Algebraic combinatorics is a branch of mathematics at the intersection of combinatorics and algebra. On the one hand, we study combinatorial structures using algebraic techniques, while on the other we use combinatorial arguments and methods to solve problems in algebra. In this collaborative project-based course, students will select among the presented topics, develop research questions, and undertake original research in the field. Student assessment is based building positive and supportive collaborative working relationships with their peers, drafts of research project manuscript, and oral presentations.

**Requirements/Evaluation:** Drafts of manuscript, oral presentations, reflections, peer collaboration skills

**Prerequisites:** MATH 200 and MATH 355

**Enrollment Limit:** 25

**Enrollment Preferences:** Senior mathematics majors, students with programming experience, students with interests in algebra and combinatorics.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (WS) (QFR)

**Writing Skills Notes:** This course will require multiple revisions of a manuscript on the mathematical tent and collaborative work. The final result will be a 10-20 page research article and the course will be designed as a writing intensive course.

**Quantative/Formal Reasoning Notes:** This is a mathematics course in the area of algebraic combinatorics and is a quantitative and formal reasoning course.

Not offered current academic year

#### **MATH 474 (S) Tropical Geometry (QFR)**

This course offers an introduction to tropical geometry, a young subject that has already established deep connections between itself and pure and applied mathematics. We will study a rich variety of objects arising from polynomials over the min-plus semiring, where addition is defined as taking a minimum, and multiplication is defined as usual addition. We will learn how these polyhedral objects connect to other areas of mathematics like algebraic geometry, and how they can be applied to solve problems in scheduling theory, phylogenetics, and other diverse fields.

**Requirements/Evaluation:** participation, problem sets, quizzes, exams, and a final project

**Prerequisites:** MATH 355 or permission of instructor

**Enrollment Limit:** 25

**Enrollment Preferences:** Senior math majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course builds quantitative skills

Not offered current academic year

#### **MATH 481 (S) Measure theory and Hilbert spaces (QFR)**

How large is the unit square? One might measure the number of individual points in the square (uncountably infinite), the area of the square (1), or the dimension of the square (2). But what about for more complicated sets, e.g., the set of all rational points in the unit square? What's the area of this set? What's the dimension? In this course we'll come up with precise ways to measure size---length, area, volume, dimension, etc.---that apply to a broad array of sets. Along the way we'll encounter Lebesgue measure and Lebesgue integration, Hausdorff measure and fractals, space-filling curves and the Banach-Tarski paradox. We will also investigate Hilbert spaces, mathematical objects that combine the tidiness of linear algebra with the power of analysis and are fundamental to the study of differential equations, functional analysis, harmonic analysis, and ergodic theory, and also apply to fields like quantum mechanics and machine learning. This material provides excellent preparation for graduate studies in mathematics, statistics and economics.

**Requirements/Evaluation:** Problem sets, exams, an expository essay

**Prerequisites:** At least one previous course that has Math 350 or 351 as a prerequisite (eg Math 374, 383, 401, 404, 408, 420, 426, 485), or permission of instructor.

**Enrollment Limit:** 20

**Enrollment Preferences:** Juniors and seniors.

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It's math.

Spring 2023

LEC Section: 01 Canceled

**MATH 482 (F) Homological Algebra (QFR)**

Though a relatively young subfield of mathematics, Homological Algebra has earned its place by supplying powerful tools to solve questions in the much older fields of Commutative Algebra, Algebraic Geometry and Representation Theory. This class will introduce theorems and tools of Homological Algebra, grounding its results in applications to polynomial rings and their quotients. We will focus on some early groundbreaking results and learn some of Homological Algebra's most-used constructions. Possible topics include tensor products, chain complexes, homology, Ext, Tor and Hilbert's Syzygy Theorem.

**Requirements/Evaluation:** homework and exams

**Prerequisites:** MATH 355

**Enrollment Limit:** 20

**Enrollment Preferences:** junior and senior math majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** this course is not a senior seminar, so it does not fulfill the senior seminar requirement for the Math major

**Distributions:** (D3) (QFR)

Not offered current academic year

**MATH 493 (F) Senior Honors Thesis: Mathematics**

Mathematics senior honors thesis; this is part of a full-year thesis (493-494). Each student carries out an individual research project under the direction of a faculty member that culminates in a thesis. See description under *The Degree with Honors in Mathematics*.

**Grading:** yes pass/fail option, yes fifth course option

**Winter Study -----****MATH 10 (W) Creative Dynamics**

Broadly defined, a dynamical system is an object whose future state can be calculated from its current state. Examples include ordinary and partial differential equations, discrete dynamics, cellular automata, billiards, spatial games, coupled/synchronized systems, agent models, evolutionary/selective dynamics, graph dynamics, Markov chains, and many more. The instructor will give a survey of such systems, and students will be free to imagine, create, and compute their own systems with an emphasis on graphical presentation of results.

**Class Format:** mornings

**Requirements/Evaluation:** grading will be based on class participation, presentation of results, and a final project

**Prerequisites:** solid computer programming skills in some language with good support for graphics

**Enrollment Limit:** 15

**Enrollment Preferences:** computational skills, math background, and enthusiasm; students will be asked to submit a brief description of their qualifications

**Expected Class Size:** NA

**Grading:** pass/fail only

Winter 2023

SEM Section: 01 Cancelled

**MATH 12 (W) The Mathematics of LEGO**

This course is a modification of eight previous winter studies I have done on the Mathematics of LEGO bricks. Similar to those, we will use LEGO

bricks as a motivator to talk about some good mathematics (combinatorics, algorithms, efficiency). We will partner with Williamstown Elementary and teach an Adventures in Learning course (where once a week for four weeks we visit the elementary school after the day ends to work with the kids). We will either submit a Lego Ideas Challenge, to try and create a set that Lego will then market and sell, or do a speed build challenge (college teams vs elementary school teams perhaps).

**Requirements/Evaluation:** short paper and final project or presentation

**Prerequisites:** none

**Enrollment Limit:** 30

**Enrollment Preferences:** none

**Expected Class Size:** NA

**Grading:** pass/fail only

### **MATH 14 (W) Flow Yoga**

This class will teach the practice of yoga based on a fusion of Ashtanga, Vinyasa and Iyengar methodologies. This course is open to all levels from those who have never done a pose to those who have practicing yoga for years. The students will learn how to connect movement to breath in a sequence of vigorous yoga poses, or asanas. The flow classes will introduce yoga sequences in an alignment-based curriculum appropriate to each student's experience. In addition to the physical work out of practicing yoga, there will be short discussions on the assigned reading of handouts that explore various topics pertinent to yoga, such as an introduction to yogic philosophy, the historical background of yoga, and a basic of knowledge of Sanskrit. The rudiments of Meditation will begin and end every session. Attendance to every class is a requirement. We will meet 3 times per week for 2 hours each time. The students will be expected to practice yoga daily on their own after having memorized certain basic yoga sequences. Each student will keep a journal where they will note the highlight of that day's class, whether it be a new asana or a sutra or whatever caught their attention. Students will be evaluated on their class participation, their journal and a short essay on a topic of their choice.

**Requirements/Evaluation:** Class participation and journal entries and final essay

**Prerequisites:** Those with previous yoga experience

**Enrollment Limit:** 25

**Enrollment Preferences:** 15-20

**Expected Class Size:** NA

**Grading:** pass/fail only

**Materials/Lab Fee:** \$106

**Attributes:** WELL Winter Study Wellness

Winter 2023

LEC Section: 01 MWF 10:00 am - 12:50 pm Sylvia I. Logan

### **MATH 18 (W) Introduction to Cryptography**

Throughout history, wars have been won and lost based on a military's ability to successfully send secret messages and to break the enemy's secret codes. In fact, until the last half of the last century, most uses for cryptography were related to the military. Since the invention of high-powered computers and the Internet, however, there has been an explosion in the need for and usage of encryption. In the 1970's, public-key encryption was invented, allowing two parties who want to communicate in a secure way to do so even without already sharing a secret "key". Today, there are numerous mathematical methods used for encryption. In this course, we will study some historical cryptosystems as well as more modern ones. Possible topics include the Caesar cipher, Enigma, The Hill Cipher, Diffie-Hellman, RSA, AES, and Elliptic Curve Cryptography. The class will meet six hours per week. Evaluation will be based on regular homework assignments, participation in class group activities, and a final project.

**Requirements/Evaluation:** Final project or presentation

**Prerequisites:** None. Students who have already taken a course in Cryptography should obtain permission of the instructor before enrolling in the course.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students will be asked to write a paragraph explaining why they would like to take the course.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Attributes:** EXPE Experiential Education Courses STUX Winter Study Student Exploration

Winter 2023

LEC Section: 01 M-F 10:00 am - 11:50 am Susan R. Loepp

### **MATH 20 (W) Greatest vs. Best: A Quantitative Exploration of Athletics**

This class will focus on a longstanding athletics debate surrounding who is the greatest athlete of all time ("GOAT") through various quantitative research avenue. As time has progressed throughout sports, more advanced statistics, measuring apparatuses, and general comparison metrics have evolved to support the ability of professional teams to properly assess talent. We can now see how Lebron James compares to Kevin Durant, both players from the same era; it is much harder to compare James to Tom Brady, and doing so requires the introduction of new metrics to compare across sports. There are two major aims. First, create a central quantitative measurement that can compare athletes across different team sports and eras to one another to accurately assess ability. Second, alter the conversation away from the "GOAT" discussion towards the best of all teammates ("BOAT"). The BOAT perspective makes the problem significantly more approachable, as now we are not concerned with contributions to a team's success, but just how successful a team is. This is still a non-trivial problem, as we have to quantify how much easier it is for a strong team to win a championship in different sports.

**Class Format:** Class will be a combination of lectures and student projects.

**Requirements/Evaluation:** Goal is to contribute to paper or papers to be submitted to sports analytics journals.

**Prerequisites:** None, but knowledge in programming / statistics a plus.

**Enrollment Limit:** 15

**Enrollment Preferences:** Students with appropriate background in math / stats / programming and expertise in knowledge of team sport statistics.

**Expected Class Size:** 10

**Grading:** pass/fail only

**Materials/Lab Fee:** \$40 for supplies, access to data sets, travel to local conferences.

### **MATH 26 (W) A Taste of Austria 2023**

Instructor: Sophia Klingenberg, Dr. med. Planned Travel Date: 10 Days of travel between January 6th - January 26 Flight to Vienna, train or bus trip to Graz. City tours and Chocolate factory tour, visit Castle, and focus on their health and wellbeing at the thermal baths. Bad Blumau, or Bad Loipersdorf.TBA. Planned Activities: Lodging will be provided at an inexpensive hotel, Jugendherberge in Vienna. Albertina, Cafe Demel, Sacher Hotel, Hawelka, Central, Landtmann, Aida among others. Visit Museums: for example: Belvedere, Jewish Museum, Sigmund Freud Museum, Narrenturm (TBA) and Coffee Houses in Vienna. Tour Zotter Chocolate Factory, Steiermark. Health: TBA: Therme Loipersdorf or Bad Blumau, Steiermark. Be mindful and focus on your health, immerse yourself in the Austrian world of wellness! Tour Schloss Eggenberg, Graz. Guided tour of the Zeughaus with armour from the 15th to the 18th century, Graz. Music: Piano Concert performed by Philipp Sheucher at the Conservatorium in Graz. Literature: Reading together "Chess Story" by Stefan Zweig. How GREEN is Austria? Learning about sustainable energy in Austria. Daily meeting before excursions: Instructions to learn the German Language. Possibly enjoy an evening at the Opera House in Graz. TBA. Students will write a four-page reflection paper on what they have gained from their travel course. I am a native Austrian who was born and raised in Graz, Austria and I have had the experience of life and culture. Working at the Opera House in Graz, as an extra, performing with the ensemble in Graz, and the famous Kirov Ballet from St. Petersburg, Russia on their summer tour. Email: sklingen@williams.edu with questions

**Requirements/Evaluation:** Short paper and final project or presentation; Final project or presentation; Reflecting paper on the trip after the travel course, explaining what the personal grow contained, and constructive criticism.

**Prerequisites:** Students do not require to have any German language knowledge. Good communication skills and personal maturity would be ideal.

**Enrollment Limit:** 15

**Enrollment Preferences:** Students who show an interest in the language and culture of Austria. Students need to be reliable, on time and attentive to class and cultural events. No alcohol policy only under supervision since students are legally allowed to consume alcohol.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Materials/Lab Fee:** \$3,200

**Attributes:** EXPE Experiential Education Courses TRVL Winter Study Travel Course

## MATHEMATICS AND STATISTICS (Div III)

### STATISTICS

Chair of the Department of Mathematics and Statistics: C. Carlisle and Margaret Tippit Professor of Statistics, Richard De Veaux

- Colin C. Adams, Thomas T. Read Professor of Mathematics
- Bhagya Athukorallage, Visiting Assistant Professor of Mathematics
- Julie C. Blackwood, Associate Professor of Mathematics
- Xizhen Cai, Assistant Professor of Statistics
- Daniel Condon, Visiting Assistant Professor of Mathematics
- Richard D. De Veaux, Chair & C. Carlisle and Margaret Tippit Professor of Statistics
- Thomas A. Garrity, Webster Atwell Class of 1921 Professor of Mathematics
- Leo Goldmakher, Associate Professor of Mathematics; on leave Spring 2023
- Pamela E. Harris, Associate Professor of Mathematics; on leave 2022-2023
- Stewart D. Johnson, Professor of Mathematics; on leave Spring 2023
- Bernhard Klingenberg, Professor of Statistics; on leave 2022-2023
- Susan R. Loepp, William R. Kenan, Jr. Professor of Mathematics
- Steven J. Miller, Professor of Mathematics
- Ralph E. Morrison, Associate Professor of Mathematics
- Shaoyang Ning, Assistant Professor of Statistics; on leave 2022-2023
- Allison Pacelli, Professor of Mathematics; on leave 2022-2023
- Lori A. Pedersen, Lecturer in Mathematics
- Anna M. Plantinga, Assistant Professor of Statistics
- Cesar E. Silva, Hagey Family Professor of Mathematics; on leave 2022-2023
- Mihai Stoiciu, Professor of Mathematics
- Daniel B. Turek, Associate Professor of Statistics; on leave Spring 2023
- Elizabeth M. Upton, Assistant Professor of Statistics
- Jenna Zomback, Visiting Assistant Professor of Mathematics

### MAJOR IN STATISTICS

The major in Statistics is designed to meet three goals: to introduce some of the central ideas of information and data science, to develop problem-solving ability by teaching students to combine creative thinking with rigorous reasoning, and to develop interdisciplinary skills by applying statistics to an application area of interest.

### REQUIREMENTS (10 courses plus colloquium)

The major in Statistics consists of ten courses plus a colloquium requirement. The major includes courses in mathematics, computer science and statistics. Students interested in continuing their study of statistics in graduate school should strongly consider taking Math 350/351 in addition to the other requirements.

### Mathematics (2 courses)

MATH 150 or 151 Multivariable Calculus or equivalent high school course

MATH 250 Linear Algebra

Except in unusual circumstances, students planning to major in statistics should complete the calculus sequence (MATH 130, 140, 150/151)

before the spring of the sophomore year, at the latest. MATH 150 is a prerequisite for STAT 201 and MATH 250 is a prerequisite for STAT 346.

### Computer Science (1 course)

CSCI 134 Intro to Computer Science or CSCI 135 Diving into the Deluge of Data or CSCI 136 Data Structures and Advanced Programming or some other course in the Computer Science Department with prior approval of the Math/Stat department.

### Core Courses (4 courses)

STAT 201 Statistics and Data Analysis, STAT 202 Introduction to Statistical Modeling or STAT 302 Applied Statistical Modeling

STAT 346 Regression and Forecasting

STAT 341 Probability

STAT 360 Inferential Statistics

### Continuation (2 courses)

Any two courses among the 300 or 400 level courses in the department with a STAT prefix.

### Capstone Course (1 course)

The capstone course is a 400-level STAT course taken in the senior year. Although the specific methodological emphasis of the course may vary from year to year, an in-depth project with both a written report and an oral presentation is typically part of the capstone course.

### Pass/Fail policies during the Academic Year 2020-2021

Information about the Department of Mathematics and Statistics Pass/Fail policies during the Academic Year 2020-2021 can be found [here](#).

### Colloquium Requirement

Participation in the Department Colloquium, in which each senior major presents a talk on a mathematical or statistical topic of their choice. Each major must also attend at least 20 colloquia (15 during the Academic Year 2020-2021), and up to 5 attendances may be counted in their junior year. Up to 5 colloquia in mathematics or computer science may also be counted. Students engaged in study away may petition the department in advance to count up to 5 suitable colloquia attendances from their study away program.

### PLACEMENT

Students with an AP Stat score of 5 or 4 are placed in the advanced introductory course Stat 202.

### NOTES

**Substitutions, Study Abroad, and Transfer Credit:** In some cases, and with prior permission of the Mathematics and Statistics Department, appropriate courses from other institutions may be substituted for the application and continuation requirements, but at least eight courses must be taken from the Department of Mathematics and Statistics at Williams.

These can, with prior permission, include courses taken away. Students with transfer credit should contact the department about special arrangements.

**Double Counting:** No course may count towards two different majors.

**Early Senior Capstone Course:** In exceptional circumstances, with the prior permission of the department, a student may be allowed to satisfy the Senior Capstone Course requirement in the junior year, provided that the student has completed at least three 300-level statistics courses before enrolling in the capstone course.

**Planning Courses:** Core courses are normally offered every year. Other 300 and 400 level statistics courses are offered on an irregular basis. Students should check with the department before planning far into the future.

**Course Admission:** Courses are normally open to all students meeting the prerequisites, subject to any course caps. Students with questions about the level at which courses are conducted are invited to consult department faculty.

### FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

**Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in many cases, though students should be sure to contact the department.

**What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description, and complete syllabus including readings/assignments.

**Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study**

away?

No.

**Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

Yes. They have to be approved MATH/STAT courses.

**Are there specific major requirements that cannot be fulfilled while on study away?**

Yes. Colloquium requirement, Senior Seminar requirement.

**Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

Yes. The highly cumulative structure of the major.

**Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:**

None to date.

## THE DEGREE WITH HONORS IN STATISTICS

The degree with honors in Statistics is awarded to the student who has demonstrated outstanding intellectual achievement in a program of study which extends beyond the requirements of the major. The principal considerations for recommending a student for the degree with honors will be: Mastery of core material and skills, breadth and, particularly, depth of knowledge beyond the core material, ability to pursue independent study of statistics, originality in methods of investigation, and, where appropriate, creativity in research.

An honors program normally consists of two semesters (STAT 493 and 494) and a winter study (WSP 031) of independent research, culminating in a thesis and a presentation. During the Academic Year 2020-2021 the winter study requirement for the honors program in Statistics is waved. One of STAT 493 or STAT 494 can count as a continuation course, but not both. Neither counts as the 400-level senior capstone course.

An honors program in actuarial studies requires significant achievement on four appropriate examinations of the Society of Actuaries.

Highest honors will be reserved for the rare student who has displayed exceptional ability, achievement or originality. Such a student usually will have written a thesis or pursued actuarial honors. In all cases, the award of honors and highest honors is the decision of the Department.

## STAT 101 (F)(S) Elementary Statistics and Data Analysis (QFR)

It is impossible to be an informed citizen in today's world without an understanding of data. Whether it is opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines, etc, we need to be able to interpret and gain information from statistics. This course will introduce the common methods used to analyze and present data with an emphasis on interpretation and informed decision making.

**Requirements/Evaluation:** weekly homework, quizzes, exams, and a project

**Prerequisites:** MATH 102 (or demonstrated proficiency on a diagnostic test)

**Enrollment Limit:** 50

**Enrollment Preferences:** juniors and seniors

**Expected Class Size:** 35

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** students with MATH130 but no statistics should enroll in STAT161; students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It is a quantitative course.

**STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)**

This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

**Requirements/Evaluation:** Weekly homework, quizzes, two midterms and a final exam (midterms include take-home components), and a data analysis project. Students will need to become familiar with the statistical software STATA.

**Prerequisites:** MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

**Enrollment Limit:** 40

**Enrollment Preferences:** Economics majors, sophomores

**Expected Class Size:** 40

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Students with calculus background should consider STAT 201. Students without any calculus background should consider STAT 101. Students with AP Stat 4 or 5 should consider Stat 202. Please refer to the placement chart on the Math&Stat department website for more information.

Spring 2023

IND Section: 01 TBA Richard D. De Veaux

**STAT 201 (F)(S) Statistics and Data Analysis (QFR)**

Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, "Data, data, data! I can't make bricks without clay." In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

**Requirements/Evaluation:** weekly homework and projects, midterm exams, and a final exam.

**Prerequisites:** MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Students will learn to interpret, choose, carry out, and communicate analyses of data.

**STAT 202 (F)(S) Introduction to Statistical Modeling (QFR)**

Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

**Requirements/Evaluation:** Homework problems; quizzes; exams; a final project (on a topic that interests you!). Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.

**Prerequisites:** MATH 140 and STAT 101/161/201/AP Statistics 4/5, or permission of instructor.

**Enrollment Limit:** 40

**Enrollment Preferences:** Prospective Statistics majors and more senior students

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Students with a 4 on the AP Stats exam should contact the department for proper placement. Students with STAT 201 are strongly encouraged to take STAT 346 or other 300-level statistics electives.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

**Attributes:** PHLH Statistics Courses

**STAT 302 (S) Applied Statistical Modeling (QFR)**

Data may come from various sources and studies with different purpose of analysis. Statistical modeling provides a unified framework to embrace different data types, and focuses on the goals of understanding relationships, assessing differences and making predictions. We will explore different types of statistical models (linear regression, ANOVA, logistic regression etc), and focus on their conditions, the interactive modeling process, as well as the statistical inference tools for drawing conclusions from them. Throughout the course, real datasets will be modeled for interesting questions about the world, and the limitations will be addressed as well.

**Requirements/Evaluation:** weekly homework assignments, quizzes, exams and a course project.

**Prerequisites:** One of the following: i) STAT 201; ii) MATH 140 and STAT 101/161/AP Statistics 4/5; iii) Permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** Students interested in statistics who have background in calculus and intro stat. Students cannot take STAT 302 either simultaneously or after STAT 346.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It is an intermediate statistics class with prerequisites that are QFR courses

Not offered current academic year

### **STAT 310 (F) Data Visualization (QFR)**

This course is about preparing, visualizing, reporting and presenting different types of data. We will start with creating common plots (e.g., barcharts, histograms, density plots, boxplots, time series and lattice plots), but also discuss visualizing results of statistical models, such as linear or logistic regression models. We will use the ggplot library in R but then switch to the plotly library for interactive graphs with mouse-over and click events. Using R's shiny and DT libraries, we will learn how to create and publish web-apps and dashboards that explore datasets and support online filtering. We will end the class with creating web apps that contain multiple graphs or maps which react to user inputs (such as selecting which variables to plot) or provide real time monitoring of streaming data. Throughout, we will use version control software (Github) to organize and keep track of our code. This course will be taught in a semi-flipped style. While the instructor will introduce certain topics, students will often be responsible for reading material ahead of time and then work individually or in pairs to reproduce material or implement it on their own data.

**Requirements/Evaluation:** Grading will almost entirely be based on class participation, individual and team-work, project presentations and the student's portfolio.

**Prerequisites:** Stat 201/202/302; Good knowledge of R

**Enrollment Limit:** 15

**Enrollment Preferences:** Preference may be given to stats majors who need the course in order to graduate, but then random selection.

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course teaches how to organize and present data graphically, but also how to critique existing data visualizations.

Not offered current academic year

### **STAT 315 (S) Applied Machine Learning (QFR)**

How does Netflix recommend films based on your viewing history? How does Facebook group its users and send out targeted ads? How did Google select from thousands of search terms to predict flu? Machine learning (ML) is a rapidly growing field that is concerned with algorithms and models to find patterns in data and solve these practical problems at the intersection between statistics, data science and computer science. This course provides a broad introduction to ideas and methods in machine learning, with emphasis on statistical intuitions and practical data analysis. Topics including regularized regression, SVM, supervised/unsupervised learning, text analysis, neural networks will be covered. Students will use R extensively throughout the course while getting introduced to some ML tools in Python.

**Class Format:** Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Requirements/Evaluation:** weekly homework, one class project, and two or three exams

**Prerequisites:** MATH 140, and STAT 201/202, or equivalent; or permission of instructor. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Enrollment Limit:** 15

**Enrollment Preferences:** Seniors.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is a statistics class with a focus on mathematical, computational, and data analysis skills as well as appropriate practical application of analysis methods

Not offered current academic year

**STAT 319 (S) Statistical Computing (QFR)**

This course introduces a variety of computational and data-centric topics of applied statistics, which are broadly useful for acquiring, manipulating, visualizing, and analyzing data. We begin with the R language, which will be used extensively throughout the course. Then we'll introduce a variety of other useful tools, including the UNIX environment, scripting analyses using bash, databases and the SQL language, alternative data formats, techniques for visualizing high-dimensional data, and text manipulation using regular expressions. We'll also cover some modern statistical techniques along the way, which are made possible thanks to advances in computational power. This course is strongly computer oriented, and assignments will be project-based.

**Requirements/Evaluation:** based primarily on projects, homework, and exams

**Prerequisites:** STAT 201 or 202 and CSCI 134, 135, or 136

**Enrollment Limit:** 30

**Enrollment Preferences:** juniors and seniors, Statistics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course uses statistical tools and programming techniques to acquire data, create visualizations, and make future predictions.

Not offered current academic year

**STAT 335 (S) Biostatistics and Epidemiology (QFR)**

Epidemiology is the study of disease and disability in human populations, while biostatistics focuses on the development and application of statistical methods to address questions that arise in medicine, public health, or biology. This course will begin with epidemiological study designs and core concepts in epidemiology, followed by key statistical methods in public health research. Topics will include multiple regression, analysis of categorical data (two sample methods, sets of 2x2 tables, RxC tables, and logistic regression), survival analysis (Cox proportional hazards model), and a brief introduction to regression with correlated data.

**Requirements/Evaluation:** evaluation will be primarily based on weekly homework, two midterm exams, a final exam, and a data analysis project

**Prerequisites:** STAT 201, STAT 202 and MATH 140, or permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Junior and senior statistics majors; public health concentrators

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is a statistics course with a focus on quantitative methods relevant to public health studies.

**Attributes:** PHLH Statistics Courses

Not offered current academic year

**STAT 341 (F)(S) Probability (QFR)**

**Cross-listings:** STAT 341 MATH 341

Secondary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be

presented, including some from classical Poisson processes, random walks and Markov Chains.

**Requirements/Evaluation:** homework, classwork, and exams

**Prerequisites:** MATH 150 and MATH 250 or permission of the instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** Priority will be given to Mathematics majors and to Statistics Majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STAT 341 (D3) MATH 341 (D3)

**Quantative/Formal Reasoning Notes:** This is a 300-level Math/Stat course.

Fall 2022

Spring 2023

LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu

### **STAT 342 (S) Introduction to Stochastic Processes (QFR)**

Stochastic processes are mathematical models for random phenomena evolving in time or space. Examples include the number of people in a queue at time  $t$  or the accumulated claims paid by an insurance company in an interval of time  $t$ . This course introduces the basic concepts and techniques of stochastic processes used to construct models for a variety of problems of practical interest. The theory of Markov chains will guide our discussion as we cover topics such as martingales, random walks, Poisson process, birth and death processes, and Brownian motion.

**Requirements/Evaluation:** weekly homework/labs, classwork, and exams

**Prerequisites:** STAT 341

**Enrollment Limit:** 30

**Enrollment Preferences:** senior Statistics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is a statistics class with a focus on mathematical skills and translating real world phenomena into mathematical descriptions.

**Not offered current academic year**

### **STAT 344 (F) Statistical Design of Experiments (QFR)**

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially e-commerce, are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look at both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

**Requirements/Evaluation:** Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).

**Prerequisites:** STAT 161 or 201 or 202, or equivalent, and Math 140 or equivalent, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Statistics majors, seniors, juniors, sophomores, first years

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2022

LEC Section: 01 MWF 10:00 am - 10:50 am Richard D. De Veaux

**STAT 346 (F)(S) Regression Theory and Applications (QFR)**

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

**Requirements/Evaluation:** Weekly homework, theory and data analysis exams, final course project.

**Prerequisites:** MATH 250, and at least one of STAT 201 or 202. Or permission of the instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** Statistics Majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Elizabeth M. Upton

**STAT 355 (F) Multivariate Statistical Analysis (QFR)**

To better understand complex processes, we study how variables are related to one another, and how they work in combination. Therefore, we want to make inferences about more than one variable at time? Elementary statistical methods might not apply. In this course, we study the tools and the intuition that are necessary to analyze and describe such data sets. Topics covered will include data visualization techniques for high dimensional data sets, parametric and non-parametric techniques to estimate joint distributions, techniques for combining variables, as well as classification and clustering algorithms.

**Requirements/Evaluation:** homework, project/presentations, possibly one or two exams.

**Prerequisites:** MATH 250, and STAT 346 or permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** students interested in statistics which have solid background in math and stat

**Expected Class Size:** 10

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It is an advanced statistics class with prerequisites that are QFR courses

Not offered current academic year

**STAT 356 (F) Time Series Analysis (QFR)**

Time series -- data collected over time -- crop up in applications from economics to engineering to transit. But because the observations are generally not independent, we need special methods to investigate them. This course will include exploratory methods and modeling for time series, including descriptive methods and checking for significance, and a foray into the frequency domain. We will emphasize applications to a variety of real data, explored using R.

**Requirements/Evaluation:** Evaluation is primarily based on quizzes and projects (on topics that interest you!). You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While most assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to live and online discussions, and working together with classmates on practice problems.

**Prerequisites:** STAT 346 (may be taken concurrently) or permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Statistics majors, seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2022

LEC Section: 01 Cancelled

### **STAT 358 (S) Introduction to Categorical Data Analysis (QFR)**

This course focuses on methods for analyzing categorical response data. In contrast to continuous data, categorical data consist of observations classified into two or more categories. Traditional tools of statistical data analysis (such as linear regression) are not designed to handle such data and pose inappropriate assumptions. We will develop methods specifically designed for modeling categorical data, with applications in the social and biological sciences as well as in medical research, engineering and economics. This course has two parts. The first part will discuss statistical inference for parameters of categorical distributions (Bernoulli, Binomial, Multinomial, Poisson) and for measures of association arising in contingency tables (difference and ratio of proportions and odds ratios). Inferential methods covered include Wald, score and likelihood ratio tests and confidence intervals, as well as the bootstrap. The longer second part will focus on statistical modeling of categorical response data via generalized linear models, with a heavy focus on logistic regression models with both quantitative and categorical predictors and their interactions. Model fitting and inference will be based on maximum likelihood and carried out via R.

**Requirements/Evaluation:** Weekly homework assignments consisting of exercises from the textbook as well as data analysis problems, carried out using R. Occasional short in-class quizzes at the beginning of class. One Midterm (with both in-class and take-home component). Final Project with presentation. Final exam. Homework accounts for roughly 15% of the grade, quizzes for another 15%, midterm (in-class and take-home combined) and final for about 30% each, and project for the remaining 10%.

**Prerequisites:** STAT 346: Regression and Forecasting

**Enrollment Limit:** 15

**Enrollment Preferences:** stats majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Students learn how to analyze data and communicate results.

Not offered current academic year

### **STAT 360 (S) Statistical Inference (QFR)**

How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer

intensive resampling techniques (e.g., the bootstrap) will also be considered.

**Requirements/Evaluation:** Homework, Quizzes, Exams

**Prerequisites:** MATH 250, STAT 201 or 202, STAT 341

**Enrollment Limit:** 15

**Enrollment Preferences:** Statistics majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** A rigorous mathematical course laying the foundation for reasoning with data

Spring 2023

LEC Section: 01 TR 11:20 am - 12:35 pm Richard D. De Veaux

### **STAT 365 (F) Bayesian Statistics (QFR)**

The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes' Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.

**Requirements/Evaluation:** homework and exams

**Prerequisites:** STAT 201 and MATH 150 and 250, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** juniors and seniors, Statistics majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Fall 2022

LEC Section: 01 Cancelled

### **STAT 368 (S) Modern Nonparametric Statistics (QFR)**

Many statistical procedures and tools are based on a set of assumptions, such as normality or other parametric models. But, what if some or all of these assumptions are not valid and the adopted models are miss-specified? This question leads to an active and fascinating field in modern statistics called nonparametric statistics, where few assumptions are made on data's distribution or the model structure to ensure great model flexibility and robustness. In this course, we start with a brief overview of classic rank-based tests (Wilcoxon, K-S test), and focus primarily on modern nonparametric inferential techniques, such as nonparametric density estimation, nonparametric regression, selection of smoothing parameter (cross-validation), bootstrap, randomization-based inference, clustering, and nonparametric Bayes. Throughout the semester we will examine these new methodologies and apply them on simulated and real datasets using R.

**Requirements/Evaluation:** performance on exams, homework, and a project

**Prerequisites:** STAT 201 and STAT 346, or permission of instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** senior Statistics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is a statistics class with a focus on mathematical, computational, and data analysis skills as well as appropriate practical application of analysis methods.

Not offered current academic year

**STAT 372 (S) Longitudinal Data Analysis** (QFR)

This course explores modern statistical methods for drawing scientific inferences from longitudinal data, i.e., data collected repeatedly on experimental units over time. The independence assumption made for most classical statistical methods does not hold with this data structure because we have multiple measurements on each individual. Topics will include linear and generalized linear models for correlated data, including marginal and random effect models, as well as computational issues and methods for fitting these models. As time permits, we will also investigate joint modeling of longitudinal and time-to-event data. We will consider many applications in the social and biological sciences.

**Requirements/Evaluation:** Weekly homework, midterm exams, a final exam, and a data analysis project

**Prerequisites:** STAT 346 (and an appropriate introductory statistics course, typically STAT 201 or 202)

**Enrollment Limit:** 20

**Enrollment Preferences:** junior and senior Statistics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will cover a variety of statistical analysis methods for longitudinal data.

**STAT 410 (F) Statistical Genetics** (QFR)

Genetic studies explore patterns of genetic variation in populations and the effect of genes on diseases or traits. This course provides an introduction to statistical and computational methods for genetic studies. Topics will include Mendelian traits (such as single nucleotide polymorphisms), genome-wide association studies, pathway-based analysis, and methods for population genetics. Students will be introduced to some of the major computational tools for genetic analysis, including PLINK and R/Bioconductor. The necessary background in genetics and biology will be provided alongside the statistical and computational methods.

**Requirements/Evaluation:** project work, homework, exams, and contribution to discussion

**Prerequisites:** STAT 346 and STAT 360, or permission of instructor

**Enrollment Limit:** 14

**Enrollment Preferences:** Statistics majors, juniors and seniors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

Not offered current academic year

### **STAT 442 (S) Statistical Learning and Data Mining (QFR)**

In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

**Class Format:** Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Requirements/Evaluation:** weekly homework, exams and an end-of-term project

**Prerequisites:** MATH/STAT 341 and STAT 346, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is an advanced statistics class involving theory and application of statistical methods to data.

Spring 2023

LEC Section: 01 MWF 10:00 am - 10:50 am Xizhen Cai

**STAT 458 (F) Generalized Linear Models- Theory and Applications (QFR)**

This course will explore generalized linear models (GLMs)--the extension of linear models, discussed in Stat346, to response variables that have specific non-normal distributions, such as counts and proportions. We will consider the general structure and theory of GLMs and see their use in a range of applications. As time permits, we will also examine extensions of these models for clustered data such as mixed effects models and generalized estimating equations.

**Requirements/Evaluation:** Weekly homework consisting of theoretical exercises and data analyses carried out in R. Short frequent quizzes and one midterm (with an in-class and take-home component). Final project and final exam.

**Prerequisites:** STAT 346, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Seniors and Statistics majors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Fall 2022

**Winter Study -----**

**STAT 19 (W) Chess and Speed Chess**

This course will present a fast and fun introduction to chess, speed chess, and multi-player variants of classical chess. We'll begin with the rules of chess, and a study of classical openings, theory, checkmates, and endgames. These concepts will be practiced through in-class games. We will always make use of chess clocks, limiting a player's total thinking time. Chess clocks are an important part of tournament chess and speed chess, and are critically important in several chess variants we'll explore. This will open up your eyes to the high-paced, social, and extremely fun nature of recreational chess. Students will immensely enjoy learning and playing these variants, and will be surprised at how much fun chess can be. The course will culminate in a series of informal tournaments among the class.

**Requirements/Evaluation:** Short paper and final project or presentation. In-class tournament participation

**Prerequisites:** Prior chess experience

**Enrollment Limit:** 20

**Enrollment Preferences:** Please submit a brief statement of your present chess knowledge and experience.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Attributes:** EXPE Experiential Education Courses

Winter 2023

LEC Section: 01 Cancelled

**STAT 30 (W) Senior Project: Statistics**

To be taken by candidates for honors in Statistics other than by thesis route.

**Class Format:** senior project

**Grading:** pass/fail only

Winter 2023

HON Section: 01 TBA Richard D. De Veaux

**STAT 31 (W) Senior Honors Thesis**

Statistics senior honors thesis.

**Class Format:** thesis

**Grading:** pass/fail only

Winter 2023

HON Section: 01 TBA Elizabeth M. Upton

**STAT 99 (W) Indep Study: Statistics**

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a

faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

**Class Format:** independent study

**Grading:** pass/fail only

## MUSIC (Div I)

Chair: Ed Gollin, Professor of Music

- Kris Allen, Lyell B. Clay Artist in Residence in Jazz Activities/Lecturer in Music, Director of the Jazz Ensemble
- M. Jennifer Bloxam, Herbert H. Lehman Professor of Music
- Corinna S. Campbell, Associate Professor of Music
- Ronald L. Feldman, Artist in Residence in Orchestral and Instrumental Activities/Lecturer in Music, Director of the Berkshire Symphony
- Matthew A. Gold, Artist in Residence in Percussion and Contemporary Music Performance
- Ed Gollin, Chair and Professor of Music
- Wang Guowei, Artist in Residence in Chinese Music Performance and Director of the Williams College Chinese Music Ensemble
- Marjorie W. Hirsch, Professor of Music; on leave Fall 2022
- Joanna Kurkowicz, Lyell B. Clay Artist in Residence, Violin and Concertmaster, Berkshire Symphony
- Anna C. Lenti, Lyell B. Clay Artist in Residence and Director of Choral/Vocal Activities, Lecturer in Music
- Tendai Muparutsa, Artist in Residence in African Music Performance, Lecturer in Music, Director of Zambezi, Co-Director of Kusika
- Benjamin S. Ory, Visiting Assistant Professor of Music; Fall 2022
- Ileana Perez Velazquez, Professor of Music
- Daniel E. Prindle, Lecturer in Music
- Tim Pyper, Lecturer in Music
- W. Anthony Sheppard, Marylin & Arthur Levitt Professor of Music; on leave Spring 2023
- Doris J. Stevenson, Lyell B. Clay Artist in Residence, Piano
- Zachary Wadsworth, Associate Professor of Music
- Brad Wells, Lyell B. Clay Artist in Residence and Director of Choral/Vocal Activities, Lecturer in Music

### COURSES AND COURSE-NUMBERING

**100-level courses** are introductory in nature. They aim to acquaint students with a variety of topics in music, ranging from the materials of music (introductory music theory and musicianship) to various musical cultures (African, American, Asian, Caribbean, and European) and styles within those cultures (classical, folk, and popular). Most 100-level courses are designed for the general student and have no prerequisites; they assume no prior musical training, and are open to all students interested in increasing their understanding and appreciation of music. The two 100-level courses that can serve to satisfy specific music theory requirements for the music major (MUS 103 and 104a or 104b) require a working knowledge of musical notation; these courses are geared to potential majors and students with strong instrumental or vocal background, and are particularly suitable for first-year students interested in taking more advanced courses in music.

**200-level courses** offer students the opportunity to explore a range of more specialized musical topics, from performance, technology, and musicianship-based classes to courses focused on specific styles, periods, composers, and examinations of meaning in music. Most regular 200-level courses have no prerequisites but do require the ability to read music, and are usually open to all students who can do so, regardless of class year. Some 200-level tutorials and writing intensive courses have no prerequisites and do not require the ability to read music, but the workload and more advanced approach to the subject matter makes these courses best suited to sophomores, juniors, and seniors. The two 200-level courses that complete the music theory requirements for the music major (MUS 201 and 202) have prerequisites; these courses are geared to potential majors, majors, and students with strong instrumental or vocal background.

**300-level courses** are designed for sophomores, juniors, and seniors with a background in instrumental or vocal performance and fluency in reading musical notation to focus on specialized topics. Some 300-level courses are experiential in nature, including performance-based coursework in conducting, composition, arranging, orchestration, and improvisation. Others are advanced courses in music theory and analysis, musicology, or ethnomusicology, taught in a seminar context that emphasizes original research and analysis.

**400-level courses** are intended for advanced juniors and seniors, usually music majors, wishing to pursue thesis, independent study, or small

seminar coursework in composition, theory and analysis, musicology, ethnomusicology, or performance, under the guidance of an individual faculty advisor.

## **MAJOR**

A minimum of ten courses are required for the major, as detailed below.

### **Four courses in Music Theory and Musicianship to be taken in sequence:**

Music 103

Music 104a (Music Theory and Musicianship I) or Music 104b (Jazz Theory and Improvisation I)

Music 201

Music 202

### **Three courses in European and American Music History:**

Music 231

Music 232

Music 233

Majors may choose to replace a maximum of one of these three specific courses with a course in music history covering aspects of the same period. The courses that may substitute for MUS 231, 232, and 233 are listed below:

Music 231: 164, 234 or 261

Music 232: 143, 146, 165, or 166

Music 233: 118, 119, 138, 150, 151, 238, 239, 244, 251, 252, 254, or 316

### **One course in World Music/Ethnomusicology from the following:**

[DANC 201 / AFR 201 / MUS 220\(F\) STU African Dance and Percussion](#)

Taught by: [Sandra Burton](#), [Tendai Muparutsa](#)  
[Catalog details](#)

[DANC 202 / AFR 206 / MUS 221\(S\) STU African Dance and Percussion](#)

Taught by: [Sandra Burton](#), [Tendai Muparutsa](#)  
[Catalog details](#)

[MUS 111\(F\) LEC Music in Global Circulation](#)

Taught by: [Corinna Campbell](#)  
[Catalog details](#)

[MUS 125 / DANC 125\(S\) SEM Music and Social Dance in Latin America](#)

Taught by: [Corinna Campbell](#)  
[Catalog details](#)

[MUS 177 / WGSS 177\(S\) SEM Gender and Sexuality in Music](#)

Taught by: [Corinna Campbell](#)  
[Catalog details](#)

[MUS 211\(F\) SEM Music, Nationalism, and Popular Culture](#)

Taught by: [Corinna Campbell](#)  
[Catalog details](#)

[MUS 222 / AFR 223 SEM Politics of Performance/Performing Politics in Contemporary Africa](#)

Taught by: [Corinna Campbell](#)  
[Catalog details](#)

[MUS 323 / THEA 321 / DANC 323 SEM Arts Organizing in Africa and the Diaspora](#)

Taught by: [Corinna Campbell](#)  
[Catalog details](#)

### **Two electives:**

One must be taken in the senior year and at the 400-level to serve as a capstone course. The second semester of a year-long honors thesis, MUS 494, will satisfy the 400-level elective requirement; for students in the class of 2024 and subsequent years, Advanced Musical Performance, MUS 491 or 492, will not satisfy the 400-level capstone elective. The other elective may be fulfilled in any semester by any Music course but must be taken in addition to courses selected to satisfy the history, theory, and world music/ethnomusicology requirements detailed above.

Majors are required to participate in faculty-directed departmental ensembles for at least four semesters.

Majors must enroll in partial credit music lessons for at least two semesters.

## THE DEGREE WITH HONORS IN MUSIC

Three routes provide the opportunity for honors or highest honors consideration in the Music major:

**Composition:** A Composition thesis must include one major work completed during the senior year supported by a 10- to 15-page discussion of the student's work or analysis of a major 20th century or contemporary work. The student's general portfolio of compositions completed during the junior and senior years will also be considered in determining honors.

**Performance:** A Performance thesis must include an honors recital given during the spring of the senior year supported by a 15- to 20-page discussion of one or more of the works performed. The student's general performance career will also be considered in determining honors.

**History, Theory and Analysis, or Ethnomusicology:** A written Historical, Theoretical/Analytical, or Ethnomusicological thesis between 65 and 80 pages in length. A written thesis should offer new insights based on original research. A public oral thesis defense is also required.

In order for a thesis proposal to be approved, a student must have at least a 3.3 GPA in Music courses (this GPA must be maintained in order to receive honors), and must have demonstrated outstanding ability and experience through coursework and performance in the proposed thesis area. Students are encouraged to seek the advice of their potential thesis advisor early in the junior year and no later than the first month of the second semester. A 1- to 2-page proposal written in consultation with the faculty advisor must be received by the Music chair by the end of spring break.

Honors candidates must enroll in Music 493(F)-W31-494(S) during their senior year. A student who is highly qualified for honors work, but is unable to pursue a year-long project for compelling reasons, may petition the department for permission to pursue a WS/one-semester thesis. The standards for evaluating such a thesis remain the same. Completed thesis is due by April 15.

## LESSONS

Courses in individual vocal or instrumental instruction are fully subsidized for all students who meet the lesson commitment. (See Music 281-288 and Advanced Musical Performance 391, 392, 491, 492). For further information, check the Music Department webpage or contact the Department of Music.

## STUDY ABROAD

One study abroad course may satisfy the one free elective requirement for the major, if approved by the department. A second study abroad course might satisfy any one of the specific required courses if the proposed course is clearly equivalent and if the substitution is approved by the department. Majors planning to study abroad should meet with the department chair to propose specific study abroad courses that might be approved to satisfy major requirements under this policy. No more than two courses taken abroad may count toward the major. Music lesson courses and ensemble participation pursued while studying abroad may count toward the performance requirements with approval of the department.

### MUS 101 (F) Listening to Music: An Introduction to the Western Classical Tradition

When you listen to music -- on your phone or computer, on the radio, at a concert -- how much do you really hear? This course refines students' listening skills through study of the major composers, styles, and genres of the Western classical tradition. We will explore music from the Baroque, Classical, Romantic, and Modern eras, including works by Bach, Mozart, Beethoven, Chopin, Tchaikovsky, Brahms, Stravinsky, and other composers. Genres to be covered include the symphony, string quartet, sonata, opera, song, and choral music.

**Requirements/Evaluation:** Grades will be based on participation, GLOW posts, several quizzes, a midterm exam, and a final exam. Attendance at two Williams concerts required if conditions permit.

**Prerequisites:** none; intended for non-major students with little or no formal training in music

**Enrollment Limit:** 19

**Enrollment Preferences:** first-years, sophomores and any student who expresses a strong interest in the course

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### MUS 102 (F) Introduction to Music Theory

The course presents an introduction to the materials and structures of music. Through a variety of applied and theoretical exercises and projects, students will develop an understanding of the elements of music (e.g. pitch, scales, triads, rhythm, meter, and their notation) and explore their combination and interaction in the larger-scale organization of works of classical, jazz and popular music (i.e. harmony, counterpoint, form, rhetoric). Practical musicianship skills will be developed through singing, keyboard, and rhythmic exercises.

**Requirements/Evaluation:** regular worksheets (1-2 pages), written and applied quizzes, three model composition projects, midterm and final exam, participation

**Prerequisites:** none

**Enrollment Limit:** 16

**Enrollment Preferences:** first-year students

**Expected Class Size:** 16

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1)

Fall 2022

LEC Section: 01 MR 1:10 pm - 2:25 pm Zachary Wadsworth

### **MUS 103 (F) Music Theory and Musicianship I**

*MUS 103 and 104 are designed for potential majors and for students with strong instrumental or vocal backgrounds. Students entering MUS 103 should have a solid understanding of musical rudiments (intervals, scales, keys) and reading proficiency in both bass and treble clefs. A short diagnostic exam will be administered at the first class meeting of MUS 103 to determine if a student requires any additional work to complement and fortify course work during the early weeks of the semester, or whether placement in MUS 102 would be more appropriate. Students with a strong background in music theory may take a placement exam during First Days to see whether they can pass out of one or both semesters. MUS 103 and 104 are required for the music major.* MUS 103 presents the materials, structures and procedures of tonal music, with an emphasis on the harmonic and contrapuntal practice of the baroque and classical periods (ca. 1650-1825). The course explores triadic harmony, voice leading, and counterpoint with an emphasis on the chorale style of J.S. Bach and his predecessors. Keyboard harmony and figured bass exercises, sight singing, dictation, analysis of repertoire, written exercises and emulation projects will develop both an intellectual and an aural understanding of music of the period. Projects include chorale harmonization, arranging, and the composition of canons.

**Class Format:** In addition to the two lecture meetings each week, the class requires three weekly lab meetings (for keyboard skills, music writing skills, and aural skills).

**Requirements/Evaluation:** weekly written work, written and applied quizzes, and midyear and final projects

**Enrollment Limit:** 24

**Enrollment Preferences:** first-years, potential Music majors, and those with strong musicianship backgrounds

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

Fall 2022

LAB Section: 02 MWF 9:00 am - 9:50 am Ed Gollin, Daniel E. Prindle, Tim Pyper

LAB Section: 03 MWF 10:00 am - 10:50 am Ed Gollin, Daniel E. Prindle, Tim Pyper

LAB Section: 04 MWF 11:00 am - 11:50 am Ed Gollin, Daniel E. Prindle, Tim Pyper

### **MUS 104 (S) Music Theory and Musicianship I**

Music 104 continues the practical musicianship work of Music 103, while expanding the scope of harmonic topics to include seventh chords and chromatic harmony. Music 104 further explores the transformation of chorale harmony in contrapuntal works of the eighteenth century. Projects include the composition of preludes and fugues on baroque models.

**Class Format:** lecture two days a week; lab meetings (for keyboard skills, music writing skills, and ear training) three days a week

**Requirements/Evaluation:** weekly written work, written and applied quizzes, and midterm and final projects

**Prerequisites:** MUS 103

**Enrollment Limit:** 24

**Enrollment Preferences:** first-year students, potential or declared Music majors, and those with strong musicianship backgrounds

**Expected Class Size:** 21

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1)

Spring 2023

LAB Section: A4 MWF 11:00 am - 11:50 am Zachary Wadsworth, Daniel E. Prindle, Tim Pyper

### **MUS 104 (S) Jazz Theory and Improvisation I**

**Cross-listings:** MUS 104 AFR 212

#### **Primary Cross-listing**

The theory and application of basic techniques in jazz improvisation and performance styles, including blues forms, swing, bebop, modally based composition etc. Appropriate for students with basic skill on their instrument and some theoretical knowledge including all key signatures, major/minor keys and modes, intervals, triads and basic seventh chords and their functions within keys. This is a performance practice course and instrumental competence is essential. Vocalists and drummers will be encouraged to study the piano; pianists guitarists and bassists should be able to sight read chords on a jazz lead sheet.

**Class Format:** alternates between lecture style exposition of theoretical topics and a master class where students will perform and be evaluated on assigned repertoire

**Requirements/Evaluation:** weekly assignments,(e.g., harmonic analysis and exercises in transposition and transcription), a midterm, a transcription project and the end of semester concert, as well as improvement as measured in weekly class performance

**Prerequisites:** MUS 103 and/or permission of instructor; musical literacy required as per above description; private study on student's individual instruction strongly encouraged

**Enrollment Limit:** 15

**Enrollment Preferences:** prospective Music majors, then Jazz Ensemble members, then Music majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** this course will share aural skills labs with MUS 104a; students considering taking this course should consult the lab times and plan their schedules accordingly

**Distributions:** (D1)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MUS 104 (D1) AFR 212 (D1)

**Attributes:** EXPE Experiential Education Courses

**Not offered current academic year**

### **MUS 110 (F)(S) Electronic Music Genres, a Creative Approach**

In this course, students will study the theoretical and practical fundamentals of audio technology, MIDI production, sound design, and interactive composition. Students are not required to have any background in Music Technology. We will start by covering the basics of Electronic Music but the class will move at a fast pace covering more advance subjects in a short period of time. We will go over concepts of Physics acoustic, MIDI (sequencing, etc), Sound editing, Digital Signal Processing Effects, Sound Synthesis, and Interactive electronic music composition using Ableton Live, Max4Live, as well as Max MSP for students to learn how to program their own virtual synthesizers and/ or algorithmic composition to create interactive

music in real time. Electronic Music Composition is a central part of the class. Students can choose any aesthetic of their choice for the composition projects, since the focus of the class is on teaching students the technological tools to create the music of their choice. Students will be encouraged to mix different styles of music creating fusion.

**Requirements/Evaluation:** Four fusion composition projects and weekly presentation of students mini-projects focused on the electronic music techniques studied in class, and based on student research of musical styles chosen for their projects.

**Prerequisites:** One of the following: MUS 102, MUS 103, or permission of instructor for those students that have taken music lessons in their previous school: please contact iperez@williams.edu

**Enrollment Limit:** 8

**Enrollment Preferences:** Music majors, students with previous experience in Music.

**Expected Class Size:** 8

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1)

Fall 2022

SEM Section: 01 TR 9:55 am - 11:10 am Ileana Perez Velazquez

Spring 2023

SEM Section: 01 TR 9:55 am - 11:10 am Ileana Perez Velazquez

### **MUS 111 (F) Music in Global Circulation (DPE)**

This course introduces a variety of musical genres and practices from around the world, alongside a discussion of the processes and politics of their global circulation. Through learning about a combination of contemporary styles and longstanding musical traditions spanning a broad geographical range, students will develop a working knowledge of musical terms, concepts, and influential musicians. Beyond engaging with music's sound and structure, we will address its capacity to express personal and group identity, and its ability to both reflect and shape broader social ideas and circumstances. In particular, we will consider music's global circulation, and how its contents and meanings reflect those processes. Genres covered in the course vary intermittently but often include: "throat singing" genres in Tuva and Sardinia, Zimbabwean mbira and Chimurenga music, Argentine Tango, Ghanaian azonto and highlife, Balinese gamelan, and North Indian classical music. No prior musical training is required.

**Requirements/Evaluation:** class attendance and participation, regular short assignments/study questions, three 5-7 page written assignments, and an 8-10 page final paper

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** current or prospective majors in Music, upperclassmen.

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** Not only are students exposed to a wide range of musical material from across the globe, they also consider how music becomes meaningful and powerful in light of local contexts and the politics of circulation. Discussions and written assignments address issues including gender identity, economic disparity, the politics of cultural preservation, and music's potential in situations of political unrest.

**Attributes:** MUS World Music/Ethnomusicology

Fall 2022

LEC Section: 01 TR 9:55 am - 11:10 am Corinna S. Campbell

### **MUS 118 (S) Hearing Race in America, 1890-1955 (DPE)**

The rise of Rock 'n' Roll in the mid-1950s has typically been viewed as a temporary confluence in American culture, suggesting possibilities for musical and racial integration even as various forms of appropriation and exclusion were perpetuated. This course will explore the earlier multiple musical streams that merged at this moment. We will start by engaging with contemporary and historical perspectives on race, adopting a radically interdisciplinary approach. Our focus will then be on several of the most prominent vernacular and commercial forms of American music during this

period: ragtime, blues, early jazz, rhythm and blues, Tin Pan Alley, country and western, bluegrass, Tex-Mex/Tejano conjunto, "Latin jazz," and Cajun/zydeco. Prior to the 1950s, these musical styles were segregated, at least in terms of production and marketing. How did racial assumptions and histories shape the creation, dissemination, and reception of this music? Can we hear the multiple ways in which race played out in American music in the first half of the twentieth century?

**Class Format:** lecture/discussion

**Requirements/Evaluation:** Evaluation will be based on a 5-page paper, a midterm, a 7-page paper, a final exam, and on class participation.

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Random selection.

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** We will focus on how racial imagination and systemic racism shaped the creation, marketing, and reception of multiple genres and styles in American popular music from 1890 to 1955. Before embarking on this historical study, we will first become familiar with current theories of race and with dominant American perceptions of race c. 1900. Perceptions of difference (in multiple forms), realities of market power, and issues of artistic and financial equity directly impacted music in this period.

Not offered current academic year

### **MUS 125 (S) Music and Social Dance in Latin America (DPE)**

**Cross-listings:** MUS 125 DANC 125

**Primary Cross-listing**

This course offers a full-spectrum introduction to a number of Latin American social dance forms, including samba, salsa, tango, and the Suriname Maroon genre, awasa. Through critical listening and viewing assignments, performance workshops, and readings from disciplines spanning ethnomusicology, anthropology, dance studies, Latin American studies and history, students will combine a technical understanding of the musical and choreographic features of these genres with a consideration of their broader contexts and social impact. Among the questions that will drive class discussions are: How do sound and movement interrelate? What aspects of gender, sexuality, class, race and ethnicity arise in the performance and consumption of Latin American genres of social dance? How do high political, economic, and personal stakes emerge through activities more commonly associated with play and leisure? This class is driven by academic inquiry into these various social dance practices; it does not prioritize gaining performance skills in the genres discussed. While there will be experiential components included throughout the course (for instance music or dance workshops), the majority of the class will be conducted in a discussion/seminar format. While the ability to read musical notation is helpful, it is not required.

**Class Format:** seminar/studio

**Requirements/Evaluation:** Regular short assignments, three 5-7 page papers, final project or paper (10-12pgs)

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** upperclassmen, majors in music, dance, Latino/a studies.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** MUS World Music/Ethnomusicology

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MUS 125 (D1) DANC 125 (D1)

**Difference, Power, and Equity Notes:** Together, the music and dance genres discussed here indicate the diversity of social dance practices within Latin America, broadly conceived. Each unit of the course delves into aspects of political, historical, and cultural context and their resonance within the realm of music and dance. Specific attention is paid to racial and intercultural aspects each genre's formulation, practice, and circulation, as well as the politics of representation in embodied expression.

Spring 2023

SEM Section: 01 MWF 11:00 am - 12:15 pm Corinna S. Campbell

### **MUS 143 (F) The Symphony**

This course traces the European symphonic tradition from the late eighteenth century through the mid-twentieth century, focusing on works by Mozart, Haydn, Beethoven, Berlioz, Liszt, Mendelssohn, Schumann, Brahms, Dvorak, Mahler, Strauss, and Shostakovich. We will examine developments in musical form and harmony, social contexts for listening, and contemporary aesthetic debates about the nature of genius, the idea of musical tradition, and the narrative capacity of instrumental music.

**Class Format:** lecture/discussion

**Requirements/Evaluation:** students will be evaluated on three 3- to 5-page essays, two exams, and short weekly assignments, ability to read music not required

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Fall 2022

LEC Section: 01 TR 11:20 am - 12:35 pm Benjamin S. Ory

### **MUS 149 (S) The Language of Film Music**

Filmmakers have relied on music from the earliest days of silent movies (often accompanied by live musical performance) to our present age of slickly-produced online video. Along the way, trends have arisen (and have been artfully thwarted) in countless film scores, whether constructed from preexisting works or specially crafted by composers like Max Steiner, Duke Ellington, Bernard Herrmann, John Williams, James Horner, Micachu, or Björk. In this class, we will look at and listen to films from different periods and cultures, observing which techniques evolved, which have changed very little, and considering when an idea is borrowed and when it might actually be new. We will also discuss the impact this language has on the experience of the viewer, and how film music functions in the wider culture. Assignments will consist of listening/viewing, responding in writing, and re-interpreting film clips with music you will compose or borrow.

**Requirements/Evaluation:** Evaluations include: several short writing and creative assignments, two quizzes, a midterm essay, and a final creative project.

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** given to juniors and seniors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

**Attributes:** FMST Core Courses

Spring 2023

### **MUS 150 (S) The Broadway Musical (DPE)**

**Cross-listings:** MUS 150 THEA 150

**Primary Cross-listing**

Named for a specific road but enjoying a global impact, the Broadway musical has intersected with multiple styles and societal concerns over the past

century. In this course, we explore the American musical theater's roots and relationship to opera, operetta, vaudeville, minstrelsy, and Tin Pan Alley. Traveling through the genre's history, we will encounter a wide range of musical styles, including ragtime, jazz, rock, and hip hop, and will explore several genre transformations, such as movies made into musicals and musicals into movies. We will develop a range of analytical skills as we investigate connections between choreography, lyrics, music, staging, and production. Throughout the semester, we will consider the genre's representations and reflections of ethnicity, race, sexuality, and class. The syllabus includes representative works by Gilbert and Sullivan, Cohan, Gershwin, Kern, Weill, Rodgers and Hammerstein, Lerner and Loewe, Bernstein, Sondheim, Lloyd Webber, and Miranda, with particular focus on such works as Showboat, Oklahoma!, Guys and Dolls, West Side Story, Hair, Rent, and Hamilton.

**Class Format:** discussion

**Requirements/Evaluation:** a midterm, a brief paper, an 8-page paper, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 30

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MUS 150 (D1) THEA 150 (D1)

**Difference, Power, and Equity Notes:** We will develop skills aimed at analyzing and interpreting how perceptions of race, gender, and class shaped, and were shaped by, Broadway. We will consider the extent to which, for example, blackface minstrelsy and ethnic-based humor persisted and how specific musicals aimed to engage with critical social and political issues throughout the genre's history. Musicals have played a major role in the contested and ongoing endeavor to define "America."

Not offered current academic year

### **MUS 151 (F) History of Jazz**

"There are only three things that America will be remembered for 200 years from now when they study the civilization: The Constitution, Jazz Music and Baseball. These are the three most beautiful things this culture's ever created."--(Gerald Early) Jazz is the most common name for a great African American Art form that still defies definition. Over the past century this elastic tradition has laid down firm roots for numerous other American and World musics, while itself in the throes of a seemingly permanent identity crisis. Jazz is perennially declared dead or dying yet consistently summoned by advertisers to lend vitality and sex appeal to liquor or automobiles. By any name and regardless of its health status, jazz has a rich history of conservative innovators, at once restless and reverent, who made fascinating leaps of creativity out of inspiration or necessity. This "listening intensive" class will look at the past century of jazz music through ideas, "what-if" questions and movements that changed the way the music was created, presented and perceived. Both musical concepts (such as syncopation and cross instrumental-influence) and cultural connections (racial, technological and economic) will be examined, giving us freedom to link similar kinds of musical thought across disparate settings and decades. Our inquiry will include (but not be limited to) the lives and music of Louis Armstrong, Fletcher Henderson, Mary Lou Williams, Duke Ellington, Charlie Parker, Thelonious Monk, Dizzy Gillespie, Art Blakey, John Lewis, Miles Davis, John Coltrane, and Wayne Shorter.

**Class Format:** All meetings online. Some meetings will be in smaller discussion groups

**Requirements/Evaluation:** class participation including regular reading and listening assignments; 4 quizzes, two short papers/projects

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

**Attributes:** AMST Arts in Context Electives AMST Comp Studies in Race, Ethnicity, Diaspora

### **MUS 164 (F) Bach and Handel: Their Music in High Baroque Culture**

This course explores the lives and music of two great composers of the High Baroque, Johann Sebastian Bach and George Frideric Handel. We will

examine their dramatically contrasting life experiences and musical pursuits within the larger social and cultural framework of the period: Bach as a provincial composer, servant to minor German aristocrats and the Lutheran Church, virtuoso organist and pedagogue; Handel as a cosmopolitan celebrity and entrepreneur, creator of operatic and instrumental entertainments for both the Italian and English nobility and the paying public. Development of listening skills and understanding of Baroque music styles, genres, and forms will be stressed. Bach's *Brandenburg Concerti* and *Mass in B-minor*, and Handel's opera *Giulio Cesare* and *Water Music Suite* are just a few of the works to be discussed and enjoyed.

**Class Format:** discussion, two meetings per week, and a field trip may be required

**Requirements/Evaluation:** participation, two papers, a midterm, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** first-year students and sophomores

**Expected Class Size:** 10

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1)

Not offered current academic year

### **MUS 165 (F) Mozart**

This course will examine the extraordinary life and musical genius of Wolfgang Amadeus Mozart. Through lectures, discussion, readings, and guided listening, students will gain appreciation of Mozart's classical compositional style and familiarity with many of his greatest works. The class will explore Mozart's pivotal position as a musician in Viennese society; his strange combination of bawdy behavior and sublime artistry; his relationship with his domineering father Leopold, as well as with Haydn, Beethoven, and Salieri; and the myths about Mozart that have sprung up in the two centuries since his death.

**Class Format:** discussion

**Requirements/Evaluation:** class participation, listening quizzes, two short papers, a midterm exam, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** students with demonstrated interest in music

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **MUS 166 (S) Beethoven**

This course provides an introduction to the life and music of Ludwig van Beethoven. The composer's difficult childhood, loss of hearing, secret affair with his "Immortal Beloved," tempestuous relationship with his suicidal nephew, along with political, philosophical, social, and cultural developments of the late 18th and early 19th centuries, will provide context for our study of his artistic achievements. Students will listen to a broad selection of Beethoven's music, including sonatas, string quartets, symphonies, overtures, concertos, choral works, and opera. Some of the topics we will discuss include the nature of his genius, his compositional methods, his influence on later composers such as Schubert, Wagner, and Brahms, Beethoven in popular culture, and the continuing impact of his music around the globe.

**Class Format:** lecture/discussion

**Requirements/Evaluation:** class participation, two 5-7 page papers, several listening quizzes, midterm and final exams

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** students with a demonstrated interest in music

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **MUS 174 (S) The Singing Voice: Structure, Styles and Meaning**

What makes an opera singer sound different than a pop singer? How does the sound of each contribute to musical meaning for listeners? And why is the former granted a higher status and the latter a wider audience? This course examines the world of singing styles and engages these styles from multiple angles: through listening, readings, film viewing and, importantly, through singing. We examine histories of styles, cultural contexts as well as basic physiology, acoustics and techniques. We will explore the basics of yodeling, overtone singing and belting, among other styles. Familiarity with musical notation recommended.

**Class Format:** studio/brief lectures

**Requirements/Evaluation:** Two quizzes, regular journaling, a final paper (6-8 page) and a presentation.

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** juniors and seniors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1)

**Attributes:** EXPE Experiential Education Courses

Spring 2023

SEM Section: 01 MR 1:10 pm - 2:25 pm Brad Wells

### **MUS 175 (F) Sound Art, Public Music**

**Cross-listings:** MUS 175 ARTS 273

**Primary Cross-listing**

Western music performance traditionally occurs within contained spaces in which performer and audience adhere to designated locations and follow tacit scripts: seats/stage; applause/bows, etc. In recent years, traditional boundaries and expectations of performance and reception have loosened, often moving into public spaces: from sound art installations to ambient music, from interactive sound sculpture to radio art to social media driven flash mobs. This course examines the work of pioneers in public music and sound art including Alvin Lucier, Bill Fontana, John Cage, Hildegard Westerkamp, Brian Eno, Elizabeth A. Baker and Christine Sun Kim, among others. The course will alternate between study and analysis of particular artistic strategies and the creation of sound art works inspired by ideas and creators we are studying.

**Requirements/Evaluation:** class participation, 3 short (1- to 2-page) essays, a response journal and the creation of five sound art works

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** juniors and seniors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** ARTS elective

**Distributions:** (D1)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MUS 175 (D1) ARTS 273 (D1)

Fall 2022

SEM Section: 01 MR 1:10 pm - 2:25 pm Brad Wells

### **MUS 177 (S) Gender and Sexuality in Music (DPE)**

**Cross-listings:** WGSS 177 MUS 177

### Primary Cross-listing

This course explores key themes in the expression of gender and sexuality through music. It draws from primarily 21st century examples, across cultures and genres, ranging from pop boy bands to Indian bhangra dance to the musical avant-garde. Themes will include: communicating gendered ideals, dance and embodiment, transgressive performances, biography and subjectivity, intersectionality, music and sexual violence, and marketing. We will explore the ways in which ideas and identities related to sex and gender are formulated and mobilized in music's performance and consumption. Inevitably, issues of sound and stagecraft intersect with factors such as race, age, and class, further informing these experiences. Students will consider their own processes of identifying and interpreting expressions of gender and sexuality in sound and movement, and contemplate the role of culture and society in informing those interpretations.

**Requirements/Evaluation:** attendance/participation, intermittent GLOW posts and short assignments (2 pgs or less), midterm project, and either a 12-page final paper or a project with supplementary paper (length to be determined in consultation with the instructor).

**Prerequisites:** open to all students; familiarity with musical terminology is helpful but not required

**Enrollment Limit:** 20

**Enrollment Preferences:** WGSS and MUSC majors/prospective majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

WGSS 177 (D1) MUS 177 (D1)

**Difference, Power, and Equity Notes:** This course critically examines the ways in which music constructs and reflects gendered and sexual identities in intersectional space. We discuss how normative viewpoints come to be accepted and interpreted as 'natural,' and how musicians and audiences have maneuvered within and against those socio-political expectations. Music and readings span a wide range of sources--elite, popular, counter-cultural; from Euro-American sources to genres hailing from Brazil, Korea, and India.

### MUS 179 (F) James Baldwin's Song

**Cross-listings:** AFR 128 COMP 129 MUS 179

### Secondary Cross-listing

"It is only in his music [ . . . ] that the Negro in America has been able to tell his story. It is a story which otherwise has yet to be told and which no American is prepared to hear," wrote James Baldwin in *Notes of a Native Son* in 1955. In this course, we strive to listen more closely to racialized experience through James Baldwin's musical literature. Through analysis and creation of music, we hope to better understand cultural difference and collective humanity. In this course, we closely analyze James Baldwin's use of song names, creation of musician characters, and replication of musical elements in his writing. Baldwin's musical word play crosses historical and genre boundaries. So we will explore texts from his early to late career, such as the gospel music of his youth in the semi-autobiographical novel *Go Tell It on the Mountain*, the metaphor of the blues in the play written during the civil-rights movement *Blues for Mr. Charlie*, the jazz musician protagonist in "Sonny's Blues" written after World War II in Paris, and his only musical recording in *A Lover's Question* set down near the end of his life. In addition to closely analyzing James Baldwin's attention to music throughout his literature, students will learn basic music writing and production skills. The tutorial will draw on a range of musical resources, including playlists, music workshops, guest lectures and performances. All of these resources will guide students to a more attuned hearing not only of music but also of the African American experience it reflects. By the end of the course, students will have written several short 1-2 page close analysis essays and song lyrics. For their final project, students will produce an original song based on key insights from the course. No musical experience is required, though an openness to learn and practice songwriting is expected.

**Requirements/Evaluation:** Several short 1-2 page close analysis essays of Baldwin's work, oral peer feedback presentations, song lyrics, and an original song composition for the final project

**Prerequisites:** None

**Enrollment Limit:** 10

**Enrollment Preferences:** This course is specifically for first-year students and they will receive preference in this class; a statement of interest will be solicited from pre-registrants.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** AFR Core Electives

Not offered current academic year

### **MUS 201 (F) Music Theory and Musicianship II**

Music 201 continues to greater degrees the study of music techniques from the common practice period by means of analysis, composition, written exercises, sight-singing, and dictation. We will expand our understanding of chromaticism. We will learn how chromaticism is used as a voice-leading tool, and how it participates in music even at deeper levels of the structure. We will learn about innovations that occurred from the early 19th century through the beginning of the 20th century and will trace the origins for these new harmonic tendencies. We will also learn how composers create larger formal structures.

**Class Format:** In addition to the scheduled lecture block, the class requires a weekly aural-skills meeting, to be scheduled in the first week of class.

The one-on-one meeting will take place with a lab instructor for approximately 10-15 minutes

**Requirements/Evaluation:** homework, theory quizzes, analysis papers, compositional projects, final project, class attendance, preparation, participation, and on the results of the lab portion of the class

**Prerequisites:** MUS 104

**Enrollment Limit:** 12

**Enrollment Preferences:** Music majors and potential Music majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1)

### **MUS 202 (S) Music Theory and Musicianship II**

Music 202 examines the materials and structures of atonal and post-tonal music from the 20th and 21st centuries, and it develops musicianship skills to aid in the perception and performance of these materials and structures. Topics include set theory, serial techniques, referential collections, post-tonal pitch centricity, new rhythmic and metric techniques, new formal structures, and the intersection of tonal and contextual structure.

**Class Format:** This course has two lecture meetings and one aural skills lab meeting per week.

**Requirements/Evaluation:** short analysis and composition assignments, quizzes, a midterm paper (3-4 pages), a final analysis paper (5 pages) and presentation, and aural skills participation and performance

**Prerequisites:** MUS 201 or permission of instructor

**Enrollment Limit:** 14

**Enrollment Preferences:** Music majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1)

### **MUS 204 (F) Jazz Theory and Improvisation II**

**Cross-listings:** MUS 204 AFR 214

**Primary Cross-listing**

A continuation of MUS 104b, this course builds upon theoretical knowledge, performance and aural skills developed previously. Students will deal with more complex theoretical and performance issues, including the use of symmetric scales, strategies for chord reharmonization, pentatonic and hexatonic scale shapes, and Coltrane's "Three Tonic" harmonic system.

**Class Format:** two weekly seminar meetings, alternating between theory and performance sessions

**Requirements/Evaluation:** weekly compositional, analysis, transcription or performance exercises and final transcription project

**Prerequisites:** MUS 104b or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Music majors and Jazz Ensemble members

**Expected Class Size:** 5-8

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

### **MUS 205 (F)(S) Composition I**

Beginning courses in musical composition. Size and number of required projects will vary from 3 to 5. A group meeting per week will deal with the presentation, performance, and critique of the student's work in progress, analysis of models for composition, and discussion of topics in composition. There will be a weekly individual meeting with the instructor to discuss each student's progress. Students must also be available for performances and reading of work outside normal class time, and the instructor and students will work together to ensure that all work written during the semester is heard/performed.

**Requirements/Evaluation:** completion of assignments, quality and timeliness of composition projects, attendance, and class participation

**Prerequisites:** MUS 201 (may be taken concurrently) or permission of instructor

**Enrollment Limit:** 6

**Enrollment Preferences:** Music majors; consideration of non-majors based on qualifications and experience

**Expected Class Size:** 4

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

### **MUS 210 (S) Music Technology I**

Designed for students with some music background who wish to learn basic principles of Musical Technology and practical use of current software and hardware. Topics include acoustics, MIDI sequencing, digital recording and editing, sampling, analog and digital synthesis, digital signal processing, and instrument design. Lectures will provide technical explanations on those topics covered in class and an historical overview of electronic music.

**Requirements/Evaluation:** weekly assignments, a midterm exam, a final paper and two composition projects

**Prerequisites:** MUS 102 or 103, or permission of instructor; knowledge of and proficiency with musical notation is required; some background in acoustics/physics is desirable

**Enrollment Limit:** 8

**Enrollment Preferences:** Music majors and those planning to major

**Expected Class Size:** 8

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **MUS 211 (F) Music, Nationalism, and Popular Culture (DPE)**

This course surveys the manner, function, and contexts through which sound and ideas of national belonging are linked. We will consider influential and iconic musicians (e.g. Umm Kalthoum, Amalia Rodriguez, Bob Marley, Carlos Gardel), international forums for the expression of national sentiment (the Olympics, Miss Universe and Eurovision competitions), and a wide range of instruments, genres, and anthems that are strong conduits for national sentiment. Drawing on the work of critical theorists including Benedict Anderson, Michael Herzfeld, and Homi K. Bhabha, we will pursue a number of analytical questions: What parallels exist between musical and political structure? How do nations adjust as their policies and demographics change? How are cultural forms implicated in postcolonial nation building projects? What marginal populations or expressive forms are included, excluded, or appropriated in the formation of national identity? Finally, what differences emerge as we change our focus from a national to an international perspective, or from officially endorsed representations of national culture to unofficial popular forms of entertainment?

**Requirements/Evaluation:** Class participation, regular short (1 page) written responses, two 5- to 6-page papers, a Final Paper/Project

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** Upperclass students and music majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** Owing to its global focus and attention to power and privilege in political and musical structures, this course meets the DPE requirement. Topics include the use of music for social control and subversion in Mobutu's Zaire, its affective power in U.S. campaign ads, and the ways in which constructions of 'folk music' impact power differentials in a national political structure. Assignments help students develop an awareness of the specific strategies whereby music mobilizes national ideologies.

**MUS 214 (S) Divas and Dervishes: Introduction to Modern Arab Music and Performance (DPE) (WS)**

**Cross-listings:** MUS 214 ARAB 214 COMP 270

**Secondary Cross-listing**

From Sufi rituals to revolutionary uprisings, music has long played a central role in the social, political, and religious life of the Arab world. This is especially audible in the modern era, when new technologies and institutions began to record, amplify, and broadcast the region's sounds, preserving centuries-old traditions while also producing new forms of popular music. This course introduces students to Arab musical genres and practices as they developed from the late nineteenth century. We will cover a broad geographical range, exploring the classical Andalusian repertoires of Algeria, ecstatic dervish chants in Egypt, patriotic pop tunes from Lebanon, and other topics. To highlight connections between musical traditions as well as their unique local features, we will ask questions such as: What can music tell us about interactions between sacred and secular life? How is music used to define social groups and negotiate identity, gender, and class? Which musical characteristics are associated with Arab "heritage" and "modernity," and how are these performed? In what ways does music shape everyday life in the Arab world? Class sessions and discussion will be based on academic readings and at-home listening assignments. No previous knowledge of Arabic or Arab music are required.

**Requirements/Evaluation:** In-class participation, short essays (1 page) every two weeks, midterm presentation, and a final paper (12-14 pages).

**Prerequisites:** None

**Enrollment Limit:** 19

**Enrollment Preferences:** Arabic Studies and Music majors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MUS 214 (D1) ARAB 214 (D1) COMP 270 (D1)

**Writing Skills Notes:** Students will develop their writing skills by submitting one-page unit responses every two weeks and a final paper of 12-14 pages on a topic of their choice. Students will receive feedback on each writing assignment and have opportunities for multiple drafts and peer review during the semester.

**Difference, Power, and Equity Notes:** Through the lens of music, this course critically examines modern Arab society and power dynamics related to politics, gender, race, and class.

**MUS 220 (F) African Dance and Percussion**

**Cross-listings:** AFR 201 DANC 201 MUS 220

**Secondary Cross-listing**

We will examine two forms that embody continuity of tradition or the impact of societal, political or economic change. Lamban was created by the Djeli, popularly called Griots served many roles in the kingdoms of Ghana and Old Mali from the 12th century to current times. This dance and music form continues as folklore in modern day Guinea, Senegal, Mali and The Gambia where it is practiced by the Mandinka people. Bira is an ancient and contemporary spiritual practice of Zimbabwe's Shona people. While these forms are enduring cultural practices, Kpanlogo from the modern West

African state of Ghana represents the post-colonial identity of this nation's youth and their aspirations for independence at the end of the 1950s. We will also consider the introduction of these forms outside of their origin. This course can be taken for academic and/or PE credit

**Class Format:** class hours will be used to learn and use the dance and music of at least two forms including historical context, a group and individual research project or paper. When possible, our process will include guest artists and field trips to see live performance as well as use of the archives at Jacob's Pillow Dance Festival.

**Requirements/Evaluation:** discussion of assignments, group response performances, and short research paper. Students enrolled for PE credit are responsible only for the performance-based projects

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** students who have taken a 100 level dance course of DANC 202; have experience in a campus-based performance ensemble; or have permission of the instructors

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

### **MUS 221 (S) African Dance and Percussion**

**Cross-listings:** AFR 206 MUS 221 DANC 202

#### **Secondary Cross-listing**

Before the 20th century, the African continent was the source of dance and music that influenced new forms rooted on and off the continent. These forms are shaped by the impact of religion, colonialism, national political movements, travel, immigration, and the continuing emergence of technology. In South Africa, the labor conditions of miners instigated the creation of Isicathulo, Gum boots, and in Brazil the history of colonialism is a factor that anchors Samba as a sustaining cultural and socioeconomic force. The birth of Hip Hop in the 20th century finds populations across the globe using its music, dance, lyrics, and swagger as a vehicle for individual and group voice. Hip Hop thrives as a cultural presence in most countries of the African continent and in the Americas. We will examine the factors that moved this form from the Bronx, New York, to Johannesburg, South Africa, and Rio, Brazil. We will examine at least two of these forms learning dance and music technique and composition material that will inform their practice. Each of these genres generated new physical practices, new and enduring communities while continuing to embody specific histories that have moved beyond their place of origin. What is their status in this century?

**Class Format:** class hours will be divided among discussion of media and readings; rehearsal of dance and music techniques; field trips to view performances; research at the Jacob Pillow's archives; and interaction with visiting artists

**Requirements/Evaluation:** a series of discussion, research, and individual and group projects; all of which will inform collaboration on mid-term and final projects

**Prerequisites:** none

**Enrollment Limit:** 16

**Enrollment Preferences:** students who have taken DANC 107 ,108 or DANC 201; have experience in a campus based performance ensemble; or have permission of the instructors

**Expected Class Size:** 16

**Grading:** yes pass/fail option, yes fifth course option

**MUS 222 (F) Politics of Performance/Performing Politics in Contemporary Africa (DPE) (WS)**

**Cross-listings:** MUS 222 AFR 223

**Primary Cross-listing**

Using select examples from throughout Africa, this course highlights genres, artists, and works that engage with social and ideological change. Students practice critical listening and performance analysis, while also considering the social contexts that render these performances meaningful and provocative. Topics include: challenges to mass mediated stereotypes of African populations, the social and economic impact of cultural tourism, music as a form of social critique, changing attitudes toward women and the LGBTQIA community, music and global aid organizations, issues of migration and displacement, and the changing roles of traditional musical occupations. Popular genres-among them Afrobeat, kwaito, soukous, rai, mbalax, Chimurenga music, and a variety of rap and hip-hop styles-are discussed alongside numerous traditional and ceremonial genres, national/political anthems, and concert pieces. Active participation in class discussion is an important component of this course.

**Class Format:** this class places a strong emphasis on discussion

**Requirements/Evaluation:** in-class preparation and participation, bi-weekly short writing assignments, a midterm paper and a final project

**Prerequisites:** some familiarity with music terminology encouraged

**Enrollment Limit:** 15

**Enrollment Preferences:** sophomores, juniors, or seniors who are current or prospective Music majors, as well as current and prospective Africana Studies and Latina/o Studies concentrators

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MUS 222 (D1) AFR 223 (D2)

**Writing Skills Notes:** Students receive regular feedback on multiple short assignments throughout the semester. Particular focus is dedicated to crafting and substantiating written arguments.

**Difference, Power, and Equity Notes:** Throughout the course, students engage with case studies concerning specific socio-political contexts within Africa, with an emphasis placed on music's role as a social agent. Topics include representational politics, music as a tool for the powerful as well as the politically disempowered, and music's role in conflict resolution.

**Attributes:** GBST African Studies Electives MUS World Music/Ethnomusicology

**Not offered current academic year**

**MUS 231 (S) Music in History I: Bach and Before**

This course explores 1000 years of music-making in Western Europe, beginning with the philosophical and theoretical origins of this music in ancient Greece and extending to the life and music of J.S. Bach. Topics covered include how the sound of music changed over a millennium; the different functions it served and how genres developed to serve these functions; the lives of the men and women who composed, performed, and wrote about music; and how the changing notation and theory of music related to its practice over the centuries. At the same time, the course provides an introduction to the modern study of music history, sampling a broad range of recent scholarship reflecting an array of critical approaches to the study of early music in our own day.

**Class Format:** lecture-discussion

**Requirements/Evaluation:** in-class and online participation, two medium length papers, unit tests and final exam

**Prerequisites:** ability to read music; open to qualified non-majors with the permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** music majors, those planning to major in music, and any student with a strong background and interest in music.

**Expected Class Size:** 8

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Required course for Music majors. Music majors may not take MUS 231 as pass/fail or 5th course option if they are using it to fulfill the Medieval/Renaissance/Baroque music history requirement for the music major.

SEM Section: 01 MR 2:35 pm - 3:50 pm M. Jennifer Bloxam

**MUS 232 (S) Music in History II: Classical and Romantic Music**

MUS 232 traces the development of Western art music from 1750 to 1900. Through listening, reading, and score analysis, we will study a broad range of composers and genres, Classical and Romantic aesthetics, and connections between music and political, philosophical, social, and cultural developments of the period. Composers include Haydn, Mozart, Beethoven, Schubert, Robert Schumann, Clara Schumann, Fanny Mendelssohn Hensel, Berlioz, Chopin, Liszt, Verdi, Wagner, Brahms, Tchaikovsky, Mahler, and others. Some of the topics we will discuss include the changing role of composers in society, music's relationship to the other arts, challenges faced by female composers, controversies surrounding music and meaning, the interaction of music and drama in opera, and musical nationalism.

**Class Format:** lecture-discussion

**Requirements/Evaluation:** class participation, two 5-6 page papers, GLOW posts, midterm and final exams

**Prerequisites:** ability to read music

**Enrollment Limit:** 15

**Enrollment Preferences:** Music majors, those planning to major, and any student with a strong interest in music

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Music majors may not take MUS 232 as pass/fail or 5th course option if they are using it to fulfill the Classical-Romantic music history requirement for the music major.

**MUS 233 (F) Music in History III: Musics of the Twentieth Century**

A survey of musics in both Western and non-Western society from the close of the nineteenth century to the present. Emphasis will be on the contextual study of the music of major composers of Western art music, on the musical expressions of selected areas of world music such as Africa, Asia, India, and the Americas, and on the intermingling of musical influences of pop, jazz, and art music. Our study will focus on issues of exoticism and globalization.

**Class Format:** discussion

**Requirements/Evaluation:** class participation, two papers, a midterm, and a final exam

**Prerequisites:** ability to read music

**Enrollment Limit:** 15

**Enrollment Preferences:** Music majors or students with some musical background.

**Expected Class Size:** 10

### **MUS 234 (F) Soundscapes of Renaissance Europe**

What was the sonic experience of living in late-medieval and early-modern Europe? This course will explore the sights and sounds of daily life for cultural elites as well as the average urban resident. Although it is often vocal polyphony that first comes to mind when thinking about Renaissance music, acoustic environments were complex, noisy, and diverse. This course aims to reflect that heterogeneity: topics include bells, processions, music and architecture, instrumental music, plainchant, visual depictions of music-making, and uses of music to project power, as well as sacred and secular vocal polyphony. Students will zoom in on cities, courts, and churches, especially the musical centers of Bruges, Florence, Ferrara, the Imperial Court of Holy Roman Emperor Charles V, and Bavaria. The course will examine music by some of the most important composers of the era, including Guillaume Du Fay, Josquin des Prez, Philippe Verdelot, Nicolas Gombert, and Orlando di Lasso.

**Class Format:** Meeting twice per week. Class discussion will be central to this course.

**Requirements/Evaluation:** in-class preparation and participation, short mid-term paper, final presentation, and final paper

**Prerequisites:** ability to read musical notation

**Enrollment Limit:** 20

**Enrollment Preferences:** music majors, those planning to major in music, or any student with a strong interest in music or Renaissance Europe

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

### **MUS 239 (S) Music in the Global Cold War (WS)**

**Cross-listings:** MUS 239 LEAD 239

**Primary Cross-listing**

Throughout the Cold War (1947-1991), music was deployed as a weapon, as a source of nationalist and ideological inspiration, as a form of political protest and resistance, and as propaganda. Music both echoed and helped shape political views and, therefore, prompted various forms of regulation and censorship (McCarthyism in the U.S.; the Union of Soviet Composers). To counter Soviet claims of American cultural inferiority and racism, the U.S. sponsored numerous musical diplomacy efforts showcasing both jazz (Armstrong; Ellington; Brubeck) and classical musicians and composers (Bernstein; American orchestras). Cold War politics and the threat of nuclear war influenced musical styles (Copland; Soviet Socialist Realism; the popular American folk music revival; serialism; rock behind the Iron Curtain), specific musical events (Tokyo East West Music Encounter; concerts celebrating the fall of the Berlin Wall), and individual careers (Shostakovich; Robeson; Van Cliburn). To investigate music's political roles and capacity for expressing communist and democratic capitalist ideologies, we will adopt a case study approach. The Cold War was a global political and, frequently, militaristic struggle. Though our focus will be on music in the U.S.S.R. and U.S.A., we will also consider musical developments impacted by the Cold War throughout Western and Eastern Europe, in Latin America, and in East Asia.

**Class Format:** Class discussion will be central to this course.

**Requirements/Evaluation:** 20% = Participation; 20% = Paper #1, 5-6 pages; 25% = Paper #2, 8 pages; 35% = Paper #3, 12 pages, due during exam period

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Students with relevant experience in Political Science, History, or Music studies.

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MUS 239 (D1) LEAD 239 (D1)

**Writing Skills Notes:** Students will write three papers during the semester: a 6 page, 8 page, and a 12 page paper. Drafts of papers 2 and 3 will be required prior to the due dates listed below. This is a "writing skills" course. Students will receive detailed comments on each paper, allowing them to build upon those comments in subsequent writing assignments.

Not offered current academic year

### **MUS 252 (F) Introduction to the Music of John Coltrane**

**Cross-listings:** AFR 242 MUS 252

Primary Cross-listing

This course offers the serious music student an opportunity to study the unique body of work produced by saxophonist and composer John Coltrane (1926-1967). The course traces the evolution of Coltrane's compositional and performance styles in the context of the musical and cultural environment in which they developed. Emphasis placed on Coltrane's musical style, representing a unique synthesis of influences, including jazz, world, and European Classical music and spirituality. Substantial listening and reading assignments, including a biography and related criticism, as well as detailed score analysis and study, are required.

**Requirements/Evaluation:** in-class participation including small quizzes, midterm, class presentation, and final paper

**Prerequisites:** MUS 103 and/or 203 strongly recommended; musical literacy sufficient to deal with the material and /or permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** musically literate students and Music majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

### **MUS 254 (S) Bebop: The (R)evolution of Modern Jazz**

**Cross-listings:** AFR 254 MUS 254

Primary Cross-listing

In the 1940s, Jazz turned a corner, transitioning from the functional and popular music of the swing era to the increasingly complex art music known as bebop. The practitioners of this new sub-genre were seen not as showmen or entertainers, but (in the words of poet Ralph Ellison) as "frozen faced introverts, dedicated to chaos." This music was simultaneously old and new, a musical evolution interpreted through the lens of cultural revolution. This class will survey the lives, music and continuing impact of bebop's most pivotal figures: Charlie Parker, Thelonious Monk, Dizzy Gillespie, Bud Powell and Kenny Clarke among many others. Through score study, guided listening and performance, the class will examine the melodic, harmonic and rhythmic innovations associated with this pivotal era in jazz history. We will evaluate, compare and contrast examples of contemporary theoretical scholarship concerning this musical vocabulary and its evolution. Intersections between the music and parallel artistic, social and political movements will also be addressed.

**Requirements/Evaluation:** weekly reading, listening, musical memorization and performance. Short written responses to discussion prompts and participation in class discussion; quizzes on assigned readings and listening, and final exam

**Prerequisites:** MUS 104b or permission of instructor, instrumental or vocal proficiency.

**Enrollment Limit:** 12

**Enrollment Preferences:** Music majors, Jazz Ensemble members, Africana Studies concentrators

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

**MUS 261 (S) Lost Voices of Medieval and Renaissance Women (WS)**

**Cross-listings:** MUS 261 WGSS 261

**Primary Cross-listing**

Remarkably few female voices from the first 1500 years of music in the West are audible today; most of the extant music and poetry of these centuries was composed by men to communicate male perspectives on matters worldly and divine. In this course we will listen to the experiences and viewpoints of medieval and Renaissance women as expressed through their poetry and song. We will ask how these women, whose lives were shaped either by the requirements of monastic culture or by the complex dynamics of aristocratic court culture, negotiated their places and made their voices heard within the patriarchal society of their time. We will examine how the contrasting environments of church and court informed the different outlooks, ideas, and aesthetics expressed in the words and music of their songs. Along the way, we will critically assess how these lost voices have been recreated to speak to us today through recordings and film. Our exploration begins in Byzantium and travels through Germany to France, Spain, and Italy. Along the way we encounter the Greek chant of the 9th century Byzantine abbess Kassia, the Latin poetry, chant, and sacred music drama of the 12th century German polymath St. Hildegard of Bingen, and the elegant poems and courtly melodies of the Countess of Dia and Queen Blanche of Castile in 12th and 13th century France. Heading south, we explore 14th century sacred polyphony at the royal convent of Las Huelgas in northern Spain, and voyage cross the Mediterranean to sample the lively musical life of 15th and 16th century cloistered female communities in northern Italy. We conclude our journey with a comparison of three remarkable 16th century women: the archduchess Margaret of Austria, Governor of the Hapsburg Netherlands, and poet-composer of French chansons; Sister Leonora d'Este, an Italian princess who spent her life enclosed in a Venetian convent, and likely authored a collection of anonymous Latin motets; and Maddelena Casulana, a northern Italian composer of madrigals, and the first woman to publish music under her own name. Her introduction to her first book of madrigals encapsulates the aim of this course: "I want to show the world, as much as I can in this profession of music, the vain error of men that they alone possess the gifts of intellect and artistry, and that such gifts are never given to women."

**Requirements/Evaluation:** Evaluation based on participation, three essays totaling 20-25 pages, three short peer reviews, and a final project presentation.

**Prerequisites:** Ability to read music helpful but not required.

**Enrollment Limit:** 10

**Enrollment Preferences:** Current or prospective Music and Women's Gender & Sexuality Studies majors, then seniors, juniors, and sophomores.

**Expected Class Size:** 6

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MUS 261 (D1) WGSS 261 (D2)

**Writing Skills Notes:** Students will write three essays totaling 20-25 pages, each of which will be revised in response to peer and instructor feedback.

**Not offered current academic year**

**MUS 272 (S) Music and Meaning (WS)**

Nearly everyone finds music meaningful, but what exactly does it mean? Without the help of words, this largely non-referential art presents special challenges to interpretation. While most would agree that musical sounds can do such things as mimic the rumbling of thunder, evoke the countryside, suggest the act of chasing, or express rage, the capacity of music to convey meaning remains controversial among scholars, performers, and listeners. Some, following music critic Eduard Hanslick, assert that musical works are essentially "tonally moving forms"--patterns of sound with no reference to the world outside themselves; a work's meaning derives solely from the interplay of musical elements. Others counter that music can signify aspects of human experience, its sounds and structures not merely referring to the outside world but even relating complex narratives. Certain writers have argued that, without the assistance of language, what music signifies remains vague, while others insist that the meaning of music is actually more precise than that of words. In this tutorial course, we will explore a range of questions regarding musical meaning. How can combinations of pitches, rhythms, and instrumental timbres signify something beyond themselves? Is the subject of musical meaning more relevant to

some historical styles or genres than others? How can we determine the meaning(s) of a work? Should we concentrate on formal processes within the music? Consider socially constructed meanings? Seek the composer's intentions? Emphasize our personal responses? What makes some interpretations more convincing than others? In grappling with these questions, students will engage with writings by Agawu, Cone, Hanslick, Kramer, Langer, Lewin, Newcomb, and Schopenhauer, among others. Music to be studied includes works by Beethoven, Schubert, Chopin, Brahms, Mahler, Tchaikovsky, Ravel, Stravinsky, Glass, and Adams.

**Requirements/Evaluation:** Students will write and present a 5- to 6-page paper every other week and a 1-2 page response to their partner's paper in the alternate weeks; evaluation will be based on five papers/presentations, and five responses.

**Prerequisites:** Ability to read music, or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Any student who expresses a strong interest in the course

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (WS)

**Writing Skills Notes:** In this tutorial course, students will write and present a 5- to 6-page paper every other week (five papers total) and a 1- to 2-page response to their partner's paper in the alternate weeks (five responses total). Through discussion in the tutorial sessions and comments on the papers, the course will place strong emphasis on developing students' critical thinking and writing skills.

Not offered current academic year

### **MUS 273 (F) Dangerous Music (WS)**

As a largely non-referential art whose meanings are far from transparent, music might seem to pose little danger. How could mere sounds represent a threat? Yet precisely because its meanings can be obscure, enabling it to achieve its ends surreptitiously, music has intertwined with danger throughout history. With its power to stir the emotions, stimulate bodily movement, encode messages, and foment rebellion, music has often been perceived as an agent of harm. Plato claimed that too much music could make a man effeminate or neurotic, and warned that certain musical modes, melodies, and rhythms promote licentious behavior and anarchic societies. Puritans, Victorians, and totalitarians, as well as opponents of ragtime, rock 'n roll, and rap, have also accused certain musical genres or styles of exerting dangerous influences, and sought to limit or suppress them. In Afghanistan, the Taliban banned music altogether. While music has often been unfairly accused, its potential for placing people in actual danger is undeniable. Works that are played at ear-splitting decibel levels, that call upon performers to injure themselves, that are used as a form of psychological torture, or that incite violence demand reconsideration of the widely shared view that music is fundamentally a form of entertainment.

**Requirements/Evaluation:** evaluation will be based on participation, five 5-6-page papers/presentations, and five 1-2 page responses

**Prerequisites:** an ability to read music is desirable but not required

**Enrollment Limit:** 10

**Enrollment Preferences:** students with demonstrated interest in music

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (WS)

**Writing Skills Notes:** Students will write five 5-6 page papers and five 1-2 page responses, and will receive extensive feedback on their writing.

Not offered current academic year

### **MUS 275 (S) Shakespeare through Music (WS)**

The plays of William Shakespeare are replete with references to music, and in his day included singing and even dancing as part of the narrative. As his plays entered the global canon, composers and choreographers, along with musicians and dancers, have contributed as avidly to interpreting Shakespeare's plots and characters as have theater directors and actors across the world. This tutorial course will focus on three plays--the tragedies *Romeo and Juliet* and *Othello*, and the comedy *Midsummer Night's Dream*--in order to compare and contrast a broad range of ways in which music works to tell these stories and portray these characters. We will consider these three plays in genres ranging from symphony orchestra, opera, and ballet to film scores, modern dance, jazz, musical theater, and popular song. Music from the Renaissance to the present day will be explored, including composers such as Purcell, Mendelssohn, Tchaikovsky, Verdi, Prokofiev, Bernstein, Britten, Ellington, and Costello. We will also examine film scores ranging from the silent era through such directors as Max Reinhardt, Orson Welles, Franco Zeffirelli, and Baz Luhrmann. Through comparative analysis of different approaches to relating Shakespeare's plays through music, this tutorial aims to develop both critical listening to music and critical

thinking about music.

**Requirements/Evaluation:** each student will write five 6- to 7-page essays, and provide five peer reviews; evaluation will be based on the quality of written work and discussion

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** Students majoring or planning to major in Music, English, or Theater.

**Expected Class Size:** 6

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (WS)

**Writing Skills Notes:** Students will write five short essays of 6-7 pages each, and receive oral and written feedback addressing structure, argumentation, and style from their tutorial partner and the instructor on every essay.

Spring 2023

TUT Section: T1 M 7:00 pm - 9:40 pm M. Jennifer Bloxam

### **MUS 278 (S) Carmen, 1845 to Now (DPE) (WS)**

**Cross-listings:** MUS 278 WGSS 248

#### **Primary Cross-listing**

The story of the gypsy *femme fatale* Carmen has endured for over 150 years. In Western culture and beyond, she exemplifies the seductive, exotic, independent, and dangerous woman who drives an upstanding man to a life of crime and finally murder. This course explores a broad array of treatments of this archetypal and problematic narrative, starting with Prosper Mérimée's 1845 novella on which Bizet based his famous 1875 opera *Carmen*. We will consider various staged and film versions of the opera itself, including Francesco Rosi's stunning 1984 movie, and discuss various other film transformations of the story, from DeMille's 1915 silent film through Hammerstein's 1954 all-black musical *Carmen Jones*, to the MTV version *A Hip Hopera* of 2004. Comic approaches will also be assessed, from Charlie Chaplin's *Carmen Burlesque* of 1915 through Spike Jones' 1952 *Carmen Murdered!* and *The Naked Carmen* of 1970. We will explore provocative dance interpretations ranging from Carlos Saura's 1983 flamenco version through David Bourne's choreography in his 2001 gay reading called *The Car Man*. Our journey concludes with a comparison of two post-colonial sub-Saharan African films--the Senegalese director Ramaka's *Karmen Gei* (2001) and *U-Carmen eKhayelitsha* (2005) by the South African director Dornford-May--that push critical reaction to Bizet's story and music beyond Western cultural boundaries.

**Class Format:** After four initial 75-minute group meetings to discuss Mérimée's novella and Bizet's music, students will meet with the instructor in pairs for one hour each week. The scheduled class time is obligatory only for the first two weeks, after which weekly pair meetings will be individually scheduled.

**Requirements/Evaluation:** Each student will write a 5- to 6-page essay every other week (five in all), and provide 2-page written and oral peer reviews in alternate weeks; evaluation will be based on the quality of written work, discussions, and oral presentation.

**Prerequisites:** None; ability to read music useful but not necessary

**Enrollment Limit:** 10

**Enrollment Preferences:** Preference given to current or prospective Music and Women's Gender & Sexuality Studies majors, then seniors and juniors.

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MUS 278 (D1) WGSS 248 (D2)

**Writing Skills Notes:** Students will write five short essays of 5-6 pages each, and receive oral and written feedback addressing structure, argumentation, and style from their tutorial partner and the instructor on every essay.

**Difference, Power, and Equity Notes:** This course satisfies the DPE requirement through a critical examination of the ways in which the Carmen story has served as a stage on which multifaceted textual and musical constructions and conflicts express the power dynamics between individual and group identities, encompassing gender and sexuality, nationality, race, ethnicity, and class.

Not offered current academic year

### **MUS 279 (F) American Pop Orientalism (DPE) (WS)**

This tutorial will investigate the representation of Asians and Asian Americans in American popular culture since the late nineteenth century. Our focus will be on music's role in Orientalist representation in a wide variety of media and genres, including Hollywood film, television, popular song, music videos, Broadway musicals, hip hop, and novels. We will begin with major texts in cultural theory (Said, Bhabha) and will attempt throughout the semester to revise and refine their tenets. Can American Orientalism be distinguished in any fundamental way from nineteenth-century European imperialist thought? How does Orientalist representation calibrate when the "exotic others" being represented are themselves Americans? Our own critical thought will be sharpened through analysis and interpretation of specific works, such as *Madame Butterfly*, "Chinatown, My Chinatown," *Sayonara*, *Flower Drum Song*, *Miss Saigon*, *Rising Sun*, *M. Butterfly*, *Aladdin*, and Weezer's *Pinkerton*. We will end the semester by considering the current state of Orientalism in American popular culture.

**Requirements/Evaluation:** five 5- to 6-page essays and five critical oral responses

**Prerequisites:** previous related coursework and/or musical experience is desirable, but is not required

**Enrollment Limit:** 10

**Enrollment Preferences:** students with prior related course experience

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE) (WS)

**Writing Skills Notes:** Students will receive detailed comments on each paper, allowing them to build upon those comments in subsequent writing assignments. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

**Difference, Power, and Equity Notes:** Students will develop analytical and interpretive skills applicable to their future engagements with a wide range of art forms as we investigate the musical, literary, and visual techniques employed in works of exotic representation. We will focus on how popular culture has shaped and reflected perceptions of race and gender in American history since the late 19th century.

**Attributes:** AMST Arts in Context Electives ASAM Core Courses

Not offered current academic year

### **MUS 281 (F)(S) Individual Vocal and Instrumental Instruction**

Individual vocal or instrumental lessons offered as a partial credit fifth course. Students are encouraged to take this course for a letter grade. (Note: partial credit music lessons taken pass/fail do not count as one of the three pass/fail options available to students for regular semester courses.) Students are required to prepare for 10 lessons during the semester with a minimum expectation of one hour practice per day and to perform publicly on at least one departmental studio recital during the semester. Lessons are scheduled TBA based upon instructor schedule. Make-up lessons are given at the discretion of the instructor. Courses in individual vocal or instrumental instruction are fully subsidized for all students who meet the 10 lesson commitment. There is no registration via Williams Student Records. To register for the course, a student must first contact the appropriate teacher; they may do this using the inquiry form. The inquiry form, an outline of the registration process, and the lesson registration deadlines are available on the Music Department website at <https://music.williams.edu/courses/#individual-vocal-and-instrumental-instruction>. Students will be reassigned to course numbers 281-288 based on the number of semesters of instruction already taken in one particular section. Specific instrument or voice sections are as follows: 01 Bassoon, 02 Cello, 03 Clarinet, 04 Bass, 05 Flute, 06 Guitar, 07 Harpsichord, 08 Horn, 09 Jazz Piano, 10 Oboe, 11 Organ, 12 Percussion, 13 Piano, 14 Classical Saxophone, 15 Trumpet, 16 Viola, 17 Violin, 18 Voice, 19 Jazz Bass, 20 Jazz Vocal, 21 Trombone, 22 Harp, 23 Jazz Drum, 24 Jazz Saxophone, 25 Jazz Trumpet, 26 Euphonium, 27 Tuba, 28 African Drumming, 29 Jazz Guitar, 30 Mbira, 31 Vocal/Songwriting, 32 Jazz Trombone 33 Sitar, 34 Tabla, 35 Erhu, 36 Yangqin, 37 Zheng, 38 Liuqin/Pipa, 39 Zhongruan

**Requirements/Evaluation:** Lesson preparation, public performance, and progress throughout the semester.

**Prerequisites:** permission of the individual instructor; enrollment limits apply to each section based upon studio space and student qualifications

**Enrollment Limit:** none

**Enrollment Preferences:** none

**Expected Class Size:** NA

**Grading:** yes pass/fail option, half credit fifth course option

**Unit Notes:** Enrollment in more than one studio must be approved each semester by the chair beforehand.

**Distributions:** No divisional credit

Spring 2023

LSN Section: 01 TBA Ed Gollin

### **MUS 291 (F)(S) Chamber Music Workshop**

Classical and Jazz Chamber Music and other small departmental ensembles (including Chamber Choir, Percussion Ensemble, Chinese Music Ensemble, and Brass Ensemble) coached by faculty on a weekly basis culminating in a performance. Offered as a partial credit fifth course. Students are encouraged to take this course for a letter grade, but as with all fifth courses, pass/fail is also an option. Students in ad hoc groups organized each semester by the director of the chamber music or jazz programs are required to prepare for 10 one-hour coaching sessions during the semester. It is recommended that each group rehearse a minimum of 2 hours each week in preparation of the coaching. Each ensemble is responsible for keeping a weekly log of rehearsal times and attendance. The logs are to be handed in to the coaches at the end of the semester. In addition students are expected to practice the assigned music individually and are required to perform on the Classical or Jazz Chamber Music concert at the end of the semester. For students in continuing departmental small ensembles, students are expected to practice the assigned music individually and keep a log of their practices, attend all rehearsals, and participate in all concerts presented during the semester. To register for the course, a student must contact the Chamber Music Performance Coordinator, and fill out a registration contract to be signed by the Coordinator, the coach, and the student. Information on the registration process is available on the Music Department website <https://music.williams.edu/courses> under "Chamber Music Workshop." The ensembles will be organized based on skill levels and the instruments represented.

**Requirements/Evaluation:** preparation for weekly coachings

**Prerequisites:** permission of the Chamber Music Staff; enrollment limits will depend upon instructor availability

**Enrollment Limit:** 12

**Enrollment Preferences:** more advanced students, to be determined by audition as necessary

**Expected Class Size:** 12

**Grading:** yes pass/fail option, half credit fifth course option

**Unit Notes:** students should register for 291 for their first semester enrolled in this course and should use the numbers 292-298 for subsequent semesters; registration is through the Music department

**Distributions:** No divisional credit

Fall 2022

Spring 2023

LSN Section: 01 TBA Ed Gollin

### **MUS 301 (F) Counterpoint**

Counterpoint, the study of the ways independent melodic lines can be joined in music, has been essential to musical and compositional instruction for centuries. Counterpoint was taught by Mozart, studied by Beethoven, and to this day remains an integral part of compositional training. The course will introduce students to species counterpoint in two and three voices--exercises that develop discipline in polyphonic writing, hearing, and thinking. The exercises will focus on the constraints of sixteenth-century vocal polyphony (music of Palestrina and Lassus) but will illustrate how such contrapuntal discipline is also manifest in music of Corelli, Bach, Brahms and Debussy.

**Requirements/Evaluation:** written exercises and emulation projects

**Prerequisites:** MUS 103 or permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** Music majors and those with previous music theory training

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **MUS 307 (F)(S) Composition III**

Advanced individual instruction in composition. Projects will be initiated largely by the students with guidance from the instructor. Student is responsible for arranging performance of their own work. Student may enroll for up to four semesters by taking these courses in sequence, with the lower numbered course being the prerequisite for the next higher numbered course. May not be taken in conjunction with Music 493 or 494, the honors courses in composition.

**Requirements/Evaluation:** satisfactory completion of student-initiated projects

**Prerequisites:** MUS 205, 206 and permission of instructor

**Enrollment Limit:** 4

**Enrollment Preferences:** Music majors

**Expected Class Size:** 2

**Grading:** yes pass/fail option, yes fifth course option

### **MUS 309 (F) Jazz Arranging and Composition**

This is a course designed to acquaint the student with the basic principles of composing and arranging for Jazz Ensemble, beginning with lead sheet format and progressing through the big band. Intensive score study and some transcription from selected recordings required. Evaluation will be based on the successful completion and performance of original arrangements and/or compositions during the semester, to include several lead sheet compositions, one quintet and one sextet arrangement, and one arrangement for big band. Students must attend extra small ensemble and large ensemble rehearsals when work is being rehearsed and/or performed. A solid background in jazz chord/scale theory is required.

**Class Format:** weekly lecture and targeted ensemble rehearsals generally last 2 hours total; additional individual tutorial style meetings are generally

an hour a week, more frequently and for longer amounts of time as needed

**Requirements/Evaluation:** project based 4-5 compositions/arrangements

**Prerequisites:** MUS 104B or permission of the instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Jazz Ensemble Members, Music Majors

**Expected Class Size:** 3-5

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

**MUS 316 (F) Music in Asian American History (DPE) (WS)**

**Cross-listings:** MUS 316 AMST 366

**Primary Cross-listing**

Is "Asian American music" all music made by Asian Americans, music by Asian Americans specifically drawing on Asian heritage, or music engaging with Asian American issues? This course embraces all three definitions and the full diversity of Asian American musical experience. We will study the historical soundscapes of immigrant communities (Chinese opera in North America; Southeast Asian war refugees) and how specific traumatic political events shaped musical life (Japanese American internment camps). We will encounter works by major classical composers (Chou Wen-Chung; Chen Yi; Tan Dun; Bright Sheng) and will investigate the careers and reception of prominent classical musicians (Midori; Seiji Ozawa; Yo-Yo Ma). Afro-Asian fusions, inspired by civil rights protest movements, manifested in jazz (Jon Jang; Fred Ho; Anthony Brown; Hiroshima; Vijay Iyer) and hip hop (MC Jin; Awkwafina; Desi rappers). Asian Americans have been active in popular music at home and abroad (Don Ho; Yoko Ono; Wang Leehom; Mitski). Finally, we will investigate communal forms of Asian American music making that have crossed racialized and gendered boundaries (taiko drumming; Indonesian gamelan; belly dance; Suzuki method). This seminar is designed to develop research skills, as we pursue original fieldwork, archival research, and oral history interviews.

**Requirements/Evaluation:** Active class participation; two short papers (5-6 pp.) and a research term paper (12-15 pp.).

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** Students with curricular experience in Asian American history or music studies.

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MUS 316 (D1) AMST 366 (D1)

**Writing Skills Notes:** Students will write three papers during the semester: two 5-6 page papers and a 12-15 page research paper, written in stages. Students will receive detailed comments on each paper and at each stage of the research paper process, allowing them to build upon those comments in subsequent writing assignments.

**Difference, Power, and Equity Notes:** Political and cultural forces of exclusion not only determined Asian American musical participation in American music history but have shaped Asian American styles of music. We will study the history of Asian American political struggles as they have intersected with music and how Asian Americans have at certain points sought allegiance through music with other marginalized groups. We will explore as well popular media representations of Asian American musicians revealing race-based assumptions.

Fall 2022

SEM Section: 01 W 1:10 pm - 3:50 pm W. Anthony Sheppard

## **MUS 323 (S) Arts Organizing in Africa and the Diaspora (DPE)**

**Cross-listings:** THEA 321 MUS 323 DANC 323

### **Primary Cross-listing**

At the heart of this class is the question, how do artists and organizations use the performing arts to effect social change in their communities? Drawing from a number of case studies from throughout Africa and the African Diaspora, we will first endeavor to understand and contextualize issues related to education, social uplift, the environment, and the economy as they relate to specific communities. We will then examine how a series of organizations (from grassroots campaigns to multinational initiatives) utilize the performing arts in response to those issues. Among the issues we will discuss at length are: -How do performers and organizations navigate the interplay between showcasing the performance talents of individuals and groups and foregrounding an issue or cause? More broadly, what dilemmas emerge as social and aesthetic imperatives intermingle? -What are the dynamics between people acting on a local level within their communities and their various international partnerships and audiences? -How can government or NGO sponsorship help and/or hinder systemic change? By the end of the semester, students will be equipped with conceptual frameworks and critical vocabularies that can help them ascertain the functions of performance within larger organizations and in service to complex societal issues. Throughout the course, we will watch and listen to a variety of performances from traditional genres to hip-hop, however this class is less about learning to perform or analyze any particular genre than it is about thinking through how performance is used as a vehicle for social change. Case studies will include youth outreach and uplift in Tanzania through the United African Alliance, campaigns to promote girls' education in Benin and Zimbabwe, community-wide decolonizing initiatives through the Yole!Africa Center in the Democratic Republic of Congo, and the cultural reclamation of a mining town in Suriname through the arts organization, Stichting Kibii.

**Requirements/Evaluation:** Four case study profiles, midterm essay (5-7pages), and a final project. Regular participation in class discussion.

**Prerequisites:** None

**Enrollment Limit:** 15

**Enrollment Preferences:** If the course exceeds the maximum enrollment, selection will be made based on students explanations for why they want to take the class.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

THEA 321 (D1) MUS 323 (D1) DANC 323 (D1)

**Difference, Power, and Equity Notes:** This course interrogates on a fundamental level issues of power and equity. Using the performing arts as a critical lens, we discuss a series of social and environmental challenges that communities of African descent face. These are in direct dialogue with global systems of power and economic factors. Issues include: environment, education, local communities' interactions with multinational corporations, and representational politics in performance.

**Attributes:** MUS World Music/Ethnomusicology

**Not offered current academic year**

## **MUS 352 (S) Interplay: Collaborative Traditions in Jazz**

"Meaningful theorizing about jazz improvisation at the level of the ensemble must take the interactive, collaborative context of musical invention as a point of departure"- Ingrid Monson, *Saying Something*. Collaboration gives birth to specific musical moments, shapes the dramatic arc of whole pieces and performances, and is the foundation out of which the styles and larger artistic identities of individuals and groups arise. This class is an opportunity for advanced students of jazz music to investigate the uniquely collaborative nature of jazz language assimilation and communication. Participants will transcribe and analyze examples of musical interplay from the recorded works of the Miles Davis Quintet of the 1960's, the John Coltrane Quartet of the 1960's, and other notable jazz ensembles. They will also undertake a thorough profile of a modern-day ensemble, including a performance-based final project. Essays on jazz aesthetics by Berliner, Monson, Hobson and Rinzier among others will serve to broaden our discussions as we examine the ideas of musical collaboration and group identity through social and commercial lenses.

**Requirements/Evaluation:** an assortment of weekly writing/listening/transcription/analysis/composition/performance projects

**Prerequisites:** advanced jazz theory and performance skills, permission of instructor, MUS 104b, 204 highly suggested

**Enrollment Limit:** 10

**Enrollment Preferences:** Music majors, jazz ensemble members

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

Not offered current academic year

### **MUS 381 (S) Choral Conducting**

The purpose of this course is to become fully acquainted with the fundamentals of conducting gesture, score study, and rehearsal technique as it relates to the choral rehearsal. Using the class as the primary practice choir, students will learn to express specific musical ideas and concepts through conducting patterns and body language, and will develop fluency and ease in these mediums through the study of varied repertoire and techniques. Regular videotaping of conducting sessions will provide opportunities for students to study themselves. Repertoire will include a broad survey of works from the early Renaissance to early 21st century, accompanied and a cappella, and issues of conducting ensembles at various skill levels will be addressed.

**Class Format:** coaching sessions

**Requirements/Evaluation:** regular conducting assignments and final projects

**Prerequisites:** MUS 103 and 104

**Enrollment Limit:** 8

**Enrollment Preferences:** upperclass students

**Expected Class Size:** 4

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Spring 2023

SEM Section: 01 TR 8:30 am - 9:45 am Anna C. Lenti

### **MUS 382 (F) Orchestral Conducting**

This course will introduce and develop a broad range of subjects associated with conducting, including: leadership, rehearsal techniques, physical and aural skills, interpretation, performance practices, and programming. Related areas to be discussed include: balance, intonation, rhythm, articulation, bowings, and complex meters. Weekly conducting and score reading assignments will form the core of the workload. Larger projects may include conducting existing instrumental ensembles, and along with score reading, will be the basis of the midterm and final exams. This course includes instrument demos, and conducting videos.

**Class Format:** lab

**Requirements/Evaluation:** class participation, regular conducting assignments, midterm and final projects

**Prerequisites:** membership in a Music Department ensemble preferred, permission of instructor

**Enrollment Limit:** 6

**Enrollment Preferences:** Music department ensemble members/upperclass students

**Expected Class Size:** 2-4

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **MUS 391 (F)(S) Advanced Musical Performance**

Individual instruction in instrumental and vocal lessons offered at the advanced level as a regular full credit course. Additional forms for full credit lessons can be obtained at the Music Department office. Full credit lessons must be approved by the entire music faculty and an audition may be required. Courses in individual vocal or instrumental instruction are fully subsidized for all students who meet the 12 lesson commitment. MUS 391, 392, 491, 492 must be taken as a graded course and it is strongly recommended that it be taken only as part of a four-course load; the numbers 391, 392, 491, 492 should be used for four sequence courses in the same instrument; if a different instrument is elected, the numbering sequence should start again at 391; numbers are selected without regard to semester taken or class year of student.

**Class Format:** individual instruction

**Requirements/Evaluation:** lesson preparation, public performance, and progress throughout the semester.

**Prerequisites:** completed application, registration and instructor recommendation must be submitted by the instructor by the Tuesday before the first Friday of the semester

**Enrollment Limit:** none

**Enrollment Preferences:** intended primarily for music majors; students must obtain the application and registration forms from the Music Department Office

**Expected Class Size:** NA

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** Music majors may register for a total of four semesters, non-majors may register for two semesters: the specific name of the project elected is to be specified after the title "Music Performance Studies"

### **MUS 471 (S) Timbre**

Timbre is central to the experience of all music and often enables us to identify styles and cultures nearly instantaneously. However, timbre is not commonly discussed in detail since our technical vocabulary for describing this musical element has been comparatively limited. Our work in this

seminar will involve readings in music theory and history, ethnomusicology, and cognitive studies as well as in the emerging field of sound studies as we attempt to define timbre, explore its manifestations in a wide variety of music, and develop an analytical approach and descriptive vocabulary tooled specifically to this musical element. We will consider how composers and performers of both art and popular musics have wielded timbre as an expressive device and how technology may allow us to analyze details of timbral performance and perception. We will investigate the relationship between timbre and orchestration, from the rise of Haydn's orchestra to the Klangfarbenmelodie of Schoenberg. We will consider extremes of timbral distortion in both vocal and electric guitar effects in rock music as well in such traditions as Korean p'ansori and will explore various forms of speech music and the work of composers of spectral music to expand our case studies. Finally, our own experiments with timbral effects will bring our seminar to bear on our musical performance.

**Requirements/Evaluation:** evaluation will be based on papers, presentations, and class participation

**Prerequisites:** MUS 103-104, and two from MUS 231, 232, or 233 (or equivalents). MUS 201-202 are also recommended but not required.

**Enrollment Limit:** 10

**Enrollment Preferences:** senior Music majors, junior Music majors

**Expected Class Size:** 5

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **MUS 474 (S) Music and Corporeality (WS)**

Music is often said to derive its own special quality from the fact that it exists outside of visual representation and is not contained within a physical form, yet musical sound and practice are created through and act upon bodies in numerous ways. This course aims to address how music and bodies shape and respond to one another. Drawing from sources across musical sub-disciplines and extending to fields including cognitive science, sound studies, performance studies, and anthropology, we will follow four lines of inquiry related to music and corporeality: 1.) **Embodied practices:** techniques and pedagogies in performance and in listening (including praxis [Bourdieu], Deep Listening [Oliveros, Becker], Alexander Technique); 2.) **Music's physical effects and affects:** pleasure and pain, the vocalic body [Bonefant, Connor, Barthes], cognitive processes; 3.) **Ideological moves:** questioning the universality of music and of bodies and Cartesian dualism; 4.) **Music and bodies at their limits:** cyberfeminism, futurism, disembodiment, ecstasy, questions of artificiality/virtuality. Musical examples will be drawn from classical and popular sources from Euro/American idioms and beyond, predominantly from the late 20th and 21st centuries.

**Requirements/Evaluation:** midterm project, final paper (including rough draft and final copy) and presentation, intermittent 1- to 3-page papers and exercises

**Prerequisites:** familiarity with music terminology and the ability to read music notation is expected; questions can be directed to the instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** senior and junior Music majors

**Expected Class Size:** 8

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (WS)

**Writing Skills Notes:** This course culminates in a final presentation and paper, meant to showcase the student's critical achievements, including their ability to formulate and substantiate their argument. Assignments and exercises throughout the course are aimed at honing students' ability to write and present effectively.

Not offered current academic year

### **MUS 475 (S) Hearing Through Seeing: Music and Visuality (WS)**

We hear music, but seldom is the experience purely aural -- the visual also plays a crucial role. Sound and sight converge when we observe musicians performing in concert venues, patterns of notes and rhythms on the musical score, pictures and text on album and sheet music covers, moving images on screens in films, music videos, and video games. A programmatic work conjures specific images, even whole narratives, in our "mind's eye," or imagination. A work of absolute music, such as a fugue or symphony, can do so as well, although what we envision here may be largely abstract. With hybrid genres, such as opera, musical theater, and dance, the musical and the visual jointly command our attention, often in a spectacular display. This seminar explores myriad ways that "seeing" mediates our experience of hearing, making, and understanding music. We will examine a broad range of topics, including synesthesia; visuality in performance and interpretation; visual metaphors such as line, color, and space in music analysis

and criticism; music and representation; intersections between music and painting, sculpture, and architecture; operatic staging; illuminated music manuscripts; eye music and graphic notation; and sound and image in digital media.

**Class Format:** Students will give four presentations based on the subjects of their papers.

**Requirements/Evaluation:** evaluation will be based on three 5-6 page papers and presentations, a final 8-10 page paper and presentation, and class participation

**Prerequisites:** ability to read music

**Enrollment Limit:** 8

**Enrollment Preferences:** junior and senior music majors, and any student with a demonstrated interest in music

**Expected Class Size:** 8

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** satisfies the 400-level course requirement for the music major

**Distributions:** (D1) (WS)

**Writing Skills Notes:** Students will write three 5-6 page papers and a final 8-10 page paper. They will receive detailed feedback on their writing and will have the opportunity to revise their work.

**Winter Study -----**

**MUS 10 (W) Introduction to Music Technology and Electronic Music**

This Winter Study Class is an introduction to the basics of Music Technology and Electronic Music. Students will learn how to use Music Notation Software Finale, MIDI, Sound Editing, and Sound Design Software to create their own compositions and/or arrangements. Students will work in groups and individually. Each class will include the instructor's presentation of the techniques and software studied in class, and a hands on approach section where students will use the software studied in class to apply the electronic music techniques discussed in their individual or group projects under the guidance of the instructor. There will be weekly student presentations of their individual and group projects. Instructor and students will also bring their favorite electronic music compositions and songs to class to discuss the techniques used by their creators.

**Requirements/Evaluation:** Final project or presentation. Weekly presentation and discussion of students' projects.

**Prerequisites:** MUS 102 or MUS 103, or permission of the instructor. Ability to read music is a prerequisite.

**Enrollment Limit:** 9

**Enrollment Preferences:** Music major

**MUS 11 (W) I/O Fest 2023: The Music of Now**

I/O Fest is the Williams College Music Department's annual student-centered festival of contemporary music and creative music making, comprising concerts, workshops, outreach, and study. Over the first two weeks of Winter Study student performers, composers, and sound artists will engage in the preparation, rehearsal, and creation of new works, leading to four days of concerts at the '62 Center for Theatre and Dance and the Clark Art Institute. Students enrolled in the class will choose areas of focus in performance, composition, or production and take part in all of the creative planning for the festival. Students will engage with and learn from visiting musicians and composers, and explore a world of adventurous music making, new ways of listening, and new modes of collaboration. The first phase of the class will culminate in the presentation of the festival from January 12-15, 2023. Students are required to participate in and attend all events on the festival. In the post-festival phase of the course students will participate in readings, workshops, and discussion groups related to the social, musical, and cultural ideas featured in the festival and explore issues in contemporary performance practice. Other activities will include informal group sessions on musical topics such as free improvisation, graphic scores, and sound art. There will also be a field trip to PS21 in Chatham, NY for a tour of the facility and a performance.

**Requirements/Evaluation:** final project or presentation

**Prerequisites:** All students must have a background in music and be able to read music. They should have proficiency as an instrumentalist, singer, or conductor, or have experience as a composer or sound artist.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students will be selected based on musical experience and interest.

**MUS 12 (W) The World and Wes Anderson**

Among commercially successful filmmakers of the new millennium, Wes Anderson has cultivated one of the most strongly recognizable (and widely imitated) styles. Focusing on Anderson's films, this course will build an intimate knowledge of Anderson's personal style while also exploring broader topics like filmmaking techniques and narrative structures. It will also use these films as a jumping-off point for discussions about the broad network of influences and outside references found therein, including ancient and contemporary art, interior design, film history, music history, political history, celebrity, philosophy, typography, and the environment. Importantly, the course will also ask questions about representation and identity in Anderson's work. Three weekly class meetings will consist of lecture, discussion, group viewing sessions, and student presentations. Outside of the classroom, students will be expected to read articles, watch videos, complete an Anderson-inspired creative project, and write a medium-length essay. No previous experience studying film or music is required.

**Requirements/Evaluation:** short paper and final project or presentation; creative project

**Prerequisites:** none. students do not need to have experience studying film or music.

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference will go to students who have taken courses relevant to the course material (in film, art, music, etc.).

**Expected Class Size:** NA

**Grading:** pass/fail only

**Attributes:** SLFX Winter Study Self-Expression STUX Winter Study Student Exploration

### **MUS 13 (W) Play Javanese Gamelan!**

Javanese Gamelan is a vibrant, living tradition of gong-chime music from Central Java, Indonesia. Gamelan music features unique tuning systems, intricate melodies, lively rhythms, and a strong sense of communal music-making. Students have the opportunity to learn several instruments over the winter term. Audio recordings and short readings supplement the hands-on learning. The group will play on a beautiful gamelan set crafted by Tentrem Sarwanto, a renowned Javanese gong-smith. The course culminates in a final performance and a brief essay on Javanese music.

**Requirements/Evaluation:** final public performance and short essay

**Prerequisites:** none

**Enrollment Limit:** 13

**Enrollment Preferences:** preference will be given to graduating seniors and upperclass students

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Phil Acimovic studied Javanese Gamelan in Surakarta, Indonesia for two years with master musicians Bp. Wakidi Dwidjomartono and Bp. Darsono Hadiraharjo. He has directed gamelans at Tufts University, Smith College, UC Davis, and UC Santa Cruz.

### **MUS 14 (W) Piano Lessons for the Music Novice**

This course, geared towards students with no previous musical training, offers an introduction to playing the piano and reading music. Students will learn to play simple pieces, scales, and chords, and will become familiar with basic music terms, notation, and concepts. The class will meet as a group for three hours a week, and each student will also have a private half-hour lesson once a week. In addition, students are expected to practice on their own daily and to complete written homework assignments. All students will perform pieces they have learned in a class recital on the last day of the course.

**Requirements/Evaluation:** Final project or presentation

**Prerequisites:** intended for students who have never taken music lessons of any kind

**Enrollment Limit:** 8

**Enrollment Preferences:** Permission by instructor

**Expected Class Size:** NA

**Grading:** pass/fail only

**Attributes:** EXPE Experiential Education Courses SLFX Winter Study Self-Expression

Winter 2023

LEC Section: 01 TWR 10:00 am - 11:50 am Marjorie W. Hirsch

### **MUS 16 (W) Zimbabwean Music Experience**

This course focuses on teaching Zimbabwean music performance. Besides introducing a selection of basic songs on mbira, marimba, and voice, the course explores the orchestration of such music on other instruments. To utilize some participants' previous experience' the course will incorporate brass, woodwinds, strings, and additional percussion. The course content will trace both continuity and change in music from traditional song styles into African popular music. Besides the instrumental practice of the class, we will watch on YouTube and other videos the collaborative nature of this

music. The class will end with an end-of-winter Study performance by the participants.

**Requirements/Evaluation:** final project or presentation

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** The first students to enroll will be selected

**Expected Class Size:** NA

**Grading:** pass/fail only

**Attributes:** SLFX Winter Study Self-Expression

Winter 2023

LEC Section: 01 TR 10:00 am - 2:50 pm Tendai Muparutsa

### **MUS 26 (W) Songwriting in Nashville**

This course will allow students of songwriting to explore both the artistic and the practical part of today's music industry. We will travel to Nashville and dive deep into writing, co-writing, critiquing, and editing original songs. Professional songwriters from the region will be invited to offer master classes and share their experiences as well as perform for us in an intimate, relaxed setting. Possible field trips include The Country Music Hall of Fame, Gruhn Guitars, Ryman Auditorium, The Bluebird Cafe, The Grand Old Opry, Performing Rights Organizations (BMI, ASCAP, and SESAC), Music Row, NSAI, recording studios and publishing Houses, etc.

**Requirements/Evaluation:** Final project or presentation.

**Prerequisites:** Preference will also be given to those who play an accompanying instrument or are accomplished vocalists.

**Enrollment Limit:** 8-9

**Enrollment Preferences:** Students who have previously enrolled in WSP Mus 15 or have taken part in private Vocals: Songwriting lessons through the music department will be given preference. Others that are interested are should contact the instructor at [blewis@williams.edu](mailto:blewis@williams.edu).

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Bernice Lewis is the Artist Associate in Songwriting at Williams College and has been a touring artist for over three decades. She has recorded two of her seven original CD's in Nashville.

**Materials/Lab Fee:** \$3500

### **MUS 31 (W) Senior Thesis: Music**

To be taken by students registered for Music 493-494.

**Class Format:** thesis

**Grading:** pass/fail only

Winter 2023

HON Section: 01 TBA Ed Gollin

### **MUS 99 (W) Independent Study: Music**

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

**Class Format:** independent study

**Grading:** pass/fail only

**Distributions:** (D1)

### **Chair: Professor Tim Lebestky**

#### Advisory Committee

- Matt E. Carter, Associate Professor of Biology; Faculty Director, Rice Center for Teaching; affiliated with: Biology, Neuroscience
- Victor A. Cazares, Assistant Professor of Psychology; affiliated with: Psychology, Neuroscience
- Amie A. Hane, Professor of Psychology; affiliated with: Psychology, Neuroscience, Public Health
- Tim J. Lebestky, Associate Professor of Biology, Chair of Neuroscience Program; affiliated with: Biology, Neuroscience
- Martha Marvin, Lecturer in Neuroscience
- Shivon A. Robinson, Assistant Professor of Psychology; affiliated with: Psychology, Neuroscience; on leave 2022-2023
- Noah J. Sandstrom, Chair and Professor of Psychology; affiliated with: Psychology, Neuroscience
- Heather Williams, William Dwight Whitney Professor of Biology; affiliated with: Biology, Neuroscience

Neuroscience is a rapidly growing interdisciplinary field concerned with understanding the relationship between brain, mind, and behavior. The interdisciplinary nature of the field is apparent when surveying those who call themselves neuroscientists. Among these are anatomists, physiologists, chemists, psychologists, philosophers, molecular biologists, computer scientists, linguists, and ethologists. The areas that neuroscience addresses are equally diverse and range from physiological and molecular studies of single neurons, to investigations of how systems of neurons produce phenomena such as vision and movement, to the study of the neural basis of complex cognitive phenomena such as memory, language, and consciousness. Applications of neuroscience research are rapidly growing and include the development of drugs to treat neurodegenerative disorders such as Alzheimer's disease and Parkinson's disease, the use of noninvasive techniques for imaging the human brain such as fMRI and near infrared optical imaging, and the development of methods for repair of the damaged human brain such as the use of brain explants and implants. Combining this wide range of approaches and research methods to study a single remarkably complex organ—the brain—and the behavioral outcomes of its activity requires a unique interdisciplinary approach. The Neuroscience Program is designed to provide students with the opportunity to explore this approach.

#### **THE PROGRAM**

The program in neuroscience consists of seven courses: The Cell (Biology 101); Introductory Psychology (Psychology 101); Neuroscience (Neuroscience 201); Topics in Neuroscience (Neuroscience 401); and three electives. Either Biology 101 or Psychology 101 must be taken prior to enrolling in the core course, Neuroscience (Neuroscience 201), which is the foundational neuroscience course and provides the background for upper-level electives in the concentration. Ideally, Neuroscience is taken the fall of the sophomore year. Electives are designed to provide in-depth coverage of specific areas within the field and many electives include laboratory experiences. At least one elective course is required from those designated as Group A (Neuroscience courses cross-listed with Biology). At least one elective course is required from those designated as Group B (Neuroscience courses cross-listed with Psychology). A third required elective may come from Group A or Group B offerings or it may come from Group C which consists of courses that are not cross-listed with neuroscience but include significant neuroscience content. Students may also petition the advisory committee to consider courses that are not listed among these groups including neuroscience-related courses that may be taken while studying abroad. Topics in Neuroscience (Neuroscience 401) is designed to provide an integrative culminating experience and is taken by all senior concentrators during the senior year.

### **THE DEGREE WITH HONORS IN NEUROSCIENCE**

The degree with honors in Neuroscience provides students with the opportunity to undertake an original research project under the supervision of one or more of the Neuroscience faculty. In addition to completing the requirements of the Neuroscience Program, candidates for an honors degree must enroll in Neuroscience 493-W31-494 and write a thesis based on an original research project. Presentation of a thesis, however, should not be interpreted as a guarantee of a degree with honors. Students interested in pursuing a degree with honors should contact the Neuroscience Advisory Committee by winter study of their junior year.

### **STUDY ABROAD**

## FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

### **Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions). Securing syllabi is often difficult, so a discussion with the program Chair is certainly necessary. Under no circumstances should a student assume that a course taken at another institution will count toward the concentration.

### **What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

The program Chair and advisory committee will consider the course title, course description, and complete syllabus, including readings/assignments. Exams or other written work will also be considered. Written work may be requested if the course description suggests that it is only tangentially related to the field of neuroscience. Written work would, therefore, need to demonstrate that there was sufficient emphasis on neuroscience material.

### **Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

Yes. Generally there is a maximum of 2 credits that can be completed through a study abroad program.

### **Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

No.

### **Are there specific major requirements that cannot be fulfilled while on study away?**

Yes. NSCI 201 and NSCI 401 can not generally be completed abroad. NSCI should be taken during the sophomore year if possible and includes a laboratory component that is rarely comparable in study abroad courses.

### **Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

NSCI 201 is only taught during the fall semester. As such, students planning to study away should plan to take it during the sophomore year.

### **Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:**

Some students (rarely) have failed to discuss the course in advance of their study abroad experiences. They may also have assumed that approval of a course by another department (e.g., Biology or Psychology) would necessarily mean that they would receive Neuroscience credit for the course. This is not necessarily the case.

## **NSCI 201 (F) Neuroscience**

**Cross-listings:** BIOL 212 NSCI 201 PSYC 212

### **Primary Cross-listing**

This course is designed to give an overview of the field of neuroscience progressing from a molecular level onwards to individual neurons, neural circuits, and ultimately regulated output behaviors of the nervous system. Topics include a survey of the structure and function of the nervous system, basic neurophysiology and neurochemistry, development, learning and memory, sensory and motor systems, and clinical disorders. Throughout the course, many examples from current research in neuroscience are used to illustrate the concepts being considered. The lab portion of the course will emphasize a) practical hands-on exercises that amplify the material presented in class; b) interpreting and analyzing data; c) presenting the results in written form and placing them in the context of published work; and d) reading and critiquing scientific papers.

**Requirements/Evaluation:** Evaluation will be based on participation in discussion groups, exercises, problem sets and quizzes performed in small groups, lab reports, midterm exams, and a final exam.

