Prerequisites: permission of instructor

Enrollment Limit: 10

Enrollment Preferences: first- and second-year students
HIST 135  (F)  The Coffeehouse from Arabia to the Enlightenment  (WS)
Invented in sixteenth-century Arabia, the coffeehouse soon made its way to Egypt and Istanbul and then to Western Europe. This institution offered a social space where men (and women) could congregate to discuss politics and ideas. Everywhere, it was an object of suspicion, yet its onward march proved unstoppable, and it even became one of the central spaces of the European Enlightenment, the eighteenth-century movement that laid the foundations of modern Western secular thought. In this course, we will reconstruct the progress of the coffeehouse in order to understand what made it so special. Through its prism we will explore a crucial period in the history of Europe and the Middle East, and investigate how intercultural interactions and intellectual exchange shaped the modern world at a time of religious and political polarization.

Requirements/Evaluation:  Attendance and participation; two 5-7-pp. papers (and a revision of each); final research project proposal and bibliography; a final, 10-12 pp. research paper; a final research presentation.

Prerequisites:  First-year standing.

Enrollment Limit:  19

Expected Class Size:  19

Grading:  no pass/fail option,  yes fifth course option

Distributions:  (D2)  (WS)

Writing Skills Notes:  This class is designed as an intensive expository writing seminar for first-year students. We focus on the structure of expository argument, the importance of revision, on library and research skills, etc. Students receive detailed feedback on their writing throughout the semester and are expected to use the opportunity to hone their craft.

HIST 137  (F)  Victorian Britain and the Anglo-Afghan Wars  (WS)
Long before the US and its allies fought the recent war in Afghanistan (2001-2021), Britain fought three Afghan Wars. Now almost forgotten, dusty reminders of Britain's imperial past, they were crucial moments in the "Great Game", the rivalry between the British and Russian empires for supremacy in Central Asia and control of land routes to British India. Largely disastrous for the British, the First Afghan War (1839-1842) resulted in the tragic deaths of some 16,000 individuals, the Second (1878-1881) generated considerable domestic discord, and the Third (1919) basically ended British influence in Afghan affairs. Nevertheless, they exercised the Victorian imagination and led to numerous cultural productions that will be dissected in our class: illustrated tales of British military exploits proliferated in the press; the children's writer G.A. Henty turned the conflicts into the stuff of imperial adventure; Rudyard Kipling made the Great Game the backdrop for several works of fiction; military officers, government officials, "lady travelers", and amateur scholars all mapped the landscape and people of Afghanistan, an endless source of fascination for the Victorians. By interpreting these various forms of documentary evidence, we will not only reconstruct the history of the wars Britain fought in Afghanistan, and the reasons for them, but dissect the stories Britons told themselves about their Empire and about Afghanistan and its people.

Requirements/Evaluation:  Evaluation will be based on regular and continuous participation in class discussion, two document analyses (750 words each), two guided research essays (5 pages each), and various shorter exercises leading up to a final research paper (10-12 pages) due at the end of class

Prerequisites:  None. First-year or sophomore standing required.

Enrollment Limit: 19
Enrollment Preferences: First-year students, and then sophomores who have not taken a 100-level seminar or tutorial in History.

Expected Class Size: 12-16

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write two document analyses (750 words each) and two guided research essays (5 pages each), all letter-graded and returned with comments. Also, students will write a final research paper (10-12 pages) in consultation with the instructor; a working bibliography and prospectus, and a rough draft, will be required in advance of submission of the final paper. Students will learn about research and writing skills and will receive timely suggestions for improving their work.

HIST 143 (S) Soccer and History in Latin America: Making the Beautiful Game (WS)

This course examines the rise of soccer (fútbol/futebol) in modern Latin America, from a fringe game to the most popular sport in the region. Focusing especially on Brazil, Argentina, Peru, and Mexico, we will analyze the central role that soccer played as these countries faced profound questions about racial, gender, regional, and national identities. Using autobiographies, videos, and scholarly works from several disciplines, we will consider topics including: the role of race and gender constructions in the initial adoption of soccer; the transformation of this foreign game into a key marker of national identity; the relationship between soccer and political and economic "modernization"; the production of strong, at times violent identities at club, national, and regional levels; and the changes that mass consumerism and globalization have effected on the game and its meanings for Latin Americans.

Requirements/Evaluation: Class participation, a series of short papers, response papers, and a research paper

Prerequisites: First-year or sophomore standing; juniors or seniors with permission of instructor

Enrollment Limit: 19

Enrollment Preferences: First year students and then sophomores who have not previously taken a 100-level seminar. If oversubscribed an application process may be developed to determine admission to the course

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write three 3-papers on set topics and an 8-10 page research paper. Revision of the first short paper is mandatory, in response to instructor's comments. Students will receive timely feedback on all pieces of writing and will participate in in-class workshops on the identifying sources, formulating an argument, and presenting a compelling case.

HIST 152 (S) The Fourteenth Amendment and the Meanings of Equality (DPE) (WS)

Cross-listings: HIST 152 WGSS 152

Primary Cross-listing

For more than 150 years, the 14th Amendment of the U.S. Constitution has served as the principal touchstone for legal debates over the meaning of equality and freedom in the United States. This course explores the origins of the 14th Amendment in the years immediately following the Civil War, and examines the evolution of that amendment's meaning in the century that followed. Central themes in this course include the contested interpretations of "birthright citizenship," "due process," "privileges and immunities," "equal protection," and "life, liberty or property"; the rise, fall, and rebirth of substantive due process; battles over incorporating the Bill of Rights into the 14th Amendment; and the changing promise and experience of citizenship. We will pay particular attention to how arguments about the 14th Amendment have shaped and been shaped by the changing meanings of racial and gender equality.

Requirements/Evaluation: a series of short (2-page) response papers; a midterm exam; and a final 12-15 page research paper

Prerequisites: first-year or sophomore standing; juniors or seniors with permission of instructor

Enrollment Limit: 19

Enrollment Preferences: given first to those who have been dropped from this class previously, then to first-years, then to sophomores
HIST 152 (D2)  WGSS 152 (D2)

Writing Skills Notes: Students will write three short (3-page) response papers to the readings in the first part of the semester, and will also write a substantial (10- to 12-page) research paper. In preparation for the research paper, students will write proposals, develop bibliographies, write outlines and drafts, and do peer critiques. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: This course satisfies the DPE requirement because it examines the legal, social, and political constructions and theorizations of difference, power, and equity. It examines the ways that individuals and groups have organized across various axes of difference to fight for legal equality, and explores how those individuals and groups have experienced legal equality and legal inequality in varied ways.

