresses in our understanding of human cognition demonstrate that religion is a purely natural phenomenon that has little if any value for human development. Theologians such as Haught and Polkinghorne have rejected these views, arguing that a proper understanding of scientific developments such as evolution and quantum mechanics suggests religiously relevant views of the universe and our place therein. This course considers these competing perspectives while offering critical reflections on the views and categories involved in these controversies. We also examine the works of reflective naturalists such as Bellah and Herrstein, who argue that far from showing the irrelevance of religious ideas and practices, the new mind and life sciences suggest a much more nuanced view according to which religion is both grounded in the natural world and central to the development of human culture. Hence, it cannot be easily discounted as irrelevant to a scientifically informed understanding of what it means to be human.

STS 301 (F) Social Construction (DPE)

Cross-listings: COMP 315 WGSS 302 REL 301 SOC 301 STS 301 SCST 301

Secondary Cross-listing

"Social construction" can often seem like the great collegial insight. By now, you've all heard that categories such as race, gender, and sexuality are in some sense not part of nature, but instead are created and maintained socially or culturally. The idea of social construction has been vital to critical race theory and queer theory, and, in this course, we will push ourselves into philosophy of science to see whether or not these same insights apply to everything. If we know that "Whiteness," "heterosexuality," and "masculinity," for instance, are all socially constructed, we will ask if the same is true of "electrons," "money," "the solar system," and "climate change." Can it be that all of our reality is socially constructed? Or does social construction have limits? If so, what are they? We will also ask more fundamental questions, such as: What does it mean to say something is socially constructed? How does social construction relate to claims that an aspect of the world is "real" or "not real?" Is social construction a theory about language, power, culture, societies, human perceptions, or the limits of science? What kind of political, ethical, ontological, or epistemological work do theories of social

construction do? We will begin with different accounts of the social construction of race, gender, and sexuality. In the second part of the course, we will dig deeper into philosophical debates about social construction as such. Then we will explore constructionism about natural science. In the last part of the course, we will change gears and explore look at cutting-edge work in the theory of social science aimed at explaining the construction and ontology of social worlds. The class will culminate in a project in which students will put their social construction theories into practice.

Requirements/Evaluation: regular attendance and participation, short weekly reflection papers, a 10-page research paper, and final project

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Religion majors, then majors from cross-listed departments

STS 302 (S) Race, gender and science: A Black, Brown, and Queer inquiry into Science and Technology Studies (DPE)

Cross-listings: HIST 390 STS 302

Primary Cross-listing

The protests that followed the murder of George Floyd have brought to the fore the realities of racism and violence that Black, Indigenous and People of Color experience daily. They also motivated a long overdue reckoning in various fields and institutions with the legacy of structural racism, and of colonial history. The history of modern science, technology and medicine is intractably connected to questions of race, gender, sexuality and colonialism. Scientific knowledge has been influenced by debates related to human difference and to colonialism, and has also contributed to the production of ideas around difference and distinction as well as around equality and equity. In this course, we will take a deeper look into different episodes in the history of modern science, technology and medicine, and will engage in a Black, Brown and Queer reading and investigation of science and technology. The course will offer a deep historical and methodological introduction to STS, as well as to a number of critical disciplines, such as Critical Race Theory, Postcolonial and decolonial theory, queer theory, in relation to science, technology and medicine. This course can serve as an alternative to STS 101.

Class Format: The course will be held remotely

Requirements/Evaluation: 2 response papers (3-5pages each) + final project (could be a 10-15p paper or creative project of any kind)

Prerequisites: Previous courses in STS, history, CRT, WGS, or similar disciplines is preferred but not necessary.

STS 308 (S) What is Power?

Cross-listings: REL 308 STS 308 SOC 308 PSCI 306

Secondary Cross-listing

What is power? Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures? What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or agency? Or ideology? This course begins with the observation that power is often described as a causal relation--an individual's power is supposed to equal their capacity to produce a change in someone else's behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: **critical theory about power** and **philosophy of science about cause and effect**. We will trace classic philosophical accounts of power and causation (in European and Chinese philosophy), as well as more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt, Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Hobbes, Hume, Locke, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, Sunzi, and Max Weber.

STS 311 (S) Global Health in the Transpacific (DPE)

Cross-listings: AMST 352 STS 311 ASIA 352

Primary Cross-listing

East is East, and West is West, Rudyard Kipling famously wrote in 1889, but never has this been true. Just as war, imperialism, and transnational flows of capital move people, cultures, and ideas across the Pacific, similar patterns of migration and mobility shape the transmission of illness and disease as well. This course explores global health and disease control as sites of domination and resistance in the Pacific Rim. Articulating the linkages between Asia/America, we will look at the racialization of people and pestilence during the third plague pandemic in Hong Kong and San Francisco, malaria control projects in colonial Southeast Asia, and the rise of modern genomics out of the ashes of Hiroshima and concern over radiation risk, and other cases, to understand how disregard for Asian bodies has shaped the development of modern medicine and public health. At the same time, Indonesia's claim of "viral sovereignty" to protect their biological specimens from Western intellectual property regimes and Hmong refugees' resistance to biomedical intervention in their struggles with mental illness offer counterpoints to Western hegemony. This course provides a critical examination of biosecurity as modern geopolitical struggle and puts Asia-Pacific and the Pacific Rim at the center of our exploration of global health.

Requirements/Evaluation: Reading responses, two short review essays, and one seminar paper

Prerequisites: Previous coursework in anthropology and sociology, some knowledge of the Asia-Pacific region.

Enrollment Limit: 12

Enrollment Preferences: Juniors and Seniors, STS concentrators. If overenrolled, students will submit a short paragraph explaining their interest in the course.

STS 316 (F) Social Ontology

Cross-listings: STS 316 REL 316

Secondary Cross-listing

What is society? What is the social world made of? The obvious answer--individual people--was for a long time dominant in the social sciences. Indeed, many theorists argued that there was no such thing as society distinct from individual humans and their intentional actions. While this mode of theorizing had some advantages, it has recently fallen out of vogue because of its inability to explain group norms, institutions, corporations, and other collectives. Explanations at the individual level are not necessarily incorrect, but rather philosophers have increasingly come to see them as incomplete. Society seems to more than an aggregate of individuals. Hence, philosophers have increasingly turned to questions of social ontology and produced fresh theories about the nature of the fundamental constituents of the social world. We will explore this research, but with the added intuition that looking beyond humans to other social animals can provide a fresh theoretical vantage. **We will set out from the idea that the social world is composed not just out of humans, but also out of materialized signs produced by social animals** (e.g., a no-smoking sign or an ant's chemical trail). This seminar will offer an advanced survey of current debates about the ontology, methodology, and aims of the humanities and social sciences. We will address questions such as: *Is there a difference between explaining and understanding social actions? Should explanation in the humanities and social sciences follow the model of explanation in the natural sciences, or are there peculiarities about social phenomena that demand a different approach? What are social structures, practices, norms, institutions? How might social structures exist over and above individuals? Do social groups have agency in their own right? What are social kinds and what is their relationship to natural kinds? How do debates in the social sciences look different if we attend to other social animals and their materialized signs?* Course readings will come from a variety of areas including: sociology, semiotics, feminist theory, philosophy of science, and philosophy of mind. When possible, we will supplement these with readings on research into animal behavior.

Requirements/Evaluation: Attendance and participation. Weekly critical responses/comments. 10-12 page final research paper.

Prerequisites: none

Neuroscience studies the brain and mind, and thereby some of the most profound aspects of human existence. In the last decade, advances in our understanding of brain function and in our ability to manipulate brain function have raised significant ethical challenges. This tutorial will explore a variety of important neuroethical questions. Potential topics will include pharmacological manipulation of "abnormal" personality; the use of "cosmetic pharmacology" to enhance cognition; the use of brain imaging to detect deception or to understand the ability, personality or vulnerability of an

individual; the relationship between brain activity and consciousness; manipulation of memories; the neuroscience of morality and decision making. In addition to exploring these and other ethical issues, we will explore the basic science underlying them.

Requirements/Evaluation: six 5-page position papers and five 2-page response papers as well as participation in discussions

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201); or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 319 (D3) NSCI 319 (D3) STS 319 (D2)

Writing Skills Notes: In alternating weeks, each student in a tutorial pair will write a 5-page essay based on the assigned readings. Essays will be discussed during tutorial meetings and written feedback from the professor will be provided for each essay. At the end of the semester, students will choose one of their prior essays to revise as their final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

STS 321 (F) Unsettled Futures: Time, Crisis, and Science Fiction from the Margins (DPE)

Cross-listings: STS 321 AMST 321

Secondary Cross-listing

Societies around the globe are now confronting a triple crisis that threatens not only political orders but also the very existence of certain forms of life: (1) financial collapse(s) that have increased the awareness and severity of mass inequality, (2) climate change and mass extinctions, and (3) the rise of white supremacy and ethno-nationalisms that threaten BIPOC lives and representative democracies. These material and political challenges have depleted many of the cultural resources that enable imagining non-apocalyptic futures. Yet, these crises are not novel. Many groups in the periphery--geographic, economic, and cultural--were and are already living through the uneven distribution of the apocalypse. Science fiction (SF) has emerged as a privileged symbolic field for the expression of hopes and anxieties that drive both culture and tech industries. Whether seen as a form of productive pessimism or liberatory theory, SF from the margins is deployed as a political tool for enacting change in the present. In this course, we will survey the history of SF as a variable and theoretical orientation constituted through the unfolding of uneven global encounters. We will analyze SF in the Cold War, Anthropocene, decolonization movements, and postcolonial and Indigenous landscapes, reading major works in SF and science and technology studies (STS) that address the politics of crisis, apocalypse, and global futures. In addition to novels and short stories, this course will incorporate film, graphic novels, music videos, video games, and other science fiction subgenres.

Requirements/Evaluation: Class discussion, approximately 10 pages of creative writing, 5 page analysis paper of your classmate's creative writing, final paper or project (5-8 page paper or equivalent)

Enrollment Limit: 15

Enrollment Preferences: Students who have taken American Studies 101 and/or Science and Technology Studies 101

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 321 (D2) AMST 321 (D2)

Difference, Power, and Equity Notes: This course examines the racial, ethnic, gendered, and sexed dimensions of science fiction and traces how marginalized people have imagined the future amidst an atemporal and unfolding apocalypse. Students will work with postcolonial, Indigenous, queer, and critical race media concerning the future, and will gain the skills needed to read political orders and crises through the lens of the margin.

STS 338 (F) Transhumanism: Religion, Technoscience, Obsolescence

Cross-listings: HSCI 338 SOC 338 STS 338 REL 338

Secondary Cross-listing

This interdisciplinary seminar invites students to pursue sociohistorical analysis and sustained critical discussion of the transhumanist movement and its overriding aims: the augmentation, transformation, and eventual transcendence of human biological constitution; the realization, through speculative technoscientific means, of an enhanced or even "postbiological existence"--a "posthuman condition," "Humanity 2.0." Through close readings of primary historical documents, transhumanist texts, scholarship on transhumanism, works of science-fiction film, literature, and popular culture, we will position the movement as an empirical conduit through which to explore the sociohistorical conditions under which transhumanist ideas and practices have emerged, circulated, and taken up residence. To that end, we will consider the ties of transhumanism to eugenics and massive investments in pharmaceuticals, anti-aging medicine, and so-called "GNR" technologies (i.e. genetics, nanotechnology, and artificial intelligence and robotics); the movement's affinities with neoliberalism and what some have pointed to as transhumanism's racialized subtext of whiteness. We will furthermore devote considerable attention to the technological singularity, the figure of the cyborg, mind-uploading, space colonization, and cryonic suspension, all of which, like transhumanism broadly, suggest that science and technology have in some sense come to operate as powerful channeling agents for the very sorts of beliefs, practices, and forms of association that theorists of secularization expected modernity to displace. Lastly, throughout the course of the seminar we will take transhumanism as a provocation to think broadly and seriously about religion, technology, embodiment, and ways of being human.

Class Format: Remote

Requirements/Evaluation: informal weekly writing, two short review essays, and one 15-page seminar paper

Prerequisites: Prior coursework in sociology-anthropology, history, religion, or science and technology studies.

Enrollment Limit: 14

Enrollment Preferences: Anthropology and Sociology majors and Science and Technology Studies concentrators

Expected Class Size: 14

Grading: yes pass/fail option, no fifth course option

STS 340 Science, Religion, and the (post)colony: Critical approaches to the global history of knowledge (DPE)

Histories of science and religion have been deeply intertwined with colonial and postcolonial history. Colonial claims to legitimacy were often rooted in perceptions of scientific and technological superiority, and colonial expansion often marched in lockstep with missionary activity and forced conversions. In the process, race and human difference emerged as concepts at the intersection of scientific and religious discourses and was forged within the colonial framework. This colonial history of science and religion impacted how scientific and religious thought, practices and institutions developed through the period of decolonization and into today. Similarly, the attendant history of race and human difference continues to influence postcolonial and contemporary discourses around race, ethnicity, identity and migration. In this course, we will trace key moments in the history of science and religion and their relation to coloniality. We will start in the sixteenth century with the rise of modern European empires, move into the height of modern colonialism, indigenous genocides and chattel slavery, and trace decolonization from the middle of the nineteenth into today. Throughout, we will investigate how science and religion emerged as concepts, practices and institutions, and how these narratives impacted, and were impacted by colonial expansion and history. We will pay particular attention to questions of race, gender, sexuality and human difference as key concepts and practices that emerged at the intersections of science, religion and (post)colonialism

Requirements/Evaluation: 2 response papers (3-5pages each) + final project (could be a 10-15p paper or creative project of any kind)

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Concentrators, followed by seniors and juniors

Expected Class Size: 15

Grading:**Distributions:** (D2) (DPE)

Difference, Power, and Equity Notes: The course addresses questions of race, gender, sexuality and human difference as seen through the history of science, technology and medicine. Students will creatively engage with critical race theory, postcolonial theory and queer theory. They will also investigate human suffering as a category that provides a deeper understanding of difference, diversity and equality.

Not offered current academic year

STS 348 (S) Women, Men and Other Animals (DPE)**Cross-listings:** ARTH 348 STS 348 SCST 348 WGSS 348 ENGL 348**Secondary Cross-listing**

In this seminar, we will together learn to be "animal critics." We will explore ways in which human groups and interests, particularly in the United States, have both attached and divorced themselves from other animals, considering such axes as gender, race, ability, and sexuality as key definitional foils for human engagements with animality. What are the "uses" of "animals" for "us," and precisely who is this "us"? How and when are some willing to see themselves as animal--indeed, under what political conditions do they embrace it? What is the history of unique, often asymmetric, interdependencies between human animals and nonhuman animals? How do actual lives of humans and non-human animals merge and clash with the rhetorics and visualities of human animality? We will examine both "everyday" animality and the forms of animality that stand out only today in retrospect, in their exceptionality, or upon reflecting on structures of privilege. We will build a critical animal studies vocabulary from a range of readings in science, philosophy, art, feminism, indigenous studies, critical race, geography, fiction, film, rhetoric, history, activist movements, disability studies, postcolonial studies, and examine both visual and narrative cultural production.