**Prerequisites:** PSYC 101 or BIOL 101; open to first-year students only with permission of instructor

**Enrollment Limit:** 72

**Enrollment Preferences:** Sophomores and Biology and Psychology majors

**Expected Class Size:** 72

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIOL 212 (D3) NSCI 201 (D3) PSYC 212 (D3)

### **NSCI 311 (F) Neural Systems and Circuits**

**Cross-listings:** BIOL 311 NSCI 311

**Secondary Cross-listing**

This course will examine the functional organization of the mammalian brain, emphasizing both neuroanatomy and neurophysiology. How do specific populations of neurons and their connections encode sensory information, form perceptions of the external and internal environment, make cognitive decisions, and execute movements? How does the brain produce feelings of reward/motivation and aversion/pain? How does the nervous system regulate homeostatic functions such as sleep, food intake, and thirst? We will explore these questions using a holistic, integrative approach, considering molecular/cellular mechanisms, physiological characterizations of neurons, and connectivity among brain systems. Journal article discussions will complement course topics, providing experience in reading, understanding, and critiquing primary research papers. Writing an original literature review article will provide experience in expository writing and anonymous peer review. Laboratory sessions will provide experience in examining macroscopic and microscopic neural structures, as well as performing experiments to elucidate the structure and function of neural systems using classical and cutting-edge techniques.

**Requirements/Evaluation:** Class participation, completion of labs, literature review assignment, hour exams, a final exam

**Prerequisites:** BIOL 212 (same as PSYC 212 or NSCI 201) or BIOL 205

**Enrollment Limit:** 24

**Enrollment Preferences:** Biology majors and Neuroscience concentrators

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** does not satisfy the distribution requirement for the Biology major

**Distributions:** (D3)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIOL 311 (D3) NSCI 311 (D3)

**Attributes:** NSCI Group A Electives

**Not offered current academic year**

### **NSCI 312 (F) Sensory Biology**

**Cross-listings:** BIOL 312 NSCI 312

**Secondary Cross-listing**

How do animals sense properties of the physical world? How do they convert physical or chemical energy to a signal within a cell that carries information? How is that information represented? What are the limits on what can be sensed? We will look for answers to these questions by investigating the molecular and cellular mechanisms of sensory transduction and how these mechanisms constrain the types of information that the nervous system encodes and processes. We will also ask how natural selection shapes the type of sensory information that animals extract from the world, and what adaptations allow some species to have "special" senses. Some of the examples we will consider are: bat echolocation (hair cells in the ear), detecting visual motion (amacrine cells in the mammalian retina), the constant reshaping of the olfactory system (chemical mapping of odors),

what makes a touch stimulus noxious, and enhanced color vision (in birds, bees, and shrimp). Laboratory exercises will focus on the nematode *C. elegans*, an important model system, to explore and extend how we understand touch, temperature sensation, chemosensation, and light sensation.

**Requirements/Evaluation:** Four take-home exams, an independent group research project (proposal, followed by results/discussion), presentation about a non-standard sensory system, many short online quizzes, and lab + class participation.

**Prerequisites:** BIOL 101 and either BIOL 212/NSCI 201 or BIOL 205

**Enrollment Limit:** 24

**Enrollment Preferences:** Preference to senior Biology majors who need a 300-level course; then to senior Neuroscience concentrators who need a Group A elective; then to Biology majors. Not open to students who have taken Biology 213.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **NSCI 313 (F) Opioids and the Opioid Crisis: The Neuroscience Behind an Epidemic**

**Cross-listings:** NSCI 313 PSYC 313

**Secondary Cross-listing**

Opioid misuse, including addiction, has emerged as a major health epidemic in the United States. This course will explore the science of opioids as well as the historical and societal context surrounding their use and abuse. We will examine the neurobiological mechanisms through which opioids interact with pain pathways and reward circuits within the brain and we will explore how changes in these systems contribute to opioid tolerance, dependence, and addiction. We will consider how genetic, environmental and behavioral factors can powerfully influence these processes. Finally, we will consider alternative approaches to pain management as well as interventions for the treatment of opioid abuse. Students will be expected to design and conduct an empirical project related to the course material. Critical evaluation of peer-reviewed primary literature from animal and human studies will serve as a foundation for class discussions. Evaluation will be based on class presentations, participation in discussions and empirical projects, written assignments, and a poster presentation of the empirical project.

**Requirements/Evaluation:** class presentations, participation in discussions and empirical projects, five short position papers (approximately 2 pages double-spaced), an APA style empirical paper (approximately 20 pages double-spaced) and poster presentation of the empirical project.

**Prerequisites:** PSYC 212 (same as BIOL 212 or NSCI 201)

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors and Neuroscience concentrators

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Not offered current academic year**

### **NSCI 314 (S) Learning and Memory in Health and Disease**

**Cross-listings:** PSYC 314 NSCI 314

**Secondary Cross-listing**

This class will examine the neuroscientific basis of different types of learning and memory (such as declarative memory, motor memory, and associative memory), including the brain circuits, cellular mechanisms, and signaling pathways that mediate these different processes. In addition, we will explore how these processes can be disrupted in different diseases and disorders (such as Alzheimer's disease or post-traumatic stress disorder) and we will discuss the strategies and targets for therapeutic intervention. Class meetings will include a mix of lectures, discussions, and student presentations. Critical evaluation of peer-reviewed studies involving both human and animal models will serve as a foundation for class discussions. Working in small teams, students will also design and conduct an empirical project related to the course material.

**Requirements/Evaluation:** In-class presentations and participation in discussions, completion of an empirical research project which will include a project proposal (3-5 pages), data collection and analysis, and a final report (10-20 pages) along with a poster presentation.

**Prerequisites:** PSYC 212/NSCI 201/BIOL 212

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors and Neuroscience concentrators

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**NSCI 319 (F) Neuroethics (WS)**

**Cross-listings:** PSYC 319 NSCI 319 STS 319

**Secondary Cross-listing**

Neuroscience studies the brain and mind, and thereby some of the most profound aspects of human existence. In the last decade, advances in our understanding of brain function and in our ability to manipulate brain function have raised significant ethical challenges. This tutorial will explore a variety of important neuroethical questions. Potential topics will include pharmacological manipulation of "abnormal" personality; the use of "cosmetic pharmacology" to enhance cognition; the use of brain imaging to detect deception or to understand the ability, personality or vulnerability of an individual; the relationship between brain activity and consciousness; manipulation of memories; the neuroscience of morality and decision making. In addition to exploring these and other ethical issues, we will explore the basic science underlying them.

**Requirements/Evaluation:** six 5-page position papers and five 2-page response papers as well as participation in discussions

**Prerequisites:** PSYC 212 (same as BIOL 212 or NSCI 201); or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Psychology majors and Neuroscience concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PSYC 319 (D3) NSCI 319 (D3) STS 319 (D2)

**Writing Skills Notes:** In alternating weeks, each student in a tutorial pair will write a 5-page essay based on the assigned readings. Essays will be discussed during tutorial meetings and written feedback from the professor will be provided for each essay. At the end of the semester, students will choose one of their prior essays to revise as their final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

**NSCI 322 (F) From Order to Disorder(s): The Role of Genes & the Environment in Psychopathology**

**Cross-listings:** NSCI 322 PSYC 312

**Secondary Cross-listing**

This course examines how experimental methods in neuroscience can be used to understand the role of nature (genes) and nurture (the environment) in shaping the brain and behavior. In particular, we will explore how neuroscience informs our understanding of psychiatric disorders such as anxiety, depression, and schizophrenia. We will investigate the biological underpinning of these disorders as well as their treatments. Readings will include human studies as well as work based on animal models. Topics will include: the ways in which environmental and genetic factors shape risk and resiliency in the context of psychiatric disease, the neural circuits and peripheral systems that contribute to psychopathology, and the mechanisms through which interventions may act. In the laboratory component of the course, students will gain hands-on experience in using animal models to study complex behavior and their associated neural mechanisms.

**Requirements/Evaluation:** class presentations, participation in discussions, two article previews (1-2 pages each), literature review (5 pages), research project proposal (5 pages), oral presentation of project proposal.

**Prerequisites:** PSYC 212 (same as BIOL 212 or NSCI 201)

**Enrollment Limit:** 19

**Enrollment Preferences:** Psychology majors and Neuroscience concentrators

**NSCI 347 (S) Neurobiology of Emotion**

**Cross-listings:** BIOL 407 NSCI 347

**Secondary Cross-listing**

Emotion is influenced and governed by a number of neural circuits and substrates, and emotional states can be influenced by memory, cognition, and many external stimuli. We will read and discuss articles about mammalian neuroanatomy associated with emotion as defined by classic lesion studies, pharmacology, electrophysiology, fMRI imaging, knockout and optogenetic mouse studies, for investigating neural circuit function in order to gain an understanding of the central circuits and neurotransmitter systems that are implicated in emotional processing. We will focus initially on the neural circuits involved in fear, as a model for how human and animal emotion and physiology is studied, with special sessions on emotional responses to music and art, as well as discussions about burgeoning neurobiological research into the emotion of disgust. The larger goal of the course is to give students opportunities and experience in critical evaluation and discussion of primary scientific literature, and to develop and refine strategies on how to use scientific evidence in building arguments in essays.

**Class Format:** three hours per week

**NSCI 401 (S) Topics in Neuroscience**

Neuroscientists explore issues inherent in the study of brain and behavior. The overall objective of this seminar is to create a culminating senior experience in which previous course work in specific areas in the Neuroscience Program can be brought to bear in a synthetic, interdisciplinary approach to understanding complex problems. The specific goals for students in this seminar are to evaluate original research and critically examine the experimental evidence for theoretical issues in the discipline. Topics and instructional formats will vary somewhat from year to year, but in all cases the course will emphasize an integrative approach in which students will be asked to consider topics from a range of perspectives including molecular, cellular, systems, behavioral and clinical neuroscience. Previous topics have included autism, depression, stress, neurogenesis, novel neuromodulators, language, retrograde messengers, synaptic plasticity, and learning and memory.

**Requirements/Evaluation:** Participation in class discussion, presentation of research articles, several short papers

**Prerequisites:** Open only to seniors in the Neuroscience program

**Enrollment Limit:** 20

**Enrollment Preferences:** Senior Neuroscience concentrators

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

### **NSCI 455 (S) Neural Regeneration**

**Cross-listings:** NSCI 455 BIOL 455

#### **Secondary Cross-listing**

Injury to the human nervous system can cause lasting impairment, but non-mammalian animals have prodigious capacity to regenerate neurons, regrow axons, and repair scars. What accounts for these differences? Regeneration can occur in multiple modes: replacement of injured neurons, repairs such as axonal regrowth to reconnect to a target structure, or repurposing existing neurons for new tasks through neural plasticity. We will explore the molecular foundations that underlie neuronal proliferation, neural plasticity, and inflammatory responses. We will consider the potential for translating these findings to inform treatments for humans who suffer from neural injury or neurodegenerative disease. Class discussions will focus on readings from the primary literature.

**Class Format:** Discussion, 3 hours per week

**Requirements/Evaluation:** Evaluation will be based on class participation, brief weekly responses, and four short research proposals.

**Prerequisites:** BIOL 212/NSCI 201 or permission of instructor.

**Enrollment Limit:** 10

**Enrollment Preferences:** Biology seniors who have not yet taken a 400 level course and Neuroscience senior concentrators who need a Group A elective.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**This course is cross-listed and the prefixes carry the following divisional credit:**

NSCI 455 (D3) BIOL 455 (D3)

**Attributes:** NSCI Group A Electives

**Not offered current academic year**

### **NSCI 493 (F) Senior Thesis: Neuroscience**

Neuroscience senior thesis; this is part of a full-year thesis (493-494). Independent research for two semesters and a winter study under the guidance of one or more neuroscience faculty. After reviewing the literature in a specialized field of neuroscience, students design and conduct an original research project, the results of which are reported in a thesis. Senior thesis work is supervised by the faculty participating in the program.

**Requirements/Evaluation:** Determined by the thesis advisor

**Prerequisites:** Permission of the thesis advisor

**Enrollment Limit:** none

**Enrollment Preferences:** Senior Neuroscience concentrator

**Expected Class Size:** NA

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

Fall 2022

HON Section: 01 TBA Tim J. Lebestky

**Winter Study -----**

**NSCI 10 (W) The Neuroscience of Learning**

An interactive and collaborative exploration of what neuroscience research reveals about how the brain learns and what factors can be influenced to facilitate successful learning. Topics include the neuroscience of attention, emotion, understanding, memory, and executive functions. Emphasis will be on the neuroscience applications to strategies correlated to the research. There will be opportunities for students to gain insight into their own learning processes. Background will be provided by interactive lecture. Students will participate in small group and full class discussions based on their reading of assigned articles. They will engage in guided research projects in areas of their own interest and share their insights in presentations. In these, they will demonstrate their understanding of the medical model to evaluate primary neuroscience research studies for validity, value, and expand this understanding into implications and strategy applications to facilitate more successful and meaningful learning for themselves and to teach others.

**Requirements/Evaluation:** final project or presentation

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** no preference

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Dr. Judy Willis, M.D. M.Ed. combined her 15 years as a board-certified practicing neurologist with ten subsequent years as a classroom teacher to become a leading authority, author, and consultant about the neuroscience of learning.

**Attributes:** STUX Winter Study Student Exploration

## PHILOSOPHY (Div II)

Chair: Professor Joseph Cruz

- Melissa J. Barry, Professor of Philosophy; on leave Fall 2022
- Joseph L. Cruz, Chair and Professor of Philosophy
- Christian De Leon, Visiting Assistant Professor of Philosophy
- Steven B. Gerrard, Mark Hopkins Professor of Philosophy
- Keith E. McPartland, Associate Professor of Philosophy
- Bojana Mladenovic, Professor of Philosophy and Director of the Williams-Exeter Programme at Oxford University; affiliated with: Philosophy, Williams-Exeter Programme at Oxford
- Julie Pedroni, Lecturer in Philosophy; affiliated with: Philosophy, Center for Environmental Studies
- Shivani Radhakrishnan, Gaius Charles Bolin Fellow in the Department of Philosophy
- Jana Sawicki, Morris Professor of Rhetoric; on leave Fall 2022
- Justin B. Shaddock, Associate Professor of Philosophy

To engage in philosophy is to ask a variety of questions about the world and our place in it—questions that we confront in our everyday lives or that underlie our ordinary practices. What is a good, meaningful, or happy human life (ethics and politics)? What do we owe non-human species and future generations (applied ethics/practical philosophy)? Does god exist? (metaphysics)? What can we know, and what makes a belief or statement true (epistemology)? Are there objective standards for judging works of art? Thus, philosophers also address questions relevant to many disciplines.

The program in philosophy is designed to aid students in thinking about such questions, by acquainting them with influential work in the field, past and present, and by giving them tools to grapple with these issues themselves. The program emphasizes training in clear, critical thinking and in effective writing. Most of our courses are offered as small seminars or tutorials in which students have multiple opportunities to develop skills in reasoning and writing interpretive and critical essays.

### MAJOR

The Philosophy major consists of nine semester courses: three required courses and six electives. The required courses are: any 100-level philosophy course, Philosophy 201 (History of Ancient Greek Philosophy) or Philosophy 202 (History of Modern Philosophy), and Philosophy 401 (Senior Seminar). The six electives are structured by a distribution requirement. Students must take at least one course in each of three areas: Contemporary Metaphysics and Epistemology [M&E], Contemporary Value Theory [V], and History [H]. These requirements apply to majors in the Class of 2018 and after.

Courses taught in other departments at Williams or at other institutions will not count toward the distribution requirement (Williams-Exeter tutorials may count, however, with the approval of the Department Chair). Up to two cross-listed courses taught in other departments may count as electives toward the major. No more than one 100-level course may count toward the major (and one 100-level course is required for the major—*no exceptions*).

### We recommend the following trajectory through the major:

By the end of the first year, take a 100-level philosophy course (this is typically the first step in the major) and one other philosophy course.

By the end of the second year, complete a 100-level philosophy course, Phil 201 or Phil 202, and at least one other philosophy course. (If you will be away for the whole of your junior year, you should complete at least five courses by the end of the second year, preferably six.)

By the end of the junior year, complete a 100-level philosophy course, Phil 201 or Phil 202, and at least four other philosophy courses.

Other recommendations: take at least one tutorial; distribute your six electives evenly across the three distribution baskets; take a logic course; and take both PHIL 201 and PHIL 202.

### The Degree with Honors in Philosophy

The degree with honors in Philosophy is awarded to students who have demonstrated outstanding achievement in a program of study that extends beyond the requirements of the major. This additional required work can take the form either of a senior essay written over one semester plus winter study (maximum 40 pages) or a year-long thesis (maximum 75 pages). Students planning to pursue a degree with honors must first write a brief proposal after having consulted with an advisor, then submit the proposal to the Department in mid-March (before spring break) of the junior year. To be eligible for honors candidates must have GPAs of 3.6 or higher in their courses in philosophy at the end of the junior and senior years. A

recommendation for graduation with honors will be made on the basis of the thoroughness, independence, and originality of the student's written work as well as their performance in a defense that will be organized by their advisor in consultation with the Chair.

## STUDY AWAY

[The Williams-Exeter Programme at Oxford \(WEPO\)](#): the first full Oxford philosophy tutorial will count as the equivalent of two full-semester philosophy courses at Williams; the second full Oxford philosophy tutorial will count as the equivalent of one full-semester philosophy course at Williams, for a total of three Williams philosophy courses. Courses must be pre-approved by the Chair of the Philosophy Department, who will also determine which, if any, courses will count toward the philosophy major distribution requirements.

Courses taken in other Study Away programs: Students may petition the Philosophy Department for credit for philosophy courses taken at their Study Away institution. They should consult with the department Chair before they commit to a program. Final determinations will be made on the basis of the course syllabus and the quality of the student's written work for the course. Typically, courses taken while studying away will not fulfill distribution requirements for the philosophy major at Williams.

## PHILOSOPHY RELATED COURSES

The following courses offered in other departments, while not cross-listed with Philosophy, may be of interest to philosophy students:

[HIST 331 SEM European Intellectual History from Aquinas to Kant](#)

## PHIL 100 (W) Philosophy of Sex (WS)

What is sex? Are the current biological explanations of human sexuality sufficient to explain the meaning that sex has in our lives? Is human sexuality subject to ethical evaluations? Should it be regulated by social customs and sanctions, by law, or should sexual choices and practices be left to individuals? In thinking about these broad questions, we will also consider some more specific ones: What is sexual orientation, and does it constitute a person's sexual identity? Are there pathological sexual desires and practices, and if so, how should we distinguish them from normal and healthy sexuality? Is anything wrong with adultery, promiscuity, polyamory, pornography, or with exchanging sex for money? What counts as consensual sex, and are all consensual sexual relationships ethically acceptable? The course will place special emphasis on developing the following skills: close, analytical reading; recognizing, reconstructing and evaluating claims, and reasons that support them; producing original ideas and arguments; participating in vigorous discussions in a respectful and reasonable manner; speaking and listening skills; and writing clear, polished, well-argued

papers, generated through several revisions.

**Class Format:** The course will meet approximately 20 hours per week, Monday through Thursday, between 11am and 4pm; there will be an hour long lunch break. The course will consist of short lectures, substantive class discussions, one-on-one writing workshops, and tutorial-style meetings. There will be daily reading and writing assignments.

**Requirements/Evaluation:** Class preparedness and participation in discussions; frequent short writing assignments; a longer (4-5 pages) tutorial-style paper, developed through several revisions; a response to the tutorial partner's paper.

**Prerequisites:** Permission of a Dean.

**Enrollment Limit:** 18

**Enrollment Preferences:** Students who need to make up a deficiency. To be determined in consultation with the Dean's office.

**Expected Class Size:** 18

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** This course is designed to count for both full semester, Winter Study, and Writing Skills credit. Once a dean approves enrollment, the Registrar's Office will register students in both PHIL 100 and PHIL 42.

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Lectures and discussions about writing skills, from sentence-level to the overall structure of the paper and arguments that support its central claim. There will be detailed comments on student's short written assignments, some of which will be revised and resubmitted. The final tutorial-style paper will be revised several times. The course will include writing workshops for one or two students at a time.

Not offered current academic year

### **PHIL 104 (S) Philosophy and Tragedy**

Tragedy and philosophy were two of the finest achievements of classical Athenian civilization, and each attempts to reveal to the reader something fundamental about our shared human condition. The worldview that underlies classical tragedy, however, seems markedly different from the one that we find in classical philosophy. While Plato and Aristotle differ on many points, they share the belief that the cosmos and the human place within it can be understood by rational means. Furthermore, they share the conviction that the most important components of a successful life are within the control of the individual human being. The picture that we find in the works of the tragedians, Aeschylus, Sophocles and Euripides is markedly different. The tragedians emphasize the ways in which the cosmos and our role in it resists any attempt to be understood, and emphasize the ways in which the success or failure of our lives often turns on things completely beyond our control. The view of the tragedians can lead to a thoroughgoing nihilism according to which --the best thing of all [for a human being] is never to have born-but the next best thing is to die soon (Aristotle's *Eudemus* as quoted in Nietzsche's *Birth of Tragedy*; see also Sophocles' *Oedipus at Colonus*)." Despite these rather grim pronouncements, tragic drama has continued to fascinate and educate generations. Furthermore, philosophers have continued to revisit the existential questions vividly raised by Greek tragedy. In this course, we will examine a number of Greek tragedies and philosophical writing on tragedy and the tragic. We will read the *Oresteia* and *Prometheus Bound* by Aeschylus, Sophocles' *Theban Cycle*, and the *Hippolytus*, *Bacchae* and *Philoctetes* by Euripides. As we read through these plays, we will also examine a number of philosophical works about tragedy. We will begin with Aristotle's *Poetics* and will continue with Hume's *Of Tragedy*, Hegel's various writings on tragedy, and Nietzsche's *The Birth of Tragedy*. If possible, we will arrange to see a live performance of a Greek tragedy.

**Requirements/Evaluation:** five papers, five responses and a final paper in multiple drafts; each week one student will write a paper responding to the week's readings and the other student will write a response to that paper

**Prerequisites:** none; this tutorial is an appropriate first course in PHIL

**Enrollment Limit:** 10

**Enrollment Preferences:** first-year students

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

Not offered current academic year

### **PHIL 109 (F) Skepticism and Relativism (WS)**

Intellectually, we are ready skeptics and relativists. We doubt, we point out that no one can be certain in what she believes, and we are suspicious of declarations of transcendent reason or truth (unless they are our own). Emboldened by our confidence in skeptical arguments, we claim that

knowledge is inevitably limited, that it depends on one's perspective, and that everything one believes is relative to context or culture. No domain of inquiry is immune to this destructive skepticism and confident relativism. Science is only "true" for some people, agnosticism is the only alternative to foolish superstition, and moral relativism and, consequently, nihilism are obvious. But is the best conclusion we can come to with respect to our intellectual endeavors that skepticism always carries the day and that nothing at all is true? In this tutorial, we will investigate the nature of skepticism and the varieties of relativism it encourages. Our readings will come primarily from philosophy, but will be supplemented with material from anthropology, physics, psychology, and linguistics. We will look at relativism with respect to reason and truth in general as well as with respect to science, religion, and morality. Along the way, we will need to come to grips with the following surprising fact. With few exceptions, thoroughgoing skepticism and relativism have not been the prevailing views of the greatest minds in the history of philosophy. Were they simply too unsophisticated and confused to understand what is for us the irresistible power of skepticism and relativism? Or might it be that our skepticism and relativism are the result of our own laziness and failure? Of course, this question cannot really be answered, nor is there any value in trying to answer it, and any "answer" will only be "true" for you. Right?

**Requirements/Evaluation:** participants will present substantial written work in the tutorial every other week, and will be responsible for commenting on their tutorial partner's work.

**Prerequisites:** none; this tutorial is an appropriate first course in PHIL.

**Enrollment Limit:** 8

**Enrollment Preferences:** This tutorial was specifically designed for first-year students, and they will be given preference. Do not write to the instructor indicating a special interest, this will make no difference. If oversubscribed, students will be selected randomly.

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write a tutorial essay every other week and will receive written feedback on composition and structure. Essays later in the semester will reflect the writing lessons of earlier in the semester.

Fall 2022

TUT Section: T1 TBA Joseph L. Cruz

### **PHIL 114 (F) Freedom and Society (WS)**

Freedom is widely held as one of our fundamental values. But how often do we ask: What is freedom? and Why do we value it? In the first unit of this course, we will consider the relationship between freedom and social order. Do our society's laws limit our freedom in order to make us safe? Or do our laws somehow enhance or enable our freedom? We will read Thomas Hobbes, John Locke, and Jean-Jacques Rousseau in seeking answers to these questions. We will then turn to some specific social forms in the second unit, and ask whether they promote or preclude our freedom. We will read Adam Smith and Karl Marx on capitalism, Simone de Beauvoir on gender, and Charles Mills on race.

**Requirements/Evaluation:** short weekly essays; longer midterm and final papers

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will complete weekly 2-page essays, and receive regular feedback on their ability to formulate a thesis and adduce an argument in defending their thesis. In addition, students will write two 6-page essays -- each of which will build on their previous short essays -- as their midterm and final projects.

**Attributes:** JLST Interdepartmental Electives

Not offered current academic year

### **PHIL 115 (S) Personal Identity (WS)**

Through lectures, discussions, close readings and assigned writings, we will consider a variety of philosophical questions about the nature of persons, and personal identity through time. Persons are subjects of experiences, have thoughts and feelings, motivation and agency; a person is thought of as continuous over time, and as related to, recognized and respected by other persons. Thus, the concept of person plays a significant role in most branches of philosophy, e.g. metaphysics, epistemology, moral and political philosophy, philosophy of mind. Conceptions of person are equally important in science (especially in psychology), law, and the arts. Questions about persons are of central importance for a myriad of our theories and practices, and for the ways in which we live our lives. The aim of this course is to explore and evaluate a number of rival conceptions of persons and personal identity over time. Some of the questions which we will discuss are: What is a person? How do I know that I am one? What constitutes my knowledge of myself as a person, and does that knowledge differ in any significant respect from my knowledge of physical objects and of other people? Our starting and central question will be: **What makes me the particular person that I am, and how is my identity as this individual person preserved over time?** The course will place special emphasis on developing students' intellectual skills in close, analytical reading; reconstructing and evaluating claims and reasons that support them; producing original ideas and arguments, orally and in writing; responding to the claims and arguments presented in texts and in class; and writing clear, polished, well-argued papers.

**Requirements/Evaluation:** Class attendance, preparedness and participation; additional small group weekly meetings; 12 short writing assignments. No final paper and no exam.

**Prerequisites:** none; open to first year students

**Enrollment Limit:** 12

**Enrollment Preferences:** freshmen, sophomores, and philosophy majors who need a 100 level course to satisfy requirement for the major

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write weekly short assignments (at most 1000 words long), six of which will be letter-graded (but only five best assignments will count for the final grade). All assignments will receive detailed comments on substance as well as on writing skills and strategies.

Not offered current academic year

### **PHIL 116 (S) Perception and Reality (WS)**

This course is an introduction to philosophy through three major themes: The nature of the universe, the existence of gods, and the mind/body problem. Throughout, we will appeal to reason and evidence in forming our best beliefs. Our discussions will range over historical and contemporary works in the Western tradition.

**Requirements/Evaluation:** active participation; four (5-6 page) essays

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Strong preference given to first-years and sophomores; there is no need to email the professor in advance to indicate a special interest in the course.

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will craft 4 six page essays, and each will receive extensive comments on structure and composition with an eye toward developing skills in philosophical writing.

Spring 2023

SEM Section: 01 TR 11:20 am - 12:35 pm Joseph L. Cruz

### **PHIL 117 (F)(S) Arguing about God (WS)**

"Faith is a fine invention," according to Emily Dickinson's poem, "when gentlemen can see; but microscopes are prudent in an emergency." This

introduction to philosophy will see how far the microscopes of reason and logic can carry us in traditional arguments about the existence and nature of God. We will closely analyze classical arguments by Augustine, Avicenna, Aquinas, Anselm, Maimonides, Descartes, and others. Pascal's wager is a different approach: it argues that even though proof of the existence of God is unavailable, you will maximize your expected utility by believing. We will examine the wager in its original home of Pascal's *Pensees*, and look at William James' related article, "The Will to Believe." The millennia old problem of whether human suffering is compatible with God's perfection is called "the problem of evil." We will examine this issue in Hume's *Dialogues Concerning Natural Religion*, classic sources and contemporary articles. Students should be aware that, in the classic tradition, this class resembles a logic course.

**Class Format:** seminar

**Requirements/Evaluation:** 5 short papers

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Five 4 or 5 page papers, evenly spaced throughout the semester. Students will receive timely comments on their writing skills, with suggestions for improvement.

Fall 2022

SEM Section: 01 TR 9:55 am - 11:10 am Steven B. Gerrard

Spring 2023

SEM Section: 01 TR 9:55 am - 11:10 am Steven B. Gerrard

**PHIL 118 (F)(S) Meaning, Communication and Society (DPE) (WS)**

The primary way we interact with others is through the use of language. We use language to communicate meanings in order to accomplish a variety of goals: to convey information, make requests, establish rules, utilize power, issue protests, and much more. We coordinate our lives through sounds from mouths, signs from hands, and squiggles on paper because somehow sounds, signs, and squiggles have *meanings*. This course is an investigation into how language is used to express meaning, and how such expression can have real interpersonal and societal impact. Using resources from philosophy and linguistics, we will study various ways in which literal and non-literal uses of language influence our social lives. Of particular interest will be how language can be used to establish, reinforce, and resist power relationships involving race and gender.

**Requirements/Evaluation:** Weekly short papers (500-1000 words), take-home midterm paper (5-6 pages), take-home final paper (7-8) pages, with comments on writing given on short papers and midterm

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Preference given to first year students and philosophy majors.

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE) (WS)

**Writing Skills Notes:** There will be short writing assignments that will receive comments on content, writing style, and argument structure every week except when midterm/final papers are due. The midterm/final papers will incorporate revisions from previous short papers.

**Difference, Power, and Equity Notes:** This course has a focus on the role of language in relationships involving power, oppression, and group inclusion between individuals belonging to various socio-political identities.

**Attributes:** Linguistics

Fall 2022

SEM Section: 01 TF 2:35 pm - 3:50 pm Christian De Leon

Spring 2023

SEM Section: 01 TF 1:10 pm - 2:25 pm Christian De Leon

**PHIL 119 (S) Why Obey the Law?: On Justice and Freedom in Western Political Philosophy (WS)**

What social and political arrangements are most conducive to fostering human well-being and the common good? Are we legitimately bound by a social contract? What makes governmental and legal authority legitimate? Is democratic rule always best? What are some of the necessary conditions for democracy? We turn first to two of Plato's most famous dialogues, *The Apology* and *The Republic*. The remainder of the course is devoted to political writings by other figures in the Western philosophical tradition (egs. Hobbes, Locke, Rousseau, Marx, J.S. Mill, W.E.B Dubois, John Rawls, Charles Mills, Jurgen Habermas). While engaging these texts, we will continually reflect on their relevance for thinking about the problems facing liberal democracies today, particularly in the U.S.

**Class Format:** Class participation will consist of various individual and group exercises designed to give students hands on experiences thinking on their feet, collaborating with others, etc.

**Requirements/Evaluation:** Six short responses, 300-500 words each (first two are pass/fail), in which students will be asked to engage a particular part of the assigned text (egs., explaining what a passage means, drawing connections between different parts of the text, identifying an argument, responding to an argument, etc); two 6-page papers based on professors prompts; participation in a panel discussion, and general class participation.

**Prerequisites:** None. Open to any student interested in the sources of our current understandings of justice, freedom and the strengths and weaknesses of democratic governance structures.

**Enrollment Limit:** 19

**Enrollment Preferences:** In the case of over enrollment preference will be given to majors, first years and sophomores

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** The professor and the teaching assistant will provide detailed comments on short and longer essays and provide occasional peer review opportunities, handouts and discussions of frequent types of errors, different possible approaches to writing and drafting, and the importance of editing and seeking the assistance of writing tutors. Students will be encouraged, but are not required, to make appointments to discuss ideas and drafts.

**Attributes:** JLST Interdepartmental Electives LEAD Ethical Issues of Leadership

Spring 2023

SEM Section: 01 TR 8:30 am - 9:45 am Jana Sawicki

**PHIL 122 (F) Philosophical Approaches to Contemporary Moral Issues (WS)**

In this tutorial we will examine a number of prominent and controversial social issues, using our study of them both as an opportunity to better understand the moral dimensions of those issues in and of themselves, and to consider the ways in which selected classical and contemporary moral theories characterize and address those moral dimensions. Topics will depend to some extent on student interest, but are likely to include concerns that fall under such headings as euthanasia, conscientious eating, abortion, the ethics of protest, and Covid-19. The course will use a case-based approach to examine these issues, and so in most weeks we will (1) read philosophical articles focused on a key concept or set of arguments central to the issue, and (2) consider in detail one morally complex case in which the concept or arguments have special application or relevance. In addition, we will devote several class meetings interspersed throughout the semester to reading foundational sources in ethical theory.

**Class Format:** Groups of three students (rather than the more conventional two students) will meet weekly with the professor.

**Requirements/Evaluation:** three tri-weekly tutorial papers and two short papers, oral commentaries, and tutorial discussion

**Prerequisites:** none; this course is suitable for first-year students

**Enrollment Limit:** 15

**Enrollment Preferences:** first-year students, sophomores, Philosophy majors, and those who have previously been dropped from the course for over-enrollment

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write three tutorial papers of 5-7 pages in length, one of which they will revise and resubmit, as well as two 2-3 page papers. In each, students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

**Attributes:** JLST Interdepartmental Electives

Fall 2022

TUT Section: T1 TBA Julie A. Pedroni

**PHIL 123 (F) Objectivity in Ethics (WS)**

Is morality simply a matter of opinion? In this course we'll examine several influential attempts to provide a rational foundation for morality, along with Nietzsche's wholesale rejection of these efforts. Readings will include work by Plato, Hobbes, Kant, Mill, Nietzsche, and contemporary authors.

**Requirements/Evaluation:** participation in discussion; short response papers; four 5-page papers, evenly spaced throughout the semester

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** first-years and sophomores, and students who need to fulfill their 100-level requirement for the philosophy major

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Four 5-page papers, evenly spaced throughout the semester. Students will receive timely comments on their writing skills, with suggestions for improvement.

Not offered current academic year

**PHIL 125 (F) Introduction to the Philosophy of Law (WS)**

This tutorial, designed especially for first year students, is a philosophy course, not a prelaw course. We will examine basic questions in the philosophy of law: What is the relationship between law and morality? Why should one obey the law (if one should)? When, if ever, is paternalistic interference by the state into the lives of its citizens justified? We will look at civil disobedience and theories of legal interpretation. We will pay special attention to the first amendment and questions concerning free speech and hate speech. We will read classic works (such as John Stuart Mill, On Liberty and H. L. A. Hart, The Concept of Law), contemporary articles, and United States Supreme Court cases.

**Class Format:** meeting with the instructor in pairs for an hour each week

**Requirements/Evaluation:** a 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and revise and re-write

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** first-year students

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** A 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and revise and re-write one of their papers. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Not offered current academic year

**PHIL 126 (F) Paradoxes (WS)**

There are three grains of sand on my desk. This is unfortunate, but at least there isn't a heap of sand on my desk. That would be really worrisome. On the other hand, there *is* a heap of sand in my backyard. I don't know how exactly how many grains of sand are in this heap, but let's say 100,000. My daughter removes one grain of sand. I don't know why, she just does. It seems like there is still a heap of sand in my backyard. In fact, it seems like you can't change a heap of sand into something that isn't a heap of sand by removing one grain of sand. Right? But now we have a problem. By repeated application of the same reasoning, it seems that even after she removes 99,997 grains of sand--I don't know what she wants with all this sand, but I'm starting to worry about that girl--there is still a heap of sand in my backyard. But three grains isn't enough for a heap. So there is not a heap in my backyard. Now I'm confused. Where did my reasoning go wrong? What we have here is an example of the *sorites* paradox. It is a paradox, because I started with seemingly true statements and used valid reasoning to arrive at contradictory conclusions. We can learn a lot about logic, language, epistemology and metaphysics by thinking through and attempting to resolve paradoxes. In this class, we'll work together to think through some ancient and contemporary paradoxes. We'll also work on writing lucid prose that displays precisely the logical structure of arguments, engages in focused critique of these arguments, and forcefully presents arguments of our own. Other topics could include: Zeno's paradoxes of motion and plurality, the liar's paradox, the surprise-exam paradox, paradoxes of material constitution, *Newcomb's Problem*, and the *Prisoner's Dilemma*.

**Requirements/Evaluation:** (i) short response papers; (ii) midterm paper (~5-6 pages) (iii) Final term-paper (~10 pages) in multiple drafts; (iv) Active and informed participation in class discussions.

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** First and second year students. Prospective philosophy majors.

**Expected Class Size:** 15-19

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** Meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write a number of short papers. Both the content and the writing will be evaluated. These papers will focus on clear and precise presentation and evaluation of arguments. There will be a midterm paper revising an earlier short paper. There will be a final term-paper written in multiple drafts.

Fall 2022

SEM Section: 01 MR 1:10 pm - 2:25 pm Keith E. McPartland

**PHIL 127 (S) Meaning and Value (WS)**

What gives an individual life meaning? Pleasure? Success in fulfilling desires? Flourishing in ways distinctive to a rational agent or a human being (including, for example, developing rational capacities and self-mastery, succeeding in worthwhile projects, cultivating relationships, living morally, developing spiritually)? Can we be mistaken about how well our lives are going, or about what has value? What are the main sources of uncertainty here? Does the fact that our lives will end threaten their meaning? Can science contribute to our understanding of these issues? We'll examine these and related questions through historical and contemporary readings.

**Class Format:** This tutorial will meet on a fixed weekly schedule agreed to by the instructor and participants.

**Requirements/Evaluation:** Four or five tutorial papers (5-6 pages in length), five or six critiques (2-3 pages in length), and one rewrite.

**Prerequisites:** None. This tutorial is an appropriate first course in PHIL.

**Enrollment Limit:** 15

**Enrollment Preferences:** First-years and sophomores, and students who need to fulfill their 100-level requirement for the philosophy major

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** This course meets the 100-level PHIL major requirement.

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will meet in pairs or trios for this tutorial. Each student will write a lead tutorial paper (5-6 pages in length) or a peer critique (2-3 pages) in alternating weeks. The instructor will provide timely comments on writing skills, with suggestions for improvement.

Spring 2023

TUT Section: T1 TBA Melissa J. Barry

**PHIL 128 (S) Utopias and Dystopias (WS)**

The touchstone of our course will be Plato's *Republic*: the first and perhaps greatest utopia as well as perhaps the greatest work in political philosophy. We will prepare for the *Republic* by reading two Socratic dialogues: the *Euthyphro* and the *Meno*. After several weeks on the *Republic* we will turn to Shakespeare's last play: *The Tempest*. From there it is a natural transition to Aldous Huxley's *Brave New World*.

**Requirements/Evaluation:** several short papers totaling at least twenty pages

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Five 4 or 5 page papers, evenly spaced throughout the semester. Students will receive timely comments on their writing skills, with suggestions for improvement.

Not offered current academic year

**PHIL 201 (F) History of Ancient Greek Philosophy**

**Cross-listings:** CLAS 203 PHIL 201

Primary Cross-listing

Very few people believe that everything is water, that we knew everything before birth, that philosophers ought to rule the state, or that the earth is at the center of the cosmos. Why then should we spend our time studying people who in addition to having these surprising beliefs have been dead for 2500 years? First of all, Greek thinkers, especially Plato and Aristotle, radically shaped the trajectory of western thought in every area of philosophy. No one can have an adequate understanding of western intellectual history without some familiarity with the Greeks, and we might think that an understanding of our intellectual history can deepen our understanding of our own situation. More importantly, many of the thinkers that we will read in this class are simply excellent philosophers, and it is worthwhile for anyone interested in philosophical problems to read treatments of these problems by excellent philosophers. We will begin the course by looking briefly at some of the Presocratic philosophers active in the Mediterranean world of the seventh through fifth centuries BCE, and some of the sophists active in the fifth century. We will then turn to several of Plato's dialogues, examining Plato's portrayal of Socrates and his development of a new and profoundly powerful philosophical conception. Finally, we will examine some of Aristotle's works on metaphysics, epistemology and ethics, considering some of the ways Aristotle's thought responds to that of predecessors.

**Requirements/Evaluation:** There will be a midterm and final exam. There will also be short writing assignments.

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy and Classics Majors.

**Expected Class Size:** 15-20

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** Philosophy majors must take either PHIL 201 or PHIL 202 (and are encouraged to take both)

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

## PHIL 202 (S) History of Modern European Philosophy

This course is a survey of 17th- and 18th-century European philosophy, with a focus on metaphysics and epistemology. Topics will include: What can we know through our senses? Can we know anything through reason alone? What is the mind? What is the body? What is the relationship between the mind and the body? What are space and time? Are we rationally justified in drawing causal inferences? Are we justified in believing in God? Authors will include: Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, and Kant.

**Requirements/Evaluation:** Students will write 4-5 essays, of 5-6 pages each

**Prerequisites:** It is recommended that students have taken a 100-level Philosophy course, though not strictly required.

**Enrollment Limit:** 20

**Enrollment Preferences:** Enrollment preference will be given to majors, prospective majors, students who have taken a 100-level PHIL course, and first-years and sophomores.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** Philosophy majors must take either PHIL 201 or PHIL 202 (and can take both)

**Distributions:** (D2)

Spring 2023

LEC Section: 01 MW 11:00 am - 12:15 pm Justin B. Shaddock

## PHIL 203 (F) Logic and Language (QFR)

Logic is the study of reasoning and argument. More particularly, it concerns itself with the difference between good and bad reasoning, between strong and weak arguments. We all examine the virtues and vices of good arguments in both informal and formal systems. The goals of this course are to improve the critical thinking of the students, to introduce them to sentential and predicate logic, to familiarize them with enough formal logic to enable them to read some of the great works of philosophy, which use formal logic (such as Wittgenstein's *Tractatus*), and to examine some of the connections between logic and philosophy.

**Class Format:** discussion

**Requirements/Evaluation:** a midterm, a final, frequent homework and problem sets

**Prerequisites:** none

**Enrollment Limit:** 40/sect

**Enrollment Preferences:** Philosophy majors, seniors, juniors, sophomores, first-years in that order.

**Expected Class Size:** 40/sect

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** The main part of the course is learning two formal languages of logic: sentential logic predicate logic

**Attributes:** Linguistics PHIL Contemp Metaphysics + Epistemology Courses

Not offered current academic year

## PHIL 207 (S) Contemporary Philosophy of Mind

The philosophy of mind has been one of the most active areas of philosophical inquiry over the last century. Whether the mind can be fully understood within a scientific framework has taken on an exciting urgency. In this course we will investigate the the broad topics of consciousness and thought by surveying the many approaches to mind that yield the contemporary debates.

**Requirements/Evaluation:** weekly two page papers on focused topics and two 8- to 10-page papers

**Prerequisites:** at least one prior 100- or 200-level PHIL or COGS course

**Enrollment Limit:** 19

**Enrollment Preferences:** prospective Philosophy majors and Cognitive Science concentrators

**Expected Class Size:** 14

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

**Attributes:** COGS Interdepartmental Electives PHIL Contemp Metaphysics + Epistemology Courses

Spring 2023

SEM Section: 01 MR 2:35 pm - 3:50 pm Joseph L. Cruz

### **PHIL 209 (S) Philosophy of Science**

**Cross-listings:** STS 209 PHIL 209

**Primary Cross-listing**

It is a generally held belief, in our time and culture, that science is the best source of our knowledge of the world, and of ourselves. The aim of this course is to examine the origins, grounds, and nature of this belief. We will analyze and discuss various accounts of scientific method, structure and justification of scientific theories, scientific choice, change, and the idea that scientific knowledge is progressive in a cumulative way. The course will begin with the "received view" of science, advanced by logical empiricists, which assumes the objectivity and the rationality of science and argues that induction is the main scientific method. We will then discuss philosophies of science which emerged out of various criticisms of this view - especially those of Popper, Lakatos, Kuhn and Feyerabend - and the challenges to the assumptions of scientific objectivity and rationality their works provoked. This discussion will lead us to the relativist and social-constructivist views developed within contemporary science studies. Finally, we will analyze the current debate about cognitive credentials of science and about proper approaches to the study of science, which came to be known as "the science wars."

**Class Format:** short lecture component in each class

**Requirements/Evaluation:** class attendance, preparedness and participation; two short assignments; three five pages long papers, the last of which will be the final paper, due a week after the end of classes

**Prerequisites:** one PHIL course, or two STS courses, or declared major in a natural science, or permission of the instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** Philosophy majors and prospective majors, then Div III majors.

**Expected Class Size:** 10-15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**Attributes:** COGS Related Courses PHIL Contemp Metaphysics + Epistemology Courses

**Not offered current academic year**

### **PHIL 211 (S) Ethics of Public Health (WS)**

From questions about contact tracing apps to racial and age disparities in health risk and outcomes, the COVID-19 pandemic has foregrounded the importance of ethics as a key concern in public health policies and activities. Moreover, the ethical issues that are implicated in responses to the pandemic reflect the range of those manifested across the field of public health as a whole. In this course, we will survey the ethics of public health through the lens of the COVID-19 pandemic, investigating concepts and arguments that are central to the ethics of public health research and practice. For example, we will examine the ethics of disease surveillance, treatment and vaccine research, resource allocation and rationing, compulsion and voluntariness in public health measures, and social determinants of health outcomes, among other topics. To do this, we will need to become familiar with key ethical theories; think deeply about such concepts as privacy, paternalism and autonomy, exploitation, cost-benefit analysis and justice; and compare the function of these concepts in the context of the COVID-19 pandemic with the way they work in responses to other public health concerns.

**Requirements/Evaluation:** Biweekly 5-7 page papers, oral commentaries, and tutorial discussions.

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** declared and prospective Philosophy majors and Public Health concentrators, students with a specific curricular need for

the course, and students with a high level of interest who are unlikely to have an opportunity to take the course in a future term

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** Public Health concentrators may use either PHIL 211T Ethics of Public Health or PHIL 213T Biomedical Ethics to fulfill their 3-elective requirement, but they may not use both courses to do so.

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write five biweekly papers of 5-7 pages in length, one of which they will revise and resubmit. In each of the tutorial papers students will describe and evaluate arguments in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

**Attributes:** PHIL Contemporary Value Theory Courses PHLH Bioethics + Interpretations of Health

Spring 2023

TUT Section: T1 TBA Julie A. Pedroni

### **PHIL 213 (F) Biomedical Ethics (WS)**

Much like the construction of medical knowledge itself, it is from specific cases that general principles of biomedical ethics arise and are systematized into a theoretical framework, and it is to cases they must return, if they are to be both useful and comprehensible to those making decisions within the biomedical context. In this tutorial we will exploit this characteristic of biomedical ethics by using a case-based approach to examining core concepts of the field. The first portion of the course will be devoted to developing and understanding four moral principles which have come to be accepted as canonical: respect for autonomy, beneficence, nonmaleficence, and justice. The remainder of the course will consider key concepts at the core of medical ethics and central issues for the field, such as privacy and confidentiality, the distinction between killing and "letting die," and therapy vs. research. To this end, each week we will (1) read philosophical material focused on one principle or concept, and (2) consider in detail one bioethics case in which the principle or concept has special application or relevance. In some weeks, students will be asked to choose from a small set which case they would like to address; in others the case will be assigned.

**Requirements/Evaluation:** bi-weekly papers, oral commentaries, and tutorial discussions

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** PHIL majors, PHLH concentrators, those who have a curricular need for the course, those who have been dropped from the course in previous semesters due to over enrollment

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write six tutorial papers of 5-7 pages in length, one of which they will revise and resubmit. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

Fall 2022

TUT Section: T1 TBA Julie A. Pedroni

### **PHIL 216 (S) Philosophy of Animals**

**Cross-listings:** ENVI 216 PHIL 216

**Primary Cross-listing**

Animals are and always have been part of human life. To name just a few ways: We treat animals as companions, as food, as objects of wonder in the wild, as resources to be harvested, as testing grounds for science, and as religious sacrifice. The abstract philosophical question before us is, *what are*

*animals such that they can be all these things?* In this course we aim to engage that abstract question through two more focused projects. Firstly, we will try to understand the mental lives of non-human animals. Secondly, we will try to make sense of the moral dimensions of our relationship to animals. Throughout we will aim to fuse a rigorous scientific perspective with more humanistic themes and philosophical inquiry. Topics include sentience, animal cognition, language in non-human animals, empathy and evolution, the history of domestication, animal rights, cross-cultural views on animals, arguments against and for vegetarianism and veganism, the morality of zoos, hunting and fishing, and pets and happiness.

**Requirements/Evaluation:** four 3-to-4 page papers and one 8-to-10 page final paper. In addition, students are required to attend remotely at least four talks in the speaker series associated with the course. These will be during the Friday course time slot. (When there is no speaker, there will not be class during that slot, so class itself will be solely on Mondays and Wednesdays.)

**Prerequisites:** none, though at least one course in philosophy is recommended.

**Enrollment Limit:** 16

**Enrollment Preferences:** students with at least one previous philosophy or cognitive science course; there is no need to email the professor in advance to indicate special interest in the course.

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** meets Contemporary Metaphysics & Epistemology requirement only if registration is under PHIL

### **PHIL 221 (F) Introduction to Formal Linguistics (QFR)**

**Cross-listings:** COGS 224 PHIL 221

Secondary Cross-listing

The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip *and* oatmeal raisin. There two ways to understand "Many students took every class". According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

**Requirements/Evaluation:** Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

**Prerequisites:** No prerequisites

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference given to seniors and philosophy/cognitive science majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**PHIL 224 (S) Marx, Nietzsche and Freud (WS)**

Each of the controversial and provocative figures whom we will read in this course have exerted a tremendous influence in our understandings of what it means to be a modern subject. Each questioned the emancipatory effect of reason and freedom as well as idealist accounts of moral progress in human history. Each identified the limits, whether historical or innate, of our human capacity to know ourselves and our world, and to live harmoniously with others. All three have had a profound influence on literature, social theory, and critical theories of the 20th and 21st centuries. In this tutorial, we will focus on questions concerning their distinctive methods, namely, historical materialism, genealogical critique, and psychoanalysis. We examine key concepts such as: capitalism, alienation, false consciousness, the death of God, nihilism, the unconscious, ego, id, superego, and the death drive.

**Class Format:** We may devote one week of the semester to roundtable discussions.

**Requirements/Evaluation:** Bi-weekly papers, 2-3 page commentaries, and tutorial discussions.

**Prerequisites:** One of the following: 100-level Philosophy course or permission of instructor. Exposure to history of modern European philosophy and/or intellectual history will be very helpful.

**Enrollment Limit:** 10

**Enrollment Preferences:** Philosophy majors or prospective majors and students with background and interest in modern philosophy and critical theories

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students write five or six 5-7 page tutorial papers. They each receive regular written and oral feedback to improve their ability to present clear and effective written arguments and interpretations.

**Attributes:** PHIL History Courses

Not offered current academic year

### **PHIL 225 (S) Existentialism**

We will study the philosophical and literary works of Soren Kierkegaard, Friedrich Nietzsche, Jean-Paul Sartre, Simone de Beauvoir, and other Existentialist thinkers of the students' choosing. One of our guiding questions will be: What makes a thinker an "Existentialist"? The answer is not merely that they ask the question, "What gives meaning to a human life?" And, it's not merely that their answer invokes our freedom to determine our own identities. More than this, Existentialists emphasize the subjective relation we bear to our belief systems, moral codes, and personal identities. Existentialists investigate deeply irrational phenomena of human life, including anxiety, boredom, tragedy, despair, death, faith, sexuality, love, hate, sadism, masochism, and authenticity. And, Existentialists express their thought in philosophical treatises as often as in literary works. In this course we will seek to comprehend the dimensions in which Existentialism is a distinctive intellectual tradition.

**Class Format:** Students will meet in pairs or trios with the instructor for 60 minutes each week.

**Requirements/Evaluation:** Students will take turns as the lead writer one week, and the respondent the next. The week's lead writer will write a 5- to 6-page essay on the assigned reading, due 36 hours before the meeting. The week's respondent will write a 2-page essay on the leader's essay due at the time of the meeting. At the meetings, both students will present their essays and hold a discussion. Students will be evaluated cumulatively on their essays and contributions to discussion.

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** preference to Philosophy majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PHIL History Courses

Not offered current academic year

### **PHIL 228 (F) Feminist Bioethics (WS)**

**Cross-listings:** PHIL 228 STS 228 WGSS 228

Primary Cross-listing

In this course we will explore the ways in which feminist approaches to moral thinking have influenced both the methodology and the content of contemporary bioethics. The first portion of the course will address the emergence of the "Ethics of Care," critically assessing its origins in feminist theory, its development within the context of the caring professions, and its potential as a general approach to bioethical reasoning. The second portion of the course will use feminist philosophy to inform our understanding of the ways in which gender structures the individual's interactions with the health care system. To do this we will explore topics that might traditionally be considered "women's issues" in healthcare, such as medicine and body image (e.g., cosmetic surgery, eating disorders), reproductive and genetic technologies, and research on women and their health care needs. In addition we'll also look at feminist analyses of topics that traditionally have not been regarded as "gendered," such as resource allocation and end of life issues.

**Class Format:** discussion

**Requirements/Evaluation:** active participation in class discussions; periodic short papers (2-3 pages); midterm and final paper ( 5-7 and 7-10 pages, respectively); and one oral presentation

**Prerequisites:** none, although previous coursework in WGSS is desirable

**Enrollment Limit:** 19

**Enrollment Preferences:** prospective and declared majors or concentrators in PHIL, WGSS, STS, and PHLH, especially those who need the course

to satisfy major or concentration requirements

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** meets Contemporary Value Theory requirement only if registration is under PHIL

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHIL 228 (D2) STS 228 (D2) WGSS 228 (D2)

**Writing Skills Notes:** Students will write periodic short papers (2-3 pages each), a midterm paper (5-7 pages) and a final paper (7-10 pages). Short papers focus on concepts, arguments, and writing skills needed in the midterm and final papers, in which students are expected to describe and evaluate arguments from assigned readings, and to present clear and effective arguments in support of their own ethical positions. Students receive feedback on all papers and have the opportunity to revise midterm and final papers.

### **PHIL 231 (F) Ancient Political Thought**

**Cross-listings:** PHIL 231 PSCI 231

Secondary Cross-listing

The core activity of this seminar is the careful reading and sustained discussion of selected works by Plato and Aristotle, but we will also engage such other thinkers as Epictetus and Augustine, and, from a political and theoretical point of view, selections from the Hebrew Bible and New Testament. Among the questions that we will address: What is justice? How can it be known and pursued? How is political power generated and exercised? What are the social and ethical prerequisites--and consequences--of democracy? Must the freedom or fulfillment of some people require the subordination of others? Does freedom require leading (or avoiding) a political life? What distinguishes that kind of life from others? What does it mean to be "philosophical" or to think "theoretically" about politics? Although we will attempt to engage the readings on their own terms, we will also ask how the vast differences between the ancient world and our own undercut or enhance the texts' ability to illuminate the dilemmas of political life for us.

**Class Format:** discussion

**Requirements/Evaluation:** three 7- to 8-page papers

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **PHIL 232 (F) Modern Political Thought**

**Cross-listings:** PHIL 232 PSCI 232

Secondary Cross-listing

This course is a chronological survey of major works of political theory from the 16th to the 20th century. In discussions and writing, we will explore the diverse visions of modernity and of politics offered by such thinkers as Machiavelli, Hobbes, Locke, Rousseau, Marx, Mill, and Freud. They help us ask: What is freedom? Who is equal? Who should rule? With what limits and justifications? What form of government best serves the people? Who are

the people, anyway? And on what grounds can we justify confidence in our provisional answers to such questions? Class will be primarily driven by discussion, often preceded by brief lectures. Attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

**Requirements/Evaluation:** three papers of 4-6 pages; class participation; brief informal writing tasks inside and outside of class meetings

**Prerequisites:** none; open to all

**Enrollment Limit:** 12

**Enrollment Preferences:** Political Theory concentrators, then Political Science majors

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2)

### **PHIL 235 (S) Morality and Partiality: Loyalty, Friendship, Patriotism (WS)**

The aim of this tutorial is to critically examine the nature, importance, and ethical value of personal attachments and loyalties. Loyalty is frequently expected by family, friends and lovers, and demanded by institutions, religious, political and ethnic communities, as well as by the state. A person incapable of loyalty is often characterized as fickle, cold, self-serving and sometimes even pathological. However, the status of loyalty as a virtue has always been suspect: it has been argued that it is incompatible with impartiality, fairness and equality, and claimed that it is always exclusionary. So, some relationships with other people--such as friendships, familial ties, love, patriotism--seem to be ethically desirable, central to the quality of our lives, and yet prima facie in tension with the widely held belief that morality requires impartiality and equal treatment of all human beings. Are we ever justified in having more concern, and doing more, for our friends, family, community or nation? Does morality require that we always subordinate our personal relationships to universal principles? Is patriotism incompatible with cosmopolitanism, and if so, which of the two should we value? If loyalty is a virtue, what are the proper limits of its cultivation and expression?

**Class Format:** tutorial pairs will meet with the instructor for one hour a week, and on their own for another hour.

**Requirements/Evaluation:** tutorial attendance and participation; bi-weekly tutorial papers, each about 5 pages long (totaling 6 per student); bi-weekly oral responses to the paper of the tutorial partner

**Prerequisites:** none; open to first year students

**Enrollment Limit:** 10

**Enrollment Preferences:** Philosophy majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will get regular and detailed feedback on their writing skills, from word choice and sentence structure to overall structure of the paper.

**Attributes:** PHIL Contemporary Value Theory Courses

Not offered current academic year

### **PHIL 236 (F) Contemporary Ethical Theory (WS)**

This course will examine central questions in normative ethics, including the following: Which features of actions are morally important and why (e.g., their motive, their intrinsic nature, or their consequences)? Which characteristics of persons give them moral status? How should moral equality be understood, and what is its foundation? When should we give morality priority over personal commitments and relationships, and why? What makes an individual's life go well? Are we capable of disinterested altruism, or are we motivated solely by self-interest? By which methods should we pursue these questions? We will examine these and related issues by looking in depth at contemporary defenses of consequentialist, deontological, and contractualist theories.

**Requirements/Evaluation:** Six tutorial papers (5-6 pages in length) and six critiques (2-3 pages in length).

**Prerequisites:** at least one PHIL course or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Current and prospective philosophy majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating weeks, spaced evenly throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

**Attributes:** PHIL Contemporary Value Theory Courses

Not offered current academic year

### **PHIL 239 (S) The Ethics of Artificial Intelligence**

**Cross-listings:** STS 239 PHIL 239

Primary Cross-listing

We will someday live alongside artificially intelligent beings who equal or exceed us. Commentators ranging from technology magnates to physics geniuses-not to mention decades of apocalyptic science fiction-have urged that that future is nothing short of an existential threat to human beings. Whether this is hyperbole or wise prognostication, it cannot be denied that the rise of AI will be a tectonic shift for culture, technology, and our fundamental sense of ourselves. When AI is fully realized, it is likely to be amongst the most important things to happen to our species. Some challenges we face are broad and about the future, though perhaps not the far future. How can we ensure that AI's will act morally? Is a world with AI's overall better or worse for us? How do we create legal and policy frameworks that cover a new kind of thinking being? If they are conscious, will AI's have dignity and rights? Other questions are pressing and immediate: Artificial intelligence techniques are used today to help decide whether someone gets a bank loan, is eligible to be released on bail, or in need of particular medical treatment. And right now there are autonomous vehicles deciding how to behave in traffic, and autonomous weapons capable of delivering lethal force. Is it moral for us to pass along these sorts of decisions to AI's? What if they are biased, unbeknownst to us? What if they are more fair? In this course we will engage ethical questions surrounding the seeming inevitability of AI.

**Class Format:** mixture of lectures and discussion

**Requirements/Evaluation:** four short (3- to 4-page) writing assignments and a final essay (8-10 pages)

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** CSCI or PHIL majors or STS or COGS concentrators

**Expected Class Size:** 25

**Grading:** no pass/fail option, yes fifth course option

### **PHIL 240 (F) Philosophy of Education**

**Cross-listings:** PHIL 240 INTR 240

Primary Cross-listing

Why are you here? What do you expect to learn? How do you expect to learn? The College Mission Statement says that "Williams seeks to provide the finest possible liberal arts education by nurturing in students the academic and civic virtues, and their related traits of character." How have you already been taught the academic and civic virtues? Where have you been taught them? In school? On the sports field? At home? How did you develop your character? This first-year seminar will examine the philosophy of education through educational autobiographies: works that tell the story of a moral and intellectual education. Each book was chosen by and will be introduced by a professor from a different department, and then Professor of Philosophy Steve Gerrard will continue the discussion.

**Requirements/Evaluation:** several short papers

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** only first-year students

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHIL 240 (D2) INTR 240 (D2)

Not offered current academic year

### **PHIL 241 (S) Contemporary Metaphysics**

Our focus in this class is going to be on the nature of causation. We make causal judgments constantly in our everyday lives and in scientific contexts. It turns out, however, to be surprisingly difficult to say what causation is. We will begin the course by looking at Hume's and Kant's discussion of causation. We will then turn to a variety of more recent attempts to give a clear characterization of causation. In addition to examining general accounts of causation, we will examine particular problems that come up in thinking about mental causation and causation in indeterministic contexts.

**Requirements/Evaluation:** one 10 page midterm paper and one 15 page final paper which will involve draft and revision, possible short response papers, and active participation in seminar

**Prerequisites:** one PHIL course; familiarity with formal logic helpful but not required; or permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Philosophy Majors

**Expected Class Size:** 10-15

**Grading:** yes pass/fail option, yes fifth course option

### **PHIL 243 (F) The Philosophy of Higher Education: College Controversies (WS)**

What are the purposes of higher education? What are the purposes of liberal arts colleges in America? What should be the goals of Williams College? We will begin examining these questions by studying the history of controversies in American higher education, concentrating especially on debates about the curriculum. We will then turn to contemporary controversies such as campus free speech. Assigned works will include Booker T. Washington, *Industrial Education*, W.E.B. Dubois, *The Talented Tenth*, Frederick Rudolph, *Williams College 1793-1993: Three Eras, Three Cultures*, Michael S. Roth, *Beyond the University: Why Liberal Education Matters*, Allan Bloom, *The Closing of the American Mind*, Martha Nussbaum, *Cultivating Humanity*, William Deresiewicz, *Excellent Sheep: The Miseducation of the American Elite and the Way to a Meaningful Life*, Greg Lukianoff and Jonathan Haidt, *The Coddling of the American Mind: How Good Intentions and Bad Ideas Are Setting Up a Generation for Failure*, and Anthony T. Kronman, *The Assault on American Excellence*.

**Class Format:** This course is a tutorial. Students will meet in pairs with the instructor one hour per week.

**Requirements/Evaluation:** A 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** I will be seeking a balance of interests and backgrounds; preference given to students who have taken at least one philosophy course

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** A 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

**Attributes:** PHIL Contemporary Value Theory Courses

Not offered current academic year

### **PHIL 244 (S) Environmental Ethics (WS)**

**Cross-listings:** ENVI 244 PHIL 244

Secondary Cross-listing

What ethical standards should guide our individual and societal choices when those choices affect current and future environmental conditions? This course will introduce students to fundamental concepts, methods, and issues in environmental ethics. Initial tutorial meetings will focus on theoretical materials that will background later discussions and will include classic readings from the environmental ethics literature (e.g., Leopold, Taylor, Rolston). Most sessions will pair readings about key concepts with specific cases that raise complex ethical issues, including the concept of moral standing and, e.g., people who do not yet exist, non-human individuals, species, and complex living systems; the concept of moral responsibility and complicity in environmentally damaging practices; the legitimacy of cost-benefit analysis as an environmental policy tool; and the valuation of human lives.

**Requirements/Evaluation:** five essays (5-7 pages each) and five prepared oral responses to partners' essays; evaluation will be based on essays, oral responses, and quality of discussion

**Prerequisites:** ENVI 101 or one course in PHIL

**Enrollment Limit:** 10

**Enrollment Preferences:** declared and prospective Environmental Studies majors and concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** meets Value Theory requirement only if registration is under PHIL

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ENVI 244 (D2) PHIL 244 (D2)

**Writing Skills Notes:** Students will write five tutorial papers of 5-7 pages in length, one of which they will revise and submit at the end of the term. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

### **PHIL 245 (S) Mind and Persons in Indian Thought**

**Cross-listings:** PHIL 245 ASIA 244 REL 244

Secondary Cross-listing

In this course, we follow the Indian philosophical conversation concerning the self and the nature of consciousness, particularly as they are found in its various Yogic traditions. We start with some of the Hindu views about the self and the mind and consider their ethical implications. We then consider a range of Buddhist critiques of these views, focusing more particularly on the Madhyamaka, which radicalizes the critique of the self into a global anti-realist and skeptical stance. We also examine the Yogacara school, which offers a process view of reality focusing on the analysis of experience. We conclude by considering some of the later Hindu holistic views of the self as responses to the Buddhist critique. In this way we come to realize that far from being the irrational foil of "the West," Indian tradition is a rich resource for thinking through some of the central questions that have challenged

philosophers in both traditions.

**Class Format:** discussion

**Requirements/Evaluation:** full attendance and participation, three short essays (6 pages each)

**Prerequisites:** none

### **PHIL 250 (S) Philosophy of Economics (WS)**

The status of economics as a predictive science has been most prominently brought into question, historically, by three unpredicted yet extremely important economic events: the Great Depression of the 1930s, stagflation of the 1970s, and bursting of the mortgage bubble in 2008. The issue of prediction was also raised by economist Donald McCloskey who, in 1988, asked his fellow economists, "If you're so smart, why ain't you rich?" Some critics find predictive failures of economists unsurprising, given the frequent reliance of the latter on assumptions known to be false (e.g., that economic agents are always selfish, have perfect information, and never make mistakes) and on models that unavoidably ignore potentially relevant factors. Perhaps, then, economics is not primarily a predictive science, but instead a descriptive, historical, and/or mathematical one. In this course, relying on works by economists and philosophers, we examine the status of economics as an academic discipline, focusing on its assumptions, methods, and results.

**Requirements/Evaluation:** six 6- to 8-page essays, six 2- to 3-page response papers, participation in discussions

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** Philosophy majors and potential majors, then Economics majors and potential majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Six 6- to 8-page essays. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

**Attributes:** PHIL Contemporary Value Theory Courses

### **PHIL 251 (S) Offensive Art**

Twenty-four centuries ago Plato argued for censorship of art. In the last century New York City mayor Rudy Giuliani attempted to shut down the Brooklyn Museum "Sensations" exhibit because he claimed it offended Christians, and the Cincinnati Contemporary Arts Center was prosecuted for exhibiting allegedly obscene photographs by Robert Mapplethorpe. Just today (15 February 2022) *The New York Times* removed some solutions from their recently purchased game *Wordle*, saying that words such as "pussy", "slave", and "wench" are "offensive or insensitive". At Williams College a mural was removed from The Log and Herman Rosse's painting "Carnival of Life" was removed from the '62 Center. What should be done about offensive art? What is offensive art? Does it matter who is offended? Does offensive art harm? Is there a difference between being offended and being harmed? Is there a difference between cultural appropriation and cultural appreciation? What are the responsibilities of museum curators and theater producers when presenting art that might offend? Who gets to decide the answer to these questions; indeed, who gets to decide what questions to ask? We will attempt answers by studying classical works (such as Plato's *Republic* and John Stuart Mill's *On Liberty*), contemporary articles, and

works of art in various media. *Trigger Warning:* all the works of art studied in this class will be chosen partly because they have offended a significant number of people. You are very likely to be offended by some of the art we discuss. This will be the only trigger warning for the class; if you don't want to be offended then this course is not for you.

**Requirements/Evaluation:** several short responses (including op-eds on current controversies) and longer final projects (a 12- to 15-page paper or equivalent work in other media)

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** seniors, juniors, then sophomores in that order

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Materials/Lab Fee:** potential additional material costs up to \$50 if individual students opt for final projects in other media

### **PHIL 272 (S) Free Will and Responsibility (WS)**

**Cross-listings:** PHIL 272 JLST 272

#### **Primary Cross-listing**

Our practice of holding people responsible seems justified as long as their choices are free. But when does a choice qualify as free? Must it be unaffected by any outside influences? If so, freedom may seem impossible since we're all deeply influenced by factors ranging from the general laws of nature to specific features of our genetic endowment and social environment (including religion, political ideology, and advertising). These affect not only our particular choices but also, more fundamentally, who we are and what we value. The real question, then, seems to be whether, and how, free choice is possible amidst all of these influences. We'll attempt to answer this question by examining recent philosophical work on the nature of free will and responsibility.

**Requirements/Evaluation:** Five tutorial papers (5-6 pages in length) and five critiques (2-3 pages in length)

**Prerequisites:** one PHIL course

**Enrollment Limit:** 10

**Enrollment Preferences:** current and prospective Philosophy majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**Writing Skills Notes:** Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating weeks, evenly spaced throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

**Attributes:** PHIL Contemporary Value Theory Courses

**Not offered current academic year**

### **PHIL 281 (S) Philosophy of Religion (WS)**

**Cross-listings:** PHIL 281 REL 302

#### **Primary Cross-listing**

Our goal will be to determine how far reason can justify belief in God. We will examine well-known philosophical arguments for and against the existence of God (including the ontological argument, the cosmological argument, the teleological argument, the argument from religious experience, and the argument from evil). For each argument, we will first look at historically important formulations and then turn to contemporary reformulations.

Our aim will be to identify and evaluate the strongest version of each argument. After working through these arguments, we will reflect more generally on the proper roles of reason and faith in justifying religious belief. Near the end of the semester, we'll also examine some evolutionary explanations of religious belief. Our tools in this course will be logic and reason, even when we are trying to determine what the limits of reason might be. Authors will include Plato, Anselm, Aquinas, Pascal, Paley, Hume, Kant, Kierkegaard, and several contemporary philosophers.

**Class Format:** students meet with instructor in pairs for an hour each week; emphasis will be placed on developing skills in reading, interpretation and oral argument as well as critical reasoning and writing

**Requirements/Evaluation:** five 5-page papers and five 2-page papers

**Prerequisites:** one PHIL course

**Enrollment Limit:** 10

**Enrollment Preferences:** current and prospective Philosophy majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHIL 281 (D2) REL 302 (D2)

**Attributes:** PHIL History Courses

Not offered current academic year

### **PHIL 288 (F) Embodiment and Consciousness: A Cross-Cultural Exploration**

**Cross-listings:** REL 288 PHIL 288

Secondary Cross-listing

This course examines some of the central questions raised by the study of the consciousness: the place of intentionality, the role of emotions, the relation with the body, the nature of subjectivity, the scope of reflexivity, the nature of perceptual presence, etc. In confronting these difficult questions, we do not proceed purely theoretically but consider the contributions of various observation-based traditions, from Buddhist psychology and meditative practices to phenomenology to neurosciences. We begin by examining some of the central concepts of Buddhist psychology, its treatment of the mind as a selfless stream of consciousness, its examination of the variety of mental factors and its accounts of the relation between cognition and affects. We also introduce the practice of meditation as a way to observe the mind and raise questions concerning the place of its study in the mind-sciences. We pursue this reflection by examining the views of James, Husserl, Sartre and Merleau-Ponty, particularly as they concern the methods for the study of the mind and the relation between consciousness, reflexivity and the body. In this way, we develop a rich array of analytical tools and observational practices to further our understanding of the mind. But we also question the value of these tools based on first person approaches by relating them to the third person studies of the mind. In this way, we come to appreciate the importance of considering the biology on which mental processes are based and the light that this approach throws on the nature of consciousness. We conclude by considering the relation between first and third person studies of the mind, focusing on the concept of the embodied mind as a fruitful bridge between these different traditions.

**Requirements/Evaluation:** regular practice of meditation, a class presentation, a short essay (6-pages); a long final research paper (15 pages)

**Prerequisites:** any introduction to philosophy and at least two upper level courses in PHIL, at least one of which meets the Contemporary Metaphysics or Epistemology distribution requirement for the major, no exceptions;

**Enrollment Limit:** 18

**Enrollment Preferences:** Religion and Philosophy majors

**Expected Class Size:** 18

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** there is no need to email the professor in advance to indicate interest in the course

### **PHIL 306 (S) The Good Life in Greek and Roman Ethics**

**Cross-listings:** CLAS 306 PHIL 306

**Primary Cross-listing**

Most thoughtful human beings spend a good deal of time musing about how we ought to live and about what counts as a good life for a human being. The philosophers of ancient Greece and Rome were among the first thinkers to develop rigorous arguments in response to such musings. Much of the moral philosophy produced in Greece and Rome remains as relevant today as when it was written. In this course, we will examine some central texts in ancient Greek and Roman moral philosophy. We will begin by reading some of Plato's early dialogues and his *Republic*. We will then turn to Aristotle's *Nicomachean Ethics*. We will then examine writings in the Stoic and Epicurean traditions, as well as Cicero's *On the Ends of Good and Evil*. As we proceed through the course, we will look at the way in which each thinker characterizes happiness, virtue and the relation between the two. We will also pay close attention to the way in which each of these thinkers takes the practice of philosophy to play a key role in our realization of the good human life.

**Requirements/Evaluation:** several short response pieces; a final paper of 10-15 pages; active participation in seminar discussion

**Prerequisites:** Phil 201 will be helpful but is not necessary.

**Enrollment Limit:** 15

**Enrollment Preferences:** Philosophy majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

### **PHIL 307 (F) Augustine's Confessions**

**Cross-listings:** CLAS 307 PHIL 307 REL 303

**Primary Cross-listing**

No thinker has done more to shape the Western intellectual tradition than Augustine (354-430 CE), and no book displays Augustine's dynamic vision of reality more compellingly than the *Confessions*. Its probing and intimate reflections on the meaning of human life, the nature of God and mind, time and eternity, will and world, good and evil, love and sexuality have challenged every generation since Augustine's own. The seminar will be structured around a close, critically engaged reading of the *Confessions* (in English translation) and will give attention to its historical context and significance as well as to its philosophical and theological ideas. (There will be optional, supplementary opportunity to engage with the Latin text for interested students with some facility with Latin.)

**Class Format:** Class meetings will consist primarily in student presentations and open, directed discussion of assigned readings.

**Requirements/Evaluation:** Regular reading assignments from the *Confessions* and related secondary literature. Weekly participation in online discussion on Glow (15% of final grade); 3 class presentations (of various lengths and kinds) (20%); a short paper (maximum 1500 words) due around the middle of the semester (20%); a term paper in two drafts (maximum 3000 words) due near and the end of the semester (40%); preparation for and participation in class that shows thoughtful engagement with the assigned readings (5%).

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Advanced students in Philosophy, Religion and/or Classics

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

### **PHIL 310 (F) Wittgenstein's Later Philosophy (WS)**

Ludwig Wittgenstein (1889-1951) is probably the greatest philosopher of the 20th century. His later work, best known through posthumously published *Philosophical Investigations*, continues to influence contemporary thinking about language, mind, action, knowledge, ethics, religion, aesthetics, culture, and of course, philosophy itself. Understanding later Wittgenstein is thus vital for engaging in contemporary philosophy, but neither the interpretation nor the evaluation of his thought is straightforward or easy. Later Wittgenstein is a controversial, polarizing figure; but serious reading of his work is invariably intellectually enriching and fertile. This tutorial aims to provide students with the skills necessary for careful, serious and thorough reading of Wittgenstein's later philosophy. In the first part of the course, we will read Wittgenstein's *Philosophical Investigations*, one of the greatest books ever written. In the second part of the course, we will read *On Certainty*, and selections from other of Wittgenstein's posthumously published works: *Zettel*, *Philosophical Grammar*, *Remarks on the Philosophy of Psychology, Culture and Value*, *Lectures and Conversations on Aesthetics, Psychology and Religious Belief*, and *The Big Typescript*. Throughout the course, we will consult and discuss the important secondary literature on Wittgenstein, and analyze different philosophical presuppositions and goals that motivate particular readings. The central topics of the course will be: meaning, rule following, human languages; private experiences and other minds; intention and action; knowledge and skepticism; and especially, the methods and nature of philosophy.

**Requirements/Evaluation:** tutorial attendance and participation; bi-weekly tutorial papers, each about 5 pages long (totaling 6 per student); bi-weekly oral responses to the paper of the tutorial partner

**Prerequisites:** two Philosophy courses

**Enrollment Limit:** 10

**Enrollment Preferences:** preference will be given to students who already took a course on Wittgenstein, for example, PHIL 309

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write two short (about 800 words) seminar papers; five 5-7 pages long papers; five 2-3 pages long comments on their tutorial partner's papers; and a final paper (also 5-7 pages long) which will be a revision of one of the previously written papers. Students will get regular feedback from their tutorial partner and from the instructor on the substance of their work as well as on their oral and writing skills, with suggestions for improvement.

### **PHIL 312 (S) Philosophical Implications of Modern Physics (QFR)**

**Cross-listings:** STS 312 PHYS 312 PHIL 312

Secondary Cross-listing

Some of the discoveries made by physicists over the last century seem to show that our common sense views are deeply at odds with our most sophisticated and best confirmed scientific theories. The course will present the essential ideas of relativity theory and quantum theory and explore their implications for philosophy. We will ask, for example, what these theories tell us about the nature of space, time, probability and causality.

**Requirements/Evaluation:** attendance, participation, problem sets, exams, six 1- to 2-page papers and a 12- to 15-page term paper

**Prerequisites:** MATH 140, high-school physics, and either a 200-level course in PHIL or a 100-level course in PHYS

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy majors and Physics majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **PHIL 315 (S) Kant's Critique of Pure Reason**

Kant's *Critique of Pure Reason* is perhaps the most significant text in the history of philosophy. It puts an end to the Early Modern traditions of Rationalism and Empiricism, and it stands at the beginning of both the Analytic and Continental traditions in contemporary philosophy. Love it or hate it, you cannot ignore it. In this course, we will study the most important and influential chapters of the *Critique* with the help of some secondary literature.

**Requirements/Evaluation:** Student will be required to write three 8-10 page papers.

**Prerequisites:** PHIL 202

**Enrollment Limit:** 10

**Enrollment Preferences:** Philosophy majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PHIL History Courses

### **PHIL 319 (F) Topics in Philosophy of Race: Hegel and Africana Philosophy (DPE)**

**Cross-listings:** AFR 327 PHIL 319

Primary Cross-listing

How are individual and social subjects formed, and how do they connect to questions of race? What is the nature of consciousness and how can it be unhappy, false or double? What do we mean when we talk about racial capitalism? This course introduces philosophy students to these and related questions through a parallel reading that brings together 19th century German philosopher Hegel and a tradition of Africana philosophy running through Douglas, Du Bois, Fanon, Gilroy, Hartman and Wynter. While Hegel studies tends to occur in isolation from philosophers in the Africana tradition, many of the above explicitly refer to and take up questions in Hegel. This course argues that by reference to the historically specific modes of subjectivity and sociality that resulted from the Transatlantic Slave Trade and the Haitian Revolution, for instance, we can better understand and address long-standing questions in European Social Philosophy. Topics to be considered include the nature of freedom (both individual and social), the master/slave dialectic and subject constitution, self-consciousness and double consciousness, the stages of history, and racial capitalism

**Requirements/Evaluation:** Progressive writing assignments including 4 exegetical commentaries, one 5 page paper and one 10-12 page final paper.

**Prerequisites:** One prior 100 level philosophy course or permission of instructor.

**Enrollment Limit:** 15

**Enrollment Preferences:** Preference given to philosophy majors and Africana studies concentrators.

**Expected Class Size:** 10-15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

AFR 327 (D2) PHIL 319 (D2)

**Difference, Power, and Equity Notes:** Course material involves self-conscious and critical engagement with the history of racial subject formation as well as Africana philosophy, and thinking about how power's distribution connects to questions of race.

**Attributes:** PHIL History Courses

**PHIL 320 (F) Topics in Critical Theory: Subjection, Power, Freedom (DPE) (WS)**

Any critical theory presupposes an account how both individual and social subjects come into being. Some critical theorists within the Frankfurt School tradition draw from upon ideas about the constitution of the subject developed in the early 19th century German philosophy of Hegel. According to Hegel, subjects are both historically and socially constituted; they are formed through their relations with other subjects. Hence, being with others, being dependent on others, is regarded as a key structuring feature of human existence. By the early 20th century, in the works of Freud, we encounter the idea of the intra-psychic features of subjects and the importance of understanding and regulating psychic forces both within and between subjects in order to adapt to the demands of living at any given time, born as we are both dependent upon and vulnerable to others. This raises the question whether a more complete account of the emergence of subjects must address both psychic, historical and social dimensions of subjectivity, the ways in which they are intertwined, and their importance for not only psychological well-being, but also relatively well-regulated socio-political relations. In this course we take up questions such as the following: What sorts of subjects do we find in modern Western societies? What are the forces, and the dynamics between forces (i.e., economic, technological, modes of communication, techniques of social control, biological, psychological) that make certain types of subjects possible influencing both their self-understandings and their forms of life? What role do emotional, irrational or unconscious forces play? To what extent do these myriad force relations limit, enable, or deform our participation as political citizens, and our capacity to transform and improve them? In our attempts to make headway in answering such daunting questions, we investigate recent debates in critical theory concerning subjection and resistance, intersubjective recognition and redistribution, social pathologies and the idea of a political unconscious. Readings will be drawn from recent work in the Frankfurt School and poststructuralist traditions of critical theory as well as anti-racist, anti-colonial, feminist and queer theories that draw upon them.

**Class Format:** We will schedule at least one seminar meeting during the semester. I will consult with students about the best time for this meeting.

**Requirements/Evaluation:** Evaluation will be based on written work (five 6-7 page papers, and five 2-3 page commentaries on your partner's papers) as well as the quality and level of preparation and intellectual engagement in our weekly meetings.

**Prerequisites:** Demonstrated background in history of modern philosophy (PHIL 202), modern political theory, or critical and social theories.

**Enrollment Limit:** 10

**Enrollment Preferences:** Preference will be given to philosophy majors and prospective majors and students with demonstrated interest and background in critical or social theories.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**Writing Skills Notes:** Students will write five of 5-7 pages in length, one of which they will revise and submit at the end of the term. We will also meet in seminar once or twice during the semester. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own positions. Students will receive written and oral feedback on both the content and form of their papers and contributions in meetings.

**Difference, Power, and Equity Notes:** In this course we address power and domination, reflect on the difference between them, and treat power relations as not only an inevitable feature of any society, but as both enabling and constraining. In addition, the course will contain readings that address race, class, gender and the legacy of colonialism.

**Attributes:** PHIL Contemporary Value Theory Courses

Not offered current academic year

**PHIL 321 (S) Introduction to Critical Theory: The Enlightenment and Its Critics (DPE) (WS)**

**Cross-listings:** PHIL 321 WGSS 322

Primary Cross-listing

We often associate modern faith in the prospects of universal human dignity, rational autonomy, the rights of man, individual liberty, democracy, open scientific inquiry and social and political progress with the Enlightenment. How can we reconcile this faith with the persistence of domination today? Critical theory aims not merely to understand the "struggles and wishes of the age" as Marx one described it, but with emancipation from domination. Understood in this way, critical theory is identified closely with the intellectual tradition of the Frankfurt School. In this tutorial, will read works in critical theory from the 18th century to the present, some from the Frankfurt tradition, and some not. We will focus on particular topics, examples of which are the following: normative critique, capitalism, authoritarianism, mass culture, enlightenment and reason, progress, violence, the domination of nature,

white supremacy, patriarchy and colonialism.

**Class Format:** students will work in pairs and meet for 75 minutes each week with the professor

**Requirements/Evaluation:** Each student will write and present a 5 or 6-page paper every other week and a commentary on their partner's essay on alternate weeks; evaluations are based on written work as well as level of preparation and the quality of intellectual engagement in tutorial meetings

**Prerequisites:** PHIL 202, Kant course, modern political theory, or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Philosophy majors and students with background in modern political theory, or other relevant demonstrated background.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHIL 321 (D2) WGSS 322 (D2)

**Writing Skills Notes:** The tutorial format requires significant writing (six 2500-3000 word papers, and six 1000-1250 word commentaries), weekly commentary on writing, and instructor comments on papers.

**Difference, Power, and Equity Notes:** In this course power, difference, domination and the prospects of and obstacles to liberatory political struggle are central topics.

TUT Section: T1 Cancelled

**PHIL 326 (S) Foucault Now** (DPE) (WS)

**Cross-listings:** WGSS 336 PHIL 326

**Primary Cross-listing**

If we think of Michel Foucault as engaged in writing histories, or genealogies, of his own present designed to undercut the sense of the obviousness of certain practices and ways of thinking, categorizing, and knowing, we can easily imagine that he might now be questioning different aspects of our contemporary "present" than the ones standardly associated with his name, namely, panopticons and surveillance, discipline, criminalization, the biopolitics of health, the normal and the abnormal, etc. In this course we address the question: How is the present we find ourselves living today different from the one that the author Foucault wrote about in the 1960s, 70s and early 80s before his untimely death in 1984? What differentiates today from yesterday? And what present practices and ways of thinking and knowing might be questioned using Foucault's tools, genealogy in particular, for resisting unnecessary constraints on freedom and the perpetuation of unnecessary suffering? What is his legacy today? In this tutorial you will read from a selection of Foucault's texts (books, lectures, interviews) in order to acquire a firm grasp of his method of "critique" and his way of looking at the interconnections between forms of power and the knowledge associated with particular disciplines. We will also read more recent work by Foucault inspired scholars on topics such as the biopolitics of gender, the genealogy of terrorism, the informational person (how we become our data), and neoliberal subjects.

**Class Format:** I may use a seminar format at least twice during the semester.

**Requirements/Evaluation:** evaluation will be based on written work (six 5- to 6-page papers, and six 2-3 page commentaries on their partner's papers) as well as the quality and level of preparation and intellectual engagement in our weekly meetings.

**Prerequisites:** Relevant background in critical theory, social theory, political theory or philosophy.

**Enrollment Limit:** 10

**Enrollment Preferences:** I will give preference to philosophy majors and to upper class students with a demonstrated background in critical theories. Some sophomores may be eligible.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

WGSS 336 (D2) PHIL 326 (D2)

**Writing Skills Notes:** This is a tutorial. Students will write five or six 5-6-page papers during the course of the semester and receive significant feedback on each paper. At the end of each tutorial meeting the student is asked to reflect on how they would approach the paper differently if they were to rewrite it.

**Difference, Power, and Equity Notes:** In this course we address power and domination, reflect on the difference between them, and treat power relations as not only an inevitable feature of any society, but as both enabling and constraining. Moreover, we will read material that uses Foucauldian tools to address contemporary issues involving sexism and racism, digital surveillance, and the abolition of prisons.

TUT Section: T1 TBA Jana Sawicki

### **PHIL 328 (S) Kant's Ethics**

Although Kant initially planned for his magnum opus to comprise theoretical and practical chapters, his metaphysics and epistemology take up all of his *Critique of Pure Reason* while his ethics is spread out over a series of works--*Groundwork of the Metaphysics of Morals*, *Critique of Practical Reason*, *Religion within the Boundaries of Mere Reason*, and *The Metaphysics of Morals*. These latter writings of Kant's had a tremendous influence on the development of subsequent moral philosophy and indeed set the stage for contemporary discussions of the nature of practical reason, motivation, freedom, and morality. Our seminar will have two aims: (1) to reconstruct the single most compelling moral theory from Kant's various ethical writings, and (2) to trace the influence of Kant's ethics in contemporary philosophy.

**Requirements/Evaluation:** weekly seminar discussion questions; 8-10-page midterm paper; 12-14-page final paper

**Prerequisites:** two courses in PHIL (including a 100-level PHIL course; PHIL 201 or 202 recommended); or permission from the instructors

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PHIL History Courses

Not offered current academic year

### **PHIL 329 (F) Four Challenging Moral Philosophers (DPE) (WS)**

Elizabeth Anscombe, Philippa Foot, Amelie Rorty, and Cora Diamond all challenged the prevailing philosophical tenets of their times. Anscombe and Foot resurrected virtue ethics for Anglo-American philosophy and made moral psychology academically respectable. (Foot also invented the infamous trolley car thought experiment.) Rorty challenged the very concept of morality and questioned all moral theory. Diamond investigated the methodology of moral philosophy, paying special attention to the role of literature. In order to hit the ground running, students will be expected to read *The Women Are Up to Something: How Elizabeth Anscombe, Philippa Foot, Mary Midgley, and Iris Murdoch Revolutionized Ethics* by Benjamin J. B. Lipscomb before the first meeting, preferably over the summer.

**Requirements/Evaluation:** Tutorial papers and rewrites

**Prerequisites:** At least three PHIL courses, including at least one in moral philosophy.

**Enrollment Limit:** 10

**Enrollment Preferences:** Philosophy majors, seniors, juniors in that order

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**Writing Skills Notes:** Students will meet with the instructor in pairs for an hour each week; a 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and revise and re-write one of their five papers

**Difference, Power, and Equity Notes:** Our four challenging moral philosophers are all women in a field dominated by men. They all challenged the prevailing philosophical tenets of their times.

Fall 2022

TUT Section: T1 TBA Steven B. Gerrard

**PHIL 330 (S) Plato (WS)**

**Cross-listings:** PHIL 330 CLAS 330

**Primary Cross-listing**

Plato is one of the most important and influential thinkers in the history of the western tradition. His depiction of the trial and death of Socrates is one of the classics of western literature, and his views on ethics and politics continue to occupy a central place in our discussions 2400 years after they were written. It is, in fact, quite difficult to get through any course of study in the liberal arts without some familiarity with Plato. Nevertheless, comparatively few people realize that the views we commonly think of as "Platonic" represent only one strand in Plato's thought. For example, we commonly attribute to Plato a theory of the Forms on the basis of his claims in the so-called "middle dialogues" (mainly Republic, Phaedo, and Symposium). However, in his philosophically more sophisticated and notoriously difficult later dialogues (such as the Parmenides, Philebus, Sophist and Statesman), Plato engages in radical criticism and revision of his earlier views. In this course, we will spend the first third of the semester attempting to understand the metaphysics and epistemology in Plato's middle dialogues. We will spend the balance of the semester coming to grips with Plato's arguments in the later dialogues. We will read several complete dialogues in translation, and will also read a wide variety of secondary source material.

**Class Format:** lecture/discussion; this class will be a roughly equal mixture of lectures, student presentations, and seminar discussion

**Requirements/Evaluation:** students will be expected to prepare a seminar presentation, to write several focused short analytical pieces, and to write a 15- to 20-page term paper in multiple drafts

**Prerequisites:** PHIL 101, PHIL 102 or permission of instructor; a prior course in logic will be extremely helpful, but is not necessary

**Enrollment Limit:** 15

**Enrollment Preferences:** upper-level Philosophy and Classics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (WS)

**PHIL 332 (S) Aristotle's Metaphysics**

**Cross-listings:** CLAS 332 PHIL 332

**Primary Cross-listing**

In this course we will study Aristotle's *Metaphysics* concentrating on books *gamma-theta*. Aristotle sets out to study being *qua* being, or what is insofar as it is. The thoughts that Aristotle expresses in these books were instrumental in setting an intellectual agenda that dominated western thought through the Middle Ages and provided the backdrop against which the modern philosophical tradition arose. Furthermore, many of the issues that Aristotle takes up in these books remain of central importance in contemporary philosophy. Our main goal in this course is to work our way through Aristotle's text which can be extremely daunting, and to reconstruct his central positions and his arguments for these positions. We will also read selections from the vast secondary literature on Aristotle's *Metaphysics*.

**Requirements/Evaluation:** discussion leadership, weekly short papers, term paper

**Prerequisites:** PHIL 201, CLAS 203

**Enrollment Limit:** 12

**Enrollment Preferences:** Philosophy and Classics majors

**Expected Class Size:** 8-10

**Grading:** no pass/fail option, no fifth course option

### **PHIL 335 (S) Contemporary Metaethics**

We speak as if moral judgments can be true or false, warranted or unwarranted. But how should objectivity in this domain be understood? Is moral objectivity like scientific objectivity, assuming that we have a clear sense of what that involves? If not, should this concern us? What are other models for understanding moral objectivity? While answers to such questions are implicit in historically important accounts of morality, these issues became the topic of explicit, sustained debate in the twentieth and twenty-first century. Our focus will be on recent influential work in this area. We will examine several different approaches in depth, including realism, constructivism, expressivism, and skepticism.

**Class Format:** seminar

**Requirements/Evaluation:** weekly seminar discussion questions; 8-10-page midterm paper; 12-14-page final paper

**Prerequisites:** two courses in PHIL (including a 100-level PHIL course; PHIL 201 or 202 recommended); or permission from the instructor

### **PHIL 336 (F) Political Liberalism and its Critics (WS)**

Political liberalism has been both celebrated and lamented. The philosopher John Rawls is widely credited with reviving liberalism in the late 20th century and providing its most persuasive defense. In this tutorial, we'll read portions of Rawls' major works, *A Theory of Justice* and *Political Liberalism*, and trace how his theory evolved in response to an array of critics, including libertarians, perfectionists, communitarians, feminist philosophers, and critical race theorists. Among other things, these critics challenged Rawls' interpretation and defense of the social contract framework, the ideals of freedom and equality, the content of principles of justice, political neutrality about the good, the nature of the self, the division between public and private spheres, and the distinction between ideal and non-ideal theory. We'll examine these criticisms in depth. If time permits, we'll also look briefly at some recent post-Rawlsian debates about the nature of distributive justice (e.g., luck vs. relational egalitarianism, or global justice).

**Class Format:** This tutorial will meet on a fixed weekly schedule agreed to by the instructor and participants.

**Requirements/Evaluation:** Six tutorial papers (5-6 pages in length) and six critiques (2-3 pages in length)

**Prerequisites:** Two PHIL courses (including a PHIL 100-level course), or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Current and prospective philosophy majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating

weeks, evenly spaced throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

**Attributes:** PHIL Contemporary Value Theory Courses

Not offered current academic year

### **PHIL 337 (F) Justice in Health Care (WS)**

Justice is a notoriously complex and elusive philosophical concept, the conditions of which are even more difficult to articulate within real world institutions and contexts than in the abstract. In this course we'll explore justice as a fundamental moral principle and as a desideratum of the US health care system. The first portion of the course will be devoted to considering general theories of justice as well as alternative conceptions of justice specifically within the health care context. While social justice and distributive justice are deeply intertwined in the health care context and we will discuss both, we will focus primarily on the concept of distributive justice. This theoretically oriented work will provide the background for subsequent examination of specific topics, which may include, among others: justice in health care financing and reform; justice in health care rationing and access to health care, with particular attention to the intersections of rationing criteria with gender, sexuality, race, disability, and age; justice in the procurement and allocation of organs for transplantation; obesity and personal responsibility for illness; and justice in medical research, including "double standards" for research conducted in low resource settings.

**Requirements/Evaluation:** biweekly papers, oral commentaries, and tutorial discussions

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** PHIL majors, PHLH concentrators, those with curricular need for the course, those who have been dropped from the course in previous semesters due to over enrollment, and those who are unlikely to have an opportunity to take the course in a later term

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write six tutorial papers of 5-7 pages in length, one of which they will revise and submit at the end of the term. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

### **PHIL 338 (S) Intermediate Logic (QFR)**

**Cross-listings:** MATH 338 PHIL 338

Primary Cross-listing

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have taken PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

**Requirements/Evaluation:** problem sets and exams

**Prerequisites:** some class in which student has studied formal reasoning

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy majors; juniors and seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Writing Skills Notes:** Three thesis papers at five pages each (each receiving critical feedback from professor); one thesis paper revision with critical feedback from professor and peers, including one letter of revision explaining the student's revision process; one keyword glossary where students develop rigorous definitions of course key terms; one roundtable discussion based on the final paper.

**Difference, Power, and Equity Notes:** This course focuses on anti-colonial struggles against European powers. Research will include the concept of "internal colonies" in the US.

**Not offered current academic year**

**PHIL 343 (S) What Philosophy Is: It's Methods, Aims and Values (WS)**

Put simply, metaphilosophy is reflection on the nature of philosophy: Can it be defined? How is it different from science? What are its distinct methods? Does philosophy yield knowledge? What role does the history of philosophy play in the discipline? Why read the history of philosophy? Unsurprisingly, philosophers have proffered a variety of answers to these questions, prompting one philosopher to remark, half-jokingly, that "there are as many definitions of philosophy as there are philosophers." Thus, Plato described the philosopher as "the one who beholds all Time and all Being." Wilfrid Sellars regarded as uncontroversial the view that it is "an attempt to see how things, in the broadest possible sense of the term, hang together in the broadest possible sense of the term." Critical theorists regard philosophy as social and ideology critique. Some understand its aim to be to answer normative questions about the nature of truth, justice, goodness and rationality. Finally, there are those who do not think philosophy can contribute much at all to answering such questions and others who question its claims to universality given its associations with colonialism, racism, sexism, etc. In this tutorial we will read philosophical texts from a range of approaches in professional philosophy since the early 20th Century (Analytic, Pragmatist, Continental or European, and Public). Some of them explicitly engage meta-philosophical debates; others exemplify particular philosophical styles and methods. Our aim is to enrich our understanding of the discipline in order to evaluate its value and limitations.

**Requirements/Evaluation:** Evaluation will be based on the written work as well as the level of preparation and intellectual engagement in tutorial

meetings. The professor will provide detailed comments on the first two papers, and all students have the option meeting with the professor after midterms to discuss strengths and areas they plan to work on in their final two papers.

**Prerequisites:** Two or three philosophy courses, or permission of instructor.

**Enrollment Limit:** 10

**Enrollment Preferences:** Preference will be given to majors and students who have had at least two, ideally three courses in philosophy.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** This is a tutorial. Students will write five 6-page papers and 2-3 page commentaries on alternate weeks. The instructor and the tutorial partner will comment extensively on each paper both orally and in writing. The aim of each tutorial meeting is enable the writer to imagine possible revisions.

**Attributes:** PHIL History Courses

Not offered current academic year

### PHIL 350 (S) Emotions

Philosophy is often described as *thinking about thinking*: variously conceived inquiries into the nature, scope and limits of human reasoning have always been at its heart. Without challenging the centrality of such projects for philosophy, this tutorial will focus on a less emphasized, but equally essential aspect of our lives: emotions. What are emotions, and how should we think about them? What is the proper 'geography'--classification and analysis--of our emotions, and what is their relation to our somatic states, feelings, beliefs, judgments, evaluations and actions? Do we have any control over our emotions? Could we (individually and socially) educate and cultivate them? How are conscious and unconscious emotions related to a person's action, character, and her social world? In addressing these substantive questions, we will also consider which methodological approach--if a single one can be privileged--we should adopt for examining emotions. We will try to determine what is the scope and nature of an adequate theory of emotions, what are the desiderata for such a theory, and what should count as evidence in its favor. We will examine a variety of philosophical and scientific theories of emotion, as well as some issues concerning normative aspects of emotions: the role of emotions in a good life, and the concept of emotional maturity.

**Requirements/Evaluation:** Class attendance, preparedness and participation; weekly meetings with the tutorial partner outside of the class; five lead papers (5-7 pages) and five short response papers (2-3 pages).

**Prerequisites:** two philosophy courses.

**Enrollment Limit:** 10

**Enrollment Preferences:** philosophy majors and prospective majors, then psychology majors.

**Expected Class Size:** 10

### PHIL 358 (S) Reasoning and Inference: The Philosophy of Logic (WS)

This is a course in the philosophy of logic. What, you may ask, is the philosophy of logic? In a logic class, we think about how to represent ordinary language and thinking within formal systems and how to prove various things within these systems. In a *philosophy of logic* class, we think about what we are doing when we do logic. An example might be helpful. You are psyched to be reading this course description right now. At least, let's assume that you are for the sake of argument. A number of things *follow from* this happy assumption. Here are a few: (i) You are psyched. (ii) You are reading. (iii) You exist. (iv) It is possible that you are reading. (v) Either you are reading or you are a fish. In the first part of this course, we are going to focus on what this *following-from* business amounts to, and ask whether there is a special sense of *following-from* that characterizes logic? We will also try to get more precise in our understanding of some of the key concepts in logic, such as contradiction, consistency, logical consequence, syntax and semantics. In the second part of the course, we will turn to the fundamental questions concerning the status and structure of logic. Logic is sometimes called the study of reason. But, is logic the study of how people *do* reason, or is it the study of how people *should* reason? Against the first, people often don't seem to reason very well. On the other hand, if logic is about how we should reason, what makes it the case that we should reason one way rather than another? What makes a theorem of logic true? For that matter, what are logical theorems even about? Should we revise logic in light

of empirical discoveries in, for example, physics or psychology? If so, what are the constraints on good revisions? Logicians and mathematicians have done a good deal of work developing extensions of and alternatives to classical logic. Some philosophers have wondered, however, whether the notion of an alternative logic is even coherent. We will end the course with a discussion of some of these alternatives. Among the authors we will read are: Aristotle, Frege, Russell, Quine, Kripke, Putnam, Field and Fine.

**Class Format:** There are likely to be video presentations of formal material. There may also be help sessions for problem sets.

**Requirements/Evaluation:** Students will write five tutorial papers and five response papers. In addition, they will revise one of these papers in light of comments from their partner and the instructor. Finally, there may be some problem sets to solidify understanding of formal material.

**Prerequisites:** Although not strictly necessary, a prior course in logic or discrete mathematics will be very helpful. In any case, some comfort with formal reasoning will be assumed as we will be going through an accelerated presentation of logical systems.

**Enrollment Limit:** 10

**Enrollment Preferences:** Philosophy majors. Students with a background and interest in formal reasoning.

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write 5 tutorial papers and 5 responses. The instructor and the respondent will attend both to the content and to the writing quality of the tutorial papers. Finally students will substantially revise one of their tutorial papers in consultation with the instructor.

### **PHIL 360 (F) The Political Thought of Frantz Fanon (WS)**

**Cross-listings:** PSCI 370 PHIL 360 AFR 360 LEAD 360

Secondary Cross-listing

Martinican psychiatrist, philosopher, and revolutionary Frantz Fanon was among the leading critical theorists and Africana thinkers of the twentieth century. Fanon ushered in the decolonial turn in critical theory, a move calling on those both within and outside of Europe to challenge the coloniality of the age and to forge a new vision of politics in the postcolonial period. This course is an advanced seminar devoted to a comprehensive examination of Fanon's political thought. We will begin with an analysis of primary texts by Fanon and end by considering how Fanon has been interpreted by his contemporaries as well as activists and critical theorists writing today.

**Requirements/Evaluation:** attendance and participation, weekly online reading response papers, a class presentation, two 7-page essays, and one 20-page final research paper

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Africana Studies concentrators, Leadership Studies concentrators, and Political Science majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PSCI 370 (D2) PHIL 360 (D2) AFR 360 (D2) LEAD 360 (D2)

**Writing Skills Notes:** Students write weekly online reading response papers, two 7-page essays, and one 20-page final research paper. Students receive written feedback from me throughout, meet with me 1-on-1 to discuss 7-page essays to then revise/re-submit and also receive written feedback before final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

### **PHIL 364 (S) Mental Health and Illness: Philosophical Considerations**

**Cross-listings:** STS 364 PHIL 364

### Primary Cross-listing

This course will raise and discuss a number of philosophical questions concerning our current understanding of mental health and mental illness. We will begin by examining the general concepts of health and disease, and then apply them to human psychology. Throughout the course, our focus will be on the best theoretical and practical knowledge we now have to diagnose, explain, and alleviate mental illness. Some of the questions that we will discuss are: What is psychopathology and what are its causes? Is it possible to have systematic knowledge of subjective experience? If so, is that knowledge importantly different in kind or in rigor from the knowledge we gain through physics, chemistry or geology? Are there metaphysical and ideological assumptions in contemporary psychiatry, and if so, could and should they be avoided? What is the basis on which current psychiatric diagnostic manuals are organized? Is that principle of organization justifiable or not? Do particular case histories offer good explanations of psychopathology? In framing and answering these questions, we will discuss subjective experience (or phenomenology) of mental illness; holism vs. reductionism; functional, historical and structural explanations of psychopathology; theory formation, evidence, and the role of values in psychology and psychiatry; the diversity and disunity of psychotherapeutic approaches; relationship between knowers and the known; and relationship between theoretical knowledge in psychiatry and the practices of healing.

**Requirements/Evaluation:** several writing assignments, evenly spaced throughout the semester

**Prerequisites:** two philosophy courses; or one philosophy and one STS course; or consent of the instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** students who took Philosophy of Science or Philosophy of Mind; Philosophy and Psychology majors

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### PHIL 379 (S) American Pragmatism

**Cross-listings:** PHIL 379 AMST 379

#### Primary Cross-listing

Along with jazz, pragmatism stands as the greatest uniquely American contribution to world culture. As the music wails in the background, we will study the classic pragmatists: William James, C. S. Peirce, and John Dewey. We will continue with the contemporary inheritors of the tradition: Cornel West, Richard Rorty, and Hilary Putnam. Although it has influenced both analytic and continental philosophy, pragmatism is a powerful third philosophical movement. Always asking what practical difference would it make, our authors investigate the central questions and disputes of philosophy, from epistemology and metaphysics to ethics and religion. Rather than seeing philosophy as an esoteric discipline, the pragmatic philosophers (with the possible exception of Peirce) see philosophy as integral to our culture and see themselves as public intellectuals.

**Requirements/Evaluation:** final paper, several short assignments

**Prerequisites:** at least two PHIL courses

**Enrollment Limit:** 25

**Enrollment Preferences:** Philosophy and American Studies majors, then seniors and juniors of any major

**Expected Class Size:** 12-15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

### PHIL 390 (S) Discourse Dynamics (WS)

**Cross-listings:** COGS 390 PHIL 390

## Secondary Cross-listing

It'd be perfectly natural to say "I might've left the stove on", then check the stove, then say "I didn't leave the stove on". But perform those exact same steps in a different order--check the stove, say "I didn't leave the stove on", then say "I might've left the stove on"--and something's gone quite wrong. Conversation is dynamic--the back and forth exchange of information is a process that grows and adapts to the surrounding context. The order in which you say things matters, and it matters for what you communicate what actions you take and what events happen around you. In this course, we will investigate dynamic communicative phenomena and discuss competing theoretical explanations about how they're interpreted. Of particular interest will be the extent to which discourse dynamics are built into the meanings of linguistic expressions vs. the extent to which they're consequences of our rational cognition. Is a sentence's relation to previously uttered sentences similar to its relation to extra-linguistic events? How much inference goes into interpreting what's said? In pursuing the answers to these questions, we will discuss both classic and contemporary theories from philosophy and linguistics.

**Requirements/Evaluation:** Four short papers (3-4 pages), take-home midterm paper (5-7) pages, take-home final paper (6-8 pages)

**Prerequisites:** At least one philosophy or cognitive science course (any level), or permission of instructor.

**Enrollment Limit:** 19

**Enrollment Preferences:** Preference given to seniors and philosophy/cognitive science majors, then to students who have taken 200-Level Intro to Formal Linguistics

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COGS 390 (D2) PHIL 390 (D2)

**Writing Skills Notes:** There will be four short papers (3-4 pages each) that will receive written comments on substance, argument structure, and writing style. These will be designed to include sections that, upon revision in light of comments, can be incorporated into the longer midterm and final papers (5-7 pages and 6-8 pages respectively). Students will be required to meet with the instructor before the midterm and final papers to discuss outlines and revisions of short papers.

## PHIL 401 (F) Senior Seminar: Philosophy of Freedom

In this course we will examine the concept of freedom from three points of view. First, we will trace the emergence and development of the concept of freedom in various historical traditions. Second, we will engage in some current philosophical debates concerning the concept of freedom in metaphysics, ethics, and political philosophy. Finally, we will consider how the concept of freedom is applied in contemporary social contexts, such as speech, religion, voting, and sexuality and gender.

**Requirements/Evaluation:** Weekly short response papers; Class presentation; Final paper.

**Prerequisites:** Limited to senior philosophy majors.

**Enrollment Limit:** 25

**Enrollment Preferences:** The seminar is required of all senior philosophy majors, and limited to them.

**Expected Class Size:** 8-10

**PHIL 12 (W) Yoga: Cultivating a Practice for Life**

"Yoga: Cultivating a Practice" will examine what the practice of Yoga is, and how it can serve as a foundation, guide, and inspiration for living, particularly in the face of personal or societal challenges. Alongside the daily physical practice of "asana" (yoga poses), the class will investigate the philosophical and ethical teachings of Yoga's ancient text, the Yoga Sutras of Patañjali. Students will learn a number of basic yoga poses and breathing techniques in 1.5-hour classes that will meet 5 days a week. Class time will include about 15 minutes of discussion, followed by a taught asana practice. Students will read and discuss portions of the Yoga Sutras, the Bhagavad Gita, and contemporary texts analyzing Yoga in society. Assignments may also include pre-recorded talks from contemporary Yoga philosophers. This course explores the roots of Yoga as an embodied practice of moral philosophy, and introduces students to Yoga's potential for individual and collective transformation. This learning is primarily experiential, and students are requested not to miss class sessions. Students will be expected to practice on their own outside of class, to journal, and to participate in class discussions of the readings. Students will submit weekly written assignments in response to prompts relating to class material and a longer final paper.

**Requirements/Evaluation:** Class participation, plus weekly short papers and final 5-page paper.

**Prerequisites:** No previous yoga experience required. Special permission required for students with significant injuries or broken bones, as the format may not allow me to accommodate their needs.

**Enrollment Limit:** 14

**Enrollment Preferences:** I will invite students to an orientation session in order to assess their interest and motivation for the class. From this, I will select participants with a goal of creating a broadly diverse group that can support and enrich each other's experience.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Anne O'Connor '86 has practiced Yoga since the late 1990s and became a Certified Iyengar Yoga Teacher (CIYT) in 2016. A Williamstown native, she lived in France and Germany for almost 20 years, working as a freelance translator and editor.

**PHIL 13 (W) Ethics Bowl: Case-Based Reasoning in Ethics**

This winter study course is inspired by the Intercollegiate Ethics Bowl (IEB®). IEB is a nationwide ethics competition in which teams of undergraduate students cooperatively develop, present, and respond to analyses of a set of 15 morally complex case scenarios from a wide range of personal, professional, or public policy domains. In the national program, all teams receive the cases in advance of the competition, but they are not told what ethical questions about the cases they will be asked to address during the tournament. Thus, teams must work through all facets of the cases in order to be prepared for whatever the moderator and judges may ask. The competition proceeds like a debate tournament, but with a difference: teams need not take a position opposing that of their competitors. They may disagree or concur; either way, they must provide an assessment of their opponents' arguments and justification for their own conclusions. The emphasis in presentations is on substantive ethical argumentation, not on rhetoric or

presentation style, and the positions presented typically represent a consensus among all the team members who have contributed to the preparations and analysis. The course will begin with a brief introduction to reasoning in practical (as opposed to theoretical) ethics and case analysis. Thereafter, students will work through this year's IEB cases, culminating in at least one public "scrimmage," which may include teams from other colleges in the NE region. Each class member will collaborate in analyzing all of the cases in-depth, but will take primary responsibility for at least two cases. We will meet together in the classroom for 6 hours per week, and students will be expected to meet in small groups outside of class hours and to work individually to prepare their cases. The discussion sessions will be intensive, but very much student-driven, with the instructor acting as a coach.

**Requirements/Evaluation:** Short paper and final project or presentation. Final paper (5-7 pp) analyzing an Ethics Bowl case of the student's choice, and participation in the public scrimmage.

**Prerequisites:** None

**Enrollment Limit:** 12

**Enrollment Preferences:** None. If the course overenrolls, a random process will be used to select students.

- Paula E. Thoms, Assistant Professor of Physical Education and Head Coach of Women's Crew
- Tommy Verdell, Assistant Professor of Physical Education, Associate Athletic Director for Inclusion and Compliance

The instructional Physical Education Program at Williams is an integral part of the student's total educational experience. As a part of the liberal arts concept, the program develops the mind-body relationship, which is dependent upon the proper integration of physical and intellectual capacities. The main objective of the physical education program is to develop in each student an appreciation of physical fitness and wellness, and to expose them to a variety of activities that are suitable for lifetime participation.

Four credits of Physical Education represent one of the requirements for the College degree. There are five physical education units during the year. In the fall academic semester, there are two six-week physical education quarters. Winter Study is another unit, and there are two physical education quarters in the spring academic semester. Two different activities must be completed in the fulfillment of the requirement. Students must complete two physical education credits during the first year, all four physical education credits must be completed by the end of sophomore year if the student wishes to study abroad.

A schedule listing all courses offered is issued to every student before each quarter and Winter Study. Classes may vary according to availability of instructors and interest of students. More information can be found at [athletics.williams.edu/physical-education](http://athletics.williams.edu/physical-education).

The following courses are offered at various times during the year:

Aqua Fitness

Badminton

Basketball

Bicycling

Boot Camp

Bowling

Canoeing

Core and Conditioning

Dance (African, Ballet, Modern)

Diving

Erg Fitness

Figure Skating

Futsal

Golf

Hiking

Ice Climbing

Kayaking

Lifeguarding

Lifetime Sports

Mountain Biking

Muscle Fitness

Outdoor Living Skills

Pickle Ball

Pilates

Rape Aggression Defense (RAD)

Rock Climbing

Rowing

Running

Skiing (Alpine and Cross Country)

Snowboarding

Snowshoeing

Soccer

Spinning

Squash

Street Hockey

Swim for Fitness

Swimming

Telemarking

Tennis

Trail Crew

Volleyball

Weight Training

Wellness

Wilderness Leadership

Yoga

Zumba

## ASTRONOMY & ASTROPHYSICS (Div III)

Chair: Professor Jay Pasachoff

- Marek Demianski, Visiting Professor of Astronomy
- Kevin Flaherty, Lecturer in Astronomy and Observatory Supervisor; affiliated with: Astronomy, Physics
- Anne Jaskot, Assistant Professor of Astronomy and Associate of the Hopkins Observatory; affiliated with: Astronomy, Physics; on leave 2022-2023
- Protik K. Majumder, Barclay Jermain Professor of Natural Philosophy, Chair of Astronomy; affiliated with: Physics, Astronomy

How long will the Sun shine? How do we discover Earth-like planets among the many exoplanets circling other stars? How did the universe begin and how has it evolved over its 13.8-billion-year history? How do we detect not only light but also gravitational waves from afar? Astronomy is the science that asks and tries to answer questions like these. We have come a long way toward understanding what makes the sky appear as it does and how the Universe behaves. The Astronomy Department offers courses for anyone who is interested in learning about the Universe, and who would like to be able to follow new astronomical discoveries as they are made. All courses in Astronomy satisfy the Division III requirement. The Astronomy major and the Astrophysics major (administered jointly with the Physics Department) are described below.

The beginning astronomy courses are offered on two levels. Astronomy 101, 102, 104, and 330-range courses are intended primarily for non-science majors and have no prerequisite. Astronomy 111 is designed for students with some exposure to physics. It has a prerequisite of one year of high school physics or permission of the instructor, and a co-requisite of Mathematics 140 or equivalent background in calculus.

Most of the astronomy courses take advantage of our observational and computational facilities including a 24-inch computer-controlled telescope with sensitive electronic detectors, and our own computer network for image processing and data analysis. The Astronomy Department site can be found at [astronomy.williams.edu](http://astronomy.williams.edu).

### ASTRONOMY MAJOR

The Astronomy major is designed for students with an interest in learning about many aspects of modern astronomy, but who do not choose to take the most advanced physics and math courses of the astrophysics major. It is also appropriate as a second major for students concentrating in another field; in particular, combining an Astronomy major with a related major like Geoscience or Computer Science has been a fruitful path for some of our students. The Astronomy major emphasizes understanding the observed properties of the physical systems that comprise the known Universe, from the Sun and solar system, to the evolution of stars and star clusters, to the Milky Way Galaxy, to external galaxies and clusters of galaxies. Because some knowledge of physics and calculus is necessary to understand many astronomical phenomena, the Astronomy major requires the first two semesters each of the physics and calculus that are also required of Physics majors and Astrophysics majors.

There are several possible routes through the Astronomy major, depending on preparation and interest. Students considering a major in Astronomy should consult with members of the department early and often. A first-year student, if unsure about choosing between Astronomy and Astrophysics, may wish to take not only Astronomy 111 but also Physics 131, 141, or 151 and Mathematics 140 (if necessary) in the fall. Students who might place out of physics courses should read the section on placement under Physics.

### Major Requirements for Astronomy

Astronomy 111 Introduction to Astrophysics OR Astronomy 101 Stars: From Suns to Black Holes and either Astronomy 102 The Solar System—Our Planetary Home OR Astronomy 104 The Milky Way Galaxy and the Universe Beyond

Two 200-level Astronomy courses (or additional 400-level Astronomy courses as substitutes)

Two 400-level Astronomy courses

Physics 131 Particles and Waves OR Physics 141 Particles and Waves—Enriched OR equivalent placement

Physics 142 Foundations of Modern Physics or Physics 151 Seminar on Modern Physics

Mathematics 140 Calculus II

Mathematics 150 Multivariable Calculus OR Mathematics 151 Multivariable Calculus OR equivalent placement

The total number of courses required for the Astronomy major is nine. A typical path through the major will begin with Physics 141, which is suitable for students with one year of high school physics and a background in calculus. However, students without high school physics may begin with Physics 131, and students entering with Advanced Placement in physics and/or math may obtain credit toward the major for the equivalent of Physics 142 and/or Mathematics 150 or 151 taken elsewhere. There are some aspects of astronomy that are closely related to chemistry or

geosciences. In recognition of this, certain advanced courses in those departments can be accepted for credit toward the Astronomy major.

## **THE DEGREE WITH HONORS IN ASTRONOMY**

The honors degree in Astronomy will be awarded on the basis of a senior thesis presenting the results of an original observational, experimental, or theoretical investigation carried out by the student under the direction of a faculty member in Astronomy. There are no specific grade requirements (other than College-wide requirements for remaining in good academic standing) for entry into the thesis research program; however, a student wishing to do a thesis should have demonstrated both ability and motivation for independent work in previous courses and in any earlier research involvement. Students doing theses will normally choose a topic and an advisor early in the second semester of their junior year and usually begin their thesis work during the summer. During the senior year, those students whose proposals have been approved will elect two courses and a winter study project in addition to the minimum requirements for the major. Preparation for the thesis will occupy at least one course (Astronomy 493) and the winter study project (Astronomy 031). At the end of the winter study period, the department will decide, in consultation with each student, whether to admit that student to honors candidacy. Both a written thesis and an oral presentation to faculty and fellow students are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill the requirements with unusually high distinction.

The department will be flexible with regard to the number and timing of courses devoted to thesis research within the general guidelines of two courses and a winter study project over and above the minimum major requirements and the written and oral presentations, especially in cases of students with advanced standing and/or summer research experience. Students considering unusual requests are urged to consult with potential advisors or the department chair as early as possible.

## **ASTROPHYSICS MAJOR**

The Astrophysics major is designed for students who want a rigorous introduction to the field, and includes not only those who plan graduate study in astronomy, astrophysics, or a closely related area, but also those interested in a wide variety of careers. Astrophysics alumni are not only astronomers but also computer scientists, geologists, teachers, doctors, lawyers, business school professors, and so on. In recent years, many astrophysics majors have had a second major in fields as wide ranging as mathematics, computer science, geosciences, economics, English, and art history. This major emphasizes the description of the Universe and its constituents in terms of physical processes. Potential Astrophysics majors should consult early with members of the Astronomy and Physics Departments to determine their most appropriate route through the major. An essential ingredient in such students' undergraduate training is experience in physics and mathematics. Therefore, the major normally will begin in the first year a student is at Williams with Physics 131, 141, or 151 and Mathematics 140 or 150 or 151 in the fall. Physics 141 is recommended for students with one year of high school physics and a background in calculus. Students with very good background placing them out of Physics 142 and out of Mathematics 140 may choose to take Physics 201 and Mathematics 150 or 151 instead. Astronomy 111 will often be taken in the fall of the sophomore year; however, many students take it in the fall of their first year at Williams, along with physics and math. Students who might place out of physics courses should read the section on placement under Physics; those who place out of Physics 131 or 141 into Physics 142 or 151 should particularly consider taking Astronomy 111 in the fall of their first year.

In addition to the major courses described below, other courses in geosciences, mathematics, and computer science may also be appropriate.

### **Major Requirements for Astrophysics**

Astronomy 111 Introduction to Astrophysics OR Astronomy 101 Stars: From Suns to Black Holes and either Astronomy 102 The Solar System—Our Planetary Home OR Astronomy 104 The Milky Way Galaxy and the Universe Beyond

Physics 131 Particles and Waves OR Physics 141 Particles and Waves—Enriched OR equivalent placement

Physics 142 Foundations of Modern Physics OR Physics 151 Seminar on Modern Physics

Physics 201 Electricity and Magnetism

Physics 202 Waves and Optics

Physics/Mathematics 210 Mathematical Methods for Scientists

Physics 301 Introductory Quantum Physics

Mathematics 150 Multivariable Calculus OR Mathematics 151 Multivariable Calculus

Three 400-level astronomy courses OR two 400-level astronomy courses and one of the following:

Astronomy 211 Astronomical Observing and Data Analysis

Physics 302 Statistical Physics

Physics 402T Applications of Quantum Mechanics

Physics 405T Electromagnetic Theory

Physics 411T Classical Mechanics;

Physics 418 Gravity

The total number of courses required for the Astrophysics major, an interdisciplinary major, is eleven. Students entering with Advanced Placement in physics and/or mathematics may obtain credit toward the major for the equivalent of Physics 141 and/or Mathematics 140 and/or 150 or 151 taken elsewhere, but at least 8 courses in astronomy, physics, and mathematics must be taken at Williams. There are some aspects of astrophysics that are closely related to chemistry or geosciences. In recognition of this relation, certain advanced courses in those departments can be accepted for credit toward the Astrophysics major on a two-for-one basis. It is not possible to double major in Astrophysics and Physics.

### **THE DEGREE WITH HONORS IN ASTROPHYSICS**

The honors degree in Astrophysics will be awarded on the basis of a senior thesis presenting the results of an original observational, experimental, or theoretical investigation carried out by the student under the direction of a faculty member in Astronomy or Physics. There are no specific grade requirements (other than College-wide requirements for remaining in good academic standing) for entry into the thesis research program; however, a student wishing to do a thesis should have demonstrated both ability and motivation for independent work in previous courses and in any earlier research involvement. Students doing theses will normally choose a topic and an advisor early in the second semester of their junior year and usually begin their thesis work during the summer. During the senior year, those students whose proposals have been approved will elect two courses and a winter study project in addition to the minimum requirements for the major. Preparation for the thesis will occupy at least one course (Astrophysics 493) and the winter study project (Astrophysics 031). At the end of the winter study period, the departments will decide, in consultation with each student, whether to admit that student to honors candidacy. Both a written thesis and an oral presentation to faculty and fellow students are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill the requirements with unusually high distinction.

The departments will be flexible with regard to the number and timing of courses devoted to thesis research within the general guidelines of two courses and a winter study project over and above the minimum major requirements and the written and oral presentations, especially in cases of students with advanced standing and/or summer research experience. Students considering unusual requests are urged to consult with potential advisors or the department chairs as early as possible.

### **STUDY ABROAD**

#### **FAQ**

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

#### **Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

#### **What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description, and complete syllabus including readings/assignments.

#### **Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

No.

#### **Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

No.

#### **Are there specific major requirements that cannot be fulfilled while on study away?**

No.

#### **Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

Yes. PHYS 301, a required course for the Astrophysics major, is only taught in the fall, and is difficult to replicate abroad, especially regarding the lab component.

#### **Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:**

None to date.

## **ASTR 101 (F) Stars: From Suns to Black Holes**

For the new era of "multimessenger astronomy" (not only light and its like but also particles from space and gravitational waves): What makes a star shine? For how long will the Sun keep shining and what will happen to it then? What are black holes and how can they form? How and what have we found out about the gravitational radiation resulting from two giant black holes merging and, with additional signals in the spectrum, from the merger of two neutron stars? What is the James Webb Space Telescope revealing about the earliest epochs of the Universe and about the atmospheres of planets around stars other than our Sun? What do we learn about our own Sun, and therefore about other stars like it, from total solar eclipses?

Astronomy 101, a non-major, general introduction to the part of contemporary astronomy that includes how stars form and die, will provide answers to these questions. We pay special attention to recent exciting discoveries, including regular briefings and current emails plus bonus coverage of NASA's Perseverance rover on Mars with the participation of Williams alumni/ae. Topics include discoveries with the Hubble Space Telescope, the new James Webb Space Telescope, missions to discover planets around other stars, the latest huge telescopes such as the one that will be part of the Vera C. Rubin Observatory in Chile, and plans for the Nancy Grace Roman Space Telescope; how astronomers interpret the light received from distant celestial objects; and the Sun as a typical star. We discuss how pulsars and black holes result from the evolution of massive stars and how supermassive black holes lurk in galaxies/quasars. We discuss the discovery of thousands of "exoplanets" around stars other than the Sun. We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of and on the same level as Astr 102 (solar system)/104 (galaxies/cosmology); students who have taken those courses are welcome.

**Class Format:** lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration. Planetarium and Roof-Observatory TAs will be available for consultation, in addition to the instructors, throughout the semester.

**Requirements/Evaluation:** two hour tests, a final exam, an observing portfolio, and lab reports

**Prerequisites:** none

**Enrollment Limit:** 30

**Enrollment Preferences:** first enrolled

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** non-major course

**Distributions:** (D3)

Fall 2022

LEC Section: 01 TR 9:55 am - 11:10 am Jay M. Pasachoff, Kevin Flaherty

LAB Section: 02 T 1:00 pm - 2:30 pm Kevin Flaherty

LAB Section: 03 T 2:30 pm - 4:00 pm Kevin Flaherty

LAB Section: 04 W 1:00 pm - 2:30 pm Kevin Flaherty

LAB Section: 05 W 2:30 pm - 4:00 pm Kevin Flaherty

## **ASTR 102 (S) Our Solar System and Others**

What makes Earth different from all the other planets? What have NASA's Curiosity and Perseverance on Mars (with their alumni/ae participation!) found about that planet's past running water and suitability for life? How has knowledge about Pluto and Arrokoth beyond it been transformed by NASA's flybys and the associated ground-based studies with which Williams College faculty and students participated? Will asteroids or comets collide with the Earth again? What is a solar eclipse like and how do we prepare for the April 8, 2024, totality? What do we learn from the rare transits of Mercury and of Venus that Williams faculty and students have studied? What may the new James Webb Space Telescope reveal about exoplanets and their atmospheres? Astronomy 102, a non-major, general introduction to the part of contemporary astronomy that comprises the study of the solar system (and the systems of planets around other stars), will provide answers to these questions and more. We will cover the historical development of humanity's understanding of the solar system, examining contributions by Aristotle, Ptolemy, Copernicus, Galileo, Kepler, Newton, Einstein, and others. We will discuss the discovery of over 4000 exoplanets around stars other than the Sun. The course gives special attention to exciting discoveries of the past few years by space probes and by the Hubble Space Telescope and the Kepler/K2/TESS missions, as well as plans and hopes for NASA's James Webb Space Telescope (which launched in December 2021). We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of, and on the same level as Astronomy 101 (stars and

stellar evolution) and 104 (galaxies and cosmology), and students who have taken those courses are welcome.

**Class Format:** lecture (three hours per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration.. Planetarium and Roof-Observing TAs will be available for consultation, in addition to the instructors, throughout the semester.

**Requirements/Evaluation:** two hour tests, a final exam, an observing portfolio, and lab reports

**Prerequisites:** none

**Enrollment Limit:** 48

**Enrollment Preferences:** first enrolled

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** non-major course

**Distributions:** (D3)

Not offered current academic year

### **ASTR 104 (S) The Milky Way Galaxy and the Universe Beyond**

It has been only about a century since the Sun was discovered not to be at the center of the Milky Way Galaxy, and the Milky Way Galaxy was determined to be only one of countless "island universes" in space. A host of technological advances is enabling us to understand even more clearly our place in the universe and how the universe began. For example, the recently discovered "chirp" from gravitational radiation (reported in 2016) resulting from two giant black holes merging, and the "chirp" from two neutron stars merging, producing also light, radio and x-ray radiation, has opened a whole different way of observing the Universe from the traditional use of light and other forms of electromagnetic radiation. With dozens of such events recorded by 2022, we are now therefore in the new era of multimessenger astronomy. Further, the James Webb Space Telescope (of NASA, European Space Agency, and the Canadian Space Agency, the NASA/ESA Hubble Space Telescope, and NASA's Chandra X-ray Observatory bring exceptionally clear images over a wider range of the spectrum; their images are aiding astronomers to better understand the past and future of the Universe, and new infrared images have been available since 2022 are available] from NASA's/ESA's/CSA's James Webb Space Telescope. JWST observations starting with summer 2022, with those and other new telescopes on the ground (Vera C. Rubin Observatory) and in space (Nancy Grace Roman Space Telescope) soon to help to confirm and enlarge our understanding of the Big Bang and the early epochs of the Universe. In addition, study of the early Universe (most recently from the Planck spacecraft) and large-scale mapping programs such as the Sloan Digital Sky Survey, the European Space Agency's Gaia, and the Dark Energy Survey. Astronomy 104, a non-major, general introduction to part of contemporary astronomy comprising the study of galaxies and the Universe, explores the answers to questions like: What is the Milky Way?; Why are quasars so luminous?; Is the Universe made largely of "dark matter" and "dark energy"?; What determines the ultimate fate of the Universe? How have studies of Cepheid variables and distant supernovae with the Hubble Space Telescope determine that the Universe is 13.8 billion years old and indicated that the Universe's expansion is accelerating? How significant is the current discrepancy "tension" between the age and expansion rate of the Universe as measured from supernova observations as opposed to measurements from the cosmic background radiation? We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of, and on the same level as Astronomy 101 and 102, and students who have taken those courses are welcome.

**Class Format:** lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration. Planetarium and Roof-Observatory TAs will be available for consultation, in addition to the instructors, throughout the semester. Current astronomical discoveries will be discussed at the beginning of each class and by email throughout the semester.

**Requirements/Evaluation:** two hour exams, a final exam, lab reports, and an observing portfolio

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** first-years

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** non-major course

**Distributions:** (D3)

### **ASTR 107 (F) Astrobiology**

**Cross-listings:** GEOS 107 ASTR 107

#### **Secondary Cross-listing**

Astrobiology is the study of the origin, evolution, and distribution of life in the universe. As such it is an inherently interdisciplinary field, incorporating all of the basic natural sciences: biology, chemistry, physics, astronomy, and the earth sciences, as well as aspects of philosophy, sociology, and engineering. Questions we will seek answers to in this class include: How, why, when, and where did life evolve on Earth, and what does that tell us about how it might evolve elsewhere? What are the chances that there is life on other planets and moons in our solar system, and why? Are there habitable planets elsewhere in the universe, and will we ever truly know if any of them contain life? We will approach these questions using a combination of lectures, activities, labs, homework assignments, and visits from some of the country's leading Astrobiology researchers. Examples of lab and homework activities include exploring our definition of life by making observations about living and non-living systems, examining evidence for ancient habitable environments in rocks, and modeling chemical fingerprinting tools used by Mars rovers. Assessment will be based on participation, quizzes, labs and homework assignments, and a final group project where students will present a mock NASA mission proposal. This course requires no previous experience in the sciences. This course is in the Sediments and Life group for the Geosciences major.

**Class Format:** Lectures will be partially flipped with student responsible for watching videos before class; class time will be split between short lectures, small group activities, and class discussions. Lab groups will meet in person every other week and have group project work on alternate weeks that may be done virtually or in person.

**Requirements/Evaluation:** Assessment will be based on participation, quizzes, labs and homework assignments, and a final group project where students will present a mock NASA mission proposal.

**Prerequisites:** none

**Enrollment Limit:** 46

**Enrollment Preferences:** first year and second year students, Geosciences majors

**Expected Class Size:** 46

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** This course counts towards the GEOS Group B Electives - Sediments and Life

**Distributions:** (D3)

**This course is cross-listed and the prefixes carry the following divisional credit:**

GEOS 107 (D3) ASTR 107 (D3)

**Attributes:** GEOS Group B Electives - Sediments + Life

**Not offered current academic year**

### **ASTR 111 (F) Introduction to Astrophysics (QFR)**

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies. ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

**Class Format:** The class has 6 afternoon labs. Nighttime observing sessions will occur throughout the semester.

**Requirements/Evaluation:** weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

**Prerequisites:** a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

**Enrollment Limit:** 28

**Enrollment Preferences:** potential Astronomy majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

Fall 2022

LEC Section: 01 TR 11:20 am - 12:35 pm Marek Demianski, Kevin Flaherty

LAB Section: 02 M 1:00 pm - 4:00 pm Kevin Flaherty

LAB Section: 03 R 1:00 pm - 4:00 pm Kevin Flaherty

### **ASTR 211 (S) Astronomical Observing and Data Analysis (QFR)**

How do astronomers make scientific measurements for objects that are light-years away from Earth? This course will introduce the basics of telescopes and observations and will give students hands-on training in the techniques astronomers use to obtain, process, and analyze scientific data. We will discuss observation planning, CCD detectors, signal statistics, image processing, and photometric and spectroscopic observations. We will begin by focusing on ground-based optical observations and will move on to non-optical observations, both electromagnetic (e.g., radio waves, X-rays) and non-electromagnetic (e.g., gravitational waves, neutrinos). Throughout the course, students will use computational techniques to work with real astronomical data, taken with our 24" telescope and from data archives.

**Class Format:** discussion, computer lab work, and observing

**Requirements/Evaluation:** weekly problem sets, lab work, and observing projects

**Prerequisites:** MATH 150 or 151; prior experience with Unix and computer programming is helpful, but not required

**Enrollment Limit:** 14

**Enrollment Preferences:** Astronomy or Astrophysics majors

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course requires regular problem sets. Labs require computer programming and statistical and graphical analyses of data.

Not offered current academic year

### **ASTR 217 (S) Planets and Moons**

**Cross-listings:** ASTR 217 GEOS 217

Secondary Cross-listing

This course examines the history and geology of the solar system. No two planets are exactly alike, and as we acquire more data and higher-resolution images, our sense of wonder grows. However, we can't hike around and hammer rocks on Venus or Titan, so we have to infer composition, form, texture and process from remotely-captured images and sparse chemical and spectral data. We will consider the origin of the solar system, the formation and evolution of planetary bodies, and the role of impacts, volcanism, tectonics and geomorphology in shaping them. We will summarize basic geological concepts of stratigraphy, structure and chronology and show how they can be applied off-world. We will review solar system exploration, and will include planetary data in lab exercises. This course is in the Solid Earth group for the Geosciences major.

**Requirements/Evaluation:** Reading journal, lab exercises, class participation

**Prerequisites:** any 100-level GEOS or any 100-level ASTR course, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Geosciences majors, Astronomy/Astrophysics majors, and sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ASTR 217 (D3) GEOS 217 (D3)

**Attributes:** GEOS Group C Electives - Solid Earth

Not offered current academic year

**ASTR 240 (F) Great Astronomers and Their Original Publications (WS)**

**Cross-listings:** ASTR 240 STS 240 LEAD 240

Primary Cross-listing

In this course we will study some of the greatest figures in astronomy and consider their leadership in advancing progress in the field. We will consider their lives and works, especially as represented by original copies of their books and other publications. These great astronomers include: 16th century, Nicolaus Copernicus (heliocentric universe); Tycho Brahe (best pre-telescopic observations); 17th century, Galileo (discoveries with his first astronomical telescope, 1610; sunspots, 1613; *Dialogo*, 1632); Johannes Kepler (laws of planetary motion, 1609, 1619, Rudolphine Tables 1627); Johannes Hevelius and Elisabeth Hevelius (atlases of the Moon and of stars, 1647, and 1687); Isaac Newton (*Principia Mathematica*: laws of universal gravitation and of motion, 1687); 18th century, Edmond Halley (*Miscellanea curiosa*, eclipse maps, 1715, 1724); John Flamsteed and Margaret Flamsteed (*Atlas Coelestis*, 1729); and William Herschel and Caroline Herschel (1781, 1798). Also, from more recent times in which original works are often articles rather than books: 20th century, Albert Einstein (special relativity, 1905; general relativity, 1916); Marie Curie (radioactivity); Cecilia Payne-Gaposchkin (hydrogen dominating stars, 1929), Edwin Hubble (Hubble's law, 1929); George Ellery Hale (Mt. Wilson Observatory 100" telescope, 1917; Palomar Observatory 200" telescope, 1948), Vera Rubin (dark matter, 1970s); Jocelyn Bell Burnell (pulsar discovery, 1968); and 21st century: Wendy Freedman (Universe's expansion rate, 2000s). First editions will be available in Williams' Chapin Library of rare books, where we will meet in an adjacent classroom. We will also consider how such original materials are collected and preserved, and look at examples from the wider world of rarities, such as a leaf from the Gutenberg Bible (c. 1453) and a Shakespeare First Folio (1623, with a discussion of astronomical references in Shakespeare's plays). The course will be taught in collaboration between an astronomer and a rare-books librarian, with remote lectures by experts from around the world.