HIST 155  (F)  School Wars  (WS)

Throughout the 20th century, parents, students, teachers, and policymakers have fought bitterly about the purpose of and practices in public schools. Public schools have been the site of a series of intense conflicts over the meanings of democracy and equality; the relationship between the individual, the family, and the state; and about completing claims to recognize the rights of teachers, children, and parents. Organized both chronologically and thematically, this course examines a series of "school wars" in the 20th century, focusing especially on battles over religion, race, and sex. Topics will include evolution/creationism, segregation and desegregation, bilingual education, sex education, free speech, and school prayer. This course asks how, why, and with what consequences schools have been an arena of cultural conflict in the United States? How do these debates help us understand the contested relationship between the rights of children and students, the rights of parents and families, the rights of communities and states, and the obligations of the federal government? How can historical analysis shed light on our present-day "school wars"? Many of these conflicts wind up in court, and we will be looking at some key Supreme Court decisions, but we will also draw upon memoirs, social histories, oral histories, popular culture, and other archival and documentary sources that focus on the experience of teachers and students. Tutorials meet in pairs. Every week, each student will either write an essay (1000-1250 words) that responds to and analyzes the readings OR a short essay (no more than 500 words) that responds to their partner's paper and raises further questions for discussion.

Requirements/Evaluation: four to five tutorial papers (approximately 5 pages) and four to five short response papers (approximately 2 pages)

Prerequisites: first-years or sophomores

Enrollment Limit: 10

Enrollment Preferences: first-year students, and then sophomores who have not previously taken a 100-level seminar

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)  (WS)

Writing Skills Notes: Students will write bi-weekly 5-page papers about the readings, and bi-weekly 2-page responses to their tutorial partner's paper. For the final paper, each student will revise and expand one of the papers they wrote in the semester. Students will receive regular written and oral feedback on their work from the professor and their tutorial partner. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

HIST 156  (F)  The Manifesto in U.S. Politics  (WS)

Is there a style or tradition of writing political manifestos in the United States? Given the nation's origins in revolution, the answer would seem on the surface to be a definitive "yes." But some observers are skeptical; one writer has gone so far as to say the term "manifesto" connotes "a radicalism that American writers generally lack." This course will investigate that claim. How would we choose to define the very term, "manifesto?" Why have so many radical American writings been embraced as having the characteristics of a manifesto? We'll look at these questions through close readings and analyses of manifestos across three different historical junctures in the U.S. -- the Revolutionary era, the 1830s and 1840s, and the 1960s and early 1970s -- focusing in particular on struggles over racial equality and women's rights.
Requirements/Evaluation: participation; three graded essays (3-5 pages each), handed in as drafts, given comments, and with time for revision; 3-5 very short, ungraded assignments on course content and about library research; one manifesto (any length) and a final reflection paper (3-5 pages).

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: first-year students and then sophomores

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will alternate between doing short graded and ungraded assignments in the first 8-10 weeks of the class: the 3 graded assignments (varying length, but no more than 7 pages maximum) each will involve a draft, and then a revision based on instructor comments; the ungraded assignments will be either informal, analytical responses to the reading; short, creative responses; or discussion questions. Students will also each write a manifesto and a short, final reflection paper.

HIST 158  (S)  North of Jim Crow, South of Freedom  (DPE) (WS)

Cross-listings: HIST 158 AFR 158

Primary Cross-listing

This course analyzes the freedom struggle in the North during the twentieth century. Whereas black northerners drew from broader campaigns and traditions of black resistance, we will explore territorial distinctions in the region that otherwise have been flattened within the long history of civil rights discourse. To accomplish this aim, we will engage the following themes: black culture and radicalism; community formation and residential segregation; demographic and migratory transitions; deindustrialization and the war; gender and respectability politics; labor tensions and civil rights unionism; northern racial liberalism; and the influence of world affairs--all with an eye toward scrutinizing the freedom struggle in its northern variety.
Requirements/Evaluation: Students are expected to participate actively and will write three short essays (3-4 pages), all of which will be letter-graded and returned with comments. In addition, students will write a final research paper (8-10 pages) in consultation with the instructor and will be required to submit a topic proposal.

Prerequisites: first-year or sophomore standing; juniors or seniors with permission of instructor

Enrollment Limit: 19

Enrollment Preferences: first-year students and then sophomores who have not previously taken a 100-level seminar. If the course is overenrolled, students with junior and/or senior status will be removed automatically. Other students will complete a questionnaire.

Expected Class Size: 19

Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

HIST 158 (D2) AFR 158 (D2)

Writing Skills Notes: Students will write three short essays (3-4 pages), all of which will be letter-graded and returned with comments. In addition, students will write a final research paper (10-12 pages) in consultation with the instructor and will be required to submit a topic proposal and outline, an annotated bibliography, and a peer-reviewed draft of the final paper. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: This course analyzes the long black freedom struggle in the North during the twentieth century. It examines black northerners' efforts to achieve citizenship and equality as well as their challenges and involvements with northern racial liberalism. It offers students the opportunity to think critically about how black resistance campaigns emerged and evolved as discriminatory racial practices persisted in spite of legal and legislative remedies.

HIST 159 (F) Crossing the Color Line: A History of Passing (DPE) (WS)

Cross-listings: AFR 159 HIST 159

Primary Cross-listing

In June 2015, Rachel Dolezal emerged as a media spectacle and the subject of national scrutiny after her white parents stated publicly that Dolezal is a white woman passing as black. Their insistence that Dolezal is white came in the wake of her reports to local news media and police that she had been the victim of several hate crimes. To critics, Dolezal is a fraud who has committed cultural appropriation. Yet, for her supporters, Dolezal's racial identification as a black woman is authentic and indisputable, since race is not based on biology but rather is a social construction. For both groups as well as impartial observers, many wondered curiously why a white woman had chosen to pass as black, especially given that historically it has been African Americans who opted to become white. Inspired by the controversy surrounding Dolezal, this tutorial will explore the history of passing in the United States. Whereas our attention will primarily be focused on black-to-white passing, we will expand our understandings of passing by emphasizing the variety of ways that identities have been shaped through the crossing of boundaries--class, ethnic, gender, intellectual, political, religious, and sexual. To accomplish our goals, we will read and cross-examine fictional and nonfictional as well as primary and secondary historical accounts of boundary-crossers. We will also screen several films that engage the theme of passing.