Requirements/Evaluation: individual research project**Prerequisites:** none**Enrollment Limit:** 15**Enrollment Preferences:** Women's, Gender and Sexuality Studies majors, Art History majors, English majors, Environmental Studies majors**Expected Class Size:** 15**Grading:** no pass/fail option, no fifth course option**Distributions:** (D2) (DPE)**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 349 (F) The Politics of Algorithms**Cross-listings:** STS 349 AMST 349 PSCI 331**Secondary Cross-listing**

Every day, you interact with or through computer algorithms. In ways often obscure to users, they structure communication or conduct in social media, education, healthcare, shopping, entertainment, dating, urban planning, policing, criminal sentencing, political campaigns, government regulation, and war. Moving from the emergence of cybernetics during World War II through such contemporary examples as facial recognition software, this seminar approaches algorithms as complex technological artifacts that have social histories and political effects. Asking *how* algorithms are political and what that tells us about politics today (particularly in the U.S.), we will consider how their design expresses forms of power and their deployment shapes ways of living. What behaviors do different algorithms solicit, reward, discourage, or stigmatize? What kinds of selfhood and relationships do they promote or thwart? How do various algorithms influence political partisanship and beliefs and intersect with existing hierarchies of race, class, gender, and sexuality? When inequities are built into a design, can that be addressed by rooting out "bias," or do such efforts miss something more inherent in the kinds of artifacts algorithms are or what they can be in a capitalist economy? Might developments in artificial intelligence transform our sense of the human or even threaten the species? Many of the seminar's themes, including democracy, power, inequality, judgment, deliberation, publicity, subjectivity, and agency, are central to political theory, but readings and course materials will also be drawn from such fields as media theory, surveillance studies, sociology, American studies, critical data science, film, and contemporary art. The course neither requires nor teaches any computer science skills.

Requirements/Evaluation: Class attendance and participation, regular short posts or exercises, and either three eight-page essays or one 8-page

essay and one longer final paper.

Prerequisites: At least one course in political, cultural, or social theory or the critical study of science and technology, or permission of the instructor. Not open to first-year students.

Enrollment Limit: 15

Enrollment Preferences: Political Science and American Studies majors and STS concentrators; then qualified students from all other majors welcome, space permitting.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

STS 350 Emotions

Philosophy is often described as *thinking about thinking*: variously conceived inquiries into the nature, scope and limits of human reasoning have always been at its heart. Without challenging the centrality of such projects for philosophy, this tutorial will focus on a less emphasized, but equally essential aspect of our lives: emotions. What are emotions, and how should we think about them? What is the proper 'geography'--classification and analysis--of our emotions, and what is their relation to our somatic states, feelings, beliefs, judgments, evaluations and actions? Do we have any control over our emotions? Could we (individually and socially) educate and cultivate them? How are conscious and unconscious emotions related to a person's action, character, and her social world? In addressing these substantive questions, we will also consider which methodological approach--if a single one can be privileged--we should adopt for examining emotions. We will try to determine what is the scope and nature of an adequate theory of emotions, what are the desiderata for such a theory, and what should count as evidence in its favor. We will examine a variety of philosophical and scientific theories of emotion, as well as some issues concerning normative aspects of emotions: the role of emotions in a good life, and the concept of emotional maturity.

Class Format: The class will meet remotely only.

Requirements/Evaluation: Class attendance, preparedness and participation; weekly meetings with the tutorial partner outside of the class; five lead papers (5-7 pages) and five short response papers (2-3 pages).

Prerequisites: two philosophy courses.

Enrollment Limit: 10

Enrollment Preferences: philosophy majors and prospective majors, then psychology majors.

STS 353 (S) Is Science Native to Turtle Island? The History of Native Science in North America (DPE)

Cross-listings: STS 353 AMST 353

Secondary Cross-listing

Settler sciences and technologies deployed by Europeans colonizing Turtle Island (what settlers called North America) were introduced as weapons of Indigenous termination. From medical violation, to anthropological theft, and industrial pollution, settler technoscience objectified and appropriated Indigenous people and lands, and attempted to displace Indigenous knowledge in the pursuit of settler supremacy. Indigenous bodies were cast as victims, objects and sometimes the tools of this project. And yet, as tools and objects, Indigenous peoples took up settler technoscience in a multitude of ways that failed (both purposefully and not) to adhere to the colonizing mission, incorporating Indigenous knowledges and orientations, subverting

settler science as a source of authority, and positioning science as a site of Indigenous sovereignty. The practice of taking up science as a tool of decolonization has become explicit in recent decades as expressly Native sciences now shape tribal funding, college education, and negotiations with international governing bodies. This course will trace the history of Native science across different nations and disciplines from the antebellum period when settler sciences were taking shape in civilian institutions to the present when Native science is professionalizing and being codified. We will read primary sources and scientific treatises by Indigenous leaders, activists, and scientists alongside secondary sources in Indigenous science and technology studies (STS), history, and postcolonial and queer theory.

Requirements/Evaluation: attendance and class participation, two 4-page research papers, and a final creative project (TBD with instructor) or 8- to 10-page paper

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: American Studies majors and Science and Technology Studies concentrators

Expected Class Size: 13

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 353 (D2) AMST 353 (D2)

Difference, Power, and Equity Notes: This course will explore how settler sciences have been used as a technology of difference making, dispossession, and genocide in United States history. It will also provide students a theoretical toolkit and historical perspective by which they can grapple with the fact that power structures like settler technoscience can be a source of both colonization and liberation.

STS 355 (S) Foucault: Confessions of the Flesh

Cross-listings: REL 355 STS 355 COMP 359

Secondary Cross-listing

The French philosopher, historian, and social critic, **Michel Foucault** (1926-1984) has had a massive influence across a range of disciplines. Indeed, in 2019, Google Scholar ranked Foucault as **the number one most highly cited scholar in the Humanities and Social Sciences**. While many of his contemporaries have faded in importance, Foucault's writings on power, madness, the history of sexuality, and the structures of domination and governmentality have become central to the theoretical canon of a range of academic disciplines. To be a scholar in the humanities today is often to be in Foucault's shadow. But despite the many references to his work, Foucault is frequently misunderstood and subsequent scholars often attribute to him positions he would have repudiated. Now almost forty years after his death, his work is also long overdue for a reappraisal as we come to understand Foucault better as a person and especially as the final, and posthumous, volume of his History of Sexuality, **Confessions of the Flesh**, has only just appeared and been translated into English. In this course we will mainly read Foucault supplemented with occasional contextual readings. Although we will touch on his earlier writings, this seminar will emphasize his middle-to-late period (beginning with **The Archaeology of Knowledge**) and including selections from his later monographs, lectures, interviews, and short writings. It will culminate in the unfinished intellectual and political project that occupied Foucault in his last days. We will think with and often against Foucault, focusing primarily on questions of power, knowledge, truth, and addressing his later emancipatory gesture toward "technologies of the self." We will also appraise the methodologies that Foucault described as "archaeology" and "genealogy." We will historicize Foucault in his life and cultural context and ask how much of his arguments still apply today. What blind-spots did he have? Which of his ideas are worth consolidating and which need repudiating? How might we go beyond Foucault?

Requirements/Evaluation: class participation, weekly critical responses, 10- to 12-page final paper

Prerequisites: none

STS 364 (S) Mental Health and Illness: Philosophical Considerations

Cross-listings: STS 364 PHIL 364

Secondary Cross-listing

This course will raise and discuss a number of philosophical questions concerning our current understanding of mental health and mental illness. We will begin by examining the general concepts of health and disease, and then apply them to human psychology. Throughout the course, our focus will be on the best theoretical and practical knowledge we now have to diagnose, explain, and alleviate mental illness. Some of the questions that we will discuss are: What is psychopathology and what are its causes? Is it possible to have systematic knowledge of subjective experience? If so, is that knowledge importantly different in kind or in rigor from the knowledge we gain through physics, chemistry or geology? Are there metaphysical and ideological assumptions in contemporary psychiatry, and if so, could and should they be avoided? What is the basis on which current psychiatric diagnostic manuals are organized? Is that principle of organization justifiable or not? Do particular case histories offer good explanations of psychopathology? In framing and answering these questions, we will discuss subjective experience (or phenomenology) of mental illness; holism vs. reductionism; functional, historical and structural explanations of psychopathology; theory formation, evidence, and the role of values in psychology and psychiatry; the diversity and disunity of psychotherapeutic approaches; relationship between knowers and the known; and relationship between theoretical knowledge in psychiatry and the practices of healing.

Requirements/Evaluation: several writing assignments, evenly spaced throughout the semester

Prerequisites: two philosophy courses; or one philosophy and one STS course; or consent of the instructor

Enrollment Limit: 20

Enrollment Preferences: students who took Philosophy of Science or Philosophy of Mind; Philosophy and Psychology majors

STS 370 (F) Medicine and Campus Health in Disruptive Times (DPE) (WS)

Cross-listings: STS 370 WGSS 371 ANTH 371

Secondary Cross-listing

This class applies the methods and theories of critical medical anthropology and medical sociology to help students design and pursue innovative ethnographic projects that explore campus or community health. How do disruptive moments like COVID-19 serve as focal moments in social history that reveal underlying social inequalities of access, health outcomes, and well-being? Students learn and use an array of ethnographic techniques such as observant participation, interviewing, focus groups, and qualitative surveys building on weekly discussions, feedback, and design exercises to explore our campus and/or wider community. We situate our campus health projects by considering the wider context of power and intersectionality that inflect and structure health and well-being within our community, nation, & world. Our case ethnographies explore how structural racism shapes medical education and healthcare care in the US, how concepts of sexual citizenship can reshape debates on sexual assault on campus, how the spread of US psychiatry inflects the landscape of global mental health across Asia, and how queer activism responds to the HIV/AIDS crisis. We consider the roles of narrative, active listening, and empathy in both medicine and ethnography, while practicing skills that can benefit student researchers and interlocutors, providers as well as patients. Our goal is understand the strengths and limits of qualitative and participatory research

within communities always already structured by power, privilege, and engaged practices.

Requirements/Evaluation: Three written fieldnotes, weekly attendance, writing and discussion exercises, & final oral presentations & data visualizations for fieldwork projects.

Prerequisites: A course in Anthropology, Sociology, Science & Technology Studies, or across DIV II is strongly recommended

Enrollment Limit: 20

Enrollment Preferences: Majors in Anthropology, Sociology, Women's, Gender and Sexuality Studies; Concentrators in Public Health, Science and Technology Studies

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 370 (D2) WGSS 371 (D2) ANTH 371 (D2)

Writing Skills Notes: This class assignments includes over 9,000 words of essay assignments, and will help students develop critical writing skills, including use of rhetoric, evidence, argument, synthesizing data, logic, and anticipating counter-arguments.

Difference, Power, and Equity Notes: This class examines the intersectionality of race, class, gender, & sexuality in impacting healthcare and health outcomes. It theorizes and explores the ways that intersectionality and implicit bias shapes health and well-being in the community, patient/provider encounters, and efforts to 'improve' community and individual health in the US, Asia, and across the globe.

STS 372 Time and Temporality

Duration, rhythm, speed, pace, trajectory, sequence, articulation, busyness, boredom, flow--time is one of the most fundamental categories of our experience of reality. Since the founding of the discipline, sociologists have been interested in how time, while seemingly given and natural, is deeply influenced by history and society. This two-part course will introduce students to the sociological analysis of time and temporality. In part one, students will explore the emergence of the so-called "modern western temporal order"--the sense of time that many people take for granted as the way things are. We will excavate the historical roots of schedules, clocks, calendars, and time zones; examine how capitalism and colonial conquest disseminated particular notions of time around the globe; and discuss leading theories of how constructions of time change through history and vary among communities. In part two, we will focus on one of the most frequently lamented and celebrated qualities of modern temporality: acceleration. Is the world speeding up? Why do so many people feel always pressed for time? What are the promises and limits of speed, acceleration, and ceaseless change for building a robust democratic society?

Requirements/Evaluation: participation, time diary analysis (3-5 pages), final paper (10-12 pages)

STS 375 (S) Human Work in Computational Systems (QFR)

Cross-listings: STS 375 CSCI 377

Secondary Cross-listing

As far as we know, the technological singularity has not yet arrived. Therefore, humans remain a part of our current computation pipeline. However,

the role humans play varies greatly: self-driving cars aim to have human involvement only in development and emergencies, whereas educational tools are built for constant human involvement. In this course, we broadly explore human work within computational systems through topics such as crowdsourcing, educational technology, citizen science, human computation, open-source software, micro-labor markets, and online gaming. Students should expect broad exposure to a wide variety of human computing topics and group projects on building and evaluating computational systems that use human work.

Class Format: Lectures will be held on Wednesday and Friday each week. Conference sections will each meet once per week. Students should sign up for the lecture section and one conference.

Requirements/Evaluation: Course projects, in-class group work/participation, weekly written homework assignments/readings.

Prerequisites: CSCI 136

Enrollment Limit: 20

Enrollment Preferences: Preference for current CS majors

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

STS 376 (F) Human-Computer Interaction

Cross-listings: STS 376 CSCI 376

Secondary Cross-listing

Human-Computer Interaction (HCI) principles are practiced in the design and evaluation of most software, greatly impacting the lives of anyone who uses interactive technology and other products. There are many ways to design and build applications for people, so what methods can increase the likelihood that our design is the most useful, intuitive, and enjoyable? This course provides an introduction to the field of human-computer interaction, through a user-centered approach to designing and evaluating interactive systems. HCI draws on methods from computer science, the social and cognitive sciences, and interaction design. In this course we will use these methods to: ideate and propose design problems, study existing systems and challenges, explore design opportunities and tradeoffs, evaluate and improve designs, and communicate design problems and solutions to varying audiences.

Requirements/Evaluation: course projects, in-class group work/participation, and exams

STS 377 (F) Landscapes in American Literature

Cross-listings: ENGL 376 STS 377 AMST 376

Secondary Cross-listing

This course examines representations of American landscapes in selected texts from the British colonial era to the present. Critical approaches will

include narrative theory, formalism, eco-criticism, and science and technology studies. The central questions are: (1) How do authors adapt narrative and poetic forms to the representation of particular landscapes? (2) How do literary landscape representations change when new technologies arise for traversing and transforming them? (3) What effects can literary landscapes have on the landscapes we live in? Landscapes include settlements, cities, wildernesses, "frontiers," suburbia, and infrastructural scenes. Relevant technologies include the postal service, the railroad, the telegraph and telephone, the automobile, commercial aviation, and Skype. Texts may include: letters of Columbus, American Indian creation stories, early American religious texts, captivity narratives, slave narratives, and poems, short stories, and novels from the 17th to the 21st centuries, as different from one another as Dickinson's "Nature-sometimes sears a Sapling-" and Annie Proulx's *Brokeback Mountain*.