**Class Format:** Meeting on campus in the Chapin Library classroom (Sawyer 452)

**Requirements/Evaluation:** class participation, two 5-page intermediate papers, and a final 15-page paper; student choice of additional readings from a provided reading list

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** if overenrolled, preference by written paragraph of explanation of why student wants to take the course

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ASTR 240 (D3) STS 240 (D2) LEAD 240 (D3)

**Writing Skills Notes:** Comments on submitted papers will aid in writing skills

**Attributes:** LEAD Facets or Domains of Leadership

Fall 2022

SEM Section: 01 W 1:10 pm - 3:00 pm Jay M. Pasachoff

CON Section: 02 W 3:10 pm - 4:00 pm Jay M. Pasachoff

**ASTR 317 (S) Current topics in Planetary Geology (WS)**

**Cross-listings:** GEOS 317 ASTR 317

Secondary Cross-listing

We will look in detail at geological processes on rocky and icy bodies of the Solar System. Each week will have a specific theme, and students will

read a series of scientific articles on that topic. The readings will form the basis for writing and discussion. Areas to be investigated may include ice ages on Mars, the origin of Earth's moon, tectonics on Venus, chaos terrain on Europa, geysers on Enceladus, cryovolcanism on Triton, methane lakes on Titan, the viability of mining in the Asteroid Belt, and the prospects for life on other worlds. This course is in the Solid Earth group for the Geosciences major.

**Class Format:** Students meet with the professor weekly, in pairs, with one student writing each week and the other critiquing; and both engaging in detailed discussion of the readings.

**Requirements/Evaluation:** Evaluation is based on written papers, critiques, and discussion.

**Prerequisites:** GEOS/ASTR 217 (Planets and Moons); OR any two courses at 200-level or higher in Geosciences and/or Astronomy; OR permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Geosciences and Astronomy majors and prospective majors

**Expected Class Size:** 6

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

GEOS 317 (D3) ASTR 317 (D3)

**Writing Skills Notes:** This tutorial-style course focuses on writing, with 6 papers (5-7 pages) written bi-weekly throughout the semester, and partner critiques in alternate weeks.

**Attributes:** GEOS Group C Electives - Solid Earth

Not offered current academic year

### **ASTR 330 (S) The Nature of the Universe**

This course is a journey through space and time from the first fractions of a second after the Big Bang to the ultimate fate of the Universe billions of years into the future. Topics include the Big Bang and its remnant cosmic background radiation, cosmic inflation, conditions during the first three minutes, creation of the elements, stellar and galactic black holes, relativity, the detection of gravitational waves, galaxies and quasars, dark matter, and the formation of the large-scale structure of the Universe. We will explore current ideas about the fate of our Universe, including the acceleration of its expansion, and its implications for the end of time. Finally, we will consider the fantastic but serious theoretical proposal that ours is but one of countless universes existing within a *multiverse*.

**Class Format:** lecture/discussion, three hours per week

**Requirements/Evaluation:** two midterm exams, a small observing portfolio, occasional quizzes, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 48

**Enrollment Preferences:** open only to juniors and seniors; closed to students who have taken or are taking ASTR 104, and closed to ASTR, ASPH, and PHYS majors; preference given to seniors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** non-major course; course in the 33X sequence are meant as general education courses for students in all majors

**Distributions:** (D3)

Spring 2023

LEC Section: 01 Cancelled

### **ASTR 402 (S) Between the Stars: The Interstellar Medium (QFR)**

The matter between the stars--the interstellar medium--tells the story of the past and future evolution of galaxies and the stars within them. Stars are accompanied by diffuse matter all through their lifetimes, from their birthplaces in dense molecular clouds, to the stellar winds they eject as they evolve, to their final fates as they shed their outer layers, whether as planetary nebulae or dazzling supernovae. As these processes go on, they enrich the interstellar medium with the products of the stars' nuclear fusion. Interpreting the emission from this interstellar gas is one of astronomers' most

powerful tools to measure the physical conditions, motions, and composition of our own galaxy and others. In this course we will study the interstellar medium in its various forms, from cold, dense, star-forming molecular clouds to X-ray-emitting bubbles formed by supernovae. We will learn about the physical mechanisms that produce the radiation we observe, including radiative ionization and recombination, collisional excitation of "forbidden" lines, collisional ionization, and synchrotron radiation. Applying our understanding of these processes, we will analyze the physical conditions and chemical compositions of a variety of nebulae. Finally, we will discuss the evolution of interstellar material in galaxies across cosmic time. This course is observing-intensive. Throughout the semester students will work in small groups to design, carry out, analyze, and critique their own observations of the interstellar medium using remote observations and archival data.

**Class Format:** Tutorial meetings will be scheduled with the professor. Meetings may be held in-person, subject to classroom availability, or remotely. Students will also complete observing projects by controlling telescopes remotely and analyzing observations in astronomical databases.

**Requirements/Evaluation:** weekly problem sets, 10-page final paper, and observing projects

**Prerequisites:** ASTR 111 and PHYS 201 or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** juniors and seniors

**Expected Class Size:** 6

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** In this course, students will derive quantitative physical formulas, use these equations to calculate and compare physical properties, and generate and analyze graphical representations of data. They will also make and analyze measurements of astronomical data through observing projects.

Not offered current academic year

#### **ASTR 404 (S) Unsolved Problems in Galaxy Evolution**

In this tutorial, we will learn about galaxies and their evolution by focusing on some of the key mysteries astronomers are trying to solve. Questions may include: How do galaxies turn their gas supply into stars? Is there a universal initial mass function for star formation? What is the origin of multiple stellar populations in globular clusters? Why do some galaxies cease star formation? Which galaxies reionized the universe? We will discuss the nature of each unsolved problem, debate the theories proposed to answer it, and consider how future progress might be made.

**Requirements/Evaluation:** student's papers, responses to the partner's papers, and problem sets

**Prerequisites:** ASTR 111 and PHYS 142 or 151 or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Juniors and Seniors

**Expected Class Size:** 6

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Not offered current academic year

#### **ASTR 410 (S) Compact Stellar Remnants: White Dwarfs, Neutron Stars and Black Holes**

A star is a very interesting, very complicated physical object. Properties of stars and their evolutionary paths depend on an intricate interplay of different physical phenomena with gravity, nuclear interactions, radiation processes and even quantum and relativistic effects playing important roles. Using basic physics we will construct simple models of stars and discuss their evolution, concentrating on the key physical processes that play the dominant role at different evolutionary stages. We will discuss late stages of stellar evolution and concentrate on the basic properties of three possible remnants: white dwarfs, neutron stars and black holes. Radio and X-ray pulsars, supernovae including Type Ia and Gamma Ray Bursts will be discussed as well as observational confirmation of existence of black holes. We will explore extreme conditions existing near neutron stars and black holes and discuss their astrophysical consequences. We will also discuss the recent exciting detection of gravitational waves by the LIGO/VIRGO laser interferometric detectors.

**Class Format:** discussion three hours per week

**Requirements/Evaluation:** classroom participation, homework assignments, a midterm exam and a final exam

**Prerequisites:** PHYS 201 or permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** physics, astrophysics, and astronomy majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Spring 2023

LEC Section: 01 MR 1:10 pm - 2:25 pm Marek Demianski

### **ASTR 412 (F) Heliophysics**

**Cross-listings:** ASTR 412 PHYS 412

#### **Primary Cross-listing**

We study all aspects of the Sun, our nearest star. In addition to discussing our observations of recent eclipses and what has been learned about the solar atmosphere from eclipse research, we discuss the solar interior (including the Nobel-prize-winning solar neutrino experiment and helioseismology), the photosphere, the chromosphere, the corona, and the solar wind. We discuss the Sun as an example of stars in general. We discuss both theoretical aspects and observational techniques, including work at recent total solar eclipses. We discuss results from current spacecraft, including the Solar and Heliospheric Observatory (SOHO), the Solar Dynamics Observatory, the Sun Watcher (SWAP), and Hinode (Sunrise), and the newer GOES/UVSI (Solar Ultraviolet Imager) run by an alumnus as well as additional Total Solar Irradiance measurements from spacecraft. We will discuss the role of solar observations in confirming Einstein's General Theory of Relativity with the bending of light at the 1919, 1922, and 2017 total solar eclipses as well as gravitational redshift measurements in solar spectral lines, extending our discussion to the recent "chirp" of gravitational radiation reported from several colliding black holes and neutron stars observed with the Laser Interferometer Gravitational-wave Observatory (LIGO). We also discuss transits of Mercury across the face of the Sun, most recently on November 11, 2019. We highlight the 2004 and 2012 transits of Venus across the face of the Sun as observed from Earth, the first such transits of Venus since 1882, as well as our work in observing transits of Venus from Jupiter with the Hubble Space Telescope. We discuss plans for observing future total solar eclipses, including those of December 4, 2021, near or over Antarctica; October 23, 2023, in northwestern Australia; and April 8, 2024, over Mexico and a U.S. path from Texas to northern New England.

**Requirements/Evaluation:** biweekly tutorial presentations; biweekly response to colleagues' presentations

**Prerequisites:** ASTR 111 or a 200-level Physics course; or permission of the instructor

**Enrollment Limit:** 10

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Winter Study -----**

**ASTR 12 (W) Space Pioneering - Dreams, Math, and Steel on the Existential Boundary**

Over the Earth's five and a half billion year history, only within the last century have its evolved conscious inhabitants acquired the tentative means to travel across the Solar System. At the same moment, in the estimate of Oxford scientist - philosopher Toby Ord *The Precipice*, the total probability of existential catastrophe, including the risk of cometary impacts, climate change, pandemics, and nuclear war over the next one hundred years is as large as 1 in 6. Spacefaring commerce, already honed to astronomical observation, global communication, navigation, and weather-climate monitoring, could serve as a primary defense against life extinction. This course will consider the prospects for a spacefaring civilization, with an elementary, but physics-driven exposition of astronautics, celestial mechanics, lunar resources, space manufacturing, global warming mitigation, and the human settlement of Mars and other space environments - including the eventual possibility of interstellar flight. Students will be invited to apply quantitative reasoning to their critical exploration of global trends in resource consumption and human opportunities toward an open future, as potentially enabled by space technology, commerce, and culture. Elementary mathematical exposition and applications will emphasize conceptual/analog thinking, relying upon "back-of-the-envelope" scaling methods and graphical interpretation. Course grades will be primarily based on class attendance and individual projects. Although brief quantitative papers will be encouraged, students may choose to make an artistic, philosophical, or socially discursive response with their project. Class lectures of 6 to 8 hours per week will constitute the core instructional material, along with small group tutorials and student presentations of up to 3 hours per week. Weekly outside-of-class work including reading, research, or other creative activity can be expected to take approximately 10 hours

**Requirements/Evaluation:** Short paper and final project or presentation

**Prerequisites:** Although previous enrollment in physics, mathematics, or other science courses will be helpful, any Williams College student should be eligible to benefit from this Winter Study offering.

**Enrollment Limit:** 30

**Enrollment Preferences:** Should enrollment be over-subscribed, preference will be given to members of the junior/senior class, and with a view to balancing a mix of both science/math majors and non-majors.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Michael Allison worked for many years as a Space Scientist at the NASA/Goddard Institute for Space Studies in New York City, also serving on several planetary flight projects, including the Cassini/Huygens mission to Saturn and Juno at Jupiter.

**Attributes:** EXPE Experiential Education Courses SLFX Winter Study Self-Expression STUX Winter Study Student Exploration

Winter 2023

LEC Section: 01 MWF 1:00 pm - 3:30 pm Michael Allison

### **ASTR 16 (W) An Infinity of Worlds: Planets and the Search for Life**

Less than a generation ago, we wondered, as we had for millions of years before, whether there were any other planets at all. Now, we are privileged to be in the first generation of humans to know that many of the points of light dusting our night sky are host to orbiting worlds, some of which may be like our Earth. In this course, we will explore the techniques that are being used to discover these new worlds. We will make our own contributions to this great age of discovery, by using NASA spacecraft data to search for new planets. This course, aimed at non-majors, will deal with the science of planet hunting, the astounding diversity of planets known to exist, the emerging science of astrobiology, and the enduring question of "are we alone?" through works of science fiction and cutting-edge research. Coursework will consist of readings from popular science books aimed at a general audience, science-fiction short stories, and excerpts from science-fiction novels, in addition to 1-2 relevant feature films. The primary mode of instruction will be 6 hours per week of in-person class meetings including lectures, small-group activities, and optional evening observing sessions at the rooftop telescope. Evaluation will be based on a final 10-page paper, the topic and format of which is extremely broad.

**Requirements/Evaluation:** 10-page paper

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** If overenrolled, preference will be given to first years and sophomores. I am willing to open a second section if enrolment numbers permit. (e.g. we had 43 enrolled in 2022)

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Rob Wittenmyer '98 is Professor of astrophysics at the University of Southern Queensland in Australia. He is a veteran planet hunter with more than 100 published planet discoveries.

## PHYSICS (Div III)

Chair: Professor Daniel Aalberts

- Daniel P. Aalberts, Chair and Kennedy P. Richardson '71 Professor of Physics; affiliated with: Physics, Bioinformatics, Genomics & Pro
- Charlie Doret, Associate Professor of Physics
- Kevin Flaherty, Lecturer in Astronomy and Observatory Supervisor; affiliated with: Astronomy, Physics
- Graham K. Giovanetti, Assistant Professor of Physics; on leave 2022-2023
- Anne Jaskot, Assistant Professor of Astronomy and Associate of the Hopkins Observatory; affiliated with: Astronomy, Physics; on leave 2022-2023
- Katharine E. Jensen, Assistant Professor of Physics
- Catherine Kealhofer, Assistant Professor of Physics; on leave Spring 2023
- Protik K. Majumder, Barclay Jermain Professor of Natural Philosophy, Chair of Astronomy; affiliated with: Physics, Astronomy
- Frederick W. Strauch, William Edward McElfresh Professor of Physics; on leave 2022-2023
- David R. Tucker-Smith, Halvorsen Professor for Distinguished Teaching and Research of Physics; on leave Fall 2022
- Jennifer G. Winters, Visiting Assistant Professor of Physics

What is light? How does a laser work? What is a black hole? What are the fundamental building blocks of the universe? Physics majors and Astrophysics majors study these and related questions to understand the physical world around us, from the very small to the very large. A physics student practices the experimental methods used to learn about this world and explores the mathematical techniques and theories developed to explain these physical phenomena. A Physics major or Astrophysics major serves as preparation for further work in physics, astrophysics, applied physics, other sciences, engineering, medical research, science teaching and writing, and other careers involving critical thinking, problem-solving, and insight into the fundamental principles of nature.

### ASTROPHYSICS MAJOR

The Physics Department, in cooperation with the Astronomy Department, offers a major in Astrophysics. [More information about the Astrophysics major can be found on the Astronomy Department site.](#)

### PHYSICS MAJOR

#### Introductory Courses

Students considering a major in physics should take both physics and mathematics as first-year students. Students typically begin with Physics 141 and Mathematics 150 or 151 (multivariable calculus); students who wish to begin with Physics 131 should consult with the department.

Physics 131 Introduction to Mechanics. This is designed as a first course in physics. It is suitable for students who either have not had physics before or have had some physics but are not comfortable solving "word problems" that require calculus.

Physics 141 Mechanics and Waves. Students in this course should have solid backgrounds in science and calculus, either from high school or college, including at least a year of high school physics.

The Department of Mathematics will place students in the appropriate introductory calculus course. The physics major sequence courses all make use of calculus at increasingly sophisticated levels. Therefore, students considering a Physics major should continue their mathematical preparation without interruption through the introductory calculus sequence (Mathematics 130, 140, and 150 or 151). Students are encouraged to take Physics 210 as early as possible.

### ADVANCED PLACEMENT

Students with unusually strong backgrounds in calculus and physics may place out of Physics 141 and either: 1) begin with the special seminar course Physics 151 in the fall (typically followed by Physics 210 in the spring), or 2) begin with Physics 142 in the spring (possibly along with Physics 210). Students may take either 151 or 142 but not both. On rare occasions a student with an exceptional background will be offered the option of enrolling in Physics 201.

Placement is based on AP scores, consultation with the department, and results of a placement exam administered during First Days. The exam can also be taken later in the year by arrangement with the department chair. The exam covers classical mechanics, basic wave phenomena, and includes some use of calculus techniques.

## REQUIREMENTS FOR THE MAJOR

A total of ten courses, nine in physics and one in mathematics, are required to complete the Physics major.

### Required Physics Sequence Courses (7)

Physics 141 Mechanics and Waves

Physics 142 Foundations of Modern Physics

or Physics 151 Seminar in Modern Physics

Physics 201 Electricity and Magnetism

Physics 202 Waves and Optics

Physics 210 Mathematical Methods for Scientists

Physics 301 Quantum Physics

Physics 302 Statistical Mechanics and Thermodynamics

### Required Mathematics Course (1)

Mathematics 150 or 151 Multivariable Calculus

Students entering with Advanced Placement in mathematics may obtain credit toward the major for the equivalent Mathematics 150 or 151 taken elsewhere.

### Elective Courses (2)

At least two more physics courses above the 100 level (or other approved courses as noted below) must be taken, bringing the total number of courses for the major to ten.

Students who place out of Physics 141 must substitute one additional elective course, for a total of ten courses.

Students who place out of both Physics 141 and 142 and begin their studies in Physics 201 must substitute one additional elective course, for a total of nine courses.

### Options

- Mathematics 209 or 309 may substitute for Physics 210.
- Astronomy 111 may count in place of Physics 141 if a student places out of 141 (see "advanced placement" above).
- An additional Astronomy or Astrophysics course above the introductory level that is acceptable for the astrophysics major may be counted.
- Two approved Division III courses may be substituted for one Physics course. Approval is on an individual basis at the discretion of the department chair.
- Honors work is in addition to completion of the basic major so Physics 493 and 494 do not count towards the ten courses in the major.

### PREPARATION FOR ADVANCED STUDY

Students who wish to do graduate work in physics, astrophysics, or engineering should elect courses in both physics and mathematics beyond the minimum major requirements. The first-year graduate school curriculum in physics usually includes courses in quantum mechanics, electromagnetic theory, and classical mechanics that presuppose intermediate level study of these subjects as an undergraduate. Therefore, students planning graduate work in physics should elect all of the following courses:

Physics 402T Applications of Quantum Mechanics

Physics 405T Electromagnetic Theory

Physics 411T Classical Mechanics

### ADVISING

Both majors and non-majors are encouraged to consult with the department chair or course instructors about course selections or other matters.

### THE DEGREE WITH HONORS IN PHYSICS

The degree with honors in Physics will be awarded on the basis of a senior thesis presenting the results of a substantial experimental or

theoretical investigation carried out under the direction of a faculty member in the department. There is no rigid grade point average required for admission to the program or for the awarding of the degree with honors, but it is normally expected that honors students will maintain at least a B average in physics and mathematics. Students will normally apply for admission to the program early in the spring of their junior year and during senior year these students will normally elect Physics 493, W31, and 494 in addition to the usual requirements for the major. At the end of winter study, the department will decide whether the student will be admitted to honors candidacy. Both a written thesis and a colloquium presentation of the results are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill them with unusually high distinction.

Honors candidates will also be required to attend departmental colloquium talks.

## STUDY ABROAD

The physics community is international in scope and a career in physics (or a related field) can provide many opportunities for travel and contact with individuals from outside the United States. The physics major at Williams is a carefully structured four-year program designed to prepare students who are so inclined for graduate study at leading research institutions. While it is possible to complete the major requirements in three years, such a major will not usually not lead to further study in the field. With careful early planning on the part of a student, and close consultation with the department chair, it is possible to complete a strong major and still study abroad provided the foreign institution can provide courses which reasonably substitute or supplement those in the Williams major program. Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Here are answers to frequently asked questions related to study abroad:

**Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in many cases, though students should be sure to contact the department.

**What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description.

**Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

No.

**Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

No.

**Are there specific major requirements that cannot be fulfilled while on study away?**

No.

**Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

Yes. The laboratory component of Physics 301 serves as our "advanced lab course." Students often cannot get equivalent experience abroad and must take this when they return senior year (non-credit). Unless there has been a recent change, our own Oxford Program is one place students cannot get lab experience.

## OPTIONS FOR NON-MAJORS

Many students want to take a self-contained and rigorous full-year survey of physics. For such students, the most appropriate sequence will be either Physics 131 or Physics 141 followed by Physics 132, depending on the student's background in science and mathematics (see Introductory Courses above). Either of these sequences satisfies the physics requirement for medical school.

The department also offers one-semester courses designed for non-majors, including Physics 107, Physics 108, and Physics 109.

## PHYS 106 (F) Being Human in STEM (DPE)

**Cross-listings:** PHYS 106 GEOS 106 STS 106

### Primary Cross-listing

This course combines academic inquiry and community engagement to investigate the themes of diversity and social climate within STEM (science, technology, engineering and mathematics) disciplines. Students will examine how diverse identities including but not limited to gender, race, disability,

sexuality, national origin, socioeconomic status, religion, and ethnicity shape the STEM experience both at Williams and nationally. We will ground our understanding through critical reading of primary scholarly research on topics such as implicit bias, identity threat, and effects of team diversity on excellence. From there, we will execute small group projects. Students will design, execute, and evaluate interventions that relate to the course goals and that have direct relevance to Williams students, faculty, and staff. For example, a student group could implement a survey of minoritized STEM students, or create a qualitative interview-based assessment of how socioeconomic status impacts students' abilities to participate in STEM fields. Course work includes weekly readings, reflective/opinion writing, in class discussion, and the development and presentation of a group project.

**Class Format:** class discussions, group project work (out of class time required)

**Requirements/Evaluation:** short response papers, class discussion participation, leading class discussions, group work, and final project

**Enrollment Limit:** 15

**Enrollment Preferences:** DIV III majors; statement of interest may be requested

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** does not count towards GEOS or PHYS major credit

**Distributions:** (D3) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHYS 106 (D3) GEOS 106 (D3) STS 106 (D2)

**Difference, Power, and Equity Notes:** This course explicitly addresses the intersection of marginalized identities and the STEM experience. Students will learn how to critically address how issues such as gender, race, ethnicity, and disability impact participation in and the experience of STEM fields. For example, students will read and critique literature documenting bias in STEM fields, and will also learn about and create interventions that can address these biases.

Not offered current academic year

### **PHYS 108 (F) Energy Science and Technology (QFR)**

**Cross-listings:** ENVI 108 PHYS 108

Primary Cross-listing

Energy use has skyrocketed in the United States and elsewhere in the world, causing significant economic and political shifts, as well as concerns for the environment. This course will address the physics and technology of energy generation, consumption, and conservation. It will cover a wide range of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating, and building lighting. Students will learn to compare the efficiencies and environmental impacts of various energy sources and uses.

**Class Format:** twice a week, occasional lab exercises, and a field trip to the college heating plant, all during class hours

**Requirements/Evaluation:** weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative

**Prerequisites:** high school physics, high school chemistry, and mathematics at the level of MATH 130

**Enrollment Limit:** 20

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ENVI 108 (D3) PHYS 108 (D3)

**Attributes:** ENVI Natural World Electives

Not offered current academic year

### **PHYS 109 (S) Sound, Light, and Perception (QFR)**

Light and sound allow us to perceive the world around us, from appreciating music and art to learning the details of atomic structure. Because of their importance in human experience, light and sound have long been the subject of scientific inquiry. How are sound and light related? How do physiology and neural processing allow us to hear and see the world around us? What are the origins of color and musical pitch? This course introduces the

science and technology of light and sound to students not majoring in physics. We will start with the origins of sound and light as wave phenomena, and go on to topics including color, the optics of vision, the meaning of musical pitch and tone, and the physical basis of hearing. We will also discuss some recent technological applications of light, such as lasers and optical communications. The class will meet for two 75-minute periods each week for a variable mixture of lecture, discussion, and hands-on, interactive experiments.

**Class Format:** each student will attend one lecture plus one conference section weekly

**Requirements/Evaluation:** class participation, problem sets, in-class exams, oral presentations, and a final exam, all with a quantitative component

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** non-science majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This class will have weekly problem sets requiring substantial quantitative reasoning

Spring 2023

LEC Section: 01 Cancelled

### **PHYS 131 (F) Introduction to Mechanics (QFR)**

We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.

**Requirements/Evaluation:** exams, labs, and weekly problem sets, all of which have a substantial quantitative component

**Prerequisites:** MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead

**Enrollment Limit:** 30

**Enrollment Preferences:** seniority

**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This class will have weekly problem sets requiring substantial quantitative reasoning

Fall 2022

LEC Section: 01 MWF 11:00 am - 11:50 am John H. Lacy

LAB Section: 02 M 1:00 pm - 4:00 pm Kevin R. Forkey, Brough Morris

LAB Section: 03 T 1:00 pm - 4:00 pm Kevin R. Forkey, Brough Morris

LAB Section: 04 Cancelled

### **PHYS 132 (S) Electromagnetism and the Physics of Matter (QFR)**

This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics,

radioactivity, and uses of radiation.

**Class Format:** lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, quizzes and exams

**Prerequisites:** PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)

**Enrollment Limit:** 22 per lab

**Enrollment Preferences:** sophomores

**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Significant homework, exams, quizzes requiring mathematical and physical reasoning.

Spring 2023

LAB Section: 02 M 1:00 pm - 4:00 pm Kevin R. Forkey

LAB Section: 03 T 1:00 pm - 4:00 pm Kevin R. Forkey

### **PHYS 141 (F) Mechanics and Waves (QFR)**

This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

**Class Format:** lecture, three hours per week; laboratory, three hours approximately every other week; conference section, one hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, three or more short quizzes/tests, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** high school physics and MATH 130 or equivalent placement, or permission of the instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** first-year students and science majors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

LAB Section: 03 T 1:00 pm - 4:00 pm Katharine E. Jensen

### **PHYS 142 (S) Foundations of Modern Physics (QFR)**

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires we rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system.

This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of physics or as the basis for future advanced study of these topics.

**Class Format:** lecture, three hours weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and problem-solving/discussion sessions

**Requirements/Evaluation:** weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151

**Enrollment Limit:** 14/L

**Enrollment Preferences:** first-year students

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

Spring 2023

LAB Section: 03 T 1:00 pm - 4:00 pm Jennifer G. Winters

### **PHYS 151 (F) Seminar in Modern Physics (QFR)**

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity has extended physics into the realm of high speeds and high energies and requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our notions of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course covers the same core material as PHYS 142 but in a small seminar format for students with strong prior preparation in physics.

**Class Format:** three 50-minute lecture/discussions per week, one 3-hour lab per week

**Requirements/Evaluation:** class participation, weekly lab assignments, weekly problem sets, exams

**Prerequisites:** placement by the department (see "advanced placement" section in the description about the department). Students may take either PHYS 142 or PHYS 151 but not both

**Enrollment Limit:** 18

**Enrollment Preferences:** first-years

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** this is a small seminar designed for first-year students who have placed out of PHYS 141

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** all assignments in the course have a substantial quantitative component

CON Section: 03 M 11:00 am - 11:50 am Jennifer G. Winters

### **PHYS 201 (F) Electricity and Magnetism (QFR)**

The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell's equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory

of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** problem sets, labs/conference section assignments, two take-home midterms, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151

**Enrollment Limit:** 10 per lab

**Enrollment Preferences:** prospective physics majors, then by seniority

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

Fall 2022

LAB Section: 02 T 1:00 pm - 4:00 pm Catherine Kealhofer

LAB Section: 03 W 1:00 pm - 4:00 pm Catherine Kealhofer

### **PHYS 202 (S) Vibrations, Waves and Optics (QFR)**

Waves and oscillations characterize many different physical systems, including vibrating strings, springs, water waves, sound waves, electromagnetic waves, and gravitational waves. Quantum mechanics even describes particles with wave functions. Despite these diverse settings waves exhibit several common characteristics, so that the understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. The rest of the course focuses on electromagnetic waves and in particular on optical examples of wave phenomena. In addition to well known optical effects such as interference and diffraction, we will study a number of modern applications of optics such as short pulse lasers and optical communications. Throughout the course mathematical methods useful for higher-level physics will be introduced.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** problem sets, labs, midterm examinations, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 201; co-requisite: PHYS/MATH 210 or MATH 209 or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** sophomores

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course has substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

LAB Section: 03 W 1:00 pm - 4:00 pm Charlie Doret

### **PHYS 210 (S) Mathematical Methods for Scientists (QFR)**

**Cross-listings:** PHYS 210 MATH 210

**Primary Cross-listing**

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

**Class Format:** three hours per week

**Requirements/Evaluation:** several exams and weekly problem sets, all of which have a substantial quantitative component

**Prerequisites:** MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

**Enrollment Limit:** 50

**Enrollment Preferences:** sophomores and juniors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHYS 210 (D3) MATH 210 (D3)

**Quantative/Formal Reasoning Notes:** This course will have weekly problem sets using advanced calculus methods

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Daniel P. Aalberts

**PHYS 234 (S) Introduction to Materials Science (QFR)**

**Cross-listings:** GEOS 234 PHYS 234

**Primary Cross-listing**

Materials Science is the study of how the microscopic structure of materials--whether steel, carbon fiber, glass, wood, plastic, or mayonnaise--determines their macroscopic mechanical, thermal, electric, and other properties. Topics of this course include classifying materials; material structure; thermodynamics and phase transformations; material properties and testing; how solids bend, flow, and ultimately break; and how to choose the right material for design applications. Materials Science is a highly interdisciplinary field and as a result the course prerequisites are broad but also flexible. Interested students who are unsure about their preparation are strongly encouraged to contact the instructor.

**Class Format:** lecture (3 hours per week) plus three to four small-group laboratory sessions throughout the semester (to be scheduled with instructor)

**Requirements/Evaluation:** weekly problem sets, class participation, and midterm and final exams, all of which have a substantial quantitative component

**Prerequisites:** high school physics and chemistry, preferably at the AP level, and MATH 140 or AP Calculus (BC), and one 200-level PHYS, CHEM, or GEOS course; or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** based on students' scientific background and seniority

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** This course does not count toward the Geosciences major.

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

GEOS 234 (D3) PHYS 234 (D3)

**Attributes:** MTSC Courses

**Not offered current academic year**

### PHYS 301 (F) Quantum Physics (QFR)

This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics. After a brief discussion of historical origins of the quantum theory, we introduce the Schrodinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 202 and PHYS/MATH 210 or MATH 309

**Enrollment Limit:** 20

**Enrollment Preferences:** physics majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Phys 301 relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

LAB Section: 04 M 1:00 pm - 4:00 pm John H. Lacy

### PHYS 302 (S) Statistical Mechanics & Thermodynamics (QFR)

Macroscopic objects are made up of huge numbers of fundamental particles interacting in simple ways--obeying the Schrödinger equation, Newton's and Coulomb's Laws--and these objects can be described by macroscopic properties like temperature, pressure, magnetization, heat capacity, conductivity, etc. In this course we will develop the tools of statistical physics, which will allow us to predict the cooperative phenomena that emerge in large ensembles of interacting particles. We will apply those tools to a wide variety of physical questions, including the behavior of gases, polymers, heat engines, biological and astrophysical systems, magnets, and electrons in solids.

**Class Format:** lecture/discussion three hours per week and weekly laboratory work

**Requirements/Evaluation:** weekly problem sets, midterm exam, final exam, and labs, all of which have a substantial quantitative component

**Prerequisites:** required: PHYS 201, PHYS/MATH 210 or MATH 309; recommended: PHYS 202, PHYS 301

**Enrollment Limit:** 14 per lab

**Enrollment Preferences:** physics majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** weekly problem sets, exams, and labs, all of which have a substantial quantitative component

**PHYS 312 (S) Philosophical Implications of Modern Physics (QFR)****Cross-listings:** STS 312 PHYS 312 PHIL 312**Primary Cross-listing**

Some of the discoveries made by physicists over the last century seem to show that our common sense views are deeply at odds with our most sophisticated and best confirmed scientific theories. The course will present the essential ideas of relativity theory and quantum theory and explore their implications for philosophy. We will ask, for example, what these theories tell us about the nature of space, time, probability and causality.

**Requirements/Evaluation:** attendance, participation, problem sets, exams, six 1- to 2-page papers and a 12- to 15-page term paper**Prerequisites:** MATH 140, high-school physics, and either a 200-level course in PHIL or a 100-level course in PHYS**Enrollment Limit:** 20**Enrollment Preferences:** Philosophy majors and Physics majors**Expected Class Size:** 20**Grading:** yes pass/fail option, yes fifth course option**Distributions:** (D3) (QFR)**This course is cross-listed and the prefixes carry the following divisional credit:**

**PHYS 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)**

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

**Secondary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**PHYS 321 (S) Introduction to Particle Physics (QFR)**

The Standard Model of particle physics incorporates special relativity, quantum mechanics, and almost all that we know about elementary particles and their interactions. This course introduces some of the main ideas and phenomena associated with the Standard Model. After a review of relativistic kinematics, we will learn about symmetries in particle physics, relativistic wave equations, Feynman diagrams, and selected applications of quantum

electrodynamics, the weak interactions, and quantum chromodynamics. We will conclude with a discussion of spontaneous symmetry breaking and the Higgs mechanism.

**Requirements/Evaluation:** weekly problem sets, a midterm exam, and a final exam

**Prerequisites:** PHYS 301

**Enrollment Limit:** 15

**Enrollment Preferences:** By seniority

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Exams and problem sets all have a significant quantitative component.

Not offered current academic year

### **PHYS 402 (S) Applications of Quantum Mechanics (QFR)**

This course will explore a number of important topics in the application of quantum mechanics to physical systems, including perturbation theory, the variational principle and the semiclassical interaction of atoms and radiation. The course will finish up with three weeks on quantum optics including an experimental project on non-classical interference phenomena. Applications and examples will be taken mostly from atomic physics with some discussion of solid state systems.

**Requirements/Evaluation:** weekly problem sets, tutorial participation, presentations, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 301

**Enrollment Limit:** 10 per sec

**Enrollment Preferences:** Physics and Astrophysics Majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course has weekly problem sets, all of which have a substantial quantitative component.

Spring 2023

TUT Section: T1 F 1:10 pm - 2:25 pm David R. Tucker-Smith

### **PHYS 405 (F) Electromagnetic Theory (QFR)**

This course builds on the material of Physics 201, and explores the application of Maxwell's Equations to understand a range of topics including electric fields and matter, magnetic materials, light, and radiation. As we explore diverse phenomena, we will learn useful approximation techniques and beautiful mathematical tools. In addition to weekly tutorial meetings, the class will meet once a week as a whole to introduce new material.

**Requirements/Evaluation:** weekly problem sets, tutorial participation, presentations, and a final exam or final project, all of which have a substantial quantitative component

**Prerequisites:** PHYS 202 and PHYS/MATH 210 or MATH 209 or MATH 309

**Enrollment Limit:** 10/section

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

Not offered current academic year

### **PHYS 411 (F) Classical Mechanics (QFR)**

This course will explore advanced topics in classical mechanics. Central ideas include the calculus of variations, the Lagrangian and Hamiltonian formulations of mechanics, phase space, central-force motion, non-inertial reference frames (including implications for physics on a rotating Earth),

rigid-body rotations, and non-linear dynamics & chaos, with additional topics from continuum and fluid mechanics as time permits. Numerical and perturbative techniques will be developed and used extensively. We will also examine the ways in which classical mechanics informs other fields of physics. In addition to weekly tutorial meetings the class will meet weekly as a whole to introduce and discuss new material.

**Requirements/Evaluation:** weekly problem sets, tutorial participation, presentations, a final project, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 202 and PHYS/MATH 210 or MATH 309

**Enrollment Limit:** 10/section

**Enrollment Preferences:** majors

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** weekly problem sets requiring substantial quantitative reasoning using analytical and numerical methods.

Fall 2022

TUT Section: T1 F 1:10 pm - 2:25 pm Charlie Doret, Daniel P. Aalberts

### PHYS 412 (F) Heliophysics

**Cross-listings:** ASTR 412 PHYS 412

**Secondary Cross-listing**

We study all aspects of the Sun, our nearest star. In addition to discussing our observations of recent eclipses and what has been learned about the solar atmosphere from eclipse research, we discuss the solar interior (including the Nobel-prize-winning solar neutrino experiment and helioseismology), the photosphere, the chromosphere, the corona, and the solar wind. We discuss the Sun as an example of stars in general. We discuss both theoretical aspects and observational techniques, including work at recent total solar eclipses. We discuss results from current spacecraft, including the Solar and Heliospheric Observatory (SOHO), the Solar Dynamics Observatory, the Sun Watcher (SWAP), and Hinode (Sunrise), and the newer GOES/UVSI (Solar Ultraviolet Imager) run by an alumnus as well as additional Total Solar Irradiance measurements from spacecraft. We will discuss the role of solar observations in confirming Einstein's General Theory of Relativity with the bending of light at the 1919, 1922, and 2017 total solar eclipses as well as gravitational redshift measurements in solar spectral lines, extending our discussion to the recent "chirp" of gravitational radiation reported from several colliding black holes and neutron stars observed with the Laser Interferometer Gravitational-wave Observatory (LIGO). We also discuss transits of Mercury across the face of the Sun, most recently on November 11, 2019. We highlight the 2004 and 2012 transits of Venus across the face of the Sun as observed from Earth, the first such transits of Venus since 1882, as well as our work in observing transits of Venus from Jupiter with the Hubble Space Telescope. We discuss plans for observing future total solar eclipses, including those of December 4, 2021, near or over Antarctica; October 23, 2023, in northwestern Australia; and April 8, 2024, over Mexico and a U.S. path from Texas to northern New England.

**Requirements/Evaluation:** biweekly tutorial presentations; biweekly response to colleagues' presentations

**Prerequisites:** ASTR 111 or a 200-level Physics course; or permission of the instructor

**Enrollment Limit:** 10

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ASTR 412 (D3) PHYS 412 (D3)

**Not offered current academic year**

### PHYS 418 (S) Gravity (QFR)

This course is an introduction Einstein's theory of general relativity. We begin with a review of special relativity, emphasizing geometrical aspects of Minkowski spacetime. Working from the equivalence principle, we then motivate gravity as spacetime curvature, and study in detail the Schwarzschild geometry around a spherically symmetric mass. After this application, we use tensors to develop Einstein's equation, which describes how energy

density curves spacetime. With this equation in hand we study the Friedmann-Robertson-Walker geometries for an expanding universe, and finally, we linearize Einstein's equation to develop the theory of gravitational waves.

**Requirements/Evaluation:** weekly problem sets, a midterm exam, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 301 or PHYS 405 or PHYS 411, or permission of instructor

**Enrollment Limit:** none

**Enrollment Preferences:** none

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** All problem sets and exams will have a substantial quantitative component.

Not offered current academic year

### **PHYS 451 (F) Condensed Matter Physics (QFR)**

Condensed matter physics is an important area of current research and serves as the basis for modern electronic technology. We plan to explore the physics of metals, insulators, semiconductors, superconductors, and photonic crystals, with particular attention to structure, thermal properties, energy bands, and electronic properties.

**Requirements/Evaluation:** weekly readings and problem sets, and exams

**Prerequisites:** PHYS 301 (may be taken simultaneously); or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Physics majors

**Expected Class Size:** 6

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

### Winter Study -----

#### PHYS 12 (W) Drawing as a Learnable Skill

Representational drawing is not merely a gift, but a learnable skill. If you wanted to draw, but have never had the time to learn; or you enjoy drawing and wish to deepen your understanding and abilities, then this course is for you. This intensive course utilizes traditional drawing exercises to teach representational drawing. By using simple techniques and extensive exercises you will learn to see more accurately and realistically represent the physical world. You will learn to draw a convincing portrait, interior, and still life. This course is designed to develop your powers of observation and enhance your innate creative problem solving abilities, which are applicable in any field. Students need no previous artistic experience, just the willingness and desire to learn a new skill. Requirements: students will be expected to attend and participate in all class sessions as well as 2 mandatory study sessions in museums. They will also be required to keep a sketchbook recording their progress and complete a final drawing project. Evaluations will be based on participation, effort, and development. All class sessions are mandatory.

**Requirements/Evaluation:** final project or presentation

**Prerequisites:** none

**Enrollment Limit:** 18

**Enrollment Preferences:** If overenrolled, selection will be based on seniority.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Stella Ehrich lived in Italy for sixteen years, where she spent seven years studying figurative realism in the Simi Studio in Florence. She holds an MFA in painting from Bennington College.

**Materials/Lab Fee:** \$24

**Attributes:** EXPE Experiential Education Courses SLFX Winter Study Self-Expression WELL Winter Study Wellness

Winter 2023

LEC Section: 01 TR 1:00 pm - 4:00 pm Stella Ehrich

#### PHYS 22 (W) Research Participation

Several members of the department will have student projects available dealing with their own research or that of current senior thesis students.

Approximately 35 hours per week of study and actual research participation will be expected from each student.

**Class Format:** to be arranged with instructor

**Requirements/Evaluation:** students will be required to keep a notebook and write a 5-page paper summarizing their work

**Prerequisites:** permission of instructor

**Enrollment Limit:** 1-2

**Enrollment Preferences:** permission of instructor

**Grading:** pass/fail only

Winter 2023

RSC Section: 01 M-F 10:00 am - 3:50 pm Charlie Doret

**PHYS 31 (W) Senior Research: Physics**

To be taken by students registered for Physics 493, 494.

**Class Format:** thesis

**Grading:** pass/fail only

Winter 2023

HON Section: 01 TBA Daniel P. Aalberts

**PHYS 32 (W) Senior Research: Astrophysics**

To be taken by students registered for Astrophysics 495, 496.

**Class Format:** independent study

**Grading:** pass/fail only

Winter 2023

HON Section: 01 TBA Daniel P. Aalberts

**PHYS 99 (W) Independent Study: Physics**

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

**Class Format:** independent study

**Grading:** pass/fail only

Winter 2023

IND Section: 01 TBA Daniel P. Aalberts

## **POLITICAL ECONOMY (Div II)**

**Chair: Professor Darel E. Paul**

### Advisory Committee

- Jon M. Bakija, Chair of Economics and W. Van Alan Clark '41 Third Century Professor in the Social Sciences
- William M. Gentry, Carl Van Duyne Professor of Economics
- Cathy M. Johnson, James Phinney Baxter III Professor of Political Science
- Sara LaLumia, Professor of Economics
- James E. Mahon, Woodrow Wilson Professor of Political Science
- James McAllister, Fred Greene Third Century Professor of Political Science; affiliated with: Political Science, Leadership Studies; on leave 2022-2023
- Darel E. Paul, Professor of Political Science, Chair of Political Economy Program; affiliated with: Political Science, Political Economy
- Sidney A. Rothstein, Assistant Professor of Political Science
- Lara D. Shore-Sheppard, Kimberly A. '96 and Robert R. '62 Henry Professor of Economics; on leave 2022-2023
- Anand V. Swamy, Chair of the Executive Committee for the Center for Development Economics and The Willmott Family Third Century Professor of Economics; affiliated with: Economics, Center for Development Economics
- David J. Zimmerman, Professor of Economics and Orrin Sage Professor of Political Economy

The Political Economy major is designed to give students a grasp of the ways in which political and economic forces interact in shaping public policy. The major includes substantial study of the central analytical approaches in both Political Science and Economics and seeks to surmount the sometimes artificial barriers of specialization that may characterize either discipline taken by itself. Three of the required Political Economy courses undertake a conscious merging of the approaches in the two fields. (These courses are designed by, and usually are taught jointly by, political scientists and economists.) Political Economy 250 examines major theoretical texts in political economy and analyzes economic liberalism and critiques of economic liberalism in the context of current policy issues. Political Economy 401 examines contemporary issues in political economy in their domestic, comparative and international contexts. Political Economy 402 asks students to research and make proposals in policy areas of current importance. Background for the two senior courses is acquired through courses in international economics, public finance, and domestic and international/comparative politics and policy.

Students in Political Economy 402 visit Washington, D.C. Sunday night through Wednesday of the first week of spring vacation to conduct interviews relating to their Political Economy 402 group projects. This is a course requirement and thus a requirement for the major.

### **MAJOR**

The Political Economy major requires students to complete eleven (11) courses: two introductory courses each in Economics and Political Science; one empirical methods course; three core courses specific to the Political Economy Program; and three electives, one from each of three categories. In order to balance students' educations, majors must take at least one elective in Economics and one elective in Political Science; the third elective may come from either Economics or Political Science. In light of the public policy orientation of the program, all majors are also required to complete one course with a substantial experiential education component which is related to the making or effect of public policy. The purpose of the experiential education requirement is for the student to get out into the world and interact with people in cases where the stakes are real, often involving some element of community service or participation in the political process or in the making of or analysis of public policy, in order to learn something about public policy that one cannot get from a purely academic experience. This requirement must be fulfilled prior to taking POEC 402. It can be fulfilled through a regular semester-length course (which might also serve as an elective in the major), a winter study course, a study abroad academic internship, a winter study internship, or a summer internship. The chair distributes a list of approved experiential courses to majors at the beginning of each academic year. For an internship to satisfy the requirement, its focus must be the making or effect of public policy. Approval of the chair is required to use an internship to fulfill this requirement.

### **Two Introductory Economics Courses**

1. ECON 110 Principles of Microeconomics
2. ECON 120 Principles of Macroeconomics

### **Two Introductory Political Science Courses**

3. PSCI 201 Power, Politics, and Democracy in America

4. PSCI 202 World Politics: An Introduction to International Relations

or PSCI 203 Introduction to Political Theory

or PSCI 204 Introduction to Comparative Politics: State, Nation, and Democracy

### One Empirical Methods Course

5. POEC 253 Empirical Methods in Political Economy

or ECON 255 Econometrics

### Three Political Economy Program Courses

6. POEC 250/ECON 299/PSCI 238 Economic Liberalism and Its Critics

7. POEC 401 Contemporary Problems in Political Economy

8. POEC 402 Political Economy of Public Policy Issues

### Three Elective Courses

Students must take at least one elective in Economics and at least one elective in Political Science; the third elective may come from either Economics or Political Science.

Please see the online catalog for up-to-date information on which courses are being offered in the current year.

## **CREDIT FOR COURSEWORK DONE ELSEWHERE**

The three Political Economy Program courses (POEC 250, 401, and 402) must be completed at Williams without exception. Students are strongly encouraged to complete the empirical methods course (POEC 253 or ECON 255) and PSCI 201 at Williams, as versions of these courses offered elsewhere are usually highly imperfect substitutes that will not provide adequate preparation for the senior seminars; students may in rare cases be able to complete either of these requirements during study at another college or university (e.g. during study abroad), but only with prior permission

from the chair. The three electives and other introductory courses in Political Science may be completed during study at another college or university (e.g. during study abroad) with permission of the chair. The general policy of the Program is to grant credit for one course per semester abroad and in extraordinary circumstances, credit for three courses for an entire year abroad. Students who score a 5 on the AP exam in Microeconomics, Macroeconomics, or Comparative Government and Politics may receive credit towards the major for the cognate introductory economics or political science course(s). Credit for A levels and IB exams in Economics and for introductory microeconomics and macroeconomics classes taken at other colleges and universities (subject to approval by the Economics department study away coordinator) is given consistent with the current policy of the Economics Department. Students whose economics department placement exam scores allow them to place out of ECON 110 and/or ECON 120 may receive credit towards the major for the corresponding class. No substitute higher-level coursework is required for majors receiving credit in this way, although it is certainly encouraged. Students cannot substitute AP credit for PSCI 201.

## **RECOMMENDED PROGRESSION THROUGH THE REQUIRED MAJOR COURSES**

ECON 110 and 120 are prerequisites for many higher level POEC and ECON classes. Therefore it is best to take these during your freshman year if you are thinking about majoring in Political Economy. You should also take any of PSCI 201, 202, 203, or 204 in your first year if possible, as you need at least one of those as a prerequisite or co-requisite for POEC 250. As all POEC majors must take PSCI 201 and enrollment preference always goes to underclass students, definitely take that in your first or second year. You should also ensure that your math coursework is sufficient in your first year. MATH 130 (Calculus I) or the equivalent is a prerequisite for the POEC methodology requirement (POEC 253 or ECON 255). You might also consider taking STAT 161 or STAT 201 early on, as that would give you the option of taking ECON 255.

Students should plan to take POEC 250 and POEC 253 (or ECON 255) during the sophomore and junior years, keeping in mind that both POEC 250 and POEC 253 are offered only in the fall, and that ECON 255 requires STAT 161, STAT 201, or STAT 202 as a prerequisite. POEC 401, taken fall of senior year, requires POEC 253 or ECON 255 as a prerequisite, so that prerequisite must be completed before the start of senior year. Students should also get started on their electives during sophomore and junior year.

## **THE DEGREE WITH HONORS IN POLITICAL ECONOMY**

Due to the special demands of this interdisciplinary major, the only route to honors in Political Economy is the thesis. Seniors may pursue the honors thesis course (Political Economy 493-W31) during the fall semester and winter study period. The third course contributing to such an honors program would normally be an elective in Political Science or Economics taken during the junior year. This course, which may be one of the required electives, must be closely related, indeed must prepare the ground for the honors thesis.

Juniors in the Political Economy major with at least a 3.5 GPA in the program may apply for the honors thesis program by means of a written proposal submitted to the chair by mid-April. Written guidelines for such proposals are available on the program website. The proposal should have been discussed with at least two faculty members, and at least one faculty advisor from each discipline must be solicited by the student prior to submission of the proposal.

Final decisions about admission to the honors program will be made in late May after spring grades become available.

To achieve the degree with honors in Political Economy, the thesis must be completed by the end of winter study period and be judged of honors quality by a committee consisting of the two advisors and a third reader. A thesis judged to be of particular distinction will qualify its author for the degree with highest honors.

## **STUDY ABROAD**

Despite the fact that Political Economy requires more courses than the typical major, many Political Economy majors go abroad. The easiest major credits to obtain abroad are the electives in Political Science and Economics. Since POEC 250 and POEC 253 are only offered in the fall, students considering spending only one semester abroad typically find spring to be the better choice. Nonetheless, many students study away for the fall or the whole year. If you expect to be away during the fall of your junior year, it is critical that you either: (a) take POEC 253 in the fall of your sophomore year; or (b) complete MATH 130 as well as STAT 161 or 201 early enough that you can take ECON 255 (which is offered every semester) before the end of your junior year. In addition, if you expect to be away fall of junior year, you should be sure to take POEC 250 in the fall of your sophomore year.

## **FAQ**

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

### **Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the program.

### **What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description.

**Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

No, although because so many of the classes in the program are Williams-specific, there is an effective limit of 2-3.

**Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

Yes. Only Economics or Political Science courses can be awarded credit, and they must satisfy one of the elective categories (or in rarer cases one of the ECON or PSCI intro requirements).

**Are there specific major requirements that cannot be fulfilled while on study away?**

Yes.

**Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

Yes. The POEC major requires 3 specific POEC courses (250, 401, and 402), and one empirical methods course (POEC 253 or ECON 255). The POEC courses are only offered in a single semester (fall for 250, 253, and 401 and spring for 402), and 401 and 402 must be taken in the senior year. 253 can be replaced with ECON 255, which is offered in fall or spring, but ECON 255 has an additional prerequisite of STAT 161, STAT 201, or STAT 202. Studying abroad in POEC requires careful planning.

### **POEC 250 (F) Economic Liberalism and Its Critics**

**Cross-listings:** ECON 299 PSCI 238 POEC 250

#### **Primary Cross-listing**

Economic liberalism holds that society is better off if people enjoy economic freedom. Its critics point to what they believe this position ignores or what it wrongly assumes, and hence, how it would make bad policy. This course explores the relationship between politics and economics by surveying influential works of political economy. Its first part examines major thinkers in relation to the historical development of capitalism in Western Europe and the United States: the classical liberalism of Adam Smith, Karl Marx's revolutionary socialism, and the reformist ideas of John Maynard Keynes. The second part considers mid-20th-century writers who revise and critique economic liberalism from a variety of perspectives, including Friedrich Hayek, Milton Friedman, Ronald Coase, Arthur Okun, and Albert O. Hirschman. The third part surveys significant recent contributions relevant to the themes of the course, with applications to current public policy issues, including topics such as: power relations and autonomy in the workplace; asymmetric information and social insurance; economic inequality and distributive justice; equality of opportunity; the economics of health care; positional goods and the moral foundations of capitalism; economic nationalism and new trade theory; behavioral economics; climate change and intergenerational equity; finance and financial crises; and rent-seeking. The combination of the historical focus of the early part of the course with discussion of modern policy issues and debates in the latter part of the course permits you to appreciate the ongoing dialogue between classical and contemporary views of political economy.

**Class Format:** This class uses a flipped classroom approach, where before each class meeting, students watch a lecture video, and sometimes write an essay or solve some problems on relating to the assigned reading and video, and then in-person class is devoted primarily to discussion.

**Requirements/Evaluation:** six short essays, several short homework assignments, and a final exam

**Prerequisites:** ECON 110 and 120 or equivalent; PSCI 201, 202, 203, or 204 (may be taken concurrently with POEC 250); open to non-majors

**Enrollment Limit:** 30

**Enrollment Preferences:** Political Economy majors and sophomores intending a Political Economy major

**Expected Class Size:** 30

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 299 (D2) PSCI 238 (D2) POEC 250 (D2)

**Attributes:** AMST Critical and Cultural Theory Electives POEC Required Courses

Fall 2022

SEM Section: 01 MR 2:35 pm - 3:50 pm William M. Gentry, James E. Mahon

**POEC 253 (F) Empirical Methods in Political Economy (QFR)**

This course introduces students to common empirical tools used in policy analysis and implementation. The broad aim is to train students to be discriminating consumers of public policy-relevant research. The emphasis in the course is on intuitive understanding of the central concepts. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; random variables and distributions; statistical estimation, inference and hypothesis testing; and modeling using multiple regression, with a particular focus on understanding whether and how relationships between variables can be determined to be causal--an essential requirement for effective policy formation. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

**Requirements/Evaluation:** Problem sets, group project, midterm exam, final exam

**Prerequisites:** MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255

**Enrollment Limit:** 20

**Enrollment Preferences:** Political Economy majors, Environmental Policy majors and sophomores

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.

**Attributes:** PHLH Statistics Courses POEC Required Courses

Fall 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Anand V. Swamy

**POEC 397 (F) Independent Study: Political Economy**

Open to juniors or seniors majoring in Political Economy, with approval of a faculty supervisor and the chair.

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

Fall 2022

IND Section: 01 TBA Darel E. Paul

**POEC 398 (S) Independent Study: Political Economy**

Open to juniors or seniors majoring in Political Economy, with approval of a faculty supervisor and the chair.

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

Spring 2023

IND Section: 01 TBA Darel E. Paul

**POEC 401 (F) Contemporary Problems in Political Economy**

This course examines contemporary problems in political economy at and across diverse spatial scales. Using both Economics and Political Science methods of analysis, students will study the way societies respond to the myriad risks facing its citizens. The goal of this course is both to build upon theoretical debates encountered in POEC 250 as well as to prepare students for the public policy analysis they will do in POEC 402.

**Requirements/Evaluation:** one 5-7 page paper; one 10-12 page final policy paper; multiple in-class group presentations; class participation

**Prerequisites:** ECON 110 and 120; PSCI 201; PSCI 202, 203, or 204, or equivalent; POEC 253 or ECON 255 or equivalent, or permission of instructor; open to non-majors

**Enrollment Limit:** 15

**Enrollment Preferences:** Political Economy majors

**Expected Class Size:** 13

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** required for the Political Economy major

**Distributions:** (D2)

**Attributes:** GBST Economic Development Studies Electives POEC Required Courses

Fall 2022

SEM Section: 01 TR 9:55 am - 11:10 am Sidney A. Rothstein, David J. Zimmerman

### **POEC 402 (S) Political Economy of Public Policy Issues**

In this course, students form groups that conduct a political and economic analysis of a public policy issue of their choosing. They do extensive reading, conduct interviews in Washington, D.C. (during spring recess), write a major report on their findings and recommendations, and present and defend their findings in a public talk. Students visit Washington, D.C. Sunday night through Wednesday of the first week of spring vacation to conduct interviews relating to their group projects. This is a course requirement.

**Class Format:** student presentations

**Requirements/Evaluation:** group policy projects including an 80- to 100-page paper and 2-hour presentation

**Prerequisites:** POEC 253 or ECON 255, POEC 250, POEC 401; open only to Political Economy majors

**Enrollment Limit:** 19

**Enrollment Preferences:** open only to Political Economy majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** required for the Political Economy major

**Distributions:** (D2)

**Attributes:** EXPE Experiential Education Courses POEC Required Courses

Spring 2023

### **POEC 493 (F) Honors Thesis: Political Economy**

Political Economy independent study.

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

Fall 2022

HON Section: 01 TBA Cathy M. Johnson, David J. Zimmerman

### **Winter Study -----**

### **POEC 31 (W) Honors Thesis: Political Economy**

To be taken by students registered for Political Economy 493.

**Class Format:** thesis

**Grading:** pass/fail only

Winter 2023

HON Section: 01 TBA Cathy M. Johnson

**POEC 99 (W) Independent Study: Political Economy**

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

**Class Format:** independent study

**Grading:** pass/fail only

## POLITICAL SCIENCE (Div II)

Chair: Professor Mark Reinhardt

- George T. Crane, Edward S. Greenbaum 1910 Professor in Political Science
- Justin Crowe, Chair of Leadership Studies and Professor of Political Science; affiliated with: Political Science, Leadership Studies
- Laura D. Ephraim, Associate Professor of Political Science; on leave 2022-2023
- Galen E Jackson, Assistant Professor of Political Science
- Joy A. James, Ebenezer Fitch Professor of Humanities; affiliated with: Humanities, Political Science
- Cathy M. Johnson, James Phinney Baxter III Professor of Political Science
- Michael D. MacDonald, Frederick L. Schuman Professor of International Relations
- James E. Mahon, Woodrow Wilson Professor of Political Science
- James McAllister, Fred Greene Third Century Professor of Political Science; affiliated with: Political Science, Leadership Studies; on leave 2022-2023
- Nicole E. Mellow, Chair and Ephraim Williams Professor of Political Science; affiliated with: Political Science, Leadership Studies
- Nimu Njoya, Lecturer in Political Science
- Darel E. Paul, Professor of Political Science, Chair of Political Economy Program; affiliated with: Political Science, Political Economy
- Mark T. Reinhardt, Class of 1956 Professor of American Civilization; affiliated with: Political Science, American Studies
- Neil Roberts, Professor of Africana Studies and Faculty Affiliate in Political Science and Religion; affiliated with: Africana Studies, Religion, Political Science; on leave 2022-2023
- Sidney A. Rothstein, Assistant Professor of Political Science
- Cheryl Shanks, Professor of Political Science
- Matthew Tokeshi, Assistant Professor of Political Science
- Mason B. Williams, Assistant Professor of Leadership Studies and Political Science; affiliated with: Leadership Studies, Political Science

Politics is most fundamentally about forging and maintaining community, about how we manage to craft a common destiny guided by shared values. Communities need a way to reconcile conflicts of interest among their members and to determine their group interest; they need to allocate power and to determine its just uses. Power may be used wisely or foolishly, rightly or cruelly, but it is always there; it cannot be wished away. Political science attends to the ways that social power is grasped, maintained, challenged, or justified. The contests over power and the values that it should be used to further give politics its drama and pathos. The effort to understand politics aims not only to describe and explain, but also to improve political life.

The Political Science major is structured to allow students either to participate in the established ways of studying politics or to develop their own focus. To this end, the department offers two routes to completing the major, each requiring nine courses. We invite students either to organize their major through the subfields that structure the discipline of political science (American politics, international relations, political theory, and comparative politics), or to develop individual concentrations reflecting their particular interests, regardless of subfields.

### MAJOR

**Subfield Concentration Route:** Upon declaring a major, students choose one subfield: American politics, international relations, political theory, or comparative politics. The subfield concentration draws at least four (4) of the nine courses from one subfield including the appropriate core course from 201-204, two electives of the student's choice at the 200 or 300 level and the senior seminar (or an individual project) in the student's subfield. Students selecting political theory as their subfield concentration must take Political Science 231 or Political Science 232 as one of their four subfield courses, in addition to taking Political Science 203 and prior to taking Political Science 430. With permission of the department chair, students may take a senior seminar in a different subfield, providing they take a third elective in the subfield of concentration. In addition, students must take courses in two subfields outside the subfield of concentration to satisfy the breadth requirement (all methods courses also count toward the breadth requirement). The faculty advisor must approve the student plan. All students must take at least one 300-level course and one research course to complete the major. (Most senior seminars are also research courses but, especially in political theory, not all are.) In addition, no more than two

100-level courses can count toward the major.

**Individual Concentration Route:** Alternatively, students may devise a concentration of their own. In this event, the student prepares a curricular plan in consultation with a faculty advisor, explaining the nature of the concentration and the courses the student will take. The individual concentration also requires nine (9) courses, with at least five (5) thematically linked courses constituting the concentration. Of these five courses, four are electives at the 200 or 300 level, including one from 201-204, and one is a senior seminar or individual project. In addition, students pursuing an individual concentration must take at least two other courses that illustrate breadth in political science. To complete the requirement, the student has their choice of any two other courses within the Political Science Department. The faculty advisor and the department chair must approve the student plan. All students must take at least one 300-level course and one research course to complete the major. (Most senior seminars are also research courses but, especially in political theory, not all are.) In addition, no more than two 100-level courses can count toward the major.

## **ADVISEMENT**

When a student chooses to major in Political Science (usually at the end of the sophomore year), they may register with any Political Science faculty member. The registering faculty member will ask for preferences for a permanent faculty advisor and will assist undecided students in finding an advisor. In all cases, students will be paired by the beginning of junior year with an advisor who will continue with them through graduation.

## **COURSE NUMBERING**

The course numbering used by the Political Science Department reflects the format and specialization of a course. The 100-level courses are designed to address political topics from multiple subfield perspectives; many are seminars designed for first-year students. The 200-level courses are divided between our core courses and our electives. The core courses, numbered from 201-204, serve as introductions both to the substance of politics and the subfields organizing the study of politics. The introductory subfield course must be completed before the senior year. The 200-level elective courses delve into political processes, problems and philosophies. 100-level and 200-level courses have no prerequisites. 300-level courses are more specialized and have prerequisites. 400-level courses are senior seminars offered for students in the major; senior seminars also are open to juniors and to non-majors if space permits. In general, the main subfield of non-core courses can be read from the middle digit of the course number: 0, 1 or 5 for American politics; 2 or 6 for international relations; 3 or 7 for political theory; 4 or 8 for comparative politics. Because the relevant course number is not available, and as some courses may not fit the subfields, please check the "attributes" entry to confirm how the course is categorized by the department.

## **WINTER STUDY PROJECT**

The department welcomes relevant WSP 99 proposals that can make important contributions to the student's understanding of public affairs and politics. Majors, seniors, and students without previous WSP 99 experience have preference.

## **THE JUNIOR YEAR ABROAD**

A major in Political Science can be readily and usefully combined with study off-campus. Generally, only one course taken per semester abroad in a program approved by the College may be counted toward the requirements for a degree in Political Science.

## **FAQ**

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

### **Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in many cases, though students should be sure to contact the department.

### **What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description, though sometimes a syllabus may be needed. How much we need may depend on our familiarity with the institution or program.

### **Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

Yes. Typically we allow not more than one course per semester, or two per year, to count for major credit. In special circumstances, the chair may consider granting an exemption and allow an additional course.

### **Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

No, although this depends on the course. If, after considering description and institution we feel it is not rigorous enough, we will not count it.

### **Are there specific major requirements that cannot be fulfilled while on study away?**

Yes. We do not allow the senior seminar requirement to be fulfilled by study abroad.

### **Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

No. One such required course (either Ancient or Modern Political Thought for those specializing in political theory within the major) can be fulfilled by an appropriate study abroad course.

**Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:**

When issues arise that's almost always because the student did not keep department adequately informed of evolving plans.

### **PREPARATION FOR GRADUATE STUDY**

The Department recommends that students contemplating graduate school, especially if they plan to study fields outside political theory, take a course in research and quantitative methods, such as PSCI 300 or, if it is not taught, ECON/POEC 253.

### **THE DEGREE WITH HONORS IN POLITICAL SCIENCE**

To become a candidate for honors the student must (1) apply in the second semester of the junior year, (2) submit a research proposal acceptable to the department's honors committee and for which an appropriate advisor is available, (3) have a record of academic excellence in Political Science. The last includes not only the student's cumulative GPA in Political Science, generally 3.5 or above, but also demonstrated research and writing skills, evidenced by one or two examples of graded work submitted along with the thesis proposal. Along with the successful completion of a high-quality thesis, the degree with honors in Political Science requires enrollment in the year-long senior thesis seminar, in addition to the other nine (9) courses of the regular major requirements.

### **ADVANCED STUDY IN AMERICAN POLITICS**

The Department of Political Science provides the opportunity for an unusually gifted student to engage in an entire year's advanced research in American politics under singularly favorable conditions. Supported by income derived from an endowment fund, the student, designated the Sentinels of the Republic Scholar (after the name of the fund), receives a substantial research stipend to cover costs associated with the proposed project.

This unique research course (Political Science 481-W33-482) is designed to encourage the pursuit of excellence among the most talented Williams students of Political Science. Admission to it is awarded to the most distinguished candidate on the basis of demonstrated capacity for outstanding work and of the project's promise for creative contributions to the understanding of American politics, political institutions and thought.

### **PSCI 118 (F) Power to the People?**

Popular unrest. The resurgence of authoritarian styles and practices in politics. Democratic collapse. Political tumult around the globe in recent decades has put elites, and others, on edge as young democracies have collapsed and longer standing ones appear to be stumbling. In the United States, basic stability and democratic expansion have been accompanied by increasing citizen distrust of institutions, growing social divisions, contestation over basic citizenship rights, and political violence. The pandemic, related economic distress, social protests and insurrection have only sharpened the precarious state of U.S. democracy. Acute observers have long seen the U.S. as a harbinger of the promise and peril of modern democracies. What is the fate of democracy in the U.S.? What does that portend, if anything, for other democracies, or for the general principle of popular sovereignty--the idea that the people govern themselves? We investigate these and related questions, primarily through active, project-based group research activities, guided by political theory and empirical research in the social sciences. Our investigation will include substantial class-time collaboration with a similarly structured undergraduate course taught by a sociologist at Johns Hopkins University and may include an optional weekend research trip.

**Requirements/Evaluation:** active class participation, three 4-page essays, multiple group assignments, and class presentations

**Prerequisites:** first-year students

**Enrollment Limit:** 14

**Enrollment Preferences:** first-year students

## **PSCI 120 (S) America and the World**

**Cross-listings:** LEAD 120 GBST 101 PSCI 120 GBST 103

### **Primary Cross-listing**

This course will help students understand the US role in the world. US wealth and military power force its leaders to make choices that no other leaders in the world confront. Students will learn to evaluate the decisions that US leaders have made on a wide range of difficult foreign policy issues, including: rising Chinese power; Russian moves in Ukraine; nuclear proliferation to Iran; terrorist threats; humanitarian disasters in Syria and Libya; and long-term challenges like climate change. We will not only describe American involvement in various international issues but also seek to understand the reasons why the US perhaps should or should not be involved, and we will see why such careful reasoning only sometimes gains traction in actual US foreign policy debates. Finally, we will assess whether US foreign policy decisions are coherent - that is, whether the US can be said to follow a "grand strategy." By the end of the course, students will develop their ability to think about foreign policy issues, improving their ability to participate in public life as engaged citizens.

**Class Format:** discussion

**Requirements/Evaluation:** short papers, class participation, and final exercise

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 12

**Cross-listings:** PSCI 155 LEAD 125 LEAD 155 PSCI 125

### **Secondary Cross-listing**

This course introduces students to the major issues in the study of leadership, a central concept in the study of politics. The first part of the course will examine key theoretical problems that have occupied political thinkers from Plato and Confucius to Machiavelli and the American framers: What makes a leader successful? What kinds of regimes best serve to encourage good leaders and to constrain bad ones? What is the relationship between leadership and morality-can the ends justify the means? What functions does leadership fill, and what challenges do leaders face, in modern democratic states? The second half of the course will look at leaders in action, charting the efforts of politicians, intellectuals, and grassroots activists to shape the worlds in which they live. Case studies will include antislavery politics and the American Civil War; the global crises of the 1930s and 1940s; and the social movements of the 1960s and 1970s. In addition to active class participation, students will be expected to write a 5-page proposal for a research paper on a leader of their choice, a 10-page research paper, an in-class midterm exam, and a cumulative, in-class final exam.

**Requirements/Evaluation:** active class participation, 5-page research proposal, 10-page research paper, in-class midterm exam, and a cumulative in-class final exam

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** first-year students and sophomores

**Expected Class Size:** 25

**Grading:** no pass/fail option, no fifth course option

**PSCI 126 (F) Religion, Politics, and Society: A Global Perspective (DPE)**

**Cross-listings:** REL 126 GBST 101 PSCI 126

**Secondary Cross-listing**

In spite of predictions that religion would wither away in the face of modernization, even casual observation indicates that it remains a powerful force in contemporary political life. Our goal is to obtain an enhanced understanding and appreciation of the salience of religion in public life. The course will be divided into three parts. The first part focuses on different theoretical approaches to making sense of the relation between religion, politics, and society, discussing especially the concept of the 'secular' in Western thought and decolonial critique thereof. The second part will take a global perspective on the relation between religion and politics. We will discuss cases of Buddhism, Christianity (Catholicism and Protestantism), Confucianism, Hinduism, Islam (Sunni and Shi'a), and Judaism. The third part focuses on religion in the USA. Here, we will discuss the role of religion in American political culture, the relation of religion to the state, the relevance of religious interests and their political mobilization, religious minorities in the United States, and many other aspects of religion in the US society. Although the study of religion and politics raises a host of deep philosophical questions, the principal aim of the course is to understand how religion affects politics (and vice versa), rather than to explore the normative dimensions of questions raised by the interaction of these two forces.

**Requirements/Evaluation:** Class participation and three papers, in these proportions: 10% attendance; 20% participation; 20% first paper (7 pages); 30% second paper (8-10 pages); and 20% third paper (7 pages). No final exam.

**Prerequisites:** none

**Enrollment Limit:** 35

**Enrollment Preferences:** Global Studies concentrators and intended concentrators; Religion majors and intended majors

**Expected Class Size:** 25

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** Core course for GBST

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

REL 126 (D2) GBST 101 (D2) PSCI 126 (D2)

**Difference, Power, and Equity Notes:** An engagement with religious difference in the world, with a spotlight on how religion and politics--that is, power--interact globally and in the USA.

Fall 2022

LEC Section: 01 TR 8:30 am - 9:45 am Farid Hafez

**PSCI 127 (S) America First? The Trump Era and the Future of World Politics**

**Cross-listings:** LEAD 127 PSCI 127

**Primary Cross-listing**

"America First" was a slogan and a perspective on foreign policy adopted by isolationists like Charles Lindbergh in the 1930's. In the aftermath of Pearl Harbor and the Second World War, a strong bipartisan consensus emerged around the principles of liberal internationalism and "America First" perspectives were marginalized in American politics. However, with the election of Donald Trump, the American presidency is now in the hands of someone who proudly claims the America first mantle. This course provides a historical and theoretical context for understanding what is unique about President Trump's approach to American foreign policy in the 21st century. Particular attention will be devoted to the contrast between the views of Trump and those of the American foreign policy establishment over issues such as NATO, nuclear proliferation, Russia, immigration, terrorism, free trade, and conflicts in the Middle East.

**Requirements/Evaluation:** two analytical essays, short response papers, and final group project

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** potential political science majors and leadership studies concentrators (foreign policy track)

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

### **PSCI 135 (F) Politics after the Apocalypse**

**Cross-listings:** STS 135 PSCI 135

Primary Cross-listing

What shape will politics take after the apocalypse? Even before the coronavirus pandemic gave us reason to wonder if we are, in fact, living through an apocalypse, speculation about the end of the world and its aftermath pervaded recent television, movies, literature, philosophy, and critical theory. In this class we draw these works into conversation with political theories of the "state of nature" and "state of exception" to better understand what political possibilities are opened and foreclosed in times of crisis. What aspects of politics will endure the ravages of fire or pestilence? What new political realities might emerge on ground cleared by disaster? What does it say about pre-pandemic politics that we were so eager to consume stories of states falling and bands of survivors scraping together a nasty, brutish and short existence? And how will the unfolding pandemic change how we respond to these stories? Class will be driven primarily by discussion, typically introduced by a brief lecture.

**Requirements/Evaluation:** two 3-5 page papers, one short story (7-15 pages and including an explanatory cover letter), contributions to a class project documenting and analyzing the pandemic, and class participation

**Prerequisites:** first- or second-year students, or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** first-year students

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2)

STS 135 (D2) PSCI 135 (D2)

**Attributes:** PSCI Political Theory Courses

Not offered current academic year

**PSCI 160 (F) Refugees in International Politics (DPE) (WS)**

Globally, refugees seem to create, and be caught up in, chronic crisis. This course evaluates how this can be--how a crisis can be chronic, and for whom this chronic crisis is a solution. We investigate who refugees are, in international law and popular understanding; read refugee stories; examine international and national laws distinguishing refugees from other categories of migrants; evaluate international organizations' roles in managing population displacement; look at the way that images convey stereotypes and direct a type of aid; consider refugee camps in theory and example; and reflect on what exclusion, integration, and assimilation mean to newcomers and host populations. In whose interest is the prevailing system? Who might change it, and how?

**Requirements/Evaluation:** Ten essays: five lead, five response. The first two weeks' essay grades will be unrecorded.

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** first-year students, to be selected randomly from list of those enrolled.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**Writing Skills Notes:** In addition to writing every week, students will have a chance work on specific skills cumulatively.

**Difference, Power, and Equity Notes:** This course examines the way in which home states categorize people and oppress some, producing refugees; the way that host states categorize people and oppress some, using immigration to shore up the prevailing ethnic hierarchy; and why we worry about some of these categories of oppression more than others.

**PSCI 201 (F)(S) Power, Politics, and Democracy in America**

Begun as an experiment over 200 years ago, the United States has grown into a polity that is simultaneously praised and condemned, critiqued and mythologized, modeled by others and remodeled itself. This course introduces students to the dynamics and tensions that have animated the American political order and that have nurtured these conflicting assessments. Topics include the founding of the American system and the primary documents (the Declaration of Independence, the Constitution, and the Federalist Papers), the primary institutions of national government then and now (Congress, the presidency, and the Supreme Court), and the politics of policy-making in the United States. We study structures, processes, key events, and primary actors that have shaped American political development. In investigating these topics, we explore questions such as these: How is power allocated? What produces political change? Is there a trade-off between democratic accountability and effective governance? How are tensions between liberty and equality resolved? Do the institutions produce good policies, and how do we define what is good?

**Requirements/Evaluation:** depending on the section, some combination of response papers, short-to-medium papers, projects, exams, and class participation

**Prerequisites:** this is an introductory course, open to first-year students and sophomores; juniors and seniors may enroll only with the permission of instructor and under special circumstances

**Enrollment Limit:** 30

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 30

### **PSCI 202 (F)(S) World Politics: An Introduction to International Relations**

World politics is often taken to be an arena of human interaction unto itself, where the concepts that serve us well in understanding domestic politics and our everyday public lives--democracy, law, institutions, morality, authority--are displaced by their opposites--rule by the strong, use of force, raison d'etat, anarchy. In particular, the discipline of International Relations claims special responsibility for analyzing and explaining this arena. But how different is world politics? We live in a world in which resolutions of the United Nations Security Council carry the aura of law and authority; human rights are held up as universal moral standards; international treaties regularly restrain supposedly sovereign states in regulating their domestic economies; culture, wealth and information surge transnationally, and the vast majority of wars are now 'civil' ones. This course is about politics at the world scale and the myriad ways in which scholars and practitioners interpret and explain it. We start by covering international relations theories, and then turn to the international politics of war and peace, trade and globalization, human rights and climate change.

**Requirements/Evaluation:** 2 papers, 6-8 pages in length; final exam; class participation

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** first-year students and sophomores

**Expected Class Size:** 25

**Grading:** no pass/fail option, yes fifth course option

### **PSCI 203 (F)(S) Introduction to Political Theory**

Is politics war by other means? Is it merely a practical way to meet our needs? Or is it, rather, the activity through which citizens pursue justice and the good life? And what is justice? How can it be established and secured? Where does it apply? To whom? What are the powers and obligations of citizenship? Who decides? On what basis? Political theory addresses questions such as these as it investigates the fundamental problems of how people can, do, and ought to live together. The questions have sparked controversy since the origins of political thinking; the answers remain controversial now. This course addresses the controversies, drawing examples from struggles over such matters as racism, colonialism, revolution, political founding, economic order, and the politics of sex and gender, while focusing on major works of ancient, modern, and contemporary theory by such authors as Plato, Aristotle, Machiavelli, Hobbes, Rousseau, Mill, Marx, Nietzsche, Beauvoir, Arendt, Fanon, Rawls, Foucault, and Young. Themes may include power, authority, freedom, justice, equality, democracy, neoliberalism, feminism, and violence, though the emphases will vary from semester to semester.

**Requirements/Evaluation:** Three papers, class participation, and occasional informal writing/Glow posts.

**Prerequisites:** none; this is an introductory course, open to all, including first-year students

**Enrollment Limit:** 25

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

### **PSCI 204 (F)(S) Introduction to Comparative Politics**

The comparative study of politics looks mainly at what goes on *inside* countries, the domestic dynamics of power and institutions and identities. The purpose is to deepen our understanding of politics. In this class we will consider a number of analytic concepts central to the study of politics generally--the state, legitimacy, democracy, authoritarianism, nationalism--to comprehend political processes and transformations in various parts of the world. We will focus particularly on three themes: what is democracy and how might it fail? Why do certain authoritarian regimes persist while others do not? What is political contention and how is it manifest in various contexts?

**Requirements/Evaluation:** 2-3 short papers, a midterm and/or final exam

**Prerequisites:** none

**Enrollment Limit:** 30

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

### **PSCI 208 (F) Wealth in America (WS)**

The pursuit of wealth is an important feature of American political identity, captured by the ideas of the American dream and the Protestant work ethic. The accumulation of wealth has been lauded as both a worthy individual activity and a vital component of the nation's public interest. Yet inequality in wealth may conflict with the political equality necessary for democratic governance and public trust, leading to concerns that we are sacrificing community, fairness, and opportunity for the benefit of a small portion of the population. This course focuses on questions about the public value of wealth and its accumulation, which have become more pressing now that the richest one percent of Americans own about 40 percent of privately held wealth. Some readings will be historical, particularly those focusing on American political thought and the politics of the Gilded Age. Most readings will focus on contemporary political debates about the accumulation, concentration, and redistribution of wealth.

**Requirements/Evaluation:** four 5-page papers and a final 10-page paper that is a revision and extension of a short paper

**Prerequisites:** none; not suitable for first-year students

**Enrollment Limit:** 19

**Enrollment Preferences:** Political Science majors with concentration in American politics and Political Economy majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** American concentration

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Four 5-page papers, peer review, and a revision of extension of one of these papers into a 10-page paper at the end of the semester. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

### **PSCI 209 (F) Poverty in America**

**Cross-listings:** WGSS 209 PSCI 209

#### **Primary Cross-listing**

Although some protest that the U.S. is heading toward European-style socialism, social welfare programs in the U.S. differ in important ways from those in other wealthy and democratic nations. This course focuses on the adoption and development of policies to address poverty and inequality in the U.S. The issues we will explore include: What is poverty, and how do Americans perceive its dangers to individuals as well as the political community? What economic, historical, and sociological theories have been advanced to explain poverty? Why has the U.S. adopted some approaches to reduce poverty but not others? What enduring political conflicts have shaped the U.S. welfare state?

**Requirements/Evaluation:** class participation, two or three short papers, and a final paper

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Political Science, Political Economy, and Women's, Gender and Sexuality Studies majors and concentrators in Public Health

**Expected Class Size:** 20

### **PSCI 212 (S) From Tocqueville to Trump: Leadership and the Making of American Democracy (DPE)**

**Cross-listings:** LEAD 205 PSCI 212

#### **Secondary Cross-listing**

America's founders didn't mean to create a democracy. But since the Revolution, leaders have been fighting to make real for all Americans the promise of government of, by, and for the people. In this course, we will look at how leaders have marshaled ideas, social movements, and technological changes to expand the scope of American democracy--and the reasons they have sometimes failed. We will examine how founders such as Benjamin Franklin and James Madison envisioned the relation between the people and the government; how workers, African Americans, and women fought to participate in American politics; and how globalization, polarization, and inequality are straining American democracy and political leadership in the 21st century. We will examine leadership to better understand American democracy--and vice versa. We will ask: What explains why some leaders have succeeded where others have failed? Have some periods of American democratic politics been more amenable to particular kinds of leadership than others? What makes American political leadership distinctive in international comparison? Who, exactly, has been permitted to participate in American politics, and on what terms? How has the relation between the governors and the governed changed over time, and what factors and events have shaped those relations? How has America's democratic experiment compared with (and interacted with) democracy elsewhere in the world? Is America really a democracy at all?

**Requirements/Evaluation:** bi-weekly short writing assignments, term paper, midterm and final in-class exams

**Prerequisites:** none

### **PSCI 214 (S) Racial and Ethnic Politics in America**

Arguably, the dominant discourse in American politics today is about race. Race is connected to salient issues like immigration and police conduct; to politicians across the political spectrum; and (some argue) to virtually everything in American politics, including fundamental concepts that have no manifest racial content, like partisanship and the size and scope of government. We will evaluate the role of race as it relates to public opinion, political behavior, campaigns, political institutions, and public policy debates, with special attention devoted to the nature of racial attitudes. Most of the course will focus on the historical and contemporary relations between whites and African Americans, but we will also explore topics involving other pan-ethnic communities, particularly Latinos and Asian Americans.

**Requirements/Evaluation:** class participation, one to two short papers (5-7 pages), one medium paper (8-12 pages), an oral presentation, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** poli sci majors first, seniors second, juniors third, sophomores fourth

### **PSCI 215 (S) Race and Inequality in the American City**

**Cross-listings:** LEAD 215 PSCI 215

Primary Cross-listing

In the past half-century, American cities have gotten both much richer and much poorer. The making of "luxury cities" has gone hand-in-hand with persistent, concentrated poverty, extreme racial segregation, mass incarceration, and failing public services-social problems borne primarily by people of color. This course will examine the political underpinnings of inequality in American cities, with particular attention to the racialization of inequality. Among the topics we will cover are: the structures of urban political power; housing and employment discrimination; the War on Crime and the War on Drugs (and their consequence, mass incarceration); education; and gentrification. We will ask: How have city leaders and social movements engaged with urban problems? How have they tried to make cities more decent, just, and sustainable? Under what circumstances has positive leadership produced beneficial outcomes, and in what circumstances has it produced perverse outcomes? We will engage primarily with political science, but also with scholarship in other disciplines, including sociology, history, geography, and legal studies, all of which share an interest in the questions we will be exploring. Students will leave this course with a deeper understanding of contemporary urban problems, a knowledge of the political structures within which those problems are embedded, and a better sense of the challenges and opportunities leaders face in contemporary urban America.

**Requirements/Evaluation:** class participation; several short essays and a longer paper with presentation

### **PSCI 216 (F) American Constitutionalism I: Structures of Power**

**Cross-listings:** PSCI 216 LEAD 216

#### **Primary Cross-listing**

How has the American Constitution been debated and understood over time? What is the relationship between constitutional and political change? This course examines the historical development of American constitutional law and politics from the Founding to the present. Our focus is on structures of power -- the limits on congressional lawmaking, growth of presidential authority, establishment of judicial review, conflicts among the three branches of the federal government, and boundaries between the federal and state and local governments. The specific disputes under these rubrics range from secession to impeachment, gun control to child labor, waging war to spurring commerce; the historical periods to be covered include the Marshall and Taney Court years, the Civil War and Reconstruction, the Progressive Era, the New Deal, the Warren Court, and the contemporary conservative ascendancy. Readings are drawn from Supreme Court opinions, presidential addresses, congressional debates and statutes, political party platforms, key tracts of American political thought, and secondary scholarship on constitutional development. Throughout the semester, our goal will be less to remember elaborate doctrinal rules and multi-part constitutional "tests" than to understand the changing nature of, and changing relationship between, constitutional power and constitutional meaning in American history.

**Class Format:** discussion

**Requirements/Evaluation:** three 5- to 7-page essays, a final exam, and class participation

### Primary Cross-listing

How has the American Constitution been debated and understood over time? What is the relationship between constitutional and political change? This course examines the historical development of American constitutional law and politics from the Founding to the present. Our focus is on rights and liberties -- freedom of speech and religion, property, criminal process, autonomy and privacy, and equality. The specific disputes under these rubrics range from abortion to affirmative action, hate speech to capital punishment, school prayer to same-sex marriage; the historical periods to be covered include the early republic, the ante-bellum era, the Civil War and Reconstruction, World Wars I and II, the Warren Court, and contemporary America. Readings are drawn from Supreme Court opinions, presidential addresses, congressional debates and statutes, political party platforms, key tracts of American political thought, and secondary scholarship on constitutional development. Throughout the semester, our goal will be less to remember elaborate doctrinal rules and multi-part constitutional "tests" than to understand the changing nature of, and changing relationship between, constitutional rights and constitutional meaning in American history.

### PSCI 218 (S) The American Presidency

**Cross-listings:** PSCI 218 LEAD 218

### Primary Cross-listing

Many argue that the presidency has been fundamentally changed by the tenure of Donald Trump. Is this right? To study the presidency is to study human nature and individual personality, constitution and institution, rules and norms, strategy and contingency. This course will examine the problems and paradoxes that attend the exercise of the most powerful political office in the world's oldest democracy: Can an executive office be constructed with sufficient energy to govern and also be democratically accountable? What are the limits on presidential power? How much do we attribute the shaping of politics to the agency of the individual in the office and to what extent are politics the result of structural, cultural, and institutional factors? Are the politics of the presidency different in foreign and domestic policy? How are national security concerns balanced with the protection of civil rights and liberties? How is the office and purpose of the presidency affected by an economic order predicated on private capital? By the character of the occupant? Exploration of these and other questions will lead us to examine topics such as presidential selection, the bases of presidential power, character and leadership issues, congressional-executive interactions, social movement and interest group relations, and the media. Attention will focus largely on the modern presidency, though older historical examples will also be used to help us gain perspective on these problems.

**Class Format:** The course will feature both seminar discussion and several small group research projects.

**Requirements/Evaluation:** three 5 to 7 page papers, small group projects, and class participation involving weekly writing

**Prerequisites:** none

**Enrollment Limit:** 12

**PSCI 220 (F) The U.S. and Afghanistan: A Post-Mortem (DPE)**

**Cross-listings:** ASIA 208 GBST 208 PSCI 220 ANTH 208

Secondary Cross-listing

The United States attacked and defeated the Afghan Taliban regime over in the course of a few short weeks in 2001. Within a few years, the finality of that victory was brought into question as the Taliban regrouped and eventually reasserted itself as a formidable guerilla army that the U.S. military could not easily defeat. At the same time that it was facing a more difficult military challenge than anticipated, the United States got bogged down in the process of nation-building, as well as efforts at social reform. This course examines the history of American involvement in Afghanistan, beginning with the Cold War when the U.S. used Afghanistan as a test case for new models of political modernization and economic development. We will go on to discuss the U.S. support for Islamist political parties during the Soviet occupation of Afghanistan in the 1980s and the consequent rise of the Taliban, and the role of Afghanistan in the September 11th attacks and the "War on Terror" that followed. The course will conclude with a consideration of the impact and legacy of the two decades of nation-building and social reform carried out by the United States since 9/11.

**Requirements/Evaluation:** grading will be determined by class participation, two short (500 word) essays, and a 15-page research paper

**Prerequisites:** none

**PSCI 222 (S) International Relations in the Cyber Age**

This is a class about international politics in the age of cyberweapons. At a general level, it focuses on a set of core conceptual questions: How has the advent of cyberweapons changed how international politics works? Are cyberweapons that target critical infrastructure similar to nuclear weapons, or is that comparison fundamentally flawed? Do concerns about information security alter states' most basic political calculations? How can we expect cyberweapons to shape the future of warfare, intelligence, and security competition? How effective are strategies like cross-domain deterrence? Should the world try to regulate the use of these technologies and, if so, how exactly? The course begins with several sessions that provide a technical overview of key information security concepts and an examination of some prominent hacks. In addition, the beginning of the course will include several classes on the theoretical implications of the advent of the cyber age, as well as a brief historical overview of information security in the post-World War II period. From there, the course will cover a number of important topics and case studies, such as Stuxnet, NotPetya, cyber espionage, intellectual property theft, threats to critical infrastructure, misinformation, propaganda, election interference, the potential implications of quantum computing, and the prospects for the establishment of an international cyber arms control regime. In general, the course will focus on competition between some of the world's premier cyber powers, such as China, Iran, Israel, North Korea, Russia, and the United States.

**Requirements/Evaluation:** Class participation; Two analytical essays, 6-7 pages in length; Final exam

### **PSCI 223 (F) International Law**

International law embodies the rules that govern the society of states. It spells out who can be a sovereign state and how to become one, what states can do, what they cannot do, and who can punish transgressions. It also creates status for other actors, such as international organizations, soldiers, national liberation movements, refugees, terrorists, transnational air and sea shipping companies, and multinational corporations. International law is similar to domestic law, with one very crucial difference: it is not enforced by a centralized, sovereign state. There is no world government. In most other respects, it is the same: it protects the status quo, including the unequal distribution of power among its members; it spells out legitimate and illegitimate ways of resolving conflicts of interest; it is biased toward the powerful and legitimates their interests; it tells its members how to act to coordinate their interests and minimize direct conflict; some of it is purely aspirational, some of it necessary for survival. Like domestic law, it is enforced only some of the time, and then against the weak more than the strong. Yet, law is still where we look for justice and, perhaps, for power to be tamed by the pressure to be legitimate.

**Requirements/Evaluation:** quizzes, Glow posts, two papers on assigned topics, two projects (video, audio, or paper)

**Prerequisites:** None, although those who have not taken PSCI 202 at Williams will be required to review one lecture ppt, then pass a basic quiz based on it by the end of the first week.

### **PSCI 224 (F) Neo-liberalism: What Is It and Why Does It Matter?**

We live in the era of neo-liberalism. But what does this mean? This course will focus on neo-liberalism in comparative perspective, looking mainly at the US and Europe. It will consider how neo-liberalism is defined, the role of states in making and maintaining neo-liberalism, the centrality of markets to neo-liberal conceptions, and the kinds of politics that produced and are produced by neo-liberalism. Economically, the course will look at the institutional configuration of neo-liberalism, changes in economies, growing inequality, the financial crises, and prevalence of debt. Politically, the course will address changes in the role of government, what governments do and do not do, the growing influence of financial interests, the role of identities in mobilizing support for and legitimating governments, and the impact of these developments on the status of citizenship and democracy.

**Requirements/Evaluation:** three papers: one 3-page, one 5-page, and one 10-page paper

### **PSCI 225 (S) International Security**

**Cross-listings:** PSCI 225 LEAD 225

**Primary Cross-listing**

This is a course about war and peace. It deals with some of the most foundational questions that concern scholars of security studies: What accounts for great power conflict and cooperation? Is intense security competition between major states inevitable, or can they get along, provided their main interests are protected? Does the structure of the international system necessarily cause conflict? Do particularly aggressive states? Can wars occur "by accident"? When and why do states choose to use military force? What role does statecraft play in matters of war and peace? How do nuclear weapons affect great power politics? The course will consider these questions from an interdisciplinary perspective that combines political science concepts with an historical approach to the evidence. The bulk of the course deals with the major events in the history of great power politics, such as the causes and conduct of World War I and World War II; the origins and course of the Cold War; the nuclear revolution; and the post-Cold War period. The course concludes with an examination of a number of major contemporary policy debates in security studies.

### **PSCI 226 (S) Aid, Arms, and Armies: The Politics of Intervention in Africa (DPE)**

**Cross-listings:** PSCI 226 LEAD 226 GBST 226

**Primary Cross-listing**

Comprised of nearly 50 countries and home to over 1 billion people, sub-Saharan Africa is remarkable in its diversity, particularly in regards to a number of outcomes central to the study of political science. It has also been a central site of numerous and profoundly impactful interventions for centuries, from the slave trade and colonialism to proxy wars and structural adjustment programs. This class investigates the many types of intervention--including military, humanitarian, and resource extraction--as well as identifying the diverse actors conducting these interventions, from missionaries to mercenaries, the World Bank to the world's leading states (e.g. United States, China, France). We interrogate how these interventions have shaped a number of key political, economic, and social outcomes for African countries, highlighting both case studies as well as common themes. We will also keep an eye out for lessons learned and the future of international interventions--the politics of foreign investment, humanitarian assistance, and multilateral partnerships.

### **PSCI 227 (S) International Relations of the Middle East**

**Cross-listings:** PSCI 227 LEAD 227

#### **Primary Cross-listing**

This is a course about the Middle East in international politics. The structure of the course combines political science concepts with a detailed survey of the region's diplomatic history. The basic format of the course will be to combine brief lectures--either posted on the class website beforehand or given at the start of each class--with an in-depth discussion of each class session's topic. The goal of these discussions is to generate debates over the conceptual, historical, and policy significance of the subjects that we cover. Specifically, the first section of the course will cover the emergence of the Persian Gulf as an area of strategic importance in international politics; U.S. policy toward Saudi Arabia and Iran after World War II; the origins of the Arab-Israeli dispute; the June 1967 and October 1973 Middle East conflicts; Egyptian-Israeli peace; the Iranian Revolution and the Iran-Iraq War; the 1991 Persian Gulf War and its consequences; and the rise of Al Qaeda, Hezbollah, and Hamas. The second part of the course focuses on the Iraq War and its consequences; the rise of ISIS; the Arab Spring; Turkey's changing foreign relations; and the war in Syria. The last section of the course covers contemporary policy challenges confronting the Middle East.

**Requirements/Evaluation:** class participation, two 6- to 8-page papers, final

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** Political Science majors with an International Relations concentration, History majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **PSCI 228 (S) International Organization**

Tens of thousands of international organizations populate our world. IGOs, whose members are sovereign states, range from the Nordic Association for Reindeer Research to NATO and the UN; INGOs, whose members are private groups and individuals, include the International Seaweed Association as well as Doctors Without Borders. We will investigate theories about where they come from, what they do, and to whom they matter, and explore controversies surrounding their agency, legitimacy, efficiency, and accountability. We cover the history, structures and functions of international organizations using case studies.

**Requirements/Evaluation:** two short papers, a presentation, one longer paper, one group project.

**Prerequisites:** none, but the introduction to international politics (202) is strongly recommended. If you have not taken that, you will need to go through a four-hour tutorial before you begin the class. Open to first-year students

**Enrollment Limit:** 25

**Enrollment Preferences:** Political Science majors, Political Economy majors, Public Health concentrators

**Expected Class Size:** 25

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

### **PSCI 229 (S) Global Political Economy**

This course offers a broad introduction to the contemporary global political economy, emphasizing the inherent and inseparable intertwining of politics and economics, power and wealth, the state and the market. The core of the course is made up of analyses of global trade, global finance, natural resources, and migration, with special attention to subjects such as free trade, currency wars, and border walls. Four class debates will focus general concepts on a specific topic: the global implications of the Russo-Ukrainian War. We conclude the course with a look toward the future of global capitalism and of the liberal world order.

**Requirements/Evaluation:** two 2000-2500 word papers, in-class debate, final exam, class participation

**Prerequisites:** none

**Enrollment Limit:** 35

**Enrollment Preferences:** Political Science and Political Economy majors and prospective majors

**Expected Class Size:** 30

### **PSCI 231 (F) Ancient Political Thought**

**Cross-listings:** PHIL 231 PSCI 231

Primary Cross-listing

The core activity of this seminar is the careful reading and sustained discussion of selected works by Plato and Aristotle, but we will also engage such other thinkers as Epictetus and Augustine, and, from a political and theoretical point of view, selections from the Hebrew Bible and New Testament. Among the questions that we will address: What is justice? How can it be known and pursued? How is political power generated and exercised? What are the social and ethical prerequisites--and consequences--of democracy? Must the freedom or fulfillment of some people require the subordination of others? Does freedom require leading (or avoiding) a political life? What distinguishes that kind of life from others? What does it mean to be "philosophical" or to think "theoretically" about politics? Although we will attempt to engage the readings on their own terms, we will also ask how the vast differences between the ancient world and our own undercut or enhance the texts' ability to illuminate the dilemmas of political life for us.

**Class Format:** discussion

**Requirements/Evaluation:** three 7- to 8-page papers

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

### **PSCI 232 (F) Modern Political Thought**

**Cross-listings:** PHIL 232 PSCI 232

#### **Primary Cross-listing**

This course is a chronological survey of major works of political theory from the 16th to the 20th century. In discussions and writing, we will explore the diverse visions of modernity and of politics offered by such thinkers as Machiavelli, Hobbes, Locke, Rousseau, Marx, Mill, and Freud. They help us ask: What is freedom? Who is equal? Who should rule? With what limits and justifications? What form of government best serves the people? Who are the people, anyway? And on what grounds can we justify confidence in our provisional answers to such questions? Class will be primarily driven by discussion, often preceded by brief lectures. Attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

**Requirements/Evaluation:** three papers of 4-6 pages; class participation; brief informal writing tasks inside and outside of class meetings

**Prerequisites:** none; open to all

**Enrollment Limit:** 12

**Enrollment Preferences:** Political Theory concentrators, then Political Science majors

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

### **PSCI 233 (F) Rastafari: Dread, Politics, Agency**

**Cross-listings:** REL 261 AFR 299 PSCI 233

#### **Secondary Cross-listing**

The emergence of Rastafari in the twentieth century marked a distinct phase in the theory and practice of political agency. From its heretical roots in Jamaica, Garveyism, Ethiopianism, and Pan-Africanism, Rastafari has evolved from a Caribbean theological movement to an international political actor. This course investigates the political theory of Rastafari in order to develop intellectual resources for theorizing the concept of agency in contemporary Africana thought and political theory. We will analyze texts and audio-visual works on the political economy of late colonial Jamaica, core Rastafari thinking, political theology, the role of reggae music, the notion of agency, and the influence of Rastafari on global politics.

**Requirements/Evaluation:** attendance and participation, weekly reading e-response papers, two short essays, and a 12- to 15- page final paper

**Prerequisites:** none; open to all

**Enrollment Limit:** 15

**Enrollment Preferences:** Africana Studies concentrators and majors in Political Science and Religion

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

### **PSCI 234 (S) Freedom**

We all want to be free--at least most of us say we do. The desire for political freedom is as old as the ancient world and as new as today's movements and liberation struggles. But what do we mean when we claim to want freedom? What institutions and social conditions make political freedom possible? For instance, do the claims of individual freedom conflict with those of community? With equality? With authority? Does freedom make us happy? Is it what we *really* want? And if it is, will we find it by engaging or turning away from politics? This course confronts these questions through readings drawn from a variety of classic and contemporary sources, including works of fiction, autobiography, journalism, law, philosophy and political theory, and social science. Our discussions will address such topics as activism and stoicism; equality and economic freedom; sexual freedom and gender politics; freedom of speech and religion; citizenship, migration, and cosmopolitanism; racism and colonialism; mass incarceration; and the uses and limits of state power. This course is part of a joint program between Williams' Center for Learning in Action and the Berkshire County Jail in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates and will be held at the jail. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Transportation will be provided by the college. \*Please note the atypical class hours, T. 4:45-8:30 pm\*

**Requirements/Evaluation:** Class attendance and active participation, short essays, and a final paper.

**Prerequisites:** Not open to first-year students.

**Enrollment Limit:** 9

**Enrollment Preferences:** Final selection will be made on the basis of statements of interest solicited after pre-registration, and interviews with the instructor.

**Expected Class Size:** 9

**Grading:** no pass/fail option, no fifth course option

### **PSCI 235 (S) Survival and Resistance: Environmental Political Theory**

**Cross-listings:** ENVI 235 PSCI 235

**Primary Cross-listing**

Contemporary struggles to reverse environmental destruction and establish sustainable communities have prompted some political theorists to rethink longstanding assumptions about politics and its relationship to nature. Does the environment have "rights"? What, if anything, is the difference between an ecosystem and a political community? Is democracy dangerous to the planet's health? Are environmental protections compatible with political freedom? How is the domination or conquest of nature connected with domination and conquest within human societies? What does justice demand in an age of climate change? In this class, we will consider the promise and limits of political theory to illuminate present day environmental crises and foster movements to overcome them. We will engage classic texts that helped to establish political theory's traditional view of nature as a resource, as well as contemporary texts that offer alternative, ecological understandings of nature and its entwinements with politics. Class will be driven primarily by discussion. Students will have significant responsibility for setting the agenda for discussions through informal writing submitted prior to class. As a writing intensive course, attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

**Requirements/Evaluation:** formal and informal writing assignments and class participation

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

### **PSCI 238 (F) Economic Liberalism and Its Critics**

**Cross-listings:** ECON 299 PSCI 238 POEC 250

#### **Secondary Cross-listing**

Economic liberalism holds that society is better off if people enjoy economic freedom. Its critics point to what they believe this position ignores or what it wrongly assumes, and hence, how it would make bad policy. This course explores the relationship between politics and economics by surveying influential works of political economy. Its first part examines major thinkers in relation to the historical development of capitalism in Western Europe and the United States: the classical liberalism of Adam Smith, Karl Marx's revolutionary socialism, and the reformist ideas of John Maynard Keynes. The second part considers mid-20th-century writers who revise and critique economic liberalism from a variety of perspectives, including Friedrich Hayek, Milton Friedman, Ronald Coase, Arthur Okun, and Albert O. Hirschman. The third part surveys significant recent contributions relevant to the themes of the course, with applications to current public policy issues, including topics such as: power relations and autonomy in the workplace; asymmetric information and social insurance; economic inequality and distributive justice; equality of opportunity; the economics of health care; positional goods and the moral foundations of capitalism; economic nationalism and new trade theory; behavioral economics; climate change and intergenerational equity; finance and financial crises; and rent-seeking. The combination of the historical focus of the early part of the course with discussion of modern policy issues and debates in the latter part of the course permits you to appreciate the ongoing dialogue between classical and contemporary views of political economy.

**Class Format:** This class uses a flipped classroom approach, where before each class meeting, students watch a lecture video, and sometimes write an essay or solve some problems on relating to the assigned reading and video, and then in-person class is devoted primarily to discussion.

**Requirements/Evaluation:** six short essays, several short homework assignments, and a final exam

**Prerequisites:** ECON 110 and 120 or equivalent; PSCI 201, 202, 203, or 204 (may be taken concurrently with POEC 250); open to non-majors

**Enrollment Limit:** 30

**Enrollment Preferences:** Political Economy majors and sophomores intending a Political Economy major

**Expected Class Size:** 30

**Grading:** no pass/fail option, no fifth course option

### **PSCI 240 (S) Theories of Comparative Politics**

This course deals with the concepts that organize much of the contemporary study of comparative politics. The course discusses the purposes of states, the origins of capitalism, the relationship of states to capitalism, the connection between identities, cultures, and states, and the definition and nature of power. The readings include Alexis de Tocqueville, Karl Marx, Max Weber, Karl Polanyi, Barrington Moore, Michel Foucault, and Edward Said.

**Class Format:** discussion

### **PSCI 241 (S) Meritocracy**

**Cross-listings:** PSCI 241 SOC 241

#### **Primary Cross-listing**

Although fewer than 1% of Americans have a degree from the country's top 30 colleges and universities, 39% of Fortune 500 CEOs, 41% of federal judges, 44% of the writing and editorial staff at the *New York Times*, 64% of Davos attendees, and 100% of Supreme Court justices do. Is this a positive sign that the United States is governed by its most talented and capable members who have risen through hard work and equal opportunity? Or a negative one pointing to the power of a corrupt and self-selecting elite? This course explores the theme of meritocracy--rule by the intelligent--in comparative perspective. We will look at both old and new arguments regarding the proper role and definition of merit in political society as well as take the measure of meritocracy in present-day Singapore, France, and the United States. The course concludes with a focus on the current debate over American meritocracy and inequality.

**Requirements/Evaluation:** two short papers, one long paper, take-home final exam, discussion questions, class participation

**Prerequisites:** none

### **PSCI 244 (S) Anti-Muslim Racism: A Global Perspective (DPE)**

**Cross-listings:** PSCI 244 GBST 243 REL 247

#### **Secondary Cross-listing**

The racialization of Islam and Muslims has been constitutive to how they have been imagined in Europe and elsewhere. This course looks at how difference works and has worked, how identities and power relationships have been grounded in lived experience, and how one might both critically and productively approach questions of difference, power, and equity. It goes back to the founding moments of an imagined white (at the beginning Christian) Europe and how the racialization of Muslim and Jewish bodies was central to this project, and how anti-Muslim racism continues to be relevant in our world today. The course will not only show how Muslims were constructed as subjects in history, politics and society from the very beginning of the making of Europe and the Americas to the end of the Cold War to the post-9/11 era. Rather, it also looks at how Muslims live through Islamophobia. It looks at processes of racialization of Muslims within the Muslim community and between Muslim communities, while also considering which agencies Muslims take to determine their own future. The course draws from anthropology, gender studies, history, political science, religious studies, postcolonial studies, decolonial studies, and sociology.

**Requirements/Evaluation:** Active class participation, two response papers, and a comprehensive, open-book and open-note final exam.

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Global Studies concentrators and Religion majors

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** Also qualifies for the GBST Urbanizing World track

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PSCI 244 (D2) GBST 243 (D2) REL 247 (D2)

**Difference, Power, and Equity Notes:** The course critically examines difference, power, and equity. Thematically, it looks at the racialization of Islam and the intersection of race, religion, class and gender in the construction of the 'Muslim problem' from a historical as well as a global contemporary perspective. It aims to promote a self-conscious and critical engagement with the practice and experience of difference, especially as it relates to the dynamics of power in structuring that experience.

SEM Section: 01 M 7:00 pm - 9:40 pm Farid Hafez

### **PSCI 245 (S) South African Politics**

The course deals with South African politics since the end of apartheid. The readings will address the politics, policies, and composition of the African National Congress (ANC), the growth of black economic elites and the black middle class, the persistence of poverty and extreme inequality, expanding corruption, and why the ANC continues to dominate politically in spite of unabated poverty and worsening inequality and corruption.

**Requirements/Evaluation:** Two 10-12 page papers and class participation.

**Prerequisites:** None.

**Enrollment Limit:** 10

**Enrollment Preferences:** Political Science majors and prospective majors.

**Expected Class Size:** 10

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** GBST African Studies Electives

Not offered current academic year

### **PSCI 246 (F) Introduction to Capitalism**

Must we choose between "socialism or barbarism?" A century after Rosa Luxemburg's challenge, it is clear that socialism did not win. Does this mean that we have descended to barbarism? Tracing the path of capitalist development in the rich democracies suggests a range of responses. Some states have developed robust institutions that provide for citizens' basic needs and check the power of business; others leave the poor threatened by starvation and workers exposed to exploitation. How and why has capitalism evolved in different forms in different countries? This course introduces students to capitalism by examining the struggles between social groups that lead to variation in distributional outcomes and economic performance. Students will develop a conceptual toolkit to study the politics of capitalism based in the economic history of the rich democracies (Europe, United States) in the twentieth century. The second half of the course challenges students to apply this toolkit to the twenty-first century, focusing on attempts to transition from industrial manufacturing to services. We engage pressing questions around technological innovation, populism, financialization, and globalization.

**Requirements/Evaluation:** Class participation, two presentations, three essays.

**Prerequisites:** None.

**Enrollment Limit:** 25

**Enrollment Preferences:** Potential and actual PSCI and POEC majors.

### **PSCI 247 (S) Political Power in Contemporary China**

**Cross-listings:** PSCI 247 ASIA 249

**Primary Cross-listing**

The People's Republic of China has experienced rapid and extensive economic, social and cultural transformation over the past forty years. Its political system, however, is little changed. The Communist Party still monopolizes power and works hard to suppress organized opposition. Political dissent has taken various forms since 1979 but the regime has found ways to repress and divert it. Yet, in spite of the state's efforts, opposition and dissent continue to bubble to the surface. The course will review the political development of the PRC since 1949 and, then, focus on the dynamics of political contention and regime persistence since the Tiananmen Crisis of 1989.

**Requirements/Evaluation:** 2-3 short papers and a final exam

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Political Science and Asian Studies majors

LEC Section: 01 MR 1:10 pm - 2:25 pm George T. Crane

### **PSCI 248 (F) The USA in Comparative Perspective (WS)**

Politics in the USA is often considered unique and incomparable, and US political science separates the study of American politics from comparative politics. This course overcomes this divide, considering politics and society in the United States comparatively, from a variety of viewpoints and by authors foreign and American, historical and contemporary. Important topics include: the colonial experience and independence; race relations and the African diaspora; national identity and authoritarian populist nationalism; war and state-building; American exceptionalism, religion, and foreign policy; the role of political and economic institutions; and the origins and shape of the welfare state. (As the list suggests, the most common comparisons are with Latin America and Western Europe, but several of our authors look beyond these regions.)

**Class Format:** a lecture in the first week; then ten weeks of tutorial; then a discussion class in the final week

**Requirements/Evaluation:** five 5- to 6-page papers, five 1- to 2-page responses, and one 1-page essay for the final class

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** sophomores and students who have been denied enrollment in the course previously

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Assignments are graded and returned weekly. After each student has written one long paper and one response, professor meets with them individually to discuss the composition and presentation of each genre. For the final class, students bring a one-page response written in "E-prime," English without the verb "to be."

**Attributes:** AMST Comp Studies in Race, Ethnicity, Diaspora PSCI American Politics Courses PSCI Comparative Politics Courses

**Not offered current academic year**

### **PSCI 250 (F) Political Psychology**

This course will examine the role of psychology in politics. The goal is to develop a rich understanding of the foundations of public opinion and political behavior. We will examine the role of social identities, partisan affiliation, concrete interests, values, issues, and ideology in shaping opinion and behavior, as well as the role of external forces such as campaigns, the media, and political elites. Along the way, we will consider a number of longstanding questions in the study of politics, such as: is the public rational? What are the root causes of racism? How does racism influence political choices? Why do people identify with political parties? Why do people vote or engage in other types of political action? How does the mass media and campaigns influence public opinion?

**Requirements/Evaluation:** class participation, 1-2 short papers (5-7 pages), 1 medium paper (8-12 pages), an oral presentation, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** If the course over-enrolls, please give first enrollment preference to political science majors, followed by political economy majors.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PSCI American Politics Courses

Not offered current academic year

### **PSCI 252 (F) Campaigns and Elections**

The 2022 midterm elections are happening in November. Though midterm elections historically generate less involvement than presidential elections, much is at stake in the upcoming midterms, as control of Congress and statehouses will likely determine what, if anything, President Biden achieves in the remainder of his term. This course will examine how we conduct the most fundamental of democratic processes in the United States: the people's choice of their representatives. We will examine factors that shape election outcomes such as the state of the economy, issues, partisanship, ideology, social identities with a special focus on race, interest groups, media, and the candidates themselves. A central question we will consider throughout the course is how "democratic" the conduct of campaigns actually is. For instance, does the citizenry have the motivation and capacity to hold public officials accountable? How do resource gaps tied to inequality in society (such as race and class) influence who votes and for whom? Do the mass media and political elites inform or manipulate the public? How closely do candidates resemble the constituencies they represent, and does it matter? We will apply our learning on many of these topics to the ongoing 2022 midterm elections.

**Requirements/Evaluation:** class participation, 1-2 short papers (5-7 pages), 1 medium paper (8-12 pages), an oral presentation, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** poli sci majors

LEC Section: 01 MR 2:35 pm - 3:50 pm Matthew Tokeshi

### **PSCI 253 (S) The Tragedy of Venezuela**

The recent history of Venezuela offers a window into many of the most important political and economic issues faced by people in developing countries. Why does an abundance of oil seem to solve some problems while often leading to perverse economic and political outcomes? How can democracy be made to work better for ordinary people? What does it mean for a government to be truly sovereign? How does corruption grow and what can we do about it? When should we leave important decisions to technocratic experts? What does it mean today to be progressive? The course first briefly reviews Venezuelan post-Independence history, with an emphasis on the post-1958 democratic settlement. It then explores more deeply the reasons for the breakdown of this settlement, the rise of Hugo Chavez, and the decay of the "21st Century Socialist" regime under Chavez and

Maduro. Materials include biographies, documentary films, short videos, economic data, and news reports.

**Class Format:** discussion

**Requirements/Evaluation:** a map quiz and four short papers

### **PSCI 257 (F) The Revolutionary Generation: Galaxy of Leaders**

**Cross-listings:** PSCI 257 LEAD 285 HIST 354

#### **Secondary Cross-listing**

The American Revolution produced a galaxy of brilliant and creative statesmen and intellectuals: Washington, Hamilton, Jefferson, Madison, Adams. In this seminar, we will study their astounding accomplishments--a successful war of independence, a Constitution and Bill of Rights, enduring democratic political institutions, and a nascent party system. But mostly we will focus on their ideas, for they were thinking revolutionaries. We will examine in depth and in detail their superb writings, their letters and speeches as well as Madison and Hamilton's Federalist essays. We will also read recent interpretations of the founding generation by Gordon Wood, Joseph Ellis, Bernard Bailyn, and others.

**Requirements/Evaluation:** three papers, weekly class presentations, and active participation in all discussions

**Prerequisites:** none; courses in Leadership Studies or Political Theory or early American History are very helpful for admission to this seminar

**Cross-listings:** PSCI 258 LEAD 258

#### **Secondary Cross-listing**

The course examines the relationship between the press and government, its watchdog function, how social media and the Internet are changing its role, the emergence of independent investigative bodies such as Pro Publica, and the myriad ways in which the press has helped shape American history, for better or worse. The course goes behind the headlines to examine the delicate interplay between government and press, peels back the familiar classics of American journalism, but also incorporates the current conflicts and tensions between the press and government. In the new age, how does the press define or redefine balance, neutrality, the quest for objectivity, and restraint. Who is a journalist, a once relatively easy question, but one now fraught with complexity? There has been a tectonic shift in the fundamental standards and practices of the press in recent years. What

are those changes and how does it augur for the future of the press and democratic institutions?

**Requirements/Evaluation:** Several short papers, 10-15 page research paper.

**Prerequisites:** None

**Enrollment Limit:** 14

**Enrollment Preferences:** Preference to Leadership Studies concentrators and Political Science majors.

**Expected Class Size:** 14

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**Attributes:** LEAD American Domestic Leadership

Not offered current academic year

### **PSCI 260 (F) Power, Feminist-Style (DPE) (WS)**

**Cross-listings:** WGSS 260 PSCI 260

Secondary Cross-listing

This course examines one of the most important concepts in the analysis of sex and gender and efforts to envision sexual and gender justice, the concept of power, from multiple feminist perspectives. At the core of feminism lies the critique of inequitable power relations. Some feminists claim that power itself is the root of all evil and that a feminist world is one without power. Others portray the feminist agenda as one of taking power, or of reconstructing society by exercising a specifically feminist mode of power. In this course, we will look at feminist critiques of power, how feminists have employed notions of power developed outside of the arena of feminist thought, and efforts to develop specifically feminist ideas of power. Along the way, we will ask: Are some concepts of power more useful to feminism? Can certain forms of power be considered more feminist than others? How can feminist power be realized? Thinkers we will engage include Judith Butler, Audre Lorde, Catherine MacKinnon, Hannah Arendt, and Patricia Hill Collins.

**Requirements/Evaluation:** eight short writing assignments (ranging from 250 words to 750 words), drafting and revision of a 10 pg final essay

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Women's, Gender, and Sexuality Studies majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

WGSS 260 (D2) PSCI 260 (D2)

**Writing Skills Notes:** This course aims to carefully unpack the writing process by focusing on particular elements of writing (summary, critical analysis) while also introducing students to tools they can use to improve their writing (freewriting). Short writing assignments like the proposal, outline, and abstract build on one another and culminate in a final essay that goes through the process of drafting and, after peer and teacher review, revision.

**Difference, Power, and Equity Notes:** This course requires students to focus on what power does and should look like from the perspective of difference, exploring the relationship between power and equity in the process. Students will reflect on and discuss the working of power in their own lives, why certain forms of power are more or less visible to particular groups, and how different ideas about power promote different interests in society at large.

**Attributes:** WGSS Theory Courses

Not offered current academic year

### **PSCI 261 (F) The Arab-Israeli Conflict (WS)**

This tutorial will cover the Arab-Israeli dispute--from both historical and political science perspectives--from the rise of the Zionist movement in the late

nineteenth century to the present day. It will examine the various explanations that scholars have offered for why the conflict has persisted for so long, how it has evolved over time, the role that outside powers have played in shaping it, and how its perpetuation (or settlement) is likely to impact Middle East politics in the future. More specifically, the class will examine the origins of the Zionist movement; the role that the First World War played in shaping the dispute; the period of the British mandate; the rise of Palestinian nationalism; the Second World War and the creation of the state of Israel; the 1948, 1956, 1967, and 1973 Arab-Israeli wars; Israel's 1982 invasion of Lebanon and its consequences; the promise and ultimate collapse of the Oslo peace process during the 1990s and early 2000s; the rise of groups such as Hamas, Hezbollah, and Palestinian Islamic Jihad; the rightward shift in Israeli politics since 2000; the intensification of Israeli-Iranian antagonism and its implications; the shift in Israel's relations with the Sunni Arab world that has occurred in recent years; and the future of the conflict.

**Requirements/Evaluation:** Biweekly response papers; Biweekly critiques of partner's response papers; Class participation; Final analytical essay

**Prerequisites:** None

**Enrollment Limit:** 10

**Enrollment Preferences:** Political Science Majors

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** This class will require students either to write a paper or critique their partner's paper on a weekly basis. Students will also be required to redraft their papers--based on feedback from both their partner and the instructor--with the goal of improving their ability to make compelling arguments in writing.

### **PSCI 262 (S) America and the Cold War**

**Cross-listings:** HIST 261 PSCI 262 LEAD 262

#### **Primary Cross-listing**

This course examines the rise and fall of the Cold War, focusing on four central issues. First, why did America and the Soviet Union become bitter rivals shortly after the defeat of Nazi Germany? Second, was one side primarily responsible for the length and intensity of the Cold War in Europe? Third, how did the Cold War in Europe lead to events in other areas of the world, such as Cuba and Vietnam? Finally, could the Cold War have been ended long before the collapse of the Soviet Union in 1989? Political scientists and historians continue to argue vigorously about the answers to all these questions. We examine both traditional and revisionist explanations of the Cold War, as well as the new findings that have emerged from the partial opening of Soviet and Eastern European archives. The final section of the course examines how scholarly interpretations of the Cold War continue to influence how policymakers approach contemporary issues in American foreign policy.

**Class Format:** lecture/discussion

**Requirements/Evaluation:** one medium length paper, an in-class midterm and final exam, and a series of short assignments

**Prerequisites:** none; PSCI 202 is recommended but not required

**Enrollment Limit:** 19

**Enrollment Preferences:** Political Science majors and Leadership Studies concentrators

**Expected Class Size:** 19

### **PSCI 265 (S) The International Politics of East Asia**

This course examines the political, economic, and cultural determinants of conflict and cooperation in East Asia. Throughout the semester, we will examine three distinct but inter-related aspects of international relations in East Asia: Security, economy, and culture by using some core concepts and theoretical arguments widely accepted in the study of international relations. We will engage some of the central questions and issues in the current debate on East Asia. Do East Asian countries seek security and prosperity in a way fundamentally different from the Western system? Is there a single best way to maintain regional order and cooperation across regions? Will a strong China inevitably claim its traditional place under the sun? Will Japan continue to live as a nation with enormous economic power but limited military means? What is the choice for South Korea between security alliance with the United States and national reconciliation with the North? What should be done to dissuade the authoritarian regime in North Korea from acquiring nuclear capabilities and lead it to different paths toward national survival? By the end of the semester, you will gain both a general perspective and substantive knowledge on East Asian international politics.

**Class Format:** discussion

**Requirements/Evaluation:** midterm exam, team debate, take-home final exam, class participation and other assignments

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Political Science and Asian Studies majors

### **PSCI 266 (S) The United States and Latin America (DPE)**

This course examines the most important political and diplomatic divide in the Western Hemisphere. The first half is a historical survey of U.S.-Latin American foreign relations from the early Spanish American independence movements through the end of the Cold War and recent developments. We consider how this history confirms or undermines influential views about U.S. foreign relations and about international relations generally. We also compare historical U.S. foreign policy toward the hemisphere to U.S. policy toward the entire world after the Cold War. The second half covers the most important current issues in hemispheric relations: the rise of leftist governments in Latin America; the war on drugs; immigration and border security; and competition with China for influence. At the end we briefly reconsider current U.S. policies in historical perspective.

**Class Format:** more lecture in the first half, more discussion and several in-class debates in the second

**Requirements/Evaluation:** a map quiz, a 2-page paper, two 3-page papers, and either another 3-page paper and a regular final exam, or a 12-page research paper and a short final exam

**Prerequisites:** none

**Enrollment Limit:** 35

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** In the paper that considers the first part of the course, the students weigh to what extent U.S. policy toward Latin America was affected by the largely derogatory attitudes of U.S. diplomats toward Latin Americans. A unit in the second part of the course critically analyzes current U.S. immigration policy in this context.

### **PSCI 268 (S) Israeli Politics**

This is an introductory course on Israeli politics. Approaching questions historically, it centers on but is not restricted to the conflict between Zionism and Palestinians. It begins by addressing the arrival of Zionists, the pursuit of statehood and the in-gathering of Jews, and the responses of neighboring Arab states and local Palestinians. The course also will examine the arrival of Arab Jews in the 1950-60, the conflicts between them and

European Jews, and the effects of their conflicts on Israeli politics. The course then will turn to Israeli settlement policies on the West Bank, the controversies surrounding the Oslo Agreement, and the contemporary situations in the West Bank and Gaza. Finally, the course will address contemporary controversies about what it means to be a Jew in Israel, about the feasibility of a "two-state" solution to the Palestinian issue, about the prospects and implications of a "one-state" solution, and about the implications for Israel of not resolving the Palestinian issue to the mutual satisfaction of Israelis and Palestinians.

**Requirements/Evaluation:** two papers totaling 20 pages

**Prerequisites:** none

### **PSCI 270 (S) The Politics of Waste**

**Cross-listings:** ENVI 241 PSCI 242 PSCI 270

#### **Primary Cross-listing**

Waste is not just a fact of life, it is a political practice. To create and maintain political order requires devising collective means to pile up, bury, burn, or otherwise dispose of stuff deemed dirty or disorderly: waste management is regime management. In turn, our feelings of disgust for anything deemed waste shape political deliberation and action on environmental policy, immigration, food production, economic distribution, and much more. The very effort to define "waste" raises thorny political questions: What (or who) is disposable? Why do we find the visible presence of certain kinds of things or persons to be unbearably noxious? How should we respond to the fact that these unbearable beings persist in existing, despite our best efforts to eliminate them? What is our individual and collective responsibility for creating and disposing of waste? Serious inquiry into waste is rare in political theory and political science--perhaps understandably, given that the study of politics is shaped by the same taboos that shape politics. In this seminar we will openly discuss unmentionable topics and get our hands dirty (sometimes literally) examining the politics of waste. We will take notice of the erasure of waste in traditional political theory and work together to fill these gaps. To do so, we will draw on work in anthropology, critical theory, history, urban studies, and waste management science; representations of waste in popular culture; and experiences with waste in our lives. This course is part of a joint program between Williams' Center for Learning in Action and the Berkshire County Jail in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates and will be held at the jail. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Transportation will be provided by the college. \*Please note the atypical class hours, Wed 4:45-8:30 pm\*

**Requirements/Evaluation:** class attendance and participation, short essays, and a final paper

**Prerequisites:** not open to first-year students

**Enrollment Limit:** 9

**Enrollment Preferences:** final selection will be made on the basis of statements of interest solicited after pre-registration and interviews with the instructor

**Expected Class Size:** 9

## **PSCI 273 (F) Politics without Humans?**

**Cross-listings:** ENVI 273 STS 273 PSCI 273

### **Primary Cross-listing**

Are human beings the only beings who belong in politics? And is political involvement a unique or defining aspect of what it means to be human? Such questions are increasingly complex as the boundaries of "the human" become blurred by the rise of artificial intelligence, robotics, and brain implants: shifting attitudes towards both animal and human bodies; and the automation of economic and military decisions (buy! sell! attack! retreat!) that used to be the prerogative of human actors. How do visions of politics without humans and humans without politics impact our thinking about longstanding questions of freedom, power, and right? Can and should the link between humans and politics survive in an age in which "posthuman" or "transhuman" entities become central characters in the drama of politics? This class will consider these questions through readings, films and artifacts that bring political theory into conversation with science fiction, popular literature on the so-called "singularity" (the merger of humans with computers), science and technology studies, evolutionary anthropology, "new materialist" philosophy, and feminist theory.

**Requirements/Evaluation:** three 5- to 7-page papers, regular Glow posts, class participation

**Prerequisites:** please note that this is an introductory-level course with no prerequisites; first-year students and those with no background in political theory are welcome, as are more experienced students

## **PSCI 280 (S) Silicon Valley: Digital Transformation and Democracy (WS)**

Nearly every country in the world seeks to drive economic growth by promoting digital technologies. The universal model is Silicon Valley. In this tutorial, students will examine the origins of the Silicon Valley model and other countries' attempts to emulate it. Departing from "just so" stories of technological determinism, we take up the lens of comparative political economy to investigate the politics that allowed US tech firms to shape economic policy to meet their interests. It is no accident that tech became a symbol for economic growth in the 1970s, precisely when it also began to build powerful alliances in Washington. After investigating the origins of the Silicon Valley model, we trace attempts to adopt it in Europe and Asia, which highlight the model's political contingencies and some of the more salient conflicts over the tech sector. We focus on the ways in which the Silicon Valley model can threaten social welfare through economic inequality and precarious employment, and engage a variety of perspectives, including workplace ethnography, to examine these threats, as well as potential regulatory responses. The course concludes by considering what policies could be appropriate for supporting, while also regulating, the tech sector in the twenty-first century.

**Requirements/Evaluation:** Five 5-page papers; five 2-page responses; participation

**Prerequisites:** One introductory course in political science and/or permission of the instructor.

**Enrollment Limit:** 10

**Enrollment Preferences:** Preference will be given to sophomores and juniors majoring in PSCI and POEC.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write essays each week. In addition, students will read each others' work and engage in structured critique.

## **PSCI 281 (S) Contemporary African Politics (DPE)**

**Cross-listings:** GBST 281 PSCI 281

**Primary Cross-listing**

This course is an introduction to the contemporary politics of Africa, with the aim of sparking a life-long interest in the affairs of the region. Comprised of nearly 50 countries and home to over 1 billion people, sub-Saharan Africa is remarkable in its diversity, particularly in regards to a number of outcomes central to the study of political science: how do institutions of the past shape current dynamics of political competition and economic growth? Why are some countries stable democracies while others struggle with military coups or authoritarian rule? What sparks political violence and how can countries emerge from conflict? Our focus is both contemporary and comparative, organized thematically around common political experiences and attributes across the region. We begin with the legacies of colonialism, the slave trade, and the politics of liberation. We then interrogate dynamics central to political life in Africa over the 60 years since independence: the role of ethnic diversity in shaping competition, the prominence of patronage politics, and the evolution of elections. We next assess major dimensions that have historically shaped the study of African politics, including conflict and violence, economic development, and foreign aid. The final section takes a comparative approach to some of the most pressing issues in Africa today: health crises, migration and mobility, technological revolution, climate change, and the emerging power of women and youth.

**Class Format:** A typical class session will be about 60% lecture and 40% discussion

**Requirements/Evaluation:** Class Participation, Map Quiz, 3 short papers (5 pages)

**Prerequisites:** None.

**Enrollment Limit:** 25

**Enrollment Preferences:** all first-years and sophomores; those juniors and seniors majoring in political science or concentrating in Global Studies.

**Expected Class Size:** 25

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

GBST 281 (D2) PSCI 281 (D2)

**Difference, Power, and Equity Notes:** This course takes the racial, ethnic, linguistic, and religious diversity of sub-Saharan Africa as a starting point for understanding the contemporary politics of the region. The course addresses the legacies of systemic inequality as well as strategies of resistance to oppression. We also examine how ethnic and religious diversity shape political institutions, competition, and conflict, comparing different countries and over time.

**Not offered current academic year**

**PSCI 282 (F) Africanist Project to Black Consciousness**

**Cross-listings:** PSCI 282 GBST 282

**Primary Cross-listing**

In 1957, when it was clear the African Nation Congress was unwilling to change its multiracialist and nonracialist language in favor of Africanist pronouncements, Robert Mangaliso Sobukwe left the party and became the editor of *The Africanist* newspaper. Two years later he formed the Pan-Africanist Congress. Similarly frustrated that the National Union of South African Students was dominated by white liberals, in 1968 Bantu Steve Biko helped form the black-only South Africa Students' Organization and, four years later, was the key figure in founding of the Black People's Convention, created to promote black consciousness ideas within the broader South African population. This course focuses on Sobukwe's Africanist project and Biko's Black Consciousness Movement, the strategies against apartheid they promoted, and the visions of a free South Africa they imagined.

**Requirements/Evaluation:** class participation; 3 two-page response papers; and a 10-12 final paper.

### **PSCI 284 (F) The Politics of Economic Crises**

The dominant world economies -- the USA, China, and the European Union -- are responding to the economic risks that might arise from the coronavirus with what have become the standard responses to economic crises. They are using debt to create liquidity, demand, and uphold credit markets. As a background to understanding the reasons for and histories of these policies, this course will read several important books that deal with the Great Depression, the financial crisis a decade ago, and the risks of debt.

**Requirements/Evaluation:** Two papers of 8-10 pages are required, along with careful reading of the books.

**Prerequisites:** None

**Enrollment Limit:** 15

**Enrollment Preferences:** Political Science majors.

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

**Attributes:** POEC Comparative POEC/Public Policy Courses PSCI Comparative Politics Courses

Not offered current academic year

### **PSCI 286 (F) Conservative Political Thought**

Conservative thinkers claim to be leading an intellectual transformation away from the tired nostrums of liberalism. They see themselves as original, dynamic, serious. This course will read leading conservative political thinkers with a view to identifying their central tenets, both negative and positive. What is it that they oppose and support? What, if anything, defines contemporary conservative thinking? Is it a coherent body of thought, a doctrine, or a collection of disparate and conflicting thinkers? What is the relationship of thinkers who emphasize the market, order, and traditional values? And what are their views on diversity, citizenship, and race, and how do heterodox leftists fit with conservative critiques of managerial liberalism?

**Requirements/Evaluation:** Two 8-10 page papers and final exam

**Prerequisites:** Political Science Majors

**Enrollment Limit:** 15

**Enrollment Preferences:** Juniors/Seniors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

Not offered current academic year

### **PSCI 288 (F) Transnational Political Movements**

This course focuses on the international dimensions of when people demand political change. We explore transnational dynamics of contentious politics, including how international actors shape domestic campaigns for democracy, peace, and justice, as well as how global advocacy movements (e.g. climate change) are organized and mobilized. Building from an international relations framework, the course brings together a variety of texts, including documentaries, social media, and guest speakers working on the front lines of global advocacy (refugee rights, anti-colonial liberation struggles, and contemporary pro-democracy movements). We critically analyze how external actors and resources inform politics on the ground, both around the world and over time, as well as evaluate the normative implications of "foreign intervention."

**Requirements/Evaluation:** Participation, 3 short papers, final project

**Prerequisites:** PSCI 202, PSCI 204, or permission of the instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** PSCI majors (or intended majors)

**Expected Class Size:** 19

**Grading:** yes pass/fail option, no fifth course option

### **PSCI 289 (S) The welfare state in comparative perspective**

**Cross-listings:** PSCI 289 POEC 289

**Primary Cross-listing**

Modern life has, in some ways, become less risky. You are unlikely to be trampled by a mammoth. But social risk has not disappeared--you could lose your job, get into an accident, or find yourself plunged somehow into poverty. Most countries around the world have built elaborate institutions to ensure citizens' welfare by protecting some people from some risks, but not all people and not all risks. Moreover, these institutions vary considerably both over time and between countries. This course examines those institutions. Our goal is to explain how and why welfare states vary and why there is so much inequality in the distribution of risk. We will do so by investigating the different kinds of institutions that mediate risks throughout the lifecycle, from parental leave to old age pensions, and by comparing these institutions between different countries. While focusing primarily on the welfare states of Western Europe, we will also examine how the politics of social risk unfold around the world, extending our investigation to Africa, Asia, and Latin America. We will conclude by reflecting on what lessons the welfare state offers for managing this century's biggest social risk: climate change.

**Requirements/Evaluation:** 3 essays; 2 presentations; participation

**Prerequisites:** One introductory political science course and/or permission of the instructor

**Enrollment Limit:** 14

### **PSCI 291 (S) American Political Events (WS)**

Scandals. Wars and assassinations. Contested elections, Supreme Court decisions, and constitutional amendments. As large as they loom in our daily experience and our historical memory, these sorts of events--concrete, discrete things that happen in and around the political world--are often underestimated as catalysts of political change. Indeed, in the study of American political development, we often look to complex processes and underlying causes as explanations for how and why ideas, institutions, and policies both emerge and evolve. Yet for all our focus on long-term and subtle causal mechanisms, events often serve as political turning points in ways that vary over time, last for extended periods of time, and are not always entirely predictable at the time. Beginning from the presumption that change often has proximate as well as latent causes, this tutorial focuses on events as critical junctures in American politics. Our concern with these events is not with why they happened as or when they did but, rather, with how they altered the American political order once they did--with how they caused shifts in political alignments, created demands for political action, or resulted in a reordering of political values. Over the course of the semester, we will look at ten different types of events, ranging from those that seem bigger than government and politics (economic collapse) to those that are the daily grist of government and politics (speeches), in each instance juxtaposing two different occurrences of a particular category of event. In so doing, we will seek to use controversial and consequential moments in American politics as a window into deeper questions about political change and the narratives we tell about it.

**Requirements/Evaluation:** five 5-to 7-page essays, five 2- to 3-page critiques, and a recorded oral final reflection

**Prerequisites:** none

### **PSCI 306 (S) What is Power?**

**Cross-listings:** SOC 308 PSCI 306 STS 308 REL 308

#### **Secondary Cross-listing**

*What is power?* Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures? What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or agency? Or ideology? This course begins with the observation that power is often described as a causal relation--an individual's power is supposed to equal their capacity to produce a change in someone else's behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: **critical theory about power** and **philosophy of science about cause and effect**. We will touch on classic philosophical accounts of power and causation, but focus our attention on more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt, Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, and Max Weber. **(Note that in 2023 this course will also fulfill the senior seminar requirement for STS)**

**Requirements/Evaluation:** critical annotations for every class, midterm review essay (4-6 pages), final essay (10-12 pages)

### **PSCI 308 (F) In Search of the American State**

When Donald Trump campaigned in 2016 to "drain the swamp," he built on the idea held by Republicans since Ronald Reagan's 1981 pronouncement that "government is not a solution to our problem, government is the problem." Skepticism of government has deep roots and strong resonance throughout American political history. Despite this, national government has grown in scope and size for much of this history, including under both Democratic and Republican administrations. This tension over what government is doing and what it should be doing is only heightened in times of crisis, such as the moment the country is in now. This course explores the relationship between citizens and their government by examining the growth of the American state in various arenas over time, as well as the assaults on government legitimacy in recent years. We will assess traditional theories

about the weakness of the American state in light of arguments about the state as: regulator of family and "private" life, adjudicator of relations between racial and ethnic groups, manager of economic inequalities, insurer of security, and arbiter of the acceptable uses of violence and surveillance.

**Requirements/Evaluation:** Students will be responsible for writing three 5-page papers and three 2-page papers, and will also be asked to take responsibility for managing discussion and presenting work at different points in the semester.

**Prerequisites:** at least one class in American politics

**Enrollment Limit:** 12

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

### **PSCI 310 (F) New York City Politics from the Blackout to Bloomberg (WS)**

**Cross-listings:** PSCI 310 LEAD 332 PSCI 332

Primary Cross-listing

This course examines New York City's political history from the 1970s to the present—a period during which the city underwent staggering economic and social changes. In the mid-1970s, New York was a poster child of urban crisis, plagued by arson and housing abandonment, crime, the loss of residents and jobs, and failing public services. By the early 21st century, the city had largely met these challenges and was once again one of the most diverse and economically vital places on earth—but also one marked by profound inequality. This course will examine how New Yorkers have contested core issues of capitalism and democracy—how those contests have played out as the city itself has changed and how they have shaped contemporary New York. Broad themes will include the city's role as a showcase for neoliberalism, neoconservatism, technocratic centrism, and progressivism; the politics of race, immigration, and belonging; the relation of city, state, and national governments; and the sources of contemporary forms of inequality. Specific topics will include policing, school reform, and gentrification. As the primary assignment in the course, students will design, research, and write a 20-page paper on a topic of their choice.