Requirements/Evaluation: Weekly formal response papers and written critiques.

Prerequisites: None.

Enrollment Limit: 10

Enrollment Preferences: First and second-year students will be prioritized, followed by history majors. Should the course be overenrolled, students will be asked to complete an enrollment questionnaire.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
Writing Skills Notes: Students will be required to complete formal writing assignments each week, alternating between response papers (4 pages) and written critiques (2 pages) of their peers' work. Students will receive substantial feedback on their writing skills, with verbal and written suggestions for improvement. Students also will receive feedback from their tutorial partners.

Difference, Power, and Equity Notes: Narratives of racial passing provocatively raise questions about the construction, logics, reinforcement, and subversion of racial categories and identities. Tutorial students will have the opportunity to deconstruct the meanings of race and identity in addition to thinking culturally, historically, and ontologically about the implications and value of these constructs. In essence, we will theorize racial identity, reconsidering, if not challenging, its stable notions of identic intelligibility.

HIST 163 (S) From Wampum to Phillis Wheatley: Communications in Early America (DPE) (WS)
How did the diverse peoples who inhabited early North America communicate with each other, across profound linguistic, cultural, social, and religious differences? This course examines histories of communication in early America and the technologies that communities developed across landscapes of coexistence and also contestation. We will study Indigenous oral traditions, traditional ecological knowledge, and wampum belts as signifiers of identity, meaning, and diplomacy for Native American nations and peoples; artistic and scientific paintings, engravings, and visual culture that moved around the Atlantic World; political orations, newspapers, and pamphlets that galvanized public opinion in the "Age of Revolutions"; stone memorials and monuments that connected communities to ancestral pasts; and the powerful poetry of African American writer Phillis Wheatley along with the orations of Pequot intellectual William Apess. Together we will raise new questions about the meanings and ongoing legacies of early American histories, and grapple with diverse approaches to understanding the past. Additionally, this course provides an opportunity to engage with original materials pertaining to early American histories in the Williams College Archives/Special Collections and Art Museum.

Class Format: Remote course. Class will meet synchronously on Zoom once per week for group conversation, with additional time devoted to Glow discussion posts and other activities. Students are encouraged to virtually meet with the instructor one-on-one to work on writing and projects.

Requirements/Evaluation: active participation in class discussions, several short essays based on readings and discussion topics, museum/archives exercise, final essay

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: limited to first- and second-year students who have not yet taken a 100-level course in History; juniors and seniors only with the permission of the instructor

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: Short essays (3-5 pages) spaced throughout the semester with instructor feedback on writing skills as well as historical content; written reflection and analysis related to museum/archives visit with original materials; final essay (8-10 pages) due at end of semester that synthesizes findings from across the whole semester and allows students to closely examine primary/secondary sources; regular opportunities to conference with instructor about writing ideas and drafts.

Difference, Power, and Equity Notes: This course delves into histories and experiences of diverse early Americans, including substantial focus on Native American/Indigenous and African/African American peoples. It introduces students to foundational methods for historical study, including decolonizing methodologies from Native American and Indigenous Studies (NAIS) and African American histories, along with critical vantages on Euro-American settler colonialism and the complex entanglements that arose in multiracial communities.

HIST 165 (F) The Age of McCarthy: American Life in the Shadow of the Cold War (WS)
The Cold War cast a long shadow over American life in the years following World War II. The relationship between domestic and foreign affairs was particularly acute during the Age of McCarthy, an era marked by a intensifying Soviet-American rivalry abroad coupled with dramatic Red baiting and
witch hunts at home. This course explores related aspects of American life from the late-1940s to the late-1950s, ranging from the phenomenon of
McCarthyism itself to fallout shelters, spy cases, the lavender scare, nuclear families, the Hollywood blacklist, the religious revival and its implications
for foreign policy, Sputnik and the space race, and links between the Cold War and Civil Rights. Using scholarly books and articles, primary sources,
novels, music, and films, we will explore interactions between politics, diplomacy, society, and culture in the Age of McCarthy. In this writing-intensive
course, we will focus on analyzing sources, writing clearly and effectively, and making persuasive arguments. Students will not only learn about
history, but they will learn to think and write as historians.

Requirements/Evaluation: class participation, several short essays, in-class presentations, and a final 10- to 12-page research paper

Prerequisites: first-years and sophomores

Enrollment Limit: 19

Enrollment Preferences: first-years, and then sophomores who have not previously taken a 100-level seminar

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write several short essays (2-4 pages each) as well as a final research paper (10-12 pages). Over the course of
the semester, students will submit a research proposal as well as several working drafts of the final research paper. These drafts will be discussed in
small group workshops, including the professor. Students will receive from the instructor timely comments on their writing skills, with suggestions for
improvement.

Attributes: HIST Group F Electives - U.S. + Canada

Not offered current academic year

HIST 166 (F) Cold War Films (WS)

This history tutorial utilizes popular film as a vehicle to explore American Cold War culture. The Cold War was an intense period of political,
ideological, cultural, and military struggle between the United States and the Soviet Union that took place after the Second World War. For every
nuclear test, arms sale, or military operation, there was a propaganda ploy, rhetorical barb, or diplomatic ultimatum to match. Amidst this hostile
competition between two incompatible ways of life--communism and capitalism; totalitarianism and democracy--an atmosphere marked by panic,
secrecy, insecurity, paranoia, surveillance, and conformity pervaded American life. Given the vast cultural influence of movies, film during this era
served as a vital ideological battleground. Moreover, cinema offers us a window into the cultural landscape of Cold War America, for film reflects,
interprets, and shapes national identity in complex ways. The films examined in this course (for the most part, Hollywood productions from the
mid-1940s to the mid-1960s) serve as unique historical documents and as cultural texts illuminating the ways filmmakers and audiences negotiated
the challenges presented by the Cold War struggle. The films assigned for this course focus on a range of topics, including anticommunism, competing
visions of Americanism, religion, the Hollywood Ten, J. Edgar Hoover and the FBI, the nuclear arms race, brainwashing, gender, race relations, and
the eventual unravelling of the Cold War consensus. The historical analysis of film requires not only a close reading of the movies themselves, but also
a clear understanding of the historical context in which they appeared. The readings paired with each film will help to clarify this context and offer
interpretations of the films with which we will engage.

Requirements/Evaluation: Students will be required to complete formal writing assignments each week, alternating between 4-page reading
response papers and 2-page critiques of their peers' work. These writing assignments will be evaluated alongside preparedness for and performance
in tutorial discussions.