Requirements/Evaluation: discussion participation; five brief response papers (~2 pages); a mid-semester essay (~5 pages); a final essay (12- to 15-pages)

Prerequisites: none

Enrollment Limit: 15

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 380 (S) Freedom Dreams, Afro-Futures & Visionary Fictions

Cross-listings: AFR 380 WGSS 380 ENGL 381 AMST 380 STS 380

Secondary Cross-listing

In this course we will examine the various ways Black scholars, artists, & writers use science fiction and visionary fiction to imagine freedom and new world orders. We will focus on the role of history, particularly slavery, in the Black radical imagination. "Freedom" is the keyword throughout the course. We will grapple with the various and sometimes conflicting meanings and uses of freedom as it relates to blackness, gender, sexuality, class

and ability. We will explore multiple forms of scholarship and cultural productions, including film, music, novels, short-stories, art, poetry, and other academic texts. All students will be asked to discover and develop their writerly voices through various critical, creative, experimental and performative assignments.

Requirements/Evaluation: active participation, completion of various short assignments, one 5-page paper and one 7- to 10-page final paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Women's, Gender and Sexuality Studies majors, then Africana Studies concentrators

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

STS 401 (F) Critical Perspectives on Science and Technology

A research-oriented course designed to give students direct experience in evaluating and assessing scientific and technological issues. Students initially study particular techniques and methodologies by employing a case study approach. They then apply these methods to a major research project. Students may choose topics from fields such as biotechnology, computers, biomedical engineering, energy, and other resource development. Students will apply their background of historical, philosophical, and technological perspectives in carrying out their study.

Requirements/Evaluation: research paper or project

Prerequisites: none

Enrollment Limit: 5

Expected Class Size: 5

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

Attributes: STS Senior Seminars

Not offered current academic year

STS 402 (F) Cold War Technocultures

Cross-listings: SCST 401 STS 402 SOC 363

Secondary Cross-listing

In this seminar students will pursue sociohistorical analyses of Cold War American culture(s) by attending to key points of intersection between politics, aesthetics, and major technoscientific developments during this period. Part I will focus principally on the emergence of the computer and its role in shaping American infrastructure and styles of thought aimed at Soviet "containment." We will trace the historical threads connecting MIT's "Whirlwind" computer project and the SAGE continental air defense system; nuclear wargaming at the RAND Corporation and the aesthetics of "thinking the unthinkable"; the science of cybernetics and the prospect of automation; and ultimately the role of computation, intermedia, and systems logic in perpetrating the atrocities of the Vietnam War. Part II will take up the Cold War space race--from Luna 2, Sputnik I, and Yuri Gagarin to Projects Mercury, Gemini, and the Apollo moon landing. Within this context we will also consider the Club of Rome's Limits to Growth report; plans backed by NASA for the industrialization and colonization of outer space; and the place of science-fiction as a Cold War aesthetic (print, televisual, cinematic). Part III, finally, will explore key moments of conflict, resistance, appropriation, and unintended consequences of Cold War technoscientific developments, among them antipsychiatry and environmentalism; Project Cybersyn, an infrastructural casualty of the U.S./CIA-backed Chilean coup of 1973; the New Left, the American counterculture, new social movements, and the countercultural roots of new media and neoliberalism.

Requirements/Evaluation: two 5-page book review essays, weekly 1-page papers, midterm essay exam, final essay exam

Prerequisites: STS 101 or instructor consent; prior coursework in Anthropology and Sociology and/or History

Enrollment Limit: 15

Enrollment Preferences: Anthropology and Sociology majors, Science and Technology Studies concentrators

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

Attributes: STS Senior Seminars

Not offered current academic year

STS 413 (S) Feminist and Critical Technoscience (DPE)

Cross-listings: WGSS 413 STS 413

Primary Cross-listing

Are Feminism and Science compatible commitments? What do these nouns mean when paired with one another, when capitalized (or not), when pluralized (or not), and when deployed by a range of authors in different disciplines? Scholars of feminist science and technology studies (FSTS) have addressed these questions in their studies of scientific objectivity, technological vulnerability, environmentalism, and the makings (or doings) of race as well as gender. We will explore these questions and topics with a view to identifying the range of ethical, political, and epistemological practices within feminist and critical technoscience. We will read theoretical texts in FSTS, such as Donna Haraway's "Situated Knowledges" and Safiya Umoja Noble's "A future for intersectional black feminist technology studies." We will also read case studies, such as Pat Treusch's "The Art of Failure in Robotics" and Emily Martin's "The Egg and the Sperm: How Science Has Constructed a Romance Based on Stereotypical Male-Female Roles." While our preliminary readings will be set in advance, students will help shape the syllabus as we advance toward a better understanding of feminist technoscience's potentials and limitations at a time when technical change often outpaces careful consideration of its consequences.

Requirements/Evaluation: discussion participation; five response papers (~2 pages); mid-semester essay (8 pages); annotated bibliography; final essay (12-15 pages + in-class presentation)

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: Science and Technology Studies concentrators

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 413 (D2) STS 413 (D2)

Difference, Power, and Equity Notes: Central to "Feminist and Critical Technoscience" is a recognition of and engagement with the historical under-privileging of women, women's work, and women's bodies in capital-S "Science" and in a wide range of other technoscientific practices. We will examine and elucidate several branches of feminist theory. We will also examine feminist accounts of contemporary technoscientific work as well as critical STS with a focus on race.

Winter Study -----

STS 12 (W) Artificial Intelligence: What a Concept!

Cross-listings: SOC 12 STS 12

Secondary Cross-listing

Computer scientists coined the term "artificial intelligence" in the 1950s, and the idea of a digitally fabricated mind has been stirring people's hopes and fears ever since. Will an artificial intelligence bring humanity to perfection, or will it exterminate us? Will it steal our jobs, or make them more fulfilling? Will it resemble us, or be entirely alien? In this course, we will examine society's evolving conceptions of AI, from early fantasies of robot invasions to contemporary speculations about machine learning and the approach of a post-human world. We'll trace the history of efforts to develop AI and the public's responses to them, with a special focus on discerning what our reactions to AI tell us about our conceptions of ourselves--our minds, our bodies, our destiny. In addition to considering scholarly and journalistic explorations of artificial intelligence, we'll examine how androids and other "thinking machines" have been portrayed in movies, fiction, and art. The course will meet for two hours three times a week, and the class sessions will be supplemented by readings and viewings.

Requirements/Evaluation: 10-page paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: preference will be given to Sociology majors and Science and Technology Studies concentrators

Grading: pass/fail only

Materials/Lab Fee: none

This course is cross-listed and the prefixes carry the following divisional credit:

SOC 12 STS 12

ANTHROPOLOGY AND SOCIOLOGY (Div II)

SOCIOLOGY

Chair: Professor James Nolan

- Zaid Adhami, Assistant Professor of Religion and Faculty Affiliate in Anthropology & Sociology; affiliated with: Anthropology and Sociology
- David B. Edwards, James N. Lambert '39 Professor of Anthropology; on leave 2021-2022
- Antonia E. Foias, Preston S. Parish '41 Third Century Professor of Anthropology
- Kim Gutschow, Lecturer in Religion and Anthropology/Sociology; affiliated with: Anthropology and Sociology
- Nicolas C. Howe, Director of CES and the Environmental Studies Program, Associate Professor of Environmental Studies and Faculty Affiliate in Anthropology and Sociology; affiliated with: Anthropology and Sociology
- Peter Just, Professor of Anthropology
- Joel Lee, Assistant Professor of Anthropology
- James A. Manigault-Bryant, Chair and Professor of Africana Studies and Faculty Affiliate in Anthropology and Sociology and Religion; affiliated with: Religion Department, Anthropology and Sociology; on leave Spring 2022
- Gregory C. Mitchell, Chair and Associate Professor of Women's, Gender and Sexuality Studies and Faculty Affiliate in Anthropology/Sociology; affiliated with: Anthropology and Sociology
- James L. Nolan, Chair and Washington Gladden 1859 Professor of Sociology
- Olga Shevchenko, Professor of Sociology
- Christina E. Simko, Associate Professor of Sociology; affiliated with: American Studies Program
- Ben Snyder, Assistant Professor of Sociology; on leave 2021-2022
- Phi H Su, Visiting Assistant Professor of Sociology

The disciplines of anthropology and sociology aim to teach students how to enter into the social/cultural worlds of others, how to grasp those worlds from the viewpoints of their inhabitants, and how to articulate those denizens' habits of mind, worldviews, and values to broader audiences.

Anthropology critically analyzes social forms and practices in all their local and global diversity, illuminating the cultural grounding of the ideologies, narratives, and structures in which we are all implicated. **Archaeology** extends this analysis to social formations of the historical and prehistorical past. **Sociology** studies the nature and trajectories of modernity, examining the intricacies of industrial and post-industrial societies and the dilemmas that confront individuals in modern social systems. These disciplines introduce students to classical and contemporary theories that illuminate the contours and contradictions of social experience. The Anthropology & Sociology program promotes a critical engagement with these theories while at the same time bringing evidence and case studies into conversation with theory.

The Department emphasizes qualitative fieldwork in its many forms. We teach students how to formulate, frame, and address intellectual problems. We also teach students the empirical methods widely used in anthropology, sociology, and other related disciplines, including, but not limited to ethnography, participant observation, interviewing, discourse and visual analysis, archival research, oral history, and archaeological methods.

Because the program emphasizes critical thinking skills to assess social claims made by others, and the application of anthropological and sociological skills to present day concerns, undergraduate training in Anthropology or Sociology has proven invaluable to majors pursuing a range of careers, including public policy, diplomacy, international development, marketing, social media development, K-12 education, journalism, medicine, and law.

MAJORS

The department offers separate majors in both Anthropology and Sociology, with a broad and diverse array of courses in both disciplines. The department is committed, however, to the unity of the social sciences. To this end, Anthropology and Sociology offer joint core courses in methodology and theory, as well as several elective courses in common. All joint courses are designated "ANSO."

Requirements

For the degree in Anthropology or Sociology, students must complete a minimum of nine courses as outlined below:

Core Courses

Majors in both disciplines must take a sequence of four core courses. Three of these are joint (ANSO) courses. The sequences are:

Anthropology

ANTH 101 How to Be Human

Sociology

SOC 101 Invitation to Sociology

Joint Courses

ANSO 205 Ways of Knowing

ANSO 305 Social Theory

ANSO 402 Senior Seminar

Elective Courses

Majors in Anthropology or Sociology must take five elective courses from the course listings of their respective disciplines or from the joint ANSO listings. Two of the courses chosen are normally at the 300 level or above. In close consultation with their departmental advisors, students may take some selected courses from other disciplines to fulfill major requirements in either Anthropology or Sociology.

Majors in each wing of the department are allowed to count up to two courses in the other wing towards fulfillment of their major requirements.

STATISTICS AND DATA ANALYSIS

In addition to the nine total courses required for the major, it is recommended that Anthropology and Sociology majors take Statistics 101 or a comparable course in statistics and data analysis.

AREA STUDIES CONCENTRATION

Students who wish to combine a major in Anthropology or Sociology with an Area Studies concentration are encouraged to do so. Courses taken to satisfy an Area Studies requirement may be counted toward the major with prior approval of a student's departmental advisor. The only exception to this rule is the Area Studies senior seminar, which cannot ordinarily be counted toward the Anthropology or Sociology degree.

LANGUAGE STUDY, STUDY ABROAD, AND WINTER STUDY

Departmental advisors will help interested students integrate a major with study abroad, foreign language study, or field research during the winter study period. The department encourages Williams students to take advantage of established foreign study programs in Egypt, Japan, India, Hong Kong, and other countries. Because some foreign study programs do not offer courses that can be counted toward the Anthropology or Sociology degrees, however, sophomores planning to study abroad in junior year must consult with the departmental advisor before declaring a major.

FAQ

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes. In some cases, provisional approval can be granted (students should be sure to contact the department for details). We welcome discussions of curricular plans for those major who travel abroad in their junior year. However, typically, students don't have access to all the salient information until **AFTER** they have taken the course.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, and complete syllabus including readings/assignments. The syllabus and readings/assignment information is required in cases when the course title and description are not sufficient to ascertain whether a course should count towards the major. We also request information on course hours.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

Yes. We credit two, and in special cases three courses.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. The expectation is for an intellectually rigorous semester-long course with a paper/exam component.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. ANSO 205, ANSO 305 and ANSO 402 are almost always taken in the department.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. ANSO 305 is offered in the fall and ANSO 205 and ANSO 402 only in the spring. We advise our majors to be aware if they plan to spend all or part of their junior year abroad.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

In one case, a student had assumed that he could take the equivalent of ANSO 205 abroad, and was disappointed to discover that was not the case. He ended up taking ANSO 205 his senior year.

THE DEGREE WITH HONORS IN ANTHROPOLOGY OR SOCIOLOGY

Honors and highest honors are normally awarded for the completion of a year-long research project that has resulted in an original thesis of high quality. Students wishing to write an honors thesis should engage a member of the department faculty as a Thesis Advisor as soon as possible and must submit a proposal for the thesis for department approval no later than the end of spring reading period of the junior year. If the proposal is approved, they will be permitted to register for Anthropology and Sociology 493-W31-494, during which they will write and defend a thesis. If their overall work in the major continues to be of high quality and the thesis is deemed of a similar quality, they may be awarded honors or highest honors in Anthropology or Sociology.

SOC 101 (F)(S) Invitation to Sociology

This course provides students with an introduction to sociological analysis and an overview of sociology as a discipline. We will focus on the relationship of individuals to the social world and become acquainted with systematic institutional analysis. Students will explore the intersection of biography, history, culture, and social structure as seen in the work of classical and contemporary social thinkers, including Marx, Durkheim, Weber, Simmel, and Goffman. Special consideration will be given to the social and cultural problems of capitalism, rationality and irrationality in modern institutions and organizations, the psychological dilemmas facing the individual in modern society, and the problem of social order and conflict.

Requirements/Evaluation: several short papers, a group presentation, and a final

Prerequisites: none

SOC 210 (S) Networks of Power: Technology in Human Affairs

Cross-listings: STS 210 SOC 210

Primary Cross-listing

Do we control our technologies, or do our technologies control us? This course will explore different philosophies of technological progress, particularly the constructivist and determinist theories, by examining major technological systems that shaped modern society, such as the telegraph system, the electric grid, radio and television broadcasting, and the internet. Each of these innovations entailed the construction of a complex network designed to serve a mix of public and business interests, and each resulted in wide-ranging and often unforeseen changes to people's lives. Guided by pertinent readings in the history and philosophy of technology, we will look critically at the forms and consequences of technological change, seeking answers to a series of complex and important questions: Is the course of technological progress an inevitable byproduct of scientific and engineering advances, or is it contingent on social and political circumstances and choices? Does technological change reinforce the social and political status quo or challenge

it? Are technological and social progress synonymous, or is there a tension between the two? One of the goals of the course will be to provide students with a more informed and critical perspective on the technological upheavals that continue to shape society today.