**Requirements/Evaluation:** active class participation, 2-page preliminary proposal, 10-page research proposal, 2-page peer feedback, 18- to 20-page research paper

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** Political Science majors and Leadership Studies concentrators

**Expected Class Size:** 14

### **PSCI 311 (F) Congress**

**Cross-listings:** PSCI 311 LEAD 311

Primary Cross-listing

Even before the pandemic, scholars, pundits, and the public thought Congress was in a state of crisis. Riven by polarized partisanship and gridlock,

the most powerful assembly in the world seemed incapable of representing citizens and addressing problems. This seminar focuses on how Congress organizes itself to act as a collective body. In an organization comprised of equals, how and why do some senators and representatives acquire more power and authority than others? How does Congress act as an institution and not just a platform for 535 individuals? Why does Congress not act, especially when the U.S. confronts so many pressing problems, and how do legislators justify inaction? In what ways does this institution promote or hinder the legitimacy, responsiveness, and responsibility expected of a democratic governing institution?

**Requirements/Evaluation:** class participation, two short papers, and a final research paper

**Cross-listings:** PSCI 312 LEAD 312

#### **Primary Cross-listing**

From democracy to liberty, equality to community, foundational *ideas* -- about what makes for good government, about what constitutes the good society, about what is necessary to lead a good life -- define the American political tradition and consume the American political imagination. Designed not only to uncover these (sometimes melodious, sometimes cacophonous) values but also to place current ideological debates about them in a broader developmental context, this tutorial will offer a topical tour of American political thinking from the birth of nationalism in the colonial period to the remaking of conservatism and liberalism in the early twenty-first century. Utilizing primary source material ranging from presidential speeches to party platforms, newspaper editorials to novels, we will seek to interrogate -- reconciling where possible, distinguishing where necessary, interpreting in all instances -- the disparate visions and assessments of the American political experience offered by politicians, artists, intellectuals, activists, and ordinary citizens over the course of more than two centuries. Our focus, then, is nothing less than the story of America -- as told by those who lived it.

**Requirements/Evaluation:** five 5- to 7-page essays, five 2- to 3-page critiques, and a revised and extended 10- to 12-page final essay

**PSCI 314 (F) How Change Happens in American Politics**

**Cross-listings:** PSCI 314 LEAD 314

**Primary Cross-listing**

An unprecedented assault on the U.S. Capitol, the rise of white nationalism, a pandemic, a volatile economy, racial reckoning, and rapidly evolving environmental crises have all rocked American politics in the last year. What might we expect to come next? From the Founding to the present, the American political order has undergone cataclysmic and thoroughgoing transformations, yet it has also proven to be remarkably enduring. How can this be? Where do we find continuities and where upheavals? What accounts for the continuities, and what for the changes? What sorts of transformations have been possible, and who or what has made them possible? Finally, what are the costs of change (and of continuity)--and who pays them? The goal of this course is to assess American political change, or lack of, and to gain a sense of the role that political leaders have played in driving change. We will examine when and how individuals and leadership have mattered vis-à-vis broader historical and contextual factors, including economic developments, demographic change, war, and constitutional and institutional parameters. After examining general models of change and of leadership, we will consider specific case studies, such as civil rights for African-Americans, gender equality, labor advances, social conservatism, and populism. We will consider some of the complicated legacies of change. Finally, we will look at arguments that America has been "exceptional"--or, unlike other countries--as well as critiques of these arguments, to help us gain an understanding of future prospects for political transformation.

**PSCI 315 (S) Parties in American Politics**

**Cross-listings:** PSCI 315 LEAD 315

**Primary Cross-listing**

Is the American party system what's wrong with American politics? It has been said that parties are essential to democracy, and in the U.S., political parties have played a central role in extending democracy, protecting rights, and organizing power. But their worth is a continuing subject of debate. Although parties have been celebrated for linking citizens to their government and providing the unity needed to govern in a political system of separated powers, they have also been disparaged for inflaming divisions among people and grid-locking the government. Other critics take aim at the two-party system with the claim that the major parties fail to offer meaningful choices to citizens. This course will investigate this debate over parties by examining their nature and role in American political life, both past and present. Throughout the course, we will explore such questions as: What constitutes a party? For whom do they function? How and why have they changed over time? Why a two-party system, and what role do third parties play? Is partisanship good or bad for democracy? For governance? What is the relationship between parties and presidents? How does partisanship become tribalism or hyper-partisanship, and can this be prevented? We will explore answers to these questions through seminar discussion, analytic essays, and independent research culminating in the writing of a longer (15 to 20 page) research paper.

**Requirements/Evaluation:** In addition to active seminar participation, students will be responsible for writing two shorter (5-7 page) papers and a longer, research paper (15-20 pages).

**Prerequisites:** PSCI course at the 200 or 300 level or permission of instructor

### **PSCI 316 (S) Policy Making Process**

Politics as usual. It's a phenomenon we all love to hate. But what does it mean? When government policy is decided by politics, does that mean the policy is necessarily bad? Can we get rid of politics in policy making or improve on it somehow? What would "politics as unusual" look like anyway? This class examines the policy making process with particular emphasis on the United States: How do issues get defined as problems worthy of government attention? What kinds of alternatives are considered as solutions to these problems? Why do we end up with some policies but not others? Do certain kinds of processes yield better policies than others? How should we decide what constitutes a good policy?

**Requirements/Evaluation:** several short papers, research paper, class participation

**Prerequisites:** one course in PSCI or permission of instructor

**Enrollment Limit:** 12

### **PSCI 317 (F) Environmental Law**

**Cross-listings:** PSCI 317 ENVI 307

Secondary Cross-listing

We rely on environmental laws to make human communities healthier and protect the natural world, while allowing for sustainable economic growth. Yet, despite 40 years of increasingly varied and complex legislation, balancing human needs and environmental quality has never been harder than it is today. Environmental Studies 307 analyzes the transformation of environmental law from fringe enterprise to fundamental feature of modern

political, economic and social life. ENVI 307 also addresses the role of community activism in environmental law, from local battles over proposed industrial facilities to national campaigns for improved corporate citizenship. By the completion of the semester, students will understand both the successes and failures of modern environmental law and how these laws are being reinvented, through innovations like pollution credit trading and "green product" certification, to confront globalization, climate change and other emerging threats.

**Requirements/Evaluation:** several short writing assignments, a term research project, and active participation in class

**Prerequisites:** ENVI 101 or permission of instructor

**Enrollment Limit:** 14

**Expected Class Size:** 14

**PSCI 319 (F)(S) Marine Policy (DPE) (WS)**

**Cross-listings:** MAST 351 ENVI 351 PSCI 319

**Secondary Cross-listing**

Coastal communities are home to nearly 40% of the U.S. population, but occupy only a small percentage of our country's total land area. Intense population density, critical transportation infrastructure, significant economic productivity, and rich cultural and historic value mark our coastal regions as nationally significant. But, coastal and ocean-based climate-induced impacts such as sea level rise, ocean warming and acidification pose extraordinary challenges to our coastal communities, and are not borne equally by all communities. This seminar considers our relationship with our ocean and coastal environments and the foundational role our oceans and coasts play in our Nation's environmental and economic sustainability as well as ocean and coastal climate resiliency. Through the lens of coastal and ocean governance and policy-making, we critically examine conflict of use issues relative to climate change, climate justice, coastal zone management, fisheries, ocean and coastal pollution and marine biodiversity.

**Class Format:** This class is taught only at Williams-Mystic in Mystic, Connecticut and includes coastal and near-shore interdisciplinary field seminars, and 10 days offshore.

**Requirements/Evaluation:** Weekly Readings; Class Participation; Small and large group strategy exercises (written and oral); Written Research Project: issues paper and draft research paper; Final Research Project: multiple formats available

**Prerequisites:** none

**Enrollment Limit:** 23

**Enrollment Preferences:** must be enrolled at Williams-Mystic in Mystic, Connecticut

**Expected Class Size:** 22

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** must be enrolled at Williams-Mystic in Mystic, Connecticut

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MAST 351 (D2) ENVI 351 (D2) PSCI 319 (D2)

**Writing Skills Notes:** Each student will write one 3-5 page research issues paper and one 8-10 page draft research paper as well as a final project with written components equaling 5-8 pages. Each submission receives written feedback from the professor, including research guidance, input on grammar, structure, language, analysis. Students also receive verbal feedback in individual conferences to discuss research paper organization, analysis, structure and grammar as well as final project input.

**Difference, Power, and Equity Notes:** Coastal and ocean policy issues relating to climate change, coastal zone management, fisheries, ocean pollution and marine biodiversity impact environmental and climate justice. Students examine coastal governance while considering the

disproportionate burdens on underrepresented populations in U.S. coastal communities caused by climate change and coastal policies. Students analyze multi-disciplinary evidence and work to strengthen their integrative, analytical, writing, and advocacy skills.

### **PSCI 320 (F) Heroes and Villains: Iconic Leadership and the Politics of Memory (WS)**

**Cross-listings:** PSCI 320 LEAD 320

#### **Secondary Cross-listing**

Americans have been arguing intensely in recent years about how we should remember the leaders from our nation's past. Does Thomas Jefferson's statue belong on a university campus? Should college dorms be named for John C. Calhoun and Woodrow Wilson? Should Harriet Tubman's portrait replace Andrew Jackson's on the \$20 bill? In this course we will look at how people in the United States and elsewhere have used their leaders' images to hash out larger political issues of national identity, purpose, and membership. Why has historical commemoration gotten so contentious--or has it always been contentious? What's really at stake when we depict our leaders? How (if at all) should we reconcile contemporary morality with historical context in assessing the leaders from our past? To address these questions, we will study portrayals of some of the most famous leaders in American history--including Alexander Hamilton, Abraham Lincoln, and Martin Luther King, Jr. Our sources will include political speeches, literature, film, and journalism as well as monuments and museum exhibits; though our examples will be drawn mostly from the United States, our conceptual framework will be transnational. As a final assignment, students will write an 18-20 page research paper on a topic of their choice related to the core themes of the course.

**Requirements/Evaluation:** Seminar participation, research proposal, peer workshop, research paper, in-class research presentation

**Prerequisites:** previous course in Leadership Studies, or Political Science, or permission of instructor

### **PSCI 321 (F) Immigration Politics in the U.S.**

The U.S. Census Bureau estimates that non-Hispanic whites will no longer be the majority racial group in the U.S. by 2044. This demographic change is fueled by past and current immigration, and the politics surrounding American immigration policy have intensified as a result. Donald Trump's rise to the presidency was fueled in part by his pledge to build a wall between the U.S. and Mexico. Meanwhile, efforts to reform the nation's immigration laws have been stuck in gridlock for years. How did we get to this point and what does the future hold? Why is immigration policy so contentious? What is at stake, and what do different groups believe to be at stake? To answer these questions, we will examine immigration from a multidisciplinary lens, but with special attention to immigration politics and policy. We will examine the history of immigration to the U.S. and the policies that have shaped it; recent developments in electoral and protest politics; the policy initiatives of recent presidential administrations, Congress, and state and local governments; and the incorporation of immigrants into U.S. society and politics, past and present.

**Requirements/Evaluation:** one 2- to 3-page paper; one 5- to 7-page paper; one oral presentation; one 15- to 20-page research paper; and class participation

### **PSCI 322 (F) Migration Governance: A Global Perspective (DPE)**

**Cross-listings:** GBST 321 PSCI 322 LEAD 324

#### **Primary Cross-listing**

This class is interested in thinking critically and empirically about one of the most polarizing and relevant issues of our time: how countries regulate cross-border mobility. Currently over 281 million international migrants live in a country different from where they were born, about 1 out of every 30 humans in the world and a population that has roughly doubled since 1990. How are international organizations and domestic governments regulating this level of unprecedented global mobility in destination countries as well as countries of origin? Throughout the semester we interrogate three themes central to migration politics (and political science): rights, access, and agency. The course is organized with a focus on legal status: which "categories" of people (i.e. illegal migrants, refugees) have differential access to rights, services, and representation depending on how they are classified where they live (and where they are from). We will critically analyze how those categories are constructed at the international and domestic levels, as well as how those categorizations are also racialized, politicized, and gendered. While we address current debates over migration governance in the United States, we situate US migration policy within the contemporary global context. The course places the US in conversation not only with European countries, but also (and especially) considerations of migration governance in destination countries in Latin America, the Middle East, Asia and Africa. We also attend to the *emigration* governance of diaspora citizens particularly from the Global South. Students will have the opportunity to apply course readings to real-world contexts through guest speakers from global organizations at the frontlines of migration policy (UNHCR, Doctors without Borders), and filmmakers documenting border crossing around the world.

**Requirements/Evaluation:** Participation, 3 Short Response Papers, Research Paper (15 pages)

**Prerequisites:** PSCI 202 or PSCI 204 or permission of the instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Political Science majors and Leadership Studies Concentrators

**Expected Class Size:** 15

### **PSCI 328 (F) Human Rights Claims in International Politics (WS)**

For decades, people and countries have used "human rights" to advance their position, delegitimize their opposition, and lodge their interests in an unassailable political category. This research seminar investigates who uses this category, to what ends, and with what success. How people ground this concept--what they think its origin is--does matter, but evaluating those foundations is not our focus. Politics is our focus. Who gains and loses from the idea that people have human rights? Does the concept fit well with, and reinforce, some institutions and configurations of power, and make others difficult to sustain (or even to conceive)? Why not simply claim that something is an interest rather than also a right? How has "human rights" been deployed in international politics, and by whom? The class is divided into four sections. The first concentrates on common readings on these questions, and prioritizes discussion, explication, and hypothesis brainstorming. The second introduces social science methodology, covering hypotheses, literature reviews, and evidence while continuing half time with materials about human rights. The third emphasizes research design, allowing students to finalize their own project while bringing in primary sources such as original documents, debates, and data. The last quarter of class focuses on student projects, on integrating and revising research to produce a set of findings and an evaluation of their meaning. The course is designed to teach political science majors the nuts, and maybe also the bolts, of social science research.

**Requirements/Evaluation:** Class discussion, short writing, worksheets, peer reviews, drafts of various sections, final paper, final presentation

**Prerequisites:** Two classes in political science, at least one of which must be in international politics.

**Enrollment Limit:** 12

**Enrollment Preferences:** Political science majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students write frequent short pieces, and revise/rewrite an increasingly long draft in sections over the course of the semester.

### **PSCI 329 Politics of the Powerless**

American politics is often unequal, and well-organized advantaged interests tend to triumph. What do disadvantaged interests do in light of these power dynamics? Give up? Compromise? Struggle on? Why do relatively powerless interests sometimes win in American politics? Is it because they have an exceptional leader? A phenomenal strategy? Fortuitous events? This course examines the political dynamics of disputes in which disadvantaged interests push for major change. We will study past campaigns and then research and discuss contemporary reform efforts.

**Requirements/Evaluation:** class discussion, two short papers, and research paper

**Prerequisites:** one course in Political Science or permission of instructor

### **PSCI 330 (S) American Political Thought in Hemispheric Context**

**Cross-listings:** PSCI 330 GBST 330

Primary Cross-listing

Actors living during the Age of Revolutions witnessed an astounding number of social, political, and cultural changes. In the short period between 1775 and 1830 more than thirty popular insurgency movements took control of the American hemisphere, most of them by organizing around the principles of republican politics. In this course, we study the peoples, demands, and visions that comprised the popular movements of the Age of Revolutions to reconstruct the canon *American Political Thought* in hemispheric context. This course emphasizes the comparative features of post-colonial movements in the Americas and centers the contributions of indigenous, raced, gendered, and ethnicized communities. The course schedule is divided into two sections. The first half of the class situates the political and theoretical problems of American Political Thought by engaging with

scholarship on post-colonial movements, decolonial thought, democratic theory, and theories of popular rule. The second half of the course contextualizes these frameworks by putting them in conversation with studies of revolutionary change, popular imagination, and case studies on revolutionary movements throughout the Americas. Students are expected to engage in archival research, as well as work with both primary and secondary sources on the Age of Revolutions.

**Requirements/Evaluation:** Regular attendance, consistent class participation, three Glow posts, three two-page reflection papers, and a final research paper of 10-12 pages

**Prerequisites:** At least one prior course in political theory, social theory, history of the Americas (either the United States or Latin America), or permission of instructor.

### **PSCI 331 (F) The Politics of Algorithms**

**Cross-listings:** STS 349 AMST 349 PSCI 331

#### **Primary Cross-listing**

Every day, you interact with or through computer algorithms. In ways often obscure to users, they structure communication or conduct in social media, education, healthcare, shopping, entertainment, dating, urban planning, policing, criminal sentencing, political campaigns, government regulation, and war. Moving from the emergence of cybernetics during World War II through such contemporary examples as facial recognition software, this seminar approaches algorithms as complex technological artifacts that have social histories and political effects. Asking *how* algorithms are political and what that tells us about politics today (particularly in the U.S.), we will consider how their design expresses forms of power and their deployment shapes ways of living. What behaviors do different algorithms solicit, reward, discourage, or stigmatize? What kinds of selfhood and relationships do they promote or thwart? How do various algorithms influence political partisanship and beliefs and intersect with existing hierarchies of race, class, gender, and sexuality? When inequities are built into a design, can that be addressed by rooting out "bias," or do such efforts miss something more inherent in the kinds of artifacts algorithms are or what they can be in a capitalist economy? Might developments in artificial intelligence transform our sense of the human or even threaten the species? Many of the seminar's themes, including democracy, power, inequality, judgment, deliberation, publicity, subjectivity, and agency, are central to political theory, but readings and course materials will also be drawn from such fields as media theory, surveillance studies, sociology, American studies, critical data science, film, and contemporary art. The course neither requires nor teaches any computer science skills.

**Requirements/Evaluation:** Class attendance and participation, regular short posts or exercises, and either three eight-page essays or one 8-page essay and one longer final paper.

**Prerequisites:** At least one course in political, cultural, or social theory or the critical study of science and technology, or permission of the instructor. Not open to first-year students.

**Enrollment Limit:** 15

**Enrollment Preferences:** Political Science and American Studies majors and STS concentrators; then qualified students from all other majors welcome, space permitting.

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

### **PSCI 332 (S) The Body as Property (DPE)**

From an ethical standpoint, human bodies are fundamentally different from objects that can be owned, acquired, and exchanged. Yet history furnishes us with countless examples of laws, administrative rules, and social conventions that treat the human body as a form of property. The institution of slavery is a particularly egregious example. But there are other examples of treating the body as property that seem more ambiguous, or even benign: the employment contract in which bodily services are offered in exchange for payment; the feminist slogan "my body, my choice"; or even the every-day transfer of bodily properties into creative projects that then become part of the things people own --- chairs, tables, houses, music, art, and intellectual property. If it is not itself a form of property, how can we explain the use of the human body to acquire possessions, create wealth, and mediate the exchange of other kinds of property? These and other tensions between the concept of property and that of humanity will be the focus of this course. How is property defined, and how far should law go to erode or reinforce distinctions between property and humanity? Course readings focus on Locke, Hegel, Marx, and critical perspectives from feminist theory, critical theory, and critical legal studies (Cheryl Harris, Alexander Kluge, Oskar Negt, Carole Pateman, Rosalind Petchesky, and Dorothy Roberts, among others).

**Requirements/Evaluation:** five 5- to 7-page essays, five 2- to 3-page critiques, and a revised and extended 10- to 12-page final essay

**Prerequisites:** prior coursework in political theory, cultural theory, philosophy, or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Political Science majors (priority given to those concentrating in Political Theory ); Justice & Law Studies concentrators (priority given to those with extensive JLST coursework).

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** The course fulfills the Difference, Power, and Equity (DPE) requirement by examining how, in the context of legally-sanctioned power relations, bodily differences are constructed, monetized, and used to generate wealth. Race, class, and gender inequalities are central to the analysis.

### **PSCI 333 (F) Asian/African American Cultural and Political Theory**

**Cross-listings:** PSCI 333 AFR 344 AMST 325

Secondary Cross-listing

Contrasted as "model minorities" or "incorrigible minorities" Asian Americans and African Americans have been pitted against one another in social standing and political objectives. However, throughout the twentieth century, African/Asian solidarity and alliances existed in political movements and literary and cultural productions. From Ho Chi Minh's anti-lynching writing, the founding conference of the WIDF (Women's International Democratic Federation) in China in 1945, through the Bandung Conference, coalitions against U.S. wars in Southeast Asia, and alignments with Chinese anti-imperialist endeavors, black and Asian peoples have joined in international political formations. Contributions to theory include the writings and activism of Langston Hughes, W.E.B. Du Bois, Richard Wright, Robert Williams, Yuri Kochiyama, Grace Lee and Jimmy Boggs, Ishmael Reed, and Amiri Baraka; films of Bruce Lee; music of Fred Ho; revolutionary praxis of Mao Tse Tung's *Little Red Book* and his writings on art and society; the Marxism of the Black Panther Party; the Afro-futurism of Sun Ra and Samuel Delany; and contemporary "Afro-pessimism." Such cultural works depict futurities and possibilities for Black and Asian diasporas. This seminar examines theory, politics, literature, film, and music produced from and linked to twentieth-century movements against capitalism, racism, colonialism, and imperial wars to think through how Black and Yellow Power have shaped solidarity to challenge white supremacy and racial capitalism. **Requirements:** One midterm paper (5-6 pp.) = 30%; final paper/project (10-12 pp.) with a creative option = 50%; short response paper and GLOW posts = 10%; participation (attendance and class discussion) = 10% Course cap: 19 Priority given to AMST majors, Africana concentrators

**Requirements/Evaluation:** One midterm paper (5-6 pp.) = 30%; Final paper/project (10-12 pp.) with a creative option = 50%; Short response paper and GLOW posts = 10%; Participation (attendance and class discussion) = 10%

### **PSCI 334 (S) Theorizing Global Justice**

While economic exchanges, cultural convergence, and technological innovations have brought people in different parts of the world closer together than ever before, globalization has also amplified differences in material wealth and social inequalities. Ill health, inadequate sanitation, and lack of access to safe drinking water are increasingly common. Yet, more than ever before, the means exist in affluent regions of the world to alleviate the worst forms of suffering and enhance the well-being of the poorest people. How are we to understand this contradiction as a matter of justice? What is the relationship between justice and equality, and what do we owe one another in a deeply divided world? Course readings will engage your thinking on the central debates in moral philosophy, normative approaches to international political economy, and grassroots efforts to secure justice for women and other severely disadvantaged groups. Key theorists include Amartya Sen, Martha Nussbaum, John Rawls, Thomas Pogge, Nancy Fraser, Paul Farmer, Vandana Shiva, Majid Rahnema, and Enrique Dussel.

**Class Format:** discussion

**Requirements/Evaluation:** oral presentation, weekly blog posts, and three papers (3 pages, 7 pages and 8-10 pages)

**Prerequisites:** at least one course in political theory or philosophy or permission of instructor

### **PSCI 337 (S) Visual Politics**

**Cross-listings:** PSCI 337 ARTH 337 AMST 370

Primary Cross-listing

Even casual observers know that appearances matter politically and that the saturation of politics by visual technologies, media, and images has reached unprecedented levels. Yet the visual dimensions of political life are at best peripheral topics in contemporary political science and political theory. This seminar explores how our understanding of politics and political theory might change if visibility were made central to our inquiries. Treating the visual as a site of power and struggle, order and change, we will examine not only how political institutions and conflicts shape what images people see and how they make sense of them but also how the political field itself is visually constructed. Through these explorations, which will consider a wide variety of visual artifacts and practices (from 17th century paintings to the optical systems of military drones and contemporary forms of surveillance), we will also take up fundamental theoretical questions about the place of the senses in political life. Readings may include excerpts from ancient and modern theorists, but our primary focus will be contemporary and will bring political theory into conversation with other fields, particularly art history and visual studies but also film and media studies, psychoanalysis, neuroscience, and STS. Possible authors include Arendt, Bal, Belting, Benjamin, Browne, Buck-Morss, Butler, Campt, Clark, Cray, Debord, Deleuze, Fanon, Foucault, Freedberg, Hobbes, Kittler, Mercer, Mitchell, Mulvey, Plato, Rancière, Scott, Sexton, Starr, Virilio, Warburg, and Zeki.

**Requirements/Evaluation:** regular, engaged class participation, several Glow posts, and \*either\* three 7- to 8-page papers \*or\* on short and one much longer paper.

**Prerequisites:** at least one prior course in political theory, cultural theory, visual studies, or art history; or permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Political Science and Art History majors (including students in the grad program); then qualified students from all disciplines welcome, space permitting

### **PSCI 339 (S) Politics in Dark Times: Hannah Arendt (WS)**

**Cross-listings:** PSCI 339 JWST 339

#### **Primary Cross-listing**

Hannah Arendt (1906-75) bore witness to some of the darkest moments in the history of politics. Born a Jew in Germany, Arendt lived through--and reflected deeply on--two world wars, the rise of totalitarianism, and the detonation of the first atomic bomb. She narrowly escaped imprisonment by the Gestapo and internment in a refugee camp in Vichy France before fleeing to New York. Yet, in the face of these horrors, Arendt never lost her faith in political action as a way to express and renew what she called "love of the world." She wrote luminously about the darkness that comes when terror extinguishes politics and the shining, almost miraculous events of freedom through which politics is sometimes renewed. In this tutorial, we will investigate what Arendt's vision of politics stands to offer to those struggling to comprehend and transform the darkest aspects of the contemporary political world. Our time and Arendt's are similarly darkened by the shadows of racism, xenophobia, inequality, terror, the mass displacement of refugees, and the mass dissemination of lies. It may be tempting to conclude from these similarities--as some recent commentators have--that we are witnessing the return of "totalitarianism" as Arendt understood it. She would be the first to refuse to use inherited concepts as if they were keys to unlock the present. Her words and her example should impel us to reject shortcuts to authentic understanding, the "unending activity by which...we come to terms with and reconcile ourselves to reality." We will turn to Arendt as an interlocutor, not a guide, as we seek to reconcile ourselves to the contingency and specificity of past and present political realities. And we will search her works and our world for embers of hope that even seemingly inexorable political tragedies may yet be interrupted by assertions of freedom in political action.

**Requirements/Evaluation:** five 5-page papers; five 2-page responses; participation

**Prerequisites:** a prior course in political theory, philosophy, or critical theory, or permission of the instructor

**Enrollment Limit:** 10

### **PSCI 340 (S) Why States Fail**

This course considers the origins of political violence and state failure at the end of the 20th century. It seeks to address why there was a resurgence of political violence at the dawn of the 21st century. Toward that end, we begin by considering competing explanations of political violence (ethnicity, democratization, natural-resource endowments, and predatory elites). We then move on to the empirical section of the course in which we cover case

studies of state failure in parts of Eastern Europe, Africa and the Middle East.

**Class Format:** discussion

**Requirements/Evaluation:** seminar participation, two oral presentations and a research paper proposal

**Prerequisites:** one of the following: PSCI 201, 202, 203, 204, 229, 243, 250, 254 or the permission of instructor

### **PSCI 342 (S) Beyond the welfare state**

"Not me. Us" became a rallying cry of Bernie Sanders' presidential campaign in late 2019. Sanders' slogan reflects a vision of a robust welfare state, defined by a widespread commitment to solidarity, where citizens share social risks as well as economic rewards. But what role can the welfare state play in the twenty-first century? How have its constitutive institutions, from pensions to unemployment insurance, evolved since the post-war "Golden Age"? Is solidarity possible only in utopia, or can we realize it in the world as well? This course identifies the political conditions under which welfare states developed in the twentieth century, and examines how they have responded to globalization, immigration, digital transformation, and other contemporary challenges. If the welfare state has a future, it will look different from the past, but how? Taking up a handful of alternative paradigms, from social investment to mutual aid, we will assess different trajectories of solidarity in the twenty-first century.

**Requirements/Evaluation:** Class participation; Two short papers; Two presentations; Take-home final essay

### **PSCI 343 (F) Democratic Erosion**

**Cross-listings:** GBST 342 PSCI 343

**Primary Cross-listing**

A central tenet of political science is that once a country reaches a certain level of political and economic development, democracy will endure indefinitely. The contemporary moment calls on us to revisit this assumption. This course explores the causes and consequences of democratic erosion through the lens of comparative politics. We ask three central questions to inform our investigation: 1) What is democracy and its alternatives? 2) How do we identify democratic breakdown? and 3) What are strategies to counteract backsliding when it occurs? Importantly, this course is *not* intended as a partisan critique of any particular American politician or political party. Rather, it is designed to provide an opportunity to engage, critically and carefully, with claims about the state of democracy in the US and elsewhere; to evaluate whether those claims are valid; and, if they are, to consider strategies for mitigating the risk of democratic erosion here and abroad. Readings draw from academic scholarship, media commentary, and current events as they unfold. We will address both empirical and normative dimensions of the issues, as well as learn about examples of democratic erosion around the world from early 20th century until today. As a collaborative class taught at dozens of other colleges, the course enables you to engage in debates about democratic erosion with students throughout the US and around the world.

**Requirements/Evaluation:** Active Class Participation, 3 Short Response Papers, Country Case Study (15-20 pages, written incrementally throughout semester) and Presentation.

**Prerequisites:** Prior coursework in political science or permission of instructor.

**Enrollment Limit:** 12

**Enrollment Preferences:** Political Science Majors, Global Studies Concentrators

### **PSCI 344 (S) Palestinian Nationalism**

Palestinian Nationalism: This tutorial will cover the history, bases of support, objectives, and accomplishments and failures of Palestinian nationalism over the past century. It will address how the Palestinian nation has been defined, who has defined it, what factions and classes have controlled its organizations, and the reasons why it has failed to achieve its goals. The tutorial will address the evolution of Palestinian nationalism historically and thematically, employing both primary and secondary sources. The readings will consist mostly of Palestinian authors, with an emphasis on documents, histories, and political analyses. Two questions will anchor the tutorial: how is the nation defined and what, if any, class interests are folded into various definitions?

**Requirements/Evaluation:** Read the assigned materials, write a 5-page paper every other week, and comment on the student's partner's paper in the other weeks.

**Prerequisites:** Political Science Majors and students with background in Middle East

**Enrollment Limit:** 10

**Enrollment Preferences:** Political Nationalism

### **PSCI 345 (S) The Meaning of Life and Politics in Ancient Chinese Thought**

**Cross-listings:** ASIA 345 PSCI 345 ASST 345

Primary Cross-listing

How can we live a good life? What standards should we use to judge how political power is constituted and used? This class will involve students in close reading of, and exegetical writing about, core texts of ancient Chinese philosophy in English translation. The purpose is to gain an understanding of a number of different perspectives on life and politics, especially Confucianism, Legalism and Daoism. While the primary focus will be on the meaning of the texts in the context of their own times, contemporary applications of core concepts will also be considered. The class will begin with background readings, since no prior work in Chinese philosophy or history is assumed. Then the class will read significant portions of the following canonical works: *Yijing*, *Analects*, *Mencius*, *Daodejing*, *Zhuangzi*, and *Han Feizi*.

**Requirements/Evaluation:** two 5-page papers and one 15-page paper

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** preference to seniors but all are welcome.

**PSCI 349 (S) Cuba and the United States (WS)**

With the passing of the Castro brothers' regime on the horizon, we examine the long and deeply felt history of dependence and conflict between Cuba and its colossal neighbor to the north. It begins with the political economy of the colony, then covers the Cuba- US relationship from José Martí and 1898 through the Cold War to the present, emphasizing the revolutionary period. Tutorial topics include: sovereignty and the Platt Amendment; culture and politics; race and national identity; policies on gender and sexual orientation; social programs; political institutions; the post-Soviet "Special Period"; the evolution of the Cuban exile community in the US; and the fraught agenda of reform and generational transition. Materials include journalism, official publications, biographies, travel accounts, polemics, policy statements of the US government, and a wide range of academic works.

**Class Format:** a lecture in the first week; then ten weeks of tutorial; then a discussion class in the final week

**Requirements/Evaluation:** five 5- to 6-page papers, five 1- to 2-page responses, and one 1-page essay for the final class

**Prerequisites:** any course on Latin America or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Assignments are graded and returned weekly. After each student has written one long paper and one response, professor meets with them individually to discuss the composition and presentation of each genre.

**PSCI 351 (S) The New Left and Neoliberalism in Latin America (DPE)**

**Cross-listings:** PSCI 351 GBST 351

Primary Cross-listing

Recent years have seen a resurgence of the political left in Latin America. This course seeks to understand the origins of this new left, the ideas and character of its protagonists, the neoliberal philosophy it opposes, and the arena of democratic politics it inhabits today. We first read polemics from both sides, before stepping back to consider Latin American political economy, including the twentieth-century left, from a more historical and analytical perspective. With this preparation, we then look more closely at major contemporary figures and movements in Venezuela, Bolivia, Mexico, Brazil, and other countries. After considering explanations of the rise of the left and assessments of its performance in power, we end our common readings by asking what it might mean today to be on the left in Latin America--or anywhere--both in policy and political terms.

**Class Format:** discussion then seminar

**Requirements/Evaluation:** three 3-page essays, a 1-page reflection paper, and a 12-page research proposal

**Prerequisites:** a course on Latin America and a course in Economics or permission of the instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PSCI 351 (D2) GBST 351 (D2)

**Difference, Power, and Equity Notes:** The New Left in Latin America originated in efforts to remedy inequalities born of the Conquest, uneven capitalist development, and racial prejudice. Its neoliberal foes generally do not doubt the existence of these inequalities, but they question the

proposition that the state could adequately address them. This course engages, contextualizes, and deepens the debate.

### **PSCI 352 (F) Politics in Mexico (DPE)**

**Cross-listings:** GBST 352 PSCI 352

#### **Primary Cross-listing**

Geography has decreed that the futures of Mexico and the United States will be tightly bound. Yet Mexico enters this future with a very different past, a distinctive political system, important cultural differences, and mixed feelings about its neighbor to the north. This course has four parts differing in content and format. The first is historical and mostly lecture. It considers several themes, including the slow emergence of a stable national state and the interplay between politics and economic change. In the second section, following a modified tutorial format, we consider politics and cultural policies around Mexican national identity in the twentieth century, looking at films, journalism, popular music, and cultural criticism. Topics include the politics of race; rapid urbanization, especially in the valley of Mexico; and the cultural impact of the turn toward the north, after 1990, in economic policy. Then, after a few discussion classes on migration, organized crime, political corruption, the COVID-19 pandemic, and other issues facing the current government of Andrés Manuel López Obrador, we turn to a seminar-style discussion of student research projects.

**Class Format:** lectures will be recorded for viewing before class sessions; four weeks of modified tutorials in pairs or small groups online; discussion classes to include in-person and online, in distinct sections if appropriate; online seminar

**Requirements/Evaluation:** map quiz; one three-page and three two-page essays; two one-page commentaries; and a seven- to eight-page research proposal, an early version to be presented to the class in online seminar

**Prerequisites:** some knowledge of Mexican history

**Enrollment Limit:** 15

**Enrollment Preferences:** Political Science majors and seniors

**Expected Class Size:** 14

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

### **PSCI 353 (F) What is Democracy?**

This is a research course that will investigate the meaning of democracy through readings and a research paper. The readings will begin with claims that democracy consists of government by elites, that the democratic component consists of elections that amount to choosing between rival slates of elites, and that agreements among elites set the boundaries for permissible democratic decision making. To examine this claim, the readings will address two fundamental issues. First, it will consider the the terms of American foreign policy after the Cold War, how it sets these, and continuities and discontinuities between the Clinton and Bush administrations. Where did Democratic and Republican foreign policy elites agree and disagree and what happened to proposals that were outside the elite consensus? Second, the course will consider the prelude and official responses to the 2008-11 financial crisis. What policies paved the way for and resolved the crisis, how were they reached, and who participated in formulating them? In other words, to what extent and in what respects were these fundamental turning points made "democratically"? Having done preliminary reading on these two issues, students will conduct in-depth research into aspects of one of these questions and write a research paper.

**Requirements/Evaluation:** One 5 page paper, 25 page research paper, presentation of paper to class, and class participation.

**Prerequisites:** Political Science majors or prospective majors, sophomores, juniors, and seniors, and permission of instructor.

**Enrollment Limit:** 15

**Enrollment Preferences:** Political Science majors or prospective majors, sophomores, juniors, and seniors, and permission of instructor.

### **PSCI 357 (S) Leadership and the Anxieties of Democracy**

**Cross-listings:** PSCI 357 LEAD 425

#### **Secondary Cross-listing**

This capstone course examines the challenges and opportunities facing political leaders in contemporary liberal democracies. We will begin by surveying institutional constraints confronting contemporary political leaders: globalization, sclerotic institutions, polarization, endemic racism, and a changing media environment, among others. Then, we will look at some important factors that shape how followers approach would-be leaders: inequality and economic precarity; identity and group consciousness; notions of membership, community, and hierarchy; and declining local institutions. While the course will focus primarily on the United States, our conceptual framework will be global; though our main interest will be contemporary, we will also examine previous eras in which democratic leadership has come under great pressure. Our primary questions will be these: Why does transformative leadership seem so difficult today? How does political leadership in the 21st century differ from leadership in earlier eras? What conditions are necessary to sustain effective leadership in the contemporary world? As a final assignment, students will craft an 18-20-page research paper on a topic of their choice related to the themes of the course.

**Requirements/Evaluation:** Seminar participation, research proposal, peer workshop, research paper, in-class research presentation

**Prerequisites:** LEAD 125 or permission of the instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Open to Leadership Studies concentrators or with the permission of the instructor; preference given to Political Science majors

### **PSCI 358 (F) Media, Politics, and Power**

Concerns about 'misinformation,' 'fakenews,' and 'propaganda' abound in discussions of politics in social media, news, entertainment and movies, and in daily conversations. Conflicting groups regularly accuse each other of being 'duped' by 'biased' sources of information on crucial issues like war, elections, sexuality, racism, and history. But is anyone immune to media influence? What is it and how might it work? And who are the groups who shape how media portray the world to us? This seminar explores such questions by investigating the political use of media in the organization of power. Readings and discussions provide a view on the past and ongoing use of media in the shaping of popular knowledge, collective actions, and public policies. We interrogate the terms 'media,' 'politics,' and 'power.' We study techniques to politically use media as well as research techniques to uncover political practices and relations. The course is divided into three parts. The first module engages students in readings on the economic and political situation of dominant types of media (AI, social media, news, etc.) and dominant media companies (Google, FaceBook, CNN, FOX, etc.). The second engages students with theory and methods for understanding and analyzing media contents (the stories, images, etc. that media convey). The final module introduces students to theory and methods for analyzing media relations (how a given media connects particular groups in particular ways). In the second and third modules, students develop *research questions* that they pair with *research methods* to politically analyze a chosen media channel. The course is designed to introduce students to fundamental components of social science research and critical thinking on media as a political tool.

**Requirements/Evaluation:** Participation in class discussions and activities, written reflections on readings, data gathering and analysis, two 8-10 page papers, peer review, 2 in-class presentations.

**Prerequisites:** None

**Enrollment Limit:** 16

**Enrollment Preferences:** Political Science majors, Science and Technology concentrators

### **PSCI 360 (S) Right-Wing Populism**

After the fall of the Berlin Wall in 1989, the political scientist Francis Fukuyama famously declared "the end of history". From now on only liberal democracy, free market capitalism, and global integration had a future. Everything else--including political ideology, nationalism, conservative religion, and sovereignty--was consigned to the ash heap. Thirty years later the future looks seriously derailed. A right-wing populism marked by Brexit, Trump, Le Pen, and a host of 'far-right' political movements in the very heartland of democratic globalizing capitalism has shaken liberal certainties. This course is an investigation into contemporary right-wing populism in Europe and North America in its social, economic, and political context. We will discuss theories of right-wing populism's appeal from both Left and Right perspectives. We will also investigate cases of right-wing populism including France's National Rally and the Eric Zemmour phenomenon, Sweden's Sweden Democrats, Hungary's Fidesz, Poland's Law and Justice Party, and Trumpism, the alt-right and QAnon. Finally we will entertain right-wing populism as both a cause and a symptom of a crisis in liberal democracy.

**Requirements/Evaluation:** two short papers; one long term paper; discussion questions; class participation

**Prerequisites:** one course in comparative politics or social theory; or permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

### **PSCI 361 (F) The CIA and American Foreign Policy**

**Cross-listings:** PSCI 361 LEAD 361 HIST 355

#### **Primary Cross-listing**

Despite an American aversion to espionage captured by Secretary of State Henry Stimson's oft-cited (yet unsubstantiated) remark, "Gentlemen don't read each other's mail," intelligence history in the United States dates back to the Revolutionary War. Still, it took the shock of Pearl Harbor for the United States to establish a permanent peacetime civilian intelligence service independent of another federal department--the Central Intelligence Agency. Since then, the agency and others which comprise the loose entity called the Intelligence Community (IC) have played a pivotal albeit intensely controversial role in US foreign and national security policies. Yet their roles and missions remain largely misunderstood and divisive, as attested to by recent debates surrounding the multiple investigations of the 9/11 tragedy, the flawed pre-war estimates of Iraq's Weapons of Mass Destruction (WMD) capabilities, the reporting on Benghazi, the Snowden revelations, and much more. This course seeks to provide greater understanding of the relationship between intelligence and US foreign and national security policy by examining the CIA's and IC's roles and responsibilities, illuminating their history alongside the history of America and the World, assessing their successes and failures, evaluating their reforms, and correlating their behavior and capabilities with US values and institutions.

**Requirements/Evaluation:** Midterm, several short papers, and a research paper.

### **PSCI 364 (F) Noam Chomsky and the Radical Critique of American Foreign Policy**

Noam Chomsky emerged as one of the most influential figures in the development of modern linguistics during the 1950's. However, since the Vietnam War, Chomsky has also established himself as perhaps the most influential critic of American foreign policy and the Washington national security establishment. This tutorial will examine his wide-ranging critique of American foreign policy over the last half century, focusing on his analysis of the role that he believes the media and academics have played in legitimizing imperialism and human rights abuses around the world. We will also explore the controversies and criticisms of his work from both the right and the left because of his political stance on issues ranging from the Arab-Israeli conflict to humanitarian intervention to free speech. Finally, we will also examine how Chomsky's views, largely considered to be radical for much of his life, have become far more mainstream over time.

**Requirements/Evaluation:** Students will write five 6-7 page papers over the course of the semester. On weeks that students are not writing the lead paper, they will write a 1-2 page critique of the essay submitted by their tutorial partner.

**Prerequisites:** One of the following courses is strongly recommended : PSCI 120, 127, 202.

**Enrollment Limit:** 10

**Enrollment Preferences:** Students with some previous coursework in American foreign policy or world politics.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** International Relations Subfield

### **PSCI 367 (S) Decolonizing International Relations (DPE)**

**Cross-listings:** GBST 367 PSCI 367

#### **Primary Cross-listing**

The Oxford English Dictionary defines Decolonization as "the withdrawal from its colonies of a colonial power; the acquisition of political or economic independence by such colonies." The emergence of an international system of sovereign states--the core foundation of international relations--presumes the process of dismantling systems of domination, extraction, and exclusion ended long ago. However, there is increasing recognition that International Relations in all forms, including theory, research, and policy, continue to be structured by traditional paradigms of power (e.g. white, male, elite). This course begins with the premise that knowledge is embedded within, and often reproduces, power hierarchies. Thus, this class is organized as a collaborative investigation with the aims of: 1) examining how whiteness and other historically dominant perspectives shape International Relations theory and research areas; 2) expanding and improving our understanding of International Relations through different lenses (e.g. race, class, gender, disability, indigenous, queer, subaltern); and 3) exploring the implications of a more inclusive approach to International Relations, both within the classroom as well as contemporary decolonization movements in the US and around the world.

**Requirements/Evaluation:** Participation, 3 response/reflection papers, annotated bibliography

**Prerequisites:** One prior course in International Relations or permission of the instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Juniors and Seniors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

GBST 367 (D2) PSCI 367 (D2)

**Difference, Power, and Equity Notes:** This class encourages students to recognize the power dynamics inherent within, and reproduced by, the study of International Relations as structured by traditionally dominant paradigms. This class provides students with the tools to critically identify, decenter, and deconstruct dominant lenses as well as the opportunity to engage with, and apply, an inclusive approach centering a more expansive range of theoretical perspectives and knowledge production.

### **PSCI 370 (F) The Political Thought of Frantz Fanon (WS)**

**Cross-listings:** PSCI 370 PHIL 360 AFR 360 LEAD 360

#### **Secondary Cross-listing**

Martinican psychiatrist, philosopher, and revolutionary Frantz Fanon was among the leading critical theorists and Africana thinkers of the twentieth century. Fanon ushered in the decolonial turn in critical theory, a move calling on those both within and outside of Europe to challenge the coloniality of the age and to forge a new vision of politics in the postcolonial period. This course is an advanced seminar devoted to a comprehensive examination of Fanon's political thought. We will begin with an analysis of primary texts by Fanon and end by considering how Fanon has been interpreted by his contemporaries as well as activists and critical theorists writing today.

**Requirements/Evaluation:** attendance and participation, weekly online reading response papers, a class presentation, two 7-page essays, and one 20-page final research paper

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Africana Studies concentrators, Leadership Studies concentrators, and Political Science majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

### **PSCI 372 (S) CAPSTONE: Sylvia Wynter, Black Lives, and Struggle for the Human**

**Cross-listings:** PSCI 372 AFR 450

Secondary Cross-listing

How do we judge the value of life? What is the significance of death and arbitrary threats to our existence? Why probe modern notions of black and blackness? What defines optimism, pessimism, enslavement, freedom, creativity, and being human? Do black lives matter? This capstone seminar will explore these and related questions through an examination of the life and work of Jamaican novelist, playwright, cultural critic, and philosopher Sylvia Wynter. Methodologically interdisciplinary, the course shall examine written and audiovisual texts that explore Wynter's inquiries into the central seminar queries. We will study figures and movements for black lives whose geopolitics frame the milieu of Wynter's work. Our examination of intellectuals and activists, with their explicit and implicit engagements with Wynter, shall facilitate assessing the possibilities, challenges, and visions of black living. We will also explore the current implications of Wynter's thought for Africana political theory, Afro-futurism, social justice, human rights, and critiques of liberal humanism. In the latter half of the course, students will have the opportunity to design, conduct, and present their own final research projects.

**Requirements/Evaluation:** attendance and participation; a 7-page midterm essay; class presentation; and a final research project

**Prerequisites:** none

**Writing Skills Notes:** Three thesis papers at five pages each (each receiving critical feedback from professor); one thesis paper revision with critical feedback from professor and peers, including one letter of revision explaining the student's revision process; one keyword glossary where students develop rigorous definitions of course key terms; one roundtable discussion based on the final paper.

**Difference, Power, and Equity Notes:** This course focuses on anti-colonial struggles against European powers. Research will include the concept of "internal colonies" in the US.

Not offered current academic year

### **PSCI 375 (S) Modern Jewish Political Theory**

**Cross-listings:** PSCI 375 JWST 492 REL 330

#### **Secondary Cross-listing**

By the late 19th century, Jews across Europe were faced with an urgent political problem. Amidst burgeoning national self-consciousness throughout the continent, despite the liberatory promises of the Enlightenment, Jews remained a vulnerable, segregated, and stigmatized minority population. Jews had to decide where to pin their hopes. Should they ally themselves with the liberals or the communists? Should they embrace nationalism or cosmopolitanism? Should they, perhaps, abandon Europe altogether and re-constitute themselves elsewhere? If so, should they focus their efforts on relocation to the historical land of Israel? Or could they go anywhere? Wherever they might go, should they aspire to build a modern Jewish nation-state, a semi-autonomous Jewish community, or some other arrangement? Should this coincide with the cultivation of a distinctively Jewish modern language? If so, should it be Hebrew or Yiddish? In this course we will assess various answers to these questions proffered by Jewish political thinkers in the modern period. We will pay particular attention to the construction of "Jews" and "Judaism" in these arguments. And we will ask persistently: what constitutes a "Jewish justification" for a political claim in modern Jewish political theory? Coverage will include: Jewish liberalism, political Zionism, Yiddishist autonomism, messianic quietism, and other views. We will read mostly primary sources, including texts by: Hermann Cohen, Theodore Herzl, Chaim Zhitlowsky, Franz Rosenzweig, Leo Strauss, Hannah Arendt, and many others.

**Requirements/Evaluation:** six short (1-2 pages) response papers; two 6- to 8-page papers, each analyzing a different view in depth; a final 18- to 20-page paper that incorporates the two previously submitted 6-8 page papers, but also compares the two views and adjudicates between them

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Religion majors, Jewish Studies concentrators, and Political Science students on the "Theory" track

**Expected Class Size:** 18

**Grading:** no pass/fail option, no fifth course option

### **PSCI 378 (F) Origins of the State**

When and how did the state come into existence as a form of political organization? This course explores theories of the origins of the state, asking how myths and other speculative accounts in the Western tradition draw boundaries between past and present, as well as between self and other. Paying attention to common oppositions such as nature/civilization, primitive/advanced, anarchy/social order, feminine/masculine, ruler/ruled and stasis/progress, we will investigate how these antagonisms work together to create the conception of the state that still dominates politics today. Course readings touch briefly on social contract theories (Locke, Hobbes, Rousseau, Kant) before turning to the core material for our exploration: alternative accounts of the origins of the state based on ancient Greek and Roman mythology and the ethnological writings of nineteenth-century socialists (Marx, Engels, Bebel, and others). More recent perspectives and critical interpretations will be drawn from feminist theory (Spivak, Pateman, MacKinnon, Folbre) and critical anthropology (Cassirer, Fabian, Graeber & Wengrow). Among our questions: Is it really possible to pinpoint a moment in time when the state came into existence? And if the aim is not to provide a historically accurate account, what exactly is at stake in constructing or demythologizing theories of the origins of the state?

**Requirements/Evaluation:** oral presentation and three papers (3 pages, 5 pages and 12-15 pages)

**Prerequisites:** Not open to first-year students.

**PSCI 380 (S) Sex Marriage Family**

**Cross-listings:** SOC 390 PSCI 380

**Primary Cross-listing**

Something has happened to America over the past fifteen years. Large minorities of young adults, especially young men, are now celibate. Cohabitation has skyrocketed but marriage is disappearing, and the country's birth rate is at an all-time low. Not surprisingly, loneliness has become epidemic. A similar story can be told for most other developed countries. The implications for political polarization, economic growth, social insurance programs, public health, military defense, even national survival are grim. What is the cause of this loss of faith in the future? Can public policy reverse these trends? This course is an investigation into relations between the sexes in the developed world, the fate of children and the family, and government attempts to shape them. The course investigates family models in historical and comparative context; the family and the welfare state; the economics of sex, gender, marriage, and class inequality; the dramatic value and behavioral changes of Gen Z around sex, cohabitation, and parenthood; and state policies to encourage partnership/marriage and childbearing in both left-wing (Scandinavia) and right-wing (Central Europe) variants.

**Requirements/Evaluation:** Two 4-5 page papers, 12-15 page research paper, discussion questions, class participation

**PSCI 382 (F) The Politics of Migration: Citizen, Immigrant, Alien, Refugee (DPE)**

Currently 272 million international migrants live in a country different from where they were born, an increase of 78% since 1990. What are the social, economic, and political consequences of unprecedented global mobility in both destination countries and countries of origin? This class investigates one of the most polarizing and relevant issues of our time: the politics of migration. Throughout the semester we interrogate four themes central to migration politics: rights, representation, access, and agency. The course is organized with a focus on status: which "categories" of people (i.e. citizens, migrants, refugees) have differential access to rights, services, and representation and why. Drawing on political speeches, documentary films, humanitarian campaigns, and a variety of academic texts, we critically analyze how those categories are constructed, as well as the political work they do in making claims, justifying policies, and shaping public opinion. The class situates contemporary US migration policies within a global context and over time, placing the US case in conversation with considerations of migration politics and policies in countries around the world. As an experiential education course, we will (virtually) attend a US naturalization ceremony as well as interview officials from organizations working with migrants and refugees here and abroad.

**Requirements/Evaluation:** Active class participation, 3 short papers (3 pages each), policy project (8-10 pages), and presentation.

**Prerequisites:** Prior course work in political science or global studies.

**Enrollment Limit:** 12

**Enrollment Preferences:** Political Science majors, Global Studies Concentrators.

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** This course examines the politics of migration with a focus on the power inherent within particular categorizations of people in relation to the state (i.e. citizens, migrants, aliens, refugees). We compare policies shaping the lives of migrants around the world, with particular considerations of how race, gender, age, and religion shape migration experiences (and migration policy). We focus on rights, access, and migrant agency throughout the course.

**PSCI 386 (F) Identity Politics: Conflicts in Bosnia, Israel-Palestine, Northern Ireland, & South Africa**

Identities have been either the stakes, or the guise taken by other kinds of conflicts, in Bosnia, Israel-Palestine, Northern Ireland, and South Africa for centuries. They have led to, or expressed, political divisions, clashing loyalties, and persistent and sometimes consuming violence. They also have produced attempts by both internal and external actors to resolve the issues. This research seminar will engage the origins of the conflicts and the role of identities in them, the role of disputes about sovereign power in creating and intensifying them, the strategies for reconciling them that are adopted domestically and internationally, the deals that have been struck or have not been struck to bring peace in these societies, and the outcomes of the various efforts in their contemporary politics. The course will begin by reading about both the general theoretical issues raised by conflicts in these "divided societies" and various responses to them. After familiarizing ourselves with what academic and policy literatures have to say about them, we then will read about the histories and contemporary politics in each society. With that as background, students will choose an aspect or aspects of these conflicts as a subject for their individual research.

**Requirements/Evaluation:** 2 10-12-page papers

### **PSCI 387 (S) The Firm**

The rise of gigantic tech firms--Google, Apple, Facebook, Amazon--has sparked widespread worries about the role of business power in capitalist democracy. Are these firms monopolies? How can they be better regulated? Should they be? This course studies the politics of business by centering analysis on the firm. From the perspective of the workplace, we investigate the firm as an arena of power, where workers and managers meet each other in continuous contests for control. From the perspective of the public sphere, we investigate the firm as an actor whose power maps uneasily onto the channels of democratic representation. Approaching the firm as both arena and actor in a number of capitalist democracies, we will compare the politics of business across different sectors, but will focus especially on tech and finance.

**Requirements/Evaluation:** Class participation; two 5- to 7-page essays; one presentation; one final essay.

**Prerequisites:** One introductory course in political science or economics, and/or permission of the instructor.

### **PSCI 388 (S) Comparative Political Economy**

**Cross-listings:** PSCI 388 POEC 388

Primary Cross-listing

This course examines the relationships between broad economic structures and political institutions. We consider why and how the spread of capitalism led to the birth of democracy in some countries, but dictatorships in others? Here we look closely at whether it is economic development which leads to the spread of democracy. Or whether it is economic crises which make the movement to democracy possible. Finally, we examine whether the emergence of a neoliberal economic order has affected the organization of political society?

### **PSCI 412 (F) Senior Seminar: Interpretations of American Politics**

American politics are in upheaval, and most Americans believe the country to be headed down "the wrong track." Yet assessments of what is at the heart of the country's problems vary. Many worry that the United States is threatened by anti-democratic actors intent on consolidating white nationalist power and corporate rule. Yet at the same time, others worry that the U.S. has abandoned the Anglo-Protestant traditions that made it strong and has entered a period of moral decay and decline. What are we to make of these different assessments? What do left and right see when they survey the nation, and why is what they see so different? Any diagnosis of contemporary maladies is premised on a vision of what a healthy functioning republic looks like. Our task in the seminar is to uncover and interrogate those visions. We will do this by exploring different interpretations of the American political order, each with its own story of narrative tensions and possible resolutions. We will then use our investigation of how different authors, and different traditions, understand the nation to help us assess contemporary politics and come to our own conclusions about what animates conflicts.

**Requirements/Evaluation:** brief weekly writing assignments; three short essays; and oral examination

### **PSCI 413 (S) Senior Seminar in American Politics: Polarized America**

With red states and blue states, partisan divisions in Congress, and even disputes about wearing masks to protect against the coronavirus, few question the fact of a polarized America. But what is the polarization about and what caused it? Is it manufactured by a political elite using the rules of the game to maintain power while ignoring the concerns of the people? Is it a capitalist strategy to divide the public in order to advance the interests of the wealthy corporate elite? Does it reflect a polity divided by racial and ethnic tensions with different visions of the nation's past and future? Does it

reflect increased inequality in a fast-changing global economy? How can a government of separated institutions operate and come to collective decisions given this discord? Can the framers' vision of deliberative, representative government meet the challenges of a polarized polity?

**Requirements/Evaluation:** class participation, weekly writing assignments, two short papers, final project

**Prerequisites:** At least one course in American politics

**Enrollment Limit:** 16

**Enrollment Preferences:** Seniors majoring in political science with concentration in American politics

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

### **PSCI 420 (F) Senior Seminar: The Nuclear Revolution**

**Cross-listings:** LEAD 420 PSCI 420 LEAD 330

#### **Primary Cross-listing**

This is a course about international politics in the nuclear age. In broad terms, it focuses on a very basic question: Does international politics still work essentially the same way as it did in the prenuclear era, or has it undergone a "revolution," in the most fundamental sense of the word? The structure of the course combines political science concepts and historical case studies, with the goal of generating in-depth classroom debates over key conceptual, historical, and policy questions. The basic format of the course will be to combine very brief lectures with detailed class discussions of each session's topic. The course will begin--by focusing on the Manhattan Project--with a brief technical overview of nuclear physics, nuclear technologies, and the design and effects of nuclear weapons. The course will then examine the following subjects: the dropping of the atomic bombs on Japan; theories of the nuclear revolution; the early Cold War period; the development and implications of thermonuclear weapons; the Berlin and Cuban missile crises; nuclear accidents; nuclear terrorism and illicit nuclear networks; the future of nuclear energy; regional nuclear programs; preventive strikes on nuclear facilities; nuclear proliferation; and contemporary policy debates.

**Requirements/Evaluation:** class participation, three 8- to 10-page papers

**Prerequisites:** PSCI 202

**Enrollment Limit:** 15

**Enrollment Preferences:** Political Science major seniors with an International Relations concentration

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

LEAD 420 (D2) PSCI 420 (D2) LEAD 330 (D2)

**Attributes:** PSCI International Relations Courses

**Not offered current academic year**

### **PSCI 421 (F) Senior Seminar: The Liberal Project in International Relations**

The most powerful actors in global politics are liberal ones, and a liberal project around democratic states, international law and organizations, and free trade dominates the global agenda. This course is an investigation into this global liberal project, engaging both theory and practice. We will discuss signature liberal theorists both classic and current as well as some of their most notable critics. We will also attend to empirical evaluations of signature liberal efforts around democratization, development, and human rights. The course ends with a discussion of the successes and failures of the European Union as the principal embodiment of the liberal project today.

**Requirements/Evaluation:** 1-3 papers of 5-7 pages, short oral presentations, daily discussion questions, 12-15 page final paper, class participation

**Prerequisites:** senior Political Science major or permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** senior Political Science majors concentrating in International Relations

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

### **PSCI 423 (F) Humanitarianism as Ideology and Strategy**

Since the mid-1980s, humanitarianism has been one dominant attitude that powerful countries, organizations and people have adopted with regard to poverty or disaster elsewhere. Humanitarianism aims at rescue, striving to keep people alive until some solution can be found. It aims not to address crises' causes nor to assist with solutions--which it considers political--just to keep human bodies alive. Critics contend that humanitarianism produces harm, provides structural incentives for people to do more or less than they need to, and deepens inequality between actors and targets. They contend that it legitimates the status quo, in which such things are bound to happen. This course confronts humanitarianism as an ideology through reading its defenders and critics, and as a political strategy assessing its usefulness.

**Class Format:** three students start class discussion every day; one reads a short (4-page) essay and two read shorter (two-page) essays

**Requirements/Evaluation:** three longer essays, six shorter essays, constructive participation

**Prerequisites:** PSCI 202 and at least one elective in international relations

**Enrollment Limit:** 12

**Enrollment Preferences:** Political science seniors then juniors; other seniors, then juniors

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PSCI International Relations Courses

Not offered current academic year

### **PSCI 431 Senior Seminar in Political Theory: Rethinking the Political**

What is politics? The question, an important part of political theory at least since Socrates, has taken on renewed significance in recent years, as theorists have sought to rethink the political in response to twentieth century dictatorships and world wars; feminist, queer, anti-racist, post- and decolonial struggles; the transformations wrought by neoliberal globalization; the emergence of "algorithmic governance"; the recent resurgence of populist nationalism; and deepening recognition of climate crises. This seminar engages some of the major attempts at rethinking produced in the 20th and 21st centuries, particularly at those that, characterizing liberalism as masking structures of subordination and elements of conflict in political life, undervaluing the importance of citizen action and public space, or being ill-suited to altered technological and ecological conditions, seek to rework or move beyond it. In addition to those who argue for an expanded and emancipatory conception of politics, we will consider arguments against politics as primary path to improvement or focus of commitment. Authors read may include Schmitt, Strauss, Rawls, Arendt, Wolin, Rancière, Brown, Connolly, Hartman, Sharpe, Moten, Wynter, Sexton, Edelman, Muñoz, Coulthard, Simpson, Lazzarato, Haraway, Latour.

**Requirements/Evaluation:** Regular, engaged class participation; short Glow posts; one 6-8 page paper; one 10-12 page paper

**Prerequisites:** Junior or senior standing and two or more theory courses or consent of instructor. Non-majors with theory interests and backgrounds are welcome

**Enrollment Limit:** 15

**Enrollment Preferences:** Juniors and seniors concentrating in political theory

**Expected Class Size:** 11

**Grading:**

**Distributions:** (D2)

**Attributes:** PSCI Political Theory Courses

Not offered current academic year

**PSCI 432 (S) Senior Seminar: Critical Theory**

This course takes a critical look at the nexus of money and political power in the United States and world politics, using the concept of "racket society" to guide our inquiry. The theory of "rackets" was first put forward by Frankfurt School theorists in the 1940s as a way of analyzing linkages among organized crime, cartels, monopolies, corporate interests, and political institutions. Their project, which we will recreate in this course, was to trace the effects of the adaptation of the legal system (and other state institutions) to the conglomeration of capital and the concentration of wealth in a few hands. The flow of money offers insights into these deeper trends. Course readings begin with the work of Max Horkheimer, Theodor Adorno, Franz Neumann, Friedrich Pollock, and Herbert Marcuse, paying special attention to their discussion of the anti-democratic effects of money on political institutions. We will also look carefully at their critique of legal frameworks that protect the wealthy while criminalizing the poor. Although these concerns were not exclusive to the Frankfurt School, the approach they took had some unique features. Having fled Nazi Germany and re-established their research institute in exile the United States, Horkheimer and his colleagues brought an outsider-insider perspective to the problem. Among our questions are the following: How did the intellectual heritage of the Frankfurt School and their experiences in Germany shape their analysis of racket society in 1940s America? Does the theory of rackets still have analytical power today? Given the massive expansion of the U.S. economy and the role of transnational capital in driving economic globalization in recent decades, what insights might the early Frankfurt School offer critics of anti-democratic tendencies in world politics today?

**Requirements/Evaluation:** regular class participation, short (1 pg) response papers, and drafts leading up to a 15-page final essay

**Prerequisites:** junior or senior standing required; in addition, prior coursework in political theory, cultural theory, philosophy, or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Senior Political Science majors with concentration in Political Theory, then other Political Science majors

**Expected Class Size:** 12

**PSCI 440 (F) Challenges to Neoliberalism in the United States and Europe since the Financial Crisis**

After emerging from the Cold War as the unrivaled model for capitalist societies, neoliberal capitalism has been subject to a series of challenges in the aftermath of the financial crisis of 2008-10. This seminar, after discussing briefly the institutions and logic of neoliberalism, will address recent challenges to it from both the left and the right in the United States and Europe. Specifically, the seminar will address the election of Donald Trump as president, the furor around Brexit in the United Kingdom and the authority of the European Union in Europe, and challenges to the hegemony of global finance and controversies around immigration in both the United States and Europe.

**Requirements/Evaluation:** in addition to participating in discussions about the readings, students are required to present to the class their written proposals for a research

**Prerequisites:** must be a senior Political Science major

**Enrollment Limit:** 15

**Enrollment Preferences:** Political Science majors specializing in the Comparative Politics subfield

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PSCI Comparative Politics Courses

Not offered current academic year

**PSCI 442 (S) Senior Seminar: Lineages of the Authoritarian State**

Authoritarian states are plentiful in the world today. Some appear durable and resilient; they are not simply transient political failures awaiting a breakthrough to democracy. This course will consider the history and contemporary experience of authoritarian states, beginning with political philosophical analyses of Aristotle, Montesquieu, Anderson, Moore, and Arendt. Attention then turns to how post-World War II authoritarianism has been understood from a variety of perspectives, including: the "transitions to democracy" approach; the "competitive authoritarian" view; and the "authoritarian resilience" analysis, among others.

**Requirements/Evaluation:** 2-4 papers of 5-7 pages, several short oral presentations, daily discussion questions, 12-15 page final paper, class participation.

**Prerequisites:** Political science major or permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Senior comparative politics concentrators; other political science senior majors; other political science majors; permission of instructor.

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**PSCI 493 (F) Senior Thesis: Political Science**

The senior major, having applied for and been accepted into the honors program during the second semester of the junior year, will devote the senior year to designing, researching, and writing a substantial and original work of scholarship, under the supervision of a faculty mentor to be assigned by the department. The final work will be submitted to and evaluated by a committee chosen by the department. In the fall semester, thesis writers will participate in a seminar supervised by a faculty member in political science. The seminar (which is one component of the 493-W31-494 designation) will focus on a variety of readings and assignments designed to help students develop their proposed project while honing the skills needed to frame and execute a successful thesis. Students will regularly circulate work for peer review and critique. By the end of the seminar, each student will submit a substantial research proposal, including annotated bibliography, for thesis work to be carried out in Winter Study and the spring semester. Those whose proposals are accepted will continue on as thesis students for the remainder of the academic year; if a proposal is not accepted, the student will finish their project as an independent study in W31.

**Requirements/Evaluation:** Completion of a variety of week-by-week assignments, culminating in a substantial thesis proposal.

**Prerequisites:** Department approval to pursue an honors thesis in political science

**Enrollment Limit:** 12

**Enrollment Preferences:** Permission of instructor

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**PSCI 494 (S) Senior Thesis: Political Science**

The senior major, having applied for and been accepted into the honors program during the second semester of the junior year, will devote the senior year to researching and writing a substantial and original work of scholarship, under the supervision of a faculty mentor to be assigned by the department. The final work will be submitted for evaluation by a committee made up of the faculty supervisor and two additional readers to be chosen by the department, in consultation with the supervisor. Thesis writers will not only work with their advisors but will participate in a weekly honors seminar supervised by a faculty member in political science. The seminar (which is one component of the 493-W31-494 designation and not a

separate course) will provide a focused forum for the exchange of ideas among the honors students, who will regularly circulate sections of their theses-in-progress for peer review and critique. The faculty seminar leader's primary role is one of coordination and guidance.

**Winter Study -----**

**PSCI 10 (W) International Economic Policymaking During Crises**

This course will provide a practical introduction to international economic policymaking, with a focus on the International Monetary Fund and World Bank. Through guest speakers and case studies, students will learn about the roles of these institutions in the response to recent economic crises. Students will also gain practical insight into the policymaking process and receive training in policy memo writing and briefings. After a brief overview of the International Monetary Fund and World Bank, the course will explore three economic crises in depth, with opportunities for students to practice policy writing and briefing skills.

**Requirements/Evaluation:** Short paper and final project or presentation (Written policy memo and oral briefing)

**Prerequisites:** One course in political science, economics, or history. The course will focus on practical policy skills and will not require advanced coursework in economics.

**Enrollment Limit:** 12

**Enrollment Preferences:** If overenrolled, preference will be determined based on short paragraph explaining interest in exploring internships and careers in public service.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Arathi Rao '06 is Advisor to the US Executive-Director to the International Monetary Fund. A Fulbright and NSF grant recipient, she holds an MPA from Harvard's Kennedy School, and worked for the World Bank, think tanks, and US government agencies.

**PSCI 11 (W) Secrecy & Democracy: The Limits of American Transparency**

Secrecy & Democracy will explore the landscape of American secrecy, the myriad ways in which information is restricted, the expanding realm of secrecy and the many institutions and agencies whose actions and influence are largely unseen. This includes not only the 16 governmental entities that make up the so-called "Intelligence Community," but also the interface between field operatives, analysts, policy makers, and courts. What is it that the three million Americans who have active security clearances actually do, who decides what is a secret and on what basis, are there costs to excessive secrecy, and how has it impacted our understanding of American policy, history, politics and public debate? We will examine the structure of the nation's security apparatus, how it has evolved, and where it appears to be going. The course will be conducted as a seminar with students pursuing those areas of particular personal interest and presenting their research findings and insights to the class. Course readings will include selected chapters from books and recent articles on the CIA, NSA, and Homeland Security. Several leading experts in the field with whom the author has worked in the past, will speak with the class through Zoom. These will include Pulitzer prize-winning journalists and authors as well as government officials who work with intelligence and classified materials. Beyond the immediate interests in secrecy, the course will take a step back and reflect upon the larger questions about how secret institutions can co-exist within a democracy, what price is paid when secrecy is excessive, and what price

is paid when it is compromised.

**Requirements/Evaluation:** Short paper and final project or presentation

**Prerequisites:** There are no prerequisites. We will not be assuming any particular familiarity with issues of secrecy, national security, or classification. We will begin with the basics and build from there.

**Enrollment Limit:** 15

**Enrollment Preferences:** The course has no inherent preference. Diverse student background is a plus.

**Expected Class Size:** NA

**Grading:** pass/fail only

### **PSCI 14 (W) JA SelCom: A Case Study in Selection Processes**

As a member of SelCom (SElection COMmittee), you will become a cohort with current members of JAAB (the Junior Advisor Advisory Board) to select the next class of JAs. You will participate in every step of the JA application evaluation process -- reading written applications, conducting interviews, discussing applicants with SelCom, and deciding on the final makeup of next year's JA class. Every SelCom member will complete anti-bias training at the beginning of Winter Study; working through biases to make thoughtful evaluations is crucial to this process. This is a fantastic opportunity for students who want to take on a leadership role that requires critical thinking and collaboration. Your input will help to shape the entry system, the JA role, and the very essence of the Williams community in the coming school year. The SelCom schedule is roughly as follows (subject to change). SelCom will likely meet 4-5 days per week. Week 1: SelCom members will undergo anti-bias training and then spend the first week conducting interviews with applicants and cleaning transcripts to ensure readability. Week 2-3: The committee will discuss applications with identifying information blinded to help mitigate bias in the selection process. Week 3-4: SelCom will revisit applications with consideration given to the personal identity of each applicant. The committee will then extend offers to a select number of candidates. Members may reconvene at some point in the spring semester (after the initial round of JA offers have been accepted or rejected) to determine which applicants on the waitlist should receive offers. If you are interested in serving on SelCom during winter study, you must fill out this application form by Thursday, November 3 at 11:59pm: <https://docs.google.com/forms/d/e/1FAIpQLSe85g8FeXhwSVT1a4GmdvwvzuDyNU2OBYc6yYwgJh0C0Ypblw/viewform>. JAAB will decide which applicants will serve on SelCom and inform all applicants of their application status by the end of the day on Monday, November 7. SelCom applicants who are not selected to serve on SelCom will have until November 9 (winter study registration deadline) to enroll in another winter study course.

**Requirements/Evaluation:** Attendance and active participation

**Prerequisites:** Anyone wanting to register for the SelCom Winter Study class needs to fill out this form:

<https://docs.google.com/forms/d/e/1FAIpQLSe85g8FeXhwSVT1a4GmdvwvzuDyNU2OBYc6yYwgJh0C0Ypblw/viewform>

**Enrollment Limit:** 25

**Enrollment Preferences:** Open to students who are in the classes of 2025, 2024.5, 2024, 2023.5, and 2023 AND who are not applying for the JA role for the 2023-2024 academic year.

**PSCI 21 (W) Fieldwork in Public Affairs and Private Non-Profits**

This course is a participant-observation experience in which students work full-time for a governmental or nongovernmental (including voluntary, activist, and grassroots) organization or for a political campaign. Examples include: town government offices; state or federal administrative offices (e.g., environmental agencies, housing authorities); interest groups that lobby government (e.g., ACLU, NRA); nonprofit organizations such as service providers or think tanks (e.g., Habitat for Humanity, Cato Institute); and grassroots, activist or community development organizations (e.g., Greenpeace or neighborhood associations). The instructors and members of the Political Science Department are available to help students find placements, if necessary, but such arrangements must be made in advance of the Winter Term. Students should first make their own contracts with an institution or agency. Each student's fieldwork mentor shall send a confirmation letter to the instructor verifying the placement and describing the nature of the work to be performed. During the session, students are responsible for keeping a journal of their experiences and observations. Additionally, students write final papers summarizing and reflecting upon the experience in light of assigned readings. A group meeting of all students will occur before winter study to prepare and after to discuss the experience. Every year, course instructors arrange for some distinct sections of this course to provide specialized fieldwork opportunities in the area for small groups of students.

**Requirements/Evaluation:** A 10-page paper

**Prerequisites:** None. Interested students must contact Paula Consolini prior to registration.

**PSCI 22 (W) LIFT: Learning Intervention for Teens**

This mentorship-based course pairs Williams students with teenagers involved in the Berkshire County juvenile justice system. LIFT is an official Commonwealth of Massachusetts probation diversion program. This is a student-led course, sponsored by Pittsfield Chief of Police Mike Wynn '93 and Professor Cheryl Shanks, but entirely run by Williams students who have served as mentors or directors in the past. Our goal is to empower the teenagers through positive peer mentorship and allow them to take ownership of an independent project of the teen's choosing. The project and other course activities aim to cultivate initiative, creativity, focus, and skills in areas such as goal-setting, research, and communication, which the teenagers can then carry forward to their school, work, and home lives. The course culminates with a project presentation in which each mentor/mentee pair formally presents their work to an audience that includes professionals in the juvenile court system, state elected officials, chiefs of police, district attorneys, the teens' peers and families, and faculty and community members. Williams students are expected to attend trainings, meet with their teens three times a week, co-facilitate a final presentation, and keep a weekly journal detailing their meetings. Because LIFT is an after-school program, this course meets Tuesday through Thursday from 3:30-5:30pm. If you are interested in applying, please fill out this google form <https://forms.gle/vWDy51KRWhDMHpJp8> - and register on PeopleSoft.

**Requirements/Evaluation:** final project or presentation, and journal and weekly statements

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** students will be evaluated based on a statement of application, and the directors reserve the right to accept fewer than 10 applicants

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Mike Wynn is the Chief of the Pittsfield Police Department and graduated from Williams in 1993.

**Attributes:** EXPE Experiential Education Courses

Winter 2023

### **PSCI 23 (W) The Practice of Politics**

Just as planning and execution in war or sports is most fruitfully analyzed without regard to one's sympathies in the contest, the successful practice of politics in campaigns and constituent assemblies may best be understood apart from party and ideology, as essentially the same game for both sides. This course will examine the political struggle in concrete and practical terms. Our exploration of strategy and tactics will begin by looking at the rules and realities of politics in the students' own hometowns, move through examples from American electoral history, and touch on the depiction of campaigns in movies and literature. The impact of ideology and personality on electoral outcomes, the value and cost of different methods of voter contact, and the role of candidates, field staff, managers, consultants, pollsters, and media experts will all be weighed. Students will also learn about the realities of legislative life, including relations with leadership, staff, lobbyists, reporters, and constituents, and the challenge of maintaining clarity in a chaotic situation.

**Requirements/Evaluation:** Short paper and final project or presentation

**Prerequisites:** None

**Enrollment Limit:** 15

**Enrollment Preferences:** Preference to Political Science majors and to students who can demonstrate prior engagement with political campaigns or institutions.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Joe Markley has thirty years of experience in every aspect of politics, including five terms in the Connecticut State Senate, employment as a manager and consultant for state and federal campaigns, and extensive involvement with grassroots organizing

**Attributes:** STUX Winter Study Student Exploration

### **PSCI 24 (W) New York Stories: Jacobs vs. Moses**

In the late 1950s, city planner Robert Moses, widely viewed as an irresistible force, met an immovable object in architecture critic Jane Jacobs, when Jacobs joined those organizing opposition to Moses's plans to extend Fifth Avenue through the middle of Manhattan's Washington Square Park. After years of struggle, Jacobs's side prevailed. It later thwarted Moses's larger ambition to run a 12-lane expressway through lower Manhattan. The clash became the stuff of not only history but also myth and legend, treated in sources ranging from journalism, scholarship, and documentaries to TV comedy, opera, and even multiple children's books. Both Moses, who did more than any other twentieth century figure to shape New York City's built environment, and Jacobs, whose writing shaped how future urban theorists and critics think about not only New York but cities in general, are more complex than the myths and legends. So, too, were the politics of their respective projects. In this course, we'll delve into the conflict and how it's been refracted in popular culture, explore the work of each figure, and use these encounters to think about how cities are and should be imagined in societies committed to equality and democracy. Materials will include portions of *The Power Broker*, Robert Caro's classic biography of Moses, *The Life and Death of American Cities*, Jacobs's most influential book, scholarship on the clash, and cultural representations from films to comics to scenes from *The Marvelous Mrs. Maisel*.

**Requirements/Evaluation:** Evaluation will be based on participation and coursework. Required work consists of occasional short writing and a 10 page final paper of equivalent work in podcast or other medium.

**Prerequisites:** None.

**Enrollment Limit:** 12

**Enrollment Preferences:** Anyone with genuine interest.

**Expected Class Size:** 8-10

**Grading:** pass/fail only

Winter 2023

**PSCI 29 (W) War Games**

Games and simulations have been used for centuries in training officers to lead combat. They are used frequently in the professional development of foreign affairs and intelligence officials. And they are used in IR courses to help students analyze and understand international politics across a wide array of interactions. This course explores the educational value of games in the study of international relations. Students in this course will spend their time playing games. We will play traditional board-based war games, diplomatic games, peacebuilding games, role-playing games, and computer simulations. We will also discuss the value of these games and simulations, different theories of victory, and the effectiveness of different gaming platforms.

**Requirements/Evaluation:** Class participation, final project (10-page paper or creative project), and attendance.

**Prerequisites:** None

**Enrollment Limit:** 30

**Enrollment Preferences:** Preference given to seniors and juniors.

**Expected Class Size:** 30

**Grading:** pass/fail only

**Materials/Lab Fee:** Approximately \$30: \$10 for reading materials + \$20 for one video game played outside class.

Winter 2023

IND Section: 01 TBA Nicole E. Mellow

**PSCI 99 (W) Independent Study: Political Science**

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

**Class Format:** independent study

**Grading:** pass/fail only

## PSYCHOLOGY

(Div III, with some exceptions as noted in course descriptions)

**Chair: Professor Noah Sandstrom**

- Stephanie A. Cardenas, Visiting Assistant Professor of Psychology
- Victor A. Cazares, Assistant Professor of Psychology; affiliated with: Psychology, Neuroscience
- Jeremy D. Cone, Associate Professor of Psychology
- Eliza L Congdon, Assistant Professor of Psychology; on leave 2022-2023
- Rebecca J. Crochiere, Assistant Professor of Psychology
- Susan L. Engel, Senior Lecturer in Psychology; Senior Faculty Fellow, Rice Center for Teaching, The Class of 1959 Director of Program in Teaching
- Steven Fein, Professor of Psychology; on leave 2022-2023
- Cynthia Guo, Visiting Assistant Professor of Psychology
- Amie A. Hane, Professor of Psychology; affiliated with: Psychology, Neuroscience, Public Health
- Kris N. Kirby, Professor of Psychology
- Nate Kornell, Professor of Psychology, Chair of Cognitive Science Program; affiliated with: Psychology, Cognitive Science
- Shannon Moore, Visiting Assistant Professor of Psychology
- Shivon A. Robinson, Assistant Professor of Psychology; affiliated with: Psychology, Neuroscience; on leave 2022-2023
- Marlene J. Sandstrom, Hales Professor of Psychology; on leave 2022-2023
- Noah J. Sandstrom, Chair and Professor of Psychology; affiliated with: Psychology, Neuroscience
- Kenneth K. Savitsky, Professor of Psychology
- Catherine B. Stroud, Associate Professor of Psychology
- Safa R. Zaki, Dean of the Faculty, John B. McCoy and John T. McCoy Professor of Psychology; affiliated with: Dean of the Faculty's Office, Psychology

### MAJOR

For the degree in Psychology, students must complete a minimum of nine courses as outlined below:

PSYC 101 Introductory Psychology

PSYC 201 Experimentation and Statistics

Three 200-level courses from the list below:

COGS/PHIL/PSYC 222 Minds, Brains, and Intelligent Behavior: An Introduction to Cognitive Science

NSCI 201/BIOL 212/PSYC 212 Neuroscience

PSYC 221 Cognitive Psychology

PSYC 232 Developmental Psychology

PSYC 242 Social Psychology

PSYC 252 Psychological Disorders

PSYC 272 Psychology of Education

Either PSYC 221 or 222, but not both, can count towards the three required 200-level courses.

Three 300-level courses from at least two of the areas listed below:

Area 1: Behavioral Neuroscience (courses with middle digit 1)

Area 2: Cognitive Psychology (courses with middle digit 2)

Area 3: Developmental Psychology (courses with middle digit 3)

Area 4: Social Psychology (courses with middle digit 4)

Area 5: Clinical Psychology (courses with middle digit 5)

Area 6: Other/Interdisciplinary Psychology (courses with middle digit 6)

Area 7: Educational Psychology (courses with middle digit 7)

At least one of these courses must be from among those carrying the format designation Empirical Lab Course.

One 400-level Psychology course.

Students who place out of Psychology 101 are still required to take nine courses to complete the major.

The department recommends that students take Psychology 201 in their sophomore year. The department requires that 201 be completed by the end of the junior year.

### **COURSE NUMBERING RATIONALE**

As is the case in all departments, the first digit of a Psychology course number indicates the relative level of the course. Where appropriate, the second digit corresponds to the Areas listed above.

### **THE DEGREE WITH HONORS IN PSYCHOLOGY**

Students who are candidates for honors need take only two 300-level courses from two different areas, but they must enroll in Psychology 493-W31-494 and write a thesis based on original empirical work. Presentation of a thesis, however, should not be interpreted as a guarantee of a degree with honors. Guidelines for pursuing the degree with honors are available from the department.

### **STUDY ABROAD**

With some advance planning, studying abroad (especially for one semester) can easily be worked into the psychology major. To facilitate this, we recommend that students:

Meet with the Study Abroad advisor as soon as they decide that they are interested in studying abroad.

Take PSYC 201 (Experimentation and Statistics) in the sophomore year.

Think ahead to the 300-level courses they are interested in taking so that they can fulfill the 200-level prerequisites before they go away or, if possible, while they are away. In our experience, study abroad programs in the following places are most likely to offer psychology courses: England, Ireland, Scotland, Spain, Australia, New Zealand, Hawaii, and Scandinavia. Students should procure the descriptions of the psychology courses they are considering taking and bring them to their meeting with the advisor.

There are some costs to studying away, particularly for the year. This limits students' opportunity to choose the particular 300-level courses they would like to take and they must sometimes settle for those that are open, those which happen to be offered, or those for which they have the prerequisites, once they return in their senior year. Many students who are keen on psychology begin doing research with professors during their junior year, and for some this leads to an honors thesis in the senior year, summer research, etc. If you are going away for the entire year and do not make such connections with a professor ahead of time (i.e., before you go), you may lose out on some of these opportunities to deepen your involvement in the major on campus. On the other hand, studying abroad can be an invaluable learning experience, so you need to think carefully, in consultation with your advisor and/or the Study Abroad advisor, about the costs and benefits of it. Very occasionally, a student who just begins taking psychology courses late in the sophomore year and wishes to go abroad for the year finds that they are not able to do both, or is restricted in the choice of study-abroad programs.

### **FAQ**

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

#### **Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

#### **What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description, complete syllabus, including readings/assignments, and exams or other written work. In addition, the course content cannot overlap substantially with material already taken at Williams.

**Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

No.

**Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

Yes. Students are required to take at least one empirical project course (which includes a lab component and data collection). This must be completed at Williams.

**Are there specific major requirements that cannot be fulfilled while on study away?**

Yes. The empirical project course must be completed here (see answer to previous question above). Other major requirements that must be completed here are the Senior Seminar and our Statistics and Experimentation course (PSYC 201). On very rare occasions students have been given credit for PSYC 201 taken elsewhere, but this is extremely unlikely. Most institutions break the material up into two different courses, or don't include all of the components that we feel are an important foundation for the major.

**Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

Yes. Students should be sure that have taken PSYC 201 PRIOR to their senior year at the latest. It is best to take it during sophomore year whenever possible.

**Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:**

There have been instances.

### **PSYC 100 (W) Intensive: Social Psychology**

A survey of theory and research in social psychology. Topics include conformity, group dynamics, stereotyping and prejudice, aggression, altruism, attraction and love, the self, social perception, attitudes and attitude change, and cultural psychology. Applications in areas such as advertising, law, economics and business, and politics will also be discussed.

**Requirements/Evaluation:** two in-class exams, one paper (5 pages), and a final exam

**Prerequisites:** permission of a dean

**Enrollment Limit:** 25

**Enrollment Preferences:** students who need to make up a deficiency

**Expected Class Size:** NA

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** This course is designed to count for both full semester and Winter Study credit. Once a dean approves enrollment, the Registrar's Office will register students in PSYC 100 and PSYC 40.

**Distributions:** (D3)

Winter 2023

LEC Section: 01 M-F 10:00 am - 11:50 am M-F 1:00 pm - 2:50 pm Jeremy D. Cone

### **PSYC 101 (F)(S) Introductory Psychology**

An introduction to the major subfields of psychology: behavioral neuroscience, cognitive, developmental, social, and psychological disorders and treatment. The course aims to acquaint students with the major methods, theoretical points of view, and findings of each subfield. Important concepts are exemplified by a study of selected topics and issues within each of these areas.

**Class Format:** Lectures will be presented during the scheduled time. To complement the lectures, students will participate in two short discussions/laboratory experiences that will be offered at a variety of times outside the lecture period.

**Requirements/Evaluation:** five unit quizzes, a final exam, and two brief lab reports (or related brief reports, depending on the availability of labs)

**Prerequisites:** none

**Enrollment Limit:** 180

**Enrollment Preferences:** First-year students and sophomores

**Expected Class Size:** 180

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

**Attributes:** NSCI Required Courses TEAC Teaching Sequence Courses

Fall 2022

LEC Section: 01 MWF 10:00 am - 10:50 am Noah J. Sandstrom, Clarence J. Gillig

Spring 2023

LEC Section: 01 MWF 10:00 am - 10:50 am , Clarence J. Gillig, Noah J. Sandstrom

### **PSYC 127 (F) The Psychology of Success (WS)**

This course will examine the psychology of success from a scientific perspective. After considering what success means, we will examine two broad influences on success: personality (e.g., intelligence, grit, and mental illness) and environment (e.g., schooling, parenting, and practice). We will talk about barriers to success, the search for success, and the cost of searching for success. Each week we will read a book or a set of articles (or possibly documentaries or podcasts). One partner will write a paper and the other will write a response. This course is not meant to make you more successful; the goal is to think critically about important issues, use evidence to make arguments, be skeptical, and practice writing and speaking in a convincing and engaging way.

**Requirements/Evaluation:** written work and discussion of that work; a five-page paper will be due every other week and a one-page response will be required other weeks

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** highest priority will be given to incoming first-years followed by rising sophomores

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will submit a paper every other week (minimum 5 pages), and in alternate weeks they will write a response to their partner's paper. The instructor will provide detailed feedback on the papers.

Not offered current academic year

### **PSYC 158 (S) Freud: A Tutorial (WS)**

**Cross-listings:** PSYC 158 HIST 485

Secondary Cross-listing

This tutorial is devoted to the systematic reading of the principal works of Sigmund Freud, one of the deepest, subtlest, and most influential thinkers of the last one-hundred years. Students will read Freud's work more or less chronologically, beginning with his writings on hysteria and concluding with his deeply pessimistic essay, *Civilization and Its Discontents*. In tutorial, we will consider the development of Freud's thought over the course of his professional life: his general psychological writings on the nature and functioning of the human psyche, his clinical writings on psychoanalysis as a form of treatment, and his cultural writings on art and artists, on the origin of human society, on religion, and on the relation of the individual to society and civilization. We will not be considering the relevance of Freud's ideas for purposes that transcend his own psychological agenda in the tutorial. Nor will we be much concerned with assessing whether Freud was "right" or "wrong" or whether his thought has clinical relevance today. Instead, we will seek to understand Freud as much as possible on his terms and not on ours, as a historical figure of originality, complexity and contradiction, whose thought deserves close reading and deep understanding within the context of Freud's thought itself.

**Class Format:** students will write and present orally six essays of 6-7 pages on assigned reading every other week; students not presenting an essay in a given week will be responsible for critiquing the presented essay

**Requirements/Evaluation:** student grades will be assigned only at the end of the semester based on their papers, their critiques, and their performance in tutorial discussion

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** juniors and seniors and History majors needing a 400-level seminar or tutorial to fulfill the requirements for a degree in History

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** fulfills History's 400-level graduation requirement

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PSYC 158 (D2) HIST 485 (D2)

**Writing Skills Notes:** As a tutorial, this course is by definition writing skills, both in terms of the number of papers that students will produce (six) and in terms of the focus on writing during every tutorial session. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

**Attributes:** HIST Group C Electives - Europe and Russia

Not offered current academic year

### **PSYC 201 (F)(S) Experimentation and Statistics (QFR)**

An introduction to the basic principles of research in psychology. We focus on how to design and execute experiments, analyze and interpret results, and write research reports. Students conduct a series of research studies in different areas of psychology that illustrate basic designs and methods of analysis. You must register for lab and lecture with the same instructor.

**Requirements/Evaluation:** research reports, exams, and problem sets

**Prerequisites:** PSYC 101; not open to first-year students except with permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course has problem sets focused on experimental design and quantitative data analysis. Students will help design and conduct experiments, analyze the data, and report their findings.

**Attributes:** COGS Related Courses PHLH Statistics Courses

### **PSYC 212 (F) Neuroscience**

**Cross-listings:** BIOL 212 NSCI 201 PSYC 212

**Secondary Cross-listing**

This course is designed to give an overview of the field of neuroscience progressing from a molecular level onwards to individual neurons, neural circuits, and ultimately regulated output behaviors of the nervous system. Topics include a survey of the structure and function of the nervous system, basic neurophysiology and neurochemistry, development, learning and memory, sensory and motor systems, and clinical disorders. Throughout the course, many examples from current research in neuroscience are used to illustrate the concepts being considered. The lab portion of the course will emphasize a) practical hands-on exercises that amplify the material presented in class; b) interpreting and analyzing data; c) presenting the results in written form and placing them in the context of published work; and d) reading and critiquing scientific papers.

**Requirements/Evaluation:** Evaluation will be based on participation in discussion groups, exercises, problem sets and quizzes performed in small groups, lab reports, midterm exams, and a final exam.

**Prerequisites:** PSYC 101 or BIOL 101; open to first-year students only with permission of instructor

**Enrollment Limit:** 72

**Enrollment Preferences:** Sophomores and Biology and Psychology majors

**Expected Class Size:** 72

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**PSYC 222 (F)(S) Minds, Brains, and Intelligent Behavior: An Introduction to Cognitive Science**

**Cross-listings:** PSYC 222 PHIL 222 COGS 222

**Secondary Cross-listing**

This course will emphasize interdisciplinary approaches to the study of intelligent systems, both natural and artificial. Cognitive science synthesizes

research from cognitive psychology, computer science, linguistics, neuroscience, and contemporary philosophy. Special attention will be given to the philosophical foundations of cognitive science, representation and computation in symbolic and connectionist architectures, concept acquisition, problem solving, perception, language, semantics, reasoning, and artificial intelligence.

**Requirements/Evaluation:** midterm and final exams, and weekly exercises

**Prerequisites:** PSYC 101 or any PHIL course or CSCI 134 or permission of instructor; background in more than one of these is recommended.

**Enrollment Limit:** 20

**Enrollment Preferences:** sophomore and first-year students, with additional preference given to students who satisfy more of the prerequisites.

There is no need to contact the instructor to indicate special interest in the course.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** meets Contemporary Metaphysics & Epistemology requirement only if registration is under PHIL

**Distributions:** (D3)

### **PSYC 232 (F)(S) Developmental Psychology**

An introduction to the study of human growth and development from conception through emerging adulthood. Topics for discussion include prenatal and infant development, perceptual and motor development, language acquisition, cognitive development, and social and emotional development. These topics form the basis for a discussion of the major theories of human development, including those about early experience, neural plasticity, dynamic systems, information processing, social learning, attachment, parenting, and family systems.

**Requirements/Evaluation:** attendance and active class participation, 3 exams (2 midterms and final), and regular writing assignments

**Prerequisites:** PSYC 101

**Enrollment Limit:** 50

**Enrollment Preferences:** Preference will be given to sophomores and junior psychology majors and senior psychology majors who still need to fulfill a 200-level requirement.

**Expected Class Size:** 50

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

### **PSYC 252 (F)(S) Psychological Disorders**

A study of the phenomenology, etiology, and treatment of the major forms of psychological disorders: depression, bipolar disorder, the schizophrenias, anxiety disorders, personality disorders, eating disorders, substance use disorders, and others. The course emphasizes an integrative approach which analyzes theories and research from psychological, biological, interpersonal, and sociocultural perspectives.

**Requirements/Evaluation:** short papers, 2 in-class exams, and participation

**Prerequisites:** PSYC 101; open to first-year students

**Enrollment Limit:** 50

**Enrollment Preferences:** Psychology majors, then sophomores, then by seniority

**Expected Class Size:** 50

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

### **PSYC 272 (S) Psychology of Education**

This course introduces students to a broad range of theories and research on education. What can developmental research tell us about how children learn? What models of teaching work best, and for what purposes? How do we measure the success of various education practices? What is the best way to describe the psychological processes by which children gain information and expertise? What accounts for individual differences in learning, and how do teachers (and schools) address these individual needs? How do social and economic factors shape teaching practices and the educational experiences of individual students? The course will draw from a wide range of literature (research, theory, and first-hand accounts) to consider key questions in the psychology of education. Upon completion of the course, students should be familiar with central issues in pre-college education and know how educational research and the practice of teaching affect one another.

**Class Format:** discussion

**Requirements/Evaluation:** two exams and a final project

**Prerequisites:** PSYC 101

**Enrollment Limit:** 50

**Enrollment Preferences:** Psychology majors and those who plan to become teachers

**Expected Class Size:** 50

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Attributes:** PSYC 200-level Courses TEAC Teaching Sequence Courses

**PSYC 312 (F) From Order to Disorder(s): The Role of Genes & the Environment in Psychopathology**

**Cross-listings:** NSCI 322 PSYC 312

**Primary Cross-listing**

This course examines how experimental methods in neuroscience can be used to understand the role of nature (genes) and nurture (the environment) in shaping the brain and behavior. In particular, we will explore how neuroscience informs our understanding of psychiatric disorders such as anxiety, depression, and schizophrenia. We will investigate the biological underpinning of these disorders as well as their treatments. Readings will include human studies as well as work based on animal models. Topics will include: the ways in which environmental and genetic factors shape risk and resiliency in the context of psychiatric disease, the neural circuits and peripheral systems that contribute to psychopathology, and the mechanisms through which interventions may act. In the laboratory component of the course, students will gain hands-on experience in using animal models to study complex behavior and their associated neural mechanisms.

**Requirements/Evaluation:** class presentations, participation in discussions, two article previews (1-2 pages each), literature review (5 pages), research project proposal (5 pages), oral presentation of project proposal.

**Prerequisites:** PSYC 212 (same as BIOL 212 or NSCI 201)

**Enrollment Limit:** 19

**Enrollment Preferences:** Psychology majors and Neuroscience concentrators

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**PSYC 313 (F) Opioids and the Opioid Crisis: The Neuroscience Behind an Epidemic**

**Cross-listings:** NSCI 313 PSYC 313

**Primary Cross-listing**

Opioid misuse, including addiction, has emerged as a major health epidemic in the United States. This course will explore the science of opioids as well as the historical and societal context surrounding their use and abuse. We will examine the neurobiological mechanisms through which opioids interact with pain pathways and reward circuits within the brain and we will explore how changes in these systems contribute to opioid tolerance, dependence, and addiction. We will consider how genetic, environmental and behavioral factors can powerfully influence these processes. Finally, we will consider alternative approaches to pain management as well as interventions for the treatment of opioid abuse. Students will be expected to design and conduct an empirical project related to the course material. Critical evaluation of peer-reviewed primary literature from animal and human studies will serve as a foundation for class discussions. Evaluation will be based on class presentations, participation in discussions and empirical projects, written assignments, and a poster presentation of the empirical project.

**Requirements/Evaluation:** class presentations, participation in discussions and empirical projects, five short position papers (approximately 2 pages double-spaced), an APA style empirical paper (approximately 20 pages double-spaced) and poster presentation of the empirical project.

**Prerequisites:** PSYC 212 (same as BIOL 212 or NSCI 201)

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors and Neuroscience concentrators

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

### **PSYC 314 (S) Learning and Memory in Health and Disease**

**Cross-listings:** PSYC 314 NSCI 314

#### **Primary Cross-listing**

This class will examine the neuroscientific basis of different types of learning and memory (such as declarative memory, motor memory, and associative memory), including the brain circuits, cellular mechanisms, and signaling pathways that mediate these different processes. In addition, we will explore how these processes can be disrupted in different diseases and disorders (such as Alzheimer's disease or post-traumatic stress disorder) and we will discuss the strategies and targets for therapeutic intervention. Class meetings will include a mix of lectures, discussions, and student presentations. Critical evaluation of peer-reviewed studies involving both human and animal models will serve as a foundation for class discussions. Working in small teams, students will also design and conduct an empirical project related to the course material.

**Requirements/Evaluation:** In-class presentations and participation in discussions, completion of an empirical research project which will include a project proposal (3-5 pages), data collection and analysis, and a final report (10-20 pages) along with a poster presentation.

**Prerequisites:** PSYC 212/NSCI 201/BIOL 212

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors and Neuroscience concentrators

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

### **PSYC 319 (F) Neuroethics (WS)**

**Cross-listings:** PSYC 319 NSCI 319 STS 319

#### **Primary Cross-listing**

Neuroscience studies the brain and mind, and thereby some of the most profound aspects of human existence. In the last decade, advances in our understanding of brain function and in our ability to manipulate brain function have raised significant ethical challenges. This tutorial will explore a variety of important neuroethical questions. Potential topics will include pharmacological manipulation of "abnormal" personality; the use of "cosmetic pharmacology" to enhance cognition; the use of brain imaging to detect deception or to understand the ability, personality or vulnerability of an individual; the relationship between brain activity and consciousness; manipulation of memories; the neuroscience of morality and decision making. In addition to exploring these and other ethical issues, we will explore the basic science underlying them.

**Requirements/Evaluation:** six 5-page position papers and five 2-page response papers as well as participation in discussions

**Prerequisites:** PSYC 212 (same as BIOL 212 or NSCI 201); or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Psychology majors and Neuroscience concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PSYC 319 (D3) NSCI 319 (D3) STS 319 (D2)

**Writing Skills Notes:** In alternating weeks, each student in a tutorial pair will write a 5-page essay based on the assigned readings. Essays will be discussed during tutorial meetings and written feedback from the professor will be provided for each essay. At the end of the semester, students will choose one of their prior essays to revise as their final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

### **PSYC 322 (S) Concepts: Mind, Brain, and Culture**

Every time we see something as a kind of thing, every time that we decide that an object is a cup rather than a glass, when we recognize a picture of a familiar face as a picture of ourselves, or even when we understand speech, we are employing categories. Most categorization decisions are automatic and unconscious, and therefore have the illusion of simplicity. The complexity of these decisions, however, becomes apparent when we attempt to build machines to do what humans perform so effortlessly. What are the systems in place that allow us this extraordinary ability to segment the world? Are they universal? How does conceptual knowledge differ across cultural groups? How do concepts affect our perception? How do the categories of experts differ from the categories of novices? Do children have the same kind of conceptual knowledge as adults? How are categories represented in the brain? In this course, we explore various empirical findings from cognitive psychology, cognitive neuroscience, and anthropology that address these questions.

**Class Format:** empirical lab course

**Requirements/Evaluation:** short papers, class presentation, and research paper

**Prerequisites:** PSYC 221 or 222 or permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors and Cognitive Science concentrators

**Expected Class Size:** 16

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

**Attributes:** COGS Interdepartmental Electives PSYC Area 2 - Cognitive Psychology PSYC Empirical Lab Course

Not offered current academic year

### **PSYC 323 (F) Visual Consciousness (WS)**

**Cross-listings:** PSYC 323 COGS 323

Secondary Cross-listing

Consciousness is considered as the 'last great mystery of science.' In this course we are going to delve into one of the most well-studied areas of this mystery, that is visual consciousness. Do you really perceive everything you look at? Are you aware of everything you see? Is our visual experience a grand illusion? We will start our investigation of such questions by reading about various approaches in understanding human consciousness. Then, we are going to apply these approaches to perception, and discuss theoretical and empirical controversies in visual consciousness. Finally, we are going to focus on evaluating empirical studies that attempt to resolve such controversies. The goal of this course is to build a bridge between theory and experimentation by learning how to interpret the results of scientific studies to shed light on theoretical and philosophical debates in the literature.

**Requirements/Evaluation:** 5 - 7 page essays every other week, and 2-page response papers to their partner's essays in alternate weeks

**Prerequisites:** COGS 222 (same as PHIL 222 or PSYC 222); or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Cognitive Science concentrators and Psychology majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PSYC 323 (D3) COGS 323 (D2)

**Writing Skills Notes:** In a tutorial format, students will receive detailed feedback on their writing each week from the professor, as well as from their partner. Students will receive timely comments on their writing skills, with suggestions for improvement. The written essays will be discussed during tutorial meetings.

Fall 2022

TUT Section: T1 Cancelled

### **PSYC 326 (F) Choice and Decision Making**

Being human means that we sometimes make choices that we know are bad for us. In this course we survey theoretical and experimental approaches to understanding our strengths and weaknesses as decision makers. Topics include rationality, the debate over cognitive biases, fast and frugal heuristics, impulsivity and self-control, addictions and bad habits, paternalism, and moral decision making.

**Requirements/Evaluation:** problem sets, essay papers, class and lab participation, and a research report

**Prerequisites:** PSYC 221 or 222 or permission of instructor; permission is typically given to students who have successfully completed ECON 110

**Enrollment Limit:** 12

**Enrollment Preferences:** senior Psychology majors who need the course to fulfill the major

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

**Attributes:** COGS Interdepartmental Electives PHLH Decision-Making by Institutions + Individuals PSYC Area 2 - Cognitive Psychology PSYC Empirical Lab Course

### **PSYC 328 (S) Cognitive Approaches to Visual Perception**

**Cross-listings:** PSYC 328 COGS 328

#### **Secondary Cross-listing**

When you open your eyes, you immediately perceive your environment in great detail. Seeing is so quick and effortless that people mistakenly think that vision works like a camera. However, the reason it feels effortless is due to the tremendous amount of complex processes and computations that take place in your brain whenever you open your eyes. In this course, we will explore such processes from a computational perspective and examine the concept of "visual illusion". We will focus on research methodologies used in vision science and look into how we can use such methodologies to explain visual illusions. We will learn about how our visual system processes certain visual features in our environment, such as motion, color, depth and shape. Learning about these processes will make us appreciate how everything we see around us can be a visual illusion.

**Requirements/Evaluation:** Class participation, weekly take-home quizzes, weekly short commentaries on readings, class presentation, individual 10-page final paper

**Prerequisites:** PSYC 221, COGS/PHIL/PSYC 222, or permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** Cognitive Science concentrators

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

**This course is cross-listed and the prefixes carry the following divisional credit:**

Spring 2023

SEM Section: 01 Cancelled

### **PSYC 332 (F) Children's Mathematical Thinking and Learning**

Are babies statistical experts? Will I ever be good at calculus? What are we born with and what do we learn? Before children are ever taught formal mathematics in a classroom, they are confronted with situations where they must use their informal understanding of geometry, space, and number to successfully navigate their environments. In this course we read and discuss both foundational and cutting-edge articles from neuroscience, cognitive science, education, and psychology to understand how humans bridge this gap between the informal and formal mathematical worlds. We will also tackle questions such as: How do culture and language affect numerical understanding? What are the sources of children's mathematical misconceptions? What are the effects of early environmental input or input deprivation on mathematical development? What do we know about gender differences in math achievement? How do stereotypes, prejudice, and math anxiety affect math performance? For your laboratory component, you will work with a small group of other students to develop an original research project that tests a specific hypothesis about children's mathematical thinking and learning. Data will be collected either online or in community schools, with the permission of parents, teachers, and children. Your results will be written-up in for your final paper, which will be in the style of an empirical journal article.

**Class Format:** community-based data collection in local schools

**Requirements/Evaluation:** class participation, discussion leader, weekly open-notes reading quizzes, individual 12- to 15-page final paper based on empirical group research project

**Prerequisites:** PSYC 201 and PSYC 232 or permission of the instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors, upperclassmen, students with a demonstrated interest in the course material

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Attributes:** PSYC Area 3 - Developmental Psychology PSYC Empirical Lab Course TEAC Teaching Sequence Courses

Not offered current academic year

**PSYC 333 (S) Children's Minds (WS)**

Humans stand out in the animal world for their capacity to develop ideas and consider those of other people. Where does this capacity come from, and how does it develop? Why do some people seem more inclined to consider ideas than others? What can schools do to foster the pursuit of ideas? Young children ask questions, tell stories, speculate, invent, and predict. By middle childhood, they are capable of constructing ideas about any number of complex topics: death, justice, infinity, and the nature of time, to name four. Yet by adolescence only some people are disposed to pursue ideas. We will examine data on children who collect objects (such as bugs or rocks) and information (about things like dinosaurs, contagion, and death), and examine the role such collections play in the capacity to construct ideas. We will consider research on how and when children puzzle over philosophical problems (for example, identity and fairness), how they learn to plan, their ability to learn from thought experiments, their emerging conception of what an idea is, and what they know about knowledge and its role in shaping beliefs and making decisions. We will also spend time looking at individual and cultural variation, as well as the influence of adults. We will read work in developmental, educational and cognitive psychology, as well as anthropology.

**Requirements/Evaluation:** Each week one member of the tutorial pair will write a 5-7 page essay answering a specific question, and the other member of the pair will write a response. The goal is for each student to write 5-6 papers, and 5-6 responses during the term.

**Prerequisites:** PSYC 232 or PSYC 272

**Enrollment Limit:** 10

**Enrollment Preferences:** Psychology majors and those involved in the Program in Teaching

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (WS)

**Writing Skills Notes:** Students will receive extensive feedback on their writing each week, both from the professor and their partner. Further, students will have the opportunity to rewrite two of their papers in light of the feedback that they receive during the semester.

**PSYC 334 (F) Defining and Disrupting the School-to-Prison Pipeline**

**Cross-listings:** PSYC 334 AFR 318

Secondary Cross-listing

The school-to-prison pipeline describes a system of processes that pushes children out of school into jails and prisons. This course will explore the pipeline and the relationships between school, prison, and society. We will begin with the history and creation of the modern-day school-to-prison pipeline, focusing on the educational and public policies that encourage the criminalization of "others", with particular emphasis on folks of color and under-resourced communities. We will also look to firsthand accounts from those pushed into the pipeline to humanize the topic and engage in thoughtful and compassionate discussion. Together, we will define "school" and "prison", identifying how these definitions are aligned with the most current iteration of the pipeline, and how they can help us as we work to dismantle it.

**Requirements/Evaluation:** Assignments for the course include ongoing journal assignments, two 3-5 page papers, and a final project.

**Prerequisites:** None

**Enrollment Limit:** 20

**Enrollment Preferences:** Africana Studies concentrators and Psychology Majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

### **PSYC 335 (S) Early Experience and the Developing Infant**

The period from conception to age three is marked by impressive rapidity in development and the plasticity of the developing brain affords both fetus and infant an exquisite sensitivity to context. This course delves into the literature that highlights the dynamic interactions between the developing fetus/infant and the environment. The course readings span a range of disciplines and cover a diversity of hot topics in the study of prenatal and infant development, including empirical research drawn from the developmental, neuroscience, psychopathology, and pediatric literatures.

**Requirements/Evaluation:** active class participation, weekly three-page papers, two oral presentations (20 minutes each and using PowerPoint), and one final 12-15 page final lab report

**Prerequisites:** PSYC 201, PSYC 212, and PSYC 232 or permission of instructor

### **PSYC 337 (S) Critical Perspectives in Special Education**

**Cross-listings:** AFR 324 PSYC 337

Secondary Cross-listing

What makes special education "special"? This course will explore the role, purpose, and function of special education in the United States. Given special education's assumption of dis/ability (Baglieri, 2012), we will also create collective and individual frameworks for discussing and deconstructing dis/ability. This course will examine history, policy, and pedagogy related to special education; we will also discuss how law and school practices have systemically and systematically excluded students of color from general education classrooms, leading to the overrepresentation of Black, Indigenous, and Latinx children in special education. We will listen to narratives shared by people with dis/abilities and our educational histories to understand how personal connections to special education influence our current beliefs and future practice.

**Requirements/Evaluation:** Assignments for the course include ongoing journal assignments, two 3-5 page papers, and a final project.

**Prerequisites:** None

**Enrollment Limit:** 20

**Enrollment Preferences:** Africana Studies concentrators and Psychology Majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

### **PSYC 338 (S) Inquiry, Invention and Ideas**

Children tinker, explore and create, but some more than others, and under some conditions more than others. What leads children to investigate,

invent and build their own ideas? We will examine the development of curiosity, invention, and the ability to have or construct an idea. We will also look at what accounts for individual differences between children, including the role of intelligence, creativity, social cues, and opportunity. We will look at how these processes unfold at home and in school, and discuss the educational implications of the research we read, and the research we conduct.

**Requirements/Evaluation:** three 3- to 5-page essays, two child observations and a 7- to 10-page final paper

**Prerequisites:** PSYC 101, and PSYC 232 or PSYC 272, or permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** preference given to Psychology majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Attributes:** PSYC Area 3 - Developmental Psychology TEAC Teaching Sequence Courses

Not offered current academic year

### **PSYC 341 (S) Stereotypes, Prejudice, and Discrimination**

**Cross-listings:** PSYC 341 WGSS 339

Primary Cross-listing

This course will examine social psychological theories and research that are relevant to the understanding of stereotypes, prejudice, and discrimination. We will take a variety of social psychological perspectives, emphasizing sociocultural, cognitive, personality, or motivational explanations. We will examine the impact that stereotypes and prejudice have on people's perceptions of and behaviors toward particular groups or group members and will explore a variety of factors that tend to exacerbate or weaken this impact. We also will consider some of the sources of stereotypes, prejudice, and discrimination and some of the processes through which they are maintained, strengthened, or revised. In addition, we will examine some of the effects that stereotypes, prejudice, and discrimination can have on members of stereotyped groups, as well as some implications of the social psychological research findings for issues such as education and business and government policies. A major component of this course will be the examination of classic and ongoing empirical research.

**Class Format:** empirical lab course

**Requirements/Evaluation:** weekly brief papers, oral reports, two longer papers

**Prerequisites:** PSYC 201 and 242

**Enrollment Limit:** 16

**Enrollment Preferences:** senior, then junior Psychology majors

**Expected Class Size:** 16

**Grading:** yes pass/fail option, yes fifth course option

### **PSYC 342 (F) Social Judgment**

This course focuses on how people make judgments and decisions in their social lives and why they are sometimes biased and irrational in their choices. We will place a strong emphasis on exploring how ideas from the judgment and decision-making literature can aid in our understanding of social psychological phenomena, including planning for the future, understanding other people, and resolving interpersonal conflicts. We will also place an emphasis on people's judgments and decisions as they pertain to their happiness and well-being, exploring how concepts in the judgment and decision-making literature can help us to understand why certain types of outcomes are more satisfying than others and why people sometimes choose in ways that fail to maximize their well-being. As we explore these questions, we will survey a variety of methods and perspectives, ranging from classic social psychological experiments to techniques imported from behavioral economics and cognitive psychology.

**Requirements/Evaluation:** a series of short papers; two essay exams; written and oral report of a research proposal

**Prerequisites:** PSYC 242 and PSYC 201, or permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 16

### **PSYC 344 (S) Contemporary Social Psychology**

This is a course about current research in social psychology--research that builds on the old classics, and research that opens up entirely new areas of study. We'll consider topics of current interest, such as implicit bias, gender identity, political polarization, moral judgment, emotion, social media, cultural influences on cognition, and more. Throughout the course, we'll think about how new studies verify, refute, or qualify older studies, and how psychological science progresses. This course is meant as a follow-up to PSYC 242 and assumes knowledge of social psychology.

**Requirements/Evaluation:** a series of papers, two essay exams, written and oral reports of research

**Prerequisites:** PSYC 242

**Enrollment Limit:** 19

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

**Attributes:** PSYC Area 4 - Social Psychology

Spring 2023

SEM Section: 01 TF 2:35 pm - 3:50 pm Kenneth K. Savitsky

### **PSYC 346 (F) Environmental Psychology**

**Cross-listings:** PSYC 346 ENVI 346

#### **Primary Cross-listing**

This is a course on contemporary social psychology as it pertains to the natural environment. Our two primary questions in this course are: (1) how can research and theory in social psychology help us understand the ways in which people engage with threats to the natural environment?, and (2) how can social psychology help us encourage environmentally responsible behavior and sustainable practices? Because human choice and behavior play such an important role in environmental problems, a consideration of human psychology may therefore be an important part of environmental solutions.

**Requirements/Evaluation:** a series of papers, two essay exams, written and oral reports of research

**Prerequisites:** PSYC 242 recommended, PSYC 201, or a comparable course in statistics and research methodology, is also recommended.

**Enrollment Limit:** 19

**Enrollment Preferences:** Psychology majors, Environmental Studies majors, and Environmental Studies concentrators

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

Fall 2022

SEM Section: 01 MWF 8:30 am - 9:45 am Kenneth K. Savitsky

**PSYC 349 (S) Psychology and Law (DPE)**

This course focuses on applications of psychology to the administration of justice. Drawing from the areas of social, personality, cognitive, and developmental psychology, we will look critically at the processes of criminal justice. We will compare the law's informal theories of human behavior with what psychologists know on the basis of empirical studies. We will cover a number of contemporary topics including police-civilian interactions, custodial interrogations, false confessions and guilty pleas, forensic evidence, deception detection, eyewitness identifications, alibi generation and corroboration, repressed and recovered memories, and jury selection and decision-making. We will also discuss methodological issues associated with conducting research in psychology and law. In the laboratory component of the course, students will design and conduct their own empirical research projects based on course readings and topics. These semester-long projects will be conducted collaboratively in pairs or teams.

**Class Format:** empirical lab course

**Requirements/Evaluation:** attendance and active class participation, several brief (1-2 page) reading response papers, (2-3) class presentations, written/oral project proposal (4-5 pages), participation empirical project (experiment design, data collection, data visualization, data analysis, interpretation), final APA-style research paper (15-20 pages), oral presentation of the research project

**Prerequisites:** PSYC 201 and either PSYC 242 or PSYC 221

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (DPE)

**Difference, Power, and Equity Notes:** We will explore the differing dynamics of power between legal actors and consider the psychological and structural factors that contribute to vulnerability, coercion, and inequality in the justice system. Through discussions of race, age, body, gender, disability, and stigmatized identities, this course will encourage students to challenge assumptions of objectivity and fairness in our legal system.

LAB Section: 02 R 1:00 pm - 4:00 pm Stephanie A. Cardenas

**PSYC 354 (S) Health Psychology**

In this course, students will contrast the traditional biomedical model of health with the biopsychosocial model with a goal of understanding how biological, psychological, and sociocultural factors influence health and well-being. We will explore psychological theory and research that targets health promotion, disease prevention, and management of chronic illness. Course readings will include empirical articles, excerpts from popular science books, and news/media articles on public health issues. Discussions will center on using the biopsychosocial model to better understand health processes (e.g., stress, tobacco use, physical inactivity) and outcomes (e.g., insomnia, diabetes, heart disease), with a special focus on health disparities among marginalized groups in the United States. Students also will learn about cognitive, behavioral, and mindfulness-based treatments ("behavioral medicine") that promote healthy behavior and the management of chronic illness/disease (e.g., obesity, pain, HIV/AIDs). All students will design and conduct an empirical research project based on the course material.

**Requirements/Evaluation:** class participation, weekly 1-page (double-spaced) reading response papers, empirical project paper (10-20 pages), and poster/oral presentation of the research project

**Prerequisites:** PSYC 201 and PSYC 252, or permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**PSYC 356 (F) Asylum: Understanding the Psychological Effects of Persecution, Trauma, and the Migration Experience**

Asylum is a specific form of humanitarian relief granted to an individual who can legally establish a history of previous persecution, or fear of future persecution, on account of their race, religion, nationality, political opinion, or membership in a particular social group. What are the psychological effects of being physically and emotionally persecuted *because of who you are, what you believe, and/or your identity*? Using the framework of asylum, we will study the effects of persecution, loss, and displacement on mental health and well-being, and the psychological impacts of traumatic stress and of seeking asylum in the United States. Through close reading of empirical studies, case studies, narratives, and legal writing, we will consider the psychological outcomes most frequently reported by asylum seekers, as well as the effects of traumatic stress on attachment and interpersonal relationships, family functioning and the capacity for recovery and post-traumatic growth. We will explore various types of persecution (e.g., gender-based violence, gang-violence, political persecution, and family separation) and their global health context. Finally, we will examine the social determinants, legal frameworks, and social justice implications of therapeutic interventions and resettlement. Students will also explore the clinical literature on psychological outcomes and how this research is informing both psychotherapy and social service interventions in the US and humanitarian settings across the globe. Guest speakers will punctuate our time over the semester, so that students can understand the role of lawyers, clinicians (medical and psychological) and global mental health researchers in addressing issues of forced displacement.

**Requirements/Evaluation:** Attendance and active participation, weekly reaction exercises (brief papers and presentations), and a final paper on an asylum-related topic of particular interest to the student.

**Prerequisites:** PSYC 252 is encouraged but not required. Students who have not taken PSYC 252 are encouraged to contact the instructor.

**Enrollment Limit:** 19

**Enrollment Preferences:** Psychology majors will have priority, but non-majors with interests in issues of asylum are encouraged to register.

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PHLH Social Determinants of Health PSYC Area 5 - Clinical Psychology

Fall 2022

SEM Section: 01 WF 11:00 am - 12:15 pm Jennifer McQuaid

**PSYC 357 (F) Depression**

This course will provide students with a comprehensive understanding of depression. Topics will include assessment, models of etiology and course, effective approaches to prevention and intervention, and depression in specific populations. Readings will expose students to seminal works in the field as well as current methods and research findings. Throughout the course, students will evaluate current research based on theory, methodological rigor, and potential impact on prevention and intervention efforts.

**Requirements/Evaluation:** class participation, five 2-page (double spaced) response papers, 2 class presentations, final paper (study proposal)

**Prerequisites:** PSYC 201; PSYC 252 recommended

**Enrollment Limit:** 19

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Attributes:** PSYC Area 5 - Clinical Psychology

Not offered current academic year

### **PSYC 358 (S) Developmental Psychopathology: Trajectories of Risk and Resilience**

Why do some youth develop psychopathology in the face of adversity whereas others do not? How do we define psychological disorders in youth? Is resilience a static trait, or can it be promoted? How do we prevent youth from developing psychopathology? In this course, students will address these and other questions using a risk and resilience framework that examines the interactions among multiple risk and protective factors in the pathway to psychopathology. Specifically, students will examine the interactions between individual characteristics (e.g., neurobiological, interpersonal, cognitive, and emotional factors) and environmental contexts (e.g., family, school, peer, early adversity, poverty) in the development of risk and resiliency. Application of etiological models and empirical findings to prevention and intervention approaches will be explored. Throughout the course, students will evaluate current research based upon theory, methodological rigor, and clinical impact.

**Requirements/Evaluation:** Evaluation will be based on oral participation, daily assignments, 1 presentation, and four 5-page position papers.

**Prerequisites:** PSYC 252; PSYC 201 recommended

**Enrollment Limit:** 19

**Enrollment Preferences:** Psychology majors and Public Health concentrators

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Attributes:** PHLH Reproductive, Maternal and Child Health PSYC Area 5 - Clinical Psychology

Spring 2023

SEM Section: 01 TR 11:20 am - 12:35 pm Catherine B. Stroud

### **PSYC 359 (S) Anxiety: Responses to Danger, Both Real and Imagined**

This is an advanced course on anxiety that takes an in depth look at the theory and research on the normative psychological processes that influence responses to danger, both real and imagined. Specifically, it examines the empirical research on psychological responses to traumatic experiences, such as combat, sexual assault, and natural and community disasters. Responses to perceived or imagined threats are also discussed as the underpinnings of such anxiety disorders as Panic Disorder, Generalized Anxiety Disorder, Social Phobia, Specific Phobia and OCD. Discussions focus on commonalities and differences in empirically supported treatments for anxiety disorders as well as controversies in the field.

**Requirements/Evaluation:** Regular attendance and active class participation - students will be randomly quizzed and/or asked to summarize or discuss material from the assigned readings and graded for their preparedness; midterm examination; one final 8-10 page literature review paper based on course content; one group presentation with discussion.

**Prerequisites:** PSYC 252

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology Majors; preference given to those with outstanding major requirements

**Expected Class Size:** 16

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

**Attributes:** PSYC Area 5 - Clinical Psychology

Not offered current academic year

### **PSYC 362 (S) Cultural Psychology**

What is culture? How does culture influence the way we think and behave? How is culture represented, impacted, and transformed in the digital age? This course will introduce you to the field of cultural psychology, and explore the role of cultural meanings, practices, and institutions on human psychology. We will discuss how culture emerges in human development and examine how the same psychological processes that give rise to rich

cultural practices also bear negative consequences on our society, such as stereotype and prejudice. We will also examine how human culture is transformed through digital devices and represented on social media. Through the course, you will learn to critically examine human behaviors in the contexts of diverse cultural beliefs, to reflect on your own upbringings through a cultural lens, and to gain an appreciation for cultures other than your own.

**Requirements/Evaluation:** Students are expected to participate in and periodically lead class discussions. As part of this, students must complete assigned readings prior to class meetings. Finally, students will participate in an individual or small-group project culminating in a written and oral presentation.

**Prerequisites:** PSYC 201 and at least one other 200-level psychology course

**Enrollment Limit:** 19

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Attributes:** PSYC Area 6 - Other/Interdisciplinary Psychology

SEM Section: 01 TR 8:30 am - 9:45 am Cynthia Guo

### **PSYC 363 (S) Media, Race, and U.S. Black Families**

**Cross-listings:** AFR 384 PSYC 363

**Secondary Cross-listing**

In this course, we will work to synthesize what we know about some of the key socializing forces for U.S. Black youth today. We will focus on how families, entertainment media, and the news can socialize Black children. Drawing on a range of theories and data we will examine how family members communicate about issues of identity and how media can come into play. What do we know about how U.S. Black families communicate about identity? What gaps remain in our knowledge, and how can we find the answers? What can we learn about today's media content when we apply research-informed lenses? What predictions can we make about its potential uses and effects among Black families? We will identify central research areas that warrant further attention and consider which methodologies would best work to fill those gaps. We will prioritize approaches that highlight the agency and strength of U.S. Black families and of youth themselves.

**Requirements/Evaluation:** 1 in-class presentation, two 2-5 page papers, and one 7-10 page final research proposal (that builds on the two shorter papers)

**Prerequisites:** None

**Enrollment Limit:** 18

**Enrollment Preferences:** Africana Studies Concentrators and Psychology Majors

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **PSYC 372 (F) Advanced Seminar in Teaching and Learning**

This advanced seminar will give students an opportunity to connect theory to practice. Each student will have a teaching placement in a local school, and participate in both peer and individual supervision. In addition, we will read a range of texts that examine different approaches to teaching, as well

as theory and research on the process of education. What is the best way to teach? How do various theories of child development and teaching translate into everyday practices with students? Students will be encouraged to reflect on and modify their own teaching practices as a result of what we read as well as their supervision. Questions we will discuss include: What is the relationship between educational goals and curriculum development? What is the relation between substance (knowledge, skills, content) and the interpersonal dynamic inherent in a classroom setting? How do we assess teaching practices and the students' learning? What does it take to be an educated person?

**Requirements/Evaluation:** this course involves a field placement, weekly readings, as well as seminar discussion, supervision, and a graded journal

**Prerequisites:** PSYC 232 or PSYC 272 or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Psychology majors and those who plan to become teachers

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Attributes:** EXPE Experiential Education Courses PSYC Area 7 - Educational Psychology TEAC Teaching Sequence Courses

Fall 2022

SEM Section: 01 W 1:10 pm - 3:50 pm Susan L. Engel

### **PSYC 373 (F) Critical Issues in Learning and Teaching**

In this seminar we will take a deep dive into several key topics in education. We will examine psychological research as well as a range of other materials (essays, film, recordings of children and personal experiences) to help answer a series of questions, including: Does the kind or quality of schooling have a measurable impact on children? How do you create curriculum? How does one conduct high quality classroom observations? What do good teachers have in common? What is the best way to help teachers get better at what they do? Can remote learning work well in K-12 settings?

**Class Format:** Students will meet in small groups with the professor. Each group will meet for a tutorial-like session once a week. We will use students' papers as a jumping off point for our discussions.

**Requirements/Evaluation:** Regular class attendance and full participation, five 5-page papers, and regular written responses to other students' papers. We will also do a variety of in-class activities that may require some independent preparation (gathering materials, or doing brief interviews) and some coordination with one another outside of class time.

**Prerequisites:** PSYC 232 or PSYC 272 or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Psychology majors and those involved in the Program in Teaching

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PSYC Area 7 - Educational Psychology TEAC Teaching Sequence Courses

Not offered current academic year

### **PSYC 377 (F) Mapping Anti-Bias Education**

**Cross-listings:** PSYC 377 AFR 358

Secondary Cross-listing

In this course, we will use theories and data to define anti-bias education in childhood contexts and examine its application across U.S. schools and childcare centers, families, and the media environment. We will ask ourselves: What do we know about the need for anti-bias education among non-marginalized and marginalized children, including those who are minoritized for their ethnic-racial, gender, and/or sexual identities? How are various biases and identities shaped in childhood? Which media-based and interpersonal interventions can be effective with anti-bias education and why? What are some of the contemporary hesitations and challenges around implementing anti-bias education for educators, families, and children? What are some of the practices that marginalized families are already implementing? As we explore approaches and possibilities for anti-bias education across children's ecosystems, we will propose innovative recommendations for research and practice that have the potential to yield positive

outcomes for today's children.

**Requirements/Evaluation:** Weekly 1-page reflection papers (graded on a pass/fail basis), one 3-5 page mid-term paper, one final 7-10 page paper or approved project

**Prerequisites:** None

**Enrollment Limit:** 18

**Enrollment Preferences:** Africana Studies Concentrators and Psychology Majors

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **PSYC 401 (F) Psychology in Popular Discourse: A Critical Examination**

This course considers several important contemporary topics from diverse psychological perspectives. These topics--which may include issues such as personal and external influences on success; technology and relationships; addiction--will be introduced via popular books, films, or podcasts, and we will analyze them more deeply with original research articles from across multiple approaches and sub-disciplines of psychology. A central goal in this course is for students to develop and apply the skills necessary to critically evaluate psychological ideas as they exist in the broader popular culture. The course will primarily be discussion based, and the students will lead these discussions.

**Class Format:** student-facilitated discussions

**Requirements/Evaluation:** participation in class discussions, choosing relevant research articles, and three position papers

**Prerequisites:** senior Psychology majors, or permission of instructor in rare cases

**Enrollment Limit:** 36(12/sec)

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 36

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3)

Not offered current academic year

### **PSYC 402 (F) Blessings and Blunders of Human Memory**

Nietzsche wrote that the forgetful are "blessed" because "they get the better even of their blunders." In what ways does forgetfulness serve us well? Is it possible, or even desirable, to have perfect memory? Can traumatic memories be repressed? Can false memories of committing a crime be implanted? Are "collective" memories subject to the same processes as individual memories? How do museums, monuments and sites (re)construct and tell a version of the past based on changing cultural identities? In this student-led seminar, we will attempt to answer these questions and more in the context of a broad exploration of the foundational concepts of human memory. We will examine the theories and methods researchers use to study individual and collective memories across varied domains, including clinical practice, romantic relationships, the justice system, and education. In this course, you will gain an evidence-based understanding of the nature of human memory through critical examinations of popular press literature, films, books, podcasts, and cutting-edge scientific studies.

**Requirements/Evaluation:** participate in and lead class discussions, three papers (approximately 5-7 pages double-spaced; including at least one publication-ready science communication piece)

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 14

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Fall 2022

SEM Section: 01 TF 1:10 pm - 2:25 pm Stephanie A. Cardenas

### **PSYC 403 (F) The Psychology of Love**

This seminar will examine psychological approaches to the study of attraction, affiliative bonds, attachment, and relationship health across the lifespan. These topics will be introduced via review articles, books, and films. Students will analyze these topics more deeply with presentations and student-led discussions of original research articles from across multiple perspectives and subdisciplines of psychology.

**Requirements/Evaluation:** participation in class discussion, selection and presentation of relevant empirical papers, three position papers

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3)

Not offered current academic year

### **PSYC 404 (F) Bias and Discrimination: Sources and Consequences**

We often assume that our experiences reflect an objective reality, that the way we see the world is the way it really is. Yet research contradicts this notion, showing that our perceptual experiences are malleable and subjective. They are shaped by higher-order, top-down influences such as our cognitions, social groups, surroundings, motivations, emotions, and prior experiences. In this class, we will explore how subjective experiences and idiosyncratic categorizations of people into social groups directly influence social justice outcomes across varied domains. For example, how do these differences in our subjective experience influence the ways in which people relate to one another? What are the implications for fair treatment across multiple factions of society, including education, employment, health care, and criminal justice? Are there effective interventions and policies for reducing gender, racial, and ethnic bias? For promoting inclusivity? If so, why are they effective? To develop an evidence-based understanding of bias and discrimination, we will critically analyze source materials from popular press literature, films, books, and podcasts, as well as empirical research from across multiple approaches and sub-disciplines of psychology. The class format will be primarily discussion based and student-led.

**Class Format:** student-led discussions

**Requirements/Evaluation:** weekly brief thought questions, lead two class discussions, select and present relevant empirical papers, three papers (5-7 pages)

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Fall 2022

SEM Section: 01 Cancelled

### **PSYC 405 (F) Why We Believe What We Believe**

As scientists, we aspire to hold beliefs that are based in evidence. As humans, however, we are likely to embrace beliefs influenced by a variety of social, historical, cultural, political, racial and religious factors. In this class, we will explore the question of why we cling to certain beliefs, even in the face of significant contradictory evidence. For example, what assumptions do we make about strangers and why are we so convinced these assumptions are correct? How does our culture affect our parenting choices and why do we hold on to them so fiercely? What assumptions do we make about the nature of memory, emotions and cognitions and are these assumptions valid? Are there "defensive moves" that we make when we are challenged racially, even when we are committedly antiracist? And, if so, why? In class, we will explore source material from popular culture: books, films, podcasts and popular press articles, and we will examine claims made about different belief systems. We will then critically evaluate these claims by exploring the available empirical psychological evidence. The format of this class is student-led discussions.

**Requirements/Evaluation:** Students will be required to develop and lead rigorous generative discussions with their classmates several times during the semester. In addition, students will be expected to actively participate in discussions and to write three 5-7 page position papers.

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Not offered current academic year

### **PSYC 407 (F) Success and Failure**

The theme of this psychology senior seminar will be success. We will discuss the path to personal success, including the relative importance of hard work, genetic talent, and luck; barriers to success like poverty and discrimination; the importance of parents, family, teachers, and friends; and what we really mean by success. For each topic we cover, we will read a book or watch a film, then delve deeper by reading and discussing scientific journal articles. Class meetings will be student-led discussions. You will write three or four 5-7 page papers. The larger goal will be to practice useful life skills such as how to lead and participate in a meeting (i.e., a class discussion), how to write engagingly and convincingly, and how to assess an argument skeptically and discuss it using evidence.

**Class Format:** student-led discussions

**Requirements/Evaluation:** participate in and lead class discussions, choose class reading assignments, and write essays

**Prerequisites:** senior Psychology majors or permission of instructor in rare cases

**Enrollment Limit:** 14

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 14

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Fall 2022

### **PSYC 408 (F) The Psychology of College**

What happens to people while they're in college? Does it have an impact on people's core identity, the way they think, form relationships, or participate in society? Most people's ideas about the impact of college come from personal experience, and the strongly held views of journalists, filmmakers, college spokespeople, relatives and public figures. Those beliefs are often misguided. Yet research can help us develop an accurate picture of just what it is that college does and doesn't do. Drawing on films, popular books and articles, as well as research from across the subdisciplines within psychology, we will examine some of the most common beliefs, and then delve into the psychological evidence that supports or refutes them. Our goal will be to develop a scientifically-based understanding of the psychological impact of college, and redesign various features of college to reflect our conclusions. Empirical work on this topic presents unique methodological challenges, so we will also spend some time designing studies that overcome those challenges.

**Requirements/Evaluation:** weekly readings, leading two class discussions, and writing three 5-7 page papers

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 14

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Not offered current academic year

### **PSYC 412 (F) Feelings & Emotions: Shaping the Brain and Society**

This course will explore what emotions are, the evolutionary origins of emotions, and the tools and techniques researchers use to study emotions both in humans and in animal models. We will examine how brain state(s) may underlie different emotions and challenge widely held notions about how an individual's emotion can influence behavior and social factors. Questions we will explore include: Is it better to be emotional or rational? What are 'gut feelings'? Are there gender differences in emotionality and, if so, what are their origins? Popular press literature and scientific studies will fuel student-led discussions as we seek to develop an evidence-based understanding of emotions and how they shape the world around us.

**Requirements/Evaluation:** Course requirements include weekly readings, leading at least two class discussions, and writing three papers: one literature review (5-7 pages), one claim- and empirically-driven paper (5-7 pages), and one op-ed (3 pages).

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** Senior psychology majors

**Expected Class Size:** 14

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3)

Fall 2022

SEM Section: 01 TR 8:30 am - 9:45 am Victor A. Cazares

**PSYC 413 (F) The Resilient Mind**

In this seminar, we will explore the psychological, environmental, and biological variables that shape an individual's response to stress and/or adversity. We will discuss how factors such as personality, coping style, social network/community, gender, brain mechanisms, and genes can influence one's ability to adapt and recover from a crisis. Students will critically examine depictions of resilience in popular literature and film, and employ empirical scientific articles from across multiple approaches and sub-disciplines of psychology to delve deeper into their analyses. Class meetings will be primarily discussion based and student-led, with the central goal of developing skills in forming and communicating evidence-based arguments.

**Requirements/Evaluation:** participating in and leading discussions, selection and presentation of relevant topics and readings, and three position papers (approximately 5-7 pages double-spaced)

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

Not offered current academic year

**PSYC 414 (F) Minding the Mind: Evaluating the Theory and Practice of Mindfulness**

While mindfulness, both in idea and practice, has been around for centuries, its popularity has dramatically increased in recent years. But what is "mindfulness" and how effective is it in addressing psychiatric and/or physical conditions such as anxiety, depression, post-traumatic stress disorder, or chronic pain? In this course, we will examine mindfulness through both its popular depictions as well as through the critical evaluation of the scientific literature. We will investigate how mindfulness practices affect biological, behavioral, and cognitive processes. We will consider the myriad ways that mindfulness has been applied in "real world" settings including mental health, education, and interpersonal relationships.

**Requirements/Evaluation:** Students are expected to participate in and periodically lead class discussions. Students will write three 5-7 page papers

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 14

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Fall 2022

SEM Section: 01 TR 11:20 am - 12:35 pm Shannon Moore

**PSYC 416 (F) Psychology of Nonviolence**

In this course we will explore the theory and practice of nonviolence in the context of empirical research in Positive Psychology. *Nonviolence* refers to choosing not to threaten or injure others, and its practice requires cultivating personal qualities that enable such a choice. Positive Psychology refers to the scientific study of those personal qualities that enable people to live happy and fulfilling lives. We will begin by studying the history and moral

theories of nonviolence. Using research from across the subdisciplines of psychology, we will then evaluate the empirical claims of those theories regarding psychological benefits of nonviolence to the practitioner, attitude change in the adversary, and effects on the larger community. An important focus of the course will be to critically assess the research methods and data analyses used in these studies. Topics will include self-control, empathy, forgiveness, tolerance, courage, aggression, resisting violent assault, and civil disobedience.