Prerequisites: None, open to all students.

Enrollment Limit: 10

Enrollment Preferences: First and second year students will be given priority. If the course is overenrolled, students will be asked to complete an
enrollment questionnaire.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will be required to complete formal writing assignments each week, alternating between 4-page reading response
papers and 2-page critiques of their peers' work. They will receive feedback on each of these papers--in writing and in person--from both the professor
and their tutorial partners. Throughout the semester these writing assignments will total 25-30 pages.

**HIST 167 (S) Let Freedom Ring? African Americans and Emancipation (WS)**

**Cross-listings:** AFR 167  HIST 167  AMST 167

**Primary Cross-listing**

This course will examine African Americans' transition from slavery to freedom. In the years that encompassed the Civil War and immediately after, most African Americans changed from being legal property, able to be bought, sold, mortgaged, rented out, and leveraged into U.S. citizens, with the Constitutional right to male suffrage. This course examines this transition. How did it come about? To what extent were African Americans able to exercise their rights that the constitution guaranteed? How did Emancipation shape African American family relations, culture and demography? This is a research seminar. We will examine work of historians and discuss the contradictions and nuances of emancipation. Readings will include monographs, scholarly articles and heavy dose of primary sources, as many as possible written by African Americans themselves. Assignments include an original research paper on an aspect of Emancipation. We will devote considerable time throughout the semester to finding primary and secondary sources and on the writing process.

**Requirements/Evaluation:** research paper, short writing assignments, class participation

**Prerequisites:** first-years and sophomores

**Enrollment Limit:** 19

**Enrollment Preferences:** first-years, and then sophomores who have not previously taken a 100-level seminar

**HIST 202 (S) Islam in Africa (DPE)**

**Cross-listings:** HIST 202  GBST 232  AFR 232  REL 232  ARAB 232

**Secondary Cross-listing**

Islam in Africa is often relegated to the peripheries in the study of Islam, a religion most associated with Arabs and the Middle East. On the flip side, Islam is also portrayed as foreign to African belief systems and institutions. The relationship between Islam and Africa, however, begins with the very advent of Islam when early Arab Muslim communities took refuge in the Abyssinian empire in East Africa. This course explores the history of Islam and Muslim societies on the African continent by focusing on the localized practices of Islam while also connecting it to Islam as a global phenomenon. The course will begin with a historical focus on the spread of Islam in Africa from East Africa and North Africa in the seventh century all the way to the spread of Islam through Sufi brotherhoods in the eighteenth and nineteenth centuries. The course will also take an anthropological approach, exploring the diverse practices of Islam in African Muslim communities and the social and cultural impact of Islam on African societies. Among the topics the course will cover include African Muslim intellectual traditions, local healing practices, religious festivals, early modern African Muslim abolitionist movements, and the historical interactions between African and Asian Muslim communities in the Indian ocean world.

**Requirements/Evaluation:** Two essays during the semester and final project.

**Prerequisites:** None

**Enrollment Limit:** 25

**Enrollment Preferences:** REL, HIST, ARAB, AFR, GBST majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option
Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
HIST 202 (D2) GBST 232 (D2) AFR 232 (D2) REL 232 (D2) ARAB 232 (D2)

Difference, Power, and Equity Notes: The course will urge students to consider how scholars construct centers and peripheries through a study of Islam in Africa that is often rendered to the peripheries in the study of Islam. The course will also explore the diversity of African Muslim communities, getting students to think about the diversity of human experiences and interpretations of shared sacred texts.

HIST 203  (F)  Modern Japan

Cross-listings: HIST 203  ASIA 203

Primary Cross-listing

This course is intended to familiarize you with the history of modern Japan, the world's third-largest economy and a dynamic influence on global culture. We will begin during the Edo Period (1600-1868), during which feudal (e.g., the status system) and more modern (e.g., a consumer society) features of Japanese life developed alongside each other. We will then examine the Meiji Restoration and explore how the Imperial Japanese state led Japan through modernization into total defeat by 1945. The course then looks at economic recovery and societal change during the postwar period, taking us up to the present day. Students will become familiar with several significant shifts in interpretation of key aspects of Japanese history. We will cover the rise and demise of the erroneous "national seclusion" narrative, the legislation of Japanese Emperor's divinity, and the debate over Japan's supposed ethnic and cultural distinctiveness. We will focus especially closely on the roles of class, gender, imperialism and foreign contacts in modern Japanese history. You are expected to critically analyze assigned primary and secondary sources and to communicate your ideas to your classmates effectively both orally and in writing. You are also expected to collaborate with your classmates to complete group activities. You will also conduct limited original archival research.

Class Format: This class features an immersive simulation, in which students will simulate the Meiji Restoration. The final project is a collaborative research project and presentation working with Japan-related sources from Williams's Special Collections.

Requirements/Evaluation: Class participation, two 5-6 page essays, immersive simulation midterm, collaborative final research presentation

Prerequisites: None

Enrollment Limit: 40

Enrollment Preferences: History majors, Asian Studies concentrators, then all others

Expected Class Size: 20-25

HIST 204  (F) Colonial Rule and Its Aftermaths in Africa  (DPE)

Cross-listings: GBST 203  HIST 204  AFR 227

Primary Cross-listing

This course focuses on the history of Africa during the colonial and post-colonial periods, especially focusing on the period between 1885 and 2000. The first part of the course will explore the imposition of colonial rule and its attendant impacts on African societies. During this section, we will especially examine how Africans responded to colonialism, including the various resistance movements that arose at different moments to contest colonial rule. We will also explore the various transformations wrought by colonialism. The second part of the course will explore the African struggle to
decolonize their societies and to fashion viable political systems. In addition to historical texts, the course will make use of cultural materials such as novels and films.

Class Format: Mixed format of lecture and discussion seminar

Requirements/Evaluation: active participation in discussion, map quiz, response papers, midterm and final exams, and case study paper (7-10 pages)

Prerequisites: None

Enrollment Limit: 30

Enrollment Preferences: if course is over-enrolled, preference to history majors and students with a demonstrated interest in African studies

Expected Class Size: 30

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

GBST 203 (D2) HIST 204 (D2) AFR 227 (D2)

Difference, Power, and Equity Notes: This course will introduce students to how Africans contended with the forces of colonialism and its aftermaths. It will examine how different African societies as well as social groups on the continent were affected by and responded to colonial rule. All of the readings, discussions, and assignments will ask students to contend with the issues of how to write African lives into the history of colonialism.