Class Format: hybrid

Requirements/Evaluation: attendance and participation, team assignments, two in-class exams, one 15-page seminar paper

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

Not offered current academic year

SOC 211 (S) Race, Environment, and the Body

Cross-listings: AMST 211 ENVI 211 AFR 211 SOC 211

Secondary Cross-listing

This course is organized around three distinct, but overlapping, concerns. The first concern is how polluting facilities like landfills, industrial sites, and sewage treatment plants are disproportionately located in communities of color. The second concern is the underlying, racist rationales for how corporations, in collaboration with state agencies, plot manufacturers of pollution. The final concern is how the environmental crises outlined in the first two sections of the course are experienced in the body. In reviewing a range of Black cultural productions--like literature, scholarship, music, and film--we will not only consider how environmental disparities physically affect human bodies, but also how embodiments of eco-crises lend to imaginaries of the relationship between the self and the natural world.

Class Format: discussion

Requirements/Evaluation: class participation, 2-3 short papers (5-7 pages), and a self-scheduled final

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: preference given to AFR concentrators, ENVI concentrators and majors, and ANSO majors.

Spring 2022

LEC Section: 01 Cancelled

SOC 212 (S) Understanding Social Media

Cross-listings: STS 214 SOC 212

Primary Cross-listing

Over just the last twenty years--beginning with Friendster and MySpace and continuing through Facebook and Twitter, Snapchat and Instagram--the rise of social media has had a profound influence on the way we live. It has given a new rhythm to our daily routines, shaped the way we inform ourselves and converse with others, and transformed media and entertainment, politics and public discourse, and many other aspects of culture. This seminar course will undertake a broad and critical examination of social media, looking at it from historical, economic, legal, social, and

phenomenological perspectives. The topics addressed will include social media's effects on self-image and self-formation, its influence on protest movements and political campaigns, its use as a conduit for news and propaganda, and the way commercial interests and technical characteristics have shaped its design and use. Through pertinent readings and lively discussions, and drawing on students' own experiences with social media, the course will illuminate social media's benefits and drawbacks while providing a foundation for thinking about possible legal, regulatory, and personal responses to this far-reaching and still unfolding social phenomenon.

Class Format: hybrid

Requirements/Evaluation: attendance and participation, team assignments, two 5-page writing assignments, final exam

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 214 (D2) SOC 212 (D2)

Attributes: FMST Core Courses

Not offered current academic year

SOC 216 (F) The City

Modern humans have moved to the city, a site with concentrated powers of various kinds, this move has effected irreversible change in human life. We will examine these forces through readings in urban theories as well as ethnographic studies. We will address themes such as the organization of urban life, the political economy of cities, housing and homelessness, and urban planning. The city is also the chief site of cultural production and meaning, and our scope of interest will range from studying subcultures, to reading graffiti, to analyzing monuments. Bearing in mind the inexorable social change of past decades, we will reconsider some classical thought on urban life in the context of postmodern discourse, conceptualize the post-industrial and global city, and conclude with an examination of the problems faced by cities in developing countries. This course is designed to provide students with a comprehensive introduction to urban studies. Students will become familiarized with both classical and modern urban theories, and in reading ethnographies they will have an opportunity to understand some fundamental methodological approaches to the study of the city.

Requirements/Evaluation: response papers, mid term exam and final research paper

Prerequisites: none

Not offered current academic year

SOC 217 (F) Inequality in a Classless Society: The Soviet Experiment and its Aftermath (DPE)

Cross-listings: ECON 107 SOC 217

Secondary Cross-listing

All societies have to come up with some way of distributing wealth and income. In turn, individuals and groups comprising these societies grapple with, justify, and at times contest their place in social and economic hierarchy. Complex as they are, such processes are all the more pressing in societies built on the explicit promise of economic equality, as was the case in the USSR and socialist Eastern Europe. Using the combined perspectives offered by economics, history, and sociology, this course will trace the practices and lived realities of social differentiation and income/wealth distribution brought about by the socialist experiment and intensifying after its demise. We will explore the life of class in these supposedly classless societies, and its reconfiguration after 1991, approaching class as, simultaneously, a matter of social classification, consumption differences, cultural identity, economic policy, and political power. We will study how the economic and political developments of late-socialism and the transition period

generated class-based differences in all walks of life, and ask what these experiments have to teach us about inequalities and persistent social and economic divisions closer to home.

Requirements/Evaluation: Class participation; small writing assignments and research exercises; and a final research project

Prerequisites: None

Enrollment Limit: 19

Enrollment Preferences: 1st and 2nd-year students thinking about majoring in Anthropology, Sociology, or Economics

Expected Class Size: 19

Grading: no pass/fail option, yes fifth course option

Unit Notes: This course cannot count toward the ECON major. It may be taken for the SOC major.

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 107 (D2) SOC 217 (D2)

Difference, Power, and Equity Notes: The subject matter of this course is all about the origins, evolution, current structures, and implications of economic and social differentiation in a region quite apart from the United States. Moreover, by crossing disciplinary lines, we hope it will offer a particularly valuable perspective on such issues. Thus, we felt that it should naturally serve as a DPE course.

Fall 2021

SEM Section: 01 MR 1:10 pm - 2:25 pm Steven E. Nafziger, Olga Shevchenko

SOC 218 (S) Law and Modern Society

This class is designed to introduce students to the field of law and society. The course begins with an overview of the various theoretical perspectives on the subject, including Durkheimian, Marxist, Foucauldian, and Weberian analyses of law and society; as well as the work of those following in the different theoretical schools established by these scholars. Informed by the theoretical overview, the next part of the course considers empirical research in selected areas of law, including tort law, criminal trial procedures, abortion and divorce law, "community justice," and the adjudication of drug offenses. Recognizing that understandings of our own legal practices are enlightened through comparisons to other legal systems, the second half of the course is primarily historical/comparative in focus. In this section, through an exploration of several case studies, American legal processes and habits are compared with related legal practices in such places as Japan, England, Scotland, Ireland, Australia, Germany, Norway, and Canada.

Class Format: discussion

Requirements/Evaluation: a short paper and midterm and final exams

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: Priority given to sociology majors.

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am James L. Nolan

SOC 219 (S) Images and Society

"This is obvious!" is what we say when we believe our point is irrefutable. But images are far less obvious than we may like to think. This course will create a forum for discussing the role of images in our lives, as well as the place of the visual in social inquiry. It will explore the variety of ways in which images--and even vision itself--are shaped by the social and cultural context in which they are embedded, develop skills for critical analysis of existing representations, and address the analytical possibilities and limitations of the study of signs and images. The course will touch upon a range of visual material, from advertising to paintings, but the bulk of the course is dedicated to photography, both as an object of visual analysis and as,

increasingly, a research method in social sciences. Topics for discussion include debates around truth in photography and the politics of representation, changing uses of photography in institutional settings, different photographic cultures and their anthropological and sociological significance, as well as the use of photography in social research. Primary sources for the discussions will be drawn from a variety of spheres, from Soviet propaganda posters to Indian studio portraiture, and will include the images we encounter in everyday life, media, politics, academia, "high" art and pop culture.

Requirements/Evaluation: active class participation, several short papers, a midterm paper and a take-home final

Prerequisites: none; open to all

Enrollment Limit: 19

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 19

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

Attributes: FMST Related Courses

Spring 2022

SEM Section: 01 MR 2:35 pm - 3:50 pm Olga Shevchenko

SOC 221 (F) Money and Intimacy (WS)

Does money matter in affectionate relationships? Can dollars buy love and care? What impact does market economics have on intimate relationships? This course will examine these questions and their relevance over the course of history, considering what forces have contributed to the shift in thinking about them, and, most importantly, how sociological research and knowledge helps us understand their current status. We will look into a wide range of aspects of private life that require actors to mix personal affairs with financial transactions, including romantic encounters, marriages (and divorces), families of various kinds and compositions, child adoptions, and outsourced care for dependents to name just a few. Intimacy carries different value and content in these contexts, as so does handling exchanges within them, and negotiating the balance of intimate and economic exchanges also necessitates applying diverse strategies *vis-à-vis* the external social world. The course will simultaneously look into the changing character of the economy as it has responded to shifting social values. We will specifically focus on how previously private concerns have penetrated the public sphere and shaped the evolution of what has been dubbed 'emotional capitalism'. People skills, teamwork, emotional labor, commodification of intimacy, care, sex, and body parts, are only few examples of the central concepts at stake. Naturally, a reflection on the growth of new technologies and social media will enrich many of the discussed themes.

Requirements/Evaluation: Each student will be expected to submit five or six 5-6-page essays and five or six brief responses. In addition, each student will be expected to actively participate in tutorial discussions. There will be no final paper or exams.

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will be required to submit a 4-5 page essay every other week. During the week when students are not submitting essays, they will submit a brief (1-2 page) response to their partner's essay.

Fall 2021

TUT Section: T1 MW 11:00 am - 12:15 pm Marketa Rulikova

SOC 224 (F) Going Nuclear: American Culture in the Atomic Age

Cross-listings: SOC 224 HIST 273

Primary Cross-listing

This course will examine the historical development and use of the nuclear bomb. Among other features of the early atomic age, the course will look at

the Manhattan Project, the delivery of the bombs for combat, and the destructive effects of the bomb's initial use in Hiroshima and Nagasaki and ongoing testing in the Marshall Islands. The class will investigate the role of the nuclear arms race in the Cold War, the consequences of nuclear production on specific communities, and the implications of the atomic age on our critical understanding of technological innovation more generally. We will also consider the saliency of competing narratives interpreting America's decision (and continuing policies) to build, use, and stockpile nuclear weapons. Employing both sociological and historical perspectives, we will explore the interactions between science, politics, and culture in the nuclear age.

Requirements/Evaluation: a midterm, a final exam, and a 10- to 12-page research paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Preference given to sociology and history majors.

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

SOC 228 (F) The Panopticon: Surveillance, Power, and Inequality (DPE)

Cross-listings: STS 229 SOC 228

Primary Cross-listing

Surveillance is built into the very fabric of modern life. From CCTV cameras, to supermarket loyalty cards, to the massive gathering of personal data on social media sites, people participate in today's "surveillance societies" just by doing everyday activities. This course uses the metaphor of the "Panopticon" as a doorway to engagement with traditional and new forms of surveillance. First described by philosopher and social theorist Jeremy Bentham, the Panopticon is a physical structure that enables one observer to see all inhabitants without those inhabitants knowing when they are being observed. In *Discipline and Punish*, Michel Foucault famously expanded thinking on the Panopticon as a metaphor for the "disciplinary" power that lies at the heart of inequality in modern society. Since Bentham and Foucault's time, however, surveillance technologies have changed significantly. To what extent does the concept of the Panopticon give us purchase on today's surveillance societies? How does watching people with new digital and algorithmic surveillance technologies shape the exercise of power and, in turn, (re)produce forms of inequality? Can privacy, convenience, and safety ever be truly balanced? Topics include: the historical origins and expansion of surveillance in modern societies, the emerging total surveillance state in Baltimore City, and whether social media is turning us all into self-surveillance addicts.

Class Format: This class will be taught online only with both synchronous and asynchronous components. Students will be asked to attend one synchronous video meeting per week. The asynchronous portion will involve discussion of readings and video lectures.

Requirements/Evaluation: participation, reading responses, midterm essay, final paper

Prerequisites: none

Enrollment Limit: 16

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 229 (D2) SOC 228 (D2)

Difference, Power, and Equity Notes: This course explores how power is distributed unequally through the mechanism of surveillance technologies, particularly in regard to racial and class differences. Among other topics, it will consider the concrete case of surveillance in Baltimore City and the question of if and when surveillance is appropriate there, given the city's ongoing crisis of citizen and police violence. Students will discuss police

surveillance in a context shaped by racial segregation and class inequality.

Not offered current academic year

SOC 230 (S) Memory and Forgetting (DPE)

Cross-listings: AMST 233 SOC 230

Primary Cross-listing

On the surface, remembering generally confronts us as a deeply personal act. What is more private than nostalgic reverie or the secrets of a dark and painful past? Yet even "individual" memories take shape through social frameworks, and we also remember "collectively" through shared myths, narratives, traditions, and the like. This course will explore the social dimensions of memory and remembering as well as their inevitable counterpart--forgetting. How do social frameworks inform our individual understandings of the past and shape our sense of selfhood? How and why are figures from the past cast as heroes or villains? How do collectivities celebrate past glories, and how do they deal with shameful or embarrassing episodes? How do economic and political power relations shape struggles over the past? In an increasingly global society, can we speak of "cosmopolitan" or "transcultural" forms of memory? Topics will include autobiographical memory and self-identity; memorials, museums, and monuments; reputations, commemorations, and collective trauma; silence, denial, and forgetting; and transitional justice, official apologies, and reparations.

Requirements/Evaluation: thoughtful and consistent class participation; an autobiographical essay (4-5 pages); four response papers (2 pages each); and a research paper (8-10 pages) with class presentation

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: if overenrolled, students will be asked to submit a short statement of interest

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AMST 233 (D2) SOC 230 (D2)

Difference, Power, and Equity Notes: This course pays particular attention to how power and inequality shape narratives about the past. We will examine and compare several efforts to transform national memories, such as the Equal Justice Initiative memorial in the United States and the Truth and Reconciliation Commission in South Africa. In doing so, we will also consider the role of memory and memorialization in broader processes of social change.

Spring 2022

SEM Section: 01 MR 2:35 pm - 3:50 pm Christina E. Simko

SOC 234 (S) How Emotions Work

What could be more personal and unique than one's own emotions? Over the last century, sociologists, anthropologists, historians, and social psychologists have challenged this taken-for-granted view of emotion, revealing just how much context, institutional structures, and history shape feeling. Emotion does not just emerge from an individual's brain and body; it is also a product of intersubjective dynamics outside the individual. In this deeply interdisciplinary course, students explore how societies shape emotion. Beginning with psychological research on the brain/body connection, we build a capacious model for how social context, norms, and institutions interact with individual psychology to produce both conscious and unconscious forms of feeling. As the course progresses, we zoom further out from the individual level and unpack emotional dynamics at the national, cross-cultural, and civilizational levels. Along the way, we take a deeper look at specific emotions, including love, shame, sympathy, sadness, and happiness. The course concludes by focusing on a pressing social problem--the seemingly global crisis of mental illness on college and university campuses. What is causing this crisis? What can we do to address this issue right here in our community?