**Class Format:** class meetings will be primarily discussion-based and student-led

**Requirements/Evaluation:** Class attendance and participation, discussion leadership, literature searches for relevant empirical research papers, short papers in the form of research summaries, and a final paper in the form of an empirical research proposal.

**Prerequisites:** PSYC 201

**Enrollment Limit:** 14

**Enrollment Preferences:** Senior Psychology majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Attributes:** JLST Interdepartmental Electives

### **PSYC 418 (F) Suckers and Scammers**

Virtually all of us are familiar with at least one account of a truly impressive scam - an event, device, or scheme that attracts attention, trust, and money, and then turns out to be a fake, sometimes with devastating consequences for everyone. What are the psychological processes and mechanisms employed by the scammers, as well as those who fall for such schemes? In this course we will consider several books and films that depict well-publicized recent examples (for instance, *Bad Blood*, *The Rachel Divide*, and *The Talented Mr. Madoff*). We'll use research from scientific journals to understand the psychology of both the scammer and those who fell for their schemes. We'll consider, among other things, the developmental origins of deception, what motivates people to pull one over on others, the role of identity maintenance, how we decide who to trust, and what it takes to convince oneself of something implausible. We'll use psychological research from all of the subdisciplines of psychology to find out what these cases might have in common, and also look at studies that illuminate unique features of each situation. Most class meetings will be student-led discussions. You will write three or four 5-7-page papers. The larger goals include: learning how to use scientific data to answer a wide range of questions about everyday life; how to engage in fruitful evidence-based argument; and how to write to think, and to persuade.

**Requirements/Evaluation:** weekly readings, leading two class discussions, and writing three 5-7 page papers

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 14

**Grading:** no pass/fail option, no fifth course option

**Winter Study -----**

**PSYC 10 (W) Yoga, Creativity & Mindfulness**

Winter Study is an ideal time to set new intentions, and to focus on physical and mental well-being. This course offers a retreat in which students can de-stress, refresh, and tap into their creative strength. Primarily a yoga class, we will meet 4-6 hours each week to deep-dive into the mindful practice of yoga asana and pranayama. This course is a multi-faceted exploration of the intersection between creativity, mindfulness and yoga. We'll explore accessible ways to cultivate mindfulness, including a beautiful guided meditation with Professor Bernie Rhie. In addition to our time in the yoga studio, students are encouraged to keep a daily journal, responding to prompts, readings, and poetry. Early in the month, our group will have the opportunity to go on a 2 day retreat at the renowned Kripalu Center for Yoga & Health in Stockbridge, Massachusetts. Located in a beautiful natural setting with breathtaking views, Kripalu offers a variety of daily yoga and mindfulness classes as well as delicious organic and vegan food. This will be a nourishing time for students to spend some healthy quiet time and to get to know each other better. Back on campus, we will spend a full day at MassMoca, do some slow art looking, participate in a "sound bath," practice yoga within the beautiful galleries themselves, and participate in a group art project. We will also visit the Clark Art Museum, where we'll enjoy a mindful hike, followed by a guided tour looking at the intersection of art + mindfulness. Throughout the month, students will explore their own creativity, whether it's creative writing/journaling, or working with paper and colored pencils in a mandala making workshop. There will be a required reading list and a final creative project. We'll share our projects in the last week of the class, and examples might be leading a guided meditation, sharing a drawing, painting or poem, or designing a yoga or mindfulness self-practice.

**Requirements/Evaluation:** Final project or presentation

**Prerequisites:** No experience in yoga is required, but it is recommended.

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference will be given to juniors and seniors as well as a balance of personal pronouns. Students are encouraged to email in advance to express why they are interested in the course.

**Expected Class Size:** 20

**Grading:** pass/fail only

**Unit Notes:** I have been teaching yoga classes to students, athletes, faculty & staff at Williams College for 10 years. I love sharing the benefits of

yoga with as varied a population as possible, because I truly believe in the benefits of the practice. I notice that increasingly, the primary reason most students enroll in my P.E. classes is to find a sanctuary where they can de-stress and quiet the mind.

**PSYC 12 (W) Towards a Meaningful Life: The Role of Joy, Creativity, Play and Gratitude**

*What does it mean to live a full life? How does one bring joy, creativity, play and gratitude into daily living?* In this experiential course, students will explore concepts and complexities related to play, creativity, joy and gratitude across cultures and develop realistic practices for integrating these qualities into daily life. Students will participate in discussions, experiential activities, wellbeing challenges, journaling and community projects. Out of class time will emphasize practice opportunities for each of the pillars of the course.

**Requirements/Evaluation:** Final project or presentation. Weekly practice plan and reflection papers.

**Prerequisites:** ability to laugh -- out loud or silently

**Enrollment Limit:** 16

**Enrollment Preferences:** The first 16 enrolled

**Expected Class Size:** NA

**PSYC 16 (W) Self Compassion: The Benefits and the Challenges**

Ever put yourself down when things aren't going well? Offering yourself compassion is often recommended by therapists and is a skill taught in some modes of therapy. What is the basis for this recommendation? How is self-compassion put into practice? What makes it so challenging? You will learn about the elements of self-compassion, explore and experience different ways of offering yourself compassion, and discuss your experiences. You will look at ways that self-compassion can positively impact your mental health, your work, your play, and your relationships. You will be asked to practice skills between classes, do some reading, and reflect on your experiences.

**Requirements/Evaluation:** Short paper and final project or presentation. 2-3 page reflection paper will be due each week. A weekly log of mindfulness activities will also be kept and submitted.

**Prerequisites:** none

**Enrollment Limit:** 16

**Enrollment Preferences:** First 16 will be enrolled

**Expected Class Size:** NA

**Grading:** pass/fail only

**PSYC 17 (W) Introduction to Art Therapy**

This course will be a multi-modal introduction to the field of art therapy. Through art-making and the study of primary source materials, students will explore the historical contexts, theoretical models, and practical applications of art therapy. Questions students will tackle: Where is the line between pathology and typically functioning? What is the role of the therapist? How can the therapist be collaborators with their clients? Who is the expert,

really? What is context? How does the therapist's context inform their practice? Students will learn about art therapy in practice with a variety of populations and techniques. In addition to understanding the theoretical framework of art therapy, students will engage in a heuristic study of the role art has played in their lives. This course will be a combination of lecture, discussion, guest speakers, audio-visual material, student presentations, and art experiential.

**Requirements/Evaluation:** short paper and final project or presentation

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** Art and Psychology Majors

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Kaye is a registered, board-certified art therapist. She practices art therapy and teaches at Springfield College.

### **PSYC 20 (W) Designing your Life and Career after Williams, as well as Mastering the Basics of Personal Finance**

This course takes a psychological approach to helping you determine what to do with your life. We start by reviewing your life story so far and determining how it has shaped you. We discuss, for example, whether you feel pressured to go down a certain road, whether you feel torn between your head and your heart, or whether you feel directionless. Then we take stock of who you really are now, including your core interests, tendencies, strengths, and weaknesses. We try to identify life designs that play to your signature strengths, as opposed to situations that are a setup for frustration and failure. The class encourages you to let go of comparing yourself to your peers, as different people need different things. You explore your underlying values and what you find most important in life. You consider the level of meaning you need in your work, as well as how much you care about money, status, fame, independence, connection, and creativity. The class introduces you to the concept of "flow," the feeling you get when engaging in activities that provide ideal levels of challenge and mastery. By designing lives that promote flow states, you will be most likely to thrive and not merely succeed. Indeed, it is important not to design a life that appears successful but feels miserable. Your choice of a romantic partner can also have huge implications for the trajectory of your life. The class helps you to identify typical traps, such as staying with someone who is a bad match, and discusses how to make constructive relationship choices. Ultimately, as there are likely multiple valid life and career paths for you to take, you identify and develop three different plans that feel authentic and inspiring to you. As most students are concerned about the financial implications of their life choices, this course also introduces you to the basics of personal finance. You will learn that making smart financial choices early in your life leads to freedom and high net worth.

**Requirements/Evaluation:** 10-page paper

**Prerequisites:** None. Just a willingness to keep an open mind about your path.

**Enrollment Limit:** 20

**Enrollment Preferences:** Juniors and Seniors given preference. Email me (bj2@Williams.edu) if you have a special reason you want to take it.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Dr. Johnson received his B.A. from Williams College, his Ph.D. in clinical psychology from Yale University, and is a Clinical Associate Professor at Brown University. He has taught this Winter Study several times and deeply enjoys mentoring students.

### **PSYC 21 (W) Psychology Internships**

Would you like to explore applications of psychology in the "real world?" This course gives students an opportunity to work full-time during Winter

Study in a mental health, business, education, law, or another setting in which psychological theories and methods are applied to solve problems. Students are responsible for locating their own potential internships whether in the local area, their hometowns, or elsewhere, and are welcome to contact the course instructor for suggestions on how to do this. In any case, all students considering this course must consult with the instructor about the suitability of the internship being considered before the Winter Study registration period. Please prepare a brief description of the proposed placement, noting its relevance to psychology, and the name and contact information of the agency supervisor. Before Thanksgiving break, the student will provide a letter from the agency supervisor which describes the agency, and the student's role and responsibilities during Winter Study. Enrolled students will meet the instructor before Winter Study to discuss matters relating to ethics and their goals for the course, and after Winter Study to discuss their experiences and reflections.

**Requirements/Evaluation:** evaluation will be based on a 10-page minimum final paper summarizing the student's experiences and reflections, a journal kept throughout the experience, and the supervisor's evaluation

**Prerequisites:** approval by Noah Sandstrom is required

**Enrollment Limit:** 20

**Enrollment Preferences:** Students who have taken a PSYC course

**Expected Class Size:** NA

**Grading:** pass/fail only

**Attributes:** STUX Winter Study Student Exploration

### **PSYC 22 (W) Introduction to Research in Psychology**

This course provides a research opportunity for students who want to understand how psychologists ask compelling questions and find answers about behavior. Several faculty members, whose subfields include behavioral neuroscience, cognitive psychology, social psychology, clinical psychology, developmental psychology, and the psychology of education, will have student projects available. Since projects involve faculty research, interested students must consult with members of the Psychology Department before electing this course. In addition, students should discuss with faculty what the weekly time requirements will be. Enrollment will be limited by available space in faculty research labs

**Requirements/Evaluation:** evaluation will be based on the quality of research participation, student's lab journal, and either an oral presentation or a written 10-page report of the research project

**Prerequisites:** Students who have taken a PSYC course.

**Enrollment Limit:** 12

**Enrollment Preferences:** selection will be based on evaluation of departmental application and number of faculty available as mentors

**Expected Class Size:** NA

**Grading:** pass/fail only

**Attributes:** STUX Winter Study Student Exploration

### **PSYC 24 (W) Understanding the effects of seeking asylum on mental health and well-being**

Asylum is a specific form of humanitarian relief granted to an individual who can legally establish a history of previous persecution, or fear of future persecution, on account of their race, religion, nationality, political opinion, or membership in a particular social group. What are the psychological effects of being physically and emotionally persecuted because of who you are, what you believe, and/or your identity? Using the framework of asylum, we will study the effects of persecution, loss and displacement on mental health and well-being. Through readings, film and journalism, we will consider the psychological outcomes most frequently reported by asylum seekers, as well as the effects of traumatic stress on attachment and interpersonal relationships. We will look closely at interventions aimed at recovery and fostering post-traumatic growth. Asylum work is multi-disciplinary -- incorporating human rights, psychology, law, public health, medicine, journalism, gender and historical studies. With this in mind, this class is open to all majors. Each student will produce a final project on an asylum-related topic. This final project may reflect individual academic concentrations other than psychology. Please note, because people who are seeking asylum have experienced persecution and/or fear future

persecution, some of the content we will be reading and discussing may be difficult or upsetting for some students.

**Requirements/Evaluation:** Short paper and final project or presentation.

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** sophomores and juniors

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Jennifer McQuaid, PhD, is a clinical psychologist translating research into practice for survivors of trauma: at-risk adults, children and families, refugees and asylum seekers. She is a Visiting Lecturer in the Williams College Dept of Psychology.

**Attributes:** STUX Winter Study Student Exploration

**PSYC 40 (W) Intensive: Social Psychology**

A survey of theory and research in social psychology. Topics include conformity, group dynamics, stereotyping and prejudice, aggression, altruism, attraction and love, the self, social perception, attitudes and attitude change, and cultural psychology. Applications in areas such as advertising, law, economics and business, and politics will also be discussed.

**Requirements/Evaluation:** two in-class exams, one paper (5 pages), and a final exam

**Prerequisites:** permission of a dean

**Enrollment Limit:** 25

**Enrollment Preferences:** students who need to make up a deficiency

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** This course is designed to count for both full semester and Winter Study credit. Once a dean approves enrollment, the Registrar's Office will register students in PSYC 100 and PSYC 40.

# PUBLIC HEALTH

Chair: Professor Amie Hane

## Advisory Committee

- Susan Godlonton, Associate Professor of Economics, Chair of Public Health Program; affiliated with: Economics, Public Health; on leave Fall 2022
- Amie A. Hane, Professor of Psychology; affiliated with: Psychology, Neuroscience, Public Health
- Kieran Honderich, Lecturer in Women's, Gender and Sexuality Studies; affiliated with: Women, Gender & Sexuality Studies, Public Health
- Marion Min-Barron, Lecturer

Public health seeks to understand, and also to protect and improve, health at the level of a community or population. Communities make decisions and allocate resources that, intentionally or not, fundamentally shape human life. For example, great reductions in sickness and early death have come from social interventions with relatively low financial cost, such as physically separating drinking water from sewage, or distributing aspirin, condoms, mosquito nets, vaccines or soap, or sharing new ideas about life's possibilities. The way a society is organized affects the way that social and scientific knowledge is distributed within it; access to that knowledge shapes health at the individual level. At its heart, the study of public health focuses on questions about relationships between science and society, and between reality and possibility: what effective public health policy is and how we can measure its effectiveness; what the relationship is, and ought to be, between research and policy; how we reconcile important moral and economic claims, or balance other values that compete with maximizing health; what counts as disease, over time and among cultures; how we think about cause and responsibility; what constitutes a healthy environment; how our fundamental beliefs determine our approaches to health decisions; and how such decisions ought to be made.

## Requirements

Application to the concentration must be completed in the Spring of sophomore year. Applications are due during pre-registration. Application materials can be obtained on the public health website [public-health.williams.edu](http://public-health.williams.edu) by early April or by e-mailing the chair of the program. Due to excess demand for the concentration, applicants are not guaranteed admittance to the program. Depending on availability, a few students may be admitted in the Spring of Junior year with a mid-April deadline.

All students wishing to pursue the Area of Concentration should take this course early in their careers, preferably sophomore year. Students may petition the advisory committee to substitute a course taken in a study-abroad program focused on global health, providing that the course is equivalent in scope. However, students who plan to take advantage of this option should have taken at least two other courses from among the electives by the end of their sophomore year, and should recognize that those who lack a foundation in the core issues of the field may find it more challenging to prepare their proposal for admission to the concentration.

## Statistics

Statistical analysis is at the heart of the quantitative tools necessary to study the health of populations. One course in statistics from the list below is required of all concentrators.

## Elective Courses

Concentrators must take at least three electives, with at least two different prefixes, from the list below. Elective courses are grouped by category, but these clusters are not meant to constrain students to a single "track" within the program. Instead, each student is free to determine, with the guidance of an advisory committee member(s), a set of electives that provides an intellectually coherent exploration of their particular areas of interest within the field of public health. In choosing electives, students should consider the balance of breadth versus depth that will allow them to gain theoretical and methodological sophistication in one or more areas. Students may not substitute an independent study for any of these electives. Winter Study courses may not be counted towards the electives.

## Experiential Component

Because many public health challenges cannot be fully appreciated until one has hands-on experience with real communities and actual populations, each concentrator must have at least one relevant field-based educational experience with a research component. This requirement may be met through participation in an approved study abroad program (see below), one of the Winter study courses marked with an asterisk, a WS99 project, or a not-for-credit summer or academic-year internship. In every case, the advisory committee must approve the project in advance. Please note that experiential component should address both the "public" and "health" in public health. Projects that center on clinical or lab or that do not have a meaningful health component will generally not satisfy the PH experiential requirement.

## PHLH 402 (S) Senior Seminar in Public Health

The capstone seminar provides concentrators with the opportunity to reflect upon and synthesize their experiential learning in the context of understanding gained from a cohesive set of elective courses, and through the lens of a variety of intellectual and disciplinary frameworks. A second goal is to give concentrators experience working in a multi-disciplinary team to address a real-world, and in many cases very daunting, public health problem. Students will read, discuss, and compose written reflections on primary source empirical papers addressing a range of issues and disciplines in the field of public health. For example, topics may include the social determinants of health, environmental health risks, and access to health care. Students will also be divided into three or four research teams to investigate a contemporary real-life issue in public health by designing a study; collecting and analyzing data; and disseminating findings by written report and formal oral presentation to the public health advisory committee faculty. The capstone course is required of all concentrators, but may be opened to other students with relevant experience at the discretion of the instructor and the advisory committee, if space permits.

### Written Proposal

To be considered for admission to the Area of Concentration in Public Health, students must submit a written statement describing the portfolio of courses, study abroad, and experiential learning component(s) they intend to pursue. In this proposal, candidates for the concentration should describe their intellectual goals, and if relevant, how these relate to their professional goals. A fundamental purpose of the proposal requirement is to encourage the student to consider concretely how s/he will engage with socio-cultural, behavioral, policy, and/or biomedical aspects of population health. To this end, students should address whether a methodological or disciplinary emphasis ties their chosen courses together, and how the intended experiential component will relate to this set of questions. This proposal is due by the end of course registration period in the spring of the sophomore year, and should be prepared in consultation with a member of the advisory committee. Concentrators are required to revisit and update their proposal prior to registration in the spring of the junior year, and to provide documentation of their internship experience both prospectively and retrospectively. Please note electives will not be offered every year. Students should check the course catalog as they considering possible electives.

## STUDY ABROAD AND INTERNSHIPS

Although not a requirement for the PH concentration, study abroad and/or overseas internships provide a crucial opportunity to engage with global health issues through field-based coursework and independent research projects. The Public Health program in coordination with the Study Abroad Advisor and the Office of Career Counseling will advise students on opportunities in these areas. In particular, students may want to consider one of the several Global Health options offered through SIT. One or more courses completed on an approved study abroad program can be counted toward the three elective courses, with permission of the Chair. You can find general study away guidelines for Public Health at [public-health.williams.edu](http://public-health.williams.edu).

### PHLH 201 (S) Dimensions of Public Health (DPE)

Public health is concerned with protecting and improving health at the level of a community or population. Although individual behavior is an essential element of public health, collective, rather than individual, outcomes are the focus of public health study. In this course we will survey the field of public health, introducing students to core concepts and methods that highlight the interrelationship of individual choice and social institutions with environmental and biological factors in producing health outcomes at the population level. We will develop these concepts and methods within the context of signal cases and public health crises.

**Requirements/Evaluation:** two papers on a selected population or country and health issue, peer reviews and active contribution to class discussion

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** sophomores, potential Public Health concentrators

**Expected Class Size:** 14

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** No divisional credit (DPE)

**Difference, Power, and Equity Notes:** This course fulfills the DPE requirement because of its central focus on the ways that difference and power shape health outcomes in the U.S. and internationally. It uses an interdisciplinary approach to explore issues including the historical relations between communities of color, healthcare providers, and public health practitioners; contestation over the role of markets and government in public health; and differing explanations for the patterns of race, class, etc., in health outcomes.

**Attributes:** PHLH Core Courses

SEM Section: 02 W 1:10 pm - 3:50 pm Marion Min-Barron

### **PHLH 220 (F) International Nutrition (DPE) (WS)**

Global malnutrition continues to represent one of the most challenging issues of international development. Problems of both under- and overnutrition beginning as early as in utero can detrimentally influence the health, development and survival of resource-limited populations. This course introduces students to the most prevalent nutritional issues through a food policy perspective and exposes them to a wide variety of interventions, policies and current debates in the field of international nutrition. In addition to exploring the multi-level programmatic approaches for the prevention and treatment of the related nutritional problems, students will gain exposure and experience in program design and program proposal writing. Readings will involve both real-world programmatic documents/evaluations as well as peer-reviewed journal articles. Examples will be drawn from Africa, Asia and Latin America.

**Requirements/Evaluation:** six 1-page essays, one final term paper (10-15 pages), one oral presentation, and active class participation

**Prerequisites:** PHLH 201 or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Public Health concentrators

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE) (WS)

**Writing Skills Notes:** As a writing skills course, students will write six 1-page essays (each with an optional rewrite) which will help build the specific writing skills necessary for the final 10- to 15 page paper. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

**Difference, Power, and Equity Notes:** This course exposes the issues of difference, power and inequity by exploring the unequal distribution of resources and power at the global, national and intra-national level within the international nutrition context. We will also critically engage with issues of power, cultural difference and related ethics in the context of international development and nutrition programming.

**Attributes:** PHLH Nutrition, Food Security+Environmental Health

Not offered current academic year

### **PHLH 310 (F) Equity in Health**

Equity in health has been defined as inequalities in health outcomes based on irrelevant social characteristics. The Sustainable Development Goals and Agenda 2030 highlight equity in health as a main focus and key to achieving social sustainability. This course will introduce students to the concept of equity in health, and discuss the theoretical underpinnings of the pathways to unequal health outcomes. The social determinants of health and how they translate to uneven outcomes will be explored and discussed. There will also be a special focus on gender and gender-based violence as a driver of ill health. How to reduce inequity in health will be discussed and debated. Readings will involve some of the classic texts on health equity as well as recent explorations of the area.

**Requirements/Evaluation:** weekly short reflection papers and one final paper (10-12 pages)

**Prerequisites:** PHLH 201 Dimensions of Public Health or Permission of Instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Public Health Concentrators

**Expected Class Size:** 16

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

**Attributes:** PHLH Reproductive, Maternal and Child Health PHLH Social Determinants of Health

Not offered current academic year

**PHLH 351 (F) Racism in Public Health (DPE)**

In the face of a global pandemic and increased police brutality, states and counties across the nation have declared racism a public health crisis. This push to identify systemic racism as a high priority in public health action and policy is an important symbolic and political move. It names the faults of histories, systems and institutions but also brings to the spotlight the individual and community responsibility to dismantle racism in the US. In this tutorial, we will examine racism in public health policy, practice and research through an investigation of several mediums of evidence and information, ranging from peer reviewed literature to news editorials, podcasts and documentaries. We will explore specific pathways by which racism functions in the disciplines of biostatistics, epidemiology, social & behavioral sciences, health policy & management and environmental health sciences while also examining the dynamics of power and history in research and community practice. We will also gain skills in speaking across differences and articulation of how our own perceptions and lived experiences of race and racism impact our study of public health. This tutorial will most likely elicit uncomfortable and hard conversations about race and requires an openness to self-reflection and the practice of listening and articulation.

**Requirements/Evaluation:** bi-weekly tutorial papers, weekly journaling, oral commentaries and tutorial discussion

**Prerequisites:** PHLH 201

**Enrollment Limit:** 10

**Enrollment Preferences:** Public Health concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** In this course students will examine and critically examine the inequities and race based social and health injustices, and the ways racism infiltrates public health action and policy, both historically and currently. They will also refine their self reflection skills in understanding how their own positions of privilege and power, or lack thereof, inform their understanding of public health.

### **PHLH 402 (S) Senior Seminar in Public Health**

The capstone seminar provides concentrators with the opportunity to reflect upon and synthesize their experiential learning in the context of understanding gained from a cohesive set of elective courses, and through the lens of a variety of intellectual and disciplinary frameworks. A second goal is to give concentrators experience working in a multi-disciplinary team to address a real-world, and in many cases very daunting, public health problem. Students will read, discuss, and compose written reflections on primary source empirical papers addressing a range of issues and disciplines in the field of public health. For example, topics may include the social determinants of health, environmental health risks, and access to health care. Students will also be divided into small research teams to interact with local organizations and investigate a contemporary real-life issue in public health. The capstone course is required of all concentrators, but may be opened to other students with relevant experience at the discretion of the instructor and the advisory committee, if space permits.

**Requirements/Evaluation:** active seminar participation, written reflections, contribution to the team research project, and a 12- to 15-page final paper

**Prerequisites:** completion of at least four courses counting towards the PHLH concentration

**Enrollment Limit:** 12

**Enrollment Preferences:** senior Public Health concentrators; students who are not senior Public Health concentrators should contact the instructor

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** No divisional credit

### **Winter Study -----**

#### **PHLH 13 (W) Concluding your Experiential Component: Public Health Reflections**

Because many public health challenges cannot be fully appreciated until one has hands-on experience working on public health issues with populations or communities, each Public Health concentrator must have at least one relevant field-based educational experience. This requirement is known as the Experiential Component (EC). This winter study course will serve as the final step in completing the EC requirement. Through in-person meetings and online discussion, students will be asked to critically reflect on their EC experience, write about their intellectual and emotional journey during their EC and discuss with classmates how this EC experience ties into previous Public Health courses and potential career and graduate educational goals. Students will meet in-person on Tuesday, January 4, 2021: 10-1pm and Tuesday, January 25, 2021: 10-1pm. For the weeks in between these two dates, students will engage in weekly online asynchronous discussions with their classmates.

**Requirements/Evaluation:** Students will be evaluated on class discussions, reflection papers and a 10-page paper which can be waived.

**Prerequisites:** PHLH 201 and completion of their Experiential Component internship/work experience.

**Enrollment Limit:** 25

**Enrollment Preferences:** Public Health concentrators who are Seniors will be given preference.

**Grading:** pass/fail only

LEC Section: 01 TBA Marion Min-Barron

#### **PHLH 16 (W) Addiction Studies and Diagnostics**

The goal of this class is to help students develop an effective understanding of the definition, impact, and treatment of addiction. Students will be familiarized with the DSM-5, the text used to diagnose mental illness in the US. Speakers will tell their stories in their journey from addiction to recovery. Students will be expected to accurately diagnose the speakers according to the criteria in the DSM-5. Finally, an extensive annotated bibliography and oral presentation will be presented in groups at the end of the course. The goal of the class is to have students carry this knowledge forward and be more informed about addiction and recovery in personal, family, social, professional, and community life. That goal is two-fold; to help

make better and more informed choices personally and with other people.

**Requirements/Evaluation:** Class and other participation outside the classroom and group project at end of course.

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** instructor's choice

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** I have taught this class nearly a dozen times and greatly enjoy doing so. I work as an addiction therapist and have personally been in recovery for 35 years. I earned an MA at the Hazelden Graduate School in 2009.

### **PHLH 99 (W) Independent Study: Public Health**

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

**Class Format:** independent study

**Grading:** pass/fail only

## QUANTITATIVE/FORMAL REASONING (QFR)

The Quantitative/Formal Reasoning (QFR) requirement is intended to help students become adept at reasoning mathematically and abstractly. The ability to apply a formal method to reach conclusions, use numbers comfortably, and employ the research tools necessary to analyze data lessens barriers to carrying out professional and economic roles. The hallmarks of a QFR course are the representation of facts in a language of mathematical symbols and the use of formal rules to obtain a determinate answer. Primary evaluation in these courses is based on multistep mathematical, statistical, or logical inference (as opposed to descriptive answers).

Prior to senior year, all students must satisfactorily complete ONE QFR course. Students requiring extra assistance (as assessed during First Days) are normally placed into Mathematics 100/101/102, which is to be taken before fulfilling the QFR requirement.

### **AMST 363 (F)(S) Mathematical and Computational Approaches to Social Justice (DPE) (QFR)**

**Cross-listings:** STS 363 WGSS 363 AMST 363 MATH 308

#### **Secondary Cross-listing**

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial group will carry out a substantial project in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science.

**Class Format:** This is a research-based tutorial.

**Requirements/Evaluation:** To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows an "ungrading" methodology.

**Prerequisites:** Across each 3 - 5 person tutorial group: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students will be admitted in groups of 3 - 5 based on a proposal submitted prior to registration. The instructor is happy to facilitate formation of groups and to give feedback on draft proposals. Contact the instructor early, prior to preregistration.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 363 (D2) WGSS 363 (D2) AMST 363 (D2) MATH 308 (D3)

**Difference, Power, and Equity Notes:** Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

**Quantative/Formal Reasoning Notes:** Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

### **ASIA 241 (S) Colonialism and Underdevelopment in South Asia (DPE) (QFR)**

**Cross-listings:** ECON 240 ASIA 241

#### **Secondary Cross-listing**

British colonial rule in South Asia shaped economy and society in fundamental ways. As resistance to colonial rule emerged in the late nineteenth

century, "nationalist" writers developed a critique of its economic impact via taxation, fiscal policy, trade, and many other policies. In their turn, supporters of British rule, "apologists," argued that British rule had laid the foundations of economic growth by securing property rights, enforcing contracts, and developing infrastructure. The debate between "nationalists" and "apologists" has never quite ended, but after the recent growth of the Indian economy it has lost some of its emotional charge. We will use this opportunity to revisit the controversy.

**Requirements/Evaluation:** essays (one every other week) and responses to partner's essays will be evaluated

**Prerequisites:** one course in ECON

**Enrollment Limit:** 10

**Enrollment Preferences:** Economics major, prior course on South Asia

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 240 (D2) ASIA 241 (D2)

**Difference, Power, and Equity Notes:** Issues of difference, power, and equity are at the heart of any analysis of colonialism, hence the DPE designation.

**Quantative/Formal Reasoning Notes:** Students will write six essays, in which they will employ economic models and engage with quantitative evidence, so the course satisfies the QFR requirement.

### **ASTR 111 (F) Introduction to Astrophysics (QFR)**

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies. ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

**Class Format:** The class has 6 afternoon labs. Nighttime observing sessions will occur throughout the semester.

**Requirements/Evaluation:** weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

**Prerequisites:** a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

**Enrollment Limit:** 28

**Enrollment Preferences:** potential Astronomy majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

**BIMO 321 (F) Biochemistry I: Structure and Function of Biological Molecules (QFR)**

**Cross-listings:** BIMO 321 BIOL 321 CHEM 321

**Primary Cross-listing**

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

**Prerequisites:** BIOL 101 and CHEM 251/255 and CHEM 155/256

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIMO 321 (D3) BIOL 321 (D3) CHEM 321 (D3)

**BIOL 202 (F) Genetics (QFR)**

Genetics, classically defined as the study of heredity, is today a multidisciplinary field whose principles provide critical insight and tools to most areas of biology and medicine. This course covers the experimental basis for our current understanding of the inheritance, structures, and functions of genes. It introduces approaches used by contemporary geneticists and molecular biologists to explore questions in areas of biology ranging from evolution to medicine. A primary focus of the course is on students developing familiarity with problem solving, the logic and quantitative reasoning required to understand how genetic mechanisms lead to biological patterns. The laboratory part of the course provides an experimental introduction to modern genetic analysis as well as introductions to interpreting genetic reasoning in the primary research literature. Laboratory experiments include investigating chromosome structure using microscopy, integrating multiple streams of evidence to map a mutation to the genome, determining the structure of a DNA plasmid using molecular tools.

**Class Format:** Lecture: three hours per week, Lab: three hours per week.**Requirements/Evaluation:** bi-weekly problem sets; weekly laboratory exercises and laboratory reports; three exams**Prerequisites:** BIOL 101 and 102**Enrollment Limit:** 120**Enrollment Preferences:** students interested in the Biology major**Expected Class Size:** 60**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** does not satisfy the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course develops quantitative skills through solving problems. Students learn to apply basic calculations and logic to predict the outcomes of biological systems, for example, describing the likelihood that an individual will be affected by an inherited disease. Application of quantitative and logical analysis contributes to a large component of the in-class work and the graded material for the class, in the form of problem sets, exams, and data analysis for lab reports.

### **BIOL 203 (F) Ecology (QFR)**

**Cross-listings:** BIOL 203 ENVI 203

#### **Primary Cross-listing**

This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

**Class Format:** Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

**Requirements/Evaluation:** pre-class quizzes, lab reports, two mid-term exams, and a final exam

**Prerequisites:** BIOL 102, or ENVI 102, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** students planning to pursue Biology and/or ENVI

**Expected Class Size:** 30

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** satisfies the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIOL 203 (D3) ENVI 203 (D3)

**Quantative/Formal Reasoning Notes:** Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

**BIOL 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)**

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

**Primary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**Class Format:** Lecture three hours per week and laboratory three hours per week.

**Requirements/Evaluation:** several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

**Prerequisites:** BIOL 101 and CHEM 251/255 or permission of instructor

**Enrollment Limit:** 60

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 60

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIOL 322 (D3) CHEM 322 (D3) BIMO 322 (D3)

**Quantative/Formal Reasoning Notes:** The laboratory program is quantitative covering data analyses, numerical transformations, graphical displays.

**Attributes:** BIGP Courses BIMO Required Courses

### **BIOL 337 (F) Evolutionary Ecology (QFR)**

Evolutionary ecology is an interdisciplinary field that integrates concepts in genetics, adaptation, and ecology to understand how evolution operates in the context of ecological communities. This course provides an overview of the discipline including foundational concepts in evolutionary demography, phenotypic plasticity, and population genetics. It also explores how breakthroughs in these topics provide a framework for advances in our understanding of the evolution of reproductive timing and ageing, interspecific interactions (e.g. competition, predation), cooperation, and altruism. The course combines lectures, readings, in-class discussion, and a lab section that includes a mixture of field, computer, and lab projects. Laboratories will give students practical, hands-on experience in how to develop, plan, and carry out evolutionary ecology research from start to finish.

**Class Format:** lecture, 3 hours per week; laboratory and discussion, 3 hours per week

**Requirements/Evaluation:** Evaluation will be based on lab assignments, two exams, discussion participation, and a written paper.

**Prerequisites:** BIOL 102, plus either BIOL 202 or BIOL 203 or equivalent

**Enrollment Limit:** 24

**Enrollment Preferences:** preference given to biology majors, seniors, and juniors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** Satisfies the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Evolutionary ecology uses concepts in genetics and ecology to understand how the frequency of alleles in a population changes over time. These changes are formalized in equations that describe these processes. Students will gain experience in utilizing these equations to describe, analyze, and predict the evolutionary outcome of ecological interactions for both theoretical and experimental purposes. Thus, the students will gain experience in solving systems of equations using algebra and in stat

### **CHEM 151 (F) Introductory Chemistry (QFR)**

This course provides an introduction to chemistry for those students with little or no high school chemistry. Students will be introduced to concepts fundamental to studying matter at the molecular level. Principal topics include introductions to the nature of atoms and molecules, stoichiometry, solubility rules and equilibria, gas laws, chemical equilibrium, acid-base reactions, periodic relationships, chemical bonding, molecular structure, intermolecular forces, oxidation-reduction reactions, and related applications. Laboratory work comprises a system of qualitative analysis and quantitative techniques. The course provides preparation for further study of organic chemistry, biochemistry, physical and inorganic chemistry and is intended for students who are anticipating professional study in chemistry, in related sciences, or in one of the health professions, as well as for those students who are interested in exploring the fundamental ideas of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** electronic and written weekly problem set assignments, laboratory work and analysis, quizzes, two tests, and a final exam

**Prerequisites:** Students are required to take the online Chemistry Placement Survey prior to registering for the course ([chemistry.williams.edu/placement](http://chemistry.williams.edu/placement)).

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** first-year students; students who have studied chemistry for one or more years are directed to CHEM 153 or 155

**Expected Class Size:** 32

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** CHEM 151 may be taken concurrently with MATH 102--see under Mathematics; CHEM 151 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** BIMO Required Courses

### **CHEM 153 (F) Concepts of Chemistry (QFR)**

This course broadens and deepens the foundation in chemistry of students who have had typically one year of chemistry at the high school level. Most students begin study of chemistry at Williams with this course. Familiarity with stoichiometry, basic concepts of equilibria, and the model of an atom is expected. Principal topics for this course include kinetic theory of gases, modern atomic theory, molecular structure and bonding, states of matter, chemical equilibrium (acid-base and solubility), and an introduction to atomic and molecular spectroscopies. Laboratory periods will largely focus on experiment design, data analysis, literature, scientific writing, ethics, and other skills critical to students' development as scientists. The course is of interest to students who anticipate professional study in chemistry, related sciences, or one of the health professions, as well as to those who want to explore the fundamentals of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** problem sets and/or quizzes, laboratory work, and exams

**Prerequisites:** Students are required to take the online Chemistry Placement Survey prior to registering for the course ([chemistry.williams.edu/placement](http://chemistry.williams.edu/placement)).

**Enrollment Limit:** 45/lecture

**Enrollment Preferences:** first-year students

**Expected Class Size:** 90

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** CHEM 153 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

### **CHEM 155 (F) Principles of Modern Chemistry (QFR)**

This course is designed for students with a strong preparation in chemistry (including laboratory experience) in secondary school, such as provided by an Advanced Placement chemistry course (or equivalent) with a corresponding AP Chemistry Exam score of 5 (or a 6 or 7 on the IB Exam, or equivalent). Topics include chemical thermodynamics, kinetics, structure and bonding, coordination chemistry, electrochemistry and spectroscopy and their application to fields such as materials science, catalysis, environmental, biological, and medicinal chemistry. Laboratory periods will focus on hands-on skills, data representation and analysis, scientific writing, exploration of the scientific literature, and other skills critical to students' development as scientists. This course is designed for students who are anticipating further study in chemistry, related sciences, or one of the health professions, as well as for students who want to explore the fundamental ideas of chemistry as part of their general education.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** frequent short assignments in preparation for class, quantitative weekly problem sets, laboratory work and reports, an hour test, and a final exam

**Prerequisites:** Students are required to take the online Chemistry Placement Survey prior to registering for the course ([chemistry.williams.edu/placement](http://chemistry.williams.edu/placement)).

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** first-year students and sophomores

**Expected Class Size:** 32

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** CHEM 155 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

### **CHEM 156 (S) Organic Chemistry: Introductory Level (QFR)**

This course provides the necessary background in organic chemistry for students who are planning advanced study or a career in chemistry, the biological sciences, or the health professions. It initiates the systematic study of the common classes of organic compounds with emphasis on theories of structure and reactivity. The fundamentals of molecular modeling as applied to organic molecules are presented. Specific topics include basic organic structure and bonding, isomerism, stereochemistry, molecular energetics, the theory and interpretation of infrared and nuclear magnetic spectroscopy, substitution, elimination and addition reactions. The coordinated laboratory work includes purification and separation techniques, structure-reactivity studies, organic synthesis, IR and NMR spectroscopy, and the identification of unknown compounds.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** quantitative problem solving, laboratory performance, three midterm exams, and a final exam

**Prerequisites:** CHEM 151 or 153 or 155 or permission of instructor

**Enrollment Limit:** 55/lecture

**Enrollment Preferences:** Seniors, juniors, sophomores, first-year students

**Expected Class Size:** 100

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular and substantial problem solving in which quantitative/formal reasoning skills are practiced and evaluated.

### **CHEM 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)**

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

#### **Secondary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells.

Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

**Quantative/Formal Reasoning Notes:** Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

### **CHEM 321 (F) Biochemistry I: Structure and Function of Biological Molecules (QFR)**

**Cross-listings:** BIMO 321 BIOL 321 CHEM 321

#### **Secondary Cross-listing**

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

**Prerequisites:** BIOL 101 and CHEM 251/255 and CHEM 155/256

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **CHEM 322 (S) Biochemistry II: Metabolism (QFR)**

**Cross-listings:** BIOL 322 CHEM 322 BIMO 322

#### **Secondary Cross-listing**

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

**Class Format:** Lecture three hours per week and laboratory three hours per week.

**Requirements/Evaluation:** several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

**Prerequisites:** BIOL 101 and CHEM 251/255 or permission of instructor

**Enrollment Limit:** 60

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 60

**Grading:** no pass/fail option, no fifth course option

### **CHEM 368 (S) Computational Chemistry and Molecular Spectroscopy (QFR)**

This tutorial provides an introduction to the principles of computational quantum mechanics and their application to problems of chemical interest such as chemical bonding, chemical reactivity, and molecular spectroscopy. Emphasis is placed upon modern electronic structure calculations, their fundamentals, practical considerations, interpretation, and applications to current research questions. Under guidance in sessions and through independent work, students will use computational methods to explore assigned weekly research problems. The research results will be presented to and discussed with the tutorial partner at the end of each week.

**Requirements/Evaluation:** tutorial participation, presentations, and submitted papers

**Prerequisites:** CHEM 361 or equivalent background in Physics

**Enrollment Limit:** 10

**Enrollment Preferences:** Chemistry majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course fulfills the QFC requirement with problem sets for assignments in which quantitative/formal reasoning skills are practiced.

### **COGS 224 (F) Introduction to Formal Linguistics (QFR)**

**Cross-listings:** COGS 224 PHIL 221

#### **Primary Cross-listing**

The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip *and* oatmeal raisin. There two ways to understand "Many students took every class". According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

**Requirements/Evaluation:** Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

**Prerequisites:** No prerequisites

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference given to seniors and philosophy/cognitive science majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COGS 224 (D2) PHIL 221 (D2)

**Quantative/Formal Reasoning Notes:** This course teaches the fundamentals of the formal analysis of language. Students will learn to provide translation schemes from English to a logical language (typed lambda calculus).

**Attributes:** COGS Interdepartmental Electives COGS Related Courses Linguistics PHIL Contemp Metaphysics + Epistemology Courses

Fall 2022

SEM Section: 01 TF 1:10 pm - 2:25 pm Christian De Leon

### **CSCI 103 (S) Electronic Textiles (QFR)**

Digital data is being infused throughout the entire physical world, escaping the computer monitor and spreading to other devices and appliances, including the human body. Electronic textiles, or eTextiles, is one of the next steps toward making everything interactive and this course aims to introduce learners to the first steps of developing their own wearable interactive technology devices. After completing a series of introductory eTextiles projects to gain practice in necessary sewing, circuitry, and programming skills, students will propose and design their own eTextiles projects, eventually implementing them with sewable Arduino components, and other found electronic components as needed. The scope of the project will depend on the individual's prior background, but can include everything from a sweatshirt with light-up turn signals for bicycling, to a wall banner that

displays the current air quality of the room, to a stuffed animal that plays a tune when the lights go on, to whatever project you can conceivably accomplish with sewable Arduino inputs, outputs, and development board in a semester context. This class will introduce students to introductory computer programming, circuitry, and sewing with the goal of creating novel wearable artifacts that interact with the world.

**Class Format:** interspersed with hands-on activities in a computer lab

**Requirements/Evaluation:** weekly homework assignments and a final project

**Prerequisites:** none

**Enrollment Limit:** 18

**Enrollment Preferences:** students who have not previously taken a CSCI course

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class:  
<https://csci.williams.edu/>

**Materials/Lab Fee:** a fee of \$95 will be added to term bill to cover Lilypad Arduino components (Protosnap Plus Kit, battery holders, sets of LEDs, temperature sensor, vibe board, tri-color LED), alligator test leads, fabric, thread & fabric scissors.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will teach students the basics of computer programming through projects in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Iris Howley

### **CSCI 104 (F) Understanding Data Through Computation (QFR)**

Many of the world's greatest discoveries and most consequential decisions are enabled or informed by the analysis of data from a myriad of sources. Indeed, the ability to organize, visualize, and draw conclusions from data is now a critical tool in the sciences, business, medicine, politics, other academic disciplines, and society as a whole. This course lays the foundations for reasoning about data by exploring complementary computational, statistical, and visualization concepts. These concepts will be reinforced by lab experiences designed to teach programming and statistics skills while analyzing real-world data sets. This course will also examine the broader context and social issues surrounding data analysis, including privacy and ethics.

**Requirements/Evaluation:** Weekly problem sets involving programming, a project, and examinations.

**Prerequisites:** None; previous programming experience or statistics is not required.

**Enrollment Limit:** 24;12/lab

**Enrollment Preferences:** Not open to those who have completed or are currently enrolled in a Computer Science course numbered 136 or higher or a Statistics course. Preference given to first-year students and sophomores who have not previously taken a computer science course.

**Expected Class Size:** 24

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class:  
<https://csci.williams.edu/>

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

### **CSCI 134 (F)(S) Introduction to Computer Science (QFR)**

This course introduces students to the science of computation by exploring the representation and manipulation of data and algorithms. We organize and transform information in order to solve problems using algorithms written in a modern object-oriented language. Topics include organization of data using objects and classes, and the description of processes using conditional control, iteration, methods and classes. We also begin the study of abstraction, self-reference, reuse, and performance analysis. While the choice of programming language and application area will vary in different offerings, the skills students develop will transfer equally well to more advanced study in many areas. In particular, this course is designed to provide the programming skills needed for further study in computer science and is expected to satisfy introductory programming requirements in other departments.

**Requirements/Evaluation:** weekly programming projects, weekly written homeworks, and two examinations.

**Prerequisites:** none, except for the standard prerequisites for a (QFR) course; previous programming experience is not required

**Enrollment Limit:** 30;15/lab

**Enrollment Preferences:** if the course is over-enrolled, enrollment will be determined by lottery.

**Expected Class Size:** 30/lec

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class: <https://csci.williams.edu/>. Students with prior experience with object-oriented programming should discuss appropriate course placement with members of the department.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

### **CSCI 136 (F)(S) Data Structures and Advanced Programming (QFR)**

This course builds on the programming skills acquired in Computer Science 134. It couples work on program design, analysis, and verification with an introduction to the study of data structures. Data structures capture common ways in which to store and manipulate data, and they are important in the construction of sophisticated computer programs. Students are introduced to some of the most important and frequently used data structures: lists, stacks, queues, trees, hash tables, graphs, and files. Students will be expected to write several programs, ranging from very short programs to more elaborate systems. Emphasis will be placed on the development of clear, modular programs that are easy to read, debug, verify, analyze, and modify.

**Requirements/Evaluation:** programming and written assignments, quizzes, examinations

**Prerequisites:** CSCI 134 or equivalent; fulfilling the Discrete Mathematics Proficiency requirement is recommended, but not required

**Enrollment Limit:** 30;15/lab

**Enrollment Preferences:** if the course is over-enrolled, enrollment will be determined by lottery.

**Expected Class Size:** 30/lec

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class:

<https://csci.williams.edu/>

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course include regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** BIGP Courses

### **CSCI 237 (F)(S) Computer Organization (QFR)**

This course studies the basic instruction set architecture and organization of a modern computer. It provides a programmer's view of how computer systems execute programs, store information, and communicate. Over the semester the student learns the fundamentals of translating higher level languages into assembly language, and the interpretation of machine languages by hardware. At the same time, a model of computer hardware organization is developed from the gate level upward.

**Requirements/Evaluation:** weekly programming assignments and/or problem sets, quizzes, midterm and final exams

**Prerequisites:** CSCI 136

**Enrollment Limit:** 24;12/lab

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

LAB Section: 03 R 2:30 pm - 4:00 pm Kelly A. Shaw

### **CSCI 256 (F)(S) Algorithm Design and Analysis (QFR)**

This course investigates methods for designing efficient and reliable algorithms. By carefully analyzing the structure of a problem within a mathematical framework, it is often possible to dramatically decrease the computational resources needed to find a solution. In addition, analysis provides a method for verifying the correctness of an algorithm and accurately estimating its running time and space requirements. We will study several algorithm design strategies that build on data structures and programming techniques introduced in Computer Science 136. These include greedy, divide-and-conquer, dynamic programming, and network flow algorithms. Additional topics of study include algorithms on graphs and strategies for handling potentially intractable problems.

**Requirements/Evaluation:** Problem sets, midterm and final examinations

**Prerequisites:** CSCI 136 and fulfillment of the Discrete Mathematics Proficiency requirement

**Enrollment Limit:** 24

**Enrollment Preferences:** Preference will be given to students who need the class in order to complete the major. Ties will be broken by seniority (seniors first, then juniors, etc.).

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course will have weekly problem sets in which students will formally prove statements about the behavior and performance of algorithms. In short, the course is about applying abstract and mathematical reasoning to the study of algorithms and computation.

### **CSCI 315 (S) Computational Biology (QFR)**

**Cross-listings:** PHYS 315 CSCI 315

**Secondary Cross-listing**

This course will provide an overview of Computational Biology, the application of computational, mathematical, statistical, and physical problem-solving techniques to interpret the rapidly expanding amount of biological data. Topics covered will include database searching, DNA sequence alignment, clustering, RNA structure prediction, protein structural alignment, methods of analyzing gene expression, networks, and genome assembly using techniques such as string matching, dynamic programming, hidden Markov models, and statistics.

**Requirements/Evaluation:** weekly Python programming assignments, code reviews, problem sets, plus a few quizzes and a final project

**Prerequisites:** programming experience (e.g., CSCI 136), mathematics (PHYS/MATH 210 or MATH 150), and physical science (PHYS 142 or 151, or CHEM 151 or 153 or 155), or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** courage

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHYS 315 (D3) CSCI 315 (D3)

**Quantative/Formal Reasoning Notes:** problem sets and programming assignments

**Attributes:** BIGP Courses

Spring 2023

LEC Section: 01 M 1:10 pm - 3:50 pm Daniel P. Aalberts

### **CSCI 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)**

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

#### **Secondary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

**Quantative/Formal Reasoning Notes:** Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

### **CSCI 334 (F)(S) Principles of Programming Languages (QFR)**

This course examines the concepts and structures governing the design and implementation of programming languages. It presents an introduction to the concepts behind compilers and run-time representations of programming languages; features of programming languages supporting abstraction and polymorphism; and the procedural, functional, object-oriented, and concurrent programming paradigms. Programs will be required in languages illustrating each of these paradigms.

**Requirements/Evaluation:** weekly problem sets and programming assignments, a midterm examination, and a final examination

**Prerequisites:** CSCI 136

**Enrollment Limit:** 30

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course include regular and substantial problem sets and labs in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2022

LEC Section: 01 TR 9:55 am - 11:10 am Daniel W. Barowy

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Stephen N. Freund

### **CSCI 339 (S) Distributed Systems (QFR)**

This course studies the key design principles of distributed systems, which are collections of independent networked computers that function as single coherent systems. Covered topics include communication protocols, processes and threads, naming, synchronization, consistency and replication, fault tolerance, and security. Students also examine some specific real-world distributed systems case studies, including Google and Amazon. Class discussion is based on readings from the textbook and research papers. The goals of this course are to understand how large-scale computational systems are built, and to provide students with the tools necessary to evaluate new technologies after the course ends.

**Requirements/Evaluation:** weekly homework assignments, midterm exam, 3 major programming projects, and a final project

**Prerequisites:** CSCI 237

**Enrollment Limit:** 24

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LEC Section: 01 MR 1:10 pm - 2:25 pm Jeannie R Albrecht

### **CSCI 361 (F) Theory of Computation (QFR)**

**Cross-listings:** MATH 361 CSCI 361

**Primary Cross-listing**

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

**Class Format:** Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

**Requirements/Evaluation:** online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination

**Prerequisites:** CSCI 256 or both a 300-level MATH course and permission of instructor

**Enrollment Limit:** 48(12/con)

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 361 (D3) CSCI 361 (D3)

**Quantative/Formal Reasoning Notes:** This course include regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** COGS Interdepartmental Electives

CON Section: 05 TF 1:10 pm - 2:25 pm Aaron M. Williams

### **CSCI 371 (F)(S) Computer Graphics (QFR)**

This course covers the fundamental mathematics and techniques behind computer graphics, and will teach students how to represent and draw 2D and 3D geometry for real-time and photorealistic applications. Students will write challenging implementations from the ground up in C/C++, OpenGL, and GLSL. Topics include transformations, rasterization, ray tracing, immediate mode GUI, forward and inverse kinematics, and physically-based animation. Examples are drawn from video games, movies, and robotics.

**Requirements/Evaluation:** evaluation based on assignments, projects, and exams.

**Prerequisites:** CSCI 136 and CSCI 237 or permission of instructor

**Enrollment Limit:** 24;12/lab

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

### **CSCI 373 (F)(S) Artificial Intelligence (QFR)**

Artificial Intelligence (AI) has become part of everyday life, but what is it, and how does it work? This course introduces theories and computational techniques that serve as a foundation for the study of artificial intelligence. Potential topics include the following: Problem solving by search, Logic, Planning, Constraint satisfaction problems, Reasoning under uncertainty, Probabilistic graphical models, and Automated Learning.

**Requirements/Evaluation:** Evaluation based on assignments, projects, and exams.

**Prerequisites:** CSCI 136 and (CSCI 256 or permission of instructor)

**Enrollment Limit:** 24

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** COGS Interdepartmental Electives

Spring 2023

LEC Section: 01 MWF 9:00 am - 9:50 am Mark Hopkins

### **CSCI 374 (F) Machine Learning (QFR)**

Machine learning is a field that derives from artificial intelligence and statistics, and is concerned with the design and analysis of computer algorithms that "learn" automatically through the use of data. Computer algorithms are capable of discerning subtle patterns and structure in the data that would be practically impossible for a human to find. As a result, real-world decisions, such as treatment options and loan approvals, are being increasingly automated based on predictions or factual knowledge derived from such algorithms. This course explores topics in supervised learning (e.g., random forests and neural networks), unsupervised learning (e.g., k-means clustering and expectation maximization), and possibly reinforcement learning (e.g., Q-learning and temporal difference learning.) It will also introduce methods for the evaluation of learning algorithms (with an emphasis on analysis of generalizability and robustness of the algorithms to distribution/environmental shift), as well as topics in computational learning theory and ethics.

**Requirements/Evaluation:** Presentations, problem sets, programming exercises, empirical analyses of algorithms, critical analysis of current literature; the final two weeks are focused on a project of the student's design.

**Prerequisites:** CSCI 136 and CSCI 256 or permission of instructor

**Enrollment Limit:** 24

**Enrollment Preferences:** Current or expected Computer Science majors.

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course heavily relies on discrete mathematics, calculus, and elementary statistics. Students will be proving theorems, among many other mathematically oriented assignments. Additionally, they will be programming, which involves analytical and logical thinking.

**Attributes:** COGS Interdepartmental Electives

Fall 2022

LEC Section: 01 MR 2:35 pm - 3:50 pm Rohit Bhattacharya

**CSCI 375 (S) Natural Language Processing (QFR)**

Natural language processing (NLP) is a set of methods for making human language accessible to computers. NLP underlies many technologies we use on a daily basis including automatic machine translation, search engines, email spam detection, and automated personalized assistants. These methods draw from a combination of algorithms, linguistics and statistics. This course will provide a foundation in building NLP models to classify, generate, and learn from text data.

**Requirements/Evaluation:** Evaluation based on assignments, projects, and exams.

**Prerequisites:** CSCI 136, and either CSCI 256 or STAT 201/202.

**Enrollment Limit:** 24

**Enrollment Preferences:** current or expected Computer Science majors.

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LEC Section: 01 MWF 10:00 am - 10:50 am Katie A. Keith

LEC Section: 02 MWF 11:00 am - 11:50 am Katie A. Keith

**ECON 110 (F)(S) Principles of Microeconomics (QFR)**

This course is an introduction to the study of the forces of supply and demand that determine prices and the allocation of resources in markets for goods and services, markets for labor, and markets for natural resources. The focus is on how and why markets work, why they may fail to work, and the policy implications of both their successes and failures. The course focuses on developing the basic tools of microeconomic analysis and then applying those tools to topics of popular or policy interest such as minimum wage legislation, pollution control, competition policy, international trade policy, discrimination, tax policy, and the role of government in a market economy.

**Requirements/Evaluation:** problem sets, quizzes, short essays, two midterms, final exam

**Prerequisites:** none

**Enrollment Limit:** 40

**Enrollment Preferences:** This course is required of Economics and Political Economy majors and highly recommended for those non-majors interested in Environmental Studies and Women's, Gender and Sexuality Studies.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** The department recommends students follow this course with ECON 120 or with a lower-level elective that has ECON 110 as its prerequisite; students may alternatively proceed directly to ECON 251 after taking this introductory course.

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

**Attributes:** POEC Required Courses

### **ECON 120 (F)(S) Principles of Macroeconomics (QFR)**

This course provides an introduction to the study of the aggregate national economy. It develops the basic theories of macroeconomics and applies them to topics of current interest. Issues to be explored include: the causes of inflation, unemployment, recessions, and depressions; the role of government fiscal and monetary policy in stabilizing the economy; the determinants of long-run economic growth; the long- and short-run effects of taxes, budget deficits, and other government policies on the national economy; the role of financial frictions in amplifying recessions; and the workings of exchange rates and international finance.

**Requirements/Evaluation:** Depending on instructor, may include: problem sets, short essays, quizzes, reading assignments, either one or two midterms, and a final exam.

**Prerequisites:** ECON 110

**Enrollment Limit:** 40

**Enrollment Preferences:** First-year students and sophomores.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

### **ECON 213 (F) Introduction to Environmental and Natural Resource Economics (QFR)**

**Cross-listings:** ECON 213 ENVI 213

#### **Primary Cross-listing**

We'll use economics to learn why we harm the environment and overuse natural resources, and what we can do about it. We'll talk about whether and how we can put a dollar value on nature and ecosystem services. We'll study cost benefit analysis, pollution in general, climate change, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth and trade. Consideration of justice and equity will be woven through the whole semester.

**Requirements/Evaluation:** problem sets, short essays, final paper; intermediate assignments may include poster, presentation, brief writing

assignment

**Prerequisites:** ECON 110 or equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** first-year and sophomore students

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** this course will count toward both the Environmental Studies major and concentration

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 213 (D2) ENVI 213 (D2)

**Quantative/Formal Reasoning Notes:** We will use formal theory expressed in math and graphs, perform calculations, and consume statistical data.

Fall 2022

LEC Section: 01 MR 2:35 pm - 3:50 pm Sarah A. Jacobson

### **ECON 232 (F) Financial Markets, Institutions and Policies (QFR)**

The focus of the course will be on how firms, financial markets, and central banks interact in the economy. Key questions addressed in the course include: How do firms allocate their resources to enhance their value? How are firms evaluated by the financial markets? How are asset prices determined, and how are these prices related to interest rates? Are financial markets efficient, and what are the implications of their efficiency or lack thereof? How does the financial system help with the management of risks faced by society? We will also study the role of the central bank (the Federal Reserve in the US), monetary policy, and government regulation and their impacts on financial decision making. Key questions include: How do central banks set monetary policy and how do those policies affect the economy and the financial decision-making process? How does monetary policy change when interest rates are (virtually) zero?

**Class Format:** There will be a mix of lecture and discussion.

**Requirements/Evaluation:** 5-7 Problem Sets, Quantitative Exercises, Group Paper, and Final Exam

**Prerequisites:** ECON 110 and ECON 120

**Enrollment Limit:** 25

**Enrollment Preferences:** Sophomore and Junior Economics majors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** We will use mathematical models, graphs, and data analysis to understand financial decisions at the firm and economy-wide levels.

**Attributes:** POEC Comparative POEC/Public Policy Courses

Fall 2022

LEC Section: 01 TR 9:55 am - 11:10 am Neal J. Rappaport

### **ECON 240 (S) Colonialism and Underdevelopment in South Asia (DPE) (QFR)**

**Cross-listings:** ECON 240 ASIA 241

#### **Primary Cross-listing**

British colonial rule in South Asia shaped economy and society in fundamental ways. As resistance to colonial rule emerged in the late nineteenth century, "nationalist" writers developed a critique of its economic impact via taxation, fiscal policy, trade, and many other policies. In their turn, supporters of British rule, "apologists," argued that British rule had laid the foundations of economic growth by securing property rights, enforcing

contracts, and developing infrastructure. The debate between "nationalists" and "apologists" has never quite ended, but after the recent growth of the Indian economy it has lost some of its emotional charge. We will use this opportunity to revisit the controversy.

**Requirements/Evaluation:** essays (one every other week) and responses to partner's essays will be evaluated

**Prerequisites:** one course in ECON

**Enrollment Limit:** 10

**Enrollment Preferences:** Economics major, prior course on South Asia

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 240 (D2) ASIA 241 (D2)

**Difference, Power, and Equity Notes:** Issues of difference, power, and equity are at the heart of any analysis of colonialism, hence the DPE designation.

**Quantative/Formal Reasoning Notes:** Students will write six essays, in which they will employ economic models and engage with quantitative evidence, so the course satisfies the QFR requirement.

**Attributes:** GBST South + Southeast Asia Studies Electives POEC Comparative POEC/Public Policy Courses

Spring 2023

TUT Section: T1 TBA Anand V. Swamy

### **ECON 251 (F)(S) Price and Allocation Theory (QFR)**

A study of the determination of relative prices and their importance in shaping the allocation of resources and the distribution of income. Subjects include: behavior of households in a variety of settings, such as buying goods and services, saving, and labor supply; behavior of firms in various kinds of markets; results of competitive and noncompetitive markets in goods, labor, land, and capital; market failure; government policies as sources of and responses to market failure; welfare criteria; limitations of mainstream analysis.

**Requirements/Evaluation:** Requirements vary by professor, but typically include frequent problem sets and multiple exams, including a final exam. They may also include one or more quizzes, short essays, collaborative projects, or presentations.

**Prerequisites:** ECON 110 and MATH 130 or its equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** Current or prospective Economics majors.

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course involves developing and analyzing mathematical models of real-world phenomena, grounded in tools like calculus and game theory. Students are assumed to be comfortable with topics from introductory calculus, including differentiation and integration.

### **ECON 252 (F)(S) Macroeconomics (QFR)**

A study of aggregate economic activity: output, employment, inflation, and interest rates. The class will develop a theoretical framework for analyzing economic growth and business cycles. The theory will be used to evaluate policies designed to promote growth and stability, and to understand economic developments in the U.S. and abroad. Instructors may use elementary calculus in assigned readings, exams and lectures.

**Requirements/Evaluation:** Requirements vary by professor, but typically include frequent problem sets and/or written assignments, midterm(s), and a final exam.

**Prerequisites:** ECON 110 and 120 and MATH 130 or its equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** Current or prospective Economics majors.

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

### **ECON 255 (F)(S) Econometrics (QFR)**

An introduction to the theory and practice of applied quantitative economic analysis. This course familiarizes students with the strengths and weaknesses of the basic empirical methods used by economists to evaluate economic theory against economic data. Emphasizes both the statistical foundations of regression techniques and the practical application of those techniques in empirical research, with a focus on understanding when a causal interpretation is warranted. Computer exercises will provide experience in using the empirical methods, but no previous computer experience is expected. Highly recommended for students considering graduate training in economics or public policy.

**Requirements/Evaluation:** Requirements vary by professor, but typically include frequent problem sets, multiple exams, a group project, and possible additional assignments or quizzes.

**Prerequisites:** MATH 130, plus STAT 161, 201 or 202 (or equivalent, including a score of 5 on the AP Statistics Exam), plus one course in ECON; STAT 101 will also serve as a prerequisite, but only if taken prior to the fall of 2018

**Enrollment Limit:** 30

**Enrollment Preferences:** Current or prospective Economics and Political Economy majors.

**Expected Class Size:** 30

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** Students may substitute the combination of STAT 201 and 346 for ECON 255

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course teaches research tools necessary to analyze data.

**Attributes:** PHLH Statistics Courses POEC Required Courses

### **ECON 345 (S) Growth Diagnostics (QFR)**

**Cross-listings:** ECON 545 ECON 345

#### **Primary Cross-listing**

Evidence from across the developing world suggests that the "binding constraints" to economic growth can be remarkably heterogeneous--i.e., the growth potential of stagnating or underperforming economies may be unlocked in a large variety of ways. For instance, pre-reform China had been constrained by poor supply incentives in agriculture, whereas Brazil has been held back by an inadequate supply of credit, South Africa by poor employment incentives in manufacturing, El Salvador by insufficient production incentives in tradables, Zimbabwe by bad governance, and so forth. How can developing-country policymakers determine country-specific constraints like these, thus enabling them to pragmatically pursue a selected set of growth-promoting policies rather than attempting to implement a "laundry list" of reforms that are naively based on "best practice" rules-of-thumb? This course will serve as a primer on "growth diagnostics," an empirically-driven analytical framework for identifying the most binding constraints to economic growth in a given country at a point in time, thereby allowing policymakers to develop well-targeted reforms for relaxing these constraints while being cognizant of the nation's prevailing economic, political, and social context. The course will first build on the basic theories and empirics of economic growth to elucidate the diagnostic framework and will then employ a wide range of country-specific case studies to demonstrate how the framework can be operationalized for policy making. Throughout the semester, students will be required to work in groups, each representing a given developing or emerging-market economy, in order to build a growth diagnostic for their group's assigned country by the end of the course.

**Requirements/Evaluation:** extensive class participation, two short (5-page) papers, two 15-page team papers comprising a country growth diagnostic, and a team presentation on the diagnostic

**Prerequisites:** for undergraduates ECON 251, ECON 252, and either ECON 255 or STAT 346

**Enrollment Limit:** 19

**Enrollment Preferences:** CDE fellows and senior Economics majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 545 (D2) ECON 345 (D2)

**Quantative/Formal Reasoning Notes:** The course material will be draw heavily on mathematical and statistical models of economic growth and macroeconomic development, and students will be required to routinely develop mathematical models and/or conduct econometric analysis in their assignments.

Spring 2023

SEM Section: 01 TR 9:55 am - 11:10 am Quamrul H. Ashraf

### **ECON 371 (F) Time Series Econometrics and Empirical Methods for Macro (QFR)**

Econometric methods in many fields including macro and monetary economics, finance and international growth and development, as well as numerous fields beyond economics, have evolved a distinct set of techniques which are designed to meet the practical challenges posed by the typical empirical questions and available time series data of these fields. The course will begin with an introductory review of concepts of estimation and inference for large data samples in the context of the challenges of multivariate endogeneous systems, and will then focus on associated methods for analysis of short dynamics such as vector autoregressive techniques and methods for analysis of long run dynamics such as cointegration techniques. Students will be introduced to concepts and techniques analytically, but also by intuition, learning by doing, and by computer simulation and illustration. The course is particularly well suited for economics majors wishing to explore advanced empirical methods, or for statistics, mathematics or computer science majors wishing to learn more about the ways in which the subject of their majors interacts with the fields of economics. The method of evaluation will include a term paper. ECON 252 and either STATS 346 or ECON 255 are formal prerequisites, although for students with exceptionally strong math/stats backgrounds these can be waived subject to instructor permission. Credit may not be earned for both ECON 371 and ECON 356.

**Requirements/Evaluation:** term paper and regular homework assignments

**Prerequisites:** ECON 252 and either ECON 255 or STATS 346

**Enrollment Limit:** 19

**Enrollment Preferences:** students wishing to write an honors thesis, and students with strong MATH/STAT/CSCI backgrounds

**Expected Class Size:** 19

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Uses quantitative/formal reasoning intensively in the form of mathematical and statistical arguments, as well as computer programming.

Fall 2022

SEM Section: 01 TF 1:10 pm - 2:25 pm Peter L. Pedroni

### **ECON 378 (F) Long-Run Comparative Development (QFR)**

The world today is marred by vast disparities in the standard of living, with about a 30-fold difference in real GDP per capita between the poorest and most affluent of nations. What are the causes of such differences in prosperity across countries? Are the origins of global inequality to be found in underlying differences among societies over the past few decades, the past few centuries, or the past few millennia? If contemporary differences in living standards have such "deep" historical roots, what scope exists for policies to reduce global inequality today? Can we expect inequality to be reduced through some natural process of macroeconomic development, or is it likely to persist unless acted upon by policy? This course will present a unified theory of economic growth for thinking about these and related questions. Examples of issues to be covered include: the Neoclassical growth model and its inefficacy for answering questions about development over long time horizons; Malthusian stagnation across societies during the pre-industrial stage of economic development; the importance of the so-called demographic transition and of human capital formation in the course of industrialization; the persistent influence of colonialism, slavery, and ethnic fragmentation in shaping the quality of contemporary politico-economic institutions; and the enduring effects of geography on comparative development, through its impact on the emergence of agriculture in early human societies and its influence in shaping the composition of traits in populations across the globe.

**Class Format:** discussion

**Requirements/Evaluation:** problem sets, at least one exam, a research paper, and a class presentation

**Prerequisites:** ECON 251, ECON 252, and either ECON 255 or STAT 346

**Enrollment Limit:** 25

**Enrollment Preferences:** junior and senior Economics majors

**Expected Class Size:** 25

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** The course material will draw heavily on mathematical and statistical models of economic growth and macroeconomic development. Students will be required to routinely develop and solve sophisticated mathematical models of economic growth, involving the rigorous application of solution concepts from constrained optimization and from optimal control theory. Students will also be required to perform some econometric analyses in their assignments.

Fall 2022

LEC Section: 01 TR 11:20 am - 12:35 pm Quamrul H. Ashraf

### **ECON 384 (S) Corporate Finance (QFR)**

This course analyzes the major financial decisions facing firms. While the course takes the perspective of a manager making decisions about both what investments to undertake and how to finance these projects, it will emphasize the underlying economic models that are relevant for these decisions. Topics include capital budgeting, links between real and financial investments, capital structure choices, dividend policy, and firm valuation. Additional topics may include issues in corporate risk management, corporate governance and corporate restructuring, such as mergers and

acquisitions.

**Class Format:** Lecture / discussion

**Requirements/Evaluation:** class participation, problem sets, short quizzes, short projects such as case write ups, a midterm exam, a final exam and a research paper (possibly written with a partner)

**Prerequisites:** ECON 251, 252, and some familiarity with statistics (e.g., ECON 255)

**Enrollment Limit:** 28

**Enrollment Preferences:** Economics majors; seniority

**Expected Class Size:** 28

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** The course uses quantitative models to evaluate decisions.

### **ECON 387 (S) Economics of Climate Change (QFR)**

**Cross-listings:** ECON 522 ENVI 387 ECON 387

#### **Primary Cross-listing**

This course introduces the economic view of climate change, including both theory and empirical evidence. Given the substantial changes implied by the current stock of greenhouse gases (GHGs) in the atmosphere, we will begin by looking at impacts on agriculture, health, income, and migration. We will consider the distribution of climate damages across poor and wealthy people, both within and across countries. Next we will study adaptation, including capital investments and behavioral changes. We will examine the sources of climate change, especially electricity generation and transportation, and think about optimal policies. Throughout the course we will discuss the limits of the economic approach, pointing out normative questions on which economic theory provides little guidance.

**Requirements/Evaluation:** problem sets, midterm, group presentation, final exam

**Prerequisites:** ECON 251, familiarity with statistics

**Enrollment Limit:** 25

**Enrollment Preferences:** Junior/Senior Economics majors and CDE fellows

**Expected Class Size:** 25

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 522 (D2) ENVI 387 (D2) ECON 387 (D2)

**Quantative/Formal Reasoning Notes:** The course involves simple calculus-based theory and applied statistics.

### **ECON 389 (S) Tax Policy in Global Perspective (QFR)**

**Cross-listings:** ECON 514 ECON 389

#### **Secondary Cross-listing**

Government policy is important for economic development. To finance their policies, governments must build the fiscal capacity to implement a tax system. In turn, fiscal capacity--the ability for the government to raise revenue--depends on economic development. This endogeneity between fiscal capacity and economic development creates challenges for tax policy in developing countries. Given these challenges, what types of taxes should countries use to raise revenues? How can governments build the fiscal capacity to generate revenue to finance critical services? This class explores

tax policy from a global and comparative perspective. Because most students will be CDE fellows, we will emphasize tax policy issues, examples, and evidence that are pertinent to developing countries. However, many tax policy lessons are universal so we will also learn about tax policies in developed countries, especially issues relevant for transnational transactions. Topics addressed include: how economic principles can be applied to the efficiency and equity consequences of tax policies; how personal income taxes, corporate income taxes, and value-added taxes are designed and administered and how they influence the economy; ideas for fundamental tax reforms; the debate over progressive taxes versus "flat" taxes; how taxes affect incentives to save and invest; how market failures and administrative problems may influence the optimality of tax policy; the implications of global capital flows and corporate tax avoidance for tax policy; tax holidays and other special tax incentives for investment; empirical evidence on the influence of taxes on foreign direct investment, labor supply, and tax evasion; tax policy towards natural resources such as minerals and oil; case studies of efforts to reform tax administration and reduce tax evasion and corruption; taxes on land and property; taxes on imports and exports; presumptive taxation; and the informal economy and its implications for tax policy.

**Requirements/Evaluation:** midterm exam, several problem sets, two 10-page essays

**Prerequisites:** one public economics course or microeconomics course (ECON 504 or ECON 110), and one empirical methods course (POEC 253 or ECON 255, 502, or 503); students who have previously taken ECON 351 will not be enrolled

**Enrollment Limit:** 19

**Enrollment Preferences:** CDE students, but undergraduates with the prerequisites are welcome

**Expected Class Size:** 15-19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 514 (D2) ECON 389 (D2)

**Quantative/Formal Reasoning Notes:** The course builds on other QFR Reasoning econ classes.

**Attributes:** POEC Comparative POEC/Public Policy Courses POEC International Political Economy Courses

Spring 2023

SEM Section: 01 MR 2:35 pm - 3:50 pm Jon M. Bakija

### **ECON 471 (S) Topics in Advanced Econometrics (QFR)**

The course uses both a practical and conceptual/theory based approach, with emphasis on methods of structural identification of dynamics in VARs and long run cointegration and nonlinear function estimation and analysis, both in conventional time series and especially panel time series which contain spatial dimensions. The course will also investigate methods of computer simulation related to these techniques. The course is well suited for students considering empirically oriented honors theses in fields that employ these techniques, such as macro, finance, growth, trade and development, as well as fields outside of economics that use time series data. It is also well suited for students majoring in economics, statistics, computer sciences or mathematics who wish to expand their econometrics training and understanding to a more advanced level.

**Requirements/Evaluation:** periodic homework assignments, term paper

**Prerequisites:** ECON 371

**Enrollment Limit:** 19

**Enrollment Preferences:** students with strong quantitative backgrounds, and to students intending to write an honors thesis

**Expected Class Size:** 19

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course will make use of mathematics, statistics and computer analysis for the conceptualization and implementation of the econometric topics that are taught.

Spring 2023

SEM Section: 01 M 7:00 pm - 9:40 pm Peter L. Pedroni

### **ECON 477 (F) Economics of Environmental Behavior (QFR)**

**Cross-listings:** ECON 477 ENVI 376

**Primary Cross-listing**

A community maintains a fishery; a firm decides whether to get a green certification; you choose to fly home or stay here for spring break: behaviors of people and firms determine our impact on the environment. We'll use economics to model environmental behavior and to consider how policies can help or hurt the environment. Topics we'll study include: voluntary conservation, social norms and nudges, firm responses to mandatory and voluntary rules, and boycotts and divestment.

**Class Format:** Class sessions will largely consist of presentations and discussions of academic research papers, as well as lab sessions to work on empirical exercises; we may break the class into groups for some discussions

**Requirements/Evaluation:** regular reading responses, empirical exercises, class participation, 2 oral presentations, and a final original research paper using an experiment, existing data, or theory

**Prerequisites:** ECON 251 and (ECON 255 or STAT 346)

**Enrollment Limit:** 19

**Enrollment Preferences:** senior Economics majors

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 477 (D2) ENVI 376 (D2)

**Quantative/Formal Reasoning Notes:** The research students will consume and produce in the class will be based on math-based theory and/or econometric-based empirical analysis.

**ENVI 203 (F) Ecology** (QFR)

**Cross-listings:** BIOL 203 ENVI 203

**Secondary Cross-listing**

This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

**Class Format:** Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

**Requirements/Evaluation:** pre-class quizzes, lab reports, two mid-term exams, and a final exam

**Prerequisites:** BIOL 102, or ENVI 102, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** students planning to pursue Biology and/or ENVI

**Expected Class Size:** 30

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** satisfies the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIOL 203 (D3) ENVI 203 (D3)

**Quantative/Formal Reasoning Notes:** Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

### **ENVI 215 (S) Climate Changes (QFR)**

**Cross-listings:** ENVI 215 GEOS 215

#### **Secondary Cross-listing**

Paleoclimatology is the reconstruction of past climate variability and the forces that drove the climate changes. The Earth's climate system is experiencing unprecedented and catastrophic change because of anthropogenic emission of greenhouse gases and land use change. Paleoclimatology allows humans to put modern climate changes into the context of the history of this planet, and shows how and why it is unprecedented and catastrophic. Each climate event we study from Earth's past teaches us lessons on why the climate system responds to anthropogenic perturbations, what climate changes we're committed to in the future, how long-lasting they will be, and what climate consequences we can avoid if we take action and reduce greenhouse gas emissions sooner. In this course, we will discuss the major mechanisms that cause natural climate variability, how climate of the past is reconstructed, and how climate models are used to test mechanisms that drive climate variation. With these tools, you will analyze and interpret data and model simulations from climate events from Earth's history, and apply these findings to anthropogenic climate changes happening now and that are projected to happen in the future. Laboratories and homework will emphasize developing problem solving skills as well as sampling and interpreting geological archives of climate change. This course is in the Oceans and Climate group for the Geosciences major.

**Class Format:** This class has three scheduled lectures per week, and one lab meeting per week which will consist of field excursions, lab exercises,

problem solving and discussion

**Requirements/Evaluation:** lab exercises and homework (25%), three quizzes (50%), and a final project (25%)

**Prerequisites:** 100-level course in GEOS, CHEM, or PHYS or ENVI 102 or permission of instructor

**Enrollment Limit:** 24

**Enrollment Preferences:** Geosciences majors and Environmental Studies majors and concentrators and Maritime Studies concentrators

**Expected Class Size:** 16

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Cross-listings:** ECON 477 ENVI 376

**Secondary Cross-listing**

A community maintains a fishery; a firm decides whether to get a green certification; you choose to fly home or stay here for spring break: behaviors of people and firms determine our impact on the environment. We'll use economics to model environmental behavior and to consider how policies can help or hurt the environment. Topics we'll study include: voluntary conservation, social norms and nudges, firm responses to mandatory and voluntary rules, and boycotts and divestment.

**Class Format:** Class sessions will largely consist of presentations and discussions of academic research papers, as well as lab sessions to work on empirical exercises; we may break the class into groups for some discussions

**Requirements/Evaluation:** regular reading responses, empirical exercises, class participation, 2 oral presentations, and a final original research paper using an experiment, existing data, or theory

**Prerequisites:** ECON 251 and (ECON 255 or STAT 346)

**Enrollment Limit:** 19

**Enrollment Preferences:** senior Economics majors

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 477 (D2) ENVI 376 (D2)

**Quantative/Formal Reasoning Notes:** The research students will consume and produce in the class will be based on math-based theory and/or econometric-based empirical analysis.

## ENVI 387 (S) Economics of Climate Change (QFR)

**Cross-listings:** ECON 522 ENVI 387 ECON 387

### Secondary Cross-listing

This course introduces the economic view of climate change, including both theory and empirical evidence. Given the substantial changes implied by the current stock of greenhouse gases (GHGs) in the atmosphere, we will begin by looking at impacts on agriculture, health, income, and migration. We will consider the distribution of climate damages across poor and wealthy people, both within and across countries. Next we will study adaptation, including capital investments and behavioral changes. We will examine the sources of climate change, especially electricity generation and transportation, and think about optimal policies. Throughout the course we will discuss the limits of the economic approach, pointing out normative questions on which economic theory provides little guidance.

**Requirements/Evaluation:** problem sets, midterm, group presentation, final exam

**Prerequisites:** ECON 251, familiarity with statistics

**Enrollment Limit:** 25

**Enrollment Preferences:** Junior/Senior Economics majors and CDE fellows

**Expected Class Size:** 25

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 522 (D2) ENVI 387 (D2) ECON 387 (D2)

**Quantative/Formal Reasoning Notes:** The course involves simple calculus-based theory and applied statistics.

## ENVI 404 (F) Coastal Processes and Geomorphology (QFR)

**Cross-listings:** MAST 404 ENVI 404 GEOS 404

### Secondary Cross-listing

Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces--wind, waves, storms, and people--that shape the coastal zone, as well as the geologic formations--sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs--that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

**Class Format:** lecture two times a week with a lab one time per week

**Requirements/Evaluation:** lab reports, quizzes, and an independent research project

**Prerequisites:** Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.

**Enrollment Limit:** 12

**Enrollment Preferences:** senior Geosciences majors, then juniors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** As a 400-level seminar, this capstone course is intended to build on and extend knowledge and skills students have developed during previous courses in the major. This course counts toward the GEOS Group B Electives - Sediments + Life.

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MAST 404 (D3) ENVI 404 (D3) GEOS 404 (D3)

**Quantative/Formal Reasoning Notes:** This course will involve the use of MATLAB software to quantitatively analyze coastal process and geomorphological data.

### **GEOS 215 (S) Climate Changes (QFR)**

**Cross-listings:** ENVI 215 GEOS 215

#### **Primary Cross-listing**

Paleoclimatology is the reconstruction of past climate variability and the forces that drove the climate changes. The Earth's climate system is experiencing unprecedented and catastrophic change because of anthropogenic emission of greenhouse gases and land use change. Paleoclimatology allows humans to put modern climate changes into the context of the history of this planet, and shows how and why it is unprecedented and catastrophic. Each climate event we study from Earth's past teaches us lessons on why the climate system responds to anthropogenic perturbations, what climate changes we're committed to in the future, how long-lasting they will be, and what climate consequences we can avoid if we take action and reduce greenhouse gas emissions sooner. In this course, we will discuss the major mechanisms that cause natural climate variability, how climate of the past is reconstructed, and how climate models are used to test mechanisms that drive climate variation. With these tools, you will analyze and interpret data and model simulations from climate events from Earth's history, and apply these findings to anthropogenic climate changes happening now and that are projected to happen in the future. Laboratories and homework will emphasize developing problem solving skills as well as sampling and interpreting geological archives of climate change. This course is in the Oceans and Climate group for the Geosciences major.

**Class Format:** This class has three scheduled lectures per week, and one lab meeting per week which will consist of field excursions, lab exercises, problem solving and discussion

**Requirements/Evaluation:** lab exercises and homework (25%), three quizzes (50%), and a final project (25%)

**Prerequisites:** 100-level course in GEOS, CHEM, or PHYS or ENVI 102 or permission of instructor

**Enrollment Limit:** 24

**Enrollment Preferences:** Geosciences majors and Environmental Studies majors and concentrators and Maritime Studies concentrators

**Expected Class Size:** 16

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ENVI 215 (D3) GEOS 215 (D3)

**Quantative/Formal Reasoning Notes:** Labs and homework include quantitative problem solving, visualization and analysis of quantitative data, and scientific computing with Matlab. No previous programming experience is assumed.

### **GEOS 414 (S) Reading Deep Time (QFR)**

Ancient sedimentary rocks and the fossils they contain are time machines - direct windows into the deep history of life on Earth and the environments that life inhabited. In this course you will learn to "read" these deep time records by collecting, interpreting, and analyzing paleontological, stratigraphic, and sedimentological data. The course will be organized around a week-long spring break trip to explore the rocks of the House Range of Utah. The Cambrian and Ordovician strata of the House Range offers an outstanding record of one of the most important periods in Earth history, tracking the rise of animal ecosystems and major increases in fossil diversity. The first 6 weeks of class will be spent learning the fundamentals of quantitative methods in paleontology and stratigraphy (often referred to as historical geology). Labs will focus on skill building including learning basic coding in R

(no experience needed or expected), and learning how to interpret paleontological, sedimentological, and stratigraphic data. We will also read widely on the field locality and on the Cambrian and Ordovician Periods. During the field trip, we will explore the House Range. Students will learn skills including interpreting geological maps, measuring stratigraphic sections, finding and identifying fossils, and correlating rock units across basins. We will collect samples and data on the field trip and bring them back to Williams. The second 6 weeks of the course will be spent processing and analyzing the samples and data collected during the field trip, culminating in final projects to be done in small groups. Students will help determine what data we will collect in the field and what projects emerge. Examples might be interpreting carbon isotopic analyses to reconstruct ancient oceanographic conditions, biostratigraphic correlation using fossils to reconstruct basin dynamics, determining paleoenvironment based on analyses of thin sections, or digging into trilobite fossil preservation and evolutionary trends. Students will draw on previous experiences and course content in the Geosciences and bring small group research projects to completion by the end of the semester, which will be presented in poster form. This course fulfills the Geosciences Group B Elective: Sediments and Life.

**Class Format:** weekly lectures, paper discussions, and hands-on labs. Required week-long spring break field course.

**Requirements/Evaluation:** Short papers and lab assignments, spring break field course participation (REQUIRED), and a final group project presented in poster form.

**Prerequisites:** GEOS majors who have taken at least one of the following courses: GEOS 212, GEOS 203, GEOS 201, GEOS 301, GEOS 302, GEOS 312T, or permission of instructor.

**Enrollment Limit:** 12

**Enrollment Preferences:** Senior, and then Junior, Geosciences majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** As a 400-level seminar, this capstone course is intended to build on and extend knowledge and skills students have developed during previous courses in the major

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course will rely on the programming language R. Students will learn how to code in R, and will use R to analyze large data sets of geological data. The majority of labs, as well as the final project, will rely on R, statistical analyses, and wrangling data.

Fall 2022

LEC Section: 01 MWF 8:30 am - 9:45 am Alex A. Apotsos

### **MATH 130 (F)(S) Calculus I (QFR)**

Calculus permits the computation of velocities and other instantaneous rates of change by a limiting process called differentiation. The same process also solves "max-min" problems: how to maximize profit or minimize pollution. A second limiting process, called integration, permits the computation of areas and accumulations of income or medicines. The Fundamental Theorem of Calculus provides a useful and surprising link between the two processes. Subtopics include trigonometry, exponential growth, and logarithms.

**Requirements/Evaluation:** Weekly homework and quizzes, 2 exams during the semester, and one final

**Prerequisites:** MATH 102 (or demonstrated proficiency on a diagnostic test); this is an introductory course for students who have not seen calculus before

**Enrollment Limit:** 50

**Enrollment Preferences:** first-year students

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** students who have previously taken a calculus course may not enroll in MATH 130 without the permission of instructor

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This a calculus course.

LEC Section: 01 MWF 10:00 am - 10:50 am Lori A. Pedersen

### **MATH 140 (F)(S) Calculus II (QFR)**

Calculus answers two basic questions: how fast is something changing (the derivative) and how much is there (the integral). This course is about integration, and the miracle that unites the derivative and the integral (the Fundamental Theorem of Calculus.) Understanding calculus requires in part the understanding of methods of integration. This course will also solve equations involving derivatives ("differential equations") for population growth or pollution levels. Exponential and logarithmic functions and trigonometric and inverse functions will also play an important role. This course is the

right starting point for students who have seen derivatives, but not necessarily integrals, before.

**Requirements/Evaluation:** homework, quizzes, and/or exams

**Prerequisites:** MATH 130 or equivalent; students who have received the equivalent of advanced placement of AB 4, BC 3 or higher may not enroll in MATH 140 without the permission of instructor

**Enrollment Limit:** 50

**Enrollment Preferences:** based on who needs calculus the soonest

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** students who have higher advanced placement must enroll in MATH 150 or above

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is a math class

### **MATH 150 (F)(S) Multivariable Calculus (QFR)**

Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives, multiple integrals. There is also a unit on infinite series, sometimes with applications to differential equations.

**Requirements/Evaluation:** Problem sets and exams

**Prerequisites:** MATH 140 or equivalent, such as satisfactory performance on an Advanced Placement Examination

**Enrollment Limit:** 50

**Enrollment Preferences:** Preference will be given to prospective math and stats majors, or students who need this as a course to serve as a prerequisite for other courses.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Students with the equivalent of advanced placement of AB 4 or above should enroll in MATH 150, students with a BC 3 or higher should enroll in Math 151 when it is being offered, and Math 150 otherwise.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** mathematics

### **MATH 151 (F) Multivariable Calculus (QFR)**

Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives and multiple integrals. The goal of the course is Stokes Theorem, a deep and profound generalization of the Fundamental Theorem of Calculus. The difference between this course and MATH 150 is that MATH 150 covers infinite series instead of Stokes

Theorem. Students with the equivalent of BC 3 or higher should enroll in MATH 151, as well as students who have taken the equivalent of an integral calculus and who have already been exposed to infinite series. For further clarification as to whether MATH 150 or MATH 151 is appropriate, please consult a member of the math/stat department.

**Requirements/Evaluation:** problem sets and exams

**Prerequisites:** AP BC 3 or higher or integral calculus with infinite series

**Enrollment Limit:** 50

**Enrollment Preferences:** First-years, sophomores, and juniors

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** MATH 151 satisfies any MATH 150 prerequisite; credit will not be given for both MATH 150 and MATH 151

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course builds quantitative skills

LEC Section: 03 MWF 10:00 am - 10:50 am Susan R. Loepp

### **MATH 200 (F)(S) Discrete Mathematics (QFR)**

In contrast to calculus, which is the study of continuous processes, this course examines the structure and properties of finite sets. Topics to be covered include mathematical logic, elementary number theory, mathematical induction, set theory, functions, relations, elementary combinatorics and probability, and graphs. Emphasis will be given on the methods and styles of mathematical proofs, in order to prepare the students for more advanced math courses.

**Requirements/Evaluation:** Fall: Homework, proof portfolio, group work, presentations, quizzes/exams, reflections. Spring: The grade will be based on homework and 4 exams.

**Prerequisites:** Calculus at the level of an AP course or Williams College Math 130 or 140. Students who have taken a 300-level or 400-level math course should obtain permission of the instructor before enrolling.

**Enrollment Limit:** 40

**Enrollment Preferences:** Preference given to first and second year students intending to major in mathematics or computer science.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course involves developing the formal mathematical language of logic and set theory. It also involves using quantitative tools to solve problems relating to combinatorics, probability, and other fields of discrete mathematics.

### **MATH 210 (S) Mathematical Methods for Scientists (QFR)**

**Cross-listings:** PHYS 210 MATH 210

[Secondary Cross-listing](#)

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

**Class Format:** three hours per week

**Requirements/Evaluation:** several exams and weekly problem sets, all of which have a substantial quantitative component

**Prerequisites:** MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

**Enrollment Limit:** 50

**Enrollment Preferences:** sophomores and juniors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHYS 210 (D3) MATH 210 (D3)

**Quantative/Formal Reasoning Notes:** This course will have weekly problem sets using advanced calculus methods

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Daniel P. Aalberts

### **MATH 250 (F)(S) Linear Algebra (QFR)**

Many social, political, economic, biological, and physical phenomena can be described, at least approximately, by linear relations. In the study of systems of linear equations one may ask: When does a solution exist? When is it unique? How does one find it? How can one interpret it geometrically? This course develops the theoretical structure underlying answers to these and other questions and includes the study of matrices, vector spaces, linear independence and bases, linear transformations, determinants and inner products. Course work is balanced between theoretical and computational, with attention to improving mathematical style and sophistication.

**Requirements/Evaluation:** homework and exams

**Prerequisites:** MATH 150/151 or MATH 200

**Enrollment Limit:** 60

**Enrollment Preferences:** Students who have officially declared a major that requires Math 250.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** In this course, students will engage in both quantitative and formal reasoning.

**Attributes:** COGS Related Courses

### **MATH 307 (F)(S) Computational Linear Algebra (QFR)**

Linear algebra is of central importance in the quantitative sciences, including application areas such as image and signal processing, data mining, computational finance, structural biology, and much more. When the problems must be solved computationally, approximation, round-off errors,

convergence, and efficiency matter, and traditional linear algebra techniques may fail to succeed. We will adopt linear algebra techniques on a large scale, implement them computationally, and apply them to core problems in scientific computing. Topics may include: systems of linear and nonlinear equations; approximation and statistical function estimation; optimization; interpolation; data scraping; singular value decomposition; and more. This course could also be considered a course in numerical analysis or computational science.

**Class Format:** This course is taught in a flipped classroom format. Students read and watch lecture videos prior to each class session. The instructor uses class time for discussion and collaborative learning activities. This course will be a good fit for students with a strong interest in applied mathematics and a willingness to devote significant effort to learning/doing computer programming.

**Requirements/Evaluation:** Students will complete checkpoint quizzes, regularly assigned homework problems and projects, and reflective writing assignments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows the policy of "ungrading." Over the course of the semester, students will develop a rubric to assess their own learning and will evaluate themselves according to this rubric.

**Prerequisites:** MATH 250; COMP 134 or equivalent prior experience with computer programming (in any language)

**Enrollment Limit:** 24

**Enrollment Preferences:** Preference given to majors and prospective majors.

**Expected Class Size:** 24

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course involves developing the formal mathematical language of linear algebra. It also involves using quantitative tools to solve problems relating to a wide range of applications in the physical and social sciences.

### **MATH 308 (F)(S) Mathematical and Computational Approaches to Social Justice (DPE) (QFR)**

**Cross-listings:** STS 363 WGSS 363 AMST 363 MATH 308

#### **Primary Cross-listing**

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial group will carry out a substantial project in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science.

**Class Format:** This is a research-based tutorial.

**Requirements/Evaluation:** To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows an "ungrading" methodology.

**Prerequisites:** Across each 3 - 5 person tutorial group: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students will be admitted in groups of 3 - 5 based on a proposal submitted prior to registration. The instructor is happy to facilitate formation of groups and to give feedback on draft proposals. Contact the instructor early, prior to preregistration.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 363 (D2) WGSS 363 (D2) AMST 363 (D2) MATH 308 (D3)

**Difference, Power, and Equity Notes:** Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

**Quantative/Formal Reasoning Notes:** Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze

real-world data.

TUT Section: T1 TBA Chad M. Topaz

Spring 2023

TUT Section: T1 TBA Chad M. Topaz

**MATH 309 (F)(S) Differential Equations (QFR)**

Ordinary differential equations (ODEs) frequently arise as models of phenomena in the natural and social sciences. This course presents core ideas of ODEs from an applied standpoint. Topics covered early in the course may include numerical solutions, separation of variables, integrating factors, and constant coefficient linear equations. Later, we will focus on nonlinear ODEs, for which it is usually impossible to find analytical solutions. Tools from dynamical systems will be introduced to allow us to obtain information about the behavior of the ODEs without explicitly knowing the solution.

**Requirements/Evaluation:** quizzes/exams, problem sets, participation

**Prerequisites:** MATH 150/151 and MATH 250

**Enrollment Limit:** 40

**Enrollment Preferences:** discretion of the instructor

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** 300-level mathematics course

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Julie C. Blackwood

**MATH 311 (F) Advanced topics in applied mathematics (QFR)**

Applied mathematics is an expansive field that uses mathematical methods to explore problems that arise in biology, physics, engineering, and many other disciplines. In this course, we will explore a diversity of methods that may include stochastic processes, optimization, signal processing, and numerical analysis. We will also explore how these methods can be utilized to understand questions in other disciplines.

**Requirements/Evaluation:** This course will have some combination of problem sets, presentations, exams, and a final project

**Prerequisites:** Differential equations (Math 309) or permission of the instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** If over-enrolled, the instructor will request a statement of interest

**Expected Class Size:** 10

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Mathematics course

Fall 2022

TUT Section: T1 TBA Julie C. Blackwood

**MATH 313 (S) Introduction to Number Theory (QFR)**

The study of numbers dates back thousands of years, and is fundamental in mathematics. In this course, we will investigate both classical and modern questions about numbers. In particular, we will explore the integers, and examine issues involving primes, divisibility, and congruences. We will also

look at the ideas of numbers and primes in more general settings, and consider fascinating questions that are simple to understand, but can be quite difficult to answer.

**Requirements/Evaluation:** Problem sets and exams

**Prerequisites:** MATH 250 or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** Students who have not taken Math 355 and seniors who need the course to complete the major and have no other options.

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course requires working with various number systems, performing explicit computations, and proving mathematical results using logical reasoning practices.

LEC Section: 01 MWF 10:00 am - 10:50 am Susan R. Loepp

### **MATH 317 (F) Introduction to Operations Research (QFR)**

In the first N math classes of your career, you can be misled as to what the world is truly like. How? You're given exact problems and told to find exact solutions. The real world is sadly far more complicated. Frequently we cannot exactly solve problems; moreover, the problems we try to solve are themselves merely approximations to the world! We are forced to develop techniques to approximate not just solutions, but even the statement of the problem. Additionally, we often need the solutions quickly. Operations Research, which was born as a discipline during the tumultuous events of World War II, deals with efficiently finding optimal solutions. In this course we build analytic and programming techniques to efficiently tackle many problems. We will review many algorithms from earlier in your mathematical or CS career, with special attention now given to analyzing their run-time and seeing how they can be improved. The culmination of the course is a development of linear programming and an exploration of what it can do and what are its limitations. For those wishing to take this as a Stats course, the final project must have a substantial stats component approved by the instructor.

**Prerequisites:** Linear Algebra (MATH 250) and one other 200-level or higher CSCI, MATH or STATS course, or permission of the instructor.

**Requirements/Evaluation:** homework, exams, projects

**Prerequisites:** MATH 150, MATH 250 and one other 200-level or higher CSCI, MATH or STATS course, or permission from the instructor.

**Enrollment Limit:** 40

**Enrollment Preferences:** Computer Science, Mathematics and Statistics majors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** [http://web.williams.edu/Mathematics/sjmillier/public\\_html/317/](http://web.williams.edu/Mathematics/sjmillier/public_html/317/)

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** 300 level mathematics course.

### **MATH 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)**

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

#### **Secondary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication

events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

**Quantative/Formal Reasoning Notes:** Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

### **MATH 329 (S) Discrete Geometry (QFR)**

Discrete geometry is one of the oldest and most consistently vibrant areas of mathematics, stretching from the Platonic Solids of the ancient Greeks to the modern day applications of convex optimization and linear programming. In this tutorial we will learn about polygons and their higher-dimensional cousins, polyhedra and polytopes, and the various ways to describe, compute, and classify such objects. We will learn how these objects and ideas can be applied to other areas, from computation and optimization to studying areas of math like algebraic geometry. Throughout this course we will be engaging with mathematical work and literature from as old as 500 BCE and as recent as "posted to the internet yesterday."

**Requirements/Evaluation:** Evaluation will be based primarily on participation, problem sets, oral presentations, a written midterm exam, an oral final exam, and a final project

**Prerequisites:** MATH 200 or Math 250, or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** First-years and sophomores

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** All of the content in this course is quantitative or formal reasoning.

Spring 2023

TUT Section: T1 TBA Ralph E. Morrison

### **MATH 334 (F) Graph Theory (QFR)**

A graph is a collection of vertices, joined together by edges. In this course, we will study the sorts of structures that can be encoded in graphs, along

with the properties of those graphs. We'll learn about such classes of graphs as multi-partite, planar, and perfect graphs, and will see applications to such optimization problems as minimum colorings of graphs, maximum matchings in graphs, and network flows.

**Requirements/Evaluation:** problem sets, exams, and a short final project

**Prerequisites:** MATH 200 or MATH 250

**Enrollment Limit:** 30

**Enrollment Preferences:** Math majors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course involves the writing of mathematical proofs.

Fall 2022

LEC Section: 01 MWF 11:00 am - 11:50 am Ralph E. Morrison

### **MATH 338 (S) Intermediate Logic (QFR)**

**Cross-listings:** MATH 338 PHIL 338

**Secondary Cross-listing**

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have taken PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

**Requirements/Evaluation:** problem sets and exams

**Prerequisites:** some class in which student has studied formal reasoning

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy majors; juniors and seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 338 (D2) PHIL 338 (D2)

**Quantative/Formal Reasoning Notes:** This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

**Attributes:** PHIL Contemp Metaphysics + Epistemology Courses

Spring 2023

SEM Section: 01 Cancelled

### **MATH 341 (F)(S) Probability (QFR)**

**Cross-listings:** STAT 341 MATH 341

**Primary Cross-listing**

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

**Requirements/Evaluation:** homework, classwork, and exams

**Prerequisites:** MATH 150 and MATH 250 or permission of the instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** Priority will be given to Mathematics majors and to Statistics Majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STAT 341 (D3) MATH 341 (D3)

**Quantative/Formal Reasoning Notes:** This is a 300-level Math/Stat course.

Spring 2023

LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu

### **MATH 342 (F) Logic** (QFR)

This course will introduce the main ideas and basic results of mathematical logic, and explain their applications to other areas of mathematics and computer science. We will begin with a study of first-order logic, covering structures and definability, theories, models and categoricity, as well as formal proofs. We will prove Gödel's completeness and compactness theorems and the Lowenheim-Skolem theorems. The course will briefly dive into computability theory, enough to prove Gödel's Incompleteness theorems and basic undecidability results.

**Requirements/Evaluation:** Evaluation based on homework, exams, and class participation.

**Prerequisites:** Math 250 - Linear Algebra

**Enrollment Limit:** 20

**Enrollment Preferences:** Junior and Senior Math Majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Mathematics course in logic and applications.

Fall 2022

LEC Section: 01 MWF 9:00 am - 9:50 am Jenna Zomback

### **MATH 344 (S) The Mathematics of Sports** (QFR)

The purpose of this class is to use sports as a springboard to study applications of mathematics, especially in gathering data to build and test models and develop predictive statistics. Examples will be drawn from baseball, basketball, cross country, football, hockey, soccer, track, as well as class choices. Pre-requisites are linear algebra (Math 250) and either a 200 level statistics class or a 100 level programming class, or permission of the instructor.

**Requirements/Evaluation:** Homework, exams, projects

**Prerequisites:** Math 250: Linear Algebra

**Enrollment Limit:** 40

**Enrollment Preferences:** None. If the course is over-enrolled preference will be given to math and stats majors, and then if needed by performance on a small assignment.

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is a 300 level mathematics course.

Spring 2023

LEC Section: 01 MWF 10:00 am - 10:50 am Steven J. Miller

**MATH 345 (S) Introduction to Numerical Analysis (QFR)**

Numerical analysis is the study of algorithms that use numerical approximation to solve problems which arise in scientific applications. This course provides an introduction to the theory, development, and analysis of algorithms for obtaining numerical solutions. Topics discussed in the course include: Error Analysis and Convergence Rates of Algorithms; Root Finding for Nonlinear Equations; Approximating Functions using Lagrange Interpolation and Cubic Spline Approximation; Numerical Differentiation and Integration; Numerical Solution of Ordinary Differential Equations; Iterative Methods for Solving Linear Systems

**Requirements/Evaluation:** Evaluation will be based on homework, projects, and exams.

**Prerequisites:** Math 250

**Enrollment Limit:** 30

**Enrollment Preferences:** Mathematics and Statistics majors.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is an advanced mathematics class that will cover the fundamental ideas of Numerical Analysis. The students will study in depths various algorithms that provide numerical solutions to various questions in science.

Spring 2023

LEC Section: 01 TR 8:30 am - 9:45 am Bhagya Athukorallage

**MATH 350 (F)(S) Real Analysis (QFR)**

Why is the product of two negative numbers positive? Why do we depict the real numbers as a line? Why is this line continuous, and what do we mean when we say that? Perhaps most fundamentally, what is a real number? Real analysis addresses such questions, delving into the structure of real numbers and functions of them. Along the way we'll discuss sequences and limits, series, completeness, compactness, derivatives and integrals, and metric spaces. Results covered will include the Cantor-Schroeder-Bernstein theorem, the monotone convergence theorem, the Bolzano-Weierstrass theorem, the Cauchy criterion, Dirichlet's and Riemann's rearrangement theorem, the Heine-Borel theorem, the intermediate value theorem, and many others. This course is excellent preparation for graduate studies in mathematics, statistics, and economics.

**Requirements/Evaluation:** Problem sets, exams, and an expository essay.

**Prerequisites:** MATH 250 or permission of instructor.

**Enrollment Limit:** 40

**Enrollment Preferences:** Juniors and Seniors.

**Expected Class Size:** 25

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

LEC Section: 02 TR 11:20 am - 12:35 pm Mihai Stoiciu

**MATH 355 (F)(S) Abstract Algebra (QFR)**

Algebra gives us tools to solve equations. The integers, the rationals, and the real numbers have special properties which make algebra work according to the circumstances. In this course, we generalize algebraic processes and the sets upon which they operate in order to better understand, theoretically, when equations can and cannot be solved. We define and study abstract algebraic structures such as groups, rings, and fields, as well as the concepts of factor group, quotient ring, homomorphism, isomorphism, and various types of field extensions. This course introduces students to abstract rigorous mathematics.

**Requirements/Evaluation:** Problem sets and exams

**Prerequisites:** MATH 250 or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** Students who have officially declared a major that requires Math 355.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** 300-level math course

**MATH 361 (F) Theory of Computation (QFR)**

**Cross-listings:** MATH 361 CSCI 361

**Secondary Cross-listing**

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

**Class Format:** Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

**Requirements/Evaluation:** online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination

**Prerequisites:** CSCI 256 or both a 300-level MATH course and permission of instructor

**Enrollment Limit:** 48(12/con)

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 361 (D3) CSCI 361 (D3)

**Quantative/Formal Reasoning Notes:** This course include regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

CON Section: 05 TF 1:10 pm - 2:25 pm Aaron M. Williams

### **MATH 374 (F) Topology (QFR)**

In Real Analysis you learned about metric spaces---any set of objects endowed with a way of measuring distance---and the topology of sets in such spaces (open, closed, bounded, etc). In this course we flip this on its head: we explore how to develop analysis (limits, continuity, etc) in spaces where the topology is known but the metric is not. This will lead us to a bizarre and fascinating version of geometry in which we cannot distinguish between shapes that can be continuously deformed into one another. Not only does this theory turn out to be beautiful in the abstract, it plays an important role in math, physics, and data analysis. This course is excellent preparation for graduate programs in mathematics.

**Requirements/Evaluation:** Problem sets, exams, an expository essay.

**Prerequisites:** MATH 350 or 351; not open to students who have taken MATH 323. If you didn't cover metric spaces in real analysis, that's OK!

**Enrollment Limit:** 30

**Enrollment Preferences:** Juniors and seniors

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It's math.

Fall 2022

LEC Section: 01 TR 9:55 am - 11:10 am Leo Goldmakher

### **MATH 393 (S) Research Topics in Combinatorics (WS) (QFR)**

Combinatorics provides techniques and tools to enumerate, examine, and investigate the existence of discrete mathematical structures with certain properties. There are numerous areas of applications including algebra, discrete geometry, and number theory. In this project-based research course students will work in small groups to learn combinatorial techniques and tools in order to develop research questions and begin tackling unsolved problems in combinatorics.

**Requirements/Evaluation:** Students will be evaluated through written drafts of a manuscript and its revisions and multiple in-class presentation.

**Prerequisites:** Math 355

**Enrollment Limit:** 19

**Enrollment Preferences:** Post-core mathematics majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (WS) (QFR)

**Writing Skills Notes:** The main goal of this course is to undertake original research in combinatorics, as such student assessment is based on developing positive collaboration skills, and improving technical written and oral skills in mathematics through manuscript draft submissions and in-class presentations. Students will provide multiple drafts of their manuscript and in right of this the course will be writing intensive.

**Quantative/Formal Reasoning Notes:** The main goal of this course is to undertake original research in the math field of mathematics. See above for more details.

Spring 2023

SEM Section: 01 Cancelled

#### **MATH 409 (F) The Little Questions (QFR)**

Using math competitions such as the Putnam Exam as a springboard, in this class we follow the dictum of the Ross Program and "think deeply of simple things". The two main goals of this course are to prepare students for competitive math competitions, and to get a sense of the mathematical landscape encompassing elementary number theory, combinatorics, graph theory, and group theory (among others). While elementary frequently is not synonymous with easy, we will see many beautiful proofs and 'a-ha' moments in the course of our investigations. Students will be encouraged to explore these topics at levels compatible with their backgrounds.

**Requirements/Evaluation:** Homework, exams, presentations.

**Prerequisites:** Real Analysis (either Math 350 or 351) and Abstract Algebra (Math 355), or permission of the instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** Math/stat senior majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is a 400 level math class.

Fall 2022

LEC Section: 01 MWF 10:00 am - 10:50 am Steven J. Miller

#### **MATH 412 (S) Mathematical Biology (QFR)**

This course will provide an introduction to the many ways in which mathematics can be used to understand, analyze, and predict biological dynamics. We will learn how to construct mathematical models that capture essential properties of biological processes while maintaining analytic tractability. Analytic techniques, such as stability and bifurcation analysis, will be introduced in the context of both continuous and discrete time models. Additionally, students will couple these analytic tools with numerical simulation to gain a more global picture of the biological dynamics. Possible biological applications may include, but are not limited to, single and multi-species population dynamics, neural and biological oscillators, tumor cell growth, and infectious disease dynamics.

**Requirements/Evaluation:** problem sets, quizzes/exams, participation, final project and paper

**Prerequisites:** MATH 250 and MATH 309, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** preference for senior math/stats major and also based on an interest statement

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will introduce methods for developing and analyzing mathematical models.

**Attributes:** PHLH Methods in Public Health

Spring 2023

LEC Section: 01 TR 11:20 am - 12:35 pm Julie C. Blackwood

### **MATH 413 (S) Computational Algebraic Geometry (QFR)**

Algebraic geometry is the study of shapes described by polynomial equations. It has been a major part of mathematics for at least the past two hundred years, and has influenced a tremendous amount of modern mathematics, ranging from number theory to robotics. In this course, we will develop the Ideal-Variety Correspondence that ties geometric shapes to abstract algebra, and will use computational tools to explore this theory in a very explicit way.

**Requirements/Evaluation:** Evaluation will be based on weekly problem sets, three exams, and final project. Any students who have taken Math 411 should consult with the instructor before enrolling in this course.

**Prerequisites:** Math 355

**Enrollment Limit:** 30

**Enrollment Preferences:** Preference given to senior math majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course is all quantitative and formal reasoning.

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Ralph E. Morrison

### **MATH 427 (S) Tiling Theory (QFR)**

Since people first used stones and bricks to tile the floors of their domiciles, tiling has been an area of interest. Practitioners include artists, engineers, designers, architects, crystallographers, scientists and mathematicians. This course will be an investigation into the mathematical theory of tiling. The course will focus on tilings of the plane, including topics such as the symmetry groups of tilings, types of tilings, random tilings, the classification of tilings and aperiodic tilings. We will also look at tilings of the sphere, tilings of the hyperbolic plane, and tilings in higher dimensions, including "knotted tilings".

**Requirements/Evaluation:** problem assignments, exams and a presentation/paper

**Prerequisites:** MATH 250 Linear Algebra and MATH 355 Abstract Algebra

**Enrollment Limit:** 30

**Enrollment Preferences:** senior majors, seniors, juniors, sophomores, first-year students (this is a senior seminar, one of which is required for all senior majors, so they have first preference)

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Mathematics course

Spring 2023

LEC Section: 01 MWF 9:00 am - 9:50 am Colin C. Adams

**MATH 442 (F) Introduction to Descriptive Set Theory (QFR)**

Descriptive set theory (DST) combines techniques from analysis, topology, set theory, combinatorics, and other areas of mathematics to study definable (typically Borel) subsets of Polish spaces. The first part of this course will cover the topics necessary to understand the main objects of study in DST: we will develop comfort with point-set topology (enough to juggle with Polish spaces and Borel sets), and set theory (just well-orderings and cardinality). The second part of the course will feature selected topics in descriptive set theory: for example, trees, the perfect set property, Baire category, and infinite games.

**Requirements/Evaluation:** Evaluation based on homework, exams, and classroom participation.

**Prerequisites:** Math 250 - Linear Algebra, Math 350/351 Real Analysis/Applied Real Analysis

**Enrollment Limit:** 14

**Enrollment Preferences:** Senior Math Majors, then non-Senior Math Majors

**Expected Class Size:** 14

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Mathematics course in descriptive set theory.

Fall 2022

LEC Section: 01 MWF 11:00 am - 11:50 am Jenna Zomback

**MATH 453 (S) Partial Differential Equations (QFR)**

In this course, we further explore the world of differential equations. Mainly, we cover topics in partial differential equations. Partial Differential Equations (PDEs) are fundamental to the modeling of many natural phenomena, arising in many fields, including fluid mechanics, heat and mass transfer, electromagnetic theory, finance, elasticity, and more. The goals of this course are to discuss the following topics: classification of PDEs in terms of order, linearity and homogeneity; physical interpretation of canonical PDEs; solution techniques, including separation of variables, series solutions, integral transforms, and the method of characteristics.

**Requirements/Evaluation:** Evaluation will be based on homework, projects, and exams.

**Prerequisites:** MATH 150-151; MATH/PHYS 210 or MATH 309

**Enrollment Limit:** 20

**Enrollment Preferences:** Mathematics and Physics majors.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is an advanced mathematics class dedicated to the study of partial differential equations (PDEs). These equations are the most important mathematical tools for the study of complex physical phenomena such as waves and fluids (including both air and water), heat transfer, electromagnetism, and finance.

Spring 2023

LEC Section: 01 TR 11:20 am - 12:35 pm Bhagya Athukorallage

**MATH 481 (S) Measure theory and Hilbert spaces (QFR)**

How large is the unit square? One might measure the number of individual points in the square (uncountably infinite), the area of the square (1), or the dimension of the square (2). But what about for more complicated sets, e.g., the set of all rational points in the unit square? What's the area of this set? What's the dimension? In this course we'll come up with precise ways to measure size---length, area, volume, dimension, etc.---that apply to a broad array of sets. Along the way we'll encounter Lebesgue measure and Lebesgue integration, Hausdorff measure and fractals, space-filling curves

and the Banach-Tarski paradox. We will also investigate Hilbert spaces, mathematical objects that combine the tidiness of linear algebra with the power of analysis and are fundamental to the study of differential equations, functional analysis, harmonic analysis, and ergodic theory, and also apply to fields like quantum mechanics and machine learning. This material provides excellent preparation for graduate studies in mathematics, statistics and economics.

**Requirements/Evaluation:** Problem sets, exams, an expository essay

**Prerequisites:** At least one previous course that has Math 350 or 351 as a prerequisite (eg Math 374, 383, 401, 404, 408, 420, 426, 485), or permission of instructor.

**Enrollment Limit:** 20

**Enrollment Preferences:** Juniors and seniors.

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It's math.

Spring 2023

LEC Section: 01 Cancelled

### **PHIL 221 (F) Introduction to Formal Linguistics (QFR)**

**Cross-listings:** COGS 224 PHIL 221

**Secondary Cross-listing**

The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip *and* oatmeal raisin. There two ways to understand "Many students took every class". According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

**Requirements/Evaluation:** Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

**Prerequisites:** No prerequisites

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference given to seniors and philosophy/cognitive science majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COGS 224 (D2) PHIL 221 (D2)

**Quantative/Formal Reasoning Notes:** This course teaches the fundamentals of the formal analysis of language. Students will learn to provide translation schemes from English to a logical language (typed lambda calculus).

**Attributes:** COGS Interdepartmental Electives COGS Related Courses Linguistics PHIL Contemp Metaphysics + Epistemology Courses

Fall 2022

SEM Section: 01 TF 1:10 pm - 2:25 pm Christian De Leon

### **PHIL 338 (S) Intermediate Logic (QFR)**

**Cross-listings:** MATH 338 PHIL 338

#### **Primary Cross-listing**

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have taken PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

**Requirements/Evaluation:** problem sets and exams

**Prerequisites:** some class in which student has studied formal reasoning

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy majors; juniors and seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 338 (D2) PHIL 338 (D2)

**Quantative/Formal Reasoning Notes:** This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

**Attributes:** PHIL Contemp Metaphysics + Epistemology Courses

Spring 2023

SEM Section: 01 Cancelled

### **PHYS 109 (S) Sound, Light, and Perception (QFR)**

Light and sound allow us to perceive the world around us, from appreciating music and art to learning the details of atomic structure. Because of their importance in human experience, light and sound have long been the subject of scientific inquiry. How are sound and light related? How do physiology and neural processing allow us to hear and see the world around us? What are the origins of color and musical pitch? This course introduces the science and technology of light and sound to students not majoring in physics. We will start with the origins of sound and light as wave phenomena, and go on to topics including color, the optics of vision, the meaning of musical pitch and tone, and the physical basis of hearing. We will also discuss some recent technological applications of light, such as lasers and optical communications. The class will meet for two 75-minute periods each week for a variable mixture of lecture, discussion, and hands-on, interactive experiments.

**Class Format:** each student will attend one lecture plus one conference section weekly

**Requirements/Evaluation:** class participation, problem sets, in-class exams, oral presentations, and a final exam, all with a quantitative component

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** non-science majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This class will have weekly problem sets requiring substantial quantitative reasoning

Spring 2023

LEC Section: 01 Cancelled

**PHYS 131 (F) Introduction to Mechanics (QFR)**

We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.

**Requirements/Evaluation:** exams, labs, and weekly problem sets, all of which have a substantial quantitative component

**Prerequisites:** MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead

**Enrollment Limit:** 30

**Enrollment Preferences:** seniority

**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This class will have weekly problem sets requiring substantial quantitative reasoning

Fall 2022

LAB Section: 02 M 1:00 pm - 4:00 pm Kevin R. Forkey, Brough Morris

LAB Section: 03 T 1:00 pm - 4:00 pm Kevin R. Forkey, Brough Morris

LAB Section: 04 Cancelled

**PHYS 132 (S) Electromagnetism and the Physics of Matter (QFR)**

This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics, radioactivity, and uses of radiation.

**Class Format:** lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, quizzes and exams

**Prerequisites:** PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)

**Enrollment Limit:** 22 per lab

**Enrollment Preferences:** sophomores

**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Significant homework, exams, quizzes requiring mathematical and physical reasoning.

LAB Section: 03 T 1:00 pm - 4:00 pm Kevin R. Forkey

### **PHYS 141 (F) Mechanics and Waves (QFR)**

This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

**Class Format:** lecture, three hours per week; laboratory, three hours approximately every other week; conference section, one hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, three or more short quizzes/tests, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** high school physics and MATH 130 or equivalent placement, or permission of the instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** first-year students and science majors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

Fall 2022

LAB Section: 03 T 1:00 pm - 4:00 pm Katharine E. Jensen

### **PHYS 142 (S) Foundations of Modern Physics (QFR)**

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires we rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of physics or as the basis for future advanced study of these topics.

**Class Format:** lecture, three hours weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and problem-solving/discussion sessions

**Requirements/Evaluation:** weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151

**Enrollment Limit:** 14/L

**Enrollment Preferences:** first-year students

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

Spring 2023

LAB Section: 03 T 1:00 pm - 4:00 pm Jennifer G. Winters

**PHYS 151 (F) Seminar in Modern Physics (QFR)**

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity has extended physics into the realm of high speeds and high energies and requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our notions of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course covers the same core material as PHYS 142 but in a small seminar format for students with strong prior preparation in physics.

**Class Format:** three 50-minute lecture/discussions per week, one 3-hour lab per week

**Requirements/Evaluation:** class participation, weekly lab assignments, weekly problem sets, exams

**Prerequisites:** placement by the department (see "advanced placement" section in the description about the department). Students may take either PHYS 142 or PHYS 151 but not both

**Enrollment Limit:** 18

**Enrollment Preferences:** first-years

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** this is a small seminar designed for first-year students who have placed out of PHYS 141

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** all assignments in the course have a substantial quantitative component

Fall 2022

LEC Section: 01 WF 11:00 am - 11:50 am Jennifer G. Winters

LAB Section: 02 W 1:00 pm - 4:00 pm Jennifer G. Winters

CON Section: 03 M 11:00 am - 11:50 am Jennifer G. Winters

**PHYS 201 (F) Electricity and Magnetism (QFR)**

The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell's equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** problem sets, labs/conference section assignments, two take-home midterms, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151

**Enrollment Limit:** 10 per lab

**Enrollment Preferences:** prospective physics majors, then by seniority

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

LAB Section: 02 T 1:00 pm - 4:00 pm Catherine Kealhofer

LAB Section: 03 W 1:00 pm - 4:00 pm Catherine Kealhofer

### **PHYS 202 (S) Vibrations, Waves and Optics (QFR)**

Waves and oscillations characterize many different physical systems, including vibrating strings, springs, water waves, sound waves, electromagnetic waves, and gravitational waves. Quantum mechanics even describes particles with wave functions. Despite these diverse settings waves exhibit several common characteristics, so that the understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. The rest of the course focuses on electromagnetic waves and in particular on optical examples of wave phenomena. In addition to well known optical effects such as interference and diffraction, we will study a number of modern applications of optics such as short pulse lasers and optical communications. Throughout the course mathematical methods useful for higher-level physics will be introduced.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** problem sets, labs, midterm examinations, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 201; co-requisite: PHYS/MATH 210 or MATH 209 or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** sophomores

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course has substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LAB Section: 02 T 1:00 pm - 4:00 pm Charlie Doret

LAB Section: 03 W 1:00 pm - 4:00 pm Charlie Doret

### **PHYS 210 (S) Mathematical Methods for Scientists (QFR)**

**Cross-listings:** PHYS 210 MATH 210

**Primary Cross-listing**

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

**Class Format:** three hours per week

**Requirements/Evaluation:** several exams and weekly problem sets, all of which have a substantial quantitative component

**Prerequisites:** MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

**Enrollment Limit:** 50

**Enrollment Preferences:** sophomores and juniors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHYS 210 (D3) MATH 210 (D3)

**Quantative/Formal Reasoning Notes:** This course will have weekly problem sets using advanced calculus methods

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Daniel P. Aalberts

### **PHYS 301 (F) Quantum Physics (QFR)**

This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics. After a brief discussion of historical origins of the quantum theory, we introduce the Schrodinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 202 and PHYS/MATH 210 or MATH 309

**Enrollment Limit:** 20

**Enrollment Preferences:** physics majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Phys 301 relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

LAB Section: 04 M 1:00 pm - 4:00 pm John H. Lacy

### **PHYS 302 (S) Statistical Mechanics & Thermodynamics (QFR)**

Macroscopic objects are made up of huge numbers of fundamental particles interacting in simple ways--obeying the Schrödinger equation, Newton's and Coulomb's Laws--and these objects can be described by macroscopic properties like temperature, pressure, magnetization, heat capacity, conductivity, etc. In this course we will develop the tools of statistical physics, which will allow us to predict the cooperative phenomena that emerge in large ensembles of interacting particles. We will apply those tools to a wide variety of physical questions, including the behavior of gases, polymers, heat engines, biological and astrophysical systems, magnets, and electrons in solids.

**Class Format:** lecture/discussion three hours per week and weekly laboratory work

**Requirements/Evaluation:** weekly problem sets, midterm exam, final exam, and labs, all of which have a substantial quantitative component

**Prerequisites:** required: PHYS 201, PHYS/MATH 210 or MATH 309; recommended: PHYS 202, PHYS 301

**Enrollment Limit:** 14 per lab

**Enrollment Preferences:** physics majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** weekly problem sets, exams, and labs, all of which have a substantial quantitative component

### **PHYS 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)**

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

#### **Secondary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo

structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

**Quantative/Formal Reasoning Notes:** Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

**Attributes:** BIGP Courses BIMO Interdepartmental Electives

### **PHYS 402 (S) Applications of Quantum Mechanics (QFR)**

This course will explore a number of important topics in the application of quantum mechanics to physical systems, including perturbation theory, the variational principle and the semiclassical interaction of atoms and radiation. The course will finish up with three weeks on quantum optics including an experimental project on non-classical interference phenomena. Applications and examples will be taken mostly from atomic physics with some discussion of solid state systems.

**Requirements/Evaluation:** weekly problem sets, tutorial participation, presentations, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 301

**Enrollment Limit:** 10 per sec

**Enrollment Preferences:** Physics and Astrophysics Majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course has weekly problem sets, all of which have a substantial quantitative component.

Spring 2023

TUT Section: T1 F 1:10 pm - 2:25 pm David R. Tucker-Smith

### **PHYS 411 (F) Classical Mechanics (QFR)**

This course will explore advanced topics in classical mechanics. Central ideas include the calculus of variations, the Lagrangian and Hamiltonian formulations of mechanics, phase space, central-force motion, non-inertial reference frames (including implications for physics on a rotating Earth), rigid-body rotations, and non-linear dynamics & chaos, with additional topics from continuum and fluid mechanics as time permits. Numerical and perturbative techniques will be developed and used extensively. We will also examine the ways in which classical mechanics informs other fields of physics. In addition to weekly tutorial meetings the class will meet weekly as a whole to introduce and discuss new material.

**Requirements/Evaluation:** weekly problem sets, tutorial participation, presentations, a final project, and a final exam, all of which have a substantial

quantitative component

**Prerequisites:** PHYS 202 and PHYS/MATH 210 or MATH 309

**Enrollment Limit:** 10/section

**Enrollment Preferences:** majors

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** weekly problem sets requiring substantial quantitative reasoning using analytical and numerical methods.

Fall 2022

TUT Section: T1 F 1:10 pm - 2:25 pm Charlie Doret, Daniel P. Aalberts

### **POEC 253 (F) Empirical Methods in Political Economy (QFR)**

This course introduces students to common empirical tools used in policy analysis and implementation. The broad aim is to train students to be discriminating consumers of public policy-relevant research. The emphasis in the course is on intuitive understanding of the central concepts. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; random variables and distributions; statistical estimation, inference and hypothesis testing; and modeling using multiple regression, with a particular focus on understanding whether and how relationships between variables can be determined to be causal--an essential requirement for effective policy formation. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

**Requirements/Evaluation:** Problem sets, group project, midterm exam, final exam

**Prerequisites:** MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255

**Enrollment Limit:** 20

**Enrollment Preferences:** Political Economy majors, Environmental Policy majors and sophomores

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.

**Attributes:** PHLH Statistics Courses POEC Required Courses

Fall 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Anand V. Swamy

### **PSYC 201 (F)(S) Experimentation and Statistics (QFR)**

An introduction to the basic principles of research in psychology. We focus on how to design and execute experiments, analyze and interpret results, and write research reports. Students conduct a series of research studies in different areas of psychology that illustrate basic designs and methods of analysis. You must register for lab and lecture with the same instructor.

**Requirements/Evaluation:** research reports, exams, and problem sets

**Prerequisites:** PSYC 101; not open to first-year students except with permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course has problem sets focused on experimental design and quantitative data analysis. Students will help design and conduct experiments, analyze the data, and report their findings.

**Attributes:** COGS Related Courses PHLH Statistics Courses

### **STAT 101 (F)(S) Elementary Statistics and Data Analysis (QFR)**

It is impossible to be an informed citizen in today's world without an understanding of data. Whether it is opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines, etc, we need to be able to interpret and gain information from statistics. This course will introduce the common methods used to analyze and present data with an emphasis on interpretation and informed decision making.

**Requirements/Evaluation:** weekly homework, quizzes, exams, and a project

**Prerequisites:** MATH 102 (or demonstrated proficiency on a diagnostic test)

**Enrollment Limit:** 50

**Enrollment Preferences:** juniors and seniors

**Expected Class Size:** 35

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** students with MATH130 but no statistics should enroll in STAT161; students with MATH150 but no statistics should enroll in STAT201.

Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It is a quantitative course.

### **STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)**

This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

**Requirements/Evaluation:** Weekly homework, quizzes, two midterms and a final exam (midterms include take-home components), and a data

analysis project. Students will need to become familiar with the statistical software STATA.

**Prerequisites:** MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

**Enrollment Limit:** 40

**Enrollment Preferences:** Economics majors, sophomores

**Expected Class Size:** 40

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Students with calculus background should consider STAT 201. Students without any calculus background should consider STAT 101. Students with AP Stat 4 or 5 should consider Stat 202. Please refer to the placement chart on the Math&Stat department website for more information.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Reasoning with data

### **STAT 201 (F)(S) Statistics and Data Analysis (QFR)**

Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, "Data, data, data! I can't make bricks without clay." In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

**Requirements/Evaluation:** weekly homework and projects, midterm exams, and a final exam.

**Prerequisites:** MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Students will learn to interpret, choose, carry out, and communicate analyses of data.

**Attributes:** COGS Related Courses PHLH Statistics Courses

LEC Section: 01 MWF 9:00 am - 9:50 am Anna M. Plantinga

### **STAT 202 (F)(S) Introduction to Statistical Modeling (QFR)**

Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course

we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

**Requirements/Evaluation:** Homework problems; quizzes; exams; a final project (on a topic that interests you!). Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.

**Prerequisites:** MATH 140 and STAT 101/161/201/AP Statistics 4/5, or permission of instructor.

**Enrollment Limit:** 40

**Enrollment Preferences:** Prospective Statistics majors and more senior students

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Students with a 4 on the AP Stats exam should contact the department for proper placement. Students with STAT 201 are strongly encouraged to take STAT 346 or other 300-level statistics electives.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

### **STAT 341 (F)(S) Probability (QFR)**

**Cross-listings:** STAT 341 MATH 341

**Secondary Cross-listing**

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

**Requirements/Evaluation:** homework, classwork, and exams

**Prerequisites:** MATH 150 and MATH 250 or permission of the instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** Priority will be given to Mathematics majors and to Statistics Majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STAT 341 (D3) MATH 341 (D3)

**Quantative/Formal Reasoning Notes:** This is a 300-level Math/Stat course.

Fall 2022

Spring 2023

LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu

### **STAT 344 (F) Statistical Design of Experiments (QFR)**

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially e-commerce, are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look at both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

**Requirements/Evaluation:** Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).

**Prerequisites:** STAT 161 or 201 or 202, or equivalent, and Math 140 or equivalent, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Statistics majors, seniors, juniors, sophomores, first years

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2022

LEC Section: 01 MWF 10:00 am - 10:50 am Richard D. De Veaux

### **STAT 346 (F)(S) Regression Theory and Applications (QFR)**

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

**Requirements/Evaluation:** Weekly homework, theory and data analysis exams, final course project.

**Prerequisites:** MATH 250, and at least one of STAT 201 or 202. Or permission of the instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** Statistics Majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

Fall 2022

LEC Section: 01 TR 9:55 am - 11:10 am Xizhen Cai

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Elizabeth M. Upton

### **STAT 356 (F) Time Series Analysis (QFR)**

Time series -- data collected over time -- crop up in applications from economics to engineering to transit. But because the observations are generally not independent, we need special methods to investigate them. This course will include exploratory methods and modeling for time series, including descriptive methods and checking for significance, and a foray into the frequency domain. We will emphasize applications to a variety of real data, explored using R.

**Requirements/Evaluation:** Evaluation is primarily based on quizzes and projects (on topics that interest you!). You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While most assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to live and online discussions, and working together with classmates on practice problems.

**Prerequisites:** STAT 346 (may be taken concurrently) or permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Statistics majors, seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2022

LEC Section: 01 Cancelled

### **STAT 360 (S) Statistical Inference** (QFR)

How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.

**Requirements/Evaluation:** Homework, Quizzes, Exams

**Prerequisites:** MATH 250, STAT 201 or 202, STAT 341

**Enrollment Limit:** 15

**Enrollment Preferences:** Statistics majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** A rigorous mathematical course laying the foundation for reasoning with data

Spring 2023

LEC Section: 01 TR 11:20 am - 12:35 pm Richard D. De Veaux

### **STAT 365 (F) Bayesian Statistics** (QFR)

The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes' Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.

**Requirements/Evaluation:** homework and exams

**Prerequisites:** STAT 201 and MATH 150 and 250, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** juniors and seniors, Statistics majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Fall 2022

LEC Section: 01 Cancelled

### **STAT 372 (S) Longitudinal Data Analysis (QFR)**

This course explores modern statistical methods for drawing scientific inferences from longitudinal data, i.e., data collected repeatedly on experimental units over time. The independence assumption made for most classical statistical methods does not hold with this data structure because we have multiple measurements on each individual. Topics will include linear and generalized linear models for correlated data, including marginal and random effect models, as well as computational issues and methods for fitting these models. As time permits, we will also investigate joint modeling of longitudinal and time-to-event data. We will consider many applications in the social and biological sciences.

**Requirements/Evaluation:** Weekly homework, midterm exams, a final exam, and a data analysis project

**Prerequisites:** STAT 346 (and an appropriate introductory statistics course, typically STAT 201 or 202)

**Enrollment Limit:** 20

**Enrollment Preferences:** junior and senior Statistics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will cover a variety of statistical analysis methods for longitudinal data.

**Attributes:** PHLH Statistics Courses

Spring 2023

LEC Section: 01 MWF 11:00 am - 11:50 am Anna M. Plantinga

### **STAT 442 (S) Statistical Learning and Data Mining (QFR)**

In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

**Class Format:** Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Requirements/Evaluation:** weekly homework, exams and an end-of-term project

**Prerequisites:** MATH/STAT 341 and STAT 346, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is an advanced statistics class involving theory and application of statistical methods to data.

Spring 2023

LEC Section: 01 MWF 10:00 am - 10:50 am Xizhen Cai

**STAT 458 (F) Generalized Linear Models- Theory and Applications (QFR)**

This course will explore generalized linear models (GLMs)--the extension of linear models, discussed in Stat346, to response variables that have specific non-normal distributions, such as counts and proportions. We will consider the general structure and theory of GLMs and see their use in a range of applications. As time permits, we will also examine extensions of these models for clustered data such as mixed effects models and generalized estimating equations.

**Requirements/Evaluation:** Weekly homework consisting of theoretical exercises and data analyses carried out in R. Short frequent quizzes and one midterm (with an in-class and take-home component). Final project and final exam.

**Prerequisites:** STAT 346, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Seniors and Statistics majors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Fall 2022

**STS 363 (F)(S) Mathematical and Computational Approaches to Social Justice (DPE) (QFR)**

**Cross-listings:** STS 363 WGSS 363 AMST 363 MATH 308

**Secondary Cross-listing**

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial group will carry out a substantial project in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science.

**Class Format:** This is a research-based tutorial.

**Requirements/Evaluation:** To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows an "ungrading" methodology.

**Prerequisites:** Across each 3 - 5 person tutorial group: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students will be admitted in groups of 3 - 5 based on a proposal submitted prior to registration. The instructor is happy to facilitate formation of groups and to give feedback on draft proposals. Contact the instructor early, prior to preregistration.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 363 (D2) WGSS 363 (D2) AMST 363 (D2) MATH 308 (D3)

**Difference, Power, and Equity Notes:** Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

**Quantative/Formal Reasoning Notes:** Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

**ASIA 241 (S) Colonialism and Underdevelopment in South Asia** (DPE) (QFR)

**Cross-listings:** ECON 240 ASIA 241

### **Secondary Cross-listing**

British colonial rule in South Asia shaped economy and society in fundamental ways. As resistance to colonial rule emerged in the late nineteenth century, "nationalist" writers developed a critique of its economic impact via taxation, fiscal policy, trade, and many other policies. In their turn,

supporters of British rule, "apologists," argued that British rule had laid the foundations of economic growth by securing property rights, enforcing contracts, and developing infrastructure. The debate between "nationalists" and "apologists" has never quite ended, but after the recent growth of the Indian economy it has lost some of its emotional charge. We will use this opportunity to revisit the controversy.

**Requirements/Evaluation:** essays (one every other week) and responses to partner's essays will be evaluated

**Prerequisites:** one course in ECON

**Enrollment Limit:** 10

**Enrollment Preferences:** Economics major, prior course on South Asia

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 240 (D2) ASIA 241 (D2)

**Difference, Power, and Equity Notes:** Issues of difference, power, and equity are at the heart of any analysis of colonialism, hence the DPE designation.

**Quantative/Formal Reasoning Notes:** Students will write six essays, in which they will employ economic models and engage with quantitative evidence, so the course satisfies the QFR requirement.

**Attributes:** GBST South + Southeast Asia Studies Electives POEC Comparative POEC/Public Policy Courses

### **ASTR 111 (F) Introduction to Astrophysics (QFR)**

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies. ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

**Class Format:** The class has 6 afternoon labs. Nighttime observing sessions will occur throughout the semester.

**Requirements/Evaluation:** weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

**Prerequisites:** a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

**Enrollment Limit:** 28

**Enrollment Preferences:** potential Astronomy majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

**BIMO 321 (F) Biochemistry I: Structure and Function of Biological Molecules (QFR)**

**Cross-listings:** BIMO 321 BIOL 321 CHEM 321

**Primary Cross-listing**

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

**Prerequisites:** BIOL 101 and CHEM 251/255 and CHEM 155/256

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIMO 321 (D3) BIOL 321 (D3) CHEM 321 (D3)

**Quantative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular problem sets in which quantitative/formal reasoning skills are practiced.

**Attributes:** BIGP Courses BIMO Required Courses

**BIMO 322 (S) Biochemistry II: Metabolism (QFR)**

**Cross-listings:** BIOL 322 CHEM 322 BIMO 322

**Primary Cross-listing**

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

**Class Format:** Lecture three hours per week and laboratory three hours per week.

**Requirements/Evaluation:** several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

**Prerequisites:** BIOL 101 and CHEM 251/255 or permission of instructor

**Enrollment Limit:** 60

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 60

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIOL 322 (D3) CHEM 322 (D3) BIMO 322 (D3)

**Quantative/Formal Reasoning Notes:** The laboratory program is quantitative covering data analyses, numerical transformations, graphical displays.