HIST 205 (F) The Making of Modern Africa (DPE)

Cross-listings: AFR 203 HIST 205

Primary Cross-listing

This course traces the incorporation of Africa into an expanding global world from the middle of the 19th century to the present and examines the impact of this integration on the history of African cultures and modern nation states. It is designed to provide you with an introductory understanding of the economic, social, and political forces that have shaped Africa in recent times and continue to affect the lives of individual people across the continent. Over the course of the semester you will be introduced to major historical themes in African History from the past 150 years, including the abolition of the slave trade and its effects, African states in the 19th century, the growing integration of different regions into shifting global and economic systems, European colonization, and African resistance to imperial conquest. We will also explore the emergence of the nationalist and anti-colonial movements, and Africa's post-colonial experiences of self-governance. Within these broad historical processes, the class will cover additional key themes such as religious change and the role of Western missionaries; changing gender roles; environmental exploitation and change; the emergence of the developmental state; urbanization; military dictatorships, and war and violence in the late 20th century. We will also cover some of the issues surrounding the study of African History as a discipline. This is a challenging task as no single course can cover more than a silver of the complexity and variety of the continent. This is why we approach the study of Modern African History through a comparative prism.

Requirements/Evaluation: active participation in discussion, map quiz, response papers, midterm and final exams, and a case study paper (7-10 pages)

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: if course is over-enrolled, preference to history majors and students with a demonstrated interest in African studies

HIST 211  (S)  Understanding 9/11 and the War in Iraq  (DPE)
Cross-listings:  HIST 211  ARAB 211
Primary Cross-listing
What were some of the causes of 9/11/2001 and what were some of the consequences? Why and how did the United States invade Iraq in 2003 and what impact did the subsequent occupation of that country have on the rest of the Middle East? In this course on recent political and cultural international history, that will also consider this history in film and popular culture, the monumental ramifications of the "War on Terror" will be considered and how this framework has shaped the 21st century. In the first part of the course, US-Middle Eastern relations will be explored and the eventual emergence of al-Qaeda in the late 1990s. Then the terrorist attacks on American soil on 9/11 will be studied and the ensuing wars on Afghanistan and Iraq. Particular attention will be on the prelude to the Iraq War, especially how that war was justified and rationalized, and the eventual occupation of Iraq. The myriad Iraqi responses will be studied along with American military experience. Finally, the course will evaluate the significance of the first decade of the 21st century and how these events continue to reverberate today.

Requirements/Evaluation:  short online writings and papers and a final project
Prerequisites:  none
Enrollment Limit:  40
Enrollment Preferences:  History and Arabic Studies majors
Expected Class Size:  25
Grading:  yes pass/fail option,  no fifth course option

HIST 213  (S)  Modern China, 1600-Present
Cross-listings:  HIST 213  ASIA 213
Primary Cross-listing
China's presence continues to grow in our world today, but contemporary China also evinces complex contradictions: a market economy promoted by a nominally Communist government, extremes of urban wealth and rural poverty, increasing participation in the international community and intensifying nationalist rhetoric. This course examines China's historical engagement with the modern world to offer perspective on its current conditions. We will begin with the Qing (1644-1911) conquest of China and consolidation of a multi-ethnic empire, and investigate China's encounters with Western and Japanese imperialism, the rise of Chinese nationalism, Republican and Communist revolutions, and the often turbulent history of the People's Republic. Throughout, we will examine themes of social, economic, intellectual, and cultural change through predominantly primary source reading and analysis.

Requirements/Evaluation:  class participation, two short papers, two essays, a midterm and a self-scheduled final exam
Prerequisites:  none; open to all
Enrollment Limit:  40

**Cross-listings:** REL 218  ANTH 212  GBST 212  HIST 214  ASIA 211  CHIN 214

**Secondary Cross-listing**

This course examines the foundational period of Chinese civilization, from the earliest evidence of human activity in the geographical region we now call China, through the end of the Han dynasty in the early third-century CE. This is the period that saw the creation and spread of the Chinese script (a writing system that would be the dominant one in East Asia for thousands of years), the teachings of Confucius (whose ideas continue to play a role in the lives of billions of people today), the construction of the Great Wall (which is not, as it turns out, visible from space), and the creation of the imperial bureaucratic system (that was, in essence, the progenitor of the modern bureaucratic state). We will proceed chronologically but focus on a set of thematic topics, including language and writing, religion and philosophy, art and architecture, politics and economics, and science and technology. While this course is entitled "Foundations of China," we will take a critical perspective on narratives, both Chinese and Western, that see Chinese history as an unbroken history of a single "civilization."

**Requirements/Evaluation:** short writing assignments (approximately 750-1000 words each), quizzes, a mid-term, and a final exam

**Primary Cross-listing**

Over a century of constant warfare came to an end in the late 1500s, ushering in more than two hundred years of relative peace in a Japan that was ruled by a military government. This course will take up the extraordinary changes and enduring continuities of the period between the establishment of the Tokugawa government in the early 1600s and its eventual collapse in 1868, an era characterized by societal order and tensions, economic growth and stagnation, the development of cities and towns, the flourishing of urban culture, the spread of new and different ideas, and the decline of the samurai. We will focus on the political, social, and cultural history of early modern Japan, including topics such as the establishment of the Tokugawa order, the nature of the political system, foreign relations, urbanization, popular culture, material culture, the quality of life, the legal order, gender and sexuality, and the fall of the Tokugawa government. Assigned materials will include government documents, intellectual treatises, autobiographies, literature, and films.

**Class Format:** discussion

**Requirements/Evaluation:** class participation, response papers, two short papers (5 pages), and a final paper (10 pages) or self-scheduled final exam

HIST 218 (F) From Crises to Cool: Modern Japan, 1850s-Present
Cross-listings: ASIA 218 HIST 218

Primary Cross-listing
Stunning revolutions, the construction and collapse of an empire, the waging of wars, devastating defeat and occupation by a foreign power, and postwar economic ups and downs have marked Japan's modern experience. This course will explore how various Japanese people from factory workers and farmers to politicians and intellectuals have understood, shaped, and lived the upheavals from the 1850s through the present day. And it will examine how the country of Japan as well as individual Japanese people have defined the identities and meanings of "modern Japan." We will ask why a modernizing revolution emerged out of the ashes of the early modern order; what democracy and its failures wrought; how world war was experienced and what legacies it left in its wake; and how postwar Japan has struggled with the successes and costs of affluence. Materials will include anthropological studies, government documents, intellectual treatises, fiction, films, and oral histories.