Requirements/Evaluation: participation, two short essays, midterm essay, emotion map activity, open space meeting, final paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

SOC 236 (S) Making Things Visible: Adventures in Documentary Work

Cross-listings: SOC 236 AMST 236 ARTH 237 ENGL 237

Primary Cross-listing

Photography, like ethnography, is an art of looking carefully and taking notice. This course will explore the overlaps between documentary photography and field methods of social science, concentrating particularly on the genre in which the two intersect: the photo essay. The students will learn methods of visual narrative and storytelling, using techniques of interviewing, still photography, and video. Concurrently, we will explore a number of examples of investigative work that blend word and image. We will ask questions about the changing practices and expectations associated with the documentarian's role, and the evolving media in which such work can be presented. Lastly, we will discuss ethical questions that haunt documentary work, including issues of responsibility and politics of representation, as well as the perennial question of whether "objective representation" is even possible or desirable. Experience in photography and/or video is not required, but students will be expected to master basic technical skills in image acquisition and audio editing taught in a separate lab section. Students should also be prepared to interact extensively with people in the community and spend a significant time off campus doing fieldwork.

Requirements/Evaluation: full participation in discussions, weekly photographic assignments, a research journal, field materials, and an independent final project; in addition to substantial readings, students should be prepared to spend a significant time out of the classroom doing field work

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: Anthropology and Sociology majors

SOC 240 (S) Performing Masculinity in Global Popular Culture (DPE)

Cross-listings: THEA 241 WGSS 240 SOC 240 AMST 241 LATS 241

Secondary Cross-listing

This course examines popular cultural contexts, asking what it means to be a man in contemporary societies. We focus on the manufacture and marketing of masculinity in advertising, fashion, TV/film, theater, popular music, and the shifting contours of masculinity in everyday life, asking: how does political economy change the ideal shape, appearance, and performance of men? How have products - ranging from beer to deodorant to cigarettes -- had their use value articulated in gendered ways? Why must masculinity be the purview of "males" at all; how can we change discourses to better include performances of female masculinities, butch-identified women, and trans* men? We will pay particular attention to racialized, queer, and subaltern masculinities. Some of our case studies include: the short half-life of the boy band in the US and in Asia (e.g., J/K-Pop), hip hop masculinities, and the curious blend of chastity and homoeroticism that constitutes masculinity in the contemporary vampire genre. Through these and other examples, we learn to recognize masculinity as a performance shaped by the political economy of a given culture.

Requirements/Evaluation: masculinity journal, mid-term essay exam, visual rhetorical analyses of pop culture images

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: a short statement of interest will be solicited

Expected Class Size: 14

Grading: yes pass/fail option, yes fifth course option

SOC 241 (S) Meritocracy

Cross-listings: PSCI 241 SOC 241

Secondary Cross-listing

Although fewer than 1% of Americans have a degree from the country's top 30 colleges and universities, 39% of Fortune 500 CEOs, 41% of federal judges, 44% of the writing and editorial staff at the *New York Times*, 64% of Davos attendees, and 100% of Supreme Court justices do. Is this a positive sign that the United States is governed by its most talented and capable members who have risen through hard work and equal opportunity? Or a negative one pointing to the power of a corrupt and self-selecting elite? This course explores the theme of meritocracy--rule by the intelligent--in comparative perspective. We will look at both old and new arguments regarding the proper role and definition of merit in political society as well as take the measure of meritocracy in present-day Singapore, France, and the United States. The course concludes with a focus on the current debate over American meritocracy and inequality.

Class Format: Remote

Requirements/Evaluation: two short papers, one long paper, take-home final exam, discussion questions, class participation

Prerequisites: none

SOC 244 (S) What They Saw in America

Cross-listings: SOC 244 AMST 244 HIST 366

Primary Cross-listing

This course traces the travels and writings of four important observers of the United States: Alexis de Tocqueville, Max Weber, G.K. Chesterton, and Sayyid Qutb. The course will consider their respective journeys: Where did they go? With whom did they talk? What did they see? The historical scope and varying national origins of the observers provide a unique and useful outsider's view of America--one that sheds light on persisting qualities of American national character and gives insight into the nature and substance of international attitudes toward the United States over time. The course will analyze the common themes found in the visitors' respective writings about America and will pay particular attention to their insights on religion, democracy, agrarianism, capitalism, and race.

Requirements/Evaluation: A midterm examination, two short essays, and a final paper.

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Priority given to Sociology, History, Anthropology, and American Studies majors.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

SOC 248 (F) Altering States: Post-Soviet Paradoxes of Identity and Difference (DPE) (WS)

Cross-listings: RUSS 348 SOC 248 GBST 247 RUSS 248 GBST 347 SOC 348

Primary Cross-listing

Critics and apologists of Soviet-style socialism alike agree that the Soviet ideology was deeply egalitarian. Putting aside for a moment the very reasonable doubts about how justified this perception actually was, it is still worth asking, how did people who lived in the world in which differences in rank, class, gender or ethnicity were not supposed to matter, make sense of their postsocialist condition, one in which new forms of difference emerged, and old ones assumed greater prominence? And how do these encounters with difference impact current events, such as the Russia-Ukraine conflict or the persistent tensions between East and West Germans? This tutorial will examine new dilemmas through ethnographic studies and documentary films that aim to capture in real time the process of articulating and grappling with newly discovered divides. We will focus especially closely on Russia, but will also read studies on East Germany, Bulgaria, Poland, Latvia and Ukraine. This course fulfills the DPE requirement by exploring comparatively the ways in which people in different countries made sense of the social, cultural and political heterogeneity of the postsocialist condition.

Class Format: The course will meet remotely for the most part, although in-person meetings with the appropriate precautions may be arranged at the tutorial partners' and instructor's discretion.

Requirements/Evaluation: 5-page paper every other week, written comments on the partner's paper in alternate weeks

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: Anthropology, Sociology, and Russian majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

SOC 252 (F) Im/mobilities

We think of the freedom to move as a mark of privilege. In the United States, passing a driving test, owning a car, and getting a passport are milestones that signal modernity and freedom. Likewise, we think of restrictions on movement as the domain of the underprivileged, such as the current and formerly incarcerated. But as the Covid-19 pandemic reveals, there have always been two sides to immobility: privileged as well as involuntary immobility. There are correspondingly two sides to mobility: those who move because they want to and others because they have no choice. In this class, students will explore conceptions of mobility as adventurous, free, and modern (as with jet-setting international elites). They will compare and contrast when mobility can be threatening, exclusionary, and limited (as recognized by the Black Lives Matter movement). This class

invites students to interpret their environment through the lens of mobility and inequality in the time of coronavirus. Drawing on sociology, anthropology, cultural studies, geography, and migration studies, this interdisciplinary course offers a beginning conversation on the causes and consequences of the freedom to move--or to stay still.

Requirements/Evaluation: Thoughtful and consistent class participation, three reflection papers (4-5 pages), and two drafts of an op-ed (with class presentation/workshopping)

Prerequisites: None

Enrollment Limit: 20

Enrollment Preferences: Given to first-year students and sophomores

SOC 262 (S) Paper Trails

Long before the invention of the passport, states or state-like entities sought to document and manage populations and discipline bodies. This course invites students to critically reflect on documentation practices and systemic violence, particularly against racial, ethnic, sexual, and political minorities. Students will explore identity-making through documentary practices such as the three-generation life history, a biographical form that Soviet-allied countries used to reward loyalty and punish disloyalty. Labels, such as a criminal record or pre-existing health conditions, also trail or precede individuals their whole lives. Students will grapple with what happens when the paper trail goes cold--when identification documents are invalidated, birth certificates withheld, household registries purged, and archives destroyed. Students will explore the rise of surveillance and biometric data alongside the actors, technologies, and industries that try to circumvent them in places such as the Xinjiang Uyghur Autonomous Region and along the US-Mexico border. In this project-based course, students will exhume their own paper trails and imagine alternative ways to create, alter, and subvert them.

Requirements/Evaluation: thoughtful and consistent class participation, in-class presentations, field notes, and drafts of an opinion essay

Prerequisites: None

Enrollment Limit: 15

Enrollment Preferences: Anthropology and sociology majors

SOC 264 (S) Transnational Activism: Practice, Problems, Ethics (DPE)

Cross-listings: SOC 264 WGSS 263

Secondary Cross-listing

The world's got problems. These problems don't respect national boundaries. This class looks at how activists have engaged across borders and with transnational institutions in order to address transnational problems like class inequality, sexism, homophobia, climate change, and more. It asks: what are the different forms that transnational activism takes and how have transnational activists advanced their goals? Why and how have transnational activists' efforts failed? What are the practical and ethical difficulties associated with transnational activism? What does ethical transnational activism look like, and can it also be effective? While focusing especially on the role of transnational activism in combating sex and gender-based inequities, we will also engage with activism that targets the other axes of oppression with which sex and gender-based oppressions are inextricably entwined.

Requirements/Evaluation: class attendance/participation; critical profile of transnational activist; essay or project proposal, final essay or project

Prerequisites: none

Enrollment Limit: none

Enrollment Preferences: Women's, Gender, and Sexuality Studies majors and Sociology majors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Difference, Power, and Equity Notes: This course centers activism organized around various axes of difference, enabling students to learn about how various groups are defining and pursuing equity. It requires students to explicitly engage the question of ethical intervention in political movements, stressing attentiveness to the dynamics of privilege and marginalization internal to movements.

Attributes: WGSS Racial Sexual + Cultural Diversity Courses

Not offered current academic year

SOC 291 (S) Religion and the American Environmental Imagination

Cross-listings: SOC 291 ENVI 291 REL 291

Secondary Cross-listing

This course examines the relationship between religious and environmental thought in modern America. Exploring a broad range of practices and beliefs, we will examine the religious (and anti-religious) roots of contemporary environmental discourse. Rather than survey the environmental teachings of organized religious groups, our focus throughout will be on ambiguous, eclectic, and fascinating traditions of "eco-spirituality" and popular "nature religion." Where do these traditions come from? What is their relationship to science, to secularism, to politics, and to the search for environmental justice? Starting with the Transcendentalist movement of the 19th century, we will trace a roughly chronological line to the present, taking long detours into several modern religious trends and movements, including the revitalization and contestation of Native American religions, Wicca and neo-pagan ecofeminism, and evangelical Creation Care. Focusing on the writings of activists and radicals from a variety of religious backgrounds, our overarching question throughout the semester is one of the most critical we face in modern environmental thought: what is the relationship between spirituality and the just, sustainable society?

Requirements/Evaluation: a 15- to 18-page research paper and several shorter writing assignments

Prerequisites: ENVI 101 or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Environmental Studies majors and concentrators

SOC 301 (F) Social Construction (DPE)

Cross-listings: COMP 315 WGSS 302 REL 301 SOC 301 STS 301 SCST 301

Secondary Cross-listing

"Social construction" can often seem like the great collegial insight. By now, you've all heard that categories such as race, gender, and sexuality are in some sense not part of nature, but instead are created and maintained socially or culturally. The idea of social construction has been vital to critical race theory and queer theory, and, in this course, we will push ourselves into philosophy of science to see whether or not these same insights apply to everything. If we know that "Whiteness," "heterosexuality," and "masculinity," for instance, are all socially constructed, we will ask if the same is true of "electrons," "money," "the solar system," and "climate change." Can it be that all of our reality is socially constructed? Or does social construction have limits? If so, what are they? We will also ask more fundamental questions, such as: What does it mean to say something is socially constructed? How

does social construction relate to claims that an aspect of the world is "real" or "not real?" Is social construction a theory about language, power, culture, societies, human perceptions, or the limits of science? What kind of political, ethical, ontological, or epistemological work do theories of social construction do? We will begin with different accounts of the social construction of race, gender, and sexuality. In the second part of the course, we will dig deeper into philosophical debates about social construction as such. Then we will explore constructionism about natural science. In the last part of the course, we will change gears and explore look at cutting-edge work in the theory of social science aimed at explaining the construction and ontology of social worlds. The class will culminate in a project in which students will put their social construction theories into practice.

Requirements/Evaluation: regular attendance and participation, short weekly reflection papers, a 10-page research paper, and final project

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Religion majors, then majors from cross-listed departments

Expected Class Size: 15

SOC 303 (S) Cultures of Climate Change

Cross-listings: SOC 303 ENVI 303

Secondary Cross-listing

This course asks why people think and talk about climate change in such very different ways. Climate change is a physical phenomenon that can be observed, quantified, and measured. But it is also an idea, and as such it is subject to the vagaries of cultural interpretation. Despite scientific agreement about its existence and its causes, many people do not see climate change as a serious problem, or as a problem at all. Many others see it as the most serious problem our species has ever faced. What are the sources of this disparity? Why can't we agree about climate change? How does something as complex and confusing as climate change become a "problem" in the first place? This course will explore a broad array of factors, from religion to race, class to colonialism. It will focus especially closely on the communication of scientific knowledge, risk perception, and environmental ethics, and it will apply a range of theories from the social sciences and humanities to a set of concrete case studies.

Requirements/Evaluation: a 15- to 18-page research paper and several shorter writing assignments

Prerequisites: ENVI 101 or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Environmental Studies majors and concentrators first; Anthropology and Sociology majors second

SOC 308 (S) What is Power?

Cross-listings: REL 308 STS 308 SOC 308 PSCI 306

Secondary Cross-listing

What is power? Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures? What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or agency? Or ideology? This course begins with the observation that power is often described as a causal relation--an individual's power is supposed to equal their capacity to produce a change in someone else's behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: **critical theory about power** and **philosophy of science about cause and effect**. We will trace classic philosophical accounts of power and causation (in European and Chinese philosophy), as well as more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt, Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Hobbes, Hume, Locke, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, Sunzi, and Max Weber.

SOC 314 (F) The Social Ecology of Racial and Gender Inequity (DPE)

Cross-listings: SOC 314 WGSS 314

Secondary Cross-listing

Why the political furor over monuments? What would a feminist city look like? Does racial justice require integration? This course trains your focus on space and place, asking you to take a socioecological perspective on race, gender, and other axes of privilege and marginalization. In it, we examine how ideas about race, gender and more shape space as well as how the design of space reinforces social constructs and power relations. After examining specific regions (the city, the suburb, the country) and their relation to one another, we examine specific sites (public transport, public toilets, libraries, houses). The course enables students to better understand the tenacity of inequity by drawing attention to its spatial dimension while at the same time introducing students to -- and providing students tools to engage in -- spatial interventions designed to disrupt vicious social-spatial cycles.

Requirements/Evaluation: attendance, class facilitation, problem identification report, two presentations, reflection

Prerequisites: WGSS/SOC Majors

Enrollment Limit: none

Enrollment Preferences: Women's, Gender, and Sexuality Studies majors

Difference, Power, and Equity Notes: This course introduces students to a socioecological approach, giving them a lens which can help them understand how important axes of difference--race and gender--are socially constructed as well as the stubborn persistence of racial and gender power differentials. Students in this course will be required to apply this lens to their own experience, as well as to discuss difficult questions about different obstacles and potential paths to greater equity in social relations.