**BIOL 202 (F) Genetics (QFR)**

Genetics, classically defined as the study of heredity, is today a multidisciplinary field whose principles provide critical insight and tools to most areas of biology and medicine. This course covers the experimental basis for our current understanding of the inheritance, structures, and functions of genes. It introduces approaches used by contemporary geneticists and molecular biologists to explore questions in areas of biology ranging from evolution to medicine. A primary focus of the course is on students developing familiarity with problem solving, the logic and quantitative reasoning required to understand how genetic mechanisms lead to biological patterns. The laboratory part of the course provides an experimental introduction to modern genetic analysis as well as introductions to interpreting genetic reasoning in the primary research literature. Laboratory experiments include investigating chromosome structure using microscopy, integrating multiple streams of evidence to map a mutation to the genome, determining the structure of a DNA plasmid using molecular tools.

**Class Format:** Lecture: three hours per week, Lab: three hours per week.

**Requirements/Evaluation:** bi-weekly problem sets; weekly laboratory exercises and laboratory reports; three exams

**Prerequisites:** BIOL 101 and 102

**Enrollment Limit:** 120

**Enrollment Preferences:** students interested in the Biology major

**Expected Class Size:** 60

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** does not satisfy the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course develops quantitative skills through solving problems. Students learn to apply basic calculations and logic to predict the outcomes of biological systems, for example, describing the likelihood that an individual will be affected by an inherited disease. Application of quantitative and logical analysis contributes to a large component of the in-class work and the graded material for the class, in the form of problem sets, exams, and data analysis for lab reports.

**BIOL 203 (F) Ecology** (QFR)

**Cross-listings:** BIOL 203 ENVI 203

**Primary Cross-listing**

This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues.

Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

**Class Format:** Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

**Requirements/Evaluation:** pre-class quizzes, lab reports, two mid-term exams, and a final exam

**Prerequisites:** BIOL 102, or ENVI 102, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** students planning to pursue Biology and/or ENVI

**Expected Class Size:** 30

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** satisfies the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIOL 203 (D3) ENVI 203 (D3)

**Quantative/Formal Reasoning Notes:** Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

### **BIOL 305 (S) Evolution (QFR)**

This course offers a critical analysis of contemporary concepts in biological evolution. We focus on the relation of evolutionary mechanisms (e.g., selection, drift, and migration) to long term evolutionary patterns (e.g., evolutionary innovations, origin of major groups, and adaptation). Topics include micro-evolutionary models, natural and sexual selection, speciation, the inference of evolutionary history, evolutionary medicine among others.

**Requirements/Evaluation:** independent research project, problem sets, participation in discussions and exams

**Prerequisites:** BIOL 202

**Enrollment Limit:** 22

**Enrollment Preferences:** Seniors and biology majors

**Expected Class Size:** 22

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** satisfies the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** We will use mathematical models to study population genetics.

### **BIOL 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)**

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

#### **Primary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

**Quantative/Formal Reasoning Notes:** Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

### **BIOL 337 (F) Evolutionary Ecology (QFR)**

Evolutionary ecology is an interdisciplinary field that integrates concepts in genetics, adaptation, and ecology to understand how evolution operates in the context of ecological communities. This course provides an overview of the discipline including foundational concepts in evolutionary demography, phenotypic plasticity, and population genetics. It also explores how breakthroughs in these topics provide a framework for advances in our understanding of the evolution of reproductive timing and ageing, interspecific interactions (e.g. competition, predation), cooperation, and altruism. The course combines lectures, readings, in-class discussion, and a lab section that includes a mixture of field, computer, and lab projects. Laboratories will give students practical, hands-on experience in how to develop, plan, and carry out evolutionary ecology research from start to finish.

**Class Format:** lecture, 3 hours per week; laboratory and discussion, 3 hours per week

**Requirements/Evaluation:** Evaluation will be based on lab assignments, two exams, discussion participation, and a written paper.

**Prerequisites:** BIOL 102, plus either BIOL 202 or BIOL 203 or equivalent

**Enrollment Limit:** 24

**Enrollment Preferences:** preference given to biology majors, seniors, and juniors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** Satisfies the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Evolutionary ecology uses concepts in genetics and ecology to understand how the frequency of alleles in a population changes over time. These changes are formalized in equations that describe these processes. Students will gain experience in utilizing these equations to describe, analyze, and predict the evolutionary outcome of ecological interactions for both theoretical and experimental purposes. Thus, the students will gain experience in solving systems of equations using algebra and in stat

### **CHEM 151 (F) Introductory Chemistry (QFR)**

This course provides an introduction to chemistry for those students with little or no high school chemistry. Students will be introduced to concepts fundamental to studying matter at the molecular level. Principal topics include introductions to the nature of atoms and molecules, stoichiometry, solubility rules and equilibria, gas laws, chemical equilibrium, acid-base reactions, periodic relationships, chemical bonding, molecular structure, intermolecular forces, oxidation-reduction reactions, and related applications. Laboratory work comprises a system of qualitative analysis and quantitative techniques. The course provides preparation for further study of organic chemistry, biochemistry, physical and inorganic chemistry and is intended for students who are anticipating professional study in chemistry, in related sciences, or in one of the health professions, as well as for those students who are interested in exploring the fundamental ideas of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** electronic and written weekly problem set assignments, laboratory work and analysis, quizzes, two tests, and a final exam

**Prerequisites:** Students are required to take the online Chemistry Placement Survey prior to registering for the course ([chemistry.williams.edu/placement](http://chemistry.williams.edu/placement)).

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** first-year students; students who have studied chemistry for one or more years are directed to CHEM 153 or 155

**Expected Class Size:** 32

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** CHEM 151 may be taken concurrently with MATH 102--see under Mathematics; CHEM 151 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** BIMO Required Courses

### **CHEM 153 (F) Concepts of Chemistry (QFR)**

This course broadens and deepens the foundation in chemistry of students who have had typically one year of chemistry at the high school level. Most students begin study of chemistry at Williams with this course. Familiarity with stoichiometry, basic concepts of equilibria, and the model of an atom is expected. Principal topics for this course include kinetic theory of gases, modern atomic theory, molecular structure and bonding, states of matter, chemical equilibrium (acid-base and solubility), and an introduction to atomic and molecular spectroscopies. Laboratory periods will largely focus on experiment design, data analysis, literature, scientific writing, ethics, and other skills critical to students' development as scientists. The course is of interest to students who anticipate professional study in chemistry, related sciences, or one of the health professions, as well as to those who want to explore the fundamentals of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** problem sets and/or quizzes, laboratory work, and exams

**Prerequisites:** Students are required to take the online Chemistry Placement Survey prior to registering for the course ([chemistry.williams.edu/placement](http://chemistry.williams.edu/placement)).

**Enrollment Limit:** 45/lecture

**Enrollment Preferences:** first-year students

**Expected Class Size:** 90

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** CHEM 153 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

### **CHEM 155 (F) Principles of Modern Chemistry (QFR)**

This course is designed for students with a strong preparation in chemistry (including laboratory experience) in secondary school, such as provided by an Advanced Placement chemistry course (or equivalent) with a corresponding AP Chemistry Exam score of 5 (or a 6 or 7 on the IB Exam, or equivalent). Topics include chemical thermodynamics, kinetics, structure and bonding, coordination chemistry, electrochemistry and spectroscopy and their application to fields such as materials science, catalysis, environmental, biological, and medicinal chemistry. Laboratory periods will focus on hands-on skills, data representation and analysis, scientific writing, exploration of the scientific literature, and other skills critical to students' development as scientists. This course is designed for students who are anticipating further study in chemistry, related sciences, or one of the health professions, as well as for students who want to explore the fundamental ideas of chemistry as part of their general education.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** frequent short assignments in preparation for class, quantitative weekly problem sets, laboratory work and reports, an hour test, and a final exam

**Prerequisites:** Students are required to take the online Chemistry Placement Survey prior to registering for the course ([chemistry.williams.edu/placement](http://chemistry.williams.edu/placement)).

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** first-year students and sophomores

**Expected Class Size:** 32

**Grading:** no pass/fail option, no fifth course option

**CHEM 156 (S) Organic Chemistry: Introductory Level (QFR)**

This course provides the necessary background in organic chemistry for students who are planning advanced study or a career in chemistry, the biological sciences, or the health professions. It initiates the systematic study of the common classes of organic compounds with emphasis on theories of structure and reactivity. The fundamentals of molecular modeling as applied to organic molecules are presented. Specific topics include basic organic structure and bonding, isomerism, stereochemistry, molecular energetics, the theory and interpretation of infrared and nuclear magnetic spectroscopy, substitution, elimination and addition reactions. The coordinated laboratory work includes purification and separation techniques, structure-reactivity studies, organic synthesis, IR and NMR spectroscopy, and the identification of unknown compounds.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** quantitative problem solving, laboratory performance, three midterm exams, and a final exam

**Prerequisites:** CHEM 151 or 153 or 155 or permission of instructor

**Enrollment Limit:** 55/lecture

**Enrollment Preferences:** Seniors, juniors, sophomores, first-year students

**Expected Class Size:** 100

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular and substantial problem solving in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** BIMO Required Courses

**CHEM 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)**

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

**Secondary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

**Quantative/Formal Reasoning Notes:** Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

### **CHEM 321 (F) Biochemistry I: Structure and Function of Biological Molecules (QFR)**

**Cross-listings:** BIMO 321 BIOL 321 CHEM 321

#### **Secondary Cross-listing**

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

**Prerequisites:** BIOL 101 and CHEM 251/255 and CHEM 155/256

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIMO 321 (D3) BIOL 321 (D3) CHEM 321 (D3)

**Quantative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular problem sets in which quantitative/formal reasoning skills are practiced.

### **CHEM 322 (S) Biochemistry II: Metabolism (QFR)**

**Cross-listings:** BIOL 322 CHEM 322 BIMO 322

#### **Secondary Cross-listing**

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

**Class Format:** Lecture three hours per week and laboratory three hours per week.

**Requirements/Evaluation:** several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

**Prerequisites:** BIOL 101 and CHEM 251/255 or permission of instructor

**Enrollment Limit:** 60

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 60

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIOL 322 (D3) CHEM 322 (D3) BIMO 322 (D3)

**Quantative/Formal Reasoning Notes:** The laboratory program is quantitative covering data analyses, numerical transformations, graphical displays.

### **CHEM 368 (S) Computational Chemistry and Molecular Spectroscopy (QFR)**

This tutorial provides an introduction to the principles of computational quantum mechanics and their application to problems of chemical interest such as chemical bonding, chemical reactivity, and molecular spectroscopy. Emphasis is placed upon modern electronic structure calculations, their fundamentals, practical considerations, interpretation, and applications to current research questions. Under guidance in sessions and through independent work, students will use computational methods to explore assigned weekly research problems. The research results will be presented to and discussed with the tutorial partner at the end of each week.

**Requirements/Evaluation:** tutorial participation, presentations, and submitted papers

**Prerequisites:** CHEM 361 or equivalent background in Physics

**Enrollment Limit:** 10

**Enrollment Preferences:** Chemistry majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course fulfills the QFC requirement with problem sets for assignments in which quantitative/formal reasoning skills are practiced.

**COGS 224 (F) Introduction to Formal Linguistics (QFR)**

**Cross-listings:** COGS 224 PHIL 221

**Primary Cross-listing**

The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip *and* oatmeal raisin. There two ways to understand "Many students took every class". According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

**Requirements/Evaluation:** Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

**Prerequisites:** No prerequisites

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference given to seniors and philosophy/cognitive science majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COGS 224 (D2) PHIL 221 (D2)

**Quantative/Formal Reasoning Notes:** This course teaches the fundamentals of the formal analysis of language. Students will learn to provide translation schemes from English to a logical language (typed lambda calculus).

**Attributes:** COGS Interdepartmental Electives COGS Related Courses Linguistics PHIL Contemp Metaphysics + Epistemology Courses

Fall 2022

SEM Section: 01 TF 1:10 pm - 2:25 pm Christian De Leon

**CSCI 103 (S) Electronic Textiles (QFR)**

Digital data is being infused throughout the entire physical world, escaping the computer monitor and spreading to other devices and appliances, including the human body. Electronic textiles, or eTextiles, is one of the next steps toward making everything interactive and this course aims to introduce learners to the first steps of developing their own wearable interactive technology devices. After completing a series of introductory eTextiles projects to gain practice in necessary sewing, circuitry, and programming skills, students will propose and design their own eTextiles projects, eventually implementing them with sewable Arduino components, and other found electronic components as needed. The scope of the project will depend on the individual's prior background, but can include everything from a sweatshirt with light-up turn signals for bicycling, to a wall banner that displays the current air quality of the room, to a stuffed animal that plays a tune when the lights go on, to whatever project you can conceivably accomplish with sewable Arduino inputs, outputs, and development board in a semester context. This class will introduce students to introductory

computer programming, circuitry, and sewing with the goal of creating novel wearable artifacts that interact with the world.

**Class Format:** interspersed with hands-on activities in a computer lab

**Requirements/Evaluation:** weekly homework assignments and a final project

**Prerequisites:** none

**Enrollment Limit:** 18

**Enrollment Preferences:** students who have not previously taken a CSCI course

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class:  
<https://csci.williams.edu/>

**Materials/Lab Fee:** a fee of \$95 will be added to term bill to cover Lilypad Arduino components (Protosnap Plus Kit, battery holders, sets of LEDs, temperature sensor, vibe board, tri-color LED), alligator test leads, fabric, thread & fabric scissors.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will teach students the basics of computer programming through projects in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Iris Howley

### **CSCI 104 (F) Understanding Data Through Computation (QFR)**

Many of the world's greatest discoveries and most consequential decisions are enabled or informed by the analysis of data from a myriad of sources. Indeed, the ability to organize, visualize, and draw conclusions from data is now a critical tool in the sciences, business, medicine, politics, other academic disciplines, and society as a whole. This course lays the foundations for reasoning about data by exploring complementary computational, statistical, and visualization concepts. These concepts will be reinforced by lab experiences designed to teach programming and statistics skills while analyzing real-world data sets. This course will also examine the broader context and social issues surrounding data analysis, including privacy and ethics.

**Requirements/Evaluation:** Weekly problem sets involving programming, a project, and examinations.

**Prerequisites:** None; previous programming experience or statistics is not required.

**Enrollment Limit:** 24;12/lab

**Enrollment Preferences:** Not open to those who have completed or are currently enrolled in a Computer Science course numbered 136 or higher or a Statistics course. Preference given to first-year students and sophomores who have not previously taken a computer science course.

**Expected Class Size:** 24

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class:  
<https://csci.williams.edu/>

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

**CSCI 134 (F)(S) Introduction to Computer Science (QFR)**

This course introduces students to the science of computation by exploring the representation and manipulation of data and algorithms. We organize and transform information in order to solve problems using algorithms written in a modern object-oriented language. Topics include organization of data using objects and classes, and the description of processes using conditional control, iteration, methods and classes. We also begin the study of abstraction, self-reference, reuse, and performance analysis. While the choice of programming language and application area will vary in different offerings, the skills students develop will transfer equally well to more advanced study in many areas. In particular, this course is designed to provide the programming skills needed for further study in computer science and is expected to satisfy introductory programming requirements in other departments.

**Requirements/Evaluation:** weekly programming projects, weekly written homeworks, and two examinations.

**Prerequisites:** none, except for the standard prerequisites for a (QFR) course; previous programming experience is not required

**Enrollment Limit:** 30;15/lab

**Enrollment Preferences:** if the course is over-enrolled, enrollment will be determined by lottery.

**Expected Class Size:** 30/lec

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class: <https://csci.williams.edu/>. Students with prior experience with object-oriented programming should discuss appropriate course placement with members of the department.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

**CSCI 136 (F)(S) Data Structures and Advanced Programming (QFR)**

This course builds on the programming skills acquired in Computer Science 134. It couples work on program design, analysis, and verification with an introduction to the study of data structures. Data structures capture common ways in which to store and manipulate data, and they are important in the construction of sophisticated computer programs. Students are introduced to some of the most important and frequently used data structures: lists, stacks, queues, trees, hash tables, graphs, and files. Students will be expected to write several programs, ranging from very short programs to more elaborate systems. Emphasis will be placed on the development of clear, modular programs that are easy to read, debug, verify, analyze, and modify.

**Requirements/Evaluation:** programming and written assignments, quizzes, examinations

**Prerequisites:** CSCI 134 or equivalent; fulfilling the Discrete Mathematics Proficiency requirement is recommended, but not required

**Enrollment Limit:** 30;15/lab

**Enrollment Preferences:** if the course is over-enrolled, enrollment will be determined by lottery.

**Expected Class Size:** 30/lec

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class:

<https://csci.williams.edu/>

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course include regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

### **CSCI 237 (F)(S) Computer Organization (QFR)**

This course studies the basic instruction set architecture and organization of a modern computer. It provides a programmer's view of how computer systems execute programs, store information, and communicate. Over the semester the student learns the fundamentals of translating higher level languages into assembly language, and the interpretation of machine languages by hardware. At the same time, a model of computer hardware organization is developed from the gate level upward.

**Requirements/Evaluation:** weekly programming assignments and/or problem sets, quizzes, midterm and final exams

**Prerequisites:** CSCI 136

**Enrollment Limit:** 24;12/lab

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

### **CSCI 256 (F)(S) Algorithm Design and Analysis (QFR)**

This course investigates methods for designing efficient and reliable algorithms. By carefully analyzing the structure of a problem within a mathematical framework, it is often possible to dramatically decrease the computational resources needed to find a solution. In addition, analysis provides a method for verifying the correctness of an algorithm and accurately estimating its running time and space requirements. We will study several algorithm design strategies that build on data structures and programming techniques introduced in Computer Science 136. These include greedy, divide-and-conquer, dynamic programming, and network flow algorithms. Additional topics of study include algorithms on graphs and strategies for handling potentially intractable problems.

**Requirements/Evaluation:** Problem sets, midterm and final examinations

**Prerequisites:** CSCI 136 and fulfillment of the Discrete Mathematics Proficiency requirement

**Enrollment Limit:** 24

**Enrollment Preferences:** Preference will be given to students who need the class in order to complete the major. Ties will be broken by seniority (seniors first, then juniors, etc.).

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course will have weekly problem sets in which students will formally prove statements about the behavior and performance of algorithms. In short, the course is about applying abstract and mathematical reasoning to the study of algorithms and computation.

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

#### **Secondary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

### **CSCI 334 (F)(S) Principles of Programming Languages (QFR)**

This course examines the concepts and structures governing the design and implementation of programming languages. It presents an introduction to the concepts behind compilers and run-time representations of programming languages; features of programming languages supporting abstraction and polymorphism; and the procedural, functional, object-oriented, and concurrent programming paradigms. Programs will be required in languages illustrating each of these paradigms.

**Requirements/Evaluation:** weekly problem sets and programming assignments, a midterm examination, and a final examination

**Prerequisites:** CSCI 136

**Enrollment Limit:** 30

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course include regular and substantial problem sets and labs in which quantitative/formal reasoning skills are practiced and evaluated.

### **CSCI 339 (S) Distributed Systems (QFR)**

This course studies the key design principles of distributed systems, which are collections of independent networked computers that function as single coherent systems. Covered topics include communication protocols, processes and threads, naming, synchronization, consistency and replication, fault tolerance, and security. Students also examine some specific real-world distributed systems case studies, including Google and Amazon. Class discussion is based on readings from the textbook and research papers. The goals of this course are to understand how large-scale computational systems are built, and to provide students with the tools necessary to evaluate new technologies after the course ends.

**Requirements/Evaluation:** weekly homework assignments, midterm exam, 3 major programming projects, and a final project

**Prerequisites:** CSCI 237

**Enrollment Limit:** 24

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LEC Section: 01 MR 1:10 pm - 2:25 pm Jeannie R Albrecht

### **CSCI 361 (F) Theory of Computation (QFR)**

**Cross-listings:** MATH 361 CSCI 361

**Primary Cross-listing**

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of

computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

**Class Format:** Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

**Requirements/Evaluation:** online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination

**Prerequisites:** CSCI 256 or both a 300-level MATH course and permission of instructor

**Enrollment Limit:** 48(12/con)

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 361 (D3) CSCI 361 (D3)

**Quantative/Formal Reasoning Notes:** This course include regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** COGS Interdepartmental Electives

### **CSCI 371 (F)(S) Computer Graphics (QFR)**

This course covers the fundamental mathematics and techniques behind computer graphics, and will teach students how to represent and draw 2D and 3D geometry for real-time and photorealistic applications. Students will write challenging implementations from the ground up in C/C++, OpenGL, and GLSL. Topics include transformations, rasterization, ray tracing, immediate mode GUI, forward and inverse kinematics, and physically-based animation. Examples are drawn from video games, movies, and robotics.

**Requirements/Evaluation:** evaluation based on assignments, projects, and exams.

**Prerequisites:** CSCI 136 and CSCI 237 or permission of instructor

**Enrollment Limit:** 24;12/lab

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

### **CSCI 373 (F)(S) Artificial Intelligence (QFR)**

Artificial Intelligence (AI) has become part of everyday life, but what is it, and how does it work? This course introduces theories and computational techniques that serve as a foundation for the study of artificial intelligence. Potential topics include the following: Problem solving by search, Logic, Planning, Constraint satisfaction problems, Reasoning under uncertainty, Probabilistic graphical models, and Automated Learning.

**Requirements/Evaluation:** Evaluation based on assignments, projects, and exams.

**Prerequisites:** CSCI 136 and (CSCI 256 or permission of instructor)

**Enrollment Limit:** 24

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** COGS Interdepartmental Electives

### **CSCI 374 (F) Machine Learning (QFR)**

Machine learning is a field that derives from artificial intelligence and statistics, and is concerned with the design and analysis of computer algorithms that "learn" automatically through the use of data. Computer algorithms are capable of discerning subtle patterns and structure in the data that would be practically impossible for a human to find. As a result, real-world decisions, such as treatment options and loan approvals, are being increasingly automated based on predictions or factual knowledge derived from such algorithms. This course explores topics in supervised learning (e.g., random forests and neural networks), unsupervised learning (e.g., k-means clustering and expectation maximization), and possibly reinforcement learning (e.g., Q-learning and temporal difference learning.) It will also introduce methods for the evaluation of learning algorithms (with an emphasis on analysis of generalizability and robustness of the algorithms to distribution/environmental shift), as well as topics in computational learning theory and ethics.

**Requirements/Evaluation:** Presentations, problem sets, programming exercises, empirical analyses of algorithms, critical analysis of current literature; the final two weeks are focused on a project of the student's design.

**Prerequisites:** CSCI 136 and CSCI 256 or permission of instructor

**Enrollment Limit:** 24

**Enrollment Preferences:** Current or expected Computer Science majors.

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course heavily relies on discrete mathematics, calculus, and elementary statistics. Students will be proving theorems, among many other mathematically oriented assignments. Additionally, they will be programming, which involves analytical and logical thinking.

**Attributes:** COGS Interdepartmental Electives

Fall 2022

LEC Section: 01 MR 2:35 pm - 3:50 pm Rohit Bhattacharya

**CSCI 375 (S) Natural Language Processing (QFR)**

Natural language processing (NLP) is a set of methods for making human language accessible to computers. NLP underlies many technologies we use on a daily basis including automatic machine translation, search engines, email spam detection, and automated personalized assistants. These methods draw from a combination of algorithms, linguistics and statistics. This course will provide a foundation in building NLP models to classify, generate, and learn from text data.

**Requirements/Evaluation:** Evaluation based on assignments, projects, and exams.

**Prerequisites:** CSCI 136, and either CSCI 256 or STAT 201/202.

**Enrollment Limit:** 24

**Enrollment Preferences:** current or expected Computer Science majors.

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LEC Section: 02 MWF 11:00 am - 11:50 am Katie A. Keith

**ECON 110 (F)(S) Principles of Microeconomics (QFR)**

This course is an introduction to the study of the forces of supply and demand that determine prices and the allocation of resources in markets for goods and services, markets for labor, and markets for natural resources. The focus is on how and why markets work, why they may fail to work, and the policy implications of both their successes and failures. The course focuses on developing the basic tools of microeconomic analysis and then applying those tools to topics of popular or policy interest such as minimum wage legislation, pollution control, competition policy, international trade policy, discrimination, tax policy, and the role of government in a market economy.

**Requirements/Evaluation:** problem sets, quizzes, short essays, two midterms, final exam

**Prerequisites:** none

**Enrollment Limit:** 40

**Enrollment Preferences:** This course is required of Economics and Political Economy majors and highly recommended for those non-majors interested in Environmental Studies and Women's, Gender and Sexuality Studies.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** The department recommends students follow this course with ECON 120 or with a lower-level elective that has ECON 110 as its prerequisite; students may alternatively proceed directly to ECON 251 after taking this introductory course.

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

**Attributes:** POEC Required Courses

### **ECON 120 (F)(S) Principles of Macroeconomics (QFR)**

This course provides an introduction to the study of the aggregate national economy. It develops the basic theories of macroeconomics and applies them to topics of current interest. Issues to be explored include: the causes of inflation, unemployment, recessions, and depressions; the role of government fiscal and monetary policy in stabilizing the economy; the determinants of long-run economic growth; the long- and short-run effects of taxes, budget deficits, and other government policies on the national economy; the role of financial frictions in amplifying recessions; and the workings of exchange rates and international finance.

**Requirements/Evaluation:** Depending on instructor, may include: problem sets, short essays, quizzes, reading assignments, either one or two midterms, and a final exam.

**Prerequisites:** ECON 110

**Enrollment Limit:** 40

**Enrollment Preferences:** First-year students and sophomores.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

### **ECON 213 (F) Introduction to Environmental and Natural Resource Economics (QFR)**

**Cross-listings:** ECON 213 ENVI 213

#### **Primary Cross-listing**

We'll use economics to learn why we harm the environment and overuse natural resources, and what we can do about it. We'll talk about whether and how we can put a dollar value on nature and ecosystem services. We'll study cost benefit analysis, pollution in general, climate change, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth and trade. Consideration of justice and equity will be woven through the whole semester.

**Requirements/Evaluation:** problem sets, short essays, final paper; intermediate assignments may include poster, presentation, brief writing assignment

**Prerequisites:** ECON 110 or equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** first-year and sophomore students

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** this course will count toward both the Environmental Studies major and concentration

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 213 (D2) ENVI 213 (D2)

**Quantative/Formal Reasoning Notes:** We will use formal theory expressed in math and graphs, perform calculations, and consume statistical data.

Fall 2022

LEC Section: 01 MR 2:35 pm - 3:50 pm Sarah A. Jacobson

### **ECON 232 (F) Financial Markets, Institutions and Policies (QFR)**

The focus of the course will be on how firms, financial markets, and central banks interact in the economy. Key questions addressed in the course include: How do firms allocate their resources to enhance their value? How are firms evaluated by the financial markets? How are asset prices determined, and how are these prices related to interest rates? Are financial markets efficient, and what are the implications of their efficiency or lack thereof? How does the financial system help with the management of risks faced by society? We will also study the role of the central bank (the Federal Reserve in the US), monetary policy, and government regulation and their impacts on financial decision making. Key questions include: How do central banks set monetary policy and how do those policies affect the economy and the financial decision-making process? How does monetary policy change when interest rates are (virtually) zero?

**Class Format:** There will be a mix of lecture and discussion.

**Requirements/Evaluation:** 5-7 Problem Sets, Quantitative Exercises, Group Paper, and Final Exam

**Prerequisites:** ECON 110 and ECON 120

**Enrollment Limit:** 25

**Enrollment Preferences:** Sophomore and Junior Economics majors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** We will use mathematical models, graphs, and data analysis to understand financial decisions at the firm and economy-wide levels.

**Attributes:** POEC Comparative POEC/Public Policy Courses

Fall 2022

LEC Section: 01 TR 9:55 am - 11:10 am Neal J. Rappaport

### **ECON 240 (S) Colonialism and Underdevelopment in South Asia (DPE) (QFR)**

**Cross-listings:** ECON 240 ASIA 241

#### **Primary Cross-listing**

British colonial rule in South Asia shaped economy and society in fundamental ways. As resistance to colonial rule emerged in the late nineteenth century, "nationalist" writers developed a critique of its economic impact via taxation, fiscal policy, trade, and many other policies. In their turn, supporters of British rule, "apologists," argued that British rule had laid the foundations of economic growth by securing property rights, enforcing contracts, and developing infrastructure. The debate between "nationalists" and "apologists" has never quite ended, but after the recent growth of the Indian economy it has lost some of its emotional charge. We will use this opportunity to revisit the controversy.

**Requirements/Evaluation:** essays (one every other week) and responses to partner's essays will be evaluated

**Prerequisites:** one course in ECON

**Enrollment Limit:** 10

**Enrollment Preferences:** Economics major, prior course on South Asia

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 240 (D2) ASIA 241 (D2)

**Difference, Power, and Equity Notes:** Issues of difference, power, and equity are at the heart of any analysis of colonialism, hence the DPE designation.

**Quantative/Formal Reasoning Notes:** Students will write six essays, in which they will employ economic models and engage with quantitative evidence, so the course satisfies the QFR requirement.

**Attributes:** GBST South + Southeast Asia Studies Electives POEC Comparative POEC/Public Policy Courses

Spring 2023

TUT Section: T1 TBA Anand V. Swamy

### **ECON 251 (F)(S) Price and Allocation Theory (QFR)**

A study of the determination of relative prices and their importance in shaping the allocation of resources and the distribution of income. Subjects include: behavior of households in a variety of settings, such as buying goods and services, saving, and labor supply; behavior of firms in various kinds of markets; results of competitive and noncompetitive markets in goods, labor, land, and capital; market failure; government policies as sources of and responses to market failure; welfare criteria; limitations of mainstream analysis.

**Requirements/Evaluation:** Requirements vary by professor, but typically include frequent problem sets and multiple exams, including a final exam. They may also include one or more quizzes, short essays, collaborative projects, or presentations.

**Prerequisites:** ECON 110 and MATH 130 or its equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** Current or prospective Economics majors.

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course involves developing and analyzing mathematical models of real-world phenomena, grounded in tools like calculus and game theory. Students are assumed to be comfortable with topics from introductory calculus, including differentiation and integration.

### **ECON 252 (F)(S) Macroeconomics (QFR)**

A study of aggregate economic activity: output, employment, inflation, and interest rates. The class will develop a theoretical framework for analyzing economic growth and business cycles. The theory will be used to evaluate policies designed to promote growth and stability, and to understand economic developments in the U.S. and abroad. Instructors may use elementary calculus in assigned readings, exams and lectures.

**Requirements/Evaluation:** Requirements vary by professor, but typically include frequent problem sets and/or written assignments, midterm(s), and a final exam.

**Prerequisites:** ECON 110 and 120 and MATH 130 or its equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** Current or prospective Economics majors.

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

### **ECON 255 (F)(S) Econometrics (QFR)**

An introduction to the theory and practice of applied quantitative economic analysis. This course familiarizes students with the strengths and weaknesses of the basic empirical methods used by economists to evaluate economic theory against economic data. Emphasizes both the statistical foundations of regression techniques and the practical application of those techniques in empirical research, with a focus on understanding when a causal interpretation is warranted. Computer exercises will provide experience in using the empirical methods, but no previous computer experience is expected. Highly recommended for students considering graduate training in economics or public policy.

**Requirements/Evaluation:** Requirements vary by professor, but typically include frequent problem sets, multiple exams, a group project, and possible additional assignments or quizzes.

**Prerequisites:** MATH 130, plus STAT 161, 201 or 202 (or equivalent, including a score of 5 on the AP Statistics Exam), plus one course in ECON; STAT 101 will also serve as a prerequisite, but only if taken prior to the fall of 2018

**Enrollment Limit:** 30

**Enrollment Preferences:** Current or prospective Economics and Political Economy majors.

**Expected Class Size:** 30

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** Students may substitute the combination of STAT 201 and 346 for ECON 255

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course teaches research tools necessary to analyze data.

**Attributes:** PHLH Statistics Courses POEC Required Courses

**ECON 345 (S) Growth Diagnostics (QFR)**

**Cross-listings:** ECON 545 ECON 345

**Primary Cross-listing**

Evidence from across the developing world suggests that the "binding constraints" to economic growth can be remarkably heterogeneous--i.e., the growth potential of stagnating or underperforming economies may be unlocked in a large variety of ways. For instance, pre-reform China had been constrained by poor supply incentives in agriculture, whereas Brazil has been held back by an inadequate supply of credit, South Africa by poor employment incentives in manufacturing, El Salvador by insufficient production incentives in tradables, Zimbabwe by bad governance, and so forth. How can developing-country policymakers determine country-specific constraints like these, thus enabling them to pragmatically pursue a selected set of growth-promoting policies rather than attempting to implement a "laundry list" of reforms that are naively based on "best practice" rules-of-thumb? This course will serve as a primer on "growth diagnostics," an empirically-driven analytical framework for identifying the most binding constraints to economic growth in a given country at a point in time, thereby allowing policymakers to develop well-targeted reforms for relaxing these constraints while being cognizant of the nation's prevailing economic, political, and social context. The course will first build on the basic theories and empirics of economic growth to elucidate the diagnostic framework and will then employ a wide range of country-specific case studies to demonstrate how the framework can be operationalized for policy making. Throughout the semester, students will be required to work in groups, each representing a given developing or emerging-market economy, in order to build a growth diagnostic for their group's assigned country by the end of the course.

**Requirements/Evaluation:** extensive class participation, two short (5-page) papers, two 15-page team papers comprising a country growth diagnostic, and a team presentation on the diagnostic

**Prerequisites:** for undergraduates ECON 251, ECON 252, and either ECON 255 or STAT 346

**Enrollment Limit:** 19

**Enrollment Preferences:** CDE fellows and senior Economics majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 545 (D2) ECON 345 (D2)

**Quantative/Formal Reasoning Notes:** The course material will be draw heavily on mathematical and statistical models of economic growth and macroeconomic development, and students will be required to routinely develop mathematical models and/or conduct econometric analysis in their assignments.

Spring 2023

SEM Section: 01 TR 9:55 am - 11:10 am Quamrul H. Ashraf

**ECON 371 (F) Time Series Econometrics and Empirical Methods for Macro (QFR)**

Econometric methods in many fields including macro and monetary economics, finance and international growth and development, as well as numerous fields beyond economics, have evolved a distinct set of techniques which are designed to meet the practical challenges posed by the typical empirical questions and available time series data of these fields. The course will begin with an introductory review of concepts of estimation and inference for large data samples in the context of the challenges of multivariate endogeneous systems, and will then focus on associated methods for analysis of short dynamics such as vector autoregressive techniques and methods for analysis of long run dynamics such as cointegration techniques. Students will be introduced to concepts and techniques analytically, but also by intuition, learning by doing, and by computer simulation and illustration. The course is particularly well suited for economics majors wishing to explore advanced empirical methods, or for statistics, mathematics or computer science majors wishing to learn more about the ways in which the subject of their majors interacts with the fields of economics. The method of evaluation will include a term paper. ECON 252 and either STATS 346 or ECON 255 are formal prerequisites, although for students with exceptionally strong math/stats backgrounds these can be waived subject to instructor permission. Credit may not be earned for both ECON 371 and ECON 356.

**Requirements/Evaluation:** term paper and regular homework assignments

**Prerequisites:** ECON 252 and either ECON 255 or STATS 346

**Enrollment Limit:** 19

**Enrollment Preferences:** students wishing to write an honors thesis, and students with strong MATH/STAT/CSCI backgrounds

**Expected Class Size:** 19

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Uses quantitative/formal reasoning intensively in the form of mathematical and statistical arguments, as well as computer programming.

Fall 2022

SEM Section: 01 TF 1:10 pm - 2:25 pm Peter L. Pedroni

### **ECON 378 (F) Long-Run Comparative Development (QFR)**

The world today is marred by vast disparities in the standard of living, with about a 30-fold difference in real GDP per capita between the poorest and most affluent of nations. What are the causes of such differences in prosperity across countries? Are the origins of global inequality to be found in underlying differences among societies over the past few decades, the past few centuries, or the past few millennia? If contemporary differences in living standards have such "deep" historical roots, what scope exists for policies to reduce global inequality today? Can we expect inequality to be reduced through some natural process of macroeconomic development, or is it likely to persist unless acted upon by policy? This course will present a unified theory of economic growth for thinking about these and related questions. Examples of issues to be covered include: the Neoclassical growth model and its inefficacy for answering questions about development over long time horizons; Malthusian stagnation across societies during the pre-industrial stage of economic development; the importance of the so-called demographic transition and of human capital formation in the course of industrialization; the persistent influence of colonialism, slavery, and ethnic fragmentation in shaping the quality of contemporary politico-economic institutions; and the enduring effects of geography on comparative development, through its impact on the emergence of agriculture in early human societies and its influence in shaping the composition of traits in populations across the globe.

**Class Format:** discussion

**Requirements/Evaluation:** problem sets, at least one exam, a research paper, and a class presentation

**Prerequisites:** ECON 251, ECON 252, and either ECON 255 or STAT 346

**Enrollment Limit:** 25

**Enrollment Preferences:** junior and senior Economics majors

**Expected Class Size:** 25

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** The course material will draw heavily on mathematical and statistical models of economic growth and macroeconomic development. Students will be required to routinely develop and solve sophisticated mathematical models of economic growth, involving the rigorous application of solution concepts from constrained optimization and from optimal control theory. Students will also be required to perform some econometric analyses in their assignments.

**Attributes:** GBST Economic Development Studies Electives POEC Comparative POEC/Public Policy Courses

Fall 2022

LEC Section: 01 TR 11:20 am - 12:35 pm Quamrul H. Ashraf

### **ECON 384 (S) Corporate Finance (QFR)**

This course analyzes the major financial decisions facing firms. While the course takes the perspective of a manager making decisions about both what investments to undertake and how to finance these projects, it will emphasize the underlying economic models that are relevant for these decisions. Topics include capital budgeting, links between real and financial investments, capital structure choices, dividend policy, and firm valuation. Additional topics may include issues in corporate risk management, corporate governance and corporate restructuring, such as mergers and acquisitions.

**Class Format:** Lecture / discussion

**Requirements/Evaluation:** class participation, problem sets, short quizzes, short projects such as case write ups, a midterm exam, a final exam and a research paper (possibly written with a partner)

**Prerequisites:** ECON 251, 252, and some familiarity with statistics (e.g., ECON 255)

**Enrollment Limit:** 28

**Enrollment Preferences:** Economics majors; seniority

**Expected Class Size:** 28

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** The course uses quantitative models to evaluate decisions.

Spring 2023

LEC Section: 01 MR 2:35 pm - 3:50 pm William M. Gentry

### **ECON 387 (S) Economics of Climate Change (QFR)**

**Cross-listings:** ECON 522 ENVI 387 ECON 387

#### **Primary Cross-listing**

This course introduces the economic view of climate change, including both theory and empirical evidence. Given the substantial changes implied by the current stock of greenhouse gases (GHGs) in the atmosphere, we will begin by looking at impacts on agriculture, health, income, and migration. We will consider the distribution of climate damages across poor and wealthy people, both within and across countries. Next we will study adaptation, including capital investments and behavioral changes. We will examine the sources of climate change, especially electricity generation and transportation, and think about optimal policies. Throughout the course we will discuss the limits of the economic approach, pointing out normative questions on which economic theory provides little guidance.

**Requirements/Evaluation:** problem sets, midterm, group presentation, final exam

**Prerequisites:** ECON 251, familiarity with statistics

**Enrollment Limit:** 25

**Enrollment Preferences:** Junior/Senior Economics majors and CDE fellows

**Expected Class Size:** 25

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **ECON 389 (S) Tax Policy in Global Perspective (QFR)**

**Cross-listings:** ECON 514 ECON 389

#### **Secondary Cross-listing**

Government policy is important for economic development. To finance their policies, governments must build the fiscal capacity to implement a tax system. In turn, fiscal capacity--the ability for the government to raise revenue--depends on economic development. This endogeneity between fiscal capacity and economic development creates challenges for tax policy in developing countries. Given these challenges, what types of taxes should countries use to raise revenues? How can governments build the fiscal capacity to generate revenue to finance critical services? This class explores tax policy from a global and comparative perspective. Because most students will be CDE fellows, we will emphasize tax policy issues, examples, and

evidence that are pertinent to developing countries. However, many tax policy lessons are universal so we will also learn about tax policies in developed countries, especially issues relevant for transnational transactions. Topics addressed include: how economic principles can be applied to the efficiency and equity consequences of tax policies; how personal income taxes, corporate income taxes, and value-added taxes are designed and administered and how they influence the economy; ideas for fundamental tax reforms; the debate over progressive taxes versus "flat" taxes; how taxes affect incentives to save and invest; how market failures and administrative problems may influence the optimality of tax policy; the implications of global capital flows and corporate tax avoidance for tax policy; tax holidays and other special tax incentives for investment; empirical evidence on the influence of taxes on foreign direct investment, labor supply, and tax evasion; tax policy towards natural resources such as minerals and oil; case studies of efforts to reform tax administration and reduce tax evasion and corruption; taxes on land and property; taxes on imports and exports; presumptive taxation; and the informal economy and its implications for tax policy.

**Requirements/Evaluation:** midterm exam, several problem sets, two 10-page essays

**Prerequisites:** one public economics course or microeconomics course (ECON 504 or ECON 110), and one empirical methods course (POEC 253 or ECON 255, 502, or 503); students who have previously taken ECON 351 will not be enrolled

**Enrollment Limit:** 19

**Enrollment Preferences:** CDE students, but undergraduates with the prerequisites are welcome

**Expected Class Size:** 15-19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 514 (D2) ECON 389 (D2)

**Quantative/Formal Reasoning Notes:** The course builds on other QFR Reasoning econ classes.

**Attributes:** POEC Comparative POEC/Public Policy Courses POEC International Political Economy Courses

Spring 2023

SEM Section: 01 MR 2:35 pm - 3:50 pm Jon M. Bakija

### **ECON 471 (S) Topics in Advanced Econometrics (QFR)**

The course uses both a practical and conceptual/theory based approach, with emphasis on methods of structural identification of dynamics in VARs and long run cointegration and nonlinear function estimation and analysis, both in conventional time series and especially panel time series which contain spatial dimensions. The course will also investigate methods of computer simulation related to these techniques. The course is well suited for students considering empirically oriented honors theses in fields that employ these techniques, such as macro, finance, growth, trade and development, as well as fields outside of economics that use time series data. It is also well suited for students majoring in economics, statistics, computer sciences or mathematics who wish to expand their econometrics training and understanding to a more advanced level.

**Requirements/Evaluation:** periodic homework assignments, term paper

**Prerequisites:** ECON 371

**Enrollment Limit:** 19

**Enrollment Preferences:** students with strong quantitative backgrounds, and to students intending to write an honors thesis

**Expected Class Size:** 19

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Course will make use of mathematics, statistics and computer analysis for the conceptualization and implementation of the econometric topics that are taught.

SEM Section: 01 M 7:00 pm - 9:40 pm Peter L. Pedroni

### **ECON 477 (F) Economics of Environmental Behavior (QFR)**

**Cross-listings:** ECON 477 ENVI 376

### Primary Cross-listing

A community maintains a fishery; a firm decides whether to get a green certification; you choose to fly home or stay here for spring break: behaviors of people and firms determine our impact on the environment. We'll use economics to model environmental behavior and to consider how policies can help or hurt the environment. Topics we'll study include: voluntary conservation, social norms and nudges, firm responses to mandatory and voluntary rules, and boycotts and divestment.

**Class Format:** Class sessions will largely consist of presentations and discussions of academic research papers, as well as lab sessions to work on empirical exercises; we may break the class into groups for some discussions

**Requirements/Evaluation:** regular reading responses, empirical exercises, class participation, 2 oral presentations, and a final original research paper using an experiment, existing data, or theory

**Prerequisites:** ECON 251 and (ECON 255 or STAT 346)

**Enrollment Limit:** 19

**Enrollment Preferences:** senior Economics majors

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 477 (D2) ENVI 376 (D2)

**Quantative/Formal Reasoning Notes:** The research students will consume and produce in the class will be based on math-based theory and/or econometric-based empirical analysis.

LEC Section: 01 MR 1:10 pm - 2:25 pm Matthew Gibson

### **ECON 545 (S) Growth Diagnostics (QFR)**

**Cross-listings:** ECON 545 ECON 345

#### **Secondary Cross-listing**

Evidence from across the developing world suggests that the "binding constraints" to economic growth can be remarkably heterogeneous--i.e., the growth potential of stagnating or underperforming economies may be unlocked in a large variety of ways. For instance, pre-reform China had been constrained by poor supply incentives in agriculture, whereas Brazil has been held back by an inadequate supply of credit, South Africa by poor employment incentives in manufacturing, El Salvador by insufficient production incentives in tradables, Zimbabwe by bad governance, and so forth. How can developing-country policymakers determine country-specific constraints like these, thus enabling them to pragmatically pursue a selected set of growth-promoting policies rather than attempting to implement a "laundry list" of reforms that are naively based on "best practice" rules-of-thumb? This course will serve as a primer on "growth diagnostics," an empirically-driven analytical framework for identifying the most binding constraints to economic growth in a given country at a point in time, thereby allowing policymakers to develop well-targeted reforms for relaxing these constraints while being cognizant of the nation's prevailing economic, political, and social context. The course will first build on the basic theories and empirics of

economic growth to elucidate the diagnostic framework and will then employ a wide range of country-specific case studies to demonstrate how the framework can be operationalized for policy making. Throughout the semester, students will be required to work in groups, each representing a given developing or emerging-market economy, in order to build a growth diagnostic for their group's assigned country by the end of the course.

**Requirements/Evaluation:** extensive class participation, two short (5-page) papers, two 15-page team papers comprising a country growth diagnostic, and a team presentation on the diagnostic

**Prerequisites:** for undergraduates ECON 251, ECON 252, and either ECON 255 or STAT 346

**Enrollment Limit:** 19

**Enrollment Preferences:** CDE fellows and senior Economics majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 545 (D2) ECON 345 (D2)

**Quantative/Formal Reasoning Notes:** The course material will draw heavily on mathematical and statistical models of economic growth and macroeconomic development, and students will be required to routinely develop mathematical models and/or conduct econometric analysis in their assignments.

Spring 2023

**ENVI 203 (F) Ecology** (QFR)

**Cross-listings:** BIOL 203 ENVI 203

**Secondary Cross-listing**

This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

**Class Format:** Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

**Requirements/Evaluation:** pre-class quizzes, lab reports, two mid-term exams, and a final exam

**Prerequisites:** BIOL 102, or ENVI 102, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** students planning to pursue Biology and/or ENVI

**Expected Class Size:** 30

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** satisfies the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIOL 203 (D3) ENVI 203 (D3)

**Quantative/Formal Reasoning Notes:** Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

### **ENVI 213 (F) Introduction to Environmental and Natural Resource Economics (QFR)**

**Cross-listings:** ECON 213 ENVI 213

#### **Secondary Cross-listing**

We'll use economics to learn why we harm the environment and overuse natural resources, and what we can do about it. We'll talk about whether and how we can put a dollar value on nature and ecosystem services. We'll study cost benefit analysis, pollution in general, climate change, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth and trade. Consideration of justice and equity will be woven through the whole semester.

**Requirements/Evaluation:** problem sets, short essays, final paper; intermediate assignments may include poster, presentation, brief writing assignment

**Prerequisites:** ECON 110 or equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** first-year and sophomore students

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** this course will count toward both the Environmental Studies major and concentration

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 213 (D2) ENVI 213 (D2)

**Quantative/Formal Reasoning Notes:** We will use formal theory expressed in math and graphs, perform calculations, and consume statistical data.

### **ENVI 215 (S) Climate Changes (QFR)**

**Cross-listings:** ENVI 215 GEOS 215

#### **Secondary Cross-listing**

Paleoclimatology is the reconstruction of past climate variability and the forces that drove the climate changes. The Earth's climate system is experiencing unprecedented and catastrophic change because of anthropogenic emission of greenhouse gases and land use change. Paleoclimatology allows humans to put modern climate changes into the context of the history of this planet, and shows how and why it is unprecedented and catastrophic. Each climate event we study from Earth's past teaches us lessons on why the climate system responds to anthropogenic perturbations, what climate changes we're committed to in the future, how long-lasting they will be, and what climate consequences we can avoid if we take action and reduce greenhouse gas emissions sooner. In this course, we will discuss the major mechanisms that cause natural climate variability, how climate of the past is reconstructed, and how climate models are used to test mechanisms that drive climate variation. With these tools, you will analyze and interpret data and model simulations from climate events from Earth's history, and apply these findings to anthropogenic climate changes happening now and that are projected to happen in the future. Laboratories and homework will emphasize developing problem solving skills as well as sampling and interpreting geological archives of climate change. This course is in the Oceans and Climate group for the Geosciences major.

**Class Format:** This class has three scheduled lectures per week, and one lab meeting per week which will consist of field excursions, lab exercises,

problem solving and discussion

**Requirements/Evaluation:** lab exercises and homework (25%), three quizzes (50%), and a final project (25%)

**Prerequisites:** 100-level course in GEOS, CHEM, or PHYS or ENVI 102 or permission of instructor

**Enrollment Limit:** 24

**Enrollment Preferences:** Geosciences majors and Environmental Studies majors and concentrators and Maritime Studies concentrators

**Expected Class Size:** 16

**Grading:** yes pass/fail option, yes fifth course option

## ENVI 404 (F) Coastal Processes and Geomorphology (QFR)

**Cross-listings:** MAST 404 ENVI 404 GEOS 404

### Secondary Cross-listing

Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces--wind, waves, storms, and people--that shape the coastal zone, as well as the geologic formations--sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs--that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

**Class Format:** lecture two times a week with a lab one time per week

**Requirements/Evaluation:** lab reports, quizzes, and an independent research project

**Prerequisites:** Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.

**Enrollment Limit:** 12

**Enrollment Preferences:** senior Geosciences majors, then juniors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** As a 400-level seminar, this capstone course is intended to build on and extend knowledge and skills students have developed during previous courses in the major. This course counts toward the GEOS Group B Electives - Sediments + Life.

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MAST 404 (D3) ENVI 404 (D3) GEOS 404 (D3)

Fall 2022

LEC Section: 01 MWF 8:30 am - 9:45 am Alex A. Apotsos

### **GEOS 414 (S) Reading Deep Time (QFR)**

Ancient sedimentary rocks and the fossils they contain are time machines - direct windows into the deep history of life on Earth and the environments that life inhabited. In this course you will learn to "read" these deep time records by collecting, interpreting, and analyzing paleontological, stratigraphic, and sedimentological data. The course will be organized around a week-long spring break trip to explore the rocks of the House Range of Utah. The Cambrian and Ordovician strata of the House Range offers an outstanding record of one of the most important periods in Earth history, tracking the rise of animal ecosystems and major increases in fossil diversity. The first 6 weeks of class will be spent learning the fundamentals of quantitative methods in paleontology and stratigraphy (often referred to as historical geology). Labs will focus on skill building including learning basic coding in R

(no experience needed or expected), and learning how to interpret paleontological, sedimentological, and stratigraphic data. We will also read widely on the field locality and on the Cambrian and Ordovician Periods. During the field trip, we will explore the House Range. Students will learn skills including interpreting geological maps, measuring stratigraphic sections, finding and identifying fossils, and correlating rock units across basins. We will collect samples and data on the field trip and bring them back to Williams. The second 6 weeks of the course will be spent processing and analyzing the samples and data collected during the field trip, culminating in final projects to be done in small groups. Students will help determine what data we will collect in the field and what projects emerge. Examples might be interpreting carbon isotopic analyses to reconstruct ancient oceanographic conditions, biostratigraphic correlation using fossils to reconstruct basin dynamics, determining paleoenvironment based on analyses of thin sections, or digging into trilobite fossil preservation and evolutionary trends. Students will draw on previous experiences and course content in the Geosciences and bring small group research projects to completion by the end of the semester, which will be presented in poster form. This course fulfills the Geosciences Group B Elective: Sediments and Life.

**Class Format:** weekly lectures, paper discussions, and hands-on labs. Required week-long spring break field course.

**Requirements/Evaluation:** Short papers and lab assignments, spring break field course participation (REQUIRED), and a final group project presented in poster form.

**Prerequisites:** GEOS majors who have taken at least one of the following courses: GEOS 212, GEOS 203, GEOS 201, GEOS 301, GEOS 302, GEOS 312T, or permission of instructor.

**Enrollment Limit:** 12

**Enrollment Preferences:** Senior, and then Junior, Geosciences majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** As a 400-level seminar, this capstone course is intended to build on and extend knowledge and skills students have developed during previous courses in the major

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course will rely on the programming language R. Students will learn how to code in R, and will use R to analyze large data sets of geological data. The majority of labs, as well as the final project, will rely on R, statistical analyses, and wrangling data.

**Attributes:** GEOS Group B Electives - Sediments + Life

#### **MAST 404 (F) Coastal Processes and Geomorphology (QFR)**

**Cross-listings:** MAST 404 ENVI 404 GEOS 404

#### **Secondary Cross-listing**

Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces--wind, waves, storms, and people--that shape the coastal zone, as well as the geologic formations--sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs--that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

**Class Format:** lecture two times a week with a lab one time per week

**Requirements/Evaluation:** lab reports, quizzes, and an independent research project

**Prerequisites:** Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.

**Enrollment Limit:** 12

**Enrollment Preferences:** senior Geosciences majors, then juniors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** As a 400-level seminar, this capstone course is intended to build on and extend knowledge and skills students have developed during previous courses in the major. This course counts toward the GEOS Group B Electives - Sediments + Life.

LEC Section: 01 MWF 8:30 am - 9:45 am Alex A. Apotsos

### **MATH 130 (F)(S) Calculus I (QFR)**

Calculus permits the computation of velocities and other instantaneous rates of change by a limiting process called differentiation. The same process also solves "max-min" problems: how to maximize profit or minimize pollution. A second limiting process, called integration, permits the computation of areas and accumulations of income or medicines. The Fundamental Theorem of Calculus provides a useful and surprising link between the two processes. Subtopics include trigonometry, exponential growth, and logarithms.

**Requirements/Evaluation:** Weekly homework and quizzes, 2 exams during the semester, and one final

**Prerequisites:** MATH 102 (or demonstrated proficiency on a diagnostic test); this is an introductory course for students who have not seen calculus before

**Enrollment Limit:** 50

**Enrollment Preferences:** first-year students

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** students who have previously taken a calculus course may not enroll in MATH 130 without the permission of instructor

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This a calculus course.

### **MATH 140 (F)(S) Calculus II (QFR)**

Calculus answers two basic questions: how fast is something changing (the derivative) and how much is there (the integral). This course is about integration, and the miracle that unites the derivative and the integral (the Fundamental Theorem of Calculus.) Understanding calculus requires in part the understanding of methods of integration. This course will also solve equations involving derivatives ("differential equations") for population growth or pollution levels. Exponential and logarithmic functions and trigonometric and inverse functions will also play an important role. This course is the

right starting point for students who have seen derivatives, but not necessarily integrals, before.

**Requirements/Evaluation:** homework, quizzes, and/or exams

**Prerequisites:** MATH 130 or equivalent; students who have received the equivalent of advanced placement of AB 4, BC 3 or higher may not enroll in MATH 140 without the permission of instructor

**Enrollment Limit:** 50

**Enrollment Preferences:** based on who needs calculus the soonest

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** students who have higher advanced placement must enroll in MATH 150 or above

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is a math class

### **MATH 150 (F)(S) Multivariable Calculus (QFR)**

Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives, multiple integrals. There is also a unit on infinite series, sometimes with applications to differential equations.

**Requirements/Evaluation:** Problem sets and exams

**Prerequisites:** MATH 140 or equivalent, such as satisfactory performance on an Advanced Placement Examination

**Enrollment Limit:** 50

**Enrollment Preferences:** Preference will be given to prospective math and stats majors, or students who need this as a course to serve as a prerequisite for other courses.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Students with the equivalent of advanced placement of AB 4 or above should enroll in MATH 150, students with a BC 3 or higher should enroll in Math 151 when it is being offered, and Math 150 otherwise.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** mathematics

### **MATH 151 (F) Multivariable Calculus (QFR)**

Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives and multiple integrals. The goal of the course is Stokes Theorem, a deep and profound generalization of the Fundamental Theorem of Calculus. The difference between this course and MATH 150 is that MATH 150 covers infinite series instead of Stokes

Theorem. Students with the equivalent of BC 3 or higher should enroll in MATH 151, as well as students who have taken the equivalent of an integral calculus and who have already been exposed to infinite series. For further clarification as to whether MATH 150 or MATH 151 is appropriate, please consult a member of the math/stat department.

**Requirements/Evaluation:** problem sets and exams

**Prerequisites:** AP BC 3 or higher or integral calculus with infinite series

**Enrollment Limit:** 50

**Enrollment Preferences:** First-years, sophomores, and juniors

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** MATH 151 satisfies any MATH 150 prerequisite; credit will not be given for both MATH 150 and MATH 151

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course builds quantitative skills

LEC Section: 03 MWF 10:00 am - 10:50 am Susan R. Loepf

### **MATH 200 (F)(S) Discrete Mathematics (QFR)**

In contrast to calculus, which is the study of continuous processes, this course examines the structure and properties of finite sets. Topics to be covered include mathematical logic, elementary number theory, mathematical induction, set theory, functions, relations, elementary combinatorics and probability, and graphs. Emphasis will be given on the methods and styles of mathematical proofs, in order to prepare the students for more advanced math courses.

**Requirements/Evaluation:** Fall: Homework, proof portfolio, group work, presentations, quizzes/exams, reflections. Spring: The grade will be based on homework and 4 exams.

**Prerequisites:** Calculus at the level of an AP course or Williams College Math 130 or 140. Students who have taken a 300-level or 400-level math course should obtain permission of the instructor before enrolling.

**Enrollment Limit:** 40

**Enrollment Preferences:** Preference given to first and second year students intending to major in mathematics or computer science.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course involves developing the formal mathematical language of logic and set theory. It also involves using quantitative tools to solve problems relating to combinatorics, probability, and other fields of discrete mathematics.

### **MATH 210 (S) Mathematical Methods for Scientists (QFR)**

**Cross-listings:** PHYS 210 MATH 210

[Secondary Cross-listing](#)

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

**Class Format:** three hours per week

**Requirements/Evaluation:** several exams and weekly problem sets, all of which have a substantial quantitative component

**Prerequisites:** MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

**Enrollment Limit:** 50

**Enrollment Preferences:** sophomores and juniors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHYS 210 (D3) MATH 210 (D3)

**Quantative/Formal Reasoning Notes:** This course will have weekly problem sets using advanced calculus methods

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Daniel P. Aalberts

### **MATH 250 (F)(S) Linear Algebra (QFR)**

Many social, political, economic, biological, and physical phenomena can be described, at least approximately, by linear relations. In the study of systems of linear equations one may ask: When does a solution exist? When is it unique? How does one find it? How can one interpret it geometrically? This course develops the theoretical structure underlying answers to these and other questions and includes the study of matrices, vector spaces, linear independence and bases, linear transformations, determinants and inner products. Course work is balanced between theoretical and computational, with attention to improving mathematical style and sophistication.

**Requirements/Evaluation:** homework and exams

**Prerequisites:** MATH 150/151 or MATH 200

**Enrollment Limit:** 60

**Enrollment Preferences:** Students who have officially declared a major that requires Math 250.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** In this course, students will engage in both quantitative and formal reasoning.

**Attributes:** COGS Related Courses

### **MATH 307 (F)(S) Computational Linear Algebra (QFR)**

Linear algebra is of central importance in the quantitative sciences, including application areas such as image and signal processing, data mining, computational finance, structural biology, and much more. When the problems must be solved computationally, approximation, round-off errors,

convergence, and efficiency matter, and traditional linear algebra techniques may fail to succeed. We will adopt linear algebra techniques on a large scale, implement them computationally, and apply them to core problems in scientific computing. Topics may include: systems of linear and nonlinear equations; approximation and statistical function estimation; optimization; interpolation; data scraping; singular value decomposition; and more. This course could also be considered a course in numerical analysis or computational science.

**Class Format:** This course is taught in a flipped classroom format. Students read and watch lecture videos prior to each class session. The instructor uses class time for discussion and collaborative learning activities. This course will be a good fit for students with a strong interest in applied mathematics and a willingness to devote significant effort to learning/doing computer programming.

**Requirements/Evaluation:** Students will complete checkpoint quizzes, regularly assigned homework problems and projects, and reflective writing assignments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows the policy of "ungrading." Over the course of the semester, students will develop a rubric to assess their own learning and will evaluate themselves according to this rubric.

**Prerequisites:** MATH 250; COMP 134 or equivalent prior experience with computer programming (in any language)

**Enrollment Limit:** 24

**Enrollment Preferences:** Preference given to majors and prospective majors.

**Expected Class Size:** 24

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course involves developing the formal mathematical language of linear algebra. It also involves using quantitative tools to solve problems relating to a wide range of applications in the physical and social sciences.

### **MATH 308 (F)(S) Mathematical and Computational Approaches to Social Justice (DPE) (QFR)**

**Cross-listings:** STS 363 WGSS 363 AMST 363 MATH 308

#### **Primary Cross-listing**

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial group will carry out a substantial project in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science.

**Class Format:** This is a research-based tutorial.

**Requirements/Evaluation:** To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows an "ungrading" methodology.

**Prerequisites:** Across each 3 - 5 person tutorial group: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students will be admitted in groups of 3 - 5 based on a proposal submitted prior to registration. The instructor is happy to facilitate formation of groups and to give feedback on draft proposals. Contact the instructor early, prior to preregistration.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 363 (D2) WGSS 363 (D2) AMST 363 (D2) MATH 308 (D3)

**Difference, Power, and Equity Notes:** Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

**Quantative/Formal Reasoning Notes:** Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze

real-world data.

Spring 2023

TUT Section: T1 TBA Chad M. Topaz

**MATH 309 (F)(S) Differential Equations (QFR)**

Ordinary differential equations (ODEs) frequently arise as models of phenomena in the natural and social sciences. This course presents core ideas of ODEs from an applied standpoint. Topics covered early in the course may include numerical solutions, separation of variables, integrating factors, and constant coefficient linear equations. Later, we will focus on nonlinear ODEs, for which it is usually impossible to find analytical solutions. Tools from dynamical systems will be introduced to allow us to obtain information about the behavior of the ODEs without explicitly knowing the solution.

**Requirements/Evaluation:** quizzes/exams, problem sets, participation

**Prerequisites:** MATH 150/151 and MATH 250

**Enrollment Limit:** 40

**Enrollment Preferences:** discretion of the instructor

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**MATH 313 (S) Introduction to Number Theory (QFR)**

The study of numbers dates back thousands of years, and is fundamental in mathematics. In this course, we will investigate both classical and modern questions about numbers. In particular, we will explore the integers, and examine issues involving primes, divisibility, and congruences. We will also

look at the ideas of numbers and primes in more general settings, and consider fascinating questions that are simple to understand, but can be quite difficult to answer.

**Requirements/Evaluation:** Problem sets and exams

**Prerequisites:** MATH 250 or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** Students who have not taken Math 355 and seniors who need the course to complete the major and have no other options.

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course requires working with various number systems, performing explicit computations, and proving mathematical results using logical reasoning practices.

Spring 2023

LEC Section: 01 MWF 10:00 am - 10:50 am Susan R. Loepp

### **MATH 317 (F) Introduction to Operations Research (QFR)**

In the first N math classes of your career, you can be misled as to what the world is truly like. How? You're given exact problems and told to find exact solutions. The real world is sadly far more complicated. Frequently we cannot exactly solve problems; moreover, the problems we try to solve are themselves merely approximations to the world! We are forced to develop techniques to approximate not just solutions, but even the statement of the problem. Additionally, we often need the solutions quickly. Operations Research, which was born as a discipline during the tumultuous events of World War II, deals with efficiently finding optimal solutions. In this course we build analytic and programming techniques to efficiently tackle many problems. We will review many algorithms from earlier in your mathematical or CS career, with special attention now given to analyzing their run-time and seeing how they can be improved. The culmination of the course is a development of linear programming and an exploration of what it can do and what are its limitations. For those wishing to take this as a Stats course, the final project must have a substantial stats component approved by the instructor.

**Prerequisites:** Linear Algebra (MATH 250) and one other 200-level or higher CSCI, MATH or STATS course, or permission of the instructor.

**Requirements/Evaluation:** homework, exams, projects

**Prerequisites:** MATH 150, MATH 250 and one other 200-level or higher CSCI, MATH or STATS course, or permission from the instructor.

**Enrollment Limit:** 40

**Enrollment Preferences:** Computer Science, Mathematics and Statistics majors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** [http://web.williams.edu/Mathematics/sjmillier/public\\_html/317/](http://web.williams.edu/Mathematics/sjmillier/public_html/317/)

### **MATH 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)**

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

#### **Secondary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication

events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **MATH 329 (S) Discrete Geometry (QFR)**

Discrete geometry is one of the oldest and most consistently vibrant areas of mathematics, stretching from the Platonic Solids of the ancient Greeks to the modern day applications of convex optimization and linear programming. In this tutorial we will learn about polygons and their higher-dimensional cousins, polyhedra and polytopes, and the various ways to describe, compute, and classify such objects. We will learn how these objects and ideas can be applied to other areas, from computation and optimization to studying areas of math like algebraic geometry. Throughout this course we will be engaging with mathematical work and literature from as old as 500 BCE and as recent as "posted to the internet yesterday."

**Requirements/Evaluation:** Evaluation will be based primarily on participation, problem sets, oral presentations, a written midterm exam, an oral final exam, and a final project

**Prerequisites:** MATH 200 or Math 250, or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** First-years and sophomores

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** All of the content in this course is quantitative or formal reasoning.

Spring 2023

TUT Section: T1 TBA Ralph E. Morrison

### **MATH 334 (F) Graph Theory (QFR)**

A graph is a collection of vertices, joined together by edges. In this course, we will study the sorts of structures that can be encoded in graphs, along

with the properties of those graphs. We'll learn about such classes of graphs as multi-partite, planar, and perfect graphs, and will see applications to such optimization problems as minimum colorings of graphs, maximum matchings in graphs, and network flows.

**Requirements/Evaluation:** problem sets, exams, and a short final project

**Prerequisites:** MATH 200 or MATH 250

**Enrollment Limit:** 30

**Enrollment Preferences:** Math majors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course involves the writing of mathematical proofs.

Fall 2022

LEC Section: 01 MWF 11:00 am - 11:50 am Ralph E. Morrison

### **MATH 338 (S) Intermediate Logic (QFR)**

**Cross-listings:** MATH 338 PHIL 338

**Secondary Cross-listing**

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have taken PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

**Requirements/Evaluation:** problem sets and exams

**Prerequisites:** some class in which student has studied formal reasoning

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy majors; juniors and seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 338 (D2) PHIL 338 (D2)

**Quantative/Formal Reasoning Notes:** This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

**Attributes:** PHIL Contemp Metaphysics + Epistemology Courses

Spring 2023

SEM Section: 01 Cancelled

### **MATH 341 (F)(S) Probability (QFR)**

**Cross-listings:** STAT 341 MATH 341

**Primary Cross-listing**

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

**Requirements/Evaluation:** homework, classwork, and exams

**Prerequisites:** MATH 150 and MATH 250 or permission of the instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** Priority will be given to Mathematics majors and to Statistics Majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STAT 341 (D3) MATH 341 (D3)

**Quantative/Formal Reasoning Notes:** This is a 300-level Math/Stat course.

Fall 2022

Spring 2023

LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu

### **MATH 342 (F) Logic** (QFR)

This course will introduce the main ideas and basic results of mathematical logic, and explain their applications to other areas of mathematics and computer science. We will begin with a study of first-order logic, covering structures and definability, theories, models and categoricity, as well as formal proofs. We will prove Gödel's completeness and compactness theorems and the Lowenheim-Skolem theorems. The course will briefly dive into computability theory, enough to prove Gödel's Incompleteness theorems and basic undecidability results.

**Requirements/Evaluation:** Evaluation based on homework, exams, and class participation.

**Prerequisites:** Math 250 - Linear Algebra

**Enrollment Limit:** 20

**Enrollment Preferences:** Junior and Senior Math Majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Mathematics course in logic and applications.

Fall 2022

LEC Section: 01 MWF 9:00 am - 9:50 am Jenna Zomback

### **MATH 344 (S) The Mathematics of Sports** (QFR)

The purpose of this class is to use sports as a springboard to study applications of mathematics, especially in gathering data to build and test models and develop predictive statistics. Examples will be drawn from baseball, basketball, cross country, football, hockey, soccer, track, as well as class choices. Pre-requisites are linear algebra (Math 250) and either a 200 level statistics class or a 100 level programming class, or permission of the instructor.

**Requirements/Evaluation:** Homework, exams, projects

**Prerequisites:** Math 250: Linear Algebra

**Enrollment Limit:** 40

**Enrollment Preferences:** None. If the course is over-enrolled preference will be given to math and stats majors, and then if needed by performance on a small assignment.

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is a 300 level mathematics course.

Spring 2023

LEC Section: 01 MWF 10:00 am - 10:50 am Steven J. Miller

**MATH 345 (S) Introduction to Numerical Analysis (QFR)**

Numerical analysis is the study of algorithms that use numerical approximation to solve problems which arise in scientific applications. This course provides an introduction to the theory, development, and analysis of algorithms for obtaining numerical solutions. Topics discussed in the course include: Error Analysis and Convergence Rates of Algorithms; Root Finding for Nonlinear Equations; Approximating Functions using Lagrange Interpolation and Cubic Spline Approximation; Numerical Differentiation and Integration; Numerical Solution of Ordinary Differential Equations; Iterative Methods for Solving Linear Systems

**Requirements/Evaluation:** Evaluation will be based on homework, projects, and exams.

**Prerequisites:** Math 250

**Enrollment Limit:** 30

**Enrollment Preferences:** Mathematics and Statistics majors.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is an advanced mathematics class that will cover the fundamental ideas of Numerical Analysis. The students will study in depths various algorithms that provide numerical solutions to various questions in science.

Spring 2023

LEC Section: 01 TR 8:30 am - 9:45 am Bhagya Athukorallage

**MATH 350 (F)(S) Real Analysis (QFR)**

Why is the product of two negative numbers positive? Why do we depict the real numbers as a line? Why is this line continuous, and what do we mean when we say that? Perhaps most fundamentally, what is a real number? Real analysis addresses such questions, delving into the structure of real numbers and functions of them. Along the way we'll discuss sequences and limits, series, completeness, compactness, derivatives and integrals, and metric spaces. Results covered will include the Cantor-Schroeder-Bernstein theorem, the monotone convergence theorem, the Bolzano-Weierstrass theorem, the Cauchy criterion, Dirichlet's and Riemann's rearrangement theorem, the Heine-Borel theorem, the intermediate value theorem, and many others. This course is excellent preparation for graduate studies in mathematics, statistics, and economics.

**Requirements/Evaluation:** Problem sets, exams, and an expository essay.

**Prerequisites:** MATH 250 or permission of instructor.

**Enrollment Limit:** 40

**Enrollment Preferences:** Juniors and Seniors.

**Expected Class Size:** 25

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It's math.

LEC Section: 02 TR 11:20 am - 12:35 pm Mihai Stoiciu

**MATH 355 (F)(S) Abstract Algebra (QFR)**

Algebra gives us tools to solve equations. The integers, the rationals, and the real numbers have special properties which make algebra work according to the circumstances. In this course, we generalize algebraic processes and the sets upon which they operate in order to better understand, theoretically, when equations can and cannot be solved. We define and study abstract algebraic structures such as groups, rings, and fields, as well as the concepts of factor group, quotient ring, homomorphism, isomorphism, and various types of field extensions. This course introduces students to abstract rigorous mathematics.

**Requirements/Evaluation:** Problem sets and exams

**Prerequisites:** MATH 250 or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** Students who have officially declared a major that requires Math 355.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** 300-level math course

**MATH 361 (F) Theory of Computation (QFR)**

**Cross-listings:** MATH 361 CSCI 361

**Secondary Cross-listing**

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

**Class Format:** Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

**Requirements/Evaluation:** online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination

**Prerequisites:** CSCI 256 or both a 300-level MATH course and permission of instructor

**Enrollment Limit:** 48(12/con)

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 361 (D3) CSCI 361 (D3)

**Quantative/Formal Reasoning Notes:** This course include regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** COGS Interdepartmental Electives

CON Section: 05 TF 1:10 pm - 2:25 pm Aaron M. Williams

### **MATH 374 (F) Topology (QFR)**

In Real Analysis you learned about metric spaces---any set of objects endowed with a way of measuring distance---and the topology of sets in such spaces (open, closed, bounded, etc). In this course we flip this on its head: we explore how to develop analysis (limits, continuity, etc) in spaces where the topology is known but the metric is not. This will lead us to a bizarre and fascinating version of geometry in which we cannot distinguish between shapes that can be continuously deformed into one another. Not only does this theory turn out to be beautiful in the abstract, it plays an important role in math, physics, and data analysis. This course is excellent preparation for graduate programs in mathematics.

**Requirements/Evaluation:** Problem sets, exams, an expository essay.

**Prerequisites:** MATH 350 or 351; not open to students who have taken MATH 323. If you didn't cover metric spaces in real analysis, that's OK!

**Enrollment Limit:** 30

**Enrollment Preferences:** Juniors and seniors

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It's math.

Fall 2022

LEC Section: 01 TR 9:55 am - 11:10 am Leo Goldmakher

### **MATH 393 (S) Research Topics in Combinatorics (WS) (QFR)**

Combinatorics provides techniques and tools to enumerate, examine, and investigate the existence of discrete mathematical structures with certain properties. There are numerous areas of applications including algebra, discrete geometry, and number theory. In this project-based research course students will work in small groups to learn combinatorial techniques and tools in order to develop research questions and begin tackling unsolved problems in combinatorics.

**Requirements/Evaluation:** Students will be evaluated through written drafts of a manuscript and its revisions and multiple in-class presentation.

**Prerequisites:** Math 355

**Enrollment Limit:** 19

**Enrollment Preferences:** Post-core mathematics majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (WS) (QFR)

**Writing Skills Notes:** The main goal of this course is to undertake original research in combinatorics, as such student assessment is based on developing positive collaboration skills, and improving technical written and oral skills in mathematics through manuscript draft submissions and in-class presentations. Students will provide multiple drafts of their manuscript and in right of this the course will be writing intensive.

**Quantative/Formal Reasoning Notes:** The main goal of this course is to undertake original research in the math field of mathematics. See above for more details.

Spring 2023

SEM Section: 01 Cancelled

#### **MATH 409 (F) The Little Questions (QFR)**

Using math competitions such as the Putnam Exam as a springboard, in this class we follow the dictum of the Ross Program and "think deeply of simple things". The two main goals of this course are to prepare students for competitive math competitions, and to get a sense of the mathematical landscape encompassing elementary number theory, combinatorics, graph theory, and group theory (among others). While elementary frequently is not synonymous with easy, we will see many beautiful proofs and 'a-ha' moments in the course of our investigations. Students will be encouraged to explore these topics at levels compatible with their backgrounds.

**Requirements/Evaluation:** Homework, exams, presentations.

**Prerequisites:** Real Analysis (either Math 350 or 351) and Abstract Algebra (Math 355), or permission of the instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** Math/stat senior majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is a 400 level math class.

Fall 2022

LEC Section: 01 MWF 10:00 am - 10:50 am Steven J. Miller

#### **MATH 412 (S) Mathematical Biology (QFR)**

This course will provide an introduction to the many ways in which mathematics can be used to understand, analyze, and predict biological dynamics. We will learn how to construct mathematical models that capture essential properties of biological processes while maintaining analytic tractability. Analytic techniques, such as stability and bifurcation analysis, will be introduced in the context of both continuous and discrete time models. Additionally, students will couple these analytic tools with numerical simulation to gain a more global picture of the biological dynamics. Possible biological applications may include, but are not limited to, single and multi-species population dynamics, neural and biological oscillators, tumor cell growth, and infectious disease dynamics.

**Requirements/Evaluation:** problem sets, quizzes/exams, participation, final project and paper

**Prerequisites:** MATH 250 and MATH 309, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** preference for senior math/stats major and also based on an interest statement

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will introduce methods for developing and analyzing mathematical models.

**Attributes:** PHLH Methods in Public Health

Spring 2023

LEC Section: 01 TR 11:20 am - 12:35 pm Julie C. Blackwood

### **MATH 413 (S) Computational Algebraic Geometry (QFR)**

Algebraic geometry is the study of shapes described by polynomial equations. It has been a major part of mathematics for at least the past two hundred years, and has influenced a tremendous amount of modern mathematics, ranging from number theory to robotics. In this course, we will develop the Ideal-Variety Correspondence that ties geometric shapes to abstract algebra, and will use computational tools to explore this theory in a very explicit way.

**Requirements/Evaluation:** Evaluation will be based on weekly problem sets, three exams, and final project. Any students who have taken Math 411 should consult with the instructor before enrolling in this course.

**Prerequisites:** Math 355

**Enrollment Limit:** 30

**Enrollment Preferences:** Preference given to senior math majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course is all quantitative and formal reasoning.

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Ralph E. Morrison

### **MATH 427 (S) Tiling Theory (QFR)**

Since people first used stones and bricks to tile the floors of their domiciles, tiling has been an area of interest. Practitioners include artists, engineers, designers, architects, crystallographers, scientists and mathematicians. This course will be an investigation into the mathematical theory of tiling. The course will focus on tilings of the plane, including topics such as the symmetry groups of tilings, types of tilings, random tilings, the classification of tilings and aperiodic tilings. We will also look at tilings of the sphere, tilings of the hyperbolic plane, and tilings in higher dimensions, including "knotted tilings".

**Requirements/Evaluation:** problem assignments, exams and a presentation/paper

**Prerequisites:** MATH 250 Linear Algebra and MATH 355 Abstract Algebra

**Enrollment Limit:** 30

**Enrollment Preferences:** senior majors, seniors, juniors, sophomores, first-year students (this is a senior seminar, one of which is required for all senior majors, so they have first preference)

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Mathematics course

Spring 2023

LEC Section: 01 MWF 9:00 am - 9:50 am Colin C. Adams

**MATH 442 (F) Introduction to Descriptive Set Theory (QFR)**

Descriptive set theory (DST) combines techniques from analysis, topology, set theory, combinatorics, and other areas of mathematics to study definable (typically Borel) subsets of Polish spaces. The first part of this course will cover the topics necessary to understand the main objects of study in DST: we will develop comfort with point-set topology (enough to juggle with Polish spaces and Borel sets), and set theory (just well-orderings and cardinality). The second part of the course will feature selected topics in descriptive set theory: for example, trees, the perfect set property, Baire category, and infinite games.

**Requirements/Evaluation:** Evaluation based on homework, exams, and classroom participation.

**Prerequisites:** Math 250 - Linear Algebra, Math 350/351 Real Analysis/Applied Real Analysis

**Enrollment Limit:** 14

**Enrollment Preferences:** Senior Math Majors, then non-Senior Math Majors

**Expected Class Size:** 14

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Mathematics course in descriptive set theory.

Fall 2022

LEC Section: 01 MWF 11:00 am - 11:50 am Jenna Zomback

**MATH 453 (S) Partial Differential Equations (QFR)**

In this course, we further explore the world of differential equations. Mainly, we cover topics in partial differential equations. Partial Differential Equations (PDEs) are fundamental to the modeling of many natural phenomena, arising in many fields, including fluid mechanics, heat and mass transfer, electromagnetic theory, finance, elasticity, and more. The goals of this course are to discuss the following topics: classification of PDEs in terms of order, linearity and homogeneity; physical interpretation of canonical PDEs; solution techniques, including separation of variables, series solutions, integral transforms, and the method of characteristics.

**Requirements/Evaluation:** Evaluation will be based on homework, projects, and exams.

**Prerequisites:** MATH 150-151; MATH/PHYS 210 or MATH 309

**Enrollment Limit:** 20

**Enrollment Preferences:** Mathematics and Physics majors.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is an advanced mathematics class dedicated to the study of partial differential equations (PDEs). These equations are the most important mathematical tools for the study of complex physical phenomena such as waves and fluids (including both air and water), heat transfer, electromagnetism, and finance.

Spring 2023

LEC Section: 01 TR 11:20 am - 12:35 pm Bhagya Athukorallage

**MATH 481 (S) Measure theory and Hilbert spaces (QFR)**

How large is the unit square? One might measure the number of individual points in the square (uncountably infinite), the area of the square (1), or the dimension of the square (2). But what about for more complicated sets, e.g., the set of all rational points in the unit square? What's the area of this set? What's the dimension? In this course we'll come up with precise ways to measure size---length, area, volume, dimension, etc.---that apply to a broad array of sets. Along the way we'll encounter Lebesgue measure and Lebesgue integration, Hausdorff measure and fractals, space-filling curves

and the Banach-Tarski paradox. We will also investigate Hilbert spaces, mathematical objects that combine the tidiness of linear algebra with the power of analysis and are fundamental to the study of differential equations, functional analysis, harmonic analysis, and ergodic theory, and also apply to fields like quantum mechanics and machine learning. This material provides excellent preparation for graduate studies in mathematics, statistics and economics.

**Requirements/Evaluation:** Problem sets, exams, an expository essay

**Prerequisites:** At least one previous course that has Math 350 or 351 as a prerequisite (eg Math 374, 383, 401, 404, 408, 420, 426, 485), or permission of instructor.

**Enrollment Limit:** 20

**Enrollment Preferences:** Juniors and seniors.

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It's math.

Spring 2023

LEC Section: 01 Cancelled

### **PHIL 221 (F) Introduction to Formal Linguistics (QFR)**

**Cross-listings:** COGS 224 PHIL 221

**Secondary Cross-listing**

The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip *and* oatmeal raisin. There two ways to understand "Many students took every class". According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

**Requirements/Evaluation:** Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

**Prerequisites:** No prerequisites

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference given to seniors and philosophy/cognitive science majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COGS 224 (D2) PHIL 221 (D2)

**Quantative/Formal Reasoning Notes:** This course teaches the fundamentals of the formal analysis of language. Students will learn to provide translation schemes from English to a logical language (typed lambda calculus).

Fall 2022

SEM Section: 01 TF 1:10 pm - 2:25 pm Christian De Leon

### **PHIL 338 (S) Intermediate Logic (QFR)**

**Cross-listings:** MATH 338 PHIL 338

#### **Primary Cross-listing**

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have taken PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

**Requirements/Evaluation:** problem sets and exams

**Prerequisites:** some class in which student has studied formal reasoning

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy majors; juniors and seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 338 (D2) PHIL 338 (D2)

**Quantative/Formal Reasoning Notes:** This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

**Attributes:** PHIL Contemp Metaphysics + Epistemology Courses

Spring 2023

SEM Section: 01 Cancelled

### **PHYS 109 (S) Sound, Light, and Perception (QFR)**

Light and sound allow us to perceive the world around us, from appreciating music and art to learning the details of atomic structure. Because of their importance in human experience, light and sound have long been the subject of scientific inquiry. How are sound and light related? How do physiology and neural processing allow us to hear and see the world around us? What are the origins of color and musical pitch? This course introduces the science and technology of light and sound to students not majoring in physics. We will start with the origins of sound and light as wave phenomena, and go on to topics including color, the optics of vision, the meaning of musical pitch and tone, and the physical basis of hearing. We will also discuss some recent technological applications of light, such as lasers and optical communications. The class will meet for two 75-minute periods each week for a variable mixture of lecture, discussion, and hands-on, interactive experiments.

**Class Format:** each student will attend one lecture plus one conference section weekly

**Requirements/Evaluation:** class participation, problem sets, in-class exams, oral presentations, and a final exam, all with a quantitative component

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** non-science majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This class will have weekly problem sets requiring substantial quantitative reasoning

Spring 2023

LEC Section: 01 Cancelled

**PHYS 131 (F) Introduction to Mechanics (QFR)**

We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.

**Requirements/Evaluation:** exams, labs, and weekly problem sets, all of which have a substantial quantitative component

**Prerequisites:** MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead

**Enrollment Limit:** 30

**Enrollment Preferences:** seniority

**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This class will have weekly problem sets requiring substantial quantitative reasoning

Fall 2022

LAB Section: 03 T 1:00 pm - 4:00 pm Kevin R. Forkey, Brough Morris

LEC Section: 01 MWF 11:00 am - 11:50 am John H. Lacy

LAB Section: 02 M 1:00 pm - 4:00 pm Kevin R. Forkey, Brough Morris

LAB Section: 04 Cancelled

**PHYS 132 (S) Electromagnetism and the Physics of Matter (QFR)**

This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics, radioactivity, and uses of radiation.

**Class Format:** lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, quizzes and exams

**Prerequisites:** PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)

**Enrollment Limit:** 22 per lab

**Enrollment Preferences:** sophomores

**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Significant homework, exams, quizzes requiring mathematical and physical reasoning.

Spring 2023

LAB Section: 03 T 1:00 pm - 4:00 pm Kevin R. Forkey

LEC Section: 01 MWF 11:00 am - 11:50 am Jennifer G. Winters

LAB Section: 02 M 1:00 pm - 4:00 pm Kevin R. Forkey

### **PHYS 141 (F) Mechanics and Waves (QFR)**

This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

**Class Format:** lecture, three hours per week; laboratory, three hours approximately every other week; conference section, one hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, three or more short quizzes/tests, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** high school physics and MATH 130 or equivalent placement, or permission of the instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** first-year students and science majors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

Fall 2022

LEC Section: 01 MWF 11:00 am - 11:50 am Katharine E. Jensen

LAB Section: 02 M 1:00 pm - 4:00 pm Katharine E. Jensen

LAB Section: 03 T 1:00 pm - 4:00 pm Katharine E. Jensen

### **PHYS 142 (S) Foundations of Modern Physics (QFR)**

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires we rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of physics or as the basis for future advanced study of these topics.

**Class Format:** lecture, three hours weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and problem-solving/discussion sessions

**Requirements/Evaluation:** weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151

**Enrollment Limit:** 14/L

**Enrollment Preferences:** first-year students

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

Spring 2023

LAB Section: 02 M 1:00 pm - 4:00 pm Jennifer G. Winters

LAB Section: 03 T 1:00 pm - 4:00 pm Jennifer G. Winters

LEC Section: 01 MWF 11:00 am - 11:50 am Protik K. Majumder

### **PHYS 151 (F) Seminar in Modern Physics (QFR)**

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity has extended physics into the realm of high speeds and high energies and requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our notions of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course covers the same core material as PHYS 142 but in a small seminar format for students with strong prior preparation in physics.

**Class Format:** three 50-minute lecture/discussions per week, one 3-hour lab per week

**Requirements/Evaluation:** class participation, weekly lab assignments, weekly problem sets, exams

**Prerequisites:** placement by the department (see "advanced placement" section in the description about the department). Students may take either PHYS 142 or PHYS 151 but not both

**Enrollment Limit:** 18

**Enrollment Preferences:** first-years

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** this is a small seminar designed for first-year students who have placed out of PHYS 141

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** all assignments in the course have a substantial quantitative component

Fall 2022

LEC Section: 01 WF 11:00 am - 11:50 am Jennifer G. Winters

LAB Section: 02 W 1:00 pm - 4:00 pm Jennifer G. Winters

CON Section: 03 M 11:00 am - 11:50 am Jennifer G. Winters

### **PHYS 201 (F) Electricity and Magnetism (QFR)**

The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell's equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** problem sets, labs/conference section assignments, two take-home midterms, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151

**Enrollment Limit:** 10 per lab

**Enrollment Preferences:** prospective physics majors, then by seniority

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

Fall 2022

LAB Section: 02 T 1:00 pm - 4:00 pm Catherine Kealhofer

LEC Section: 01 MWF 10:00 am - 10:50 am Catherine Kealhofer

LAB Section: 03 W 1:00 pm - 4:00 pm Catherine Kealhofer

### **PHYS 202 (S) Vibrations, Waves and Optics (QFR)**

Waves and oscillations characterize many different physical systems, including vibrating strings, springs, water waves, sound waves, electromagnetic waves, and gravitational waves. Quantum mechanics even describes particles with wave functions. Despite these diverse settings waves exhibit several common characteristics, so that the understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. The rest of the course focuses on electromagnetic waves and in particular on optical examples of wave phenomena. In addition to well known optical effects such as interference and diffraction, we will study a number of modern applications of optics such as short pulse lasers and optical communications. Throughout the course mathematical methods useful for higher-level physics will be introduced.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** problem sets, labs, midterm examinations, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 201; co-requisite: PHYS/MATH 210 or MATH 209 or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** sophomores

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course has substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LEC Section: 01 MWF 10:00 am - 10:50 am Charlie Doret

LAB Section: 02 T 1:00 pm - 4:00 pm Charlie Doret

LAB Section: 03 W 1:00 pm - 4:00 pm Charlie Doret

### **PHYS 210 (S) Mathematical Methods for Scientists (QFR)**

**Cross-listings:** PHYS 210 MATH 210

**Primary Cross-listing**

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

**Class Format:** three hours per week

**Requirements/Evaluation:** several exams and weekly problem sets, all of which have a substantial quantitative component

**Prerequisites:** MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

**Enrollment Limit:** 50

**Enrollment Preferences:** sophomores and juniors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHYS 210 (D3) MATH 210 (D3)

**Quantative/Formal Reasoning Notes:** This course will have weekly problem sets using advanced calculus methods

Spring 2023

LEC Section: 01 TR 9:55 am - 11:10 am Daniel P. Aalberts

### **PHYS 301 (F) Quantum Physics (QFR)**

This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics. After a brief discussion of historical origins of the quantum theory, we introduce the Schrodinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 202 and PHYS/MATH 210 or MATH 309

**Enrollment Limit:** 20

**Enrollment Preferences:** physics majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Phys 301 relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

LAB Section: 03 W 1:00 pm - 4:00 pm John H. Lacy

### **PHYS 302 (S) Statistical Mechanics & Thermodynamics (QFR)**

Macroscopic objects are made up of huge numbers of fundamental particles interacting in simple ways--obeying the Schrödinger equation, Newton's and Coulomb's Laws--and these objects can be described by macroscopic properties like temperature, pressure, magnetization, heat capacity, conductivity, etc. In this course we will develop the tools of statistical physics, which will allow us to predict the cooperative phenomena that emerge in large ensembles of interacting particles. We will apply those tools to a wide variety of physical questions, including the behavior of gases, polymers, heat engines, biological and astrophysical systems, magnets, and electrons in solids.

**Class Format:** lecture/discussion three hours per week and weekly laboratory work

**Requirements/Evaluation:** weekly problem sets, midterm exam, final exam, and labs, all of which have a substantial quantitative component

**Prerequisites:** required: PHYS 201, PHYS/MATH 210 or MATH 309; recommended: PHYS 202, PHYS 301

**Enrollment Limit:** 14 per lab

**Enrollment Preferences:** physics majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** weekly problem sets, exams, and labs, all of which have a substantial quantitative component

Spring 2023

### **PHYS 315 (S) Computational Biology (QFR)**

**Cross-listings:** PHYS 315 CSCI 315

#### **Primary Cross-listing**

This course will provide an overview of Computational Biology, the application of computational, mathematical, statistical, and physical problem-solving techniques to interpret the rapidly expanding amount of biological data. Topics covered will include database searching, DNA sequence alignment, clustering, RNA structure prediction, protein structural alignment, methods of analyzing gene expression, networks, and genome assembly using techniques such as string matching, dynamic programming, hidden Markov models, and statistics.

**Requirements/Evaluation:** weekly Python programming assignments, code reviews, problem sets, plus a few quizzes and a final project

**Prerequisites:** programming experience (e.g., CSCI 136), mathematics (PHYS/MATH 210 or MATH 150), and physical science (PHYS 142 or 151, or CHEM 151 or 153 or 155), or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** courage

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHYS 315 (D3) CSCI 315 (D3)

**Quantative/Formal Reasoning Notes:** problem sets and programming assignments

**Attributes:** BIGP Courses

Spring 2023

LEC Section: 01 M 1:10 pm - 3:50 pm Daniel P. Aalberts

### **PHYS 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)**

**Cross-listings:** MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

#### **Secondary Cross-listing**

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo

structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

**Quantative/Formal Reasoning Notes:** Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

**Attributes:** BIGP Courses BIMO Interdepartmental Electives

Spring 2023

LAB Section: 02 TR 1:00 pm - 4:00 pm Lois M. Banta

SEM Section: 01 TR 9:55 am - 11:10 am Lois M. Banta

### **PHYS 402 (S) Applications of Quantum Mechanics (QFR)**

This course will explore a number of important topics in the application of quantum mechanics to physical systems, including perturbation theory, the variational principle and the semiclassical interaction of atoms and radiation. The course will finish up with three weeks on quantum optics including an experimental project on non-classical interference phenomena. Applications and examples will be taken mostly from atomic physics with some discussion of solid state systems.

**Requirements/Evaluation:** weekly problem sets, tutorial participation, presentations, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 301

**Enrollment Limit:** 10 per sec

**Enrollment Preferences:** Physics and Astrophysics Majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course has weekly problem sets, all of which have a substantial quantitative component.

Spring 2023

TUT Section: T1 F 1:10 pm - 2:25 pm David R. Tucker-Smith

### **PHYS 411 (F) Classical Mechanics (QFR)**

This course will explore advanced topics in classical mechanics. Central ideas include the calculus of variations, the Lagrangian and Hamiltonian formulations of mechanics, phase space, central-force motion, non-inertial reference frames (including implications for physics on a rotating Earth), rigid-body rotations, and non-linear dynamics & chaos, with additional topics from continuum and fluid mechanics as time permits. Numerical and perturbative techniques will be developed and used extensively. We will also examine the ways in which classical mechanics informs other fields of physics. In addition to weekly tutorial meetings the class will meet weekly as a whole to introduce and discuss new material.

**Requirements/Evaluation:** weekly problem sets, tutorial participation, presentations, a final project, and a final exam, all of which have a substantial

quantitative component

**Prerequisites:** PHYS 202 and PHYS/MATH 210 or MATH 309

**Enrollment Limit:** 10/section

**Enrollment Preferences:** majors

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** weekly problem sets requiring substantial quantitative reasoning using analytical and numerical methods.

Fall 2022

TUT Section: T1 F 1:10 pm - 2:25 pm Charlie Doret, Daniel P. Aalberts

### **POEC 253 (F) Empirical Methods in Political Economy (QFR)**

This course introduces students to common empirical tools used in policy analysis and implementation. The broad aim is to train students to be discriminating consumers of public policy-relevant research. The emphasis in the course is on intuitive understanding of the central concepts. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; random variables and distributions; statistical estimation, inference and hypothesis testing; and modeling using multiple regression, with a particular focus on understanding whether and how relationships between variables can be determined to be causal--an essential requirement for effective policy formation. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

**Requirements/Evaluation:** Problem sets, group project, midterm exam, final exam

**Prerequisites:** MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255

**Enrollment Limit:** 20

**Enrollment Preferences:** Political Economy majors, Environmental Policy majors and sophomores

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.

**Attributes:** PHLH Statistics Courses POEC Required Courses

Fall 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Anand V. Swamy

### **PSYC 201 (F)(S) Experimentation and Statistics (QFR)**

An introduction to the basic principles of research in psychology. We focus on how to design and execute experiments, analyze and interpret results, and write research reports. Students conduct a series of research studies in different areas of psychology that illustrate basic designs and methods of analysis. You must register for lab and lecture with the same instructor.

**Requirements/Evaluation:** research reports, exams, and problem sets

**Prerequisites:** PSYC 101; not open to first-year students except with permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course has problem sets focused on experimental design and quantitative data analysis. Students will help design and conduct experiments, analyze the data, and report their findings.

**Attributes:** COGS Related Courses PHLH Statistics Courses

### **STAT 101 (F)(S) Elementary Statistics and Data Analysis (QFR)**

It is impossible to be an informed citizen in today's world without an understanding of data. Whether it is opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines, etc, we need to be able to interpret and gain information from statistics. This course will introduce the common methods used to analyze and present data with an emphasis on interpretation and informed decision making.

**Requirements/Evaluation:** weekly homework, quizzes, exams, and a project

**Prerequisites:** MATH 102 (or demonstrated proficiency on a diagnostic test)

**Enrollment Limit:** 50

**Enrollment Preferences:** juniors and seniors

**Expected Class Size:** 35

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** students with MATH130 but no statistics should enroll in STAT161; students with MATH150 but no statistics should enroll in STAT201.

Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** It is a quantitative course.

### **STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)**

This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

**Requirements/Evaluation:** Weekly homework, quizzes, two midterms and a final exam (midterms include take-home components), and a data

analysis project. Students will need to become familiar with the statistical software STATA.

**Prerequisites:** MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

**Enrollment Limit:** 40

**Enrollment Preferences:** Economics majors, sophomores

**Expected Class Size:** 40

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Students with calculus background should consider STAT 201. Students without any calculus background should consider STAT 101. Students with AP Stat 4 or 5 should consider Stat 202. Please refer to the placement chart on the Math&Stat department website for more information.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Reasoning with data

### **STAT 201 (F)(S) Statistics and Data Analysis (QFR)**

Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, "Data, data, data! I can't make bricks without clay." In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

**Requirements/Evaluation:** weekly homework and projects, midterm exams, and a final exam.

**Prerequisites:** MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Students will learn to interpret, choose, carry out, and communicate analyses of data.

### **STAT 202 (F)(S) Introduction to Statistical Modeling (QFR)**

Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course

we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

**Requirements/Evaluation:** Homework problems; quizzes; exams; a final project (on a topic that interests you!). Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.

**Prerequisites:** MATH 140 and STAT 101/161/201/AP Statistics 4/5, or permission of instructor.

**Enrollment Limit:** 40

**Enrollment Preferences:** Prospective Statistics majors and more senior students

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Students with a 4 on the AP Stats exam should contact the department for proper placement. Students with STAT 201 are strongly encouraged to take STAT 346 or other 300-level statistics electives.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

**Attributes:** PHLH Statistics Courses

### **STAT 341 (F)(S) Probability (QFR)**

**Cross-listings:** STAT 341 MATH 341

**Secondary Cross-listing**

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

**Requirements/Evaluation:** homework, classwork, and exams

**Prerequisites:** MATH 150 and MATH 250 or permission of the instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** Priority will be given to Mathematics majors and to Statistics Majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STAT 341 (D3) MATH 341 (D3)

**Quantative/Formal Reasoning Notes:** This is a 300-level Math/Stat course.

Spring 2023

LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu

### **STAT 344 (F) Statistical Design of Experiments (QFR)**

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially e-commerce, are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look at both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

**Requirements/Evaluation:** Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).

**Prerequisites:** STAT 161 or 201 or 202, or equivalent, and Math 140 or equivalent, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Statistics majors, seniors, juniors, sophomores, first years

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2022

LEC Section: 01 MWF 10:00 am - 10:50 am Richard D. De Veaux

### **STAT 346 (F)(S) Regression Theory and Applications (QFR)**

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

**Requirements/Evaluation:** Weekly homework, theory and data analysis exams, final course project.

**Prerequisites:** MATH 250, and at least one of STAT 201 or 202. Or permission of the instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** Statistics Majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

### **STAT 356 (F) Time Series Analysis (QFR)**

Time series -- data collected over time -- crop up in applications from economics to engineering to transit. But because the observations are generally not independent, we need special methods to investigate them. This course will include exploratory methods and modeling for time series, including descriptive methods and checking for significance, and a foray into the frequency domain. We will emphasize applications to a variety of real data, explored using R.

**Requirements/Evaluation:** Evaluation is primarily based on quizzes and projects (on topics that interest you!). You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While most assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to live and online discussions, and working together with classmates on practice problems.

**Prerequisites:** STAT 346 (may be taken concurrently) or permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Statistics majors, seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2022

LEC Section: 01 Cancelled

### **STAT 360 (S) Statistical Inference (QFR)**

How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.

**Requirements/Evaluation:** Homework, Quizzes, Exams

**Prerequisites:** MATH 250, STAT 201 or 202, STAT 341

**Enrollment Limit:** 15

**Enrollment Preferences:** Statistics majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** A rigorous mathematical course laying the foundation for reasoning with data

Spring 2023

LEC Section: 01 TR 11:20 am - 12:35 pm Richard D. De Veaux

### **STAT 365 (F) Bayesian Statistics (QFR)**

The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes' Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.

**Requirements/Evaluation:** homework and exams

**Prerequisites:** STAT 201 and MATH 150 and 250, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** juniors and seniors, Statistics majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Fall 2022

LEC Section: 01 Cancelled

### **STAT 372 (S) Longitudinal Data Analysis (QFR)**

This course explores modern statistical methods for drawing scientific inferences from longitudinal data, i.e., data collected repeatedly on experimental units over time. The independence assumption made for most classical statistical methods does not hold with this data structure because we have multiple measurements on each individual. Topics will include linear and generalized linear models for correlated data, including marginal and random effect models, as well as computational issues and methods for fitting these models. As time permits, we will also investigate joint modeling of longitudinal and time-to-event data. We will consider many applications in the social and biological sciences.

**Requirements/Evaluation:** Weekly homework, midterm exams, a final exam, and a data analysis project

**Prerequisites:** STAT 346 (and an appropriate introductory statistics course, typically STAT 201 or 202)

**Enrollment Limit:** 20

**Enrollment Preferences:** junior and senior Statistics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** The course will cover a variety of statistical analysis methods for longitudinal data.

**Attributes:** PHLH Statistics Courses

Spring 2023

LEC Section: 01 MWF 11:00 am - 11:50 am Anna M. Plantinga

### **STAT 442 (S) Statistical Learning and Data Mining (QFR)**

In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

**Class Format:** Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Requirements/Evaluation:** weekly homework, exams and an end-of-term project

**Prerequisites:** MATH/STAT 341 and STAT 346, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is an advanced statistics class involving theory and application of statistical methods to data.

Spring 2023

LEC Section: 01 MWF 10:00 am - 10:50 am Xizhen Cai

**STAT 458 (F) Generalized Linear Models- Theory and Applications (QFR)**

This course will explore generalized linear models (GLMs)--the extension of linear models, discussed in Stat346, to response variables that have specific non-normal distributions, such as counts and proportions. We will consider the general structure and theory of GLMs and see their use in a range of applications. As time permits, we will also examine extensions of these models for clustered data such as mixed effects models and generalized estimating equations.

**Requirements/Evaluation:** Weekly homework consisting of theoretical exercises and data analyses carried out in R. Short frequent quizzes and one midterm (with an in-class and take-home component). Final project and final exam.

**Prerequisites:** STAT 346, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Seniors and Statistics majors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Fall 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Elizabeth M. Upton

**STS 363 (F)(S) Mathematical and Computational Approaches to Social Justice (DPE) (QFR)**

**Cross-listings:** STS 363 WGSS 363 AMST 363 MATH 308

**Secondary Cross-listing**

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial group will carry out a substantial project in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science.

**Class Format:** This is a research-based tutorial.

**Requirements/Evaluation:** To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows an "ungrading" methodology.

**Prerequisites:** Across each 3 - 5 person tutorial group: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students will be admitted in groups of 3 - 5 based on a proposal submitted prior to registration. The instructor is happy to facilitate formation of groups and to give feedback on draft proposals. Contact the instructor early, prior to preregistration.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 363 (D2) WGSS 363 (D2) AMST 363 (D2) MATH 308 (D3)

**Difference, Power, and Equity Notes:** Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

**Quantative/Formal Reasoning Notes:** Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

## RELIGION (Div II)

Chair: Professor Jeffrey Israel

- Zaid Adhami, Assistant Professor of Religion and Faculty Affiliate in Anthropology & Sociology; affiliated with: Religion, Anthropology & Sociology
- Efrain Agosto, Visiting Professor of Latinx Studies and Religion; affiliated with: Religion, Latina/o Studies
- Magnús T. Bernhardtsson, Brown Professor of History and Faculty Affiliate in Arabic Studies, Leadership Studies and Religion, Chair of Global Studies; affiliated with: History, Global Studies, Religion, Leadership Studies
- Denise K. Buell, Cluett Professor of Religion; on leave 2022-2023
- Edan Dekel, Professor of Classics, Chair of Jewish Studies Program; affiliated with: Classics, Religion; on leave 2022-2023
- Georges B. Dreyfus, Jackson Professor of Religion
- Kim Gutschow, Senior Lecturer in Religion and Anthropology/Sociology; affiliated with: Religion, Anthropology & Sociology
- Jacqueline Hidalgo, Professor of Latina/o/x Studies and Religion, Director of Oakley Center for Humanities & Social Sciences; affiliated with: Oakley Center, Latina/o Studies, Religion; on leave Fall 2022
- Jeffrey I. Israel, Chair and Associate Professor of Religion
- James A. Manigault-Bryant, Chair and Professor of Africana Studies and Faculty Affiliate in Anthropology and Sociology and Religion; affiliated with: Africana Studies, Religion, Anthropology & Sociology
- Neil Roberts, Professor of Africana Studies and Faculty Affiliate in Political Science and Religion; affiliated with: Africana Studies, Religion, Political Science; on leave 2022-2023
- Jason Josephson Storm, Professor of Religion, Chair of Science & Technology Studies; affiliated with: Religion, Science & Technology Studies
- Saadia Yacoob, Assistant Professor of Religion

### MAJOR

The major in Religion is designed to perform two related functions: to expose the student to the methods and issues involved in the study of religion as a phenomenon of psychological, sociological, and cultural/historical dimensions; and to confront students with the beliefs, practices, and values of specific religions through a study of particular religious traditions. It is a program that affords each student an opportunity to fashion their own sequence of study within a prescribed basic pattern constructed to ensure both coherence and variety. Beginning with the class of 2016, the major in Religion will consist of at least nine semester courses as follows:

#### Required Sequence Courses

REL 200 Theories and Methods in the Study of Religion

One 300-level seminar or tutorial

REL 401 Senior seminar

#### Elective Courses

Six electives at the 100-, 200-, or 300-level (with a maximum of one 100-level class to count towards major).

In addition, each major will select a specialization route in the major in conversation with and with the approval of the department. The specialization will consist of at least four courses. There are two ways to meet this requirement. A major could fulfill the requirement by concentration in one of the College's coordinate programs or by designating four specialization courses that can be supported by the resources of the Religion department faculty and the College. In other words, these four courses might be from among the six electives and one 300-level seminar or tutorial or might include additional coursework from other programs and departments (whether cross-listed or not).

The major will culminate in a year-long senior project. The first semester will remain a seminar (REL 401) on a topic in the study of religion set by the faculty member in consultation with incoming seniors. The spring semester will consist of participation in a research colloquium (not a course taken for credit). In this colloquium, each senior major will present their individual research projects, begun in the senior seminar, drawing on their specializations and advised by members of the faculty.

For those who wish to go beyond the formally-listed courses into a more intensive study of a particular religious tradition, methodological trend, or religious phenomenon (e.g., ritual, symbol-formation, mysticism, theology, etc.), there is the opportunity to undertake independent study or, with the approval of the department, to pursue a thesis project.

The value of the major in Religion derives from its fostering of a critical appreciation of the complex role religion plays in every society, even those that consider themselves non-religious. The major makes one sensitive to the role religion plays in shaping the terms of cultural discourse, of social attitudes and behavior, and of moral reflection. But it also discloses the ways in which religion and its social effects represent the experience of individual persons and communities. In doing these things, the major further provides one with interdisciplinary analytical tools and cross-cultural experience and opens up new avenues for dealing with both the history of a society and culture and the relationships between different societies and cultures. What one learns as a Religion major is therefore remarkably applicable to a wide range of other fields of study or professions.

Students declaring Religion as a major will identify an area of specialization and link it to their senior seminar final paper and be expected to present it in a spring colloquium during their senior year.

### **THE DEGREE WITH HONORS IN RELIGION**

The degree with honors in Religion requires the above-mentioned nine courses and the preparation of a thesis of 75+ pages with a grade of B+ or better. A thesis may combine revised work done in other courses with new material prepared while enrolled either in Religion 493-W31 or Religion W31-494. Up to two-thirds of the work in the thesis may be such revised work, but at least one-third must represent new work. The thesis must constitute a coherent whole either by its organizing theme or by a focus on a particular religious tradition. Candidates will also be expected to present the results of their thesis orally in a public presentation. Students who wish to be candidates for honors in Religion will submit proposals and at least one paper that may be included in the thesis to the department in the spring of their junior year. Students must normally have at least a 3.5 GPA in Religion to be considered for the honors program.

The chair will serve as advisor to non-majors.

### **STUDY ABROAD**

The Williams College Religion Department encourages potential majors to study abroad in order to enhance their education and gain international perspectives on religious studies. There are many excellent study abroad opportunities offering students a variety of possible experiences: among them cultural immersion, field work, intensive language learning, independent study, participation in another educational system. Many of our majors study in the Williams College Oxford Program, but our majors also regularly pursue a semester or year-long study in other programs.

### **FAQ**

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

#### **Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in many cases, though students should be sure to contact the department.

#### **What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description. Sometimes a course title is sufficient, but for many courses we also need to see a description of some sort because the title is unclear.

#### **Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

No.

#### **Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

No.

#### **Are there specific major requirements that cannot be fulfilled while on study away?**

Yes. 3 courses: Religion 200, one 300-level Religion seminar or tutorial, and Religion 401 Senior Seminar.

#### **Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

Yes. Make sure that they have or will be able to take REL 200, because it is offered only once a year.

#### **Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:**

None to date.

## **REL 102 (F) The Meaning of Life**

As Henry David Thoreau put it, "The mass of men lead lives of quiet desperation," attempting to fill the void of their existence with sex, money, ephemeral amusements, and the steady accumulation of unnecessary possessions - basically killing time until the day they die. For some people this might seem to be enough, but this course is for those of us who lie awake at night wondering things like: "Why are we here?" "What does it mean to live a good life?" "How can I be happy?" "What is our duty to others?" "What really matters?" and the biggest question of them all: "What is the Meaning of Life?" This course will trace the diverse responses to these important questions offered by philosophers and religious thinkers in different cultures and time periods. We will read their texts critically and discuss how they can be directly relevant to our lives. Students will also be introduced to abstract theorizing in Religious Studies about how different cultures and traditions have historically come to live meaningfully. Authors and texts to be read may include Aristotle, Hannah Arendt, Marcus Aurelius, the Bhagavad Gita, H. H. Dalai Lama, the Dhammapada, Viktor Frankl, Søren Kierkegaard, Martin Luther King Jr, Shantideva, Peter Singer, Leo Tolstoy, Ibn Tufayl, Max Weber, and Slavoj Zizek.

**Requirements/Evaluation:** attendance and participation, journal and short writing assignments, midterm and final exams

**Prerequisites:** none

**Enrollment Limit:** 40

**Enrollment Preferences:** potential religion majors

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

Fall 2022

LEC Section: 01 MR 1:10 pm - 2:25 pm Jason Josephson Storm

## **REL 105 (F) Introduction to European Art Before 1700**

**Cross-listings:** REL 105 ARTH 101

**Secondary Cross-listing**

A team-taught introduction to the art and architecture of Europe from the ancient Mediterranean to Baroque Italy. This course celebrates the glory of works of art as physical objects, to be viewed and contemplated, to be sure, but also often to be worshiped, worn, touched (even licked), held, exhibited, bought and sold, passed through or around, and lived in. To help students begin to appreciate how these works of art might have been understood by those who originally made and used them, the course sets its objects of study within a number of revealing historical contexts, from the social and the political to the philosophical and the art historical. To give students time with original works of art, our discussion-centered conferences use the wealth of art resources in Williamstown: the Clark Art Institute, the buildings and sculpture of the Williams College Campus, and the Williams College Museum of Art.

**Class Format:** This course has 2 components: lectures and conferences. The lectures will be twice or three times weekly, the conferences once per week. Both lectures and conferences will be held in person.

**Requirements/Evaluation:** Three shorter essays (one of which may be in the form of a take-home final exam), several quizzes, and engaged participation in conference sections

**Prerequisites:** none

**Enrollment Limit:** 60

**Enrollment Preferences:** Preference will be based on a short questionnaire, which students will be asked to complete if the course is over-enrolled.

**Expected Class Size:** 60

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

REL 105 (D1) ARTH 101 (D1)

**Attributes:** ARTH pre-1800 Courses

### **REL 109 Apocalypse (WS)**

An end of days. A utopia to come. A great cosmic reversal of fortune. A revelation of truth that leads to radical transformation. Each of these themes and many more fall under the genre of imagination that we associate with the apocalypse. In order to understand the persistence and prevalence of apocalyptic imaginations, we will move back and forth through time. On the one hand, we will read the Book of Revelation in relationship to a selection of ancient Zoroastrian, Jewish, Greek, Christian, and Muslim texts identified with apocalyptic traditions. On the other hand, we will read these texts in relationship to and alongside select literature and movements of apocalypse in the U.S.A. We will pay particular attention to how apocalyptic imaginations reflect upon and interact with social structures of class, colonization, ethnicity, gender, race, and sexuality.

**Requirements/Evaluation:** grading will be based on participation, short P/F papers, a graded 3-page essay that will be revised, a 5-page second essay, and a final 7- to 10-page paper

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** first-years and sophomores preferred or Religion majors

**Expected Class Size:** 15

**Grading:**

**Distributions:** (D2) (WS)

**Writing Skills Notes:** As a WS course, grading will be based on short, weekly P/F papers, a graded 3-page essay that will be revised for credit, a 5-page second essay, and a final 7- to 10-page paper for which a draft will be peer reviewed. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Not offered current academic year

### **REL 110 (S) Religion in Everyday Life (WS)**

When studying religions, people generally turn to studying scriptures, the life and teachings of the religion's founder, and the fundamental doctrines of the religion. What this approach does not allow us to understand, however, is the way that such religious traditions actually manifest themselves in the world. This course introduces students to an alternative approach to studying religion, by exploring the way these religions are lived and experienced by individuals and communities in a variety of contexts. We will see how religion intersects with people's lived experiences of gender, race, class, sexuality, and broader socio-cultural and political contexts. We will explore this approach to religion through an engagement with ethnography (the qualitative research method in the social-sciences generally described as "participant-observation"). Students will not only learn about the theory and practice of this methodology, but will also conduct their own ethnographic research project over the course of the semester. This will involve: designing a feasible project and research question, selecting local research sites and subjects, taking field-notes and conducting interviews, and finally analyzing data and writing an ethnographic essay.

**Class Format:** Semester-long community-based field research. Regular in-class peer-review exercises.

**Requirements/Evaluation:** regular reading responses, semester-long research project with frequent small assignments building up to the final product (class presentation and approximately 10-page paper)

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** first-year students and sophomores; students interested in Religious Studies

**Expected Class Size:** 10-12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will learn a specific mode of qualitative/ethnographic writing through a semester-long field-based project. This involves many scaffolded assignments of field-based research and writing, for which they receive very regular feedback from the instructor, as well as extensive peer-review exercises. There will be a number of readings on writing style and technique, as well as class discussion and workshopping activities. The final essay will itself be developed in multiple steps.

**REL 126 (F) Religion, Politics, and Society: A Global Perspective (DPE)**

**Cross-listings:** REL 126 GBST 101 PSCI 126

**Secondary Cross-listing**

In spite of predictions that religion would wither away in the face of modernization, even casual observation indicates that it remains a powerful force in contemporary political life. Our goal is to obtain an enhanced understanding and appreciation of the salience of religion in public life. The course will be divided into three parts. The first part focuses on different theoretical approaches to making sense of the relation between religion, politics, and society, discussing especially the concept of the 'secular' in Western thought and decolonial critique thereof. The second part will take a global perspective on the relation between religion and politics. We will discuss cases of Buddhism, Christianity (Catholicism and Protestantism), Confucianism, Hinduism, Islam (Sunni and Shi'a), and Judaism. The third part focuses on religion in the USA. Here, we will discuss the role of religion in American political culture, the relation of religion to the state, the relevance of religious interests and their political mobilization, religious minorities in the United States, and many other aspects of religion in the US society. Although the study of religion and politics raises a host of deep philosophical questions, the principal aim of the course is to understand how religion affects politics (and vice versa), rather than to explore the normative dimensions of questions raised by the interaction of these two forces.

**Requirements/Evaluation:** Class participation and three papers, in these proportions: 10% attendance; 20% participation; 20% first paper (7 pages); 30% second paper (8-10 pages); and 20% third paper (7 pages). No final exam.

**Prerequisites:** none

**Enrollment Limit:** 35

**Enrollment Preferences:** Global Studies concentrators and intended concentrators; Religion majors and intended majors

LEC Section: 01 TR 8:30 am - 9:45 am Farid Hafez

**REL 134 (S) Leaving the World Behind: The Literature of Reclusion (DPE) (WS)**

**Cross-listings:** ANTH 134 CHIN 134 COMP 134 REL 134

**Secondary Cross-listing**

Living in a time of political and social turmoil, Confucius told his followers: "When the realm has the Way, show yourself; when it lacks the way, hide." Reclusion here is a moral choice, justified by the ethical decline of the state. But it could also be a mortal necessity in a period in which government service was a distinctly hazardous pursuit. In other contexts becoming a hermit could instead be figured as aesthetic stance meant to preserve one's artistic integrity against the dominant claims of society. This course looks at the literature of reclusion--living a life of seclusion from society--in a range

of different cultures and periods, from ancient China to contemporary America. With sources that include poems, essays, novels, and films, we will investigate a set of issues surrounding radical seclusion. What different forms does seclusion take? Can one be a hermit without being completely separated from society? What is the relationship between hermits and the state-to what extent does one depend on the other? What are the philosophical and moral implications of eremitism? Is separating oneself from human society an inherently immoral act? What is the relationship between seclusion and technology in the contemporary world? What is the nature of solitude and can it be experienced in a group (for example, in contemporary "intentional communities")? While most of our work will focus on textual analysis, there will be an experiential component to the course as well. Each student will design and implement their own experiment in (short-term) eremitism.

**Class Format:** experiential component

**Requirements/Evaluation:** tutorial papers, responses, and an individual project

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** first-year students, Chinese majors, Religion majors, Anthropology majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE) (WS)

**Writing Skills Notes:** Students will write a 5- to 7-page paper every other week for a total of five papers. On weeks in which they are not writing, they will critique their partner's paper. Papers will receive substantial writing-based feedback from both the instructor and partner.

**Difference, Power, and Equity Notes:** This course provides students with the opportunity to analyze the shaping of social differences and dynamics of unequal power. Acts of seclusion are often ways that individuals can challenge the dominance of the state and other structures of authority indirectly. Modes of seclusion can differ substantially depending on the social standing of the recluse. These are issues that we will examine in the course.

## **REL 149 (S) The Sacred in South Asia**

**Cross-listings:** ANTH 249 ASIA 242 REL 149

Secondary Cross-listing

Is religious identity necessarily singular and unambiguous? The jinn - Islamic spirits born of fire - are sought out for their healing and other powers not only by Muslims in India, but by Hindus, Christians and Sikhs, as well. In parts of Bengal statues of the Hindu goddess Durga are traditionally sculpted by Muslim artisans. Buddhist pilgrimage sites in Sri Lanka contain tombs of Muslim Sufi saints and shrines of Hindu deities. South Asia - where a fifth of humanity lives - provides some of the most striking examples of pluralism and religiously composite culture in our contemporary world. Yet at the same time, strident religious majoritarianism has been a defining feature of the politics of India, Pakistan and Sri Lanka for decades, and haunts Nepal and Bangladesh as well. Are these two modes of religious being - pluralistic and composite on the one hand, singular and majoritarian on the other - reflective of two different conceptions of selfhood? What if we turn from questions of community and identity to questions of unseen power and the sacred? This course is an exploration of lived religion in South Asia. It is simultaneously a study of popular Hinduism, Buddhism and Islam and an introduction to the anthropology of religion. Centered on in-depth studies of popular sites of 'syncretic' ritual practice (shared across religious difference) as well as studies of mass mobilizations that seek to align the religious community with the nation, we approach from multiple angles what the sacred might mean in modernity.

**Requirements/Evaluation:** weekly (1 page) posts on readings, two short (5 page) papers, and one (12-14 page) final research paper.

**Prerequisites:** Interest in the topic!

**Enrollment Limit:** 20

**Enrollment Preferences:** Students in all fields of study are most welcome; if overenrolled, priority will be given to majors in Anthropology, Sociology, Religion and Asian Studies.

**Cross-listings:** REL 166 AMST 166 COMP 166 ENGL 268

**Primary Cross-listing**

Islam and Muslims in the United States are the subject of extensive public scrutiny and media coverage in broader public discourses. It is less common, however, to hear Muslims' own voices speak about their lives, experiences, beliefs, and commitments. This course will take a literary approach to exploring American Muslims' own narratives about themselves, which will serve as an introduction to religion in contemporary U.S. culture. We will address questions such as: How do American Muslims attempt to fashion their identity in the wake of 9/11? What are the pressures and demands of American national belonging and cultural citizenship that Muslims must navigate? How are race, gender, ethnic heritage, and immigration definitive of Muslim experiences and self-understandings? How are Muslims approaching the tensions between communal belonging and individuality? What are the competing claims and contestations about authentic expressions of Islam? We will be engaging such themes through an analysis of popular memoirs, autobiographies, novels, short stories, poetry, films, and comedy.

**Requirements/Evaluation:** regular reading responses, short midterm essays, and final paper

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** First-year students and sophomores

**REL 204 (S) What is Islamic Art? (DPE) (WS)**

**Cross-listings:** REL 204 ARTH 206

**Secondary Cross-listing**

Through a deep engagement with primary sources--visual, performative and textual--this tutorial introduces students to global cultures that have participated in the production of Islamic art and culture through the centuries. Through a diverse set of readings, we will discuss how Islamic art is viewed today. How did, for instance, Colonialism and Orientalism from the 18th to the 20th centuries create an entrenched narrative for the study of the field, that continues to hold sway to this day? How have Muslim cultures defined their own artistic production? In particular, how can specific artworks, such as figural painting or palace architecture, be understood as "Islamic"? What are some key scholarly debates around the term "Islamic Art"? The tutorial is specifically designed keeping in mind the period of soul-searching the field is currently going through, even to the point of questioning the very term "Islamic art" and its epistemological parameters. By familiarizing students to an important discipline in art history, the aim of the tutorial is to provide alternate methodologies as well as epistemologies that run parallel to more mainstream or familiar avenues of study.

**Requirements/Evaluation:** focused bi-monthly writing assignments, 5-7 pages in length, and bi-monthly peer response papers, 2 pages in length.

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** Art History majors and seniors, Religion majors

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

REL 204 (D1) ARTH 206 (D1)

**Writing Skills Notes:** This tutorial helps students develop writing skills in terms of grammar, structure, and organization. It is designed to teach students how to make clear, well-articulated arguments. Students will receive extensive feedback every other week on their writing assignments from the instructor and their peers. There will also be a comprehensive mid-semester review from the instructor.

**Difference, Power, and Equity Notes:** In addition to introducing students to an important field of art history, the tutorial analyzes how Islamic art was codified and examined during the colonial and post-colonial periods, and how that understanding has come to define the field over the last century. The course will encourage students to challenge longstanding biases and assumptions when studying these artworks.

### **REL 205 (S) Ancient Wisdom Literature**

**Cross-listings:** JWST 205 CLAS 205 REL 205 COMP 217

#### **Primary Cross-listing**

The Biblical books of Proverbs, Ecclesiastes, and Job are often grouped together under the Hebrew category of *hokhmah*, 'wisdom.' Although these books are very different in content, they can all be interpreted as meditations on ethical and practical philosophy. In this way, they represent the Hebrew Bible's canonical embrace of a widespread Near Eastern literary phenomenon. From the instructional literature of Egypt and Mesopotamia to Greek didactic poetry and fables, ancient Mediterranean cultures offer a wide range of texts that engage the issues of personal behavior, leadership, and justice. Starting with the central wisdom books of the Hebrew Bible and moving through relevant material from the Apocrypha, New Testament, and the Egyptian and Babylonian traditions, this course will examine the literature of wisdom throughout the ancient world with an eye toward understanding its various social, political, and philosophical contexts. We will then consider the Greek wisdom tradition in such texts as Hesiod's *Works and Days*, Aesop's fables, and fragments from the pre-Socratic philosophers. Finally, we will explore the influence of these ancient sources on later expressions of wisdom in medieval European literature, as well as more recent examples such as Benjamin Franklin's *Poor Richard's Almanack*. *All readings are in translation.*

### **REL 206 (S) The Book of Job and Joban Literature**

**Cross-listings:** JWST 206 REL 206 COMP 206

#### **Primary Cross-listing**

The Book of Job has often been described as the most philosophical book of the Hebrew Bible. The story of one man's struggle to understand the cause of his suffering and his relationship to God represents the finest flowering of the Near Eastern wisdom literature tradition. Through its exploration of fundamental issues concerning human suffering, fate and divinity, and the nature of philosophical self-examination, Job has served as a touchstone for the entire history of existential literature. At the same time, the sheer poetic force of the story has inspired some of the greatest artistic and literary meditations in the Western tradition. This course will engage in a close reading of the Book of Job in its full cultural, religious, and historical context with special attention to its literary, philosophical, and psychological dimensions. We will then proceed to investigate key modern works in several genres that involve Joban motifs, themes, and text both explicitly and implicitly. These texts will include Franz Kafka's *The Trial*, Archibald MacLeish's *J.B.*, Robert Frost's "Masque of Reason," Carl Jung's *Answer to Job*, and William Blake's *Illustrations to the Book of Job*. *All readings are in*

*translation.*

**Class Format:** For the spring of 2021, this course will be taught online. The seminar will meet at the regularly scheduled time twice a week.

### **REL 207 (F) From Adam to Noah: Literary Imagination and the Primeval History in Genesis**

**Cross-listings:** COMP 250 REL 207 JWST 207 CLAS 207

#### **Primary Cross-listing**

How long did Adam and Eve live in the Garden of Eden? What was the mark of Cain? Why did Enoch not die? Who was Noah's wife? How did Giants survive the Flood? These are only a few of the fascinating questions that ancient readers and interpreters of the Book of Genesis asked and attempted to answer. The first ten chapters of Genesis present a tantalizingly brief narrative account of the earliest history of humankind. The text moves swiftly from the Creation to the Flood and its immediate aftermath, but this masterful economy of style leaves many details unexplained. This course will explore the rich and varied literary traditions associated with the primeval history in the Genesis. Through a close reading of ancient noncanonical sources such as the Book of Enoch, Jubilees, and the Life of Adam and Eve, as well as Jewish traditions represented in Josephus, Philo, and Rabbinic literature and other accounts presented in early Christian and Gnostic texts, we will investigate the ways in which the elliptical style of Genesis generated a massive body of ancient folklore, creative exegesis, and explicit literary re-imagining of the early history of humankind. We will then turn to some continuations of these variant traditions in medieval literature, with particular attention to the material on the figures of Cain and Noah. *All readings are in translation.*

**Class Format:** For the fall of 2020, this course will be taught online. The seminar will meet at the regularly scheduled time twice a week.

### **REL 208 (S) Genesis: The Family Saga**

**Cross-listings:** COMP 207 REL 208 JWST 208

#### **Primary Cross-listing**

The Book of Genesis has rightly been described as the masterpiece of Hebrew biblical narrative. In particular, the continuous tale that begins with Abraham and Sarah and extends four generations to the children of Jacob, Leah, and Rachel is one of the most extraordinary examples of literary artistry in any time or tradition. As one family wrestles with the promise of becoming a chosen people, the narrative explores themes of marriage,

parenthood, sibling rivalry, land, violence, wandering, and, above all, the complex relationship between humanity and God. This course will examine those themes through a close reading of Genesis in translation, from Abraham and Sarah's first appearance on the scene to the death of Jacob. We will consider the text from multiple perspectives with an eye toward understanding the literary, philosophical, and psychological dimensions that continue to amaze and perplex readers to this day.

**Requirements/Evaluation:** class participation, a series of short writing assignments, and two longer papers

**Prerequisites:** none

### **REL 209 (S) Jewish America**

**Cross-listings:** REL 209 JWST 209

Primary Cross-listing

Who and what counts as "Jewish" in America? Does stand-up comedy have a distinctly Jewish pedigree? What about neoconservatism? How is it possible to answer such questions without falling into what David Hollinger has called the "booster-bigot trap"? How is it possible, that is, to avoid answers that uncritically celebrate "Jewish contributions" or perniciously suggest "Jewish influence"? This course will explore the various meanings of Jewishness in American culture as expressed by artists, rabbis, activists, intellectuals, boosters, bigots and others. We will seek to avoid the booster-bigot trap by focusing vigilantly on what is at stake wherever Jewishness is invoked, defined or ascribed. We will draw methodological support from scholars like Hollinger, Jonathan Freedman, Laura Levitt, Yuri Slezkine, Shaul Magid, Andrea Most and others. Particular attention will be given to the appearance of Jewish themes and involvement in popular culture and political action, as well as to Jewish American communal institutions, the everyday lives of Jewish Americans, and Jewish variations on American religion. Coursework will involve some historical, sociological and ethnographic readings, but will focus primarily on close analysis of films, literary fiction, stand-up comedy, political magazines, theological texts, and television shows. We may, for instance, watch films like *The Jazz Singer* (1927 and 1980), *Exodus* and *Annie Hall*; read John Updike's *Bech: A Book*, Philip Roth's *Operation Shylock* or Cynthia Ozick's *The Puttermesser Papers*; listen to the comedy of Mort Sahl, Lenny Bruce and Sarah Silverman; read from Henry Ford's *Dearborn Independent*, the *Menorah Journal* or *Commentary*; study works by Rabbis Stephen Wise, Abraham Joshua Heschel and Meir Kahane; and watch episodes of *Bridget Loves Bernie*, *Northern Exposure* and *Curb Your Enthusiasm*. We will also study arguments about the role and meaning of Jewishness in American secularization, "therapeutic culture," the civil rights movement, the sexual revolution, and feminism.

**Requirements/Evaluation:** class participation, two short papers, a midterm take-home exam, and a final paper interpreting an example of Jewishness in America chosen by the student

**Prerequisites:** none

### **REL 210 (S) Distant Encounters: East Meets West in the Art of the European Middle Ages**

**Cross-listings:** ARAB 212 REL 210 ARTH 212

**Secondary Cross-listing**

This lecture course will investigate the rich artistic consequences -- in architecture, manuscript illumination, mosaic, sculpture, panel painting, fresco, metalwork, and other minor arts -- of European contact with the Eastern Mediterranean between approximately 300 and 1450 CE. From the beginnings of Christianity, pilgrims from Europe made the long journey to sacred sites in the Holy Land (extending across parts of present-day Egypt, Israel, Syria, and Turkey). When these sites became less accessible with the spread of Islam in the seventh century, Europeans sought to recreate the sites at home. Later, from 1095 onward, Christian Europeans attempted to reclaim and hold the Holy Land from non-Christians by force, through an ill-fated series of five major and several lesser "crusades." Over the centuries, before, during, and after the Crusades, exposure to the peoples, ideas, and cultures of the Eastern Mediterranean also came through trade and through the travel and settlement of non-Europeans in Europe itself, particularly in Spain, Sicily, and Venice. Through all of these centuries, moreover, the Christian empire of Byzantium, focused on its great capital of Constantinople (present-day Istanbul), interacted in myriad ways, both friendly and hostile, with the polities of Western Europe. The course will explore artistic production within each of these different cross-cultural contexts of East-West encounter. In the process, we will reflect on how art could function as a conduit for the exchange of ideas in the Middle Ages, and how it could be used both to negotiate and to intensify cultural difference.

**Requirements/Evaluation:** 6-8-page paper, quiz, midterm, final exam

**REL 211 Christians versus Pagans: Ancient Egypt**

This course explores the religious terrain of ancient Egypt in the Greek and Roman periods. Focused mostly on the rise of Christianity, this course asks big questions about what changes and what stays the same when major religious movements emerge in a place. What parts of Christianity were new to Egypt and were premised upon a rejection and displacement of Egyptian religious practices and beliefs? What parts of Egyptian religious life, rather than being replaced or transformed by Christianity, were adopted into Christianity? And what parts of Egyptian religious practice resisted Christianity? And how and where did it resist?

**REL 213 (F) Patrons, Rituals, and Living Images in Japanese Buddhism**

**Cross-listings:** ASIA 205 REL 213 ARTH 205

**Secondary Cross-listing**

This course introduces students to Buddhist art and architecture in Japan from its introduction in the sixth century through the present. We focus on the ways different communities--the imperial court, immigrant artists, monks, women, and commoners--employed and venerated Buddhist images for

political legitimacy, personal salvation, and worldly benefit. This course also examines how Japanese Buddhist imagery became aestheticized in the early twentieth century and appropriated later in modern and contemporary visual cultures. Some of the topics to be discussed include the reception of continental styles of Buddhist sculpture, the relationship between mandalas and rituals, the role of women in developing Buddhist embroideries, and the Western reappraisal of Zen arts. Students will develop familiarity with the concepts and ideas underlying the production of Buddhist images and will gain foundational skills in analyzing the visual, material, and iconographic qualities of Japanese Buddhist art. For the final project, students will design a digital exhibition focused around one of the topics of the course.

**Requirements/Evaluation:** attendance, class participation, 4 reading and object response papers (2-3 pages), midterm, non-cumulative final exam, and digital exhibition project with an 8-10 minute presentation

**Prerequisites:** none

**Enrollment Limit:** 25

### **REL 216 (S) Greek Art and the Gods**

**Cross-listings:** ARTH 238 REL 216 CLAS 248

**Secondary Cross-listing**

In the *Iliad*, when the god Apollo is visualized, it is as a man, angry in his heart, coming down from the peaks of Olympos, bow and quiver on his shoulders, the arrows clanging as the god moves, "like the coming of night," to bring dogs, horses, and men to their deaths. By the end of the Classical period, one statue of the archer god depicted him as a boy teasing a lizard. In this course, we will examine the development of the images the Greek gods and goddesses, from their superhuman engagement in the heroic world of epic, to their sometimes sublime artistic presence, complex religious function, and transformation into metaphors in aesthetic and philosophical thought. The course will cover the basic stylistic, iconographical, narrative, and ritual aspects of the gods and goddesses in ancient Greek culture. The course will address in detail influential artistic monuments, literary forms, and social phenomena, including the sculptures of Olympia and the Parthenon; divine corporeality in poetry; the theology of mortal-immortal relations; the cultural functions of visual representations of gods, and the continued interest in the gods long after the end of antiquity. Readings assignments will include selections from Homer, Hesiod, Sappho, Aischylos, Euripides, Plato, Walter Burkert, Jean-Pierre Vernant, Nikolaus Himmelmann, Erika Simon, and Friedrich Nietzsche.

**Class Format:** discussion

**Requirements/Evaluation:** short writing assignments, midterm exam, final exam, final paper

**Prerequisites:** none

**Enrollment Limit:** 40

**Enrollment Preferences:** preference will be given to pre-registered Art-History majors needing to fulfill the pre-1800 requirement; otherwise, the course is open to any interested student

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**REL 217 (F) Religion and American Politics**

**Cross-listings:** REL 217 HIST 257

**Primary Cross-listing**

In this course, students will explore the history of religion and American politics, from the colonial era to the present. In the process, they will tackle such questions as: Were Anglo-American colonies 'cities on a hill' or bastions of intolerance? Was the First Amendment designed to protect the state from religion, or religion from the state? Has American religion primarily served to justify the *status quo* or inspire revolutionary change? How have religious ethics shaped responses to racial, gender, and class inequality? How has religious conflict impacted civic unity and political polarization? What role *should* religion play in American political life? The course will cover such topics as: Anglo-colonial treatment of heretics and blasphemers; the meaning of the First Amendment; religious conflict over slavery; state regulation of sexuality and polygamy; state treatment of religious minorities; the Scopes Trial and scientific modernity; Christian responses to industrial capitalism; theologies of civil disobedience and nonviolence; and 20th-century religious battles over school prayer, civil rights, the military draft, abortion, and democracy itself.

**Requirements/Evaluation:** Class participation; five informal response papers (350-450 words); two unit papers (4-6 pages); final paper (8-10 pages).

**Prerequisites:** None; open to all students.

**Enrollment Limit:** 20

**Enrollment Preferences:** Religion and History majors, in order of descending seniority.

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

### REL 218 (F) Foundations of China

**Cross-listings:** REL 218 ANTH 212 GBST 212 HIST 214 ASIA 211 CHIN 214

#### Secondary Cross-listing

This course examines the foundational period of Chinese civilization, from the earliest evidence of human activity in the geographical region we now call China, through the end of the Han dynasty in the early third-century CE. This is the period that saw the creation and spread of the Chinese script (a writing system that would be the dominant one in East Asia for thousands of years), the teachings of Confucius (whose ideas continue to play a role in the lives of billions of people today), the construction of the Great Wall (which is not, as it turns out, visible from space), and the creation of the imperial bureaucratic system (that was, in essence, the progenitor of the modern bureaucratic state). We will proceed chronologically but focus on a set of thematic topics, including language and writing, religion and philosophy, art and architecture, politics and economics, and science and technology. While this course is entitled "Foundations of China," we will take a critical perspective on narratives, both Chinese and Western, that see Chinese history as an unbroken history of a single "civilization."