Class Format: lecture and discussion

HIST 220 (S) History and Society in India and South Asia: c. 2000 to 1700s CE
Cross-listings: HIST 220 ASIA 222

Primary Cross-listing
This course is an introduction to the history of India and South Asia from prehistoric times to the emergence of early modernity. During these centuries, the subcontinent emerged as one of the most diverse and complex regions of the world, as it continues to be even today. The course will cover the period between the rise of the urban Indus Valley civilization to the end of the Mughal Empire and will address topics such as the origins and development of the caste system and "Hinduism", society and culture in the great epics like the Ramayana, the beginnings of Jain and Buddhist thought, politics and patronage under Islamic polities, the formation of Mughal imperial authority through art, architecture and literature, among others. Through the study of social processes, the course will focus on the diversity and connectedness that have defined the subcontinent throughout its history. It will also consider the role of history in the region and how a number of events from the past continue to inform its present.

Class Format: Lecture-discussion
Requirements/Evaluation: class participation, reading responses, 2 essays, mid-term and a final exam
Prerequisites: none; open to all
Enrollment Limit: 40
Enrollment Preferences: History Majors, and anyone interested in South Asian history before colonialism
HIST 221 (S) South Asia: Colonialism to Independence, 1750-1947 CE

Cross-listings: HIST 221 ASIA 221 GBST 221

Primary Cross-listing

This course focuses on the history of South Asia with the aim of providing an overview of the political and social landscape of the region from c. 1750 to 1947. This period spans the decline of the Mughal Empire through British colonial rule, South Asians’ struggle for independence, and the Partition of India and Pakistan. We will explore a range of themes including the rise of colonialism, nationalism, religion, caste, gender relations, and the emergence of modern social and political institutions on the subcontinent. In addition to reading key texts and historical primary sources on the specific themes, we will also work with a variety of multimedia sources including films, short stories and podcasts. One objective of this course is to introduce students to the different political and social processes that led to the creation of India, Pakistan and Bangladesh; another is to teach students to think critically about the significance of history and history writing in the making of the subcontinent.

Class Format: This class will also have a small discussion component.

Requirements/Evaluation: class participation, response papers (2-3 pages), two short essays (4-5 pages), midterm and final exams

Prerequisites: none; open to all

Enrollment Limit: 40

Enrollment Preferences: history majors if the the class is overenrolled.

Expected Class Size: 25-30

Grading: yes pass/fail option, no fifth course option

HIST 222 (S) Greek History

Cross-listings: HIST 222 CLAS 222

Secondary Cross-listing

Ancient Greece has been thought to embody the origins of Western civilization in its institutions, values, and thought; it has been seen as the infancy of modern society, with the attributes of innocence, purity, and the infant's staggering capacity for exploration and learning; it has been interpreted as an essentially primitive, violent culture with a thin veneer of rationality; and it has been celebrated as the rational culture par excellence. The study of ancient Greece indeed requires an interpretive framework, yet Greek culture and history have defied most attempts to articulate one. We will make our attempt in this course by investigating ancient Greece as a set of cultures surprisingly foreign to us, as it so often was to its own intellectual elite. But we will also come to appreciate the rich and very real connections between ancient Greek and modern Western civilization. The course will begin with Bronze Age-Greece and the earliest contacts with eastern cultures, and will conclude with the spread of Greek influence into Asia and the transformation of Greek culture through the conquests of Alexander the Great. We will explore topics such as the aristocratic heritage of the city-state, the continuous influence of contacts as well as conflicts with non-Greeks, the effects of pervasive war on Greek society, the competitive spirit in political and religious life, the relationship of intellectual culture to Greek culture as a whole, Greek dependence on slavery, and the diversity of political and social forms in the Greek world.

HIST 223  (S)  Roman History

Cross-listings:  CLAS 223  HIST 223  LEAD 223

Secondary Cross-listing

The history of ancient Rome can be seen as an account of formative events, practices, and thought in the history of western culture; it also is the history of the most far-reaching experience of diverse cultures, beliefs, and practices known in the Western tradition until modern times. By studying Roman history from Rome's emergence in central Italy in the 7th century BCE through the reign of the emperor Constantine in the early fourth century CE, we will see the complex and fascinating results of an ambitious, self-confident nation's evolution, transformation, and expansion throughout the Mediterranean world. We will consider questions such as, How did a republic with an aversion to autocratic rule and devotion to libertas understand its existence as an imperial power as well as its own elite's dominant rule over Romans and non-Romans alike? How and why did the Roman republic and its deeply entrenched republican ideology give way to the effective rule by one man, Augustus, and the increasingly monarchical rule of the emperors who followed? Did Roman political life in the later republic cause the violence that left it in crisis, or did the persistence of violence in Roman life account for the nature of Roman politics? Who were the non-elites of Rome, Italy, and the Roman empire that often get left in the shadows in our ancient sources? Who were the important writers, politicians, poets, philosophers, and innovators whose works constitute a rich cultural heritage worthy of both appreciation and critique? Throughout the course there will be an emphasis on the problems of historical and cultural interpretation, on how the Roman experience is relevant to our own, and, importantly, on the pleasures of historical investigation. Readings for this course will include a variety of original sources, a range of scholarly essays on specific topics, and a textbook that will provide our chronological framework.

Class Format: This course will be taught in hybrid mode. Assignments will consist of readings, case studies, short writing assignments and student-led discussions both in-class and via GLOW. Some elements will be offered asynchronously and/or optionally depending on the needs of students studying remotely. Please email the instructor with any questions you have about the structure or nature of the class or about what to expect if you are studying remotely.

Requirements/Evaluation: Class preparation and participation, several short response papers, one longer 6- to 8-page paper, a midterm exam, and a final exam. Students who have a B+ average or better at the end of the semester may substitute a 10 to 15-page research paper for the final exam.

Prerequisites: None; open to all

Enrollment Limit: 20

Enrollment Preferences: Preference given to students who are or are considering majoring in Classics or History, or who are concentrating in Leadership Studies. Preference is then given to first-year students and sophomores.