Attributes: WGSS Racial Sexual + Cultural Diversity Courses

Not offered current academic year

SOC 315 (F) Culture, Consumption and Modernity

How do lifestyles, fashions and trends appear and evolve? Are we authors of our own taste? What structures our choices of goods and activities? What is it that gives meaning to objects and makes them desirable? Are there non-consumer societies in the modern world? How has globalization changed the ways people consume in different parts of the globe? This course will explore consumption and consumer practices as products of modernity and will analyze the political, cultural and social agendas that have transformed consumption over time. Politics of consumption (the way in which seemingly free and independent consumption choices aggregate into the existing system of global capitalism) will be treated alongside its symbolic element: the role of consumer practices in creating and articulating identities, building relationships and creating solidarities. We will look at fashion, advertising, arts and shopping in places as varied as nineteenth-century France, socialist Russia, and in contemporary United States, tracing both the mechanisms that structure patterns of consumption, and the consequences that these patterns have for the larger social order.

Requirements/Evaluation: full participation, ten journal entries and a 15-page term paper that will go through a draft and revision stage

SOC 324 (S) Memory and Identity (DPE)

Our sense of self is inextricably tied to our understanding of our past, both as individuals and as members of society. This sense of origins, however, is far from natural; it itself has its origins in the debates and politics of the time, and evolves under an array of influences. This course analyzes discourses of collective and individual identity and the mechanisms involved in the formulation of the individuals' sense of their place in the world. Topics include: media of memory, politics of commemoration, nostalgia and selective forgetting, narratives of trauma and of a "golden age," the invention of tradition, and battles over remembrance and heritage, such as the struggles over the proper way to face the difficult past around the world, with a particular emphasis on the United States and on the memory wars in the post-Soviet space.

Requirements/Evaluation: extensive class participation, several short papers, and a final research project with class presentation

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course fulfills the DPE requirement because it explores the diversity of the ways in which communities imagine and engage with their past, and puts struggles over memory in the context of groups' struggles for power and visibility.

Not offered current academic year

SOC 326 (S) Being Mortal

One of the defining features of the human condition is our awareness of our own mortality. How do we cope with this awareness? How does it influence our social institutions? We will begin by exploring how social theorists such as Emile Durkheim, Max Weber, Ernest Becker, and Peter

Berger grappled with mortality and its significance for human social life. We will then turn to the social institutions that structure our confrontation with mortality today. How, why, and with what consequences has death been "sequestered" in modern Western societies and set aside from the social world of the living? What rites and rituals remain for coping with death and dying, and how do our cultural assumptions influence the experiences of grief, loss, and mourning? How does modern medicine--which is oriented toward cure but must ultimately confront the inescapable realities of aging and death--deal with mortality? How have hospice, palliative care, and debates over physician-assisted suicide changed the landscape in recent years? How do societies cope with collective losses in the aftermath of wars, disasters, and atrocities? Our focus will be on the United States, but we will also consider cross-cultural comparisons.

Requirements/Evaluation: three 6- to 7-page papers; an in-class presentation; thoughtful and consistent participation in class discussion

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Sociology and Anthropology majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

Not offered current academic year

SOC 329 (F) Work and Future of Capitalism

What does it mean to work? How does capitalism shape the way we work? What might work look like in the future? In this three-part course, students engage with global capitalism's past, present, and future, asking analytic and normative questions about work and the trajectory of capitalism. The first part of the course examines the historical origins of capitalism and leading theories about what capitalism is and how it stratifies the world into racialized social classes. A central theme in part one will be how capitalist labor relations shape meaning and subjectivity, particularly the experience of dignity. In part two, we examine recent and emerging trends in capitalist labor, such as the death of the career, the rise of the "gig" economy, platform capitalism, and even the seemingly inevitable end of work itself as entire occupations become automated by machine learning. A key question will be how these transformations exacerbate and/or alleviate longstanding inequalities from capitalism's 19th century past. The course concludes by asking students to imagine what work might look like in the next century. Should we continue to work at all? What kinds of social activity should we value, and how would we go about taming, eroding, or even smashing capitalism to allow them to flourish?

Class Format: This class will be taught online only with both synchronous and asynchronous components. Students will be asked to attend one synchronous video meeting per week. The asynchronous portion will involve discussion of readings and video lectures.

Requirements/Evaluation: participation, reading responses, midterm paper, final paper

Prerequisites: none

Enrollment Limit: 16

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Not offered current academic year

SOC 335 (F) Nowheres

We live in a world of nation-states. The world map, according to journalist Joshua Keating, is "itself as an institution, an exclusive club of countries" that rarely accepts new members. Throughout the course, we question how countries conquered the world and became the taken-for-granted political unit. We do so, paradoxically, by looking at contemporary nations that do not appear on the world map. These include nations without statehood, such as Somaliland; those that span countries, including indigenous communities across the US and Canada; and nations that have lost their countries, such as Palestine and South Vietnam. By interrogating "nowheres," we tease out what it means to be a country, and pinpoint when and why the definitions do not apply uniformly. Students will reflect on why the world map has been so remarkably static since the end of the Cold War. We will further probe the social, political, and human costs of the exceptions to this general rule. Students will raise questions and attempt answers to what our interconnected world means for "nowheres" looming on the horizon--nation-states that, as a result of climate change, will soon vanish.

Requirements/Evaluation: Thoughtful and consistent class participation, one 15- to 20-page research paper, several shorter writing assignments and drafts building up to the research paper, and class project to create a speculative digital atlas

Prerequisites: None

Enrollment Limit: 15

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

SOC 338 (F) Transhumanism: Religion, Technoscience, Obsolescence

Cross-listings: HSCI 338 SOC 338 STS 338 REL 338

Primary Cross-listing

This interdisciplinary seminar invites students to pursue sociohistorical analysis and sustained critical discussion of the transhumanist movement and its overriding aims: the augmentation, transformation, and eventual transcendence of human biological constitution; the realization, through speculative technoscientific means, of an enhanced or even "postbiological existence"--a "posthuman condition," "Humanity 2.0." Through close readings of primary historical documents, transhumanist texts, scholarship on transhumanism, works of science-fiction film, literature, and popular culture, we will position the movement as an empirical conduit through which to explore the sociohistorical conditions under which transhumanist ideas and practices have emerged, circulated, and taken up residence. To that end, we will consider the ties of transhumanism to eugenics and massive investments in pharmaceuticals, anti-aging medicine, and so-called "GNR" technologies (i.e. genetics, nanotechnology, and artificial intelligence and robotics); the movement's affinities with neoliberalism and what some have pointed to as transhumanism's racialized subtext of whiteness. We will furthermore devote considerable attention to the technological singularity, the figure of the cyborg, mind-uploading, space colonization, and cryonic suspension, all of which, like transhumanism broadly, suggest that science and technology have in some sense come to operate as powerful channeling agents for the very sorts of beliefs, practices, and forms of association that theorists of secularization expected modernity to displace. Lastly, throughout the course of the seminar we will take transhumanism as a provocation to think broadly and seriously about religion, technology, embodiment, and ways of being human.

Class Format: Remote

Requirements/Evaluation: informal weekly writing, two short review essays, and one 15-page seminar paper

Prerequisites: Prior coursework in sociology-anthropology, history, religion, or science and technology studies.

Enrollment Limit: 14

Enrollment Preferences: Anthropology and Sociology majors and Science and Technology Studies concentrators

Expected Class Size: 14

Grading: yes pass/fail option, no fifth course option

SOC 362 (S) Stories We Tell (WS)

Cross-listings: SOC 362 COMP 362

Primary Cross-listing

From The Moth to StoryCorps to Williams College's own Storytime, stories are ubiquitous in contemporary society. Indeed, sociologists have argued that social life is itself "storied"--that we locate ourselves within familiar narrative structures, using them to "construct" identities and "tell" our lives. Stories, in this view, are not only the stuff of literature, but also the very fabric of social life: the foundation for individual and collective identities. This course grapples with the role of stories and storytelling in modern social life. What role do stories play in constituting personal identity? What cultural templates structure the stories we tell? Why are memoirs so popular, and how can we explain the more recent resurgence of interest in oral forms of storytelling? What role does storytelling play in politics and social movements? Specific topics will include confessional culture, podcasts, memoir,

politics, and social change. Along the way, we will pay explicit attention to medium, and consider how sociologists might learn from journalists, documentarians, and memoirists to convey stories from their own research.

Requirements/Evaluation: 5-page paper every other week; written comments on a partner's paper in alternate weeks

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: if overenrolled, students will be asked to submit a short statement of interest

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

SOC 362 (D2) COMP 362 (D2)

Writing Skills Notes: As a tutorial, this course includes consistent opportunities to develop skills in writing and argumentation. Partners will alternate between receiving detailed written feedback (from both the instructor and a peer) and offering constructive comments. At the end of the semester, students will have the opportunity to revise one of their essays, implementing and solidifying what they have learned.

SOC 363 (F) Cold War Technocultures

Cross-listings: SCST 401 STS 402 SOC 363

Primary Cross-listing

In this seminar students will pursue sociohistorical analyses of Cold War American culture(s) by attending to key points of intersection between politics, aesthetics, and major technoscientific developments during this period. Part I will focus principally on the emergence of the computer and its role in shaping American infrastructure and styles of thought aimed at Soviet "containment." We will trace the historical threads connecting MIT's "Whirlwind" computer project and the SAGE continental air defense system; nuclear wargaming at the RAND Corporation and the aesthetics of "thinking the unthinkable"; the science of cybernetics and the prospect of automation; and ultimately the role of computation, intermedia, and systems logic in perpetrating the atrocities of the Vietnam War. Part II will take up the Cold War space race--from Luna 2, Sputnik I, and Yuri Gagarin to Projects Mercury, Gemini, and the Apollo moon landing. Within this context we will also consider the Club of Rome's Limits to Growth report; plans backed by NASA for the industrialization and colonization of outer space; and the place of science-fiction as a Cold War aesthetic (print, televisual, cinematic). Part III, finally, will explore key moments of conflict, resistance, appropriation, and unintended consequences of Cold War technoscientific developments, among them antipsychiatry and environmentalism; Project Cybersyn, an infrastructural casualty of the U.S./CIA-backed Chilean coup of 1973; the New Left, the American counterculture, new social movements, and the countercultural roots of new media and neoliberalism.

Requirements/Evaluation: two 5-page book review essays, weekly 1-page papers, midterm essay exam, final essay exam

Prerequisites: STS 101 or instructor consent; prior coursework in Anthropology and Sociology and/or History

Enrollment Limit: 15

Enrollment Preferences: Anthropology and Sociology majors, Science and Technology Studies concentrators

SOC 368 (F) Technology and Modern Society

Cross-listings: ENVI 368 SOC 368

Primary Cross-listing

With widespread use of new social media, controversial developments in such bio-technical practices as the cloning of mammals, rapid advances in various forms of telecommunication, and the increasing sophistication of technological weaponry in the military, the triumph of technology remains a defining feature of modern life. For the most part, modern humans remain unflinchingly confident in the possibilities technology holds for continuing to improve the human condition. Indisputably, technology has benefited human life in innumerable ways. However, as with other features of modernity, technology has also had significant, albeit largely unanticipated, social consequences. Working within a sociological paradigm, this course will focus on the less often examined latent functions of technology in modern society. It will consider, for example, the social effects of technology on community life, on privacy, and on how people learn, think, understand the world, communicate, and organize themselves. The course will also examine the effects of technology on medicine, education, criminal law, and agriculture and will consider such counter-cultural reactions to technology as the Luddite movement in early nineteenth century England, Amish agrarian practices, and the CSA (community supported agriculture) movement.

Requirements/Evaluation: two short papers, a midterm exam, and a final exam

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Anthropology and Sociology majors

SOC 372 (S) Time and Temporality

Duration, rhythm, speed, pace, trajectory, sequence, articulation, busyness, boredom, flow--time is one of the most fundamental categories of our experience of reality. Since the founding of the discipline, sociologists have been interested in how time, while seemingly given and natural, is deeply influenced by history and society. This two-part course will introduce students to the sociological analysis of time and temporality. In part one, students will explore the emergence of the so-called "modern western temporal order"--the sense of time that many people take for granted as the way things are. We will excavate the historical roots of schedules, clocks, calendars, and time zones; examine how capitalism and colonial conquest disseminated particular notions of time around the globe; and discuss leading theories of how constructions of time change through history and vary among communities. In part two, we will focus on one of the most frequently lamented and celebrated qualities of modern temporality: acceleration. Is the world speeding up? Why do so many people feel always pressed for time? What are the promises and limits of speed, acceleration, and ceaseless change for building a robust democratic society?

Requirements/Evaluation: participation, time diary analysis (3-5 pages), final paper (10-12 pages)

Prerequisites: none

Enrollment Limit: 20

Winter Study -----

SOC 12 (W) Artificial Intelligence: What a Concept!

Cross-listings: SOC 12 STS 12

Primary Cross-listing

Computer scientists coined the term "artificial intelligence" in the 1950s, and the idea of a digitally fabricated mind has been stirring people's hopes and fears ever since. Will an artificial intelligence bring humanity to perfection, or will it exterminate us? Will it steal our jobs, or make them more fulfilling? Will it resemble us, or be entirely alien? In this course, we will examine society's evolving conceptions of AI, from early fantasies of robot invasions to contemporary speculations about machine learning and the approach of a post-human world. We'll trace the history of efforts to develop AI and the public's responses to them, with a special focus on discerning what our reactions to AI tell us about our conceptions of ourselves--our minds, our bodies, our destiny. In addition to considering scholarly and journalistic explorations of artificial intelligence, we'll examine how androids and other "thinking machines" have been portrayed in movies, fiction, and art. The course will meet for two hours three times a week, and the class sessions will be supplemented by readings and viewings.

Requirements/Evaluation: 10-page paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: preference will be given to Sociology majors and Science and Technology Studies concentrators

Grading: pass/fail only

SOC 16 (W) The Lives of Infamous Men

Michel Foucault is famous for his analysis of how power and knowledge are interwoven in institutions such as the prison or the clinic. Less well known are the life stories that Foucault exhumed from the archives of these institutions--a patricidal peasant assumed to be insane, an intersexed individual raised as a girl in a convent but later legally identified as a man. These stories provoke questions about the self, identity, power, and resistance. Taking Foucault's essay "The Lives of Infamous Men" as our point of departure, we will explore the violence done to lives when they are made to conform to the neatness of the archive, and ask how we might do justice to these lives as historians. This class will meet 6 hours per week and include a research component inviting students to construct a biographical report of a historical individual of their choosing.

Requirements/Evaluation: 10-page paper

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: seniority

Grading: pass/fail only

Unit Notes: William Stahl is a political theorist researching the politics of biography. Previously, he has taught at New York University, Abu Dhabi and the University of California, Los Angeles.