**Requirements/Evaluation:** short writing assignments (approximately 750-1000 words each), quizzes, a mid-term, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 40

**Enrollment Preferences:** Chinese majors, History majors, Religion majors, and Anthropology majors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

### REL 219 (F) Realizing Utopias

**Cross-listings:** STS 219 REL 219

#### Primary Cross-listing

***Our world can be better.*** We are faced with unfolding global catastrophes, such as the pandemic, anthropogenic climate change, economic crises, racialized injustice, and political polarization, and many people seem to have lost their capacity to imagine better futures. Perhaps that is why we as a society have no problem picturing the end of the world--fictional dystopias and apocalypses are abundant while (e)utopias are scarce. This a problem because, as numerous political theorists have observed, it is hard to organize meaningful change around cynicism and nihilism. But our dystopian present makes it even more important to imagine and even realize utopias. This course will help us do so. Our core collective goal will be to explore pragmatic realizations of radical hope. Complementing urgent efforts to resist or mitigate intense injustice in the present, we will aspire to articulate bold visions for emancipatory communities of the future. Rather than primarily focusing on the limitations of existing institutions, this seminar will treat these as problems to be solved rather than as reasons to accept the status quo, and we will embrace affirmative projects of designing the frameworks for better worlds. But we also don't want to blind ourselves to the challenges of being visionary. In brief, we will engage in serious explorations of the underlying principles and rationales for various emancipatory political communities while also pragmatically assessing their potential difficulties. We will spend the first part of the course reading political theory (on issues such as resource allocation, collective decision making, and social justice) alongside various artistic and political manifestos. We will spend one week reading utopian novels (including as possibilities socialist, anarchist, techno-futurist, ecotopias, Afrofuturist, queer utopias, and many more). But the majority of the course will be project-based. Students will form small teams to engage in radical thought experiments and then construct and refine their ideas of better possible societies/political communities. These teams will produce 1) policy papers to address how their utopian societies would deal with real world issues, and 2) artifacts (such as art, manifestos, pamphlets, short stories, videos, or the like) that might appear in the futures they envision, exploring both their ideals and their limits. The semester will culminate in a public exhibition of these works. Thinkers to be considered may include: Marx & Engels, José Esteban Muñoz, Boaventura de Sousa Santos, Lucy Sargisson, David Schweickart, Colin Ward, Erik Olin Wright, and others.

**Requirements/Evaluation:** attendance and participation, short writing assignments, group policy papers, and artifacts (e.g., art, manifestos, pamphlets, short stories, or videos) for end of semester exhibit.

**Prerequisites:** none.

**Enrollment Limit:** 20

**Enrollment Preferences:** If overenrolled students will be asked for a statement of interest and utopian project idea.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

### **REL 220 (F) History of Islam and the Middle East since 1453**

**Cross-listings:** HIST 206 REL 220 ARAB 206

#### **Secondary Cross-listing**

This course offers an introduction to the major political and societal institutions that evolved under the aegis of what we might call "Islamic civilization" since the Ottoman conquest of Byzantine Constantinople in 1453. The principal geographic areas covered are the Middle East, North Africa, and to some extent the Balkans. Major topics include the rise of the Ottoman sultanate and their consolidation of rule, the Persian Safavid Empire, the rise of Western intervention and colonialism, nationalism, and state formation, and the challenges of and responses to modernization.

**Requirements/Evaluation:** attendance, participation, map exercise, 2 papers, midterm and take-home final

### **REL 222 (F) The Jewish Art of Interpretation**

**Cross-listings:** JWST 222 REL 222 COMP 211

#### **Primary Cross-listing**

*Turn it and turn it, for everything is in it.* This famous rabbinic dictum offers an enigmatic yet comprehensive account of the principles that have defined the Jewish practice of interpretation for over two millennia. The imperative to keep a text, word, image, or concept in constant motion, in order to generate as many meanings and cross-meanings as possible, challenges us to transform the act of interpretation itself into a virtuosic craft or art that can engage the human imagination as diversely and powerfully as the creation of the works being interpreted. At the same time, emphasis on the dynamism between text and interpreter should dispel the notion that only expansive works have expansive meanings. If interpretation itself is an art, then even the shortest text can contain "everything" within it when it participates in that art. This course will engage students in a radical experiment in the art of interpretation. Through a deep encounter with a selection of miniature texts, ranging from ancient rabbinic proverbs and medieval fables to the modern parables and fragments of Franz Kafka, as well as folklore and jokelore from every period in Jewish history up to the present, we will develop an interpretive practice that combines analytic, critical, and creative principles in both written and oral contexts. The goal throughout is to explore interactively how the making of meaning is an integral part of the human experience.

**Requirements/Evaluation:** class participation, regular short written and oral assignments, and a final project

**Prerequisites:** none

**Enrollment Limit:** 18

**Expected Class Size:** 18

**Grading:** yes pass/fail option, no fifth course option

### **REL 224 (S) U.S. Latinx Religions**

**Cross-listings:** AMST 224 REL 224 LATS 224

#### **Secondary Cross-listing**

In this course, we will engage aspects of Latinx religious experiences, practices, and expressions in the United States of America. Given the plurality of Latinx communities and religious lives in the U.S.A., we can only consider select contexts that help us understand the challenges of studying and defining the "religious" and "hybridity" in Latinx contexts. We will survey certain selected religious traditions and practices --such as popular Catholic devotions to Guadalupe, crypto-Judaism, curanderismo, Latinx Muslims, and Santería--by focusing on particular moments of religious expression as elucidated in specific historiographies, ethnographies, art, literature, and film.

**Class Format:** discussion

**Requirements/Evaluation:** class participation, short writing exercises, a 3-page essay, a 5-page essay, and an 8-12-page final review essay/project

**Prerequisites:** none

### **REL 232 (S) Islam in Africa (DPE)**

**Cross-listings:** HIST 202 GBST 232 AFR 232 REL 232 ARAB 232

#### **Primary Cross-listing**

Islam in Africa is often relegated to the peripheries in the study of Islam, a religion most associated with Arabs and the Middle East. On the flip side, Islam is also portrayed as foreign to African belief systems and institutions. The relationship between Islam and Africa, however, begins with the very advent of Islam when early Arab Muslim communities took refuge in the Abyssinian empire in East Africa. This course explores the history of Islam and Muslim societies on the African continent by focusing on the localized practices of Islam while also connecting it to Islam as a global phenomenon. The course will begin with a historical focus on the spread of Islam in Africa from East Africa and North Africa in the seventh century all the way to the spread of Islam through Sufi brotherhoods in the eighteenth and nineteenth centuries. The course will also take an anthropological approach, exploring the diverse practices of Islam in African Muslim communities and the social and cultural impact of Islam on African societies. Among the topics the course will cover include African Muslim intellectual traditions, local healing practices, religious festivals, early modern African Muslim abolitionist movements, and the historical interactions between African and Asian Muslim communities in the Indian ocean world.

**Requirements/Evaluation:** Two essays during the semester and final project.

**Prerequisites:** None

**Enrollment Limit:** 25

**Enrollment Preferences:** REL, HIST, ARAB, AFR, GBST majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

### **REL 235 (S) The Garden in the Ancient World**

**Cross-listings:** COMP 235 REL 235 CLAS 235 ENVI 232

#### **Secondary Cross-listing**

Drawing on the literature, art, and archaeology of ancient gardens and on real gardens of the present day, this course examines the very nature and experience of the garden and the act of gardening. Using a multi-disciplinary approach, we will explore the garden as a paradise; as a locus for philosophical discussion and religious encounter; as a site of labor, conquest, and resistance; and as a place for solace, inspiration, and desire. This course will be grounded in crucial readings from antiquity, such as the Hebrew Bible, Homer, Sappho, Cicero, Lucretius, Vergil, Horace, Columella, and Augustine, and in the perspectives of more modern writers, from Jane Austen and Tom Stoppard to contemporary cultural historian George McKay. Ultimately, our goal is to analyze conceptions and expressions of beauty, power, and love-in the garden. All readings are in translation.

**Requirements/Evaluation:** class participation, short written assignments, and a final project

### **REL 236 (S) Reading the Qur'an**

**Cross-listings:** ARAB 236 REL 236 COMP 213 GBST 236

#### **Primary Cross-listing**

In the nearly 1500 years of Islamic history, the Qur'an has been a central source of spiritual insight, ethical and legal guidance, sacred stories, and theological principles. Considered the divine word of God, the Qur'an is central to devotional life. This course will explore the Qur'an as a text that is always in a state of production. We will focus significantly on close readings of the text of the Qur'an, in addition to pre-modern and modern Qur'anic exegesis. The course will begin with a historical account of the revelation and collection of the Qur'an, placing the form and content of the text in the context of 7th century Arab society and the life of the Prophet. We will then study Qur'anic commentaries to discuss how Muslims have drawn theological, legal, philosophical, and mystical meaning from the Qur'an. We will pose some of the following questions: What do the different exegetical methods tell us about the intertextual nature of the Qur'an? How have these shifting notions affected the meaning made from Qur'anic verses and

passages? What role do interpretive communities play in determining what the Qur'an says? Lastly, through an exploration of the art of Qur'an recitation, calligraphy, and Qur'an manuscripts, we will explore the ways in which the Qur'an is also an object of devotion in Muslim life.

**Requirements/Evaluation:** class participation, weekly reading responses, 3- to 4-page midterm paper, and a final project with a media component and a 4- to 6-page analytical essay

**Prerequisites:** none

### **REL 237 (S) Islam in the United States: Race, Religion, Politics (DPE)**

**Cross-listings:** REL 237 AFR 237 AMST 237

Primary Cross-listing

Malcolm X is one of the most iconic yet controversial figures in the black freedom struggle in the United States. He is also arguably the most prominent and influential Muslim in the history of the United States. His story and legacy powerfully illustrate the complex intersections of Muslim identity, political resistance, and national belonging. From the early period of "Black Muslim" movements represented by Malcolm X, to the current "War on Terror" era, American Muslims have faced a complex intersection of exclusions and marginalization, in relation to national belonging, race, and religion. Taking Malcolm X as our point of departure, this course examines how American Muslims have navigated these multiple layers of marginalization. We will therefore consider how the broader socio-political contexts that Muslims are a part of shape their visions of Islam, and how they contest these competing visions among themselves. In so doing, we will examine the complex relation between religion, race, and politics in the United States. Throughout the course, we will be engaging with historical and anthropological material, autobiographies, comics, documentaries, films, historical primary-source documents, and social media materials. The course fosters critical thinking about diversity by challenging assumptions of who Muslims are, what being American means, and what Islam is. It also focuses on the complex interaction of different dimensions of diversity, from religion to ideology, race, nationality, ethnicity, culture, gender, and language.

**Requirements/Evaluation:** regular reading responses, midterm essay, final exam/essay

### **REL 238 (F) Islam and Reason (DPE)**

In an essay on the "reality of Islam," the popular New Atheist writer, Sam Harris, concludes: "All civilized nations must unite in condemnation of a theology that now threatens to destabilize much of the Earth... It is time we realized that the endgame for civilization is not political correctness. It is not respect for the abject religious certainties of the mob. It is reason." These words forcefully express the common sentiment that the fanatical blind faith

demanding by "mainstream Islam" poses a major threat to the so-called civilized world. Islam is thus seen as exemplifying the irrational dogmatism of religion par excellence. This course will critically examine such assumptions, by exploring how Muslim philosophers and theologians throughout the history of Islam have addressed a variety of questions, such as: Is faith compatible with reason and rationality? What is the relation between reason and scripture? What modes of perception, reasoning, and knowledge are involved in religious belief? What room is there for doubt, skepticism, and critique in Islam? We will explore these questions through an array of primary and secondary readings in Islamic theology, philosophy, mysticism, and ethics, as well as anthropological engagements with lived Islam. Through these explorations, we will also critically reflect on our own cultural assumptions about religious belief, the nature of reason and knowledge, and the politics and power-dynamics of reason and rationality.

**Requirements/Evaluation:** Regular discussion posts; Midterm essay; Final essay

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** Religion majors

**Expected Class Size:** 5-10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** This course requires students to engage deeply with a very different philosophical universe than that of the modern West. This is also meant to prompt a critical engagement with our own cultural and philosophical assumptions about reason, knowledge, and religious belief. Finally, we will also reflect on the politics and power-dynamics of reason and rationality, considering how dominant modes of thinking are designated as "reason" and others are relegated to being objects of critique.

### **REL 241 (F) History of Sexuality**

**Cross-listings:** REL 241 HIST 292 GBST 241 WGSS 239

**Primary Cross-listing**

Is sexuality an immutable aspect of who we are or is it socially constructed? How have people understood sex and sexuality throughout history? Why does religion have any say in the sexual lives of individuals and society? What are sexual transgressions and why are they punished? Is sex a commodity that can be exchanged for money? Is sex political? This course will explore these questions through a historical approach, focusing in particular on the shifting understanding of sex and sexuality across historical time and different geographical regions. In investigating the category of sexuality, this course will push us to consider three key questions: 1) Is sexuality a useful category for historical analysis, 2) how have our assumptions regarding sexuality and sexual ethics taken shape and changed over time and 3) how do social, cultural, political, and economic conditions affect changing meanings of sexuality. Historical studies will be read in conjunction with different theoretical frameworks about sexuality. Reading historical accounts of sexuality alongside theoretical pieces will allow us to consider how historians construct an argument and the influence of theoretical frameworks in shaping scholarship. Some of the theorists we will read in the course include: Michel Foucault, David Halperin, Afsaneh Najmabadi, Valerie Traub, and Carla Freccero.

**Requirements/Evaluation:** reading responses, two essays, and final research paper

**Cross-listings:** REL 242 WGSS 242 ARAB 242

**Primary Cross-listing**

The figure of the Muslim woman is an object of intense scrutiny in Western society. Claims that Muslim women are oppressed and the incompatibility of Islam and feminism abound. This course will consider women and gender roles in the Islamic tradition and how Muslim women have interpreted and negotiated these discourses. We will explore questions of masculinity, femininity, and sexuality across various historical periods as well as through contemporary Muslim feminist scholarship and literature (including film and novels). We will begin with insights into the politics of representing Muslim women, exploring how Muslim women are depicted in popular culture and media and ask the crucial question: do Muslim women need saving? We will then explore: how Muslim women have claimed religious authority through scriptural interpretation; how they have negotiated their position in Islamic law both historically and in contemporary Muslim societies; and the lives of pious women in Sufism--the mystical tradition of Islam. We will conclude with Muslim feminist scholarship and recent works on Islamic masculinities. Throughout the course, emphasis will be placed on the diversity of interpretations in Islam around women, gender, and sexuality and on Muslim women's own articulations about their religious identity and experiences. Some of the topics covered in this course include: marriage and divorce, slavery, modesty and veiling, and homosexuality.

**Requirements/Evaluation:** weekly discussion post, midterm essay, and final paper (6-8 pages)

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Religion, Women's, Gender and Sexuality Studies and Arabic majors

### REL 243 (F) Islamic Law: Past and Present

**Cross-listings:** ARAB 243 WGSS 243 REL 243 HIST 302

**Primary Cross-listing**

From fear of the Shari'a to its implementation in so called "Islamic countries," Islamic law is perhaps best associated with draconian punishments and the oppression of women. Islamic law is ever present in our public discourse today and yet little is known about it. This course is designed to give students a foundation in the substantive teachings of Islamic law. Islamic law stretches back over 1400 years and is grounded in the Quran, the life example of the Prophet Muhammad, and juridical discourse. Teetering between legal and ethical discourse, the Shari'a moves between what we normally consider law as well as ethics and etiquette. The course will explore four key aspects of the law: its historical development, its ethical and legal content, the law in practice, and the transformation of Islamic law through colonialism and into the contemporary. Specific areas we will cover include: ritual piety, family and personal status law, criminal law, and dietary rules.

**Requirements/Evaluation:** weekly responses, four 2- to 3-page essays

**Cross-listings:** PHIL 245 ASIA 244 REL 244

**Primary Cross-listing**

In this course, we follow the Indian philosophical conversation concerning the self and the nature of consciousness, particularly as they are found in its various Yogic traditions. We start with some of the Hindu views about the self and the mind and consider their ethical implications. We then consider a range of Buddhist critiques of these views, focusing more particularly on the Madhyamaka, which radicalizes the critique of the self into a global anti-realist and skeptical stance. We also examine the Yogacara school, which offers a process view of reality focusing on the analysis of experience. We conclude by considering some of the later Hindu holistic views of the self as responses to the Buddhist critique. In this way we come to realize that far from being the irrational foil of "the West," Indian tradition is a rich resource for thinking through some of the central questions that have challenged philosophers in both traditions.

**Class Format:** discussion

**Requirements/Evaluation:** full attendance and participation, three short essays (6 pages each)

**Prerequisites:** none

**Enrollment Limit:** 18

**Enrollment Preferences:** selection based on the basis of relevant background

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Cross-listings:** ASST 246 ASIA 246 REL 246 ANTH 246 WGSS 246

**Primary Cross-listing**

This tutorial considers India's multiple and intersecting identities, in relation to climate emergencies, resource scarcities, and ongoing struggles for power and status across very different parts of India. We examine the intersectional identities that produce solidarity and opposition within landscapes always already structured by power and inequity. How do communal and individual identities such as gender, class, caste, sexuality or religion shape social conflict and ongoing struggles for power in India today? We examine key moments in Indian history that that continue to produce social conflict and fluidity such as Partition, the riots in Gujarat, Hyderabad, and Delhi that have shaped the modern landscape of communal identity, as well as the contested border such as Ladakh as well as Jammu & Kashmir. Our readings will include ethnographic, sociological, historical fiction, and oral history. Students choose their own topics to delve into for final weeks of the semester.

**Class Format:** Meeting weekly in pairs with tutorial partner to discuss texts and student essays.

**Requirements/Evaluation:** weekly writing assignments and tutorial attendance every week

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** Majors in Anthropology, Sociology, Religion, Women's, Gender & Sexuality Studies, concentrators in Asian Studies, STS

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**REL 247 (S) Anti-Muslim Racism: A Global Perspective (DPE)**

**Cross-listings:** PSCI 244 GBST 243 REL 247

**Secondary Cross-listing**

The racialization of Islam and Muslims has been constitutive to how they have been imagined in Europe and elsewhere. This course looks at how difference works and has worked, how identities and power relationships have been grounded in lived experience, and how one might both critically and productively approach questions of difference, power, and equity. It goes back to the founding moments of an imagined white (at the beginning Christian) Europe and how the racialization of Muslim and Jewish bodies was central to this project, and how anti-Muslim racism continues to be

relevant in our world today. The course will not only show how Muslims were constructed as subjects in history, politics and society from the very beginning of the making of Europe and the Americas to the end of the Cold War to the post-9/11 era. Rather, it also looks at how Muslims live through Islamophobia. It looks at processes of racialization of Muslims within the Muslim community and between Muslim communities, while also considering which agencies Muslims take to determine their own future. The course draws from anthropology, gender studies, history, political science, religious studies, postcolonial studies, decolonial studies, and sociology.

**Requirements/Evaluation:** Active class participation, two response papers, and a comprehensive, open-book and open-note final exam.

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Global Studies concentrators and Religion majors

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** Also qualifies for the GBST Urbanizing World track

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PSCI 244 (D2) GBST 243 (D2) REL 247 (D2)

**Difference, Power, and Equity Notes:** The course critically examines difference, power, and equity. Thematically, it looks at the racialization of Islam and the intersection of race, religion, class and gender in the construction of the 'Muslim problem' from a historical as well as a global contemporary perspective. It aims to promote a self-conscious and critical engagement with the practice and experience of difference, especially as it relates to the dynamics of power in structuring that experience.

**REL 249 (S) Anti-Semitism (DPE)**

**Cross-listings:** JWST 249 REL 249

**Primary Cross-listing**

This course will investigate intellectual traditions, political movements, and cultural objects that portray Jews, Jewishness, or Judaism as essentially pernicious. We will analyze materials from a variety of times and places, including the ancient world, the medieval period, and the present day. We will assess the impact of anti-Semitism on the lives of Jews and non-Jews. But we will also read theoretical approaches to the study of anti-Semitism that raise key questions for our investigation. Where does the term "anti-Semitism" come from and how exactly should it be defined? Is anti-Semitism a continuous phenomenon that connects every claim of Jewish perniciousness, wherever it is alleged, for over two thousand years of human history? Or should every context be treated as fundamentally distinct, so that the claim of Jewish perniciousness is presumed to have a distinct meaning, origin, and purpose in each case? What motivates charges of Jewish perniciousness? What are the particular threats typically alleged to be posed by Jews, Jewishness, and Judaism? How do constructions of Jewish perniciousness fit with constructions of race, gender, ethnicity, religion, class, sexuality, and nationality in different times and places?

**Requirements/Evaluation:** Three 5-7 page papers, class participation

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Jewish Studies concentrators, Religion majors, and students who have taken JWST 203

**Expected Class Size:** 15

### **REL 250 (F) Scholars, Saints and Immortals: Virtue Ethics in East Asia**

**Cross-listings:** ASIA 250 REL 250

#### **Primary Cross-listing**

In East Asian cultures, as in the United States, popular conceptions of morality typically take their shape, not from explicit rules, but from *moral paragons*--stylized figures that are said to embody a distinctive cluster of virtues. For example, American Christians invoke not only Jesus, but also a pantheon of "secular saints" as diverse as Martin Luther King Jr. and General Patton, George Washington and Cesar Chavez. This course will explore the cultural functions of moral paragons and philosophies of virtue in East Asia by introducing students to examples from Chinese and Japanese history, ranging from Confucian articulations of the ideal scholar-bureaucrat to Buddhist conceptions of the Bodhisattva to Taoist immortals. It will also address the history of ethical thought in East Asia, focusing particular attention on conceptions of "Virtue Ethics." This approach has come to be seen by some contemporary analytic philosophers as a way out of the impasse produced by ethical relativism and the loss of theological rationales for moral action. Readings will include Euro-American philosophers such as Nietzsche and MacIntyre as well as primary texts in translation by Chuang-tzu, Confucius, Shantideva and others. The fall 2021 iteration of the course will have a special focus with a few additional readings on idealized communities and political "utopias."

### **REL 254 (S) The Theory and Practice of Meditation in the Modern World**

This course invites students to examine theoretically and experientially meditation. Throughout the course, we examine meditations belonging to various Buddhist traditions through our own practice. We study some of the manuals where these meditations are taught and connect these practices to some of the more important ideas of the tradition. In studying and practicing meditation, we follow a gradual approach, starting from the most basic practices to more advanced ones. We also connect the practices and ideas we consider with modern scientific approaches, examining practices such as mindfulness therapy and the practice of positive emotions from a psychological perspective. In the process, we re-contextualize Buddhist ideas by connecting them with modern approaches, particularly those inspired by biology, psychology and ecology. Throughout the course, students will keep a daily practice of meditation and record their experiences in a journal so as to be able to come to an informed understanding combining a theoretical grasp of the issues raised by meditation and their own personal appreciation.

**Class Format:** mixture of lecture, discussion, and practice of meditation

**Requirements/Evaluation:** full attendance and participation, regular practice of meditation, two middle-length essays, and a meditation journal

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Religion majors, students who have taken REL 288

**REL 255 (F) Buddhism: Ideas and Practices**

**Cross-listings:** ANTH 255 REL 255 ASIA 255

**Primary Cross-listing**

This course introduces students to Buddhism by examining its ideas and practices as they have taken place in actual social contexts rather than as disembodied textual objects. After examining the main ideas and narratives of the tradition, we turn our attention to Thailand where we examine how these ideas and narratives have shaped a whole range of practices, from meditation to shamanistic rituals. We then consider the transformations that Buddhism is undergoing in contemporary society, examining the rise of meditation movement, the changing role of monks and laity, the resurgence of the nun order, the rise of Buddhist social activism and the development of new Buddhist social philosophies. We ask questions such as: How can Buddhism adapt to a modern global consumerist society? What are the transformations involved in this process and the role that Buddhism can play in such a global society? Should Buddhists take advantage of the opportunities of this new global culture or should they adopt a critical stance toward its consumerist values?

**Class Format:** discussion

**REL 259 (S) Ethics of Jewish American Fiction**

**Cross-listings:** ENGL 259 JWST 259 REL 259

**Primary Cross-listing**

After the Second World War, Jewish American writers who wrote about Jewish characters and Jewish themes were increasingly celebrated as central figures in American fiction. Isaac Bashevis Singer, Bernard Malamud, Saul Bellow, Cynthia Ozick and Philip Roth are among those who gained prominence in this period. These writers were literary innovators and often addressed broad humanistic themes. But they also struggled with profound questions that arose in the postwar period about Jewishness, the legacy of the Holocaust, and what it means to be an American. In this course we will read the above authors and others. We will focus, in particular, on the distinctive ethical and political ideas, emotions, and aspirations that animate their work. The course will begin with a study of theoretical approaches that will provide the basis for our ethical criticism: we will read, for instance, Lionel Trilling, Wayne Booth, Martha Nussbaum, and Noël Carroll. Then we will delve into the fiction, following a trail that begins in the postwar period and continues in fictions by Erica Jong, Rebecca Goldstein, Michael Chabon, Gary Shteyngart, and others. Can we find a distinctive Jewish American ethics in Jewish American fiction?

**Requirements/Evaluation:** class participation, one take-home exam on theoretical approaches to ethical criticism; four short essays

**Prerequisites:** none

### **REL 261 (F) Rastafari: Dread, Politics, Agency**

**Cross-listings:** REL 261 AFR 299 PSCI 233

#### **Secondary Cross-listing**

The emergence of Rastafari in the twentieth century marked a distinct phase in the theory and practice of political agency. From its heretical roots in Jamaica, Garveyism, Ethiopianism, and Pan-Africanism, Rastafari has evolved from a Caribbean theological movement to an international political actor. This course investigates the political theory of Rastafari in order to develop intellectual resources for theorizing the concept of agency in contemporary Africana thought and political theory. We will analyze texts and audio-visual works on the political economy of late colonial Jamaica, core Rastafari thinking, political theology, the role of reggae music, the notion of agency, and the influence of Rastafari on global politics.

**Requirements/Evaluation:** attendance and participation, weekly reading e-response papers, two short essays, and a 12- to 15- page final paper

### **REL 262 (S) Time and Blackness**

**Cross-listings:** AFR 208 AMST 208 REL 262

#### **Secondary Cross-listing**

The concept of time has been one of the most examined, yet least explicitly theorized, concepts in Africana Studies. While the field is saturated with historical studies and literary analyses that take up issues of cultural memory--which involves thinking about time--time itself has rarely the subject of sustained inquiry. This may be due to its abstractness as an idea, and the level of analysis its conceptualization demands, or because time in the Black experience cannot be understood outside of the meaning of race, which itself is not completely tangible. In this tutorial, "Time and Blackness," we will explore how Black writers across a number of genres--spiritual autobiography, fiction, memoir, literary criticism, and cultural theory--understand time, and create paradigms of time to organize their work. The following questions will structure our investigation: What are the constituent elements of time in Black writings? How does race shape the ways Black writers conceive the experience of time? And, finally, to what can we attribute the recent surge in explicit, theoretical examinations of "time and blackness"?

**Requirements/Evaluation:** assignments will include six 2-page response papers; two 5-page writing assignments; and a final, 10-page review essay on how time is understood in a genre of writing

**Prerequisites:** none

**Enrollment Limit:** 10

### **REL 263 (F) Giving God a Backbeat: Rap Music, Religion & Spirituality**

**Cross-listings:** AFR 221 REL 263

#### **Secondary Cross-listing**

On the surface, religion and rap music may seem as if they have little in common. Yet, like other Black musical traditions such as spirituals and the blues, rap is rooted in African American religious traditions. In this course, we will explore the ways in which rap music intersects with the sacred and secular worlds. Through an examination of black religious traditions, lyrics, music videos, and digital media, we will unearth what Anthony Pinn calls the "spiritual and religious sensibilities" of rap music. Grounded in culture-centered criticism, we will investigate the rhetoric of rap and religion through the theoretical ideas of Black Liberation Theology and hip-hop feminism.

**Requirements/Evaluation:** students will be evaluated on their class participation, Twitter threads, response papers, quizzes, and a final class group project

**Prerequisites:** none

**Enrollment Limit:** 18

### **REL 264 (F) The Bible and Slavery (DPE)**

**Cross-listings:** REL 264 AFR 264

#### **Primary Cross-listing**

This course will examine issues related to the intersection of "slavery" and "Bible." We will consider topics as varied as the story of Israel's deliverance from Egyptian bondage, the laws surrounding slavery in the Torah, the continuation of slavery into early Christianity, and the arguments surrounding slavery in the United States in the antebellum period. Our conversation will tackle a series of questions including the following ones: What role did these themes play in later Jewish communities? What role did the enslaved play in the development of the Christ-following communities? What were the key passages (and, arguments) supporting the racialized version of U.S. slavery? What are the legacies of the history of slavery that continue to haunt us?

**Requirements/Evaluation:** class participation, short (2-3 page) writing assignments, one (mid-term) examination, and a final 8-10 page paper

**Prerequisites:** none, although a previous course on religion is recommended

**Enrollment Limit:** 15

**Enrollment Preferences:** Religion majors or at least one course in Religion

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

REL 264 (D2) AFR 264 (D2)

**Difference, Power, and Equity Notes:** This course will address discursive and institutional bases of oppression that remain potent in the United States and beyond. An understanding of slavery as a thematic element in Biblical texts (and their ongoing reception) is indispensable to the critical analysis of racial injustice and human freedom.

SEM Section: 01 W 7:00 pm - 9:40 pm Emerson B. Powery

**REL 268 (F) Where are all the Jews?** (DPE) (WS)

**Cross-listings:** REL 268 ARAB 363 COMP 363 JWST 268

**Secondary Cross-listing**

Until four decades ago, many Maghrebi and Middle Eastern cities and villages teemed with Jewish populations. However, the creation of the Alliance Israelite Universelle's schools (1830s), the establishment of the State of Israel in 1948, the decolonization process in the Maghreb and the Middle East, and the Arab defeat in the Six-Day War accelerated the departure of Arab and Berber Jews from their homelands to other destinations, including France, Israel, Canada, the United States, and different Latin American countries. Arab and Berber Jews' departure from their ancestral lands left a socioeconomic and cultural void that Maghrebi and Middle Eastern cultural production has finally started to address, albeit shyly. The course will help students understand the depth of Jewish life in the Maghreb and the Middle East, and interrogate the local and global factors that led to their disappearance from both social and cultural memories for a long time. Reading fiction, autobiographies, ethnographies, historiographical works, and anthropological texts alongside documentaries films, the students will understand how literature and film have become a locus in which amnesia about Arab/Berber Jews is actively contested by recreating a bygone world. Resisting both conflict and nostalgia as the primary determinants of Jewish-Muslim relations, the course will help students think about multiple ways in which Jews and Muslims formed communities of citizens despite their differences and disagreements.

**Requirements/Evaluation:** 400-word weekly, focused responses on Glow; a book review (600 words); two five-page papers as mid-terms; one ten-page final paper; one presentation.

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** students interested in critical and comparative literary, religious or historical studies.

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

REL 268 (D2) ARAB 363 (D1) COMP 363 (D1) JWST 268 (D2)

**Writing Skills Notes:** Students are required to present an outline of their papers before submitting a draft paper. The professor will give feedback on each written work to improve students' writing skills. Students are required to incorporate the feedback to improve their drafts before they become final. Students will receive detailed and consistent feedback about their writing in Arabic language. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

**Difference, Power, and Equity Notes:** Students in this course will understand the historical process that lead to the disappearance of Arab/Berber Jews. Students also will work out alternative ways to grasp Jewish-Muslim relations beyond nostalgia and conflict. Finally, students enrolled in the course will grapple with and try to disentangle the complexity of Jewish-Muslim citizenship in both pre-colonial and postcolonial contexts.

**REL 269 (F) Mindfulness Examined: Meditation, Emotion, and Affective Neuroscience** (DPE) (WS)

**Cross-listings:** REL 269 STS 269 ASIA 269 ANTH 269

### Primary Cross-listing

This course provides a social analysis of and practical engagement with mindfulness in the US today. It considers the modern applications of Buddhist meditation as a tool to improve awareness of the related processes of mind, behavior, and emotions within landscapes structured by racism, sexism, and other systemic inequalities. We consider how mindfulness relates to Buddhist discourses as well as the rapid rise of fields like contemplative neuroscience, affective neuroscience, and integrative neurobiology. How can mindfulness help people communicate more effectively--be they doctors or patients, teachers or students? How has the exploding research on mindfulness and meditation since 2000 help us understand the intersection of human emotions, behaviors, and relationships? We train in a variety of Buddhist meditation practices through the semester including forest bathing, mindfulness, compassion meditation, while unpacking the subjective experience of our minds and emotions first-hand. Students will be asked to train in mindfulness practices the entire semester while studying models of the mind developed by research in clinical and evolutionary psychology, affective neuroscience, and interpersonal neuroscience.

**Requirements/Evaluation:** weekly tutorial papers and discussion

**Prerequisites:** A prior class or some experience with meditation is recommended

**Enrollment Limit:** 10

**Enrollment Preferences:** ANTH, SOC, REL, ASST majors; PHLH, STS concentrators; seniors and juniors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

REL 269 (D2) STS 269 (D2) ASIA 269 (D2) ANTH 269 (D2)

**Writing Skills Notes:** This class will involve weekly tutorial essays or oral responses, intensive written feedback on every essay, and a mid-semester 'writing chat' with the instructor.

**Difference, Power, and Equity Notes:** This class fulfills the Difference, Power, and Equity requirement because it will explore the ways that mindfulness can address the growing epidemic of anxiety, depression, and other mental health issues we find in the US today. We study mindfulness from an intersectional perspective and relate its benefits to intersecting inequities and intergenerational trauma in the US today.

### REL 270 (F) Reading Jesus, Writing Gospels: Christian Origins in Context (WS)

**Cross-listings:** REL 270 COMP 263 CLAS 270

### Primary Cross-listing

What were the religious and cultural landscapes in which Christianity emerged? How did inhabitants of the ancient Mediterranean world speak about the concept and significance of religion? How have scholars of early Christianity answered these questions? What are the implications of their reconstructions of early Christian history? The course is divided into four parts. The first part establishes the interpretive approach of the course. The second part of this course addresses these questions by examining the formation of Christianity from its origins as a Jewish movement until its legalization, using a comparative socio-historical approach. The third part of the course focuses on the earliest literature produced by the Jesus movement and consider it within a comparative framework developed in the first half of the course. The final part of the course emphasizes modern interpretations of Jesus and the Jesus movement; here we shall be examining how scholars make use of ancient materials to frame their arguments.

**Class Format:** lecture/discussion

**Requirements/Evaluation:** three 3-page papers (with revisions), one 5- to 7-page paper (that builds on one of the earlier 3 page papers), and a final paper (7-10 pages, that draws on some of the earlier writing in addition to new writing)

**Prerequisites:** none; open to all

**Enrollment Limit:** 19

**Enrollment Preferences:** sophomores, especially potential majors in Religion, Classics, and Comparative Literature

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

### **REL 274 (F) Ritual, Power and Transgression**

**Cross-listings:** REL 274 ANTH 299

#### **Secondary Cross-listing**

The focus of this course is on the role of ritual in harnessing political power. In the first part of the semester, we examine some of the ways in which different cultures manufacture social order and political power through categories of inclusion and exclusion, clean and dirty, proper and improper, and licit and illicit. We will be particularly attuned to the ways in which these categories are performed through and maintained by rituals and how bodies are deployed in ritual spaces as instruments of persuasion and control. We will also look in depth at a variety of ritual forms, including scapegoating and sacrifice, and how they serve as engines of political control and protest, and we will examine the uses of dead bodies and memorials as vehicles for gaining and maintaining political power and the destruction and desecration of bodies and memorials as a form of political protest and dissent. Throughout the semester, we will be relating theoretical texts and historical cases to current political struggles in this country and abroad.

**Requirements/Evaluation:** class participation, biweekly responses to instructor prompts, two short (500 words) response papers, and one 12-page (2400 words) research paper

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** ANSO and REL majors, open to first-years

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**REL 275 (F) Buddhist Material Culture**

**Cross-listings:** ANTH 275 REL 275 ASIA 275

**Secondary Cross-listing**

You've heard of the "material girl"(or boy), but what about the material Buddhist? What is material culture, and what makes it Buddhist? If Buddhism is supposed to be a tradition that encourages non-attachment, then what is meant by Buddhist material culture? Shouldn't Buddhists be free of material things? Or, rather, who says that they have to be? This course encourages students to look beyond modernist ideals of Buddhism as merely a rational tradition about monks, manuscripts, and mindfulness. In this course, students are encouraged to take Buddhist "stuff", material culture, seriously. This course offers: (1) an introduction to the core concepts of Buddhism; (2) a brief overview of theories of material religion, or the "material turn" in the study of religion; and (3) a sampling of the vast material- and spiritual worlds of Buddhist Asia, particularly China, Korea, Japan, Thailand and Myanmar. We begin by decolonializing Buddhism. Then, we trace the Humanities trend of the past couple decades that prioritizes material investigations that acknowledge the agency of not only humans but also that of objects/things/stuff. These theories also emphasize networks--among people, things, and spirits. We look closely at Buddhist stuff. Things act upon us, and we (re)act upon them. They shape identity, create meaning, and maintain relationships. We will learn that things are never just things. They help us better understand what people do in Buddhism, not just what people believe. This course includes brief experiential components on Buddhist meditation and ritual. By the end of the semester, students will have a basic understanding of Buddhist concepts, will learn to value Buddhist material culture, and will be able to apply social theories of religion and things. No prior experience in meditation or Buddhism is required. This course does not assume any previous background in Buddhism, Religion, Asian Studies, or Art History.

**Requirements/Evaluation:** midterm exam; Four quizzes; final project presentation and encyclopedic essay (1,000 words)

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** majors ANSO, REL, or concentrators in Asian Studies

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**REL 276 (S) Gnosis, Gnostics, Gnosticism (DPE)**

**Cross-listings:** REL 276 COMP 258

**Primary Cross-listing**

Reality is not what it seems. Salvation by knowledge, arch-heresy, an eternal source of mystical insights and experiences, secret esoteric teachings available only to a few. All these and more have been claims made about gnosis, Gnostics, and Gnosticism. This course will introduce you to the key ancient texts and ideas associated with Gnostics in modern forms of esotericism and spiritualities. We shall explore how claims about gnosis offer modes of critiquing and seeking to transform unjust social and political systems.

**Class Format:** lecture/discussion

**Requirements/Evaluation:** weekly GLOW posts, 1 textual analysis paper, 1 historiographical analysis paper, and a final paper that entails a revision and expansion of earlier writing for the course.

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** students with prior coursework in biblical or other ancient literature or history

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

REL 276 (D2) COMP 258 (D1)

**Difference, Power, and Equity Notes:** This course situates "gnosis" as a practical epistemological orientation used both to disrupt and challenge power arrangements deemed unjust and to empower those who are marginalized within dominant power structures. At the same time, the course interrogates "gnostic" epistemological claims as capable of being used to reinstall hierarchical power structures. Attention to power and equity and how difference is produced is at the center of the course.

Not offered current academic year

### **REL 277 (F) Meditation and Modern American Life**

**Cross-listings:** REL 277 ENGL 277

Secondary Cross-listing

The first English translation of a Buddhist text was published in the United States in 1844. At the time, few Americans knew the first thing about what Buddhism was, but now, a little over a century and a half later, Buddhist ideas and practices (meditation, in particular) can be found everywhere. In this class, we'll explore how Buddhism came to be the profoundly important cultural force in American life that it is today, looking particularly at the increasingly mainstream role of meditation in modern American life. We'll study how traditional Buddhist meditation practices were transmitted to the West, and then track the way those practices changed over time, as they were adapted to the radically new context of American culture. And we'll study the way meditation is impacting a wide array of cultural domains, including: literature, psychology, education, environmentalism, Western attitudes towards death and dying, and the fight against racism. A key part of the course will be an introduction to the theory and practice of meditation: we'll learn a variety of meditation techniques, and we'll spend a significant amount of time each class practicing and reflecting upon those practices. This course is a part of a joint program between Williams' Center for Learning in Action and the Berkshire County Jail, in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Classes will be held at the jail, with transportation provided by the college. \*Please note the atypical class hours, Thursdays, 4:45-8:30 pm.\*

**Requirements/Evaluation:** full attendance and participation; meditation 2-3 times a week outside of class; a meditation journal; and a final 10-page essay

**Enrollment Limit:** 18

**Enrollment Preferences:** final selection will be made on the basis of (a) statements of interest sent via email to brhie@williams.edu by June 26 and (b) brief interviews with the instructor.

**Expected Class Size:** 18

**Grading:** yes pass/fail option, no fifth course option

### **REL 281 (S) Religion and Science**

**Cross-listings:** REL 281 STS 281

Primary Cross-listing

In the last few years the deniers of religion such as Dennett and Dawkins have forcefully argued that recent scientific developments show the degree to which religion is irrelevant to a modern understanding of what it means to be human. Atran and Boyer have made a similar case, arguing that recent progresses in our understanding of human cognition demonstrate that religion is a purely natural phenomenon that has little if any value for human development. Theologians such as Haught and Polkinghorne have rejected these views, arguing that a proper understanding of scientific

developments such as evolution and quantum mechanics suggests religiously relevant views of the universe and our place therein. This course considers these competing perspectives while offering critical reflections on the views and categories involved in these controversies. We also examine the works of reflective naturalists such as Bellah and Herrstein, who argue that far from showing the irrelevance of religious ideas and practices, the new mind and life sciences suggest a much more nuanced view according to which religion is both grounded in the natural world and central to the development of human culture. Hence, it cannot be easily discounted as irrelevant to a scientifically informed understanding of what it means to be human.

**Requirements/Evaluation:** tutorial format. one paper every two weeks

### **REL 283 (F) Religion and American Capitalism**

**Cross-listings:** REL 283 HIST 383

**Primary Cross-listing**

Was Jesus a revolutionary socialist or a savvy salesman? Does capitalism bring prosperity to the virtuous or lead us to worship Mammon? Shall the meek inherit the earth or should the hand of the diligent rule? Is it holy to be poor or is prosperity our moral duty? These questions have long preoccupied religious believers, and their changing answers have transformed the history of American capitalism. This course invites students to study that history, from the early 19th century to the present. It will cover such topics as: utopian communes; the political economy of slavery; working-class religion and labor organizing; Christian and Jewish socialism; big business and the Prosperity Gospel; 'New Age' spirituality and the counterculture; liberation theology and racial capitalism; and conservative Christianity in the age of Wal-Mart and Chick-Fil-A.

**Requirements/Evaluation:** Participation in group discussion; five response papers (300-400 words); two essays (4-6 pp); final research paper (8-10 pp).

**Prerequisites:** None; open to all students.

**Enrollment Limit:** 15

**Enrollment Preferences:** Religion and History majors.

### **REL 284 (S) From the Battlefield to the Hermit's Cell: Art and Experience in Norman Europe (WS)**

**Cross-listings:** REL 284 WGSS 284 ARTH 218

**Secondary Cross-listing**

This tutorial provides students with the chance to investigate in-depth three of the most astonishing works of art created during the entire Middle Ages: the Bayeux Tapestry (c.1077-1082), the Cappella Palatina (c.1130s-1166), and the Psalter of Christina of Markyate (1120s-1160s). Created within a

hundred years of each other all within territories controlled by the Normans--a warrior dynasty that settled in northern France in the 10th century and then expanded north into England and south into Italy in the 11th and 12th centuries--each of these works is unprecedentedly ambitious in scale, dazzling in its material properties, and survives in its original wholeness, a rarity in the medieval world. Despite these similarities, however, each work is very different from the other two and so sheds light on very different aspects of Norman experience, across Europe. The Bayeux Tapestry, likely made by female embroiderers for a baronial hall, is a giant textile (over 70 meters long) that in gruesome and fascinating detail tells the story of the Norman invasion of England by William the Conqueror in 1066. The Cappella Palatina in Palermo, in turn, commissioned by King Roger II, is a royal chapel covered in sumptuous mosaics that reveals through its decoration and ritual the dynamic interaction of Islamic, Byzantine, and Latin Christian traditions in the multicultural Norman kingdom of Sicily in the 12th century. And the Psalter of Christina of Markyate, a large prayerbook made for the use of a female recluse in southern England, contains 40 full-page paintings and 215 decorated initials, a vast and inventive program of imagery that through its creative profundity helped reshape private devotional art and culture for centuries to come. Through their variety, then, these three objects--an embroidery, a building, and a book--give students insight into the rich array of concerns and aspirations, from the political to the spiritual and from the public to the private, that gave substance and meaning to 11th- and 12th-century European life, for women as well as men. What is more, these three remarkable works of art have been the focus of much interesting scholarship in recent years, so an exploration of some of that literature provides a compelling introduction to the discipline of art history itself, past and present.

**Requirements/Evaluation:** Participation in discussion; five 5-7-page tutorial papers; five 1-2-page response papers.

**Prerequisites:** None

**Enrollment Limit:** 10

**Enrollment Preferences:** First years and sophomores, but open to all.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

REL 284 (D2) WGSS 284 (D2) ARTH 218 (D1)

**Writing Skills Notes:** In this tutorial, students will develop skills of critical reading and focus on how to craft clear and persuasive arguments of their own. To help them achieve these goals, they will receive timely comments on their written work, especially the five 5-7-page papers they will submit, with suggestions for improvement.

### **REL 285 (S) Haunted: Ghosts in the Study of Religion**

Haunting offers a powerful way to speak about forces that affect us profoundly while remaining invisible or elusive. "What is it that holds sway over us like an unconditional prescription? The distance between us and that which commands our moves-or their opposite, our immobility-approaches us: it is a distance that closes in on you at times, it announces a proximity closer than any intimacy or familiarity you have ever known" (Avital Ronell, *Dictations: On Haunted Writing* [1986] xvi-xvii). The figure of the ghost has been developed by those seeking to grapple with the ongoing effects of modern slavery, colonialism, state-sponsored terrorism, the holocaust, and personal trauma and loss. Building upon the insights about memory, history, and identity that haunting has been used to address, this course will challenge you to explore the study of religion by way of its "seething absences." We shall ask how the study of religion has endeavored to address loss, trauma, and its persistent effects, what "holds sway" over various approaches to the study of religion, as well as how "religion" constitutes its own ghostly presence, haunting other domains.

**Class Format:** tutorial; meeting in pairs, each student will either write and present a paper or respond to their partner's paper

**Requirements/Evaluation:** two 1-page papers (written and presented), five 5-page papers, and five oral critiques (based on written notes) of their partner's paper; students will revise two papers

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** Religion majors

## **REL 286 (F) The Bible and Migration: Latinx Perspectives**

**Cross-listings:** REL 286 LATS 285

### **Primary Cross-listing**

This course seeks to understand migration in the current historical moment, around the globe but especially on the US border. The lenses through which we will explore migration include Religion, with special focus on the Christian Bible. We will explore instances of and reflections on migration in the Bible, as well as various interpretations of the Bible emerging today in debates over migration. The course will approach US migration from the perspective of Latinx communities in the US - historically, culturally, politically, and religiously. Readings will include: The Bible, monographs and essays on the Bible and Migration, especially from the perspectives of Latinx authors and thinkers.

**Requirements/Evaluation:** Participation in class discussions; two to three short essays (3-5 pages each) analyzing selected readings; a longer final research paper (7-10 pages) on an aspect of Bible and Migration of interest to the student defined in consultation with the professor.

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Religion majors and Latinx Studies concentrators, and those interested in these areas of study

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

## **REL 288 (F) Embodiment and Consciousness: A Cross-Cultural Exploration**

**Cross-listings:** REL 288 PHIL 288

### **Primary Cross-listing**

This course examines some of the central questions raised by the study of the consciousness: the place of intentionality, the role of emotions, the relation with the body, the nature of subjectivity, the scope of reflexivity, the nature of perceptual presence, etc. In confronting these difficult questions, we do not proceed purely theoretically but consider the contributions of various observation-based traditions, from Buddhist psychology and meditative practices to phenomenology to neurosciences. We begin by examining some of the central concepts of Buddhist psychology, its treatment of the mind as a selfless stream of consciousness, its examination of the variety of mental factors and its accounts of the relation between cognition and affects. We also introduce the practice of meditation as a way to observe the mind and raise questions concerning the place of its study in the mind-sciences. We pursue this reflection by examining the views of James, Husserl, Sartre and Merleau-Ponty, particularly as they concern the methods for the study of the mind and the relation between consciousness, reflexivity and the body. In this way, we develop a rich array of analytical tools and observational practices to further our understanding of the mind. But we also question the value of these tools based on first person approaches by relating them to the third person studies of the mind. In this way, we come to appreciate the importance of considering the biology on which mental processes are based and the light that this approach throws on the nature of consciousness. We conclude by considering the relation between first and third person studies of the mind, focusing on the concept of the embodied mind as a fruitful bridge between these different traditions.

**Requirements/Evaluation:** regular practice of meditation, a class presentation, a short essay (6-pages); a long final research paper (15 pages)

**Prerequisites:** any introduction to philosophy and at least two upper level courses in PHIL, at least one of which meets the Contemporary Metaphysics or Epistemology distribution requirement for the major, no exceptions;

**Enrollment Limit:** 18

**Enrollment Preferences:** Religion and Philosophy majors

**Expected Class Size:** 18

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** there is no need to email the professor in advance to indicate interest in the course

**REL 291 (S) Religion and Ecology in America (WS)**

**Cross-listings:** SOC 291 REL 291 ENVI 291

**Secondary Cross-listing**

This course examines the relationship between religious and environmental thought in America. Exploring a broad range of practices, symbols, and beliefs, we will examine the religious roots and branches of modern environmentalism. Rather than survey the formal teachings of organized religious groups, we will explore the creation and contestation of environmental meaning in the public sphere through literature, art, philosophy, and popular culture. How have writers, thinkers, and artists from different religious and cultural backgrounds shaped the way we think about nature? How have they shaped the way we think about politics, science, and social justice? How have they influenced each other to produce distinctively American forms of eco-spirituality? In pursuit of these questions, we will consider a diverse array of topics and cases, including struggles to protect Native American sacred places, the role of Black churches in fighting environmental racism, Protestant outdoorsmanship, Catholic climate activism, Jewish eco-mysticism, atheist biology, Buddhist therapy, and more.

**Requirements/Evaluation:** Each week each student will either write a 5- to 7-page essay on assigned readings or offer a 2-page critique of their partner's paper.

**Prerequisites:** ENVI 101 or instructor permission

**Enrollment Limit:** 10

**Enrollment Preferences:** Environmental Studies majors and concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

SOC 291 (D2) REL 291 (D2) ENVI 291 (D2)

**Writing Skills Notes:** Each student will write five five-page papers and five two-page papers in this class. They will be given extensive weekly feedback on their writing in the form of one-on-one meetings and written comments, and they will be given multiple opportunities for revision. Emphasis will be placed on the mechanics of argumentation, logic and rhetoric, and the development of a distinctive voice.

TUT Section: T1 Cancelled

**REL 292 (S) Religion and Politics in the Caribbean and the Diaspora: Puerto Rico and Cuba**

**Cross-listings:** REL 292 LATS 253

**Secondary Cross-listing**

This course explores the role of religion in Caribbean history and politics, with a focus on Puerto Rico and Cuba. These Caribbean islands have lived out contested colonized histories and experiences, as well as diasporic realities on the US mainland. The US government and military have played a significant role in both since the turn of the last century, forcibly shaping their economies and politics. Religion, particularly the Protestant missionary enterprise since the US invasions in 1898, has also shaped histories and politics on the islands and throughout their diasporas. We will explore the role and impact of Protestant religion in these historically indigenous, African descendent, and Roman Catholic religious spaces, as well as how these religious engagements and theologies impacted migration and the creation of diasporic communities in the US. We will analyze the role of religion in imperialist endeavors, as well as in solidarity movements. Puerto Rican and Cuban historical luminaries, such as Pedro Albizu Campos and Jose

Marti, who struggled against Spanish colonialism in Puerto Rico and Cuba respectively, had not only political but religious visions for better prospects for their homelands. By understanding the intertwining of religion and politics in Puerto Rico, Cuba and their diasporic communities, we will have the tools to consider the implications for other Caribbean nations, such as the Dominican Republic, as well as other Latin American countries that have experienced US interventions and the creation of diasporic communities.

**Class Format:** This course will follow a discussion format, in which students are expected to come to class prepared to address the assigned readings, to have completed short assignments in preparation for discussions, to make presentations to the class, and/or to lead discussions.

**Requirements/Evaluation:** Evaluation in this course will be based on class participation, short 1 to 2-page writing assignments every other week based on readings and assigned videos/films; a five-page midterm essay on an aspect of Puerto Rican or Cuban political/religious reality discussed in class, and final 7-page research essay on a theme in the course agreed upon by student and professor.

**Prerequisites:** None

**Enrollment Limit:** 25

**Enrollment Preferences:** LATS concentrators and Religion majors, and those with expressed interest in these fields

**Expected Class Size:** 15

### **REL 294 (S) Paul and Early Christianity: Race, Ethnicity, Empire, and the New Testament**

In the Christian New Testament, 13 letters are attributed to "Paul" (out of a total of 27 documents that comprise the New Testament). These letters have been a rich source for a host of political and theological debates over the last two millennia, but in this course, we will examine them as expressions of earliest Christianity's encounter with race, ethnicity, gender, and the ethics of a new religious movement, established in the midst of the oppressive Roman imperial order. Seven of these letters were almost certainly written by someone known to us as Paul of Tarsus. How Paul, a devout Jew, addressed controversial issues in his newfound communities, often in equally controversial ways, will guide our discussions of the role of religion and politics in his world as well as our own. Reading the letters of Paul and related documents in the New Testament, and interpretations of Paul over the centuries, including in modern scholarship, especially by African American, Asian American, and Latinx biblical scholars, theologians, artists, and thinkers will focus our study of religion and politics, ancient and modern.

**Requirements/Evaluation:** Students will prepare oral and written summaries of the letters (at least one per student) from their own perspectives in conversation with scholarly interpretation, as well as write short papers (two for the semester, 3-4 pages each) on relevant themes for today inherent in these ancient documents. There will also be a final, research paper (8-10 pages) examining race, ethnicity, gender, and/or politics -- then and now -- using several of the letters as sources for the written exploration.

**Prerequisites:** None

**Enrollment Limit:** 20

**Enrollment Preferences:** juniors and seniors, either Religion majors, concentrators, or at least one course in Religion

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

### **REL 295 (S) Foundations of Confucian Thought (DPE) (WS)**

**Cross-listings:** REL 295 ASIA 215 CHIN 215

Secondary Cross-listing

How should people treat each other? What constitutes human nature and does it tend towards good or evil? How should we organize society, by

focusing on laws and regulations, or on ritual and moral guidance? What is the nature of moral rulership? What is the proper relationship between the individual and larger units of society, from the family to the state? These are some of the key questions that the school of thought that has come to be known as "Confucianism" addresses. As the dominant moral and political philosophy for thousands of years in much of East Asia, Confucianism has shaped our world, past and present, in innumerable ways. In this class we will focus on the foundational texts of the Confucian tradition: the *Analects* (purported to record the words of Confucius himself), the *Mengzi* (often romanized as "Mencius"), the writings of Xunzi, and the *Classic of Filial Piety*. Beyond those questions noted above, we will further examine how these texts construct their arguments; how they were first composed, compiled, and circulated; how they employ such key concepts as "humaneness" (*ren*), "moral power" (*de*), and "ritual propriety" (*li*); and how they functioned as part of the larger philosophical, linguistic, political, and historical context that we now think of as "early China."

**Requirements/Evaluation:** Evaluation is based on 4 short papers (3-4 pages each), one longer final paper (10-12 pages), and participation in class discussions.

**Prerequisites:** None.

**Enrollment Limit:** 19

**Enrollment Preferences:** Enrollment priority goes to current or prospective majors in the Department of Asian Languages, Literatures, and Cultures; current or prospective Asian Studies concentrators; and Religion majors.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

### **REL 296 (F) The History of the Holocaust**

**Cross-listings:** HIST 338 JWST 338 REL 296

#### **Secondary Cross-listing**

In twenty-first century United States, the murder of approximately six million European Jews by Nazi Germany remains a central event in our political, moral, and cultural universe. Nevertheless, the Holocaust still confounds historians' efforts to understand both the motivations of the perpetrators and the suffering of the victims. In this course, we will study the origins and unfolding of Nazi Germany's genocidal policies, taking into consideration the perspectives of those who carried out mass murder as well as the experiences and responses of Jews and other victim groups to persecution. We will also examine the Holocaust within the larger context of the history of World War II in Europe and historians' debates about Germany's exterminatory war aims. Course materials will include diaries, speeches, bureaucratic documents, memoirs, films, and historical scholarship.

**Class Format:** mostly discussion

**Requirements/Evaluation:** class participation, weekly reading responses, a map quiz, two papers (5-7 pages) on class readings, a final research paper (10-12 pages)

**Prerequisites:** none; open to first-year students with instructors permission

**Enrollment Limit:** 25

**Enrollment Preferences:** History majors and Jewish Studies concentrators

### **REL 302 (S) Philosophy of Religion (WS)**

**Cross-listings:** PHIL 281 REL 302

Secondary Cross-listing

Our goal will be to determine how far reason can justify belief in God. We will examine well-known philosophical arguments for and against the existence of God (including the ontological argument, the cosmological argument, the teleological argument, the argument from religious experience, and the argument from evil). For each argument, we will first look at historically important formulations and then turn to contemporary reformulations. Our aim will be to identify and evaluate the strongest version of each argument. After working through these arguments, we will reflect more generally on the proper roles of reason and faith in justifying religious belief. Near the end of the semester, we'll also examine some evolutionary explanations of religious belief. Our tools in this course will be logic and reason, even when we are trying to determine what the limits of reason might be. Authors will include Plato, Anselm, Aquinas, Pascal, Paley, Hume, Kant, Kierkegaard, and several contemporary philosophers.

**Class Format:** students meet with instructor in pairs for an hour each week; emphasis will be placed on developing skills in reading, interpretation and oral argument as well as critical reasoning and writing

**Requirements/Evaluation:** five 5-page papers and five 2-page papers

**Prerequisites:** one PHIL course

**Enrollment Limit:** 10

**Enrollment Preferences:** current and prospective Philosophy majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

### **REL 303 (F) Augustine's Confessions**

**Cross-listings:** CLAS 307 PHIL 307 REL 303

Secondary Cross-listing

No thinker has done more to shape the Western intellectual tradition than Augustine (354-430 CE), and no book displays Augustine's dynamic vision of reality more compellingly than the *Confessions*. Its probing and intimate reflections on the meaning of human life, the nature of God and mind, time and eternity, will and world, good and evil, love and sexuality have challenged every generation since Augustine's own. The seminar will be structured around a close, critically engaged reading of the *Confessions* (in English translation) and will give attention to its historical context and significance as well as to its philosophical and theological ideas. (There will be optional, supplementary opportunity to engage with the Latin text for interested students with some facility with Latin.)

**Class Format:** Class meetings will consist primarily in student presentations and open, directed discussion of assigned readings.

**Requirements/Evaluation:** Regular reading assignments from the *Confessions* and related secondary literature. Weekly participation in online discussion on Glow (15% of final grade); 3 class presentations (of various lengths and kinds) (20%); a short paper (maximum 1500 words) due around the middle of the semester (20%); a term paper in two drafts (maximum 3000 words) due near and the end of the semester (40%); preparation for and participation in class that shows thoughtful engagement with the assigned readings (5%).

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Advanced students in Philosophy, Religion and/or Classics

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

### **REL 306 (F) Feminist Approaches to Religion (WS)**

**Cross-listings:** WGSS 307 REL 306

#### **Primary Cross-listing**

What does feminist theory have to offer the study and practice of religion? How have participants in various religious traditions helped to produce and enact different kinds of feminist approaches to critique and transform religions? Feminisms and religions have a long though often troubled history of interconnection. In this course, we shall explore a range of feminist analyses that have either emerged out of particular religious contexts or have been applied to the study of religious traditions and practices. The course prioritizes attention to the intersections and interactions of gender, race, ethnicity, sexuality, and nationality (among other factors) with religion.

**Requirements/Evaluation:** weekly GLOW posts before class, one "position paper" for class discussion (3 pages), a research question with rationale for interest and potential action plan (1 page), exploratory research statement (2 pages), essay on interpretive approach to research project (3 pages), participation in writing workshop on 7-page early drafts of final papers, one 15-page final paper.

**Prerequisites:** none; open to all

**Enrollment Limit:** 15

**Enrollment Preferences:** Religion and Women's, Gender and Sexuality Studies majors have priority, and then students who have taken either REL 200 or WGSS 101.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

WGSS 307 (D2) REL 306 (D2)

**Writing Skills Notes:** This course features a series of scaffolded writings assignments that will culminate in a final research project.

### **REL 308 (S) What is Power?**

**Cross-listings:** SOC 308 PSCI 306 STS 308 REL 308

#### **Primary Cross-listing**

*What is power?* Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures? What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or agency? Or ideology? This course begins with the observation that power is often described as a causal relation--an individual's power is supposed to equal their capacity to produce a change in someone else's behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: **critical theory about power** and **philosophy of science about cause and effect**. We will touch on classic philosophical accounts of power and causation, but focus our attention on more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt,

Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, and Max Weber. **(Note that in 2023 this course will also fulfill the senior seminar requirement for STS)**

**Requirements/Evaluation:** critical annotations for every class, midterm review essay (4-6 pages), final essay (10-12 pages)

**Prerequisites:** None.

**Enrollment Limit:** 15

**Enrollment Preferences:** STS concentrators, then Religion, Sociology, and Political Science majors.

**Expected Class Size:** 14

### **REL 312 (S) The Mughal Empire: Power, Art, and Religion in India**

**Cross-listings:** GBST 312 ASIA 312 REL 312 HIST 312

#### **Secondary Cross-listing**

Established in the early 1500s, the Mughal Empire was one of the grandest and the longest to rule the Indian subcontinent for over three hundred years. Commanding unprecedented resources and administering a population of 100 to 150 million at its zenith--much larger than any European empire in the early modern world--the Mughals established a centralized administration, with a vast complex of personnel, money, and information networks. Mughal emperors were also political and cultural innovators of global repute. Moreover, while the Mughal dynasty was brought to an end with British colonial rule over India in 1857, the Mughal administrative structures and cultural influences continued to have a lasting impact on the British and later Indian states that followed. Centered around the intersection of the themes of power, patronage of art and architecture and religion, this course will ask: What factors contributed to the durability of the Mughal Empire for three centuries? How did global trade and innovations in taxation contribute to its wealth and stability? How did this dynasty of Muslim monarchs rule over diverse, and largely non-Muslim populations? How did they combine Persian cultural elements with regional ones to establish an empire that was truly Indian in nature? How were the Mughals viewed in their contemporary world of gunpowder empires like the Safavids of Persia and the Ottomans of Turkey? Readings will include the best of the recent scholarship on this vastly influential empire and a rich collection of primary sources, including emperor's memoirs, accounts of European travelers, and racy biographies, which will allow students make their own analysis. They will also have the opportunity to interpret paintings (some of which are held in the WCMA collections) and architecture. They will also discuss how the Mughals are remembered in South Asian film and music.

## REL 314 (S) Racial and Religious Mixture (DPE)

**Cross-listings:** REL 314 LATS 327 AFR 357 AMST 327

### Secondary Cross-listing

The very term "mixture" implies that two or more distinct substances have been brought together. Distinctions of race and religion are social fictions; yet, the lived ramifications of these social fictions involve tense struggles over the boundaries of racial and religious communities. These boundaries are not just ideas but also practices. In the history of the Americas, mixed racial and religious identities and experiences have more often been the result of violent clashes than romantic encounters. Still, the romanticization of the New World as a geography that makes such mixtures possible reaches back to the earliest days of Spanish conquest in the Americas. This course critically reconsiders varying ways that racial and religious mixtures have been imagined, defined, challenged, negotiated, and survived under imaginative and legal rubrics of mestizaje, creolization, transculturation, passing, syncretism, religious hybridity, and mixed race studies.

**Class Format:** mostly discussion

**Requirements/Evaluation:** participation, short writing exercises, a 3-page first essay, a 5- to 8-page second essay, and a 10- to 14-page final paper

**Prerequisites:** none

## REL 316 (F) Social Ontology

**Cross-listings:** STS 316 REL 316

### Primary Cross-listing

**What is society? What is the social world made of?** The obvious answer--individual people--was for a long time dominant in the social sciences. Indeed, many theorists argued that there was no such thing as society distinct from individual humans and their intentional actions. While this mode of theorizing had some advantages, it has recently fallen out of vogue because of its inability to explain group norms, institutions, corporations, and other collectives. Explanations at the individual level are not necessarily incorrect, but rather philosophers have increasingly come to see them as incomplete. Society seems to more than an aggregate of individuals. Hence, philosophers have increasingly turned to questions of social ontology and produced fresh theories about the nature of the fundamental constituents of the social world. We will explore this research, but with the added intuition that looking beyond humans to other social animals can provide a fresh theoretical vantage. **We will set out from the idea that the social world is composed not just out of humans, but also out of materialized signs produced by social animals** (e.g., a no-smoking sign or an ant's chemical trail). This seminar will offer an advanced survey of current debates about the ontology, methodology, and aims of the humanities and social sciences. We will address questions such as: *Is there a difference between explaining and understanding social actions? Should explanation in the humanities and social sciences follow the model of explanation in the natural sciences, or are there peculiarities about social phenomena that demand a different approach? What are social structures, practices, norms, institutions? How might social structures exist over and above individuals? Do social groups have agency in their own right? What are social kinds and what is their relationship to natural kinds? How do debates in the social sciences look different if we attend to other social animals and their materialized signs?* Course readings will come from a variety of areas including: sociology, semiotics, feminist theory, philosophy of science, and philosophy of mind. When possible, we will supplement these with readings on research into animal behavior.

**Requirements/Evaluation:** Attendance and participation. Weekly critical responses/comments. 10-12 page final research paper.

### **REL 319 (S) Milton's Paradise Lost**

**Cross-listings:** REL 319 ENGL 315

Secondary Cross-listing

If you know anything about John Milton, you probably think of him as some blind guy who wrote a really long poem about the Bible. It's hard to shake the feeling that Milton is the fustiest of English poets--dull, pious, brilliant and all, and not someone you would read if you didn't have to. But then what are we to make of the following? The first piece that Milton wrote that was read widely throughout Europe was a boisterous defense of the English Revolution. Milton was most famous in his lifetime as the poet who went to bat for the Puritan insurgents--the poet who came right out and said that the king looked better without his head. Of all the major English poets, Milton is the revolutionary. So a course on Milton is by necessity a course on literature and revolution. We will read *Paradise Lost*, widely regarded as the greatest non-dramatic poem in English, and a few other books to help us prepare for that big one. Some questions: How did the mid-seventeenth century, probably the most tumultuous decades in the history of modern Britain, transform the culture of the English-speaking world? What is the relationship between literature and the state or between literature and radical politics? Is there a poetics of revolution? How can a poet who seems to be writing for Sunday school--about God and Adam and Eve and the serpent--really have been writing about rebellion all along?

**Requirements/Evaluation:** one 6- to 8-page paper, one 10- to 12-page paper, informal weekly writing assignments, and active seminar participation

### **REL 320 (F) "You Do You!" The Ethics and Politics of Personal Authenticity**

From the breathtaking expansion of the "self-help" industry to corporate advertisement, from the entertainment industry to cultural politics around sexuality and race, the rhetoric and ideal of personal authenticity pervades our daily existence. From every corner we are told: "To thine own self be true!" This powerful moral ideal has arguably become an inescapable and hegemonic frame of U.S. cultural life in the 21st century (and more broadly middle-class life around the globe). The imperative of authentic self-realization -- to discover and become your "true self," in opposition to mere conformity to social conventions and independent of external expectations -- is seen as essential if we are to live a healthy and fulfilling life, and to fully realize what it means to be human in the deepest sense. This course will interrogate this ideal and imperative of personal authenticity from several angles. We will begin by examining a variety of contemporary manifestations of this ethos. We will then explore the historical roots and evolution of the emphasis on authentic selfhood in the modern West, as well as comparable notions of sincerity, selfhood, interiority, and introspection in other (non-liberal, non-Christian) cultural contexts and religious traditions. We will also consider the ideal of authenticity in light of contemporary social theory, as well as engage a variety of ethical-political critiques of authenticity. Through this, we will investigate a number of important questions: Is there such a thing as the "true self" that is autonomous and free of social influences and norms, and how does one discover this true self? What are the limits and social consequences of this aspiration towards authentic selfhood? Is the rhetoric of personal authenticity simply an expression of

narcissistic individualism, or is there a higher moral value and ideal that it speaks to? Can community cohesion and shared collective purpose be sustained alongside the imperative of authenticity? How does the ideal of authentic selfhood interact with collective or socially-conferred identities (like race or heritage)? What are the effects of the widespread commodification of authenticity? How do we understand the relation between personal authenticity and the conditions of late-stage capitalism?

### **REL 322 (F) Brutal Buddhism: Buddhism & Violence**

**Cross-listings:** ANTH 321 ASIA 322 REL 322

#### **Secondary Cross-listing**

Buddhist-sanctioned violence is often met with incredulous reception. Why? Buddhists, including monks, are human too. The single-story narrative that praises Buddhism as a peaceful tradition is fallacy. This myopic view of Buddhism is a result of colonial and orientalist legacies that have shaped Euro-American perspectives. Building upon the intellectual and social history of that legacy, in this course, we study Buddhist brutality. The cases include: the persecution of the Hindu-Tamil minority in Sri Lanka; the genocide of Rohingyas in Myanmar, fueled by the influence of outspoken figures like the Buddhist monk Ashin Wirathu, a nationalist and leader of the anti-Islam group 969, whose sentiments are shared among Buddhists in southern Thailand along the Muslim Malay border. We also look at the Thai conscription of forty-thousand soldiers who fought in the Vietnam War with the blessings of Buddhist monks, and WWII's Japanese militarism supported by Zen Buddhism. The struggles for recognition of the nun's order in Southeast Asia, and East Asian women's soteriological limitations due to patriarchal structures, another kind of brutality, is also addressed. While these cases focus on Buddhist agencies of violence, war, and terror, we must consider political, economic, and socio-cultural factors. Students are encouraged to pursue original research that moves beyond questions such as "How do we reconcile violent episodes enacted by Buddhists?", or "What justification is given for Buddhists to condone such acts?". We do discuss these concerns, but we will not prioritize philosophical approaches or religious ideals. Rather this course emphasizes considerations on how Buddhism, like any other religion (indeed, any "-ism"), can be weaponized. So, the question becomes, "why?". By the end of the semester, students will understand the importance of contextual analysis, positionality, globalization, and will be able to apply social theories of religion and violence.

**Requirements/Evaluation:** midterm exam; Four one-page written critical reading responses; final project presentation and essay (1,500-1,750 words)

### **REL 325 (F) Faith and Profit in the Medieval Mediterranean**

**Cross-listings:** HIST 325 REL 325

**Secondary Cross-listing**

In many historical societies, there have been tensions between the demands of economic and religious life. What can I sell, what should I do with money, and how shall I interact with strangers? What is the relationship between religious ideals and the habits of everyday life? These questions can become especially acute when representatives of two or more competing belief systems interact with each other. The medieval Mediterranean provides numerous rich examples of societies and individuals facing these questions. In this class, we will look at how medieval Jews, Christians, and Muslims resolved these and other dilemmas in the market societies surrounding the Mediterranean basin, as they created their own forms of religious law and economic philosophy. In the process, we will gain a more profound understanding of the roots of modern debates about capitalism, property, and economic justice.

**REL 330 (S) Modern Jewish Political Theory**

**Cross-listings:** PSCI 375 JWST 492 REL 330

**Primary Cross-listing**

By the late 19th century, Jews across Europe were faced with an urgent political problem. Amidst burgeoning national self-consciousness throughout the continent, despite the liberatory promises of the Enlightenment, Jews remained a vulnerable, segregated, and stigmatized minority population. Jews had to decide where to pin their hopes. Should they ally themselves with the liberals or the communists? Should they embrace nationalism or cosmopolitanism? Should they, perhaps, abandon Europe altogether and re-constitute themselves elsewhere? If so, should they focus their efforts on relocation to the historical land of Israel? Or could they go anywhere? Wherever they might go, should they aspire to build a modern Jewish nation-state, a semi-autonomous Jewish community, or some other arrangement? Should this coincide with the cultivation of a distinctively Jewish modern language? If so, should it be Hebrew or Yiddish? In this course we will assess various answers to these questions proffered by Jewish political thinkers in the modern period. We will pay particular attention to the construction of "Jews" and "Judaism" in these arguments. And we will ask persistently: what constitutes a "Jewish justification" for a political claim in modern Jewish political theory? Coverage will include: Jewish liberalism, political Zionism, Yiddishist autonomism, messianic quietism, and other views. We will read mostly primary sources, including texts by: Hermann Cohen, Theodore Herzl, Chaim Zhitlowsky, Franz Rosenzweig, Leo Strauss, Hannah Arendt, and many others.

**Requirements/Evaluation:** six short (1-2 pages) response papers; two 6- to 8-page papers, each analyzing a different view in depth; a final 18- to 20-page paper that incorporates the two previously submitted 6-8 page papers, but also compares the two views and adjudicates between them

**Prerequisites:** none

### **REL 333 (S) The Politics of Myth**

Myths animate ethical and political life. Shared stories that function as sources of justification and motivation are reflected in our anxieties and aspirations, in how we talk, and in how we perform our identities. These are stories about the origins of our world, the founding of the political order, the forging of groups, the menace of enemies, the triumph of heroes, the ultimate destiny of humankind. In this course, we will explore the meaning of "myth" in our ethical and political lives. We will read and discuss a wide range of approaches to myth. For instance, readings may include works by Plato, medieval Jewish and Islamic philosophers, Friedrich Nietzsche, Georges Sorel, Ernst Cassirer, and Walter Benjamin. Particular attention will be given to a set of mid-twentieth century theorists of myth who have had an especially strong impact on the meaning of myth in American popular culture: Carl Jung, Mircea Eliade, and Joseph Campbell. We will assess the enduring resonance of their ideas and explore new opportunities to think critically and imaginatively about myth in this tradition, reading works by Wendy Doniger, Jeffrey Kripal, and other contemporary scholars in religious studies. These theoretical explorations will serve to enrich our efforts, throughout the course, to uncover the myths that animate our own lives. We will explore *our myths* through sustained introspection, interpretations of popular culture, and opportunities for myth-criticism and myth-making. Thus, in addition to the critical analysis of myths and myth theories, students will have the opportunity to play creatively with the possibilities of myth. The course will culminate in a final creative project engaging with the idea of myth.

**Requirements/Evaluation:** Two 5-7 page papers and either a final annotated creative project or a final 7-10 page paper.

**Prerequisites:** None

**Enrollment Limit:** 18

**Enrollment Preferences:** Religion majors and students who have taken a course in the Religion department.

### **REL 334 (S) Imagining Joseph**

**Cross-listings:** REL 334 JWST 334 COMP 334 ANTH 334

Secondary Cross-listing

Beloved son, rival brother, faithful servant, dreamer, seer, object of desire, lover, husband, bureaucrat, Joseph is one of the most fully-limned and compelling figures in the Jewish, Christian, and Muslim scriptural traditions. The story of Joseph unfolds over fourteen chapters in the Hebrew Bible, and is the subject of the fourth longest sura in the Qur'an. Through millennia, the story of Joseph has inspired a wealth of interpretations, commentary, apocrypha, re-tellings, and back-story, including an apocryphal book of scripture about Joseph and his wife, Asenath, Sufi poetry about Joseph and Zuleikha (Potiphar's wife), a trilogy by the 20th century German novelist Thomas Mann, a musical by Andrew Lloyd Weber, and many expressions in Western visual art. The course will explore these various expressions, looking to them for the ways in which Joseph has captured the imaginations of peoples and cultures across time and space. The course will be organized as a collaborative seminar in which the class will read the foundational scriptures together, followed by thematic discussions to which students will contribute insights from their own readings of particular peripheral texts. Students will learn the pleasures of close and intense exegetical reading in approaching the Hebrew Bible and Qur'an, as well as the more expansive pleasures of linking post-scriptural expressions together.

**Requirements/Evaluation:** occasional response papers; substantial final project and paper; class participation

**REL 335 (S) The Meaning of Diaspora and the Jews of Europe (WS)**

**Cross-listings:** REL 335 HIST 434 JWST 434

**Secondary Cross-listing**

Dispersion, exile, migration, statelessness are all aspects of diaspora. In the study of diasporic peoples and cultures, the Jews have long figured as the archetype. As a result, Jewish political figures, intellectuals, social activists and scholars have played a central role in discussions of the meaning of diaspora, including debates about its political and social implications, economic value, and cultural significance. In the first half of the semester, in discussions of common readings, we will examine various historical interpretations of Jews' diasporic existence from the nineteenth century to the present and its implications for humanitarianism. Beginning in the first half of the semester and with greater intensity in the second half of the semester, you will conduct independent archival research on some aspect of the history of the Jewish diaspora using the digitized archives of the American Jewish Joint Distribution Committee that will culminate in a twenty-plus-page paper. In the second half, the seminar will continue to meet weekly as a research colloquium, to provide a forum for you to present your research and drafts in progress and to give feedback on fellow students' work. In this seminar, we are not merely studying history; you are actually doing history. That is to say, you will be more than students of history in this course: you will become historians in your own right. Over the semester, you will learn how to pose historical questions; to engage critically with readings beyond summarizing them; to synthesize an enormous amount of source material; and to learn how to write more clearly. By the end of the semester, the goal is for each student to produce a polished research paper based on substantial engagement with archival sources and relevant secondary literature that will serve as a capstone to your coursework at Williams or as a potential jumping-off point for future research projects, including a senior thesis in History or Jewish Studies.

**Requirements/Evaluation:** class participation, several short papers, oral presentations, and a 20-page research paper

**REL 338 (F) Transhumanism: Religion, Technoscience, Obsolescence**

**Cross-listings:** HSCI 338 SOC 338 STS 338 REL 338

**Secondary Cross-listing**

This interdisciplinary seminar invites students to pursue sociohistorical analysis and sustained critical discussion of the transhumanist movement and its overriding aims: the augmentation, transformation, and eventual transcendence of human biological constitution; the realization, through speculative technoscientific means, of an enhanced or even "postbiological existence"--a "posthuman condition," "Humanity 2.0." Through close readings of primary historical documents, transhumanist texts, scholarship on transhumanism, works of science-fiction film, literature, and popular culture, we will position the movement as an empirical conduit through which to explore the sociohistorical conditions under which transhumanist ideas

and practices have emerged, circulated, and taken up residence. To that end, we will consider the ties of transhumanism to eugenics and massive investments in pharmaceuticals, anti-aging medicine, and so-called "GNR" technologies (i.e. genetics, nanotechnology, and artificial intelligence and robotics); the movement's affinities with neoliberalism and what some have pointed to as transhumanism's racialized subtext of whiteness. We will furthermore devote considerable attention to the technological singularity, the figure of the cyborg, mind-uploading, space colonization, and cryonic suspension, all of which, like transhumanism broadly, suggest that science and technology have in some sense come to operate as powerful channeling agents for the very sorts of beliefs, practices, and forms of association that theorists of secularization expected modernity to displace. Lastly, throughout the course of the seminar we will take transhumanism as a provocation to think broadly and seriously about religion, technology, embodiment, and ways of being human.

**Requirements/Evaluation:** informal weekly writing, two short review essays, and one 15-page seminar paper

**Prerequisites:** Prior coursework in sociology-anthropology, history, religion, or science and technology studies.

**Enrollment Limit:** 14

**Enrollment Preferences:** Anthropology and Sociology majors and Science and Technology Studies concentrators

**Expected Class Size:** 14

**Grading:** yes pass/fail option, no fifth course option

#### **REL 340 Science, Religion, and the (post)colony: Critical approaches to the global history of knowledge (DPE)**

Histories of science and religion have been deeply intertwined with colonial and postcolonial history. Colonial claims to legitimacy were often rooted in perceptions of scientific and technological superiority, and colonial expansion often marched in lockstep with missionary activity and forced conversions. In the process, race and human difference emerged as concepts at the intersection of scientific and religious discourses and was forged within the colonial framework. This colonial history of science and religion impacted how scientific and religious thought, practices and institutions developed through the period of decolonization and into today. Similarly, the attendant history of race and human difference continues to influence postcolonial and contemporary discourses around race, ethnicity, identity and migration. In this course, we will trace key moments in the history of science and religion and their relation to coloniality. We will start in the sixteenth century with the rise of modern European empires, move into the height of modern colonialism, indigenous genocides and chattel slavery, and trace decolonization from the middle of the nineteenth into today. Throughout, we will investigate how science and religion emerged as concepts, practices and institutions, and how these narratives impacted, and were impacted by colonial expansion and history. We will pay particular attention to questions of race, gender, sexuality and human difference as key concepts and practices that emerged at the intersections of science, religion and (post)colonialism

**Requirements/Evaluation:** 2 response papers (3-5pages each) + final project (could be a 10-15p paper or creative project of any kind)

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Concentrators, followed by seniors and juniors

**Expected Class Size:** 15

**Grading:**

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** The course addresses questions of race, gender, sexuality and human difference as seen through the history of science, technology and medicine. Students will creatively engage with critical race theory, postcolonial theory and queer theory. They will also investigate human suffering as a category that provides a deeper understanding of difference, diversity and equality.

#### **REL 355 (S) Foucault: Confessions of the Flesh**

**Cross-listings:** REL 355 STS 355 COMP 359

Primary Cross-listing

The French philosopher, historian, and social critic, **Michel Foucault** (1926-1984) has had a massive influence across a range of disciplines. Indeed,

in 2019, Google Scholar ranked Foucault as **the number one most highly cited scholar in the Humanities and Social Sciences**. While many of his contemporaries have faded in importance, Foucault's writings on power, madness, the history of sexuality, and the structures of domination and governmentality have become central to the theoretical canon of a range of academic disciplines. To be a scholar in the humanities today is often to be in Foucault's shadow. But despite the many references to his work, Foucault is frequently misunderstood and subsequent scholars often attribute to him positions he would have repudiated. Now almost forty years after his death, his work is also long overdue for a reappraisal as we come to understand Foucault better as a person and especially as the final, and posthumous, volume of his History of Sexuality, ***Confessions of the Flesh***, has only just appeared and been translated into English. In this course we will mainly read Foucault supplemented with occasional contextual readings. Although we will touch on his earlier writings, this seminar will emphasize his middle-to-late period (beginning with ***The Archaeology of Knowledge***) and including selections from his later monographs, lectures, interviews, and short writings. It will culminate in the unfinished intellectual and political project that occupied Foucault in his last days. We will think with and often against Foucault, focusing primarily on questions of power, knowledge, truth, and addressing his later emancipatory gesture toward "technologies of the self." We will also appraise the methodologies that Foucault described as "archaeology" and "genealogy." We will historicize Foucault in his life and cultural context and ask how much of his arguments still apply today. What blind-spots did he have? Which of his ideas are worth consolidating and which need repudiating? How might we go beyond Foucault?

**Requirements/Evaluation:** class participation, weekly critical responses, 10- to 12-page final paper

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** In order of preference, Religion majors, STS concentrators, Comp Lit majors, and then Philosophy majors.

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

### **REL 358 (F) Religion and Law (DPE)**

**Cross-listings:** GBST 358 REL 358

#### **Primary Cross-listing**

This course explores the concept of "law" through an investigation of the complex relationship between law, ethics, and religion. In doing so, we will look at legal theoretical texts as well as legal anthropological studies to pose critical questions about the nature of law, the functioning logic of law, the relationship between law and lived experience, and the legal construction of categories and facts. In the course, we will consider two intersections of religion and law: the particularities of religious legal traditions and the relationship between religion and secular law. Topics will include the secular legal construction of religion, the relationship between law and ethics, the nature of legal hermeneutics, and the racial, gender, and sexual politics of legal interpretation.

**Requirements/Evaluation:** reading response, two essays, final research paper

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Religion majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

GBST 358 (D2) REL 358 (D2)

**Difference, Power, and Equity Notes:** Law is seen as both a repressive and liberatory force. In taking a critical approach to the nature of law and legal interpretation, this course prepares students to think about the language of "rule of law," "order," and "justice" as a complex relationship between law and power.

**REL 360 (S) The Gothic Cathedral: An Art History**

**Cross-listings:** ARTH 360 REL 360

**Secondary Cross-listing**

Through their enormous scale, through the gravity-defying complexity of their construction, and through the sumptuousness of their materials and decoration, Gothic cathedrals -- the medieval equivalent of the blockbuster movie, and then some -- have amazed visitors for centuries. The widespread social media reaction of shock and dismay to the fire at Notre Dame Cathedral in Paris almost three years ago, moreover, indicates that this power of the cathedral to dazzle and to capture hearts remains very much alive. But how have art historians, specifically, made sense of these extraordinary, and extraordinarily complex, monuments? And how have the questions they have asked about the cathedral changed over time? Through a close examination of a number of influential books, in particular -- each one of them a kind of miniature cathedral in its own right -- this 300-level seminar will investigate the shifting interpretation of the Gothic Cathedral over the past 150 years. In so doing, the seminar aims to shed light not only on the fascinating multiplicity of realities that make up the Gothic cathedral but also on the changing shape of the discipline of art history itself, from its beginnings to the early 2020s.

**Requirements/Evaluation:** participation in class discussion; 2 oral presentations; two 2-3-page papers, and a 8-10-page paper

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** art majors and sophomores, but open to all

**Expected Class Size:** 10

**REL 374 (S) Mysticism: Vision, Writing, History (WS)**

**Cross-listings:** REL 374 COMP 352 ENGL 374

**Secondary Cross-listing**

The promise of God's real presence in the world lies at the heart of Christianity as a messianic and scriptural faith. But mystics, who seek out and bear witness to their own experiences of the divine, have often been viewed with suspicion by church and state authorities. At stake in these confrontations between orthodoxy and the individual witness are questions of knowledge and power. To whom does God speak, who speaks for God, and how can anyone, whether mystic or priest, be certain? We will learn how these questions have inflected certain passages in the history of Christian belief and practice: the flourishing culture of mystical writing by medieval women, the efforts of some Protestant sects to distribute authority more horizontally, and early modern philosophers' criticisms of prophecy and fanaticism. But our deepest concerns will be literary and aesthetic. What modes of writing did mystics use to express what was, in fact, inexpressible? What role did visual art play in visionary experience? And how has mysticism influenced the work two of the twentieth century's most significant theorists of language, Ludwig Wittgenstein and Jacques Derrida?

**Requirements/Evaluation:** biweekly 5-page papers, biweekly 2-page response papers, thoughtful participation in class discussions

**Prerequisites:** a 100-level ENGL course, or a score of 5 on the AP English Literature exam, or a score of 6 or 7 on the Higher Level IB English exam

**Enrollment Limit:** 10

**Enrollment Preferences:** English majors and those intending to major in English

**REL 412 (F) Gandhi: History, Ideas and Legacy (WS)**

**Cross-listings:** REL 412 LEAD 412 ASIA 412 ASST 412 GBST 412 HIST 496 LEAD 322

Secondary Cross-listing

This course studies the life, work, and ideas of M.K. Gandhi (1869-1948), one of the most influential thinkers of the non-western world. Gandhi is well known today for his philosophy of non-violent resistance and its application in India's freedom struggle as well as his influence on the work of leaders

like Martin Luther King and Nelson Mandela. Hailed as the 'father of the Indian nation', however, Gandhi is not only known for his political ideas but also for his deep engagement with aspect of everyday human behavior and morality: truth, vegetarianism, sex and celibacy, to name just a few of his obsessions which contributed to making his broader philosophy. It is this commitment to a morally pure life that earned him the title of 'Mahatma' or Great Soul in India. This tutorial will focus on three key aspects of Gandhi: his ideas of peaceful protest as means of social and political change, his contemplations on moral philosophy, and on his legacy in modern India and the world. Students will read a combination of Gandhi's own writings as well as journal articles, monographs and films. The course will probe questions such as: What was the context and nature of Gandhian nationalism? Did it help to integrate the Indian nation? Was Gandhi truly a Great Soul, a saint or a shrewd politician? In what ways is Gandhi received and remembered by the Indian nation today? How does understanding a figure like Gandhi facilitate our understanding of modern nationalism, citizenship and political action?

**Requirements/Evaluation:** 5-7-page essays or 2-page critique due each week and a final report (3-4 pages) at the end of the semester.

**Prerequisites:** None, except students who have taken HIST488T will not be permitted to take this class.

**Enrollment Limit:** 10

**Enrollment Preferences:** Senior history majors and students who have previously taken HIST221. Students who have previously taken HIST488T will not be permitted to take this class.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

## **REL 421 (S) Picturing God in the Middle Ages**

**Cross-listings:** REL 421 ARTH 421

Secondary Cross-listing

How did medieval Europeans imagine their God and how did they give what they imagined pictorial form? How were these pictures used, both in public and in private life, and why? Paying particular attention to the function and experience of medieval works of art, this seminar will examine the evolution of images of God, in both the Eastern and Western halves of Europe, and the problems these images often generated. Through readings and class discussion, the course will investigate, among other specific topics: the varied attitudes toward the representability of God in Judaism, Islam, and Christianity; the impact of the Roman cult of the emperor and of images of the dead on the earliest portraits of Christ; the cult of the icon, concerns over idolatry, and the destruction of images; ideas about spiritual versus physical vision and their influence on the making and viewing of pictures; the relationship of sacred images to relics, the Eucharist, and other aspects of Christian ritual; and the pictorial exploration of both the torture and sexuality of Christ. Students will also pursue an individual research project, in which they will examine in greater depth a specific depiction of divinity of their choosing, in light of what we have considered together in the seminar.

**Class Format:** Class will meet online at first but may shift to in-person if circumstances allow

**Requirements/Evaluation:** class participation, oral presentation, one short paper (2-3 pages), final research paper (15-20 pages)

**Winter Study -----**

**REL 10 (W) Write a Novel**

How many of you have always wanted to write a novel, but never managed to find the time? This course will give you the chance to do just that.

Inspired by National Novel Writing Month, participants in this class will be challenged to complete a significant portion of a novel over the course of Winter Study. We will hold meetings four days a week for three-hour intervals to blitz write text for our respective creative projects. Over the course of these meetings, we will may spend some time informally discussing the craft of creative writing, but our primary focus will simply be putting words down on the page every day. Although no formal experience with creative writing is required, students should come into the class prepared to begin writing and with at least some vague idea of the work they wish to produce. Students interested in using the class to complete other equivalent length

writing projects (such as screenplays, memoirs, etc) will be considered on a case-by-case basis.

**Requirements/Evaluation:** Each students will be expected to produce at least 6,000 words of text per week. A total document of at least 20,000 words (roughly half of a short novel) will be required at the completion of the course.

**Prerequisites:** None

**Enrollment Limit:** 8

**Enrollment Preferences:** If oversubscribed, selection of students will be based on the submission of a short letter describing the proposed novel (or other project).

**Expected Class Size:** NA

**Grading:** pass/fail only

### **REL 16 (W) Experiments in Mindfulness and Art Museums**

Vietnamese Buddhist Zen master Thích Nhất Hạnh said, "Always there is the opportunity to live our life fully. When we drink water, we can be aware that we are drinking water. When we walk, we can be aware that we are walking." It could be added: When we view art, we can be aware that we are viewing art. When we make art, we can be aware that we are being creative. How can we learn to become more alert and conscious to our surroundings and then apply these skills so we can enjoy a fuller, more vivid experience of life? Art holds a key to the answer, and that forms the basis of this experimental winter studies course. Using MASS MoCA's contemporary art exhibitions, explore how objects can act like gongs to bring us to the present, urging us to slow down and be aware of their embedded messages and their possible healing properties. In facilitated art explorations, we will apply contemplative tools modeled on centuries-old Buddhist and other cultures mindfulness techniques, including-but not limited to-guided visualizations, slow walking, mindful listening and chanting, and observations of breathing. Additional experiments will feature opportunities to tune into the creative spirit that we all possess in guided art-making activities to process the overarching course philosophy (based on John Dewey) that "art is experience." This course will take place at MASS MoCA twice weekly for 3 hours each session. Students will work with MASS MoCA's director of education and curator of Kidspace to experiment with "ArtInSight," MASS MoCA's three-pronged pedagogy that includes arts-based social justice conversations, mindfulness-based insight activities, and art-making exercises to deepen connections to the art on view and to one's own creativity. Guest artists will be brought in to further explore mindfulness and the arts. While this is a great opportunity for art/art history and religion majors, students are not required to already have mindfulness or art-making practices

**Requirements/Evaluation:** final project or presentation

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** preference will be given to art and religion majors, juniors and seniors

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Laura Thompson, EdD, is MASS MoCA's director of education and Kidspace gallery curator. Laura has worked in arts and museum education for more than three decades and is a certified Kripalu meditation teacher.

## ROMANCE LANGUAGES (Div I)

### FRENCH

Chair: Professor Leyla Rouhi

Professors: K. Pieprzak; Assistant Professors: P. Leelah, S. Saint-Just; Visiting Assistant Professor: K. Levine; Teaching Associates: Danae Tsiamis and Paul Bouchet; on leave: B. Martin

#### MAJOR—French Language and Literature

The French major seeks to provide training in literary and cultural analysis and linguistic expression through the study of selected texts from the French-speaking world. Emphasis is placed on the changes in form and subject matter from the early modern period to the contemporary era.

The major consists of nine courses. One of these courses must be the 400-level senior seminar during the student's final year at the College.

Students entering the major program at the 200-level may, with the permission of the Department, choose as part of their major program, one course in Art History, History, Philosophy, Comparative Literature or other subjects that relate to and broaden their study of French. Students entering the major program at a very advanced level may, in some cases and with the permission of the Department, include two such courses in their major program.

Working with the major advisor, the student will formulate a curricular plan that will ensure balance and coherence in courses taken. Such balance and coherence will be based on the above areas of literary and cultural investigation. Prospective majors should discuss their program with the major advisor by the end of their sophomore year. This is especially imperative for students who are planning to spend a part or all of their junior year in France.

Inasmuch as all courses in French assume the active participation of each student in discussions conducted in the foreign language, regular attendance at class meetings is expected.

#### MAJOR—French Studies

The major in French Studies is an interdisciplinary program that provides students with the opportunity to acquire skills and knowledge embracing the cultural, historical, social, and political heritage of France and the Francophone world. The program allows for an individualized course of study involving work in several departments and the opportunity to study abroad.

Students electing the French Studies major should register with the French Studies faculty advisor during their sophomore year. At that time, they should submit a feasibility plan that articulates their projected program.

#### The French Studies major consists of ten courses satisfying the following requirements:

at least five RLFR courses in French language, literature, film, or culture;

the RLFR senior seminar during the student's final year at the College;

*Electives:* The remaining courses needed to complete the major must be drawn from at least three different departments and relate primarily to an aspect of the cultures, histories, societies, and politics of France and the Francophone world. These courses will be selected in consultation with members of the Department of Romance Languages. Appropriate electives might include:

AFR 360 Political Thought Frantz Fanon

ARTH 254 Manet to Matisse

HIST 390 Haitian and French Revolutions

RLFR 101-450 All courses in French and Francophone language, literature, film, and culture

#### THE DEGREE WITH HONORS IN FRENCH

Students majoring in French may apply to be admitted to the Honors Program in French upon demonstrating the following: (1) fluency of spoken and written language; (2) potential for successful independent research, as demonstrated by strong performance in advanced-level coursework; (3) interest and motivation; and (4) overall quality and feasibility of the proposal.

By May 15th of their junior year, candidates will have found a thesis advisor, and given the Department a three- to five-page proposal and a preliminary bibliography. (In some cases, and upon consultation with the Department, candidates will have the option to choose a second reader in addition to their primary advisor; for example, when the thesis is interdisciplinary enough in nature that it requires the expertise of an additional reader). This proposal will be discussed by the Department; by June 1st, the candidate will be informed whether they can proceed with the thesis, and if so, what changes need to be made to the focus and scope of the project. The summer before the senior year will be spent reading, researching (in

relevant archives or with field work), and compiling a more detailed bibliography.

Upon their return to Williams, candidates will devote to their theses two semesters of independent study (beyond the nine courses required for the major) and the winter study period of their senior year (493-W31-494). The thesis will be written in French and will usually not be shorter than fifty pages. By the end of the Fall semester, students will normally have a clear outline of the project, have done substantial research, and produced the draft of at least the first half of the project. During January this draft will be suitably rewritten and edited with a view to a final version, while the candidates will also begin work on remaining chapters.

Candidates will submit what they have written to the department on the last day of Winter Study.

On the Tuesday of the first week of the spring semester candidates will make a presentation of the project at a departmental colloquium in French. The thesis will be promptly discussed and evaluated to determine whether or not the student should continue in the honors program. The second semester of independent thesis work will be spent writing more chapters, as well as revising, rewriting, and polishing the project where necessary. The completed thesis in its final form will be due on April 25th. At the end of the Spring term, the student will present and defend the final project before members of the Department and others by invitation. The grade will be awarded once members of the Department have consulted after the defense.

## **THE CERTIFICATE IN FRENCH**

The Certificate in French Language and Cultures consists of a sequence of seven courses for which the student must earn a cumulative grade average of B or higher.

For students with no prior study of French, the course sequence will consist of RLFR 101-102, RLFR 103, RLFR 104, and three additional courses, with at least one of these at the 200-level or higher taken at Williams. For students starting the sequence at RLFR 103 or higher, six additional courses must be taken, including at least three French courses at the 200-level or higher. For these students starting at French 103 or higher, two electives may be taken in other departments: one elective should be in French or Francophone culture (art, literature, theatre, music) and the other in French or Francophone civilization (history, political science, philosophy).

## **PLACEMENT**

A placement test in French is administered at Williams at the opening of the fall semester. Incoming first-year students who register for any French course above the 101 level must take this test, regardless of their previous preparation.

## **STUDY ABROAD**

We encourage all students of French to complement their courses at Williams with the life-changing experience of studying abroad in a Francophone country. In particular, French majors and certificate students are strongly advised to complete part of the requirements for the major or certificate by studying abroad, for either a semester or a year. Most study abroad programs require applicants to have completed a fifth-semester French course in college (French 105) or higher before they go abroad. Credit for up to a total of 4 courses towards the major or certificate can be granted for either a semester or a full year abroad, at the discretion of the Romance Languages Department. Students who are planning to get credit for their study abroad courses should meet with a French faculty member in advance, to review the courses they intend to take abroad. Normally, only courses that focus on French language or Francophone literature, history, politics, art, and culture may be counted towards the major or certificate. The final assignment of course credit will be authorized in consultation with the student's French advisor, once the student has returned to Williams. Such credits can only be determined by review of course format, course materials, and evidence of satisfactory academic performance; students should thus provide not only their study abroad transcript, but retain course materials (including syllabi, papers, exams, and other projects) for potential review back at Williams. While students can gain credit for 100-, 200-, and 300-level courses during their time abroad, the 400-level senior seminar must be taken during the senior year at Williams. Early planning is essential: Students interested in studying abroad are strongly urged to attend the yearly Francophone Study Away Information Session (held each October) during their first year or sophomore year. Students will receive credit for only those study abroad programs recommended and approved by the Dean of Study Away and the Romance Languages Department. Williams has long-term affiliations with the following programs: Hamilton College (Paris), Sweet Briar College (Paris), CUPA (Paris), Middlebury College (Paris), Wellesley College (Aix-en-Provence), Boston University (Grenoble), and both SIT and CIEE (in Morocco, Senegal, and Madagascar). For more on all approved study-abroad programs, see the webpages for the French program ([french.williams.edu](http://french.williams.edu)) and Study Away ([study-away.williams.edu/programs](http://study-away.williams.edu/programs)). Finally, the Department does not administer proficiency exams (for study abroad, fellowships, or job applications) to students who have not completed a French course at Williams; and most study abroad programs will not accept students who have not taken any college courses in French (at Williams) prior to their application. Students should thus plan well ahead (as early as their first year and sophomore year) to take appropriate courses at Williams, before applying for and taking part in study abroad programs in the Francophone world.

## **RLFR 101 (F) Introduction to French Language and Francophone Cultures (DPE)**

This year-long course offers a complete introduction to the French language and is designed to help you become fully conversant in French by

focusing on four fundamental language skills: listening, speaking, reading, and writing. Through daily practice, class activities, interactive discussion, listening exercises, written work, reading assignments, and active engagement with music, video, and film, you will quickly gain confidence and increasing facility with your abilities to speak and understand both spoken and written French. In addition, our study of grammar, vocabulary, and communication skills will be organized around an engaging and dynamic introduction to a variety of French-speaking cultures around the world, from France and Belgium, to Québec and Martinique, to Sénégal and Morocco. *Conducted in French.*

**Requirements/Evaluation:** active class participation, workbook exercises and compositions, chapter tests, midterms, and final exams

**Prerequisites:** none; for students who have never formally studied French; students who have previously studied French (in any formal course, at any level) must take the French Placement Test in late August or early September

**Enrollment Limit:** 18

**Enrollment Preferences:** all are welcome, but if over-enrolled, preference will be given to first-year and second-year students and those with compelling justification for admission

**Expected Class Size:** 18

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** RLFR 101-102 is a year-long course; credit granted only if both semesters (RLFR 101 and 102) are taken. RLFR 101-102 students must also take the French Winter Study Course.

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** Through its focus on French and Francophone cultures around the world, this course enables students to gain both linguistic and cultural proficiency, and to engage with the great diversity of colonial and post-colonial cultures, histories, and identities in France and Belgium, Québec and Martinique, Sénégal and Morocco.

Fall 2022

SEM Section: 01 M-F 10:00 am - 10:50 am Kathryn E Levine

### **RLFR 102 (S) Introduction to French Language and Francophone Cultures**

This year-long course offers a complete introduction to the French language and is designed to help you become fully conversant in French by focusing on four fundamental language skills: listening, speaking, reading, and writing. Through daily practice, class activities, interactive discussion, listening exercises, written work, reading assignments, video-observations, and film-viewing, you will quickly gain confidence and increasing facility with your abilities to speak and understand both spoken and written French. In addition, our study of grammar, vocabulary, and communication skills will be organized around an engaging and dynamic introduction to a variety of French-speaking cultures around the world, from France and Belgium, to Québec and Martinique, to Sénégal and Morocco. *Conducted in French.*

**Class Format:** This class meets 5 times a week from M-F. Students are required to attend class from Monday to Friday.

**Requirements/Evaluation:** participation, online homework, mid-semester and final projects, short writing assignments

**Prerequisites:** RLFR 101, or by Placement Test, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference will go to first- and second-year students and those with compelling justification for admission. Statement of interest solicited if overenrolled.

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Spring 2023

LEC Section: 01 M-F 10:00 am - 10:50 am Sophie F. Saint-Just

### **RLFR 103 (F) Intermediate Studies in French Language and Francophone Cultures**

As a continuation of French 101-102, this dynamic first-semester intermediate course is designed to help you improve your French, while at the same time learning more about French and Francophone cultures, politics, literature, and film. Through the active study and daily practice of listening, speaking, reading, and writing in French, you will: continue developing your communication skills and learn to express your opinions and ideas;

improve your command of spoken and written French through a revision of important grammatical structures; strengthen your reading and writing skills in order to prepare you for further study of literary texts; and develop an increased vocabulary and cultural appreciation of French-speaking cultures around the world.

**Requirements/Evaluation:** Class participation, Homework, Mid-Semester and Final Exams, Short Writing Assignments

**Prerequisites:** RLFR 101-102, or by Placement Test, or Permission of Instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** All are welcome, but if over-enrolled, preference will be given to first-year and second-year students and those with compelling justification for admission

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1)

Fall 2022

### **RLFR 104 (S) Intermediate French II: Advanced Intermediate Studies in French**

As a continuation of French 103, this course will help students gain greater fluency in French, through an exploration of French and Francophone literature, film, media, politics, and culture. With a focus on listening, speaking, reading, and writing, students will review advanced grammar expand their vocabulary, gain greater confidence, and both discuss and debate central questions in the social, political, and cultural landscape of French-speaking communities in Europe, Africa, and the Caribbean.

**Requirements/Evaluation:** Participation, Homework, Writing Assignments, Midterm, & Final Project.

**Prerequisites:** RLFR 103, or by Placement Test, or Permission of Instructor.

**Enrollment Limit:** 20

**Enrollment Preferences:** Enrollment preference for students who completed RLFR 103 in Fall 2022, or those who have placed into RLFR 104 on the French Placement Test.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1)

Spring 2023

SEM Section: 01 MW 7:00 pm - 8:15 pm Preea Leelah

### **RLFR 105 (F) Advanced French: Advanced Studies in French Language and Francophone Culture**

In this French course, we will read and examine literary texts from the twelfth to the 19th centuries, and films from the twentieth and twenty-first centuries. In order to analyze them, we will briefly situate them in their social and historical contexts. These works will help us better understand contemporary France and explore France's colonial past. We will also learn how to write a short research paper in French in the form of an explication de texte. While the themes, authors, time periods will vary, our approach will remain the same. The three themes love, fear, and France's colonial past will be the course's organizing principles. A small section of our course will be devoted to grammar revisions in order to continue to improve our reading and language skills. Conducted in French

**Requirements/Evaluation:** class participation, grammar exercises, 2 five-page papers, 1 presentation

**Prerequisites:** RLFR 104, placement exam, or by permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** All are welcome, but if overenrolled, preference will be given to first- and second-year students and French major and certificate students. If necessary, a statement of interest will be solicited.

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Fall 2022

**RLFR 106 (S) Advanced French: Danger and Desire in French Film and Fiction (DPE)**

**Cross-listings:** RLFR 106 COMP 107

**Primary Cross-listing**

This is an advanced course in French language designed to help you improve your speaking, comprehension, reading, and writing, through the dynamic study of short literary texts and films focusing on danger and desire in nineteenth-, twentieth-, and twenty-first-century France. Through active discussion and debate, textual and cinematic analysis, grammatical review, and careful writing and revision, you will improve your command of spoken and written French, strengthen your ability to express complex ideas, expand your vocabulary, and deepen your understanding of French fiction, film, and culture. This is an ideal course to prepare for study abroad or for more advanced coursework in French literature and cinema. As a focus for improving your French, we will examine a broad range of texts and films on danger and desire in France from 1820 to 2020, with an emphasis on passion and ambition, infatuation and seduction, betrayal and vengeance, courage and cruelty, warfare and resistance. Works to include nineteenth-century texts by Chateaubriand, Duras, Balzac, Mérimée, Flaubert, Maupassant, Zola; twentieth-century texts by Colette, Camus, Sartre, Beauvoir, Duras, Ernaux, Guibert, Quint, Lindon, Vilrouge; and twenty-first-century films by Caron, Ozon, Ducastel, Martineau, Dercourt, and Becker. Conducted in French.

**Requirements/Evaluation:** active class participation, grammar exercises, two short papers, midterm, and final paper

**Prerequisites:** Exceptional performance in RLFR 104; successful performance in RLFR 105; or by placement test; or permission of the instructor.

**Enrollment Limit:** 16

**Enrollment Preferences:** All are welcome, but if over-enrolled, preference will be given to French majors and certificate students; and those with compelling justification for admission.

**Expected Class Size:** 16

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RLFR 106 (D1) COMP 107 (D1)

**Difference, Power, and Equity Notes:** This course centers on a critical examination of difference, power, and equity in French film & fiction. The content examines the effects of class, ethnicity, gender, and sexuality on social inequalities among rich & poor, soldiers & civilians, nations & colonies, men & women. The course employs critical tools to teach students how to articulate and interrogate social injustice, through reading, viewing, discussion, writing, and revision.

**Not offered current academic year**

**RLFR 107 (S) Advanced French: Formation and Transformation (DPE)**

This advanced course is designed to help you refine your French speaking, comprehension, and writing skills in preparation for studying abroad or for more advanced French coursework. We will explore the themes of *formation* (the French term that means at once education and training) and personal transformation, through fictional and autobiographical texts and films. How do individuals find their place in societies and both define and redefine their own identities? Is it possible to reflect critically on one's own *formation*, or is it easier to do so through works of fiction? We will also reflect on our own educational experiences as we read works by authors such as Marguerite Duras, Maryse Condé, Annie Ernaux, and Pierre Bourdieu, and watch both recent and classic films from 1950s France to 2020s Québec.

**Requirements/Evaluation:** One close-reading presentation and essay, one discussion-leading presentation, two analytical essays, final project

**Prerequisites:** Successful performance in RLFR 105 or 106, or by placement test, or permission of the instructor.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students from all majors welcome, but if over-enrolled, preference will be given to French majors and certificate students.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** This course explores questions of difference, power, and equity through a critical analysis of educational systems in France and the Francophone World. Although education is assumed to create equity (in both France and in North America), the content of this course will help students nuance this view and articulate how different social identities are often excluded from the power and opportunity that education seems to promise.

Spring 2023

SEM Section: 01 MWF 12:00 pm - 12:50 pm Kathryn E Levine

**RLFR 108 (S) Voyages Francophones: Alienation and Self-Discovery in Contemporary Literature and Film**

This is an advanced course in French language designed to help you improve your speaking, listening comprehension, reading, and writing, through the dynamic study of literary texts and films focusing on the themes of alienation and self-discovery in the late twentieth- and early twenty-first-century Francophone world. Through active discussion and debate, textual and cinematic analysis, grammatical review, and careful writing and revision, you will improve your command of spoken and written French, strengthen your ability to express complex ideas, expand your vocabulary, and deepen your understanding of French-language fiction, film, and culture. This is an ideal course to prepare for study abroad or for more advanced coursework in French language and cinema. As a focus for improving your French, we will examine a broad range of texts and films on the themes of alienation and self-discovery-especially in the context of immigration and coming of age-as they are represented in texts from France, Québec, and the Caribbean.

**Requirements/Evaluation:** class participation, grammar exercises, group discussion leading, two short papers, and final project

**Prerequisites:** exceptional performance in RLFR 104; successful performance in RLFR 105; or by placement test; or permission of the instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** French Majors and certificate students

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

**Attributes:** FMST Related Courses

Not offered current academic year

**RLFR 202 (F) War and Resistance: Two Centuries of War Literature in France (1800-2015) (DPE)**

**Cross-listings:** RLFR 202 COMP 292 WGSS 201

Primary Cross-listing

In 1883, Maupassant called on his fellow war veterans and writers to join him in speaking out against warfare and violence, crying "Let us dishonor war!" From the Gallic Wars against Caesar (during the first century BC) to recent terrorist attacks in France (at the opening of the twenty-first century), the French literary tradition is rich in texts that bear witness to war and speak out against its monstrous inhumanity. While war literature in France can be traced back to ancient and medieval texts on Vercingétorix, Charlemagne, William the Conqueror, and Joan of Arc, this course will focus specifically on literary representations of war during the nineteenth- and twentieth-centuries, from the Napoleonic Wars, to the First and Second World Wars, to the Algerian and Cold Wars, and the "War on Terror." Discussions will examine the impact of war on soldiers and civilians, patriotism and pacifism, history and memory; the implications of war as invasion and conquest, occupation and resistance, victory and defeat; the relationship of war to gender, sexuality, and ethnicity; and the role of war in colonialism and genocide. Readings to include novels, short stories, and poems by Balzac, Stendhal, Hugo, Rimbaud, Daudet, Maupassant, Zola, Cocteau, Wiesel, Duras, Camus, and Fanon. Films to include works by Resnais, Renoir, Carion, Jeunet, Malle, Angelo, Pontecorvo, and Duras. *Conducted in French.*

**Requirements/Evaluation:** active class participation, midterm exam, and two to three papers (of 3-5 pages each)

**Prerequisites:** exceptional performance in RLFR 105; successful performance in RLFR 106; or by French placement exam; or by permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** French majors and certificate students; Comparative Literature majors; Women's, Gender and Sexuality Studies majors;

and those with compelling justification for admission

**Expected Class Size:** 16

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RLFR 202 (D1) COMP 292 (D1) WGSS 201 (D1)

**Difference, Power, and Equity Notes:** This course focuses on a critical examination of difference, power, and equity in French war literature and film. Through the study of war (as invasion and conquest, occupation and resistance, colonialism and genocide), the course thus challenges students to examine the effects of class, race, religion, ethnicity, gender, and sexuality in narratives on war and violence, and on survival and resistance.

Not offered current academic year

### **RLFR 214 (S) Everything New is Old Again: Legacies of Medieval France**

In the twelfth century, the French language shifted from a mostly ephemeral spoken language to a language that deserved to be written down. Authors began recording stories that had only been told aloud, and readers of Latin begin translating classical literature for French-speaking audiences. This huge burst of creative expression remade popular culture in ways that we can still recognize today--if we know what to look for. In this course, we will explore how our twenty-first-century passion for memes on TikTok and other social media has similar roots in twelfth-century tastes, and how the literature and culture of medieval France have shaped what we now think of as literature and pop culture. We will explore four major themes: the reinvention and adaptation of classical literature, the invention of modern romantic love, the introduction of King Arthur, and hilarious short fiction (also known as twelfth-century memes). Readings to include love poetry, short narratives both funny and serious, and longer texts about adventure and love. *Conducted in French.*

**Requirements/Evaluation:** active class participation, midterm paper, class presentation, and final project

**Prerequisites:** strong performance in RLFR 105; successful performance in RLFR 106; or by French placement exam; or by permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** French majors and certificate students; and those with compelling justification for admission

**Expected Class Size:** 16

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1)

Not offered current academic year

### **RLFR 216 (F) Women Behaving Badly: Deviant Women in Early Modern French Literature (DPE)**

**Cross-listings:** RLFR 216 WGSS 216

Primary Cross-listing

Female deviance often implies resisting a dominant and oppressive patriarchal status quo embedded within cultural and historical backgrounds. This course explores female characters in early modern French literature who refuse to conform to established gender roles. Defying social constructs of femininity, through either judicious negotiations or more aggressive and violent behavior, is an important trope in the writings of both male and female authors of the seventeenth and eighteenth centuries. What constitutes deviant behavior, however, depends on social definitions of gender roles, which evolve over time. In this course, we will first examine women's place within the historical and socio-cultural context of the *Ancien Régime*, which will lead to an examination of female behavior censured during the seventeenth and eighteenth centuries. We will then reflect on how we, as modern readers, perceive such deviancy at it relates to the past. Finally, we will discuss the relevance of studying deviant women in light of current events, such as the #MeToo movement, which has led to a new level of consciousness and empathy for the plight of marginalized groups. Potential readings to include Corneille's *Médée*, Madame de la Fayette's *Princesse de Clèves*, Laclos's *Liaisons dangereuses*, and Isabelle de Charrière's *Lettre à Mistriss Henley*.

**Requirements/Evaluation:** active class participation, one presentation (8-10 minutes), three to four papers (3-5 pages), and a longer final paper

**Prerequisites:** strong performance in RLFR 105; successful performance in RLFR 106; or by French placement exam; or by permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** French majors and certificate students; Comparative Literature majors; Women's, Gender and Sexuality Studies majors; and those with compelling justification for admission

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RLFR 216 (D1) WGSS 216 (D1)

**Difference, Power, and Equity Notes:** This course focuses on a critical examination of difference, power, and equity in early modern France. Through the study of deviant women, the course thus challenges students to examine the effects of class, race, ethnicity, gender, and sexuality in narratives on women, misogyny, and criminality.

Fall 2022

SEM Section: 01 MR 2:35 pm - 3:50 pm Preea Leelah

### **RLFR 218 (S) Translating French: An Introduction to Theory and Practice**

**Cross-listings:** COMP 209 RLFR 218

#### **Primary Cross-listing**

What decisions do translators make in order to render texts accurately (and even beautifully) into another language? What makes one translation "better" than another? Should we consider translation as a literary genre in its own right, and should we read translated texts differently from texts in their original language? This advanced course will invite you into the world of translation studies, bringing together aspects of translation theory and technical translation methodologies in order to develop your skills as translators, readers, and speakers of French. We will translate texts from a range of genres mostly from French into English and occasionally from English into French, paying particular attention to the formal and linguistic differences that can pose problems for translators. In addition to completing an independent translation project on your choice of text or media, you will also consider your own priorities as translators, formulating and revising two translation statements over the course of the semester. This course will be taught in French, and the class format will vary between lectures, seminar-style discussions, workshops, and student presentations.

**Requirements/Evaluation:** Active class participation, three written translations, and final translation project (including a written translation and class presentation).

**Prerequisites:** Strong performance in RLFR 106, successful performance in another 200-level French course, or by placement, or by permission of the instructor.

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference will be given to French majors and certificate students, and to Comparative Literature majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COMP 209 (D1) RLFR 218 (D1)

Spring 2023

SEM Section: 01 MWF 10:00 am - 10:50 am Kathryn E Levine

### **RLFR 226 (S) Black France/France Noire (DPE)**

**Cross-listings:** AFR 226 RLFR 226

#### **Primary Cross-listing**

On the eve of the new millennium, the year 1998 saw the emergence in France of "Black studies à la française" (Ndiaye). Inspired, in part, by the 150th anniversary of the 1848 abolition of slavery, the French black minority "made itself more visible" (Faes and Smith). This course examines a wide range of discursive practices through which athletes, artists, authors, politicians, activists, and scholars amplified their voices in the French hexagone. It retraces the rise of these discourses and how they assert, reframe, and establish blackness as a legitimate field of knowledge and a space of affirmation and contestation. Following a study of the interwar period (1918-1939), when the work of "negritude women" (Sharpley-Whiting) such as "afro-latinité" spurred the negritude movement, we will discuss publications, documentaries, and seminal moments of protest in the early twenty-first

century. Course material may include works by Suzanne Césaire, Jane and Paulette Nardal, Aimé Césaire, Frantz Fanon, Achille Mbembé, Françoise Vergès, Pascal Blanchard, Nicolas Bancel and Sandrine Lemaire, Pap Ndiaye, Gaston Kelman, Rokhaya Diallo, Alice Diop, Léonora Miano, and Fabienne and Véronique Kanor. *Conducted in French.*

**Requirements/Evaluation:** response papers, midterm paper, TV show, colloquium

**Prerequisites:** RLFR 201, 202, or 203, or by permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** French and Africana Studies concentrators

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

AFR 226 (D2) RLFR 226 (D1)

**Difference, Power, and Equity Notes:** This course satisfies the DPE requirement because it focuses on "the shaping of social differences, dynamics of unequal power, and processes of change" through the lenses of historical colonial legacies, race, gender, citizenship among other questions.

Not offered current academic year

### **RLFR 229 Black Outside the U.S.**

This course explores multiple ways Black identity evolves, adapts and is experienced differently depending on location. Students analyze Black experience in the U.S., France and Senegal through a range of texts from books and social media to music and film. One key aspect of the course is a study abroad trip to Senegal, which increases cultural awareness through experiential learning. This combination of textual learning with experiential knowledge exemplifies how language, religion, gender, geography, and performance shape one's racial identity. In the first section of the course, students investigate Black experience in the U.S., focusing on such topics as the one-drop rule, racial profiling and where mixed people fit within Black/White tensions. The second section highlights the politics of language in France. Students explore how words like "Black," "noir" and "race" have strong political connotations in France and spur both resistance to and alliance with Black American civil rights history. In the third part of the course, students visit Dakar, Senegal, and analyze Blackness through their own observations and encounters. Their trip insights jumpstart the final focus of the course on Senegal. Students investigate the influence of French colonialism on Black identity in Senegal, which makes the two geographical experiences of Blackness very different but still forever linked.

**Class Format:** seminar, the course includes a required spring break trip to Dakar, Senegal, which is no additional cost to students

**Requirements/Evaluation:** evaluation will be based on class participation, short weekly reading responses, two 4-5 page papers, a presentation based on the spring break trip, and a final presentation including a short 2-page report

**Prerequisites:** none

**Enrollment Limit:** 8

**Enrollment Preferences:** students who have taken other AFR courses, Francophone speakers and students

**Expected Class Size:** 8

**Grading:**

**Distributions:** (D2)

**Attributes:** AFR Core Electives GBST Borders, Exiles + Diaspora Studies Electives

Not offered current academic year

### **RLFR 232 (S) Liberté, Egalité, Fraternité ? Race, Gender, and Political Power in Eighteenth-Century France (DPE)**

**Cross-listings:** COMP 219 RLFR 232

Primary Cross-listing

The French Revolution of 1789 was, to a large extent, inspired by Enlightenment thinkers such as Voltaire, Rousseau, and Diderot who promoted ideas on individual liberty, scientific progress, religious freedom, and secularism. The Revolution brought with it promises of a society freed from the abuses of an absolute monarchy. Yet as feminist thinker Olympe de Gouges would note, when France redefined its notion of citizenship after 1789, it did not include women and people of color. This course examines Enlightenment ideas that led to the French Revolution, while analyzing how those ideas failed to bring true equality. Voltaire, Buffon, and Montesquieu all advocated for the abolition of slavery, but they also held racist and sexist

views, justified by pseudoscientific discourse. By further juxtaposing these thinkers with feminist and abolitionist authors such as Olympe de Gouges and Claire de Duras, we will examine how eighteenth-century female authors advocated for the rights of women. Finally, we will analyze artworks such as Marie-Guillemine Benoist's *Portrait d'une négresse* (1800) and discuss how France is using such works today to reckon with its history of discrimination.

**Requirements/Evaluation:** active class participation, one presentation (8-10 minutes), three to four papers (3-5 pages), and a longer final paper

**Prerequisites:** excellent performance in RLFR 105; successful performance in RLFR 106; other RLFR 200-level courses; or by French placement exam; or by permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** French majors and certificate students; Comparative Literature majors; and those with compelling justification for admission

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COMP 219 (D1) RLFR 232 (D1)

**Difference, Power, and Equity Notes:** In its focus on Race, Gender, and Political Power, this course centers on a critical examination of difference, power, and equity in eighteenth-century France. Through the study of enlightenment and feminist thinkers and leaders, the course asks students to analyze the social, political, and discursive effects of class, race, ethnicity, gender, and sexuality in narratives on revolution, and to re-examine both past and present definitions of "liberty, equality, fraternity."

Spring 2023

SEM Section: 01 MR 2:35 pm - 3:50 pm Preea Leelah

**RLFR 260 (F) Francophone Graphic Novels** (DPE)

**Cross-listings:** RLFR 260 COMP 260

**Primary Cross-listing**

In this class we will read contemporary graphic novels and *bandes dessinées* from Côte d'Ivoire, Morocco, Guadeloupe, Lebanon, France, and Québec to analyze how they approach subjects such as colonial history, migration and discrimination, gender and sexuality, and representations of disability and the racialized body. We will pay particular attention to the visual form and the critical theory of the graphic novel to further understand why this hybrid genre has become so popular and widespread, and how it is shaping conversations about difference and power in the Francophone world. *Conducted in French.*

**Requirements/Evaluation:** weekly 1-page response papers, two short 4-5-page papers, presentation and final 7-8-page research paper

**Prerequisites:** RLFR 105, 106, by placement or by permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** French majors and certificate students, Comparative Literature majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RLFR 260 (D1) COMP 260 (D1)

**Difference, Power, and Equity Notes:** The readings in this course focus on French colonial and Francophone postcolonial history, contemporary migration, and structures of discrimination built on race, religion, gender, and ableism in the French-speaking world. We will explore how graphic novels in their hybrid visual/verbal forms propose different ways of shaping the dynamics and the discourse of difference and power.

Fall 2022

SEM Section: 01 TR 11:20 am - 12:35 pm Katarzyna M. Pieprzak

**RLFR 300 (S) The *Banlieue* in Literature, Music, and Film** (DPE) (WS)

**Cross-listings:** RLFR 300 AFR 339 COMP 336

**Primary Cross-listing**

The *banlieue* looms large in the French collective imagination. From its origins in medieval law, the term *banlieue* at the end of the 20th century has taken on multiple, at times overlapping, but almost exclusively negative meanings. It designates a peripheral geographical space often in contrast to its city center, social exclusion, "urban culture"--as in Hip Hop-produced within that space, and last but not least the symbolic bias through which its inhabitants are viewed (Vieillard-Baron). In this course, we will examine various constructions of the *banlieue* in French music, a manifesto, film, blogs, and literature to focus on the analytical, contestatory and affirmative dimensions of these narratives. Two decades after the film *La haine*, and ten years after the riots, how are filmmakers, artists, authors, and scholars of the *banlieue* reimagining and reframing the *banlieue*? What do current depictions of *banlieues* in the French media tell us about the State, French politics, and the state of French politics? What do "*banlieue* films" and "*banlieue* lit" tell us about the *banlieue*? In this course, conducted in French, we will read, watch, and listen to various constructions of the *banlieue* in French music, film, and literature to focus on the contestatory and affirmative dimensions of these narratives.

**Requirements/Evaluation:** 3 thesis five-page research papers, 2 start-of-the-class brief presentations, active participation to in-class discussions and mini-conference on the *banlieue* (class final project).

**Prerequisites:** RLFR 105 and above

**Enrollment Limit:** 14

**Enrollment Preferences:** French majors and certificate students, Africana and Comparative literature students

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RLFR 300 (D1) AFR 339 (D2) COMP 336 (D1)

**Writing Skills Notes:** To hone their research and writing skills (and prepare for their conference on the *banlieue*), students will write three research papers (with thesis statement and subheadings) from which they will receive professor feedback.

**Difference, Power, and Equity Notes:** This course, *Banlieue in Lit, Music, Film* fosters difficult but carefully framed conversations about race, class, gender, citizenship, housing segregation, discursive practices, immigration and belonging in contemporary France and how identities and power relationships are expressed in *banlieue* film, literature and French hip hop music.

**Attributes:** FMST Core Courses

**Not offered current academic year**

**RLFR 307 (F) Building Francophone Cities: Literature, Art and History** (DPE)

**Cross-listings:** RLFR 307 COMP 308

**Primary Cross-listing**

Through literature, visual art, and urban history, this class will engage with the remarkable histories, presents and imagined futures of five Francophone cities: Casablanca (Morocco), Algiers (Algeria), Kinshasa (Democratic Republic of the Congo), Fort-de-France (Martinique) and Port-au-Prince (Haiti). We will learn about their colonial foundations and postcolonial transformations while paying attention to how these urban spaces and their people and histories are represented and imagined by poetry, novels, and visual art. (Conducted in French)

**Requirements/Evaluation:** Active participation, weekly 1-page response papers, midterm 5-page paper, final project (oral presentation and 8-page paper).

**Prerequisites:** RLFR 105 or above, or by permission of instructor

**Enrollment Limit:** 18

**Enrollment Preferences:** French majors or certificate students, Comp. Lit. majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RLFR 307 (D1) COMP 308 (D1)

**Difference, Power, and Equity Notes:** This course examines the French colonial history and postcolonial futures of five major Francophone cities and pays particular attention to questions of representation of class, race and gender in the historical, literary and visual record.

**RLFR 360 (S) Repairing a Broken World: Intro to North African Contemporary Art (DPE)**

**Cross-listings:** ARTH 460 COMP 361 ARAB 360 RLFR 360 ARTH 560

**Primary Cross-listing**

How do artists respond to a world in crisis? How does visual art engage violent histories, injured bodies, social injustice and ecological disaster? In this course we will explore the political and ethical concept of repair as it emerges in the work of contemporary North African visual artists. Repair is both a material and symbolic transformational practice of putting together something that is torn or broken. It is never complete, nor does it redeem a history of harm or violence. Rather repair is an invitation: a bringing of people, histories, objects, buildings, feelings and geographies into relation with one another in order to link worlds that have been splintered and separated. It is also a call to imagine other futures. North African contemporary artists have deeply engaged in this type of repair work, attending to colonial history, economies of extraction and environmental damage, race and slavery, housing inequity, gender identity and broken transmission of memory. We will dive into the work of individual artists as well as collectives while reading theoretical texts about broken-world thinking, reparative epistemology, alternative archives, and material reparations.

**Class Format:** Section 1 is conducted entirely in French. Section 2 is conducted in English (with the option of selected reading in French). Students are welcome to sign up for either section but students taking the course for RLFR credit must register for section 1.

**Requirements/Evaluation:** For undergrads: Active participation, weekly glow posts, 5-page mid-term paper, 10-12 page final paper and presentation. For grad students: Active participation, weekly glow posts, 5-page mid-term paper, and 20-page final paper and presentation.

**Prerequisites:** For RLFR students, any RLFR 200-level course or above, or by permission of instructor.

**Enrollment Limit:** 18/sec

**Enrollment Preferences:** If over-enrolled, preference will be given to RLFR, ARAB, ARTH and COMP majors, and only 4 spots will be offered to Grad Art students.

**Expected Class Size:** 15/sec

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ARTH 460 (D1) COMP 361 (D1) ARAB 360 (D1) RLFR 360 (D1) ARTH 560 (D1)

**Difference, Power, and Equity Notes:** This course critically examines art work that engages colonial history, economies of extraction and environmental damage, race and slavery, housing inequity, gender identity.

SEM Section: 02 TF 1:10 pm - 2:25 pm Katarzyna M. Pieprzak

**RLFR 410 (F) Senior Seminar: Movement and Migration (DPE)**

How do movement and migration produce and disrupt constructions of identity, home, and the nation? In the context of movement and migration, how is place imagined, experienced and remembered? What are the relationships between movement and containment, flight and freedom? Over the course of the semester, we will examine literary texts, film and visual art from French-speaking communities that focus on: the immigration experience in France, the construction of a Francophone Atlantic identity, internal migration between rural and urban spaces, clandestine migration between Africa and Europe, population displacement due to war, and the possibility of creating portable or nomadic places of memory. Works by Chamoiseau, Glissant, Diome, Condé, Maffre, Pineau, and Binebine among others. *Conducted in French.*

**Requirements/Evaluation:** Weekly 1-page response papers, 5-page mid-term paper and a final 10-page research paper and presentation.

**Prerequisites:** Any 200-level RLFR course, or by permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Senior French majors and students completing the certificate in French, but open to advanced students of French.

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** Students will explore how literature, film and art narratives on migration and movement challenge (and also sometimes replicate) discourses of exclusion and structures of discrimination based on race and ethnic identity and gender. While the course focuses on French-speaking communities and people, we will think broadly about difference and power as they relate to movement, flight and freedom.

Not offered current academic year

### **RLFR 412 (F) Senior Seminar: Nineteenth-Century French Novel: Desperate Housewives and Extreme Makeovers**

**Cross-listings:** WGSS 408 RLFR 412

Primary Cross-listing

In 1834, Balzac wrote that "Paris is a veritable ocean. Sound it: you will never know its depth." The same can be said of the French nineteenth-century novel and its boundless ability to echo the past and illuminate the present. From the Romanticism of Stendhal and Hugo, and the Realism of Balzac and Flaubert, to the Naturalism of Zola and Maupassant, the novel became a forum for examining illicit sexuality, institutional misogyny, social injustice, criminal passions, revolutionary struggles, and Parisian pleasures in nineteenth-century France. Characters such as the imprisoned housewife Emma Bovary, the reluctant revolutionary Jean Valjean, the social-climbing lover Julien Sorel, the ambitious undergraduate Rastignac, and the domestically-abused Gervaise became synonymous with France's turbulent social and political landscape from the 1830s to the 1880s. And as recent film adaptations make clear, these desperate housewives and extreme makeovers continue to haunt our twenty-first century present. Reinterpreted by such actors as Gérard Depardieu, Isabelle Huppert, Uma Thurman, Claire Danes, and Jennifer Aniston, the nineteenth-century novel continues to sound out the scandalous and sensational depths of our own century. Readings to include novels by Balzac, Stendhal, Hugo, Flaubert, Maupassant, Zola. Films to include adaptations by Clément, Berri, August, Arteta, Lelouch, Chabrol. Conducted in French.

**Requirements/Evaluation:** active class participation, midterm exam, and two to three papers

**Prerequisites:** a 200-level or 300-level RLFR literature course at Williams; advanced coursework during study abroad; or by permission of the instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** French majors and certificate students; Women's, Gender, and Sexuality Studies majors; Comparative Literature majors; and those with compelling justification for admission

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

**This course is cross-listed and the prefixes carry the following divisional credit:**

WGSS 408 (D2) RLFR 412 (D1)

Not offered current academic year

### **RLFR 414 (S) Senior Seminar: Coming of Age: French and Francophone Childhood and Adolescent Film (DPE)**

**Cross-listings:** RLFR 414 COMP 414

Primary Cross-listing

Like the bildungsroman in literature, the coming of age story is a genre in itself in cinema. In this senior seminar, we will watch, discuss, and analyze French and Francophone childhood and adolescent narrative films whose protagonists bring into focus larger issues such as racial discrimination, class, gender, sexual identity, social mobility, repression from the state, regime change, delinquency, justice, bereavement, and human trafficking. We will watch seminal films by Euzhan Palcy, the Dardennes brothers, Céline Sciamma, Férid Boughédir, François Truffaut, Faiza Ambah, and Raoul Peck.

**Requirements/Evaluation:** three three-page response papers; thesis statement, methodology, and works cited list on one page; 2 low-stakes presentations and one script of a video essay or academic journal "special issue" essay

**Prerequisites:** 200-level RLFR courses

**Enrollment Limit:** 19

**Enrollment Preferences:** French and Comparative Literature majors and certificate students

**Expected Class Size:** 10

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RLFR 414 (D1) COMP 414 (D1)

**Difference, Power, and Equity Notes:** This course qualifies for a Difference, Power, and Equity requirement because the films we focus on racial inequality, class, gender, sexual identity, post slavery society in the Caribbean, lack of social mobility, repression from the state, regime change, delinquency, justice, bereavement, and human trafficking.

### **RLFR 511 (F) Intensive French Grammar and Translation**

This course is designed to offer students a thorough and systematic review of sentence structures and grammar to develop a reading knowledge of French. Through this intensive study, students will learn to decipher the subtleties of the written language, and as they become more confident they will start translating a variety of short excerpts. Students are also expected to learn and develop a wide lexical range centered on art history and criticism, but not limited to it.

**Class Format:** classes meet twice weekly and are conducted in English

**Requirements/Evaluation:** class participation, papers, a midterm, and a final examination

**Prerequisites:** a strong interest and need to learn French

**Enrollment Preferences:** although this course is to serve the needs of students enrolled in the Graduate Program in the History of Art, undergraduates may enroll by permission of the instructor

**Grading:** pass/fail option only

**Distributions:** (D1)

Not offered current academic year

### **RLFR 512 (S) Readings in French Art History and Criticism**

This course is designed to provide Graduate Program students and interested others with knowledge of French acquired through translation and interpretation. The core of this course is based on the reading and translating of a variety of critical works covering different periods and genres in the field of art history. The material read will be analyzed in form and content, translated or summarized, in order to develop the skills and understand the techniques necessary for reading French accurately. Grammar will be reviewed in context.

**Requirements/Evaluation:** evaluation is based on class participation, papers, a midterm, and a final examination

**Prerequisites:** RLFR 511 or permission of instructor; undergraduates are welcome with permission of instructor

**Grading:** pass/fail option only

**Distributions:** (D1)

Not offered current academic year

### **Winter Study -----**

### **RLFR 13 (W) Creative Portraiture in the Darkroom**

In this course, we will revisit the boundaries between self-portraiture and portraiture. Working in pairs, students will both practice being a model and a photographer: they will pose as a model for their classmates and assist a classmate in creating a self-portrait. In addition, using as a point of departure Hippolyte Bayard's photograph Self-Portrait as a Drowned Man, one of the first self-portraits in the history of photography, students will learn how to use the view camera (the large format camera used during the invention of photography in 1839 and still in use today). We will also study the characteristics of film photography, specifically, light, chemicals, sensitive media, and negative and use them as tools to make creative portraits in the darkroom. By the end of the course, students will have learned to shoot with a 4 x 5 view camera and have practiced with manipulations in the darkroom in order to create unique portraits. Each student will exhibit their work as a triptych in an exhibition. Be aware that this class requires an average of 10 weekly lab or studio hours outside of regular classes.

**Requirements/Evaluation:** short paper and final project or presentation

**Prerequisites:** knowledge of black and white analog photography is preferred, but not required

**Enrollment Limit:** 10

**Enrollment Preferences:** Art majors then random

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Documentary photographer Daniel Goudrouffe, who describes himself as a photographer-author, creates compelling visual narratives about the complexity of life in the Caribbean and its diaspora. His archive of the contemporary Caribbean equally enable

## ROMANCE LANGUAGES (Div I)

### ITALIAN

Chair: Professor Leyla Rouhi

Visiting Assistant Professor: M. Monserrati

The study of Italian in the target language encourages students to gain a deep appreciation of the language, culture and literature through active participation and meaningful experience with the culture on its own terms. Italian courses at Williams are therefore conducted exclusively in Italian in order to enhance and reinforce the emotive and cognitive involvement of the students as they are introduced to the Italian world-view in a lively and natural manner. Students desirous of more contact with Italian are encouraged to attend the weekly Italian Table in the designated college dining hall. More information can be found at [cflc.williams.edu/italian](http://cflc.williams.edu/italian).