Expected Class Size: 15

HIST 224 (F) Introduction to Medieval Europe
This course traces the development of European societies from the collapse of the Western Roman imperial order in the fifth century CE to the rise and consolidation of powerful monarchies by the fifteenth century: a foundational period in European history. Along the way, we will confront many of the paradoxes that make medieval history so compelling. How did political fragmentation coexist with the spread of an increasingly uniform, Latin Christian culture? How was that same Christian culture mobilized to support both hierarchy and popular resistance to hierarchy, both early capitalism and voluntary poverty? As we encounter the medieval world through the men and women who lived in it, we will read the writings of saints and heretics, poets and lawyers, merchant and mystics. Though Western Europe will be our focus, we will also examine how Western European Christians defined themselves, in part, through their relationships with their neighbors in the Islamic and Byzantine worlds, and with internal religious minorities, such as the Jews. By the end of the course, students will appreciate how the socio-economic and intellectual legacy of the Middle Ages profoundly shaped the subsequent history not only of Europe, but the world.

Requirements/Evaluation:  Attendance and participation, weekly reading responses or short in-class quiz, two short papers, and a final exam.

HIST 226 (S) Early Modern Europe  
The three hundred years from the late Middle Ages to the French Revolution were Europe's formative centuries: they saw the emergence of the Renaissance and the Reformation, the outbreak of the Wars of Religion, the colonization of the Americas and intensification of trade in Asia, the Scientific Revolution and the Enlightenment. Through these historical experiences, European culture developed an identity distinct from its Christian one, as well as peculiar political and economic forms that ended up shaping the modern world. This course will examine such topics as the revival of classical letters, the formation of the modern state, urban and courtly culture, and religion and unbelief. Although the "early modern" era is profoundly different from our own, it remains crucial to any interpretation of the world in which we live today. Readings will emphasize primary sources and include such authors as Machiavelli, Montaigne, Hobbes, Aphra Behn, Voltaire, and Mary Wollstonecraft.  
Requirements/Evaluation:  Attendance and active participation; map quiz; two 5-page papers; midterm and final exam.  
Prerequisites:  No prerequisites.  
Enrollment Limit:  40

HIST 230 (F) Modern European Jewish History, 1789-1948  
Cross-listings:  HIST 230  JWST 230
What does it mean to be a Jew? The vexed question of Jewish identity emerged anew at the end of the eighteenth century in Europe and has dominated Jewish history throughout the modern period. Although Jewish emancipation and citizenship followed different paths in different parts of Europe, in general Jews were confronted by unprecedented opportunities for integration into non-Jewish society and unprecedented challenges to Jewish communal life. Focusing primarily on France and Germany, and to a lesser extent on the Polish lands, this course will introduce students to the major social, cultural, religious, and political transformations that shaped the lives of European Jews from the outbreak of the French Revolution to the aftermath of World War II. We will explore such topics as emancipation, Jewish diversity, the reform of Judaism, competing political ideologies, Jewish-gentile relations, the rise of modern antisemitism, the role of Jewish women, interwar Jewish life and culture, Jewish responses to Nazism and the Holocaust, and the situation of Jews in the immediate postwar period. In addition to broad historical treatments, course materials will include memoirs, diaries, and fiction.

HIST 232 (S) Twentieth-Century Europe: Nationalism, War, and Empire
This course is a survey of twentieth-century Europe. While providing students with a historical basis for understanding the continent's social, political, and cultural changes, this course pays attention to two interrelated phenomena: first, the process by which Europe went from being a constellation of empires to one of nation-states; second, the heterogenous ways in which Europe's residents participated in the making -- and then the remaking -- of modern Europe. 2023 marks the thirtieth anniversary of the European Union. This course provides students with a historical framework for understanding how and why Europe's residents rallied around this project of European integration and did so after having lived under imperial and national formations.
Requirements/Evaluation: Class participation, a midterm and final, and one 5-7-page paper
Prerequisites: None; open to all

HIST 242  (F)  Latin America From Conquest to Independence

This course will examine the processes commonly referred to as the creation of "Latin America" and will do so from numerous perspectives. Starting with the construction of indigenous societies, from small and decentralized groupings to huge imperial polities, before 1492, to the invasion of Europeans from that date forward, we will take up the question of the Iberian "conquest," looking at the often violent encounters that made up that event and analyzing its success, limits, and results. We will then study the imposition of Iberian rule from the point of view of would-be colonizers and the peoples they treated as objects of colonization, stressing the multiple and conflicting character of European, indigenous, and African perspectives. Thus looking at the Americas from both the outside-in and inside-out, we will focus on the unequal relations of power that came to define cultural, political, and economic life in the colonies, always with an eye on the gendered and racialized nature of those relations. We will also not only compare very different regions of the Iberian Americas but also see how the grand shifts of history intervened in—and perhaps consisted of—the most normal elements of daily life in northern Mexico, the central Andes, coastal Brazil, and other parts of colonial Latin America. Visual as well as more traditional written primary materials, along with secondary texts and films, will serve as the basis for our discussions throughout the semester.

Class Format: discussion

Requirements/Evaluation: class participation, two short papers (4-5 pages), and a take-home final exam

Prerequisites: none

Enrollment Limit: 40

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

HIST 254  (F)  Sovereignty, Resistance, and Resilience: Native American Histories to 1865  (DPE)

Cross-listings: HIST 254  AMST 254  LEAD 254

Primary Cross-listing

This course surveys Native American/Indigenous North American histories from creation through the mid-nineteenth century, tracing the complex ways that tribal nations and communities have shaped North America. Equally important, it reckons with the ongoing effects of these pasts in the twenty-first century, and communities' own forms of interpretation and critique. It also introduces foundational methodologies in Native American and Indigenous Studies (NAIS) and strategies for pursuing decolonizing scholarship and action. Beginning with the diverse Indigenous societies that have inhabited the Americas for millennia before Columbus's arrival, it foregrounds the complexity of Native peoples, nations, and worldviews situated in particular homelands, as well as accounts of beginnings and migrations. It addresses how Native peoples confronted grievous epidemics resulting from the "Columbian Exchange," and contended with Euro-colonial projects of "discovery" and colonization. Indigenous nations' multifaceted efforts to maintain sovereignty and homelands through eras of pervasive violence and removal are addressed, as well as forms of relations and kinship with African-American and Afro-Indigenous people. It concludes with how different Native communities negotiated the tumultuous era of the Civil War and
created pathways for endurance and security in its aftermath. The course centers on Indigenous actors—intellectuals, diplomats, legal strategists, knowledge keepers, spiritual leaders, artists, and many others—and consistently connects historical events with present-day matters of land, historical memory, education, caretaking, and activism. Additionally, it provides an opportunity to engage with original materials in the Williams College Archives/Special Collections and Art Museum. While the scope of the course is continental and transoceanic, it devotes significant attention to the Native Northeast and the Stockbridge-Munsee Mohican homelands in which Williams College is located.