MATHEMATICS AND STATISTICS (Div III)

STATISTICS

Chair of the Department of Mathematics and Statistics: C. Carlisle and Margaret Tippit Professor of Statistics, Richard De Veaux

- Colin C. Adams, Thomas T. Read Professor of Mathematics
- Julie C. Blackwood, Associate Professor of Mathematics
- Xizhen Cai, Assistant Professor of Statistics; on leave 2021-2022
- Richard D. De Veaux, Chair & C. Carlisle and Margaret Tippit Professor of Statistics
- Thomas A. Garrity, Webster Atwell Class of 1921 Professor of Mathematics
- Leo Goldmakher, Associate Professor of Mathematics; on leave 2021-2022
- Pamela E. Harris, Associate Professor of Mathematics, Faculty Fellow of the Davis Center and the Office of Institutional Diversity, Equity and Inclusion; affiliated with: The Davis Center, InstDiversity,Equity&Inclusion
- Stewart D. Johnson, Professor of Mathematics
- Bernhard Klingenberg, Professor of Statistics
- Susan R. Loepp, William R. Kenan, Jr. Professor of Mathematics
- Steven J. Miller, Professor of Mathematics
- Ralph E. Morrison, Assistant Professor of Mathematics
- Shaoyang Ning, Assistant Professor of Statistics
- Allison Pacelli, Professor of Mathematics; on leave Spring 2022
- Lori A. Pedersen, Lecturer in Mathematics
- Anna M. Plantinga, Assistant Professor of Statistics; on leave 2021-2022
- Cesar E. Silva, Hagey Family Professor of Mathematics
- Mihai Stoiciu, Professor of Mathematics
- Annie Tang, Visiting Lecturer of Statistics
- Chad M. Topaz, Professor of Mathematics
- Laurie L. Tupper, Assistant Professor of Statistics; on leave 2021-2022
- Daniel B. Turek, Assistant Professor of Statistics
- Elizabeth M. Upton, Assistant Professor of Statistics

MAJOR IN STATISTICS

The major in Statistics is designed to meet three goals: to introduce some of the central ideas of information and data science, to develop problem-solving ability by teaching students to combine creative thinking with rigorous reasoning, and to develop interdisciplinary skills by applying statistics to an application area of interest.

REQUIREMENTS (10 courses plus colloquium)

The major in Statistics consists of ten courses plus a colloquium requirement. The major includes courses in mathematics, computer science and statistics. Students interested in continuing their study of statistics in graduate school should strongly consider taking Math 350/351 in addition to the other requirements.

Mathematics (2 courses)

MATH 150 or 151 Multivariable Calculus or equivalent high school course

MATH 250 Linear Algebra

Except in unusual circumstances, students planning to major in statistics should complete the calculus sequence (MATH 130, 140, 150/151) before the spring of the sophomore year, at the latest. MATH 150 is a prerequisite for STAT 201 and MATH 250 is a prerequisite for STAT 346.

Computer Science (1 course)

CSCI 134 Intro to Computer Science or CSCI 135 Diving into the Deluge of Data or CSCI 136 Data Structures and Advanced Programming or some other course in the Computer Science Department with prior approval of the Math/Stat department.

Core Courses (4 courses)

STAT 201 Statistics and Data Analysis, STAT 202 Introduction to Statistical Modeling or STAT 302 Applied Statistical Modeling

STAT 346 Regression and Forecasting

STAT 341 Probability

STAT 360 Inferential Statistics

Continuation (2 courses)

Any two courses among the 300 or 400 level courses in the department with a STAT prefix.

Capstone Course (1 course)

The capstone course is a 400-level STAT course taken in the senior year. Although the specific methodological emphasis of the course may vary from year to year, an in-depth project with both a written report and an oral presentation is typically part of the capstone course.

Pass/Fail policies during the Academic Year 2020-2021

Information about the Department of Mathematics and Statistics Pass/Fail policies during the Academic Year 2020-2021 can be found [here](#).

Colloquium Requirement

Participation in the Department Colloquium, in which each senior major presents a talk on a mathematical or statistical topic of their choice. Each major must also attend at least 20 colloquia (15 during the Academic Year 2020-2021), and up to 5 attendances may be counted in their junior year. Up to 5 colloquia in mathematics or computer science may also be counted. Students engaged in study away may petition the department in advance to count up to 5 suitable colloquia attendances from their study away program.

PLACEMENT

Students with an AP Stat score of 5 or 4 are placed in the advanced introductory course Stat 202.

NOTES

Substitutions, Study Abroad, and Transfer Credit: In some cases, and with prior permission of the Mathematics and Statistics Department, appropriate courses from other institutions may be substituted for the application and continuation requirements, but at least eight courses must be taken from the Department of Mathematics and Statistics at Williams.

These can, with prior permission, include courses taken away. Students with transfer credit should contact the department about special arrangements.

Double Counting: No course may count towards two different majors.

Early Senior Capstone Course: In exceptional circumstances, with the prior permission of the department, a student may be allowed to satisfy the Senior Capstone Course requirement in the junior year, provided that the student has completed at least three 300-level statistics courses before enrolling in the capstone course.

Planning Courses: Core courses are normally offered every year. Other 300 and 400 level statistics courses are offered on an irregular basis. Students should check with the department before planning far into the future.

Course Admission: Courses are normally open to all students meeting the prerequisites, subject to any course caps. Students with questions about the level at which courses are conducted are invited to consult department faculty.

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, and complete syllabus including readings/assignments.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. They have to be approved MATH/STAT courses.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. Colloquium requirement, Senior Seminar requirement.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. The highly cumulative structure of the major.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

None to date.

THE DEGREE WITH HONORS IN STATISTICS

The degree with honors in Statistics is awarded to the student who has demonstrated outstanding intellectual achievement in a program of study which extends beyond the requirements of the major. The principal considerations for recommending a student for the degree with honors will be: Mastery of core material and skills, breadth and, particularly, depth of knowledge beyond the core material, ability to pursue independent study of statistics, originality in methods of investigation, and, where appropriate, creativity in research.

An honors program normally consists of two semesters (STAT 493 and 494) and a winter study (WSP 031) of independent research, culminating in a thesis and a presentation. During the Academic Year 2020-2021 the winter study requirement for the honors program in Statistics is waved. One of STAT 493 or STAT 494 can count as a continuation course, but not both. Neither counts as the 400-level senior capstone course.

An honors program in actuarial studies requires significant achievement on four appropriate examinations of the Society of Actuaries.

Highest honors will be reserved for the rare student who has displayed exceptional ability, achievement or originality. Such a student usually will have written a thesis or pursued actuarial honors. In all cases, the award of honors and highest honors is the decision of the Department.

STAT 101 (F)(S) Elementary Statistics and Data Analysis (QFR)

It is impossible to be an informed citizen in the world today without an understanding of data and information. Whether opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines or consumer webdata, we need to be able to separate the signal from the noise. We will learn the statistical methods used to analyze and interpret data from a wide variety of sources. The goal of the course is to help reach conclusions and make informed decisions based on data.

Requirements/Evaluation: weekly homework, quizzes, exams, and a project

Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test)

Enrollment Limit: 50

Enrollment Preferences: juniors and seniors

Expected Class Size: 35

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students with MATH130 but no statistics should enroll in STAT161; students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161/201 should enroll in STAT 202.

Distributions: (D3) (QFR)

LEC Section: 01 TR 11:20 am - 12:35 pm Annie Tang

STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)

This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

Requirements/Evaluation: students complete homework, quizzes, exams (including take-home exams), and a project. Students will need to get familiar with the statistical software STATA.

Prerequisites: MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

Enrollment Limit: 40

Enrollment Preferences: Economics majors, sophomores

Expected Class Size: 40

Grading: no pass/fail option, no fifth course option

Unit Notes: Students with calculus background should consider STAT 201 or 202. Students without any calculus background should consider STAT 101. Please refer to the placement chart on the Math&Stat department website for more information.

STAT 201 (F)(S) Statistics and Data Analysis (QFR)

Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, "Data, data, data! I can't make bricks without clay." In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

Requirements/Evaluation: weekly homework and projects, midterm exams, and a final exam.

Prerequisites: MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent

Enrollment Limit: 45

Enrollment Preferences: Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors

Expected Class Size: 45

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Students will learn to interpret, choose, carry out, and communicate analyses of data.

STAT 202 (F)(S) Introduction to Statistical Modeling (QFR)

Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

Class Format: Class meetings will discuss questions from lecture, dive further into the material, and work on examples. You'll use chat and discussion boards to build community, study with classmates, and ask questions outside of class time. The professor and TAs will also offer optional synchronous office hours/review sessions.

Requirements/Evaluation: Homework problems; quizzes; a final project (on a topic that interests you!); midterm and final exams. You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.

Prerequisites: AP Statistics 4 or 5, or STAT 101, or STAT 161, or STAT 201, or permission of instructor

Enrollment Limit: 40

Enrollment Preferences: Prospective Statistics majors and more senior students

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students with a 4 on the AP Stats exam should contact the department for proper placement

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

STAT 302 (S) Applied Statistical Modeling (QFR)

Data may come from various sources and studies with different purpose of analysis. Statistical modeling provides a unified framework to embrace different data types, and focuses on the goals of understanding relationships, assessing differences and making predictions. We will explore different types of statistical models (linear regression, ANOVA, logistic regression etc), and focus on their conditions, the interactive modeling process, as well as the statistical inference tools for drawing conclusions from them. Throughout the course, real datasets will be modeled for interesting questions about the world, and the limitations will be addressed as well.

Class Format: Hybrid format

Requirements/Evaluation: weekly homework assignments, quizzes, exams and a course project.

Prerequisites: One of the following: i) STAT 201; ii) MATH 140 and STAT 101/161/AP Statistics 4/5; iii) Permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Students interested in statistics who have background in calculus and intro stat. Students cannot take STAT 302 either simultaneously or after STAT 346.

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: It is an intermediate statistics class with prerequisites that are QFR courses

Not offered current academic year

STAT 310 (F) Data Visualization (QFR)

This course is about preparing, visualizing, reporting and presenting different types of data. We will start with creating common plots (e.g., barcharts, histograms, density plots, boxplots, time series and lattice plots), but also discuss visualizing results of statistical models, such as linear or logistic regression models. We will use the ggplot library in R but then switch to the plotly library for interactive graphs with mouse-over and click events. Using R's shiny and DT libraries, we will learn how to create and publish web-apps and dashboards that explore datasets and support online filtering. We will end the class with creating web apps that contain multiple graphs or maps which react to user inputs (such as selecting which variables to plot) or provide real time monitoring of streaming data. Throughout, we will use version control software (Github) to organize and keep track of our code. This course will be taught in a semi-flipped style. While the instructor will introduce certain topics, students will often be responsible for reading material ahead of time and then work individually or in pairs to reproduce material or implement it on their own data.

Requirements/Evaluation: Grading will almost entirely be based on class participation, individual and team-work, project presentations and the student's portfolio.

Prerequisites: Stat 201/202/302; Good knowledge of R

Enrollment Limit: 15

Enrollment Preferences: Preference may be given to stats majors who need the course in order to graduate, but then random selection.

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course teaches how to organize and present data graphically, but also how to critique existing data visualizations.

Not offered current academic year

STAT 315 (S) Applied Machine Learning (QFR)

How does Netflix recommend films based on your viewing history? How does Facebook group its users and send out targeted ads? How did Google select from thousands of search terms to predict flu? Machine learning (ML) is a rapidly growing field that is concerned with algorithms and models to find patterns in data and solve these practical problems at the intersection between statistics, data science and computer science. This course provides a broad introduction to ideas and methods in machine learning, with emphasis on statistical intuitions and practical data analysis. Topics including regularized regression, SVM, supervised/unsupervised learning, text analysis, neural networks will be covered. Students will use R extensively throughout the course while getting introduced to some ML tools in Python.

Class Format: Hybrid format. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Requirements/Evaluation: weekly homework, one class project, and two or three exams

Prerequisites: MATH 140, and STAT 201/202, or equivalent; or permission of instructor. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Enrollment Limit: 15

Enrollment Preferences: Seniors.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a statistics class with a focus on mathematical, computational, and data analysis skills as well as appropriate practical application of analysis methods

STAT 319 (S) Statistical Computing (QFR)

This course introduces a variety of computational and data-centric topics of applied statistics, which are broadly useful for acquiring, manipulating, visualizing, and analyzing data. We begin with the R language, which will be used extensively throughout the course. Then we'll introduce a variety of other useful tools, including the UNIX environment, scripting analyses using bash, databases and the SQL language, alternative data formats, techniques for visualizing high-dimensional data, and text manipulation using regular expressions. We'll also cover some modern statistical techniques along the way, which are made possible thanks to advances in computational power. This course is strongly computer oriented, and assignments will be project-based.

Requirements/Evaluation: based primarily on projects, homework, and exams

Prerequisites: STAT 201 or 202 and CSCI 134, 135, or 136

Enrollment Limit: 30

Enrollment Preferences: juniors and seniors, Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses statistical tools and programming techniques to acquire data, create visualizations, and make future predictions.

Spring 2022

LEC Section: 01 TF 1:10 pm - 2:25 pm Daniel B. Turek

STAT 335 (S) Biostatistics and Epidemiology (QFR)

Epidemiology is the study of disease and disability in human populations, while biostatistics focuses on the development and application of statistical methods to address questions that arise in medicine, public health, or biology. This course will begin with epidemiological study designs and core concepts in epidemiology, followed by key statistical methods in public health research. Topics will include multiple regression, analysis of categorical data (two sample methods, sets of 2x2 tables, RxC tables, and logistic regression), survival analysis (Cox proportional hazards model), and a brief introduction to regression with correlated data.

Class Format: Hybrid format

Requirements/Evaluation: evaluation will be primarily based on weekly homework, two midterm exams, a final exam, and a data analysis project

Prerequisites: STAT 201, STAT 202 and MATH 140, or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Junior and senior statistics majors; public health concentrators

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a statistics course with a focus on quantitative methods relevant to public health studies.

STAT 341 (F)(S) Probability (QFR)

Cross-listings: STAT 341 MATH 341

Secondary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 150 and MATH 250 or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STAT 342 (S) Introduction to Stochastic Processes (QFR)

Stochastic processes are mathematical models for random phenomena evolving in time or space. Examples include the number of people in a queue at time t or the accumulated claims paid by an insurance company in an interval of time t . This course introduces the basic concepts and techniques of stochastic processes used to construct models for a variety of problems of practical interest. The theory of Markov chains will guide our discussion as we cover topics such as martingales, random walks, Poisson process, birth and death processes, and Brownian motion.

Requirements/Evaluation: weekly homework/labs, classwork, and exams

Prerequisites: STAT 341

Enrollment Limit: 30

Enrollment Preferences: senior Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a statistics class with a focus on mathematical skills and translating real world phenomena into mathematical descriptions.

Spring 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Elizabeth M. Upton

STAT 344 (F) Statistical Design of Experiments (QFR)

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially, e-commerce are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

Requirements/Evaluation: Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).