#### RLIT 101 (F) Elementary Italian

This course is designed for beginners. Its goal is to give students the opportunity to develop a basic oral/aural and reading/writing proficiency in Italian. During the semester, you will be given training in grammar, pronunciation, aural-oral skills, reading, and writing in Italian by studying a wide range of communication patterns and real-life situations. At the end of the semester, you will be able to use Italian to talk about yourself, describe your family, town, friends, and discuss your interests. You will also be able to talk in Italian about the present and past events and converse with your peers about your daily activities. Your listening skills will allow you to understand short dialogues and conversations, watch clips from mainstream Italian films, and write short compositions. *Conducted entirely in Italian.* The course is taught in person.

**Class Format:** five hours a week with the professor

**Requirements/Evaluation:** participation, homework, compositions, quizzes, an oral exam, oral presentation, midterm and final exams

**Prerequisites:** none; not open to those who have had one year or more of high school Italian

**Enrollment Limit:** 20

**Enrollment Preferences:** instructor will prioritize on the basis of study abroad plans and year at Williams

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** students registered for RLIT 101-102 are required to attend and pass the sustaining program during Winter Study; credit granted only if both semesters (RLIT 101 and 102) are taken

**Distributions:** (D1)

Fall 2022

SEM Section: 01 M-F 9:00 am - 9:50 am Michele Monserrati

#### RLIT 102 (S) Elementary Italian

This course is designed for beginners who already have some basic knowledge of Italian. Its goal is to give students the opportunity to review and expand their oral/aural and reading/writing proficiency in Italian. During the semester, you will continue to learn grammar, vocabulary, pronunciation while improving your aural-oral skills, reading, and writing in Italian. The instructor will present you with a wide range of communication patterns and real-life situations to achieve these goals. At the end of the semester, you will be able to use Italian to talk about yourself, your life, describe your town and history, dreams and interests, and express your opinion on complex topics. You will also be able to talk in Italian about the present, past, and future events and express doubts and hopes. You will understand more complex conversations and clips from mainstream Italian films and write more extended compositions. *Conducted entirely in Italian.*

**Class Format:** Students will meet four times a week with me and once a week with the TA in small groups of 2-3 students.

**Requirements/Evaluation:** participation, homework, compositions, quizzes, an oral exam, oral presentation, midterm and final exams

**Prerequisites:** RLIT 101; not open to those who have had one year or more of high school Italian

**Enrollment Limit:** 20

**Enrollment Preferences:** instructor will prioritize on the basis of study abroad plans and year at Williams

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** students registered for RLIT 101-102 are required to attend and pass the sustaining program during the winter study period; credit granted only if both semesters (RLIT 101 and 102) are taken

**Distributions:** (D1)

Spring 2023

SEM Section: 01 M-F 10:00 am - 10:50 am Michele Monserrati

### **RLIT 105 (F) Pathway to Proficiency**

The course taught in Italian aims primarily to fine-tune the student's speaking, reading, and writing ability while introducing the formal study of Italian culture and society by analyzing short literary texts, articles, films, and plays. This course will also explore Italy's lesser-known cultural and natural sites in an attempt to highlight what Italy has to offer in terms of eco-friendly and sustainable tourism and cultural diversity. In the wake of *Black Lives Matter's* quest for social justice, a part of this course will be dedicated to Italian black writers and artists to explore how the Italian colonial past affects Italy's racial discourse and the construction of its national identity. Students will review and expand the previous semesters' grammar structures to achieve a higher level of fluency and sophistication in language production. Italian 105 is intended for study-abroad returnees and other advanced speakers; students who have been particularly successful in Italian 101-102 are also encouraged to enroll. The course is taught in person.

**Requirements/Evaluation:** oral presentations, midterm and final exams, tests, compositions, participation

**Prerequisites:** RLIT 101/102 or by permission of the instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Students from 101/102 classes, as well as study-abroad returnees.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

## ROMANCE LANGUAGES (Div I)

### SPANISH

**Chair: Professor Leyla Rouhi**

Professors: G. Bell-Villada, S. Fox, J. French. Assistant Professor: C. Macías Prieto. Visiting Assistant Professor: A. Hanson

Teaching Associates: Gabriel Gonzalo Fernández, Emma González Martínez, Anamaría Pla-Ávalo

On leave: G. Bell-Villada (Spring)

#### THE MAJOR IN SPANISH

Students who major in Spanish can expect to acquire linguistic fluency along with in-depth knowledge of the cultures of Spain and Latin America. Through the study of the major writers and historical events of the Spanish-speaking world, our program offers training in literary analysis and linguistic expression, as well as a deep appreciation of Hispanic civilizations.

The major consists of nine courses above the 102 level. In exceptional circumstances, the Department may decide to accept RLSP 101-102 for the Spanish major. One of the nine courses must be the 400-level senior seminar taken during the student's final year at the College; another must be a course that substantially focuses on literature or cultural texts produced before 1800. Students entering at the 200-level may, with the permission of the Department, choose as part of their major program one course not conducted in Spanish but offered by faculty in Romance Languages or another Department or Program, such as Latino/a Studies, Comparative Literature, History, etc., provided that the subject matter relate to and broaden their study of Spanish. Students entering at a very advanced level may, in some cases and with the permission of the Department, include two such courses in their major program. Working with a member of the Spanish faculty, the student will formulate a curricular plan that will ensure balance and coherence in courses taken prior to declaring a major in Spanish. This is especially imperative for students who are planning to spend a part or all of their junior year in Latin America or Spain.

#### THE DEGREE WITH HONORS IN SPANISH

Students majoring in Spanish may apply to be admitted to the Honors Program in Spanish upon demonstrating the following: (1) fluency of spoken and written language; (2) potential for successful independent research, as demonstrated by strong performance in advanced-level coursework; (3) interest and motivation; and (4) overall quality and feasibility of the proposal. Two routes are available to those who wish to apply for the degree with honors.

The first of these involves the writing of a senior thesis.

By May 15th of their junior year, candidates will have found a thesis advisor, and given the Department a three- to five-page proposal and a preliminary bibliography. (In some cases, and upon consultation with the Department, candidates will have the option to choose a second reader in addition to their primary advisor; for example, when the thesis is interdisciplinary enough in nature that it requires the expertise of an additional reader).

This proposal will be discussed by the Department; by June 1st, the candidate will be informed whether they can proceed with the thesis, and if so, what changes need to be made to the focus and scope of the project. The summer before the senior year will be spent compiling a more detailed bibliography and reading.

Upon their return to Williams, candidates will devote to their theses two semesters of independent study (beyond the nine courses required for the major) and the winter study period of their senior year (493-W31-494). The thesis will be written in Spanish and will usually not be shorter than fifty pages. By the end of the Fall semester, students will normally have a clear outline of the project, have done substantial research, and produced the draft of at least the first half of the project. During January this draft will be suitably rewritten and edited with a view to a final version, while the candidates will also begin work on remaining chapters.

Candidates will submit what they have written to the department on the last day of Winter Study.

On the Tuesday of the first week of the spring semester candidates will make a presentation of the project at a departmental colloquium in Spanish. The thesis will be promptly discussed and evaluated to determine whether or not the student should continue in the honors program. The second semester of independent thesis work will be spent writing more chapters, as well as revising, rewriting, and polishing the project where necessary. The completed thesis in its final form will be due on April 25th. At the end of the Spring term, the student will present and defend the final project before members of the Department and others by invitation. The grade will be awarded once members of the Department have consulted after the defense.

The second route is a group of three clearly related courses (offered by the Department of Romance Languages or by other departments, such as History, Art, Philosophy, English, etc.), only one of which may be counted in the nine courses comprising the major. One of the courses will be an Independent Study (plus senior year WSP 30) in the spring of the senior year, at the end of which the student will write an essay that synthesizes the

content of the three related courses. Students may apply for this route by November 2 of the senior year.

In the case of both routes to the degree with honors, the department's recommendation for graduation with honors will be based on the originality and thoroughness of the finished project.

## THE CERTIFICATE IN SPANISH

The Certificate in Spanish Language and Culture consists of a sequence of seven courses for which the student must earn a cumulative grade average of B or higher. Those so interested should express their intent to the chair of the department by March 1 or earlier.

For students with no prior Spanish background, the course sequence will consist of Spanish 101-102, Spanish 103 and 104, and three courses in Spanish above the 104 level, with at least one of these courses at the 200-level or higher taken at Williams. If the student starts out the sequence at Spanish 103, in addition to the three courses in Spanish beyond the 104 level (including a 200-level course or higher), two electives may be taken in other departments. One elective should be in Spanish or Latin-American cultural history (art, literature, drama, music) and the other in Spanish or Latin-American intellectual, political, or social history. Spanish 200, 201, or 208 can be counted for the elective requirement.

Electives may be considered from a variety of departments and programs. However, students should consult with the chair of Romance Languages before making any enrollment decisions.

## PLACEMENT

Students come to study Spanish at Williams with a wide range of backgrounds and prior experiences. Some will have studied Spanish for many years in high school and earlier. Others will have grown up speaking Spanish with family and friends but had little opportunity to study the language at school. Others have lived in Spanish-speaking countries or otherwise studied in immersive contexts. And for others, Spanish is a brand-new language that they are eager to begin learning.

Whatever your previous experience with Spanish, *¡Bienvenida! ¡Bienvenido!* We are glad to have you with us. In order to figure out the most appropriate point of entry, we ask that all students who wish to begin their study of Spanish in the new academic year take the department's placement exam when it is offered during First Days. The only students who don't need to take the placement exam are those who qualify as "true beginners," those with no previous experience of Spanish and for whom 101-102 is obviously the right choice. Everyone else should take the placement test. After you do, the Registrar's Office will notify you of the level and/or course the Spanish faculty have recommended for you. You should free to reach out to the department chair, your recommended instructor, or any other faculty member if you have questions or concerns about your placement.

## STUDY ABROAD

Spanish majors, as well as non-majors interested in further exposure to the language and the culture, are strongly encouraged to study in Spain or Latin America for either a semester or a full year. We recommend that you start planning for study abroad as early as possible, and that you speak to our faculty early on to go over the many possible destinations and programs available to you. In recent years, Williams students have studied in such varied and far-flung locations as Buenos Aires, Havana, Lima, Barcelona, and Madrid. Those who are interested in Madrid may wish to consider the Hamilton College program, with which we maintain consortial ties. Credit for up to four courses can be granted at the discretion of the Department for study overseas. Those four courses count towards the certificate or the major in Spanish. Students interested in study abroad should consult with a member of the department at their earliest convenience.

## FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

### **Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in some cases, provisional approval can be granted (students should be sure to contact the department for details).

### **What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description, and complete syllabus, including readings/assignments. If it is a program we are familiar with, the course title and description are enough. If it is a new program/new type of course we need all the available materials (syllabus, assignments, etc.).

### **Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

Yes. Four maximum.

### **Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

Yes. They have to be courses that focus on language, culture, history, or politics of the target language/culture.

### **Are there specific major requirements that cannot be fulfilled while on study away?**

Yes. Our Senior Seminars are required for the major.

### **Are there specific major requirements in your department/program that students should be particularly aware of when weighing study**

away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

No.

**Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:**

This hardly ever happens but could happen if a student doesn't seek out pre-approval from a faculty member.

### **RLSP 101 (F) Elementary Spanish**

This course focuses on grammar, elementary composition, practice in conversation, and reading of easy modern prose. It is taught by the intensive oral method.

**Requirements/Evaluation:** participation, regular homework exercises, quizzes, a midterm, and a final exam.

**Prerequisites:** This course is for students who have no previous background in Spanish.

**Enrollment Limit:** 15

**Enrollment Preferences:** None. However students with two or more years of High School Spanish are normally not eligible.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Materials/Lab Fee:** Textbook.

**Distributions:** (D1)

Fall 2022

SEM Section: 01 M-F 10:00 am - 10:50 am Soledad Fox

### **RLSP 102 (S) Elementary Spanish**

This course is a continuation of RLSP 101. It focuses on grammar, elementary composition, practice in conversation, and reading of easy modern texts. It is taught by the intensive oral method.

**Class Format:** The class meets five hours a week; students will complete workbook and lab exercises weekly.

**Requirements/Evaluation:** Daily preparation and participation, regular assignments, frequent tests, a midterm and a final. At least two cultural activities per semester must be attended.

**Prerequisites:** RLSP 101; this course is for students who have studied less than two years of Spanish in secondary school. Students must complete RLSP 101 as well as the Winter Study sustaining program to be eligible to enroll.

**Enrollment Limit:** 20

**Enrollment Preferences:** potential majors, all those showing serious interest in the study of a new language.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** Students in RLSP 101-102 are required to attend and pass the sustaining program during the winter study period.

**Distributions:** (D1)

SEM Section: 01 M-F 10:00 am - 10:50 am Leyla Rouhi

### **RLSP 103 (F) Intensive Intermediate Spanish**

**RLSP 103 (F) Intensive Intermediate Spanish.** This course is a continuation of Spanish 101-102. It is designed to help students improve their proficiency in each of the major skill-groups (listening, speaking, reading and writing) while providing an introduction to the cultures of the Spanish-speaking world. Classroom activities and homework are designed to increase vocabulary and improve your ability to handle daily life in a Spanish-speaking country, to express your views on complex subjects such as art and politics, and to increase your knowledge of the cultural

traditions of Latin America and Spain. Film screenings and readings in Hispanic literature, culture and politics will provide material for in-class discussion and some writing assignments. This course provides the linguistic and cultural training that is necessary to engage the diverse Spanish-speaking communities of Latin America, Spain and the US; it will help to prepare students for further literary and cultural studies as well as provide skills that are increasingly essential in fields such as medicine, law, and education. **Conducted in Spanish.**

**Class Format:** Class meets four hours a week: three times with the professor (either in the morning or at noon) and one time in the afternoon with the TA.

**Requirements/Evaluation:** Regular attendance and active in-class participation, workbook exercises and weekly compositions, quizzes, midterm and final exams.

**Prerequisites:** RLSP 101-102 or by Spanish placement exam

**Enrollment Limit:** 20

**Enrollment Preferences:** If the course is over-subscribed, priority will be given to first-year students and others with a demonstrable commitment to study of Spanish.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

#### **RLSP 104 (S) Intensive Intermediate Spanish, Upper Level**

This course is a continuation of Spanish 103. During the spring semester we resume our work to expand your proficiency in each of the major skill-groups (listening, speaking, reading and writing) while increasing familiarity with the vibrant cultures of the Spanish-speaking world. Students in both sections of RLSP 104 can once again expect to sample a variety of written and audiovisual media -- poems and short fiction, essays, journalism, blogs and film -- to deepen their understanding of Hispanic cultures. However, Section 2 will have a more distinct focus on cinema: we will watch a series of classic and contemporary films and develop the specialized vocabulary and skills needed to analyze them in class discussions and student writing. Regardless of which section you are in, students in Spanish 104 can expect to write regularly and to meet with their professor, teaching associate and classmates in varying combinations for four hours each week. This course is designed to prepare students for further literary and cultural studies in Spanish -- including the challenges of study abroad -- and to hone communication skills that are increasingly essential in professional fields such as medicine, law, and education. *Pasajes Lengua* and its accompanying *Cuaderno de Práctica* will once again serve as our primary texts. Conducted in Spanish. For students who have not taken Spanish 103 at Williams, the departmental placement exam is required for enrollment in 104.

**Class Format:** Students will spend 4 hours per week in class in engagement with their Professor, Teaching Associate (TA), and classmates. In addition to the regular MWF classes with their Professor, students will meet for one additional hour per week with the TA. As will be explained in the course syllabus and at the first class meeting, this additional hour with the TA will take place at a time (to be decided during the first weeks of class) that is mutually beneficial for the TA and students.

**Requirements/Evaluation:** Weekly 1- to 2-page compositions, daily homework and class participation, oral reports, unit exams and a final exam.

**Prerequisites:** RLSP 103 or by Spanish placement exam

**Enrollment Limit:** 20

**Enrollment Preferences:** If the course is over-subscribed, priority will be given to first-year students and others with a demonstrable commitment to study of Spanish.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

SEM Section: 02 MWF 10:00 am - 10:50 am Jennifer L. French

### **RLSP 105 (F) Advanced Grammar, Composition, Conversation**

In this course students will refine their knowledge of Spanish grammar and vocabulary towards further fluency in speaking and writing. The focus of the class is grammar through active engagement with relevant cultural, literary, and political materials centered for the most part on Spain. Students will produce regular grammar and composition exercises as well as oral reports. They will also meet with the Teaching Associate, in smaller groups, weekly.

**Class Format:** students must participate in TA sessions once a week.

**Requirements/Evaluation:** regular grammar and composition assignments, a mid-term, occasional quizzes, oral reports; active participation and regular attendance required.

**Prerequisites:** RLSP 104, or results of the Williams College Placement Test, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** first-year students, potential majors

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

### **RLSP 106 (S) Advanced Grammar and Composition through Literature**

This course is designed for advanced students who wish to further polish and refine their grammatical, lexical, and writing skills in Spanish. The course may be taken immediately after 104, by placement exam results, or even after students have begun to sample the Department's literature and culture offerings at the 200- and 300-level. Classic works of short fiction by celebrated Latin American authors such as Gabriel García Márquez and Julio Cortázar will be discussed; selected Latin American films will be viewed as well. For written and oral assignments: weekly essays, in-class presentations, and language-laboratory activities. *Conducted in Spanish.*

**Class Format:** Discussion.

**Requirements/Evaluation:** a weekly essay based on the stories read in class, written lab exercises, participation in the grammatical and literary discussions, quizzes, a mid-term and a final

**Prerequisites:** RLSP 104, any course 201+, placement exam or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Sophomore

**Expected Class Size:** 10-19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **RLSP 107 (F) Advanced Grammar and Conversation**

How is Spanish language relevant to my academic field? What linguistic and cultural resources should I acquire to effectively communicate my academic interests in this language? How do I prepare for a professional presentation in Spanish? What are the limitations of the academic language at the moment of interacting with people in the community? The Advanced Grammar course 107 will provide cultural and linguistic resources to address the questions above and other common concerns that students have around their proficiency and skills to communicate effectively. This course focuses on helping students to advance their cultural and communicative skills in Spanish, as they share their professional interests with other

students. The class will discuss four general topics -medicine, history and human rights, art, and environmental issues-, which will create the context for students to conduct oral presentations and activities around their own academic fields. Another important emphasis of the course will be to connect students' professional interests to current issues of social justice in USA, Latino America and other world countries. To expand their cultural and linguistic knowledge, participants will prepare two different types of oral activities for the class: formal-academic presentations and non-formal activities that use colloquial registers. The RLSP 107 course will require a constant and committed collaboration between participants.

**Class Format:** Students should expect to meet with the professor three times per week during the scheduled class hours. One hour of practice with the TA will be added at agreed-upon times once the enrollment is fully established.

**Requirements/Evaluation:** Regular grammar and composition assignments, a mid-term exam and a final project; intense reading, active participation and regular attendance required.

**Prerequisites:** RLSP 104, placement exam results, permission of instructor or Department Chair

**Enrollment Limit:** 20

**Enrollment Preferences:** Spanish majors and certificate students, current and potential.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

Not offered current academic year

### **RLSP 201 (F) The Spanish Labyrinth**

How can you learn to separate the stereotypical images of Spain from reality? How can we talk about one "Spain", when the country a complex composite of ancient and diverse cultural remnants mixed with recent influxes of immigrants and separatist movements? How has the vulnerable peninsula survived centuries of violent upheavals and divisiveness; dramatic economic rises and collapses? How has the Covid-19 pandemic affected Spain's health system, demographics, and international economy? This course aims to offer students a strong foundation in Spanish issues, whether they have already spent time abroad, or hope to do so in the future. In this course we will approach Spain by studying examples of its literary and artistic production, from periods of brilliant cultural exchange, and times of censorship, repression, and crisis. Some topics of focus will be the Inquisition, the Civil War, contemporary Spain's obsession with its own recent past, and its uncertain future as it begins to recover from the effects of Covid. Secondary texts will also be provided for historical and socio-political background and reference. *Conducted in Spanish.*

**Requirements/Evaluation:** Conducted entirely in Spanish, Active regular participation in class discussions. Each student will give one presentation and, on a separate occasion, also be a discussion leader. Two short writing assignments (2-3 pp) and one final essay (10-12 pp). Students are encouraged to use office hours (or by appointment meetings) at different points in the semester to help each one with questions, approaches to homework and class participation, and to provide additional feedback and practice for writing and oral expression.

**Prerequisites:** RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Spanish majors and certificate candidates

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

### **RLSP 202 (S) Introduction to the Analysis of Literature in Spanish (WS)**

This course is intended for students who are considering a major in Spanish, including those who have recently completed RLSP 105, 107, or 200. Using a textbook, *Aproximaciones al estudio de la literatura hispánica*, we will study the fundamentals of genre analysis while reading selected works of prose, poetry, and drama from Latin America and Spain. In addition to studying the principles and techniques of literary analysis, this course will continue to develop your speaking, oral, writing, and reading comprehension skills. *Conducted in Spanish.*

**Class Format:** Students are expected to be active participants at all scheduled class meetings, which will be used for discussion and collaborative analysis of literary texts.

**Requirements/Evaluation:** Assignments will include four essays (from 4 to 6 pages each); a number of short writing assignments; a mid-term and a final exam; and consistent preparation and class participation.

**Prerequisites:** RLSP 105, 107, 200, 209, or placement exam results indicating readiness for a 200-level course

**Enrollment Limit:** 20

**Enrollment Preferences:** first- and second-year students who are considering the major in Spanish

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (WS)

**Writing Skills Notes:** Each student will write four essays on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

Spring 2023

SEM Section: 01 MWF 11:00 am - 11:50 am Jennifer L. French

### **RLSP 203 (F) From Modernismo to El Boom de la Novela**

A survey of some of the leading imaginative writers of Ibero America. Readings will begin with the modernista poets and go on to include fiction of Mexico by Rulfo, a wide sampling of verse by Pablo Neruda, and narratives of the "Boom" period by authors such as Borges, Cortázar, Lispector, and García Márquez. *Conducted in Spanish.*

**Class Format:** In-person.

**Requirements/Evaluation:** Response journals, three 6- to 8-page papers, a mid-term and final exam, and class participation.

**Prerequisites:** RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Seniors, juniors, and then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

### **RLSP 204 (S) Hispanic/Bilingual Communities in USA: language and identity**

"Hispanic/Bilingual Communities in USA: language and identity" is a course for Heritage Learners with two different profiles: those who have acquired Spanish at home and those who have been learning the language at school. Students' own sense of affective connection with the language through their families will guide our reflection on Spanish as a social component that unifies multiple Hispanic communities in the USA. We will also discuss the dialectal, sociolectal and generational differences between the members of those speaking communities, and the implications of considering these groups as homogenous. The course will address the role that media, institutions and cultural products play in preserving and (re)defining Spanish in the USA. We will review the language and its variation through TV programs, music, magazines, and literature. Heritage Learners already have an important foundation of linguistic knowledge that prepares them for interaction in Spanish. In this course they will be asked to further extend their resources through constant grammar and vocabulary practice. The course requires writing reports and larger texts, and the reading of an important amount of specialized texts in Spanish. Many of the daily activities will require teamwork. The course will meet 2 times per week: M, W, 1 hour 15 minutes per session. Students who have taken Spanish 209 can also register for this course.

**Requirements/Evaluation:** Evaluation will be based on class participation, daily assignments, essays, projects and one parcial exam.

**Prerequisites:** None

**Enrollment Limit:** 12

**Enrollment Preferences:** sophomores, juniors, majors, or concentrators.

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1)

Not offered current academic year

### **RLSP 206 (S) Latin-American Civilizations**

An introduction to the multiple elements constituting Latin-American culture. Class assignments include readings from selected Latin-American essayists and screenings of classic films. Particular focus on the conflict between local and foreign cultural traditions. Areas to be considered: Spanish Catholicism, the influence of European liberalism and U.S. expansion, the Indian and African contribution, and the cultural impact of social revolution in Mexico and Cuba. *Conducted in Spanish.*

**Class Format:** In-person

**Requirements/Evaluation:** two essays on assigned topics, response journals, one oral presentation, active discussion of the ideas and the facts presented in class, a midterm, and a final

**Prerequisites:** RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Juniors, sophomores, first-years.

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

**Attributes:** GBST Latin American Studies Electives

Not offered current academic year

### **RLSP 209 (F) Spanish for Heritage Speakers**

**Cross-listings:** LATS 209 RLSP 209

Primary Cross-listing

This course is intended for students of Latino/a heritage. It will address the unique needs of students whose knowledge of Spanish comes primarily from informal and family situations rather than a conventional classroom experience. The goal of the course is to build on and expand students' existing knowledge of Spanish while developing skills for using the language in more formal/academic contexts. *Conducted in Spanish.*

**Requirements/Evaluation:** homework, class participation, and a series of communicative projects

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Potential Spanish majors/certificate students and LATS concentrators

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

SEM Section: 01 MWF 10:00 am - 10:50 am Carlos Macías Prieto

### **RLSP 211 (S) A Survey of Spanish Literature from the 11th to the 17th Centuries**

This course will introduce the student to some of the major works of Spanish literature from its beginnings through the Golden Age. We will study the

historical context in which the works were written as well as the literary history of the periods in question. Students will learn methods of textual analysis through readings of relevant literary criticism. Readings will include selected canonical prose, poetry, and drama of the periods; special emphasis will be given to the myth of the coexistence of three religions in Iberia and the often misguided idea of dividing this literature into the categories of 'medieval' and 'Renaissance'. *Conducted in Spanish.* This course fulfills the pre-1800 requirement for the Spanish major

**Requirements/Evaluation:** evaluation will be based on class participation, short paper assignments, and a final paper

**Prerequisites:** RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **RLSP 216 (S) Latin American Environmental Literature and Cultural Production (DPE)**

**Cross-listings:** RLSP 216 ENVI 233

#### **Primary Cross-listing**

This foundational course explores a wide array of ecocultural texts from Latin America, ranging from accounts of Europeans' first arrival to the crisis of mass extinction and anthropogenic climate change today. In between we consider an eclectic mix of styles and genres, including poetry, essays, prose fiction and speeches produced by a varied group of cultural agents. We read classic texts by canonical figures (José Martí's "Our América," the *Popol vuh*), which take on new meaning in the current context, as well as some little-known gems of ecological consciousness. Readings and discussion trace connections between environmental thought and the region's long and multi-layered history of colonialism, and students are encouraged to develop their own positions by responding to some of the leading theoretical discourses that animate the field of Latin American ecocriticism: decolonial and creole ecologies, ecofeminism, transcultural materialism, and postdevelopment. *Conducted in English.*

**Requirements/Evaluation:** Students will write and revise three formal essays over the course of the semester. There will also be shorter written assignments and intermittent discussion-leading.

**Prerequisites:** None.

**Enrollment Limit:** 15

**Enrollment Preferences:** Preference given to students majoring in Spanish or Environmental Studies.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RLSP 216 (D1) ENVI 233 (D1)

**Difference, Power, and Equity Notes:** This course meets the goals of the DPE requirement in that it focalizes the current environmental crisis through the long history of political, economic and cultural struggles in Latin America. We examine the genealogies of environmental culture, tracing the emergence of ecofeminism, for example, through generations of writers. We also examine the phenomenon of creolization and its relationship to the environmental cultures of Latin America's originary peoples.

### **RLSP 217 (S) Love in Early Modern Spain**

The principal focus of this course is the Spanish "comedia" of the seventeenth century (with supplemental readings from prose and poetry) to provide us with a dynamic and critical understanding of the theme of love as constructed by the greatest dramatists and authors of the period. Works by Lope de Vega, Tirso de Molina, Calderón, San Juan de la Cruz, Santa Teresa, María de Zayas, and others will show us how the theme was treated from diverse perspectives, and how it related to the social and political context of the time. *Conducted in Spanish.*

**Requirements/Evaluation:** Active and meaningful participation, short assignments, one final project.

**Prerequisites:** RLSP 105 or 200, or results of Williams College Placement Exam, or permission of instructor

**Enrollment Limit:** 22

**Enrollment Preferences:** Spanish and Comparative Literature majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **RLSP 220 (S) Women on the Verge**

**Cross-listings:** RLSP 220 WGSS 222

**Primary Cross-listing**

From the early twentieth century to the present day, the radical changes in the lives of Spanish women have clearly reflected the tug of war between progress and tradition in recent Spanish history. The dramatic upheavals in Spanish politics have marked and transformed the lives of women to such a great extent that one can often gauge the political and social climate of any given historical moment by considering how the role of women was defined by the law, the Catholic church, education, and other social and political institutions. Using literary and historical texts as well as films, newspapers and other media, this course will look at the transformations in the public and private lives of Spanish women during the following periods: the turn of the century, the Second Republic, the Spanish Civil War, the Franco years, the transition to democracy, and the present day.

**Requirements/Evaluation:** This course is conducted entirely in Spanish.

**Prerequisites:** RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Spanish and Comparative Literature majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

### **RLSP 228 (S) Velázquez, Goya, and Picasso**

**Cross-listings:** ARTH 228 RLSP 228

**Primary Cross-listing**

This course will provide an introduction to three major Spanish painters--Velázquez, Goya, and Picasso--who lived and worked, respectively, in the 17th, 18th, 19th and 20th centuries. Though these painters are world famous, they are rarely studied comparatively, and in the context of their Spanish artistic roots. The syllabus will cover the historical and social contexts in which they started working, and how they followed, and departed from, artistic conventions of the time. Through specific paintings, we will consider the historical evolution of the artists' relationship to their patrons and subjects, from the elite status of Velázquez within the royal court, to Goya's dramatic rise with the reigns of Charles III, and Charles IV, and his subsequent exile to France. Picasso was free of royal patronage and also lived in France, yet despite this freedom he remained deeply connected to the themes and concerns of his Spanish artistic predecessors. In addition to key paintings including Velázquez's "Las Meninas" and other royal portraits, Goya's "Maja Desnuda" and his series "The Disasters of War," Picasso's "Guernica," and his own 20th century reinterpretation of "Las Meninas," we will focus on the artists' shared subjects of portraits and war, and consider the following issues: How does the role of the Spanish artist change over the periods covered? How did the artist exercise his freedom whilst under the scrutiny of the court and the Catholic Church? How were these painters' lives and work shaped by key historical events such as the Inquisition, Napoleon's invasion of Spain, or the Spanish Civil War? How does the work of art evolve in its role from private royal commission to public display in museums open to all? We will read short literary pieces from each period, primary materials such as letters and other documents, and historical and critical works. All readings will be in English. Knowledge of Spanish is encouraged, but not required.

**Requirements/Evaluation:** 3- to 5-page weekly assignment

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** first-year students and sophomores

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ARTH 228 (D1) RLSP 228 (D1)

Not offered current academic year

**RLSP 230 (F) Mexican Literature and Cultural Production (DPE) (WS)**

This course will offer a survey of the rich and varied cultural production of Mexico, from the pre-Hispanic past to the present. Students will explore a variety of literary genres (pre-Hispanic poetry, creation stories and songs; chronicles of conquest; short works of prose fiction and novels; and modern poetry and essays) as well as other kinds of cultural production within a framework of historical contextualization and formal analysis. The course meets twice per week. *Conducted in Spanish.*

**Requirements/Evaluation:** Each student will write three 4- to 5-page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version. Excellent preparation, active and engaged participation in class discussions.

**Prerequisites:** RLSP 105, placement exam results, permission of instructor.

**Enrollment Limit:** 19

**Enrollment Preferences:** Spanish majors and certificate students, current and potential; LATS concentrators

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**Writing Skills Notes:** Each student will write three 4- to 5-page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

**Difference, Power, and Equity Notes:** This course will introduce students to the rich and varied cultural production of Mexico across time and space. It will highlight the often marginalized and neglected intellectual histories of indigenous peoples and other minoritized sectors of Mexican society. As such, students will acquire critical tools to examine and understand the rich and varied cultural production of Mexico.

**Attributes:** GBST Latin American Studies Electives

Not offered current academic year

**RLSP 231 (F) Indigenous Writers of Colonial Mexico and Peru (DPE) (WS)**

This course examines the writings of 16th and 17th Century Indigenous authors of New Spain and colonial Peru. We will study the works of well-known Indigenous writers such as Hernando de Alvarado Tezozomoc, Fernando de Alva Ixtlilxochitl, El "Inca" Garcilaso de la Vega, and Guaman Poma de Ayala, as well as writings by lesser-known and anonymous Indigenous authors. Our focus on the historical contexts and formal aspects of their works will be supplemented and enhanced by a study of the critical methods of textual analysis that are particularly relevant to Indigenous texts, as facilitated by a set of selected critical readings. The course, in short, will aim to interrogate the idea of a "Spanish lettered city" (a colonial city dominated by Spanish men of letters) and will explore the possibilities of an "alter-native" lettered city, one in which Indigenous writing flourishes during times of crisis. *Conducted in Spanish.*

**Requirements/Evaluation:** Each student will write four 4- to 5-page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise the first three papers and submit a final version. Excellent preparation and active, engaged participation in class discussions is required.

**Prerequisites:** RLSP 105, 107, 200, or 202, placement exam results, or permission of instructor.

**Enrollment Limit:** 19

**Enrollment Preferences:** Spanish majors and certificate students, current and potential; LATS concentrators

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**Difference, Power, and Equity Notes:** This course will introduce students to the rich and varied cultural production of colonial Mexico and Peru. It will highlight the often marginalized and neglected intellectual histories of Indigenous peoples and other minoritized sectors of colonial society. As such, students will acquire critical tools to examine and understand the rich and varied cultural production of Mexico and Peru during the Spanish colonial era.

**RLSP 251 (F) Somos Sur: US-Mexico-Central American Borderlines (WS)**

What are borderlands? How have they been created? How do they affect the life of those who cross or are being crossed by these borders? This course focuses on the cultural production that explores US-Mexico-Central American borderlands and the diverse policies and practices that (re)create and (re)image these borders. In consideration of some of the dictatorships in Central America, the NAFTA agreement and post 9/11 policies, as well as war zones and the drug war; we will explore the concepts of citizenship, migration, nationalism, and (in)visibility in its intersection with gender, racial positioning, and social class. Drawing upon cultural studies, feminist theory, history, and ethnography we will examine materials such as photography, installation art, journalism, literature, film, and music. This interdisciplinary approach aims to shed light on the causes and consequences of the political, cultural, and economic narratives involved in our current understanding of these fronteras. This class is conducted in Spanish; readings will be in both English and Spanish.

**Requirements/Evaluation:** essays, oral presentation, participation

**Prerequisites:** RLSP 105, placement exam results, permission of the instructor or the Department Chair

**Enrollment Limit:** 19

**Enrollment Preferences:** Spanish majors

**Expected Class Size:** 18

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (WS)

**Writing Skills Notes:** Weekly short (less than 1000 words) papers, alternatively letter-graded and graded P/F; at least three letter-graded papers will be revisions of a P/F paper; and final 5 pages long paper, which is a revision and expansion of the last weekly paper.

**Not offered current academic year**

**RLSP 259 Violent States, Violent Subjects: Nation-Building and War in 19th Century Latin America (DPE) (WS)**

Although the massive, mechanized wars of the 20th century often overshadow earlier conflicts, the 19th century was also a period of widespread bloodshed in Latin America. First, of course, came the carnage of the Independence Wars, which was followed by decades of civil war (Mexico, Argentina, Peru, Uruguay, Colombia, Venezuela) and two bitter international wars--the Paraguayan War (1864-1870) and the Pacific War (1879-1883)--each of which would have a lasting impact on the countries involved. The restoration of peace brought economic development and new opportunities for dominant groups, but also the return of some of the most violent practices of the colonial period: indigenous peoples were conquered, their lands settled by whites or used for grazing cattle, and blacks (often despite the official abolition of slavery) met with new forms of exclusion, exploitation, and physical violence. In this tutorial we will explore the literary links between some of the violent conflicts listed above and the foundation of national identities in Latin America, reading texts that probe the social and ethical implications of State-sponsored violence. Issues to be explored include militarism and the development of nationalism; genocide and the national community; torture, truth and testimony; and the notion of 'civilization.' We will read one or two key precursors and a variety of 19th century texts that may include works by Juan Francisco Manzano, Esteban Echeverría, Ricardo Palma, Rosa Guerra, Dorotea Duprat de Lassere and Juan Crisóstomo Centurión, and Lucio V. Mansilla. In addition, we will read a few contemporary texts, written in the aftermath of the late-20th century dictatorships in the Southern Cone, that actively reflect on the long history of State-sponsored violence in Latin America (Ricardo Piglia, Diamela Eltit, Augusto Roa Bastos). Students will work in trios throughout the semester,

each group meeting with the instructor once a week. Each week one of the students will present a 5-page paper on the assigned reading and one will be designated the official respondent, whose job is to lead a discussion of the paper. The third member of the group will turn in a revision of the previous week's paper. Prerequisites: one 200-level RLSP course or permission of instructor. Heritage learners, international students and second-language learners are all heartily welcome. Conducted in Spanish.

**Class Format:** Conducted in Spanish.

**Requirements/Evaluation:** Each student will write and revise a minimum of three five-page papers during the course of the semester. Students will be evaluated on the basis of their preparation for each tutorial meeting as evidenced by the quality and frequency of their engagement with the material, including their classmates' written work. Essays will be graded after they have been revised and submitted to the professor.

**Prerequisites:** Any 200-level Spanish course.

**Enrollment Limit:** 12

**Enrollment Preferences:** Priority given to Spanish majors.

**Expected Class Size:** 12

**Grading:**

**Distributions:** (D1) (DPE) (WS)

**Writing Skills Notes:** Students will practice writing throughout the semester, and will receive abundant feedback on their written work from their tutorial partners and the instructor. We are altering the tutorial format from the standard duos to trios of students, so that students will have ample opportunity to revise their written work.

**Difference, Power, and Equity Notes:** This course focuses on issues of diversity, power and privilege within the internal and regional constitution of Latin American countries. We will read with an awareness of some of the ways that differences of race, class, nationality and gender may be mobilized in times of conflict, and consider how the collective narratives that are constructed and imposed in the aftermath tend to deal with those conflicts.

**Attributes:** GBST Latin American Studies Electives

Not offered current academic year

### **RLSP 264 (S) Outcasts of the Lettered City: Nation-Building and the Margins in 19th Century Latin America (DPE) (WS)**

Bandits, vagabonds, runaway slaves, and unruly women. Defeated soldiers. Afro-Colombian rivermen. Indigenous Americans and their white captives. Latin American cultural production of the 19th century is conventionally studied in terms of the urban intellectuals' projects of nation-formation in the aftermath of the long struggle for independence from Spain. This course examines that process from the outside, considering instead a series of literary and other writings that represent the marginalized others of the desired nation-state, the women and men, many of them Afro-descended, Indigenous and mixed race, who found themselves excluded from the new national community--or who preferred a life on the pampas, deep in the jungle, or somewhere else outside the confines of bourgeois society. Primary readings will be selected from among the following: Simón Rodríguez, *American Societies in 1828*, Juan Francisco Manzano, *Autobiography of a Slave*; Domingo F. Sarmiento, *Facundo. Civilization and Barbarism in the Argentine Republic*; José Hernández, *Martín Fierro*; Flora Tristán, *Peregrinations of a Pariah*; Juan Crisóstomo Centurión, *Viaje nocturno*, Federico Gamboa, *Santa*; Candelario Obeso, *Popular Songs of My Land*; Cirilo Villaverde, *Cecilia Valdés*, Lucio V. Mansilla, *Excursion to the Ranquel Indians*. We will also read a number of critical essays by leading scholars in the field of 19th century Latin American literature.

**Requirements/Evaluation:** Students will write and revise approximately 20 double-spaced pages, in Spanish, over the course of the semester. Students will also prepare 10-15 minutes responses to their classmates' work. We will read 100-150 pages of Spanish prose each week and well as critical essays, which will often be in English.

**Prerequisites:** Any 200-level course with an RLSP prefix or permission of instructor.

**Enrollment Limit:** 12

**Enrollment Preferences:** Spanish majors and potential Spanish majors.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE) (WS)

**Writing Skills Notes:** This course is conducted as a tutorial. The number of students in each unit (pairs or triplets) depends on how many students enroll, but whatever our structure turns out to be, each student can anticipate multiple opportunities to write and revise their individual essays in response to feedback from their classmate and professor, as well as to serve as the respondent offering feedback on other students' work. Thus we emphasize editing and revision as essential parts of the writing process.

**Difference, Power, and Equity Notes:** This course examines structures of exclusion in 19th century Latin America -- the reproduction and

perpetuation of socio-economic and institutional structures based on racial, gendered and class-based hierarchies established during the colonial era -- and the spaces that historical individuals have been able to occupy within and around them.

Not offered current academic year

### **RLSP 280 (S) From Roma to Yalhalhj: Race and Identity Politics Through Contemporary Mexican Cultural Production (WS)**

In 2017, the National Institute of Statistics in Mexico (INEGI) used for the first time a color palette to measure individuals' skin tone. The study showed that "Mexicans who were classified by the interviewers as having darker skin tones tend to have lower levels of education and are worse off economically than their lighter-skinned counterparts" (Zizumbo and Flores, 2017). Raising controversy among those who would like to think of Mexico as a post-racial nation and those who recognize social inequality and discrimination on the basis of skin tone, the debate resonates in the way Mexican citizenship and cultural identity are both represented in mainstream media, even with the intention of showing diversity. The prevalent whitewashing dominating mass media in Mexico extends from advertisements to films, promoting an image of wealth and education intrinsically related to not only skin tone but also with race/ethnic positionality and gender. This course will explore the representation of these variables and their intersections through the analysis of photography, films, novels, paintings, reality shows, telenovelas, advertising campaigns, and music videos. In addition, we will take into account questions of representation, agency, and visibility addressed by cultural producers from pueblos originarios who do not consider themselves Mexican citizens. This class will be conducted in Spanish.

**Requirements/Evaluation:** essays, oral presentation, participation

**Prerequisites:** RLSP 105, placement exam results, permission from the instructor or the Department Chair

### **RLSP 301 (S) Cervantes' "Don Quijote"**

We will devote the semester to the study of one novel: Miguel de Cervantes' *Don Quijote*, published in the early part of the 17th century. We will try to understand the reasons for the novel's immense and ongoing influence. We will study Cervantes' handling of issues that continue to have relevance to our lives today: relationships, the role of fiction in life, the shapes of mental illness, how we show people who we think we are, how our governments, families and friends decide who we are, the fun and annoyance of going on a road trip with someone, the meaning of justice, and the meaning of storytelling, to name a few. In the process, we will set things in context to understand what was going on in Cervantes' world. Finally, we will find that even an entire semester was not enough to engage fully with this extraordinary work. *Conducted in English using a contemporary translation.*

**Class Format:** lecture/discussion

**Requirements/Evaluation:** active class participation; two to three short projects and one final research project

**Prerequisites:** any 200-level RLSP or Comp lit or English course at Williams

**Enrollment Limit:** 20

**Enrollment Preferences:** Spanish majors and Comp Lit majors and Engl majors.

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1)

Spring 2023

SEM Section: 01 MWF 9:00 am - 9:50 am Leyla Rouhi

### **RLSP 303 (S) Cervantes' "Don Quijote"**

A close study, in Spanish, of one of the most influential and early European novels. *Don Quijote* by Miguel de Cervantes (1547-1616 C.E) was a hit in its day in the seventeenth century, and has not ceased to influence artists and thinkers since. Moving between humorous and serious tones, Cervantes takes on several issues in the *Quijote*: the point of fiction in real life, the complications of relationships between men and women, the meaning of madness, the experience of religious co-existence, the shapes of friendship, and the task of literary criticism, just to name a few. We will read the book in a fine unabridged edition, and set it in several relevant contexts to better understand its original intellectual horizon as well as the reasons for its continuing relevance.

**Class Format:** discussion conducted in Spanish

**Requirements/Evaluation:** active participation, two short papers, and a final project in close consultation with the instructor

**Prerequisites:** any RLSP 200-level literature class taken at Williams, or permission of the instructor

**Enrollment Limit:** none

**Enrollment Preferences:** Spanish and Comparative Literature majors

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** this course fulfills one of the requirements for the Spanish major

**Distributions:** (D1)

Not offered current academic year

### **RLSP 307 (F) The Short Stories of Miguel de Cervantes**

We will conduct a close study of the collection of short stories known as *Las novelas ejemplares* written by Miguel de Cervantes (1547-1616 CE). The stories, though not as famous as *Don Quijote*, are as innovative and dynamic as the author's best-known novel. We will set them in the context of the political and artistic landscape of Spain in the early part of the 17th century to better understand their nature and function. In particular, we will pay attention to how social and individual identities are shaped in the stories, and the ways in which our own assumptions about identity work alongside those of these texts.

**Class Format:** Conducted in Spanish.

**Requirements/Evaluation:** Regular attendance and active participation; two short essays or four reaction papers; one final project of 8-10 pages or the equivalent in close consultation with the instructor.

**Prerequisites:** Any RLSP 200-level class taken at Williams, or results of the placement test, or permission of instructor.

**Enrollment Limit:** 18

**Enrollment Preferences:** Preference given to Spanish and COMP majors.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **RLSP 308 (S) Survey of Colonial Latin American Literature from 1492 to the Early 19th Century (DPE) (WS)**

This course will focus on major works of Spanish American literature from 1492 through the first part of the 19th century. Readings will include narrative texts such as *Cartas de relación*, chronicles of conquest, religious texts, and indigenous annals, as well as poetry and drama. While many of the texts will focus on colonial Mexico, we will also study texts from Central and South America. We will focus on the historical contexts and formal aspects of these works, and study methods of textual analysis that are particularly relevant to these texts via selected critical readings. Special attention will be given to colonial encounters and the clash of cultures that produced new identities and textualities under Spanish colonial rule. The course meets twice per week. *Conducted in Spanish.*

**Requirements/Evaluation:** Each student will write three 4-6 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version. Excellent preparation and class participation.

**Prerequisites:** One RLSP course at the 200-level or above or permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** Spanish majors

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**Writing Skills Notes:** Each student will write three 4-6 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

**Difference, Power, and Equity Notes:** This course will highlight intellectual production of indigenous peoples of the Americas under Spanish colonial rule. It will explore the new identities and textualities that emerge as a result of the encounter and subsequent conquest of the Americas. As such, students will gain critical skills to analyze and understand a diversity of Spanish-American colonial texts from the 16th century to the early 19th century.

**Attributes:** GBST Latin American Studies Electives

Not offered current academic year

### **RLSP 319 (S) Dictatorship and the Latin-American Novel (DPE)**

Military dictatorship is among the most crucial factors in Latin-American society and history, and some of the continent's leading novelists have taken it upon themselves to depict the experience in their work. In this course we will examine both the fact of dictatorship itself and the diverse representation thereof in Spanish-American fiction. Novels by García Márquez, Vargas Llosa, Poniatowska, and Tomas Eloy Martínez will be closely studied.

Students will also read *Absalom! Absalom!* by Faulkner, whose influence on Latin-American authors' techniques of representation has been decisive and profound.

**Class Format:** In-person.

**Requirements/Evaluation:** three 8-page papers, response journals, an oral report, a final 3-page paper, and class participation

**Prerequisites:** RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Spanish majors, Latina/o Studies concentrators

**Expected Class Size:** 5-10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** This course focuses on the ultimate sort of power--namely, military dictatorship. And it focuses on the historical fact of such a phenomenon within the U.S. political sphere of influence--Latin America. To study dictatorship and its depiction in literature is a means of understanding the nature of that power imbalance and of taking a first step toward some sense of equity.

### **RLSP 342 (S) Reading Sor Juana: "única poetisa americana, musa décima," (DPE) (WS)**

This course focuses on the writings of one of the most revered women writers in Hispanic Letters, Sor Juana Inés de la Cruz, who was regarded by her contemporaries as the Tenth Muse. Our exploration and study of Sor Juana's writings will focus on the different genres in which she wrote--prose, poetry, and drama--and it will include a survey and analysis of the historical context in which she wrote, the formal aspects of her writings, and critical essays about her work written by leading scholars in the field of Latin American literature. Near the end of the semester, the course will conclude by expanding its focus to examine the ways in which Sor Juana's work has influenced contemporary Latin American and U.S. Latina authors. *Conducted in Spanish.*

**Requirements/Evaluation:** Each student will write three 5-7 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide two 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version. Excellent preparation and class participation is required.

**Prerequisites:** One RLSP course at the 200-level or above or permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** Spanish majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

### **RLSP 388 (S) La Regenta: Masculinity in Crisis in Nineteenth-Century Spain**

This seminar is an in-depth study of arguably the most remarkable Spanish novel of the nineteenth century: *La Regenta* (1885) by Leopoldo Alas (alias Clarín, 1852-1901). We will spend the semester living with the most eccentric, repressed, confused, sometimes arrogant, and sometimes humble inhabitants of the fictional city of Vetusta (based on the real city of Oviedo) and immerse ourselves in Spanish history and culture through a story of adultery. In the grand tradition of nineteenth-century novels about fallen women, *La Regenta* in fact reveals the seamy underside of society, the profound anxieties of masculinity and identity formation, as well as where our biases and assumptions about both successful and failed relationships come from today.

**Requirements/Evaluation:** Active and meaningful participation, short assignments, one final project.

**Prerequisites:** Any Spanish 200-level class taken at Williams, or results of the Williams Placement Test, or permission of Instructor.

**Enrollment Limit:** 20

**Enrollment Preferences:** Spanish and Comparative Literature Majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **RLSP 401 (F) Climate Changes (Latin America): Aesthetics, Politics, Science**

**Cross-listings:** RLSP 401 ENVI 301

Primary Cross-listing

In her 2007 book, *In Catastrophic Times: Resisting the Coming Barbarism*, philosopher Isabelle Stengers offers a chilling observation: "we are more badly equipped than ever for putting to work the solutions defined as necessary" to avoid the most devastating effects of global warming--the extinction of 25 to 75% of existing species; an increase in sea levels that will drown island nations and coastal cities; the breakdown of agricultural systems, leading to widespread famine; and the recurrence of powerful hurricanes and other so-called "natural" disasters. All of this, as Stengers and others point out, will create human upheaval, conflict and suffering on an unprecedented scale. This senior seminar examines works of literature, art and film that Latin Americans have produced in response to the catastrophic times in which we live. We will discuss the political, economic, and cultural histories that have led to our present moment, including neoliberalism, dictatorship, and the rise and fall of the leftwing Pink Tide. Through works of new and experimental fiction, poetry, film, performance and visual art, we will consider the lives and work of environmental activists, including Berta Cáceres and others who were murdered because of their outspoken opposition to extractive capitalism, examine the struggle for the decolonization of environmental knowledge, an epistemological battle increasingly waged on behalf of all living things, and experience the politics of mourning for the hundreds of thousands of life-forms disappearing from the planet. Cultural texts to be explored throughout the semester may include: *La vorágine* (José Eustasio Rivera, Colombia, 1924); *Distancia de rescate* (Samanta Schweblin, Argentina, 2014); *Lo que sueño Sebastián* (Rodrigo Rey Rosa, Guatemala, 1995); *Serras da desordem* (Andrea Tonacci, Brazil, 2006); *Boi Neón* (Gabriel Mascaro, Brazil, 2015); *American Fork* (George Handley, USA, 2018).

**Requirements/Evaluation:** rigorous preparation and participation in class discussions, oral presentations and discussion-leading, response papers, one 5- to 7-page paper and one 15- to 20-page paper

**Prerequisites:** one 300-level course in the department, evidence of a successful direct-enroll experience at a local university in Latin America or Spain, or permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** senior Spanish majors; after that, priority will be given to ENVI majors with a strong command of Spanish

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** this is the senior seminar required for all Spanish majors

**Distributions:** (D1)

**This course is cross-listed and the prefixes carry the following divisional credit:**

#### **RLSP 404 (F) Spain's Tale of Two Cities:Madrid and Barcelona (DPE)**

The ancient rivalries between Madrid and Barcelona may be best known because of their internationally watched soccer teams, but there's much more to the story than meets the eye in a stadium. Barcelona, immortalized for world audiences in George Orwell's classic *Homage to Catalonia*(1938), has a complicated political and cultural history. Catalans have a fascinating and unique culture and language. Their identity has often been cause for political unrest in their relationship with the rest of Spain, and even amongst Catalans themselves. In recent years, tensions with Spain's capital, Madrid, home to the central government and the Royal family, have filled headlines and divided politicians and even families. In this senior seminar we will focus on these two cities in their own right, and explore the counterpoints between them. We will consider the historical roots of lesser known aspects of Catalan culture and identity in order to tease out some of the myriad perspectives that are at play in Spain today. Materials will come from many different media: historical pieces, music, art and architecture, classic novels and films, recent fiction and essays by second generation authors who have been raised by immigrant parents in both cities, and media pieces. We will also invite cultural observers and players to be guest speakers and help us stay up to date as we follow this ever evolving relationship that keeps journalists and politicians on tenterhooks.

**Requirements/Evaluation:** This course will be conducted entirely in Spanish. Students will be expected to participate actively in weekly online classes. There will be two short writing assignments of 3-5 pp. Each student will prepare a presentation for one of our class meetings, and be a discussion leader for part of another meeting. Students will be expected to schedule office hours with me individually, and to work on an independent research project towards the end of the semester which will culminate in a final paper of 10-15 pp.

**Prerequisites:** Students should be seniors on the road to fulfilling their degree requirements for the Spanish major.

**Enrollment Limit:** 11

**Enrollment Preferences:** Senior Spanish Majors. This is the 20-21 Senior Seminar for the Spanish Major.

**Expected Class Size:** 10

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** This course fulfills the DPE requirement because it compares two rival cities and the struggles for power between a majority (Spanish) and minority (Catalan) culture and language. We will also read texts by first generation authors for whom Spanish and Catalan are dominant but secondary languages and cultures. The syllabus seeks to offer a multiplicity of perspectives in order to help students critically engage with centuries-old patterns of difference and exclusion.

Not offered current academic year

#### **RLSP 405 (F) Alternative American Literatures: From the Indigenous Chronicle to the Latin American & Chic. Novel (DPE) (WS)**

Do the Americas have a common literature? If so, is it possible to trace their roots and continuity from the colonial era to the present? Literary critic Martin Lienhard suggests that it is indeed possible to trace the origin of a literature common to Latin America from the colonial era and into present by focusing on what he calls "alternative literatures"--literatures that relativize the importance of Europeanized and Creole literatures and valorize the richness of oral traditions in the Americas. Such literatures, he asserts, are closely tied to marginalized sectors of society. In this course, we will take Lienhard's concept of "alternative literatures" as a point of departure to pursue our own examinations of how these "alternative literatures" are

constituted. While the primary aim of this course is to focus on the writings of Latin American authors, we will end by exploring the relationship between "alternative" Latin American literatures and Chicana/o/x literatures. Readings will include narrative texts such as *Cartas de relación*, chronicles of conquest, religious texts, indigenous annals, poetry, and drama, as well as contemporary Latin American and Chicana/o/x novels.

**Requirements/Evaluation:** Four essays, class presentations, active participation, and regular attendance required

**Prerequisites:** any 300-level RLSP course or permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Senior Spanish Majors.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE) (WS)

**Writing Skills Notes:** Each student will write four 4-6 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

**Difference, Power, and Equity Notes:** This course will highlight intellectual production of indigenous peoples of the Americas under Spanish colonial rule as well as the writings of more contemporary minority authors of Latin America. It will explore the new identities and textualities that emerge as a result of the encounter and subsequent conquest of the Americas. As such, students will gain critical skills to analyze a diversity of Spanish-American colonial texts from the 16th century as well as more contemporary narrative texts.

Not offered current academic year

#### **RLSP 407 (F) Gender, Race and Nature: Ecocritical Examinations of Latin American Culture (DPE)**

This senior seminar brings an ecocritical focus to the study of Latin American cultural production. We are particularly interested in works of literature and other kinds of cultural texts that critique, subvert, or transcend conventionally Eurocentric and patriarchal conceptualizations of the human and its relation to non-human being. Rhetorical tropes linked to extractivist economic practices and their alternatives will be identified and analyzed over the course of the semester as we sample a wide range of literary and non-literary texts (poetry, narrative prose, essay, film, painting, woodcuts, music, digital media) produced throughout the 20th and 21st centuries. We will also read and discuss writings by leading ecocritics and decolonial theorists including Silvia Rivera Cusicanqui, Eduardo Gudynas, Mary Louise Pratt, Walter Mignolo, and more.

**Requirements/Evaluation:** Thorough preparation and active class participation, discussion-leading, one 5-7 page paper and one 15-20 page paper as well as a paper proposal, abstract, bibliography, and draft.

**Prerequisites:** Study abroad, one or more RLSP courses at the 200+ level, or permission of instructor.

**Enrollment Limit:** 19

**Enrollment Preferences:** Senior Spanish majors, then other interested students.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** This course brings decolonial theory and ecocriticism together in an approach to Latin American cultural production.

**RLSP 30 (W) Honors Essay: Spanish**

To be taken by candidates for honors other than by thesis route.

**Class Format:** honors essay

**Grading:** pass/fail only

Winter 2023

HON Section: 01 TBA Leyla Rouhi

**RLSP 31 (W) Senior Thesis: Spanish**

To be taken by students registered for Spanish 493-494.

**Class Format:** thesis

**Grading:** pass/fail only

Winter 2023

HON Section: 01 TBA Leyla Rouhi

**RLSP 88 (W) Spanish Sustaining Program**

Students registered for RLSP 101-102 are required to attend and pass the Spanish Sustaining Program. However, students are also required to register for a regular Winter Study course. Once the regular Winter Study registration process is complete, the Registrar's Office will automatically enroll you in the Sustaining Program--check your class schedule to confirm enrollment.

**Grading:** pass/fail option only

Winter 2023

LAB Section: 01 TWF 9:00 am - 9:50 am Gabriel Gonzalo Fernández, Anamaria Pla-Avalo, Emma Gonzalez Martinez, Leyla Rouhi

**RLSP 99 (W) Independent Study: Spanish**

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

**Class Format:** independent study

**Grading:** pass/fail only

## RUSSIAN (Div I)

Chair: Professor Janneke van de Stadt

Professors: J. van de Stadt and J. Cassidy; Assistant Professor: O. Kim; Bolin Dissertation Fellow: Kamal Abdul Kariem; Teaching Associate: Dilara Karashashova

### LANGUAGE STUDY

The department provides language instruction to enable students to acquire all five linguistic skills: understanding, speaking, reading, writing, and culture. Russian 101-W88-102 covers the basics of Russian grammar. Russian 103 through 202 offer additional instruction in grammar and vocabulary acquisition, and provide extensive practice in reading and conversation.

### STUDY ABROAD

The department strongly encourages students who want fluency in Russian to spend a semester or year studying in Russia or one of the former Soviet republics. Students generally apply to one of several approved foreign study programs. Russian 104 or the equivalent and junior standing are normally prerequisite for study abroad.

### FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

#### **Can your department or program typically pre-approve courses for major/concentration credit?**

No, generally not until after a student returns and can provide course material for review (e.g. completed work such as exams, portfolios, lab reports and the like).

#### **What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

In Addition to course title and description, we always have a conversation with our students about the actual work they completed since sometimes syllabi are vague, or not followed with complete thoroughness.

#### **Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

Yes, four courses.

#### **Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

No.

#### **Are there specific major requirements that cannot be fulfilled while on study away?**

No, the only candidate for this would be the Senior Seminar, and it has never been an issue.

#### **Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

No.

#### **Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:**

None to date.

### LITERATURE AND CULTURE IN TRANSLATION

The department regularly offers courses on Russian literature, culture, and politics in English for those students who have little or no knowledge of Russian, but who wish to become acquainted with Russian literary, cultural, and social history.

### THE CERTIFICATE IN RUSSIAN

To enhance a student's educational and professional profiles, the Certificate in Russian offers a useful tool for using the language in a wide variety of disciplines. The sequence of language and culture courses is designed to supplement a student's major at Williams by enabling the student to expand their knowledge in a related field.

Students who enter Williams with previous training in Russian may substitute more advanced courses for all the 100-level courses; they can also be exempted from up to two of the required courses. Thus, in order to earn a certificate a student must take no fewer than five courses (including three courses in Russian) after enrolling at Williams. The student must achieve proficiency at the level of a B in RUSS 251 or the equivalent.

## Required Courses

101

102

103

104

one additional course conducted in Russian

## Elective Courses

at least one course on Russian cultural history

at least one course on Russian intellectual, political, or social history, or post-Soviet economics

## THE MAJOR

The Russian major offers students an interdisciplinary approach to the intellectual and cultural history of Russia and the former Soviet republics. Students complete the major by combining courses in Russian language and literature with courses in history, political science, music, economics, and art. The major requires a minimum of ten courses of which at least six must be conducted in Russian, at least two must be at the 300-level, and one at the 400-level. In addition, students may take up to four related courses offered by other departments and taught in English.

### Examples of appropriate courses in other departments are:

HIST 241 Imperial Russia

SOC 248 Post-Soviet Paradoxes

HIST 337 After Stalin: Soviet History

PSCI 286 Russian Politics and Foreign Policy under Vladimir Putin

Students selecting the major must typically complete Russian 104 or 152 (or the equivalent) by the end of the junior year. Majors will normally be expected to take the 400-level seminar offered in their senior year, even if they have previously taken another version of it. Russian majors may receive major credit for summer language study (in consultation with the department) and for as many as four courses taken during study abroad.

## THE DEGREE WITH HONORS IN RUSSIAN

At the beginning of the second semester of the senior year, students may nominate themselves to candidacy for the degree with honors. By the end of the junior year at the latest, however, they will have established in consultation with the department their qualifications for embarking on the project, the pattern of study to be followed, and the standards of performance.

Students earn a degree with honors by submitting a senior thesis (493-W31-494) of honors quality.

## RUSS 101 (F) Elementary Russian I

An introduction to contemporary standard Russian, this course provides opportunities to acquire basic proficiency in all five language skills--listening comprehension, speaking, reading, writing, and culture--through immersion, intensive use of authentic materials, and a strong emphasis on the spoken word in all class activities. Greater emphasis is placed on writing in the second semester. For students who already know some Russian, consultation with the department is required before registering for any Russian language course in the sequence 101 through 252.

**Class Format:** class meets five times a week;

**Requirements/Evaluation:** active class participation, completion of all assignments, regular summative exercises, written and oral final exercises

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** first-and second-year students; students expressing an interest in the Russian major or certificate; students who need to learn Russian for research purposes

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** students registered for RUSS 101-102 are required to attend and to pass the sustaining program during the winter study period; credit granted only if both semesters (RUSS 101 and 102) are taken.

**Distributions:** (D1)

### **RUSS 104 (S) Intermediate Russian**

This course continues to develop all five skills--listening comprehension, speaking, reading, writing, and culture--for students who have completed at least three semesters of college-level Russian. Coursework includes the ongoing study of Russian grammar, especially of increasing complexity, as well as an examination of a variety of authentic materials from Russian and Soviet culture, current events, and daily life. Significant attention will be devoted to vocabulary expansion. Students who complete the yearlong sequence of RUSS 103 and RUSS 104 should be well prepared to undertake study abroad in Russia and are encouraged to do so.

**Class Format:** the class meets four hours a week: three with the professor and the fourth with the Russian Teaching Associate (time to be arranged)

**Requirements/Evaluation:** Daily class participation and preparation, completion of all assignments and exercises, in and out of class, two oral assessments, and a final written exercise

**Prerequisites:** RUSS 103 or RUSS 151 or the equivalent; consult with instructor if unsure

**Enrollment Limit:** 15

**Enrollment Preferences:** Russian Majors and language certificate seekers, then students of Russian language, literature, history or culture.

**Expected Class Size:** 5-10

**Grading:** yes pass/fail option, yes fifth course option

### **RUSS 203 (F) Nineteenth-Century Russian Literature**

**Cross-listings:** COMP 203 RUSS 203

#### **Primary Cross-listing**

This course will introduce you to some of the most influential literary texts of the nineteenth-century Russian literature that became moral, ideological, and aesthetic touchstones for *all* later periods of Russian culture. We will study the works of Pushkin, Gogol, Lermontov, Turgenev, Chernyshevsky, Dostoevsky, Tolstoy, and Chekhov with attention to their thematic and aesthetic preoccupations, socio-political and philosophical contributions, and historical contexts. Topics of particular interest include Russia's national and imperial identity; Russia's experiment in Westernization; questions of religion and science; the fluctuating meanings of social class and rebellion. By the end of this course, you will have acquired a basic understanding of the history, aesthetics, and politics of nineteenth-century Russian literary culture, as well as its broader legacy. You will have strengthened your reading and writing skills through training to read primary texts closely and analytically. All readings are in English.

**Requirements/Evaluation:** participation, reading responses on Glow, one presentation, one short paper, final research paper

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** students majoring or considering a major in Russian or Comparative literature

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **RUSS 204 (S) To See the Past: Russian and Soviet Cinema on History**

**Cross-listings:** RUSS 204 GBST 204 COMP 204

#### **Primary Cross-listing**

This course surveys Soviet and Russian cultural history of the 20th- and 21st-centuries through the history of the cinematic medium. We will watch and analyze key films of this period--films by Eisenstein, Vertov, Tarkovsky, Muratova, Balabanov, Zviagintsev, and Fedorchenko among others--from a double perspective. On the one hand, we will study the cultural and historical contexts of the Soviet Union and Russia; on the other hand, we will learn the formal and stylistic aspects of the cinematic medium as it developed historically (from silent, to sound, to color, to digital etc.). From this double perspective, we will try to answer a larger question that underlies this course: What kind of historical thinking can we learn through cinema as a medium? In other words, we will take cinema neither simply as a direct reflection of state ideology nor as pure aesthetic form or entertainment for the masses. Rather, we will approach the films of this period as audio-visual texts that are rich in historical content and require our informed and attentive interpretation.

**Requirements/Evaluation:** For each class you'll watch 1 or 2 film(s) and read typically 1 article under 20 pages. You will submit short viewing response before each class. Additionally, there will be short viewing or creative assignments to familiarize students with formal aspects of film. Evaluation will be based on participation, one presentation, short sequence analysis, and final paper or video essay

**Prerequisites:** none, open to all students

**Enrollment Limit:** 15

**Enrollment Preferences:** declared or prospective Russian or Comparative Literature majors, Russian Certificate seekers, Global Studies concentrators

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **RUSS 213 (F) Why do Pussies Riot and What is "Homosexual" Propaganda? Gender and Sexuality in Putin's Russia (DPE)**

**Cross-listings:** COMP 257 GBST 213 WGSS 214 RUSS 213

#### **Primary Cross-listing**

Since Vladimir Putin's rise to power, the media has highlighted events in Russia that at first glance resemble oddly sexualized jokes. At the same time that the Kremlin has reinstated authoritarian policy reminiscent of the Soviet Union, the Western press has chronicled Putin's topless vacations in Siberia, protests by the feminist collectives Pussy Riot and Femen, a 2011 ban on women's lacy underwear, federal legislation from 2013 prohibiting "homosexual" propaganda, and a 2017 court decision that outlawed a meme of Putin as a "gay clown." This course examines the Putin regime's ongoing attempts to police gender expression and private sexual behavior, as well as how Russian citizens' performance of gender and sexuality has changed in the past twenty years. We will consider gender and sexuality as distinctive features of Putinism, which have contributed to a biopolitical

turn in official policy and inspired resistance and protest among Russian feminists and queers. *All readings will be in English, and all films will have English subtitles.*

**Requirements/Evaluation:** active participation in class discussions, several response papers, two short papers (3-5 pages each), and a final project

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Those majoring in Russian and/or WGSS, as well as Global Studies concentrators.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COMP 257 (D1) GBST 213 (D1) WGSS 214 (D2) RUSS 213 (D1)

**Difference, Power, and Equity Notes:** The course engages in cultural comparison, explores how power and privilege are allocated differently in post-Soviet Russia than in the West, and critically theorizes contemporary Russian culture and discourse.

**Attributes:** GBST Russian + Eurasian Studies Electives

Not offered current academic year

**RUSS 217 (S) Indigeneity Today: Comparative Indigenous Identities in the US and Russia (DPE) (WS)**

**Cross-listings:** RUSS 217 ANTH 217 GBST 219

Primary Cross-listing

Indigenous movements for land, rights, and cultural preservation have spread to and originated in all corners of the world. However, the global nature of these movements at times obscures ways of being Indigenous in differing contexts. This course analyzes Indigeneity in both the United States and Russia today. Through reading and analyzing ethnography, theory, and literature, it focuses on Indigenous peoples in a comparative context. Rather than prioritizing concern with Indigenous peoples emerging from the US, it attempts to demonstrate what Indigeneity has been in both the United States and Russia and what it is and means today. It asks the following questions: what is Indigeneity and who is Indigenous; how is Indigenous identity constructed and by whom; and what convergences and divergences exist in Indigeneity between the US and Russia or for that matter in other contexts? To help answer these questions, in this course we will grapple with Indigeneity as a social category and other social formations, especially ethnicity, nationality, and race. Topics include: Indigeneity and the State, Revitalization and Resurgence, Indigenous People and Nature Protection, and Hemispheric and Global Indigeneities.

**Requirements/Evaluation:** Weekly post to course Glow discussion page, 1 or 2 times leading class discussion on the assigned readings, 1 short presentation, 1 extended project with regular short writing submissions, 1 final paper and final presentation

**Prerequisites:** None

**Enrollment Limit:** 16

**Enrollment Preferences:** Majors and certificate-seekers in Russian, then majors in Anthropology and Sociology, and then Global Studies concentrators

**Expected Class Size:** 10-12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RUSS 217 (D1) ANTH 217 (D1) GBST 219 (D1)

**Writing Skills Notes:** This course has the following assignments: Weekly post to the Glow discussion page, 1 short presentation, 1 extended project with regular writing submissions, 1 final paper and final presentation. For the extended project, we will have both peer-review and instructor feedback for all project assignments. In peer-review and instructor feedback, comprehension of the material and the content of the writing, improvement in writing style and clarity, and development of voice will be discussed.

**Difference, Power, and Equity Notes:** In the course, students will learn about Indigeneity as a context-specific social formation. It understands Indigeneity as a category of difference with past and present importance. We will read about, discuss, and write about Indigeneity as a social category, along with other social categories it arose alongside (such as race, ethnicity, and nationality), and how it has been mobilized by both those who identify as Indigenous and by those who designate others as Indigenous.

Spring 2023

SEM Section: 01 MR 2:35 pm - 3:50 pm Kamal A. Kariem

**RUSS 218 (S) Extreme Persuasions: The Far Right in the United States and Russia (DPE) (WS)**

**Cross-listings:** RUSS 218 AMST 219 WGSS 217

**Secondary Cross-listing**

The purpose of this course is to explore the unexpected recent confluence of the American and Russian far-right movements, among advocates for authoritarianism in both countries who have traditionally understood the 'other' superpower to be an implacable enemy. How have nationalist movements in the United States come to see the Russian Federation as a vanguard for 'whiteness' and traditional masculinity in European identity, overturning the perception of Russia as a racial Other that was prevalent among American conservatives during the Cold War? What are the affinities between the imperial and openly patriarchal aspirations of Putinism and the goals of American religious Reconstructionism, with its interpretation of the Confederacy as a God-given model for racial separatism and gender complementarianism? We will discuss repressive historical legacies and homophobia in both countries, devoting particular attention to debates about protest art and the removal of monuments, and to movements that situate themselves in opposition to neoliberal forms of ethno-nationalism.

**Requirements/Evaluation:** On average, there will be 100 pages of reading per week. Over the course of the semester, students will be required to view three films, which will be discussed in class. Class participation counts for 25% of the course grade; each of the first three response papers, 15%; the term paper, 25%; the in-class presentation of the term paper, 5%.

**Prerequisites:** None

**Enrollment Limit:** 19

**Enrollment Preferences:** Majors and concentrators in AMST, Russian, and Women's and Gender Studies.

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RUSS 218 (D2) AMST 219 (D2) WGSS 217 (D2)

**Writing Skills Notes:** The written work is comprised of three response papers (5-7 pages each), a rough draft of the term paper (8-10 pages) that will be ungraded but extensively commented upon, and the term paper itself (10-15 pages). Each student to discuss their writing strategies prior to the deadlines for the essay assignments. For the essays, students may choose from among a range of prompts, or design a topic of their own.

**Difference, Power, and Equity Notes:** Students will use the assigned readings as points of departure for analyzing and responding to traditionalist configurations of gender and ethno-nationalism in the United States and the Russian Federation. Particular attention will be devoted to the proliferation of different conceptions of power and privilege in both countries, and to ways in which a parsing of them may facilitate an engagement with the arguments of far right movements while retaining the concept of social justice.

**Attributes:** AMST Critical and Cultural Theory Electives

**Not offered current academic year**

**RUSS 219 (F) Cults of Personality (WS)**

**Cross-listings:** COMP 215 RUSS 219

**Primary Cross-listing**

First uttered by Soviet leader Nikita Khrushchev in 1956, the phrase "cult of personality" was formulated to discredit the hero-worship that accompanied Joseph Stalin's iron-fisted rule of the Soviet Union. Since then, the phrase has gained currency as a condemnation of a variety of seemingly all-powerful leaders in oppressive political regimes, including China's Mao Zedong, Iran's Ayatollah Khomeini, and the ruling Kim family in North Korea. In this course, we will examine the phenomenon of the cult of personality from a variety of perspectives, beginning with the cult surrounding Stalin and ending with that of Vladimir Putin. Our course material will encompass scholarship from multiple disciplines, including history, sociology, political science, cultural and media studies, as well as artistic expression typically labeled propaganda in literature, the visual arts, and film. Although our course will begin in the Soviet Union and end in contemporary Russia, we will explore how the cult of personality has been adapted and updated for different cultural and political purposes in fascist Germany and Spain, China, Iran, North Korea, and Cuba. *All readings will be in English, and all films will have English subtitles.*

**Requirements/Evaluation:** completion of weekly reading and writing assignments, as well as active engagement during tutorial sessions

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** first-year students

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COMP 215 (D1) RUSS 219 (D1)

**Writing Skills Notes:** Students will be writing papers (5-6 pages) every other week and receiving detailed feedback on their writing with the expectation that they will identify areas in need of improvement and work on these throughout the semester. The course will also require that students write one paper together with their tutorial partner and that they rewrite two different papers, one at midterm and the other at the end of the term.

### **RUSS 306 (S) Rise and Shine with Tolstoy**

**Cross-listings:** RUSS 306 COMP 306

**Primary Cross-listing**

Prepare to alternately fall in love and lock horns with this illustrious nineteenth-century Russian author. He is worth it. Whether searching for the meaning of life, interrogating what it means to love another human being or struggling with religious faith, Tolstoy was a busy, busy man and a prolific writer. This course will examine his life and major works in the broader context of Western intellectual history. Readings will include his two great novels, *War and Peace* and *Anna Karenina*, as well as a number of shorter works, such as *The Cossacks* and *The Death of Ivan Ilych*. We will also consider some of Tolstoy's aesthetic and religious writing as we examine his constant, rich, and at times surprising development as one of the greatest artists and thinkers of the 19th-century.

**Requirements/Evaluation:** timely completion of all reading assignments, active and substantive class participation, discussion leading, 4-5 short essays, and a final project

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** RUSS and COMP majors, then students studying Russian

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RUSS 306 (D1) COMP 306 (D1)

**Attributes:** GBST Russian + Eurasian Studies Electives

**Not offered current academic year**

### **RUSS 345 (S) Bagging the Monsters : Tolstoy's Other Prose**

*War and Peace* and *Anna Karenina*, which Henry James famously described as "baggy monsters," are works that are immediately identified with Leo Tolstoy, a giant of nineteenth-century Russian literature. But Tolstoy wrote so much more! From short works of adult fiction, to stories for children, pedagogical essays, political tracts, aesthetic treatises, and philosophical musings. He produced variously and prodigiously throughout his life and that's not even counting his fascinating diaries and personal correspondence. Our course readings will probe this exceptional variety with the goal of understanding the scope of Tolstoy's thinking in greater depth. All readings and discussion will be in Russian.

**Requirements/Evaluation:** Active and substantive class participation, leading discussion, weekly short writing assignments, and 1-2 longer writing pieces of 4-5 pages.

**Prerequisites:** Three years of college Russian or the equivalent. Students who have not taken Russian language at Williams must consult the instructor.

**Enrollment Limit:** 10

**Enrollment Preferences:** Russian majors and certificate seekers, then comparative literature majors.

**Expected Class Size:** 5

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

### **RUSS 346 (S) The Nineteenth-Century Povest'**

Among the genres that made nineteenth-century Russian literature famous, perhaps the most elusive is the *povest'*. Neither short story nor novella, the term *povest'* describes a type of short fiction, which any author aspiring to literary greatness in nineteenth-century Russia felt obliged to take on. This course surveys representative *povesti* by Russian writers from Karamazin to Chekhov, offering a survey of nineteenth-century Russian literature through the lens of its short fiction. Along the way, we will read *povesti* by Pushkin, Lermontov, Gogol, Turgenev, Dostoevsky, and Tolstoy. All works will be read in the Russian original.

**Requirements/Evaluation:** completion of all reading assignments; two oral presentations in class; two short papers; a final project presented in class

**Prerequisites:** RUSS 202 or the equivalent, or permission of the instructor.

**Enrollment Limit:** 10

**Enrollment Preferences:** Russian majors and those pursuing the Russian certificate.

**Expected Class Size:** 5

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

SEM Section: 01 TR 8:30 am - 9:45 am Julie A. Cassidy

### **RUSS 348 (F) Altering States: Post-Soviet Paradoxes of Identity and Difference (DPE) (WS)**

**Cross-listings:** RUSS 348 GBST 348 SOC 348

Secondary Cross-listing

Critics and apologists of Soviet-style socialism alike agree that the Soviet ideology was deeply egalitarian. Putting aside for a moment the very reasonable doubts about how justified this perception actually was, it is still worth asking, how did people who lived in the world in which differences in rank, class, gender or ethnicity were not supposed to matter, make sense of their postsocialist condition, one in which new forms of difference emerged, and old ones assumed greater prominence? And how do these encounters with difference impact current events, such as the war Russia is currently waging on Ukraine, or the persistent tensions between East and West Germans? This tutorial will examine new dilemmas through ethnographic studies and documentary films that aim to capture in real time the process of articulating and grappling with newly discovered divides. We will focus especially closely on Russia, but will also read studies on East Germany, Bulgaria, Poland, and Ukraine. This course fulfills the DPE requirement by exploring comparatively the ways in which people in different countries made sense of the social, cultural and political heterogeneity of the postsocialist condition.

**Requirements/Evaluation:** 5-page paper every other week, written comments on the partner's paper in alternate weeks

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** Anthropology, Sociology, and Russian majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RUSS 348 (D2) GBST 348 (D2) SOC 348 (D2)

**Writing Skills Notes:** This is a tutorial course, with plenty of opportunities to work on writing and argumentation. Tutorial papers receive written feedback from both the instructor and the tutorial partner, and are workshopped during the tutorial meetings.

**Difference, Power, and Equity Notes:** Students will learn to identify and interrogate processes of social differentiation and exclusion as they take place across Russia and Eastern Europe. We will also train ourselves to identify parallels, as well as differences, between responses to the social and economic uncertainty ushered by the fall of socialism, and the discontents triggered by similar conditions closer to home.

**RUSS 401 (F) National in Form, Socialist in Content: The History of Soviet Republics Through Cinema**

The USSR consisted of fifteen republics whose cultural production was meant to be "national in form and socialist in content." This course examines the cultural history of the multinational Soviet state by focusing on the history of film production in the regions beyond Moscow. How did Soviet nationality policy change over time? What kind of films did such policy yield and how should they be interpreted? What was the dynamic between the center and periphery? And finally, what are the implications of this shared history today? These are some key questions that we will discuss in this course. To do so we will read historical documents and scholarly materials on Soviet nationality policies and film production. We also will watch and analyze films produced in the republics. The course is conducted in Russian.

**Requirements/Evaluation:** completion of all reading and viewing assignments, weekly reading responses and active participation in class discussions, two presentations, final team project subtitled a film produced in one of the republics

**Prerequisites:** RUSS 252 or the permission of the instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** those majoring in Russian or pursuing a Certificate in Russian

**Expected Class Size:** 8

**Winter Study -----****RUSS 25 (W) Williams in Georgia**

Williams has a unique program in the Republic of Georgia, which offers students the opportunity to engage in three-week internships in a wide variety of fields. Our students have helped in humanitarian relief organizations like Save the Children, interned in journalism at *The Georgian Times*, taught unemployed women computer skills at The Rustavi Project, documented wildlife, studied with a Georgian photographer, done rounds at the Institute of Cardiology, and learned about transitional economies at the Georgian National Bank. In addition to working in their chosen fields, students experience Georgian culture through museum visits, concerts, lectures, meetings with Georgian students, and excursions. We will visit the sacred eleventh-century Cathedral of Svetitskhoveli and the twentieth-century Stalin Museum, see the birthplace of the wine grape in Kakheti, and explore the region where Jason sought the Golden Fleece. Participants are housed in pairs with English-speaking families in Tbilisi, Georgia's capital city. Students will submit weekly reports on their work while in the country (6 pages in total or the equivalent in another medium), as well as an overall reflection (4 pages or the equivalent in another medium) upon their return from Georgia.

**Requirements/Evaluation:** weekly reports on their work while in Georgia (6 pages in total or equivalent in another medium); overall reflection (4 pages or equivalent in another medium) upon return

**Prerequisites:** none; knowledge of Georgian or Russian is not required

**Enrollment Limit:** 8

**Enrollment Preferences:** interested students must attend an informational meeting and submit a short essay about their interest in the course

**Expected Class Size:** 8

## SCIENCE AND TECHNOLOGY STUDIES (Div II)

Chair: Professor Jason Josephson Storm

### Advisory Committee

- Matt E. Carter, Associate Professor of Biology; Faculty Director, Rice Center for Teaching; affiliated with: Biology, Neuroscience
- José A. Constantine, Associate Professor of Geosciences
- Laura D. Ephraim, Associate Professor of Political Science; on leave 2022-2023
- Ezra D. Feldman, Visiting Assistant Professor of English; affiliated with: English, Science & Technology Studies, Graduate Program in the History of Art
- Laura J. Martin, Assistant Professor of Environmental Studies and Faculty Affiliate in History; affiliated with: Center for Environmental Studies, History
- Bojana Mladenovic, Professor of Philosophy and Director of the Williams-Exeter Programme at Oxford University; affiliated with: Philosophy, Williams-Exeter Programme at Oxford
- Eli Nelson, Assistant Professor of American Studies; on leave 2022-2023
- Jason Josephson Storm, Professor of Religion, Chair of Science & Technology Studies; affiliated with: Religion, Science & Technology Studies

Science and Technology Studies (STS) is an interdisciplinary program concerned with science and technology and their relationship to society. The community of scholars in the Williams STS program apply methods from diverse disciplines. They seek to illuminate the historical, social, cultural, ethical, and political dimensions of science and technology. By bridging humanities, social sciences, science, and technology, our program seeks to build relationships across campus.

The STS program at Williams takes a broad umbrella approach to the discipline. Topics include: sociology of knowledge production; philosophy of science; history of science and technology; the economics of research and development; science and public policy; technology and the environment; scientometrics; interactions between humans and technology; science fiction and other artistic depictions of science and technology; boundaries between pseudo-science, religion, and science; and the broader ethical issues evoked by science and technology.

Science and Technology Studies concentrators must complete a total of **six courses**. Five of these must have the STS prefix. Students must take: Introduction to STS; Senior Seminar; and three electives, of which at most two can originate in the same department. In addition, Science and Technology Studies concentrators must complete one course with a laboratory or field work component in natural, social, or computer science; this course may also satisfy one of the divisional distribution requirements.

Students may petition the Chair for recognition of a course as an STS course even if it is not cross-listed in STS. The petitions will be approved or denied on a case-by-case basis.

The program is administered by a chair and an advisory committee of faculty who teach in the program. Students who wish to enroll normally register with the chair by the fall of their junior year.

## STUDY ABROAD

### FAQ

Students **MUST** contact departments/programs **BEFORE** assuming study away credit will be granted toward the major or concentration.

#### **Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

#### **What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Complete syllabus and course description, including readings/assignments.

#### **Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

No.

#### **Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

No.

**Are there specific major requirements that cannot be fulfilled while on study away?**

No.

**Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

Yes. Be sure to check record of enrollment in classes with laboratory or fieldwork components to satisfy program.

**Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:**

None to date.

### **STS 101 (S) STEM's Empire: A Critical Introduction to Science and Technology Studies (DPE)**

Who follows the science? The COVID-19 pandemic has upended many's beliefs in the rationality of scientific enterprise, exposing the institutions, power dynamics, and inequalities that shape its constitution. Meanwhile, the "tech fix" approach to ending the pandemic solely through vaccination has produced staggering death tolls compared to non-pharmaceutical interventions like masking, social distancing, and contact tracing implemented in places such as Liberia, Rwanda, and the Asia-Pacific, which have contained COVID-19 with relative success. As feminist and postcolonial scholars have long told us, the power of science often operates through division, producing dichotomies such as West/non-West, modern/traditional, global/local, developed/underdeveloped, and science/non-science. It is inextricably linked to the colonial conquest of territories, bodies, and minds. In this course, we will explore scientific practice and the production of scientific knowledge through the metaphor of empire: How might we understand scientific claims to truth, knowing that colonial relations of power are still embedded in our identities and institutions, and in the hegemonies that shape our world? We will explore this question by engaging with feminist and postcolonial critiques of science, studying controversies over the environment, medicine, indigenous knowledge, diversity in STEM, and other topics. We will pay particular attention to the situated processes out of which claims to the universal or global are made, asking who is left out of making such claims as well. An introductory course, students will be exposed to key debates in STS and learn critical tools for analyzing science and technology in an unequal but interconnected world.

**Requirements/Evaluation:** Several short response papers, mid-term paper, final project

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 14

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** This course will demonstrate how issues of power shapes the practices of empiricism.

Not offered current academic year

### **STS 102 (F) Breeding Controversy: Technologies and Ideologies of Population Control (DPE)**

**Cross-listings:** WGSS 103 STS 102

Primary Cross-listing

What is "good breeding?" For whom is birth control "liberating?" This course traces the surprising ways that concepts of population growth and decline from the natural sciences come to inform social discourses on "overpopulation" in the twentieth and twenty-first centuries. Science and politics mix to decide: who should be able to reproduce--and, consequently, who might not be born--so that some may live more prosperously? By studying the history of eugenics movements, contraceptive technologies in the context of development, and the racialized cultures of reproductive medicine, we will analyze how scientific ways of thinking about human lives reflect and reproduce social inequities. We will use the tools of feminist technoscience studies to understand how science, culture, power, and politics intersect to create new technologies of "selection" that are far from natural. New literatures in critical race STS, black feminist thought, and critical theory will inform our discussions.

**Requirements/Evaluation:** Weekly paper or response and in-class debate.

**Prerequisites:** None.

**Enrollment Limit:** 10

**Enrollment Preferences:** Freshmen. If over-enrolled, students will submit a short paragraph stating their interest in the course.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

WGSS 103 (D2) STS 102 (D2)

**Difference, Power, and Equity Notes:** This course will demonstrate how scientific knowledges also reflect biases organized along lines of social difference, including race, gender, class and nation. Readings in critical race theory will give students a deeper appreciation of these issues.

**Attributes:** PHLH Reproductive, Maternal and Child Health

Not offered current academic year

### **STS 106 (F) Being Human in STEM (DPE)**

**Cross-listings:** PHYS 106 GEOS 106 STS 106

Secondary Cross-listing

This course combines academic inquiry and community engagement to investigate the themes of diversity and social climate within STEM (science, technology, engineering and mathematics) disciplines. Students will examine how diverse identities including but not limited to gender, race, disability, sexuality, national origin, socioeconomic status, religion, and ethnicity shape the STEM experience both at Williams and nationally. We will ground our understanding through critical reading of primary scholarly research on topics such as implicit bias, identity threat, and effects of team diversity on excellence. From there, we will execute small group projects. Students will design, execute, and evaluate interventions that relate to the course goals and that have direct relevance to Williams students, faculty, and staff. For example, a student group could implement a survey of minoritized STEM students, or create a qualitative interview-based assessment of how socioeconomic status impacts students' abilities to participate in STEM fields. Course work includes weekly readings, reflective/opinion writing, in class discussion, and the development and presentation of a group project.

**Class Format:** class discussions, group project work (out of class time required)

**Requirements/Evaluation:** short response papers, class discussion participation, leading class discussions, group work, and final project

**Enrollment Limit:** 15

**Enrollment Preferences:** DIV III majors; statement of interest may be requested

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** does not count towards GEOS or PHYS major credit

**Distributions:** (D3) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHYS 106 (D3) GEOS 106 (D3) STS 106 (D2)

**Difference, Power, and Equity Notes:** This course explicitly addresses the intersection of marginalized identities and the STEM experience. Students will learn how to critically address how issues such as gender, race, ethnicity, and disability impact participation in and the experience of STEM fields. For example, students will read and critique literature documenting bias in STEM fields, and will also learn about and create interventions that can address these biases.

Not offered current academic year

### **STS 135 (F) Politics after the Apocalypse**

**Cross-listings:** STS 135 PSCI 135

Secondary Cross-listing

What shape will politics take after the apocalypse? Even before the coronavirus pandemic gave us reason to wonder if we are, in fact, living through an apocalypse, speculation about the end of the world and its aftermath pervaded recent television, movies, literature, philosophy, and critical theory. In this class we draw these works into conversation with political theories of the "state of nature" and "state of exception" to better understand what political possibilities are opened and foreclosed in times of crisis. What aspects of politics will endure the ravages of fire or pestilence? What new political realities might emerge on ground cleared by disaster? What does it say about pre-pandemic politics that we were so eager to consume stories of states falling and bands of survivors scraping together a nasty, brutish and short existence? And how will the unfolding pandemic change how we

respond to these stories? Class will be driven primarily by discussion, typically introduced by a brief lecture.

**Requirements/Evaluation:** two 3-5 page papers, one short story (7-15 pages and including an explanatory cover letter), contributions to a class project documenting and analyzing the pandemic, and class participation

**Prerequisites:** first- or second-year students, or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** first-year students

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 135 (D2) PSCI 135 (D2)

**Attributes:** PSCI Political Theory Courses

Not offered current academic year

### **STS 142 (F) AlterNatives: Indigenous Futurism and Science Fiction (DPE)**

**Cross-listings:** AMST 142 STS 142

Secondary Cross-listing

Indigenous people occupy a paradoxical position in time. On one hand, as survivors of genocide and occupation, they are already post-apocalyptic, occupying what many Indigenous thinkers argue is "our ancestor's dystopia." On the other hand, Indigenous people are relegated to the past in settler and colonial discourses, which, in relying heavily on notions of contact, authenticity, and vanishing, preclude Indigenous peoples from not only futurity, but from modernity and associated visions of science and technology too. This tutorial explores how Native science fiction imagines and enacts futurity from this paradoxical Indigenous temporality. Looking across numerous national and transnational Indigenous contexts, in addition to different kinds of media, including short stories, novels, visual art, video games, films, and online platforms like second life, this tutorial foregrounds the ways in which science fiction functions as a mode of Indigenous theory, knowledge production, and claiming of not only the future but of the past and present, as well. Pairing media readings with works in science fiction and Indigenous studies, we will explore the role of indigeneity in the founding and tropes of European and settler science fiction, Native "slipstream" and eco SF, post-post-apocalyptic thinking, space travel and frontiers, Native pessimism, and Indigenous technologies and epistemologies cast into the future. We will pay careful attention to the political stakes of these narratives and expression for Indigenous sovereignty and self-determination.

**Requirements/Evaluation:** attendance and participation, weekly 2- to 4-page written responses to class readings, short fiction prompts, and your partner's writing

**Prerequisites:** permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** American Studies majors and Science and Technology Studies concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

AMST 142 (D2) STS 142 (D2)

**Difference, Power, and Equity Notes:** This course will underscore the ways in which structures like race, gender, sexuality, and colonialism are deeply imbedded in every form of cultural production, and will highlight how imagining the future otherwise has real impact and import in the lives and political existence colonized people.

**Attributes:** AMST Arts in Context Electives AMST Comp Studies in Race, Ethnicity, Diaspora

Not offered current academic year

### **STS 153 (S) Androids, Cyborgs, Selves (WS)**

**Cross-listings:** STS 153 ENGL 153

### Secondary Cross-listing

In this expository writing course, we will analyze and argue about how near-human and partly human bodies appear in fiction and film. When do these bodies improve the spaces in which they appear? When do they threaten them? How are they gendered, how are they raced, and why? What do they desire? Authors in different cultural and technological contexts have imagined not-quite-human selves for different ends and in different ways.

Together we will develop our ideas on these topics in clear, strong prose. We will also ask how artists have cast human identities into foreign materials and media, and study the distortions and revelations that result. During museum visits at WCMA, students will use examples of self-portraiture, electrified bodies, and aspirational bodies to explore the representation, imitation, and abstraction of selves. Because this is an expository writing seminar, we will spend half or more of our class time discussing and practicing writing skills.

**Requirements/Evaluation:** five response papers (500 words); four essays (1200-1500 words, each in two drafts); class participation

**Prerequisites:** none

**Enrollment Limit:** 12

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 153 (D2) ENGL 153 (D1)

**Writing Skills Notes:** This expository writing course is dedicated to facilitating real improvement in students' written work. Students write five response papers and four five-page essays (in two drafts) over the course of the semester, receiving substantial instructor feedback on all. Students will practice: drafting, revising, and responding to critique; writing appropriately for given occasions and audiences; grounding their writing in close, analytical reading; and acknowledging sources.

Not offered current academic year

### STS 208 (S) Designer Genes (DPE)

**Cross-listings:** WGSS 208 STS 208 AMST 206 ENGL 208

### Secondary Cross-listing

In this course, we explore cultural texts that attempt to come to terms with--or exploit--the revolution in contemporary genetics with a particular focus on gender, race, class, and sexuality. The mapping of the human genome in 2001 opened incredible opportunities for medicine, law, and society, but it also, as Alice Wexler has written, "opened a vast arena for contests of power over what it means to be human, who has the power to define what is normal, [and] who has access to what resources and when." Wexler was writing before the final sequencing of the human genome. Now we have CRISPR technology, ushering in a new, more pressing set of ethical concerns. We are currently in the midst of a "global race to genetically modify humans," as the anthropologist Eben Kirksey has documented in his new book *The Mutant Project*. How will we come to define the human? Who gets to decide? Our writers and filmmakers make clear that genetic medicine cannot be thought apart from a profit-driven American health care system or family and gender dynamics. Joanna Rudnick's documentary *In the Family*, for instance, explores the personal and political issues associated with hereditary breast cancer and the patenting of genes. Octavia Butler's Afro-futurist novel *Dawn* explores black female sexuality, reproduction, and the survival of the species in her character's encounter with a genetically enhanced alien species. The film *Gattaca* shows us a fully realized dystopian society where genetically modified humans are the norm--a society that now "has discrimination down to a science." The transgender artist Tamara Pertamina, on the other hand, "hopes to decolonize the science of genetic engineering," as Kirksey has written, with her performance artist projects. Our texts come from a number of different genres, including the memoir, science fiction, film, documentary, art, and non-fiction writing at the intersections of science, medicine, philosophy, anthropology, and law.

**Requirements/Evaluation:** Personal essay, short analysis papers, Perusall annotations, final research group project

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Majors, concentrators, juniors and seniors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

WGSS 208 (D2) STS 208 (D2) AMST 206 (D2) ENGL 208 (D1)

**Difference, Power, and Equity Notes:** This course asks students to think deeply about questions of social justice in the context of the revolution in modern genetics. Race, class, gender, and sexuality all play a role in who has access to new life-saving technologies, and how these technologies are used. This course employs critical tools (feminist and queer theory, ethics' case studies, close reading) to help students question and articulate the social injustices at play in scientific research and bioengineering.

### **STS 209 (S) Philosophy of Science**

**Cross-listings:** STS 209 PHIL 209

#### **Secondary Cross-listing**

It is a generally held belief, in our time and culture, that science is the best source of our knowledge of the world, and of ourselves. The aim of this course is to examine the origins, grounds, and nature of this belief. We will analyze and discuss various accounts of scientific method, structure and justification of scientific theories, scientific choice, change, and the idea that scientific knowledge is progressive in a cumulative way. The course will begin with the "received view" of science, advanced by logical empiricists, which assumes the objectivity and the rationality of science and argues that induction is the main scientific method. We will then discuss philosophies of science which emerged out of various criticisms of this view - especially those of Popper, Lakatos, Kuhn and Feyerabend - and the challenges to the assumptions of scientific objectivity and rationality their works provoked. This discussion will lead us to the relativist and social-constructivist views developed within contemporary science studies. Finally, we will analyze the current debate about cognitive credentials of science and about proper approaches to the study of science, which came to be known as "the science wars."

**Class Format:** short lecture component in each class

**Requirements/Evaluation:** class attendance, preparedness and participation; two short assignments; three five pages long papers, the last of which will be the final paper, due a week after the end of classes

**Prerequisites:** one PHIL course, or two STS courses, or declared major in a natural science, or permission of the instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** Philosophy majors and prospective majors, then Div III majors.

**Expected Class Size:** 10-15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

### **STS 210 (S) Networks of Power: Technology in Human Affairs**

**Cross-listings:** STS 210 SOC 210

#### **Secondary Cross-listing**

Do we control our technologies, or do our technologies control us? This course will explore different philosophies of technological progress, particularly the constructivist and determinist theories, by examining major technological systems that shaped modern society, such as the telegraph system, the electric grid, radio and television broadcasting, and the internet. Each of these innovations entailed the construction of a complex network designed to serve a mix of public and business interests, and each resulted in wide-ranging and often unforeseen changes to people's lives. Guided by pertinent readings in the history and philosophy of technology, we will look critically at the forms and consequences of technological change, seeking answers to a series of complex and important questions: Is the course of technological progress an inevitable byproduct of scientific and engineering advances, or is it contingent on social and political circumstances and choices? Does technological change reinforce the social and political status quo or challenge it? Are technological and social progress synonymous, or is there a tension between the two? One of the goals of the course will be to provide

students with a more informed and critical perspective on the technological upheavals that continue to shape society today.

**Requirements/Evaluation:** attendance and participation, team assignments, two in-class exams, one 15-page seminar paper

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Anthropology and Sociology majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

Not offered current academic year

### **STS 213 (S) Race, Gender, and the Alien Body: Octavia Butler's Science Fiction**

**Cross-listings:** STS 213 WGSS 213 AFR 213

Secondary Cross-listing

Science fiction is a genre well known for its ability to envision new realities, and Octavia E. Butler (1947-2006) is among the most highly regarded science fiction writers. Butler's uncanny ability to imagine the future anew and to merge those ruminations with her experiences as an African American woman provide powerful commentary on--and often disrupt--modern understandings of race, gender, and human embodiment. We will explore questions such as: What role does 'gender' play in Butler's fiction? How does Butler's treatment of the 'alien' cause us to reconsider what it means to be human? How does Butler incorporate 'race' and the concept of 'other' into her fiction, and how do these techniques help us situate contemporary discussions of a post-race society? We will examine the relationship between Butler's visions for the future and what her narratives of future worlds invariably suggest about the present. We will read key texts including the best-selling text *Kindred* (1979), the haunting dystopian novel *Parable of the Sower* (1994), the popular vampire text *Fledgling* (2005), and the collection *Bloodchild and Other Stories* (1996). We will also explore contemporary engagement with Butler's work including the relationship between the main character from her book *Dawn* (1987), and Henrietta Lacks, the African American woman from whom the immortal cell line (HeLa) used for medical research derives. This tutorial will engage Octavia Butler's work broadly, and with particular attention to how the concepts 'race,' 'gender,' 'alien' and 'body' are interrogated in her writings.

**Requirements/Evaluation:** attendance, paired weekly reflection/response papers, a 5- to 7-page creative writing assignment, and a final essay of 10 pages

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** students with interests and/or prior coursework in Africana Studies and Women's, Gender, and Sexuality Studies

**Expected Class Size:** 10

### **STS 214 (S) Understanding Social Media**

**Cross-listings:** STS 214 SOC 212

Secondary Cross-listing

Over just the last twenty years--beginning with Friendster and MySpace and continuing through Facebook and Twitter, Snapchat and Instagram--the rise of social media has had a profound influence on the way we live. It has given a new rhythm to our daily routines, shaped the way we inform ourselves and converse with others, and transformed media and entertainment, politics and public discourse, and many other aspects of culture. This seminar course will undertake a broad and critical examination of social media, looking at it from historical, economic, legal, social, and phenomenological perspectives. The topics addressed will include social media's effects on self-image and self-formation, its influence on protest

movements and political campaigns, its use as a conduit for news and propaganda, and the way commercial interests and technical characteristics have shaped its design and use. Through pertinent readings and lively discussions, and drawing on students' own experiences with social media, the course will illuminate social media's benefits and drawbacks while providing a foundation for thinking about possible legal, regulatory, and personal responses to this far-reaching and still unfolding social phenomenon.

**Requirements/Evaluation:** attendance and participation, team assignments, two 5-page writing assignments, final exam

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Anthropology and Sociology majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

### **STS 215 (F) Viral Inequality: Power and Difference in Pandemics (DPE)**

**Cross-listings:** GBST 217 STS 215

#### **Primary Cross-listing**

From contested data to controversial containment strategies, the shape and course of pandemics are influenced at every level by the question: *Who matters? Whose lives* are prioritized and protected? *Whose expertise* is made actionable, and why? Focusing on the uneven distribution of risk and care during pandemics, this course explores how global health emergencies are not states of exception, but rather events that lay bare the priorities and interests of their host societies. Our investigation into pandemics—including Black Death, cholera, "Spanish" flu, HIV/AIDS, Ebola and novel coronaviruses—will provide a critical entry point into understanding the social, political, and economic processes that shape health interventions and outcomes, and their divergences along lines of social difference. We will ground our discussion and analysis using key concepts in Science & Technology Studies, while drawing from critical medical anthropology, disability studies, theories of capitalism and disaster studies to enrich our conversation.

**Class Format:** Online seminar

**Requirements/Evaluation:** Several short essays and reflection papers

**Prerequisites:** None, open to all students

**Enrollment Limit:** 12

**Enrollment Preferences:** If overenrolled, preference will be given to first-years and sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

GBST 217 (D2) STS 215 (D2)

**Difference, Power, and Equity Notes:** This course takes an intersectional approach to understanding how global pandemics unfold. It will emphasize how power dynamics and social differences shape responses to, and outcomes of, health emergencies. Readings in social and critical race theory are designed to give students a deeper appreciation of these issues.

**Attributes:** PHLH Social Determinants of Health

Not offered current academic year

### **STS 219 (F) Realizing Utopias**

**Cross-listings:** STS 219 REL 219

#### **Secondary Cross-listing**

**Our world can be better.** We are faced with unfolding global catastrophes, such as the pandemic, anthropogenic climate change, economic crises, racialized injustice, and political polarization, and many people seem to have lost their capacity to imagine better futures. Perhaps that is why we as a society have no problem picturing the end of the world--fictional dystopias and apocalypses are abundant while (e)utopias are scarce. This a problem because, as numerous political theorists have observed, it is hard to organize meaningful change around cynicism and nihilism. But our dystopian present makes it even more important to imagine and even realize utopias. This course will help us do so. Our core collective goal will be to explore pragmatic realizations of radical hope. Complementing urgent efforts to resist or mitigate intense injustice in the present, we will aspire to articulate bold visions for emancipatory communities of the future. Rather than primarily focusing on the limitations of existing institutions, this seminar will treat these as problems to be solved rather than as reasons to accept the status quo, and we will embrace affirmative projects of designing the frameworks for better worlds. But we also don't want to blind ourselves to the challenges of being visionary. In brief, we will engage in serious explorations of the underlying principles and rationales for various emancipatory political communities while also pragmatically assessing their potential difficulties. We will spend the first part of the course reading political theory (on issues such as resource allocation, collective decision making, and social justice) alongside various artistic and political manifestos. We will spend one week reading utopian novels (including as possibilities socialist, anarchist, techno-futurist, ecotopias, Afrofuturist, queer utopias, and many more). But the majority of the course will be project-based. Students will form small teams to engage in radical thought experiments and then construct and refine their ideas of better possible societies/political communities. These teams will produce 1) policy papers to address how their utopian societies would deal with real world issues, and 2) artifacts (such as art, manifestos, pamphlets, short stories, videos, or the like) that might appear in the futures they envision, exploring both their ideals and their limits. The semester will culminate in a public exhibition of these works. Thinkers to be considered may include: Marx & Engels, José Esteban Muñoz, Boaventura de Sousa Santos, Lucy Sargisson, David Schweickart, Colin Ward, Erik Olin Wright, and others.

**Requirements/Evaluation:** attendance and participation, short writing assignments, group policy papers, and artifacts (e.g., art, manifestos, pamphlets, short stories, or videos) for end of semester exhibit.

**Prerequisites:** none.

**Enrollment Limit:** 20

**Enrollment Preferences:** If overenrolled students will be asked for a statement of interest and utopian project idea.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

### **STS 221 (F) History of Photography**

**Cross-listings:** STS 221 ARTH 221

**Secondary Cross-listing**

This lecture course will examine the history of photography from its beginnings in the 1830s to the present, from the first grainy black and white images to the work of contemporary artists using cutting-edge photographic technologies. We will examine photographs used for documentary, scientific, and aesthetic purposes, and we will trace the medium's emergence and acceptance as a fine art. We will also explore photography's physical and conceptual characteristics as a medium, paying particular attention to its uniquely intimate and frequently contested relationship to "the real." By the end of the course, students will have a broad understanding of photography as a unique medium within the history of art and knowledge of the theoretical frameworks that developed alongside that history.

**Requirements/Evaluation:** three to four short papers, quizzes, online presentations.

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** art history majors

**STS 226 (F) The Art of Natural History (WS)**

**Cross-listings:** STS 226 ARTH 229

**Secondary Cross-listing**

The scientific revolutions of the eighteenth and nineteenth centuries fundamentally changed the way the natural world was seen and celebrated, classified and organized, displayed and manipulated. New discoveries in the natural sciences and competing theories of evolution intertwined with shifting conceptions of natural history, of nature, and of humankind's proper place within it. This course will investigate the links between art and natural science. It will seek to understand the crucial role of the visual arts and visual culture in the study and staging of natural history from the eighteenth century to the present. We will pursue the questions that preoccupied the artists themselves. How should an artist react to new ecological insights? What is the proper artistic response to newly discovered flora and fauna? What is the role of aesthetics in the communication of knowledge? How are those aesthetics connected to ethics? How might a drawing of a plant convey information that is different from that of a photograph or a glass model of a plant? How might a theatrical diorama frame a scientific idea in a way that is different from a bronze statue? Students will seek to understand the myriad connections between seeing, depicting, and knowing, to question long-held assumptions about the division between "objective" science and "subjective" art, and to recognize that art has the ability not only to interpret, disseminate, and display scientific knowledge, but to create it as well.

**Class Format:** There will be field trips if travel is allowed.

**Requirements/Evaluation:** Five 5 page essays, five 1-2 page responses to partner's essays, critical conversation.

**Prerequisites:** None.

**Enrollment Limit:** 8

**Enrollment Preferences:** Sophomores with an interest in art history, art studio, ecology, environmental studies, and science and technology studies, juniors with these same interests, then art history majors, and science and technology majors, in that order.

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 226 (D1) ARTH 229 (D1)

**Writing Skills Notes:** This course will require students to write a short paper or a critical response to their partner's paper each week. Students will receive critical feedback on both form and content from their professor and from their peers.

**Attributes:** ARTH post-1800 Courses

**Not offered current academic year**

**STS 228 (F) Feminist Bioethics (WS)**

**Cross-listings:** PHIL 228 STS 228 WGSS 228

**Secondary Cross-listing**

In this course we will explore the ways in which feminist approaches to moral thinking have influenced both the methodology and the content of contemporary bioethics. The first portion of the course will address the emergence of the "Ethics of Care," critically assessing its origins in feminist theory, its development within the context of the caring professions, and its potential as a general approach to bioethical reasoning. The second portion of the course will use feminist philosophy to inform our understanding of the ways in which gender structures the individual's interactions with the health care system. To do this we will explore topics that might traditionally be considered "women's issues" in healthcare, such as medicine and body image (e.g., cosmetic surgery, eating disorders), reproductive and genetic technologies, and research on women and their health care needs. In addition we'll also look at feminist analyses of topics that traditionally have not been regarded as "gendered," such as resource allocation and end of

life issues.

**Class Format:** discussion

**Requirements/Evaluation:** active participation in class discussions; periodic short papers (2-3 pages); midterm and final paper ( 5-7 and 7-10 pages, respectively); and one oral presentation

**Prerequisites:** none, although previous coursework in WGSS is desirable

**Enrollment Limit:** 19

**Enrollment Preferences:** prospective and declared majors or concentrators in PHIL, WGSS, STS, and PHLH, especially those who need the course to satisfy major or concentration requirements

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** meets Contemporary Value Theory requirement only if registration is under PHIL

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHIL 228 (D2) STS 228 (D2) WGSS 228 (D2)

**Writing Skills Notes:** Students will write periodic short papers (2-3 pages each), a midterm paper (5-7 pages) and a final paper (7-10 pages). Short papers focus on concepts, arguments, and writing skills needed in the midterm and final papers, in which students are expected to describe and evaluate arguments from assigned readings, and to present clear and effective arguments in support of their own ethical positions. Students receive feedback on all papers and have the opportunity to revise midterm and final papers.

### **STS 229 (S) The Panopticon: Surveillance, Power, and Inequality (DPE)**

**Cross-listings:** STS 229 SOC 228

Secondary Cross-listing

Surveillance is built into the very fabric of modern life. From CCTV cameras, to supermarket loyalty cards, to the massive gathering of personal data on social media sites, people participate in today's "surveillance societies" just by doing everyday activities. This course uses the metaphor of the "Panopticon" as a doorway to engagement with traditional and new forms of surveillance. First described by philosopher and social theorist Jeremy Bentham, the Panopticon is a physical structure that enables one observer to see all inhabitants without those inhabitants knowing when they are being observed. In *Discipline and Punish*, Michel Foucault famously expanded thinking on the Panopticon as a metaphor for the "disciplinary" power that lies at the heart of inequality in modern society. Since Bentham and Foucault's time, however, surveillance technologies have changed significantly. To what extent does the concept of the Panopticon give us purchase on today's surveillance societies? How does watching people with new digital and algorithmic surveillance technologies shape the exercise of power and, in turn, (re)produce forms of inequality? Can privacy, convenience, and safety ever be truly balanced? Topics include: the historical origins and expansion of surveillance in modern societies, policing and state surveillance, and social media surveillance.

**Requirements/Evaluation:** participation, reading responses, midterm essay, final paper

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** Anthropology and Sociology majors

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 229 (D2) SOC 228 (D2)

**Difference, Power, and Equity Notes:** This course explores how power is distributed unequally through the mechanism of surveillance technologies, particularly in regard to racial and class differences. Among other topics, it will consider the concrete case of surveillance by police in Baltimore City and the question of if and when surveillance is appropriate there, given the city's ongoing crisis of citizen and police violence. Students will discuss

police surveillance in a context shaped by racial segregation and class inequality.

Spring 2023

SEM Section: 01 MR 1:10 pm - 2:25 pm Ben Snyder

**STS 231 (S) Africa and the Anthropocene (DPE)**

**Cross-listings:** AFR 231 STS 231 ENVI 231

**Secondary Cross-listing**

Despite its low contributions to global carbon emissions, the continent of Africa is predicted to experience some of the worst effects of climate change. This interdisciplinary course investigates the causes and consequences of this troubling contradiction. It positions the African continent as an important site for understanding how legacies of empire, racial and gendered inequality, resource extraction, and capital accumulation impact contemporary global environmental politics. Students will engage theoretical texts, reports from international organizations, films, novels, and web-based content. Topics include: humanism/post-humanism; migration and displacement; representations of conflict; and sustainable development.

**Requirements/Evaluation:** Assignments include: 2 short written commentaries (2-3 pages each), mid-term current event analysis (5-7 pages), final analytical essay (10-12 pages) and class presentation

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Environmental Studies majors and concentrators

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

AFR 231 (D2) STS 231 (D2) ENVI 231 (D2)

**Difference, Power, and Equity Notes:** Africa and the Anthropocene considers inequity in environmental politics from the vantage of the African continent. Through selected readings and classroom discussions students will tackle questions of power, racial and gendered difference, empire, and economic stratification. The course contributes to the DPE requirement by helping students to develop skills to better analyze abiding challenges in global society.

Spring 2023

SEM Section: 01 MR 2:35 pm - 3:50 pm Brittany Meché

**STS 236 (F) Aesthetics of Automation: From the Mechanical Turk to A.I.**

In this course we will study the changing aesthetics of automation in European and North American cultural contexts from the 18th century to the present. We will also explore the wider cultural and material effects of automation (as imagined and as implemented) upon public and private spheres, craftsmen and courts, wage-laborers, artists, and inventors. The objects we examine will be as various as the dulcimer-playing android presented as a gift to Marie Antoinette, IBM's Deep Blue, and singer-actor Janelle Monae's android alter-ego, Cindi Mayweather. Our primary sources will consist of visual representations in print and film as well as literary and commercial writing; our secondary sources will consist of essays in aesthetic theory, cultural studies, science and technology studies, and the history of technology.

**Requirements/Evaluation:** mid-term and final essays, an annotated bibliography, discussion participation, and brief in-class writing exercises.

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** STS concentrators

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

### **STS 239 (S) The Ethics of Artificial Intelligence**

**Cross-listings:** STS 239 PHIL 239

#### **Secondary Cross-listing**

We will someday live alongside artificially intelligent beings who equal or exceed us. Commentators ranging from technology magnates to physics geniuses-not to mention decades of apocalyptic science fiction-have urged that that future is nothing short of an existential threat to human beings. Whether this is hyperbole or wise prognostication, it cannot be denied that the rise of AI will be a tectonic shift for culture, technology, and our fundamental sense of ourselves. When AI is fully realized, it is likely to be amongst the most important things to happen to our species. Some challenges we face are broad and about the future, though perhaps not the far future. How can we ensure that AI's will act morally? Is a world with AI's overall better or worse for us? How do we create legal and policy frameworks that cover a new kind of thinking being? If they are conscious, will AI's have dignity and rights? Other questions are pressing and immediate: Artificial intelligence techniques are used today to help decide whether someone gets a bank loan, is eligible to be released on bail, or in need of particular medical treatment. And right now there are autonomous vehicles deciding how to behave in traffic, and autonomous weapons capable of delivering lethal force. Is it moral for us to pass along these sorts of decisions to AI's? What if they are biased, unbeknownst to us? What if they are more fair? In this course we will engage ethical questions surrounding the seeming inevitability of AI.

**Class Format:** mixture of lectures and discussion

**Requirements/Evaluation:** four short (3- to 4-page) writing assignments and a final essay (8-10 pages)

**Prerequisites:** none

**Enrollment Limit:** 25

### **STS 240 (F) Great Astronomers and Their Original Publications (WS)**

**Cross-listings:** ASTR 240 STS 240 LEAD 240

#### **Secondary Cross-listing**

In this course we will study some of the greatest figures in astronomy and consider their leadership in advancing progress in the field. We will consider their lives and works, especially as represented by original copies of their books and other publications. These great astronomers include: 16th century, Nicolaus Copernicus (heliocentric universe); Tycho Brahe (best pre-telescopic observations); 17th century, Galileo (discoveries with his first astronomical telescope, 1610; sunspots, 1613; *Dialogo*, 1632); Johannes Kepler (laws of planetary motion, 1609, 1619, Rudolphine Tables 1627); Johannes Hevelius and Elisabeth Hevelius (atlases of the Moon and of stars, 1647, and 1687); Isaac Newton (*Principia Mathematica*: laws of universal gravitation and of motion, 1687); 18th century, Edmond Halley (*Miscellanea curiosa*, eclipse maps, 1715, 1724); John Flamsteed and Margaret Flamsteed (*Atlas Coelestis*, 1729); and William Herschel and Caroline Herschel (1781, 1798). Also, from more recent times in which original works are often articles rather than books: 20th century, Albert Einstein (special relativity, 1905; general relativity, 1916); Marie Curie (radioactivity); Cecilia Payne-Gaposchkin (hydrogen dominating stars, 1929), Edwin Hubble (Hubble's law, 1929); George Ellery Hale (Mt. Wilson Observatory 100" telescope, 1917; Palomar Observatory 200" telescope, 1948), Vera Rubin (dark matter, 1970s); Jocelyn Bell Burnell (pulsar discovery, 1968); and 21st century: Wendy Freedman (Universe's expansion rate, 2000s). First editions will be available in Williams' Chapin Library of rare books, where we will meet in an adjacent classroom. We will also consider how such original materials are collected and preserved, and look at examples from the wider world of rarities, such as a leaf from the Gutenberg Bible (c. 1453) and a Shakespeare First Folio (1623, with a discussion of astronomical references in Shakespeare's plays). The course will be taught in collaboration between an astronomer and a rare-books librarian, with remote lectures by experts from around the world.

**Class Format:** Meeting on campus in the Chapin Library classroom (Sawyer 452)

**Requirements/Evaluation:** class participation, two 5-page intermediate papers, and a final 15-page paper; student choice of additional readings from a provided reading list

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** if overenrolled, preference by written paragraph of explanation of why student wants to take the course

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

### **STS 243 (F) Epidemic! A Critical History of Medicine, Science and Power (DPE)**

The world after COVID won't look the same. It has disrupted our lives and laid bare the racial, gendered and economic inequalities in our health system, and the deficiencies of political and public health institutions, as it continues to claim more victims. For centuries, communicable diseases ravaged different communities and led to massive mortality and morbidity. The death toll disrupted social organizations, destroyed families and communities, and challenged medical institutions and State authority. Medical thought and practice struggled to make sense of contagion, disease factors and treatment; State authorities were faced with demands to intervene, protect and support the sick, all while its own institutions were ravaged by diseases; race, gender, sexuality and other human differences were deployed to justify why some died more, and to show that, for the State, some lives mattered more than others. In this course, we trace how epidemics influenced the history of medicine, science and technology, and how they impacted social structures around the world. We ask about the meaning of contagion, how medical and scientific thought understood diseases. We investigate the history of quarantines and isolations. We ask about race, gender and sexuality and their place in the making of epidemics, and we investigate the history of colonialism and its connection to changing disease landscape. Tracing epidemics from the nineteenth century plagues to COVID, the course investigates the place of epidemics and contagion in medical and scientific thought, how they relate to race, gender, sexuality and colonialism, and how they changed and shaped the world we live in.

**Requirements/Evaluation:** 2 response papers (3-5pages each) + final project (could be a 10-15p paper or creative project of any kind)

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Concentrators, followed by seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** The course addresses how epidemics, and the way medical and political institutions dealt with them, were shaped by issues of race, gender, sexuality and human difference, and how epidemics in turn impacted perception of race, gender and sexuality. Students will engage with a number of theories and methods related to difference, such as critical race theory, postcolonial theory and queer theory.

**Not offered current academic year**

### **STS 250 (F) Environmental Justice (DPE)**

**Cross-listings:** STS 250 ENVI 250

**Secondary Cross-listing**

How are local and global environmental problems distributed unevenly according to race, gender, and class? What are the historical, social and economic structures that create unequal exposures to environmental risks and benefits? And how does inequity shape the construction and

distribution of environmental knowledge? These are some of the questions we will take up in this course, which will be reading and discussion intensive. Through readings, discussions, and case studies, we will explore EJ in both senses. Potential topics include: toxics exposure, food justice, urban planning, e-waste, unnatural hazards, nuclearism in the U.S. West, natural resources and war, and climate refugees. Occasionally, community leaders, organizers, academics, and government officials will join the class to discuss current issues.

**Requirements/Evaluation:** several short essays, final essay

**Prerequisites:** ENVI 101 or permission of the instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** juniors, seniors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 250 (D2) ENVI 250 (D2)

**Difference, Power, and Equity Notes:** This course will explore how unequal power leads to environmental injustice. Specifically, we will analyze how local and global environmental problems are distributed unevenly according to race, gender, and class. This is a service-based learning course, and students will hone skills to address environmental injustices.

### **STS 251 Science and Militarism in the Modern World (WS)**

In 1961, United States President Dwight D. Eisenhower warned of the global dangers of what he called the "military-industrial complex." In this course, we will interrogate the military-scientific complex, or the imbrication of militarism and scientific knowledge. This tutorial takes up a number of environmental themes, including the role of environmental science within military campaigns, conservation and environmental racism, nuclear waste and ecological contamination. Surveying conflicts from World War II through the present-day War on Terror, this course will investigate how environmental scientists, politicians, soldiers, activists, and artists have grappled with the intertwined legacies of science and militarism. Students will engage a range of textual materials including books, films, photographs, and news reports.

**Requirements/Evaluation:** Course requirements include bi-weekly response papers (5-7 pages) and tutorial discussions.

**Prerequisites:** None

**Enrollment Limit:** 10

**Enrollment Preferences:** ENVI and STS majors and concentrators

**Expected Class Size:** 10

**Grading:**

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Over the course of the semester, students will write 5 papers (5-7 pages each). They will receive bi-weekly detailed feedback on their writing from the professor and their tutorial partner. This feedback will include advice on strengthening their argumentation and use of textual evidence, as well as grammar and usage suggestions/corrections. Students will be graded on the portfolio of papers, with specific attention to how they have incorporated feedback in each subsequent paper.

**Attributes:** ENVI Humanities, Arts + Social Science Electives

Not offered current academic year

### **STS 261 (F) Science and Militarism in the Modern World**

**Cross-listings:** STS 261 ENVI 261

Secondary Cross-listing

In 1961, United States President Dwight D. Eisenhower warned about the global dangers of what he called the "military-industrial complex." In this course, we will interrogate the military-scientific complex, or the imbrication of militarism and scientific knowledge. Surveying conflicts from World War II through to the present-day War on Terror, this course will consider how empire, networks of expert knowledge, resource extraction, environmental

contamination, and land degradation have shaped the modern world. Students will engage a range of textual materials including books, films, photographs, and news reports. Course requirements include weekly writing assignments and participation in small group discussions.

**Class Format:** This course adopts a tutorial model. Students will be divided into 5 groups of 2. Each week the groups will meet with me. Each pair will include one "presenter," who shares a 4-6 page paper responding to the week's theme, and one "respondent," who will offer a 2-3 page response to the presenter's paper. The roles of presenter and respondent will alternate each week. Each student will produce 5 papers as "presenter" and 5 papers as "respondent."

**Requirements/Evaluation:** Each student will produce five (4-6 page) papers as "presenter" and five (2-3 page) papers as "respondent." Grades will be issued based on the portfolio of papers and active participation in discussions.

**Prerequisites:** None

**Enrollment Limit:** 10

**Enrollment Preferences:** ENVI and STS majors and concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

### **STS 262 (S) Paper Trails (DPE)**

**Cross-listings:** GBST 262 SOC 262 STS 262

Secondary Cross-listing

Long before the invention of the passport, states or state-like entities sought to document and manage populations and discipline bodies. This course invites students to critically reflect on documentation practices and systemic violence, particularly against racial, ethnic, sexual, and political minorities. Students will explore identity-making through documentary practices such as the three-generation life history, a biographical form that Soviet-allied countries used to reward loyalty and punish disloyalty. Labels, such as a criminal record or pre-existing health conditions, also trail or precede individuals their whole lives. Students will grapple with what happens when the paper trail goes cold--when identification documents are invalidated, birth certificates withheld, household registries purged, and archives destroyed. Students will explore the rise of surveillance and biometric data alongside the actors, technologies, and industries that try to circumvent them in places such as the Xinjiang Uyghur Autonomous Region and along the US-Mexico border. In this project-based course, students will exhume paper trails and imagine alternative ways to create, alter, and subvert them.

**Requirements/Evaluation:** thoughtful and consistent class participation, facilitation of guest speakers, Special Collections visit, project memos, and final project and presentations

**Prerequisites:** None

**Enrollment Limit:** 15

**Enrollment Preferences:** Anthropology and sociology majors, Global Studies concentrators; Science and Technology Studies concentrators

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

GBST 262 (D2) SOC 262 (D2) STS 262 (D2)

**Difference, Power, and Equity Notes:** In this course, students will interrogate some of the key documents that structure our lives and serve as tools for waging systemic violence against ethnic, racial, sexual, and political minorities. Students will synthesize and apply these lessons about bureaucratic documentation toward the benefit of a community partner.

**STS 269 (F) Mindfulness Examined: Meditation, Emotion, and Affective Neuroscience (DPE) (WS)****Cross-listings:** REL 269 STS 269 ASIA 269 ANTH 269**Secondary Cross-listing**

This course provides a social analysis of and practical engagement with mindfulness in the US today. It considers the modern applications of Buddhist meditation as a tool to improve awareness of the related processes of mind, behavior, and emotions within landscapes structured by racism, sexism, and other systemic inequalities. We consider how mindfulness relates to Buddhist discourses as well as the rapid rise of fields like contemplative neuroscience, affective neuroscience, and integrative neurobiology. How can mindfulness help people communicate more effectively--be they doctors or patients, teachers or students? How has the exploding research on mindfulness and meditation since 2000 help us understand the intersection of human emotions, behaviors, and relationships? We train in a variety of Buddhist meditation practices through the semester including forest bathing, mindfulness, compassion meditation, while unpacking the subjective experience of our minds and emotions first-hand. Students will be asked to train in mindfulness practices the entire semester while studying models of the mind developed by research in clinical and evolutionary psychology, affective neuroscience, and interpersonal neuroscience.

**Requirements/Evaluation:** weekly tutorial papers and discussion**Prerequisites:** A prior class or some experience with meditation is recommended**Enrollment Limit:** 10**Enrollment Preferences:** ANTH, SOC, REL, ASST majors; PHLH, STS concentrators; seniors and juniors**Expected Class Size:** 10**Grading:** yes pass/fail option, no fifth course option**Distributions:** (D2) (DPE) (WS)**This course is cross-listed and the prefixes carry the following divisional credit:**

REL 269 (D2) STS 269 (D2) ASIA 269 (D2) ANTH 269 (D2)

**Writing Skills Notes:** This class will involve weekly tutorial essays or oral responses, intensive written feedback on every essay, and a mid-semester 'writing chat' with the instructor.**Difference, Power, and Equity Notes:** This class fulfills the Difference, Power, and Equity requirement because it will explore the ways that mindfulness can address the growing epidemic of anxiety, depression, and other mental health issues we find in the US today. We study mindfulness from an intersectional perspective and relate its benefits to intersecting inequities and intergenerational trauma in the US today.**Attributes:** GBST South + Southeast Asia Studies Electives PHLH Social Determinants of Health

**STS 272 (S) The History and Mythology of Chinese Scripts****Cross-listings:** STS 272 CHIN 272 COMP 272**Secondary Cross-listing**

Written scripts using what are most often called "Chinese characters" have an attested history of over 3000 years and have been used all over the world to represent a range of different languages. In this course we will examine the history and development of Chinese characters from their earliest extant examples on sacrificial animal bones to their often amusingly misguided use for contemporary tattoos. We will look at historical evidence and mythology, carefully constructed grammatological studies and wild orientalist imaginings. Some topics will include: comparisons between the development of Chinese characters and other written scripts, the relationship between Chinese characters and the languages of China, the use of Chinese characters to write non-Chinese languages, Chinese characters in art and calligraphy, theories of connections between Chinese characters and Chinese philosophy and literature, issues of education and literacy, and the future of Chinese characters in the digital age.

**Class Format:** discussion**Requirements/Evaluation:** quizzes, short writing assignments, a midterm, and a final exam**Prerequisites:** none**Enrollment Limit:** none**Enrollment Preferences:** none**Expected Class Size:** 15

### **STS 273 (F) Politics without Humans?**

**Cross-listings:** ENVI 273 STS 273 PSCI 273

#### **Secondary Cross-listing**

Are human beings the only beings who belong in politics? And is political involvement a unique or defining aspect of what it means to be human? Such questions are increasingly complex as the boundaries of "the human" become blurred by the rise of artificial intelligence, robotics, and brain implants: shifting attitudes towards both animal and human bodies; and the automation of economic and military decisions (buy! sell! attack! retreat!) that used to be the prerogative of human actors. How do visions of politics without humans and humans without politics impact our thinking about longstanding questions of freedom, power, and right? Can and should the link between humans and politics survive in an age in which "posthuman" or "transhuman" entities become central characters in the drama of politics? This class will consider these questions through readings, films and artifacts that bring political theory into conversation with science fiction, popular literature on the so-called "singularity" (the merger of humans with computers), science and technology studies, evolutionary anthropology, "new materialist" philosophy, and feminist theory.

**Requirements/Evaluation:** three 5- to 7-page papers, regular Glow posts, class participation

**Prerequisites:** please note that this is an introductory-level course with no prerequisites; first-year students and those with no background in political theory are welcome, as are more experienced students

**Enrollment Limit:** 25

### **STS 281 (S) Religion and Science**

**Cross-listings:** REL 281 STS 281

#### **Secondary Cross-listing**

In the last few years the deniers of religion such as Dennett and Dawkins have forcefully argued that recent scientific developments show the degree to which religion is irrelevant to a modern understanding of what it means to be human. Atran and Boyer have made a similar case, arguing that recent progresses in our understanding of human cognition demonstrate that religion is a purely natural phenomenon that has little if any value for human development. Theologians such as Haught and Polkinghorne have rejected these views, arguing that a proper understanding of scientific developments such as evolution and quantum mechanics suggests religiously relevant views of the universe and our place therein. This course considers these competing perspectives while offering critical reflections on the views and categories involved in these controversies. We also examine the works of reflective naturalists such as Bellah and Herrstein, who argue that far from showing the irrelevance of religious ideas and practices, the new mind and life sciences suggest a much more nuanced view according to which religion is both grounded in the natural world and central to the development of human culture. Hence, it cannot be easily discounted as irrelevant to a scientifically informed understanding of what it means to be human.

**Requirements/Evaluation:** tutorial format. one paper every two weeks

**Prerequisites:** none

### **STS 290 (F) Technologies of Friendship**

**Cross-listings:** ENGL 290 STS 290

#### **Primary Cross-listing**

Contemporary friendships--whether among roommates, near neighbors, or friends living thousands of miles apart--are highly mediated. We communicate and signal our attachment through Zoom windows, apps, and social media platforms, and we create ambiguous relationships with people whom we "follow" or "friend" without having met in person. Sometimes we text as much as we talk even with intimate friends, and carrying on in-person friendships has been complicated in myriad ways by the Covid-19 pandemic. But friendships have always been mediated, and in this tutorial we will examine how writers across centuries have described the tools and technologies of friendship: some perhaps quaint or sentimental (for example the written letter) and others creepy or invasive (for example Apple's "Find My" app or social media's "suggestions"). We will ask common and important questions, such as "Can one have too many friends?"; "Are long-distance friendships sustainable?"; and "What health risks do we take for friendship, and what other risks do technologies of friendship carry?" Readings will include works of fiction and journalism, and scholarship from psychology, the history of technology, and science and technology studies. The technologies we will consider include emojis, coffeehouses, memes, letters, telephones, video games, and social media.

**Requirements/Evaluation:** Students will write essays and critique their partner's essays in alternate weeks.

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** STS concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

### **STS 302 (S) Race, gender and science: A Black, Brown, and Queer inquiry into Science and Technology Studies (DPE)**

**Cross-listings:** HIST 390 STS 302

#### **Primary Cross-listing**

The protests that followed the murder of George Floyd have brought to the fore the realities of racism and violence that Black, Indigenous and People of Color experience daily. They also motivated a long overdue reckoning in various fields and institutions with the legacy of structural racism, and of colonial history. The history of modern science, technology and medicine is intractably connected to questions of race, gender, sexuality and colonialism. Scientific knowledge has been influenced by debates related to human difference and to colonialism, and has also contributed to the production of ideas around difference and distinction as well as around equality and equity. In this course, we will take a deeper look into different episodes in the history of modern science, technology and medicine, and will engage in a Black, Brown and Queer reading and investigation of science and technology. The course will offer a deep historical and methodological introduction to STS, as well as to a number of critical disciplines, such as Critical Race Theory, Postcolonial and decolonial theory, queer theory, in relation to science, technology and medicine. This course can serve as an alternative to STS 101.

**Requirements/Evaluation:** 2 response papers (3-5pages each) + final project (could be a 10-15p paper or creative project of any kind)

**Prerequisites:** Previous courses in STS, history, CRT, WGS, or similar disciplines is preferred but not necessary.

**Enrollment Limit:** 10

**Enrollment Preferences:** Juniors and Seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

### **STS 308 (S) What is Power?**

**Cross-listings:** SOC 308 PSCI 306 STS 308 REL 308

Secondary Cross-listing

*What is power?* Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures? What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or agency? Or ideology? This course begins with the observation that power is often described as a causal relation--an individual's power is supposed to equal their capacity to produce a change in someone else's behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: **critical theory about power** and **philosophy of science about cause and effect**. We will touch on classic philosophical accounts of power and causation, but focus our attention on more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt, Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, and Max Weber. **(Note that in 2023 this course will also fulfill the senior seminar requirement for STS)**

**Requirements/Evaluation:** critical annotations for every class, midterm review essay (4-6 pages), final essay (10-12 pages)

**Prerequisites:** None.

### **STS 311 (S) Global Health in the Transpacific (DPE)**

**Cross-listings:** AMST 352 STS 311 ASIA 352

Primary Cross-listing

East is East, and West is West, Rudyard Kipling famously wrote in 1889, but never has this been true. Just as war, imperialism, and transnational flows of capital move people, cultures, and ideas across the Pacific, similar patterns of migration and mobility shape the transmission of illness and disease as well. This course explores global health and disease control as sites of domination and resistance in the Pacific Rim. Articulating the linkages between Asia/America, we will look at the racialization of people and pestilence during the third plague pandemic in Hong Kong and San Francisco, malaria control projects in colonial Southeast Asia, and the rise of modern genomics out of the ashes of Hiroshima and concern over radiation risk, and other cases, to understand how disregard for Asian bodies has shaped the development of modern medicine and public health. At the same time, Indonesia's claim of "viral sovereignty" to protect their biological specimens from Western intellectual property regimes and Hmong refugees' resistance to biomedical intervention in their struggles with mental illness offer counterpoints to Western hegemony. This course provides a critical examination of biosecurity as modern geopolitical struggle and puts Asia-Pacific and the Pacific Rim at the center of our exploration of global health.

**Requirements/Evaluation:** Reading responses, two short review essays, and one seminar paper

**Prerequisites:** Previous coursework in anthropology and sociology, some knowledge of the Asia-Pacific region.

**Enrollment Limit:** 12

**Enrollment Preferences:** Juniors and Seniors, STS concentrators. If overenrolled, students will submit a short paragraph explaining their interest in the course.

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

### **STS 316 (F) Social Ontology**

**Cross-listings:** STS 316 REL 316

Secondary Cross-listing

**What is society? What is the social world made of?** The obvious answer--individual people--was for a long time dominant in the social sciences.

Indeed, many theorists argued that there was no such thing as society distinct from individual humans and their intentional actions. While this mode of theorizing had some advantages, it has recently fallen out of vogue because of its inability to explain group norms, institutions, corporations, and other collectives. Explanations at the individual level are not necessarily incorrect, but rather philosophers have increasingly come to see them as incomplete. Society seems to more than an aggregate of individuals. Hence, philosophers have increasingly turned to questions of social ontology and produced fresh theories about the nature of the fundamental constituents of the social world. We will explore this research, but with the added intuition that looking beyond humans to other social animals can provide a fresh theoretical vantage. **We will set out from the idea that the social world is composed not just out of humans, but also out of materialized signs produced by social animals** (e.g., a no-smoking sign or an ant's chemical trail). This seminar will offer an advanced survey of current debates about the ontology, methodology, and aims of the humanities and social sciences. We will address questions such as: *Is there a difference between explaining and understanding social actions? Should explanation in the humanities and social sciences follow the model of explanation in the natural sciences, or are there peculiarities about social phenomena that demand a different approach? What are social structures, practices, norms, institutions? How might social structures exist over and above individuals? Do social groups have agency in their own right? What are social kinds and what is their relationship to natural kinds? How do debates in the social sciences look different if we attend to other social animals and their materialized signs?* Course readings will come from a variety of areas including: sociology, semiotics, feminist theory, philosophy of science, and philosophy of mind. When possible, we will supplement these with readings on research into animal behavior.

**Requirements/Evaluation:** Attendance and participation. Weekly critical responses/comments. 10-12 page final research paper.

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** STS concentrators, Religion or Biology majors, and then other students majoring/concentrating in DIV II areas.

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** advanced theory seminar with difficult readings.