Prerequisites: STAT 161, 201, 202, or equivalent, and Math 140 or equivalent, or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Statistics majors, seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2021

LEC Section: 01 MWF 12:00 pm - 12:50 pm Richard D. De Veaux

STAT 346 (F)(S) Regression Theory and Applications (QFR)

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear, logistic and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

Requirements/Evaluation: Weekly homework, midterm exam, final exam, end-of-year project.

Prerequisites: MATH 250, MATH/STAT 341 (may be taken concurrently) and at least one of STAT 201 or 202. Or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: Statistics Majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

Spring 2022

LEC Section: 01 TR 9:55 am - 11:10 am Elizabeth M. Upton

STAT 355 (F) Multivariate Statistical Analysis (QFR)

To better understand complex processes, we study how variables are related to one another, and how they work in combination. Therefore, we want to make inferences about more than one variable at time? Elementary statistical methods might not apply. In this course, we study the tools and the intuition that are necessary to analyze and describe such data sets. Topics covered will include data visualization techniques for high dimensional data

sets, parametric and non-parametric techniques to estimate joint distributions, techniques for combining variables, as well as classification and clustering algorithms.

Class Format: This will be a hybrid course for students who are both remote and in-person, with a mix of synchronous and asynchronous elements

Requirements/Evaluation: homework, project/presentations, possibly one or two exams.

Prerequisites: MATH 250, and STAT 346 or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: students interested in statistics which have solid background in math and stat

Expected Class Size: 10

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: It is an advanced statistics class with prerequisites that are QFR courses

Not offered current academic year

STAT 356 (S) Time Series Analysis (QFR)

Time series -- data collected over time -- crop up in applications from economics to engineering to transit. But because the observations are generally not independent, we need special methods to investigate them. This course will include exploratory methods and modeling for time series, including descriptive methods and checking for significance, and a foray into the frequency domain. We will emphasize applications to a variety of real data, explored using R.

Class Format: Introductory lectures will be available asynchronously as text and video; synchronous sessions will discuss questions from lecture, dive further into the material, and work on examples. You'll use chat and discussion boards to build community, study with classmates, and ask questions outside of class time. There will also be optional synchronous office hours/review sessions.

Requirements/Evaluation: Evaluation is primarily based on quizzes and projects (on topics that interest you!). You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While most assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to live and online discussions, and working together with classmates on practice problems.

Prerequisites: STAT 346 (may be taken concurrently) or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Statistics majors, seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Not offered current academic year

STAT 358 (S) Introduction to Categorical Data Analysis (QFR)

This course focuses on methods for analyzing categorical response data. In contrast to continuous data, categorical data consist of observations classified into two or more categories. Traditional tools of statistical data analysis (such as linear regression) are not designed to handle such data and pose inappropriate assumptions. We will develop methods specifically designed for modeling categorical data, with applications in the social and biological sciences as well as in medical research, engineering and economics. This course has two parts. The first part will discuss statistical inference for parameters of categorical distributions (Bernoulli, Binomial, Multinomial, Poisson) and for measures of association arising in contingency tables (difference and ratio of proportions and odds ratios). Inferential methods covered include Wald, score and likelihood ratio tests and confidence intervals, as well as the bootstrap. The longer second part will focus on statistical modeling of categorical response data via generalized linear models, with a heavy focus on logistic regression models with both quantitative and categorical predictors and their interactions. Model fitting and inference will be based on maximum likelihood and carried out via R.

Requirements/Evaluation: Weekly homework assignments consisting of exercises from the textbook as well as data analysis problems, carried out

using R. Occasional short in-class quizzes at the beginning of class. One Midterm (with both in-class and take-home component). Final Project with presentation. Final exam. Homework accounts for roughly 15% of the grade, quizzes for another 15%, midterm (in-class and take-home combined) and final for about 30% each, and project for the remaining 10%.

Prerequisites: STAT 346: Regression and Forecasting

Enrollment Limit: 15

Enrollment Preferences: stats majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Students learn how to analyze data and communicate results.

Spring 2022

LEC Section: 01 TR 11:20 am - 12:35 pm Bernhard Klingenberg

STAT 360 (S) Statistical Inference (QFR)

How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.

Class Format: For the Spring 2021 semester, synchronous zoom lectures are planned, where the instructor uses Google's jamboard to interact with students

Requirements/Evaluation: Homework, Quizzes, Exams

Prerequisites: MATH 250, STAT 201 or 202, STAT 341

Enrollment Limit: 15

Enrollment Preferences: Statistics majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: A rigorous mathematical course laying the foundation for reasoning with data

Spring 2022

LEC Section: 01 TR 8:30 am - 9:45 am Bernhard Klingenberg

STAT 362 (F) Design of Experiments (QFR)

How do you get informative research results? By doing the right experiment in the first place. We'll look at the techniques used to plan experiments that are both efficient and statistically sound, the analysis of the resulting data, and the conclusions we can draw from that analysis. Using a framework of optimal design, we'll examine the theory both of classical designs and of alternatives when those designs aren't appropriate. On the applied side, we'll make extensive use of R to work with real-world data.

Requirements/Evaluation: based primarily on projects, homework, and exams

Prerequisites: STAT 346

Enrollment Limit: 30

Enrollment Preferences: seniors/juniors and Statistics majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Not offered current academic year

STAT 365 (F) Bayesian Statistics (QFR)

The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes' Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.

Requirements/Evaluation: homework and exams

Prerequisites: STAT 201 and MATH 150 and 250, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: juniors and seniors, Statistics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Fall 2021

LEC Section: 01 TF 1:10 pm - 2:25 pm Daniel B. Turek

STAT 368 (S) Modern Nonparametric Statistics (QFR)

Many statistical procedures and tools are based on a set of assumptions, such as normality or other parametric models. But, what if some or all of these assumptions are not valid and the adopted models are misspecified? This question leads to an active and fascinating field in modern statistics called nonparametric statistics, where few assumptions are made on data's distribution or the model structure to ensure great model flexibility and robustness. In this course, we start with a brief overview of classic rank-based tests (Wilcoxon, K-S test), and focus primarily on modern nonparametric inferential techniques, such as nonparametric density estimation, nonparametric regression, selection of smoothing parameter (cross-validation), bootstrap, randomization-based inference, clustering, and nonparametric Bayes. Throughout the semester we will examine these new methodologies and apply them on simulated and real datasets using R.

Requirements/Evaluation: performance on exams, homework, and a project

Prerequisites: STAT 201 and STAT 346, or permission of instructor.

Enrollment Limit: 30

Enrollment Preferences: senior Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a statistics class with a focus on mathematical, computational, and data analysis skills as well as appropriate practical application of analysis methods.

Not offered current academic year

STAT 372 (F) Longitudinal Data Analysis: Modeling Change over Time (QFR)

This course explores modern statistical methods for drawing scientific inferences from longitudinal data, i.e., data collected repeatedly on experimental units over time. The independence assumption made for most classical statistical methods does not hold with this data structure because we have multiple measurements on each individual. Topics will include linear and generalized linear models for correlated data, including marginal and random effect models, as well as computational issues and methods for fitting these models. We will consider many applications in the social and biological sciences.

Class Format: Hybrid format. Approximately 2/3 of class time will be lecture (in person for students who are on campus, recorded for remote students). All synchronous students (whether in person or online) will attend a remote lab/discussion section each week. Asynchronous options will be provided for students unable to participate synchronously.

Requirements/Evaluation: performance on exams, homework, and a project

Prerequisites: STAT 201 and STAT 346

Enrollment Limit: 15

Enrollment Preferences: junior and senior Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will cover a variety of statistical analysis methods for longitudinal data.

STAT 442 (S) Statistical Learning and Data Mining (QFR)

In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

Class Format: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Requirements/Evaluation: weekly homework, exams and an end-of-term project

Prerequisites: STAT 346 or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is an advanced statistics class involving theory and application of statistical methods to data.

Spring 2022

LEC Section: 01 MR 2:35 pm - 3:50 pm Shaoyang Ning

STAT 458 (F) Spatio-Temporal Data (QFR)

Everything happens somewhere and sometime. But the study of data collected over multiple times and locations requires special methods, due to the dependence structure that relates different observations. In this course, we'll look at exploring, analyzing, and modeling this kind of information--introducing standard methods for purely time-series and purely spatial data, and moving on to methods that incorporate space and time together. Topics will include autocovariance structures, empirical orthogonal functions, and an introduction to Bayesian hierarchical modeling. We'll use R to apply these techniques to real-world datasets.

Requirements/Evaluation: project work, homework, exams, and contribution to discussion

Prerequisites: STAT 346, or permission of instructor

Enrollment Limit: 14

Enrollment Preferences: Seniors and Statistics majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Not offered current academic year

STAT 465 (F) Bayesian Statistics (QFR)

Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. Indeed, the Bayesian approach is now recognized across scientific disciplines as a modern and powerful tool. We begin with an introduction to Bayes' Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to performing Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods, before moving on to multivariate sampling methods and methodology. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing. The course will culminate in an independent Bayesian research project.

Requirements/Evaluation: Homework, exams, and project

Prerequisites: STAT 346, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: Juniors and Seniors, and Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course mandates significant mathematical and statistical prowess.

Not offered current academic year

STAT 493 (F) Senior Thesis: Statistics

Each student carries out an individual research project under the direction of a faculty member that culminates in a thesis. See description under *The Degree with Honors in Statistics*.

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Fall 2021

HON Section: 01 TBA Richard D. De Veaux

STAT 494 (S) Senior Thesis: Statistics

Each student carries out an individual research project under the direction of a faculty member that culminates in a thesis. See description under *The Degree with Honors in Statistics*.

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Spring 2022

HON Section: 01 TBA Richard D. De Veaux

STAT 497 (F) Independent Study: Statistics

Directed independent study in Statistics.

Prerequisites: permission of department

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Fall 2021

IND Section: 01 TBA Richard D. De Veaux

STAT 498 (S) Independent Study: Statistics

Directed independent study in Statistics.

Prerequisites: permission of department

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Spring 2022

IND Section: 01 TBA Richard D. De Veaux

STAT 499 (F)(S) Statistics Colloquium

Statistics senior colloquium. Meets every week for an hour both fall and spring. Senior statistics majors must participate. This colloquium is in addition to the regular four semester-courses taken by all students.

Requirements/Evaluation: delivering a passing talk and participation throughout the year

Prerequisites: Statistics majors must take the colloquium in their senior year

Enrollment Limit: none

Enrollment Preferences: none

Expected Class Size: 25

Grading: non-graded

Distributions: (D3)

Fall 2021

SEM Section: 01 W 1:10 pm - 3:50 pm Richard D. De Veaux

Spring 2022

SEM Section: 01 W 1:10 pm - 3:50 pm Richard D. De Veaux

Winter Study -----

STAT 30 (W) Senior Project: Statistics

To be taken by candidates for honors in Statistics other than by thesis route.

Class Format: senior project

Grading: pass/fail only

Winter 2022

HON Section: 01 TBA Richard D. De Veaux

STAT 31 (W) Senior Honors Thesis

Statistics senior honors thesis.

Class Format: thesis

Grading: pass/fail only

Winter 2022

HON Section: 01 TBA Richard D. De Veaux

STAT 99 (W) Indep Study: Statistics

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

Class Format: independent study

Grading: pass/fail only

Winter 2022

IND Section: 01 TBA Richard D. De Veaux

ROMANCE LANGUAGES (Div I)

SPANISH

Chair: Professor Brian Martin

Professors: G. Bell-Villada, S. Fox. Assistant Professor: C. Macías Prieto. Visiting Assistant Professor: C. Melgarejo-Torres; Teaching Associates: Katia Cruz-Quintana, Celia Domingo García, Gabriel Gonzalo Fernández

On leave: J. French (Fall), L. Rouhi (Spring)

THE MAJOR IN SPANISH

Students who major in Spanish can expect to acquire linguistic fluency along with in-depth knowledge of the cultures of Spain and Latin America. Through the study of the major writers and historical events of the Spanish-speaking world, our program offers training in literary analysis and linguistic expression, as well as a deep appreciation of Hispanic civilizations.

The major consists of nine courses above the 102 level. In exceptional circumstances, the Department may decide to accept RLSP 101-102 for the Spanish major. One of the nine courses must be the 400-level senior seminar taken during the student's final year at the College; another must be a course that substantially focuses on literature or cultural texts produced before 1800. Students entering at the 200-level may, with the permission of the Department, choose as part of their major program one course not conducted in Spanish but offered by faculty in Romance Languages or another Department or Program, such as Latino/a Studies, Comparative Literature, History, etc., provided that the subject matter relate to and broaden their study of Spanish. Students entering at a very advanced level may, in some cases and with the permission of the Department, include two such courses in their major program. Working with a member of the Spanish faculty, the student will formulate a curricular plan that will ensure balance and coherence in courses taken prior to declaring a major in Spanish. This is especially imperative for students who are planning to spend a part or all of their junior year in Latin America or Spain.

THE DEGREE WITH HONORS IN SPANISH

Students majoring in Spanish may apply to be admitted to the Honors Program in Spanish upon demonstrating the following: (1) fluency of spoken and written language; (2) potential for successful independent research, as demonstrated by strong performance in advanced-level coursework; (3) interest and motivation; and (4) overall quality and feasibility of the proposal. Two routes are available to those who wish to apply for the degree with honors.

The first of these involves the writing of a senior thesis.

By May 15th of their junior year, candidates will have found a thesis advisor, and given the Department a three- to five-page proposal and a preliminary bibliography. (In some cases, and upon consultation with the Department, candidates will have the option to choose a second reader in addition to their primary advisor; for example, when the thesis is interdisciplinary enough in nature that it requires the expertise of an additional reader).

This proposal will be discussed by the Department; by June 1st, the candidate will be informed whether they can proceed with the thesis, and if so, what changes need to be made to the focus and scope of the project. The summer before the senior year will be spent compiling a more detailed bibliography and reading.

Upon their return to Williams, candidates will devote to their theses two semesters of independent study (beyond the nine courses required for the major) and the winter study period of their senior year (493-W31-494). The thesis will be written in Spanish and will usually not be shorter than fifty pages. By the end of the Fall semester, students will normally have a clear outline of the project, have done substantial research, and produced the draft of at least the first half of the project. During January this draft will be suitably rewritten and edited with a view to a final version, while the candidates will also begin work on remaining chapters.

Candidates will submit what they have written to the department on the last day of Winter Study.

On the Tuesday of the first week of the spring semester candidates will make a presentation of the project at a departmental colloquium in Spanish. The thesis will be promptly discussed and evaluated to determine whether or not the student should continue in the honors program. The second semester of independent thesis work will be spent writing more chapters, as well as revising, rewriting, and polishing the project where necessary. The completed thesis in its final form will be due on April 25th. At the end of the Spring term, the student will present and defend the final project before members of the Department and others by invitation. The grade will be awarded once members of the Department have consulted after the defense.