Requirements/Evaluation: Attendance at lectures, active participation in class discussion, several short essays based on readings and discussion topics, museum/archives exercise, final essay/project.

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: History majors, followed by first- and second-year students

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

HIST 254 (D2) AMST 254 (D2) LEAD 254 (D2)

Difference, Power, and Equity Notes: This course intensively explores Native American/Indigenous North American histories, experiences, and forms of critical and creative expression, as well as responses to and engagements with Euro-American settler colonialism. It guides students into methodologies central to Native American and Indigenous Studies (NAIS), and gives opportunities for oral and written reflections on NAIS approaches to historical themes and sources, as well as decolonizing methodologies more broadly.

HIST 255 (F) From Sand Creek to Standing Rock: Recent Native American Histories (DPE)

This course surveys Native American/Indigenous histories from the era of the U.S. Civil War to the present as well as future, centering community voices, scholarship, and interpretations. Beginning with Sand Creek and the violence experienced by Native communities in 1864, it traces how diverse Native nations navigated the tumultuous times that followed, up to recent protective actions at Standing Rock and Mauna Kea in the 21st century. Topics include treaty-making and diplomacy; creation and contestation of reservation systems; connections with African-American families and communities; residential school experiences of Native youth and families; Indigenous visual and performative artistic traditions and transformations, both in North America and abroad; urban relocation policy and experiences; Red Power activism and Indigenous internationalism; treaty rights activism and federal recognition debates; environmental interventions and food sovereignty movements; and critiques of settler colonialism. The course stresses the resilience of sovereign Indigenous nations into the present, and introduces students to a wide range of methodological approaches from Native American and Indigenous Studies and history. It blends big-picture vantages on these topics with microhistorical accounts of particular individuals, communities, and events, and offers a continental view of historical changes coupled with attention to the specific area of the Native Northeast—Stockbridge-Munsee Mohican homelands—in which Williams College is situated.

Requirements/Evaluation: class discussion, reading responses, short analytic essays, archival/object analysis, final essay/project

Prerequisites: Hist/AmSt 254: Native American Histories to 1865 is good preparation for this course, but is not required.

Enrollment Limit: 15

Enrollment Preferences: History and American Studies majors; then first- and second-year students from any major

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course focuses on Native American/Indigenous experiences in North American and transnationally, and offers immersion in critical perspectives on settler colonialism and U.S. law and practice, and well as introduction to methodologies in Native American and Indigenous Studies.

**HIST 257 (F) Religion and American Politics**

**Cross-listings:** REL 217 HIST 257

**Secondary Cross-listing**

In this course, students will explore the history of religion and American politics, from the colonial era to the present. In the process, they will tackle such questions as: Were Anglo-American colonies 'cities on a hill' or bastions of intolerance? Was the First Amendment designed to protect the state from religion, or religion from the state? Has American religion primarily served to justify the status quo or inspire revolutionary change? How have religious ethics shaped responses to racial, gender, and class inequality? How has religious conflict impacted civic unity and political polarization? What role should religion play in American political life? The course will cover such topics as: Anglo-colonial treatment of heretics and blasphemers; the meaning of the First Amendment; religious conflict over slavery; state regulation of sexuality and polygamy; state treatment of religious minorities; the Scopes Trial and scientific modernity; Christian responses to industrial capitalism; theologies of civil disobedience and nonviolence; and 20th-century religious battles over school prayer, civil rights, the military draft, abortion, and democracy itself.

**Requirements/Evaluation:** Class participation; five informal response papers (350-450 words); two unit papers (4-6 pages); final paper (8-10 pages).

**Prerequisites:** None; open to all students.

**Enrollment Limit:** 20

**Enrollment Preferences:** Religion and History majors, in order of descending seniority.

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**HIST 258 (S) The Petroleum Age: A Global History**

We live in a world transformed by petroleum. All around us today--in global carbon emissions, transportation, the clothes we wear, everyday objects we touch, microplastics in our water--oil is there, even if we can't always see it. At the same time, the industry fuels massive flows of global capital, and provokes critical political shifts, conflicts, and resistance movements around the world. How did oil's ubiquity happen in just over 150 years? This course will chart a global, modern history by keeping this energy source always in our sight, paying particular attention to its role in the political economy, its ecological impacts, the cultural changes it has set in motion, and its place in people's material lives. Throughout the semester, we will also foreground some of the foundational skills needed to create an historical account, which will culminate in students' completing a 5-minute video or podcast on a relevant topic of their choice.

**Class Format:** While this class will include brief lectures, it will largely revolve around discussion. Students do not need any experience in making videos or podcasts to enroll in the class.

**Requirements/Evaluation:** participation; two short graded essays (3-5 pages); two short ungraded essays (2-3 pages); short research assignments (1 page each, ungraded); final video or podcast project (graded); 24-hour take-home exam.

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** sophomores and first-years

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

**Attributes:** HIST Group G Electives - Global History
HIST 261 (S) America and the Cold War

Cross-listings: HIST 261 PSCI 262 LEAD 262

Secondary Cross-listing

This course examines the rise and fall of the Cold War, focusing on four central issues. First, why did America and the Soviet Union become bitter rivals shortly after the defeat of Nazi Germany? Second, was one side primarily responsible for the length and intensity of the Cold War in Europe? Third, how did the Cold War in Europe lead to events in other areas of the world, such as Cuba and Vietnam? Finally, could the Cold War have been ended long before the collapse of the Soviet Union in 1989? Political scientists and historians continue to argue vigorously about the answers to all these questions. We examine both traditional and revisionist explanations of the Cold War, as well as the new findings that have emerged from the partial opening of Soviet and Eastern European archives. The final section of the course examines how scholarly interpretations of the Cold War continue to influence how policymakers approach contemporary issues in American foreign policy.

Class Format: lecture/discussion

Requirements/Evaluation: one medium length paper, an in-class midterm and final exam, and a series of short assignments

Prerequisites: none; PSCI 202 is recommended but not required

Enrollment Limit: 19

Enrollment Preferences: Political Science majors and Leadership Studies concentrators

HIST 263 (F) The United States and the World, 1898-2001

This survey course examines the United States and the World from 1898-2001. Students will be introduced to key diplomatic developments from the Spanish-American War to the War on Terror with attention to ideological, political, cultural, military, and economic forces. Topics will include American imperialism and anti-imperialism, the emergence of U.S. cultural and economic hegemony in the interwar years, WWII and the origins of the Cold War, the Soviet-American rivalry in Europe and on the periphery, nuclear policy, the Vietnam War, late-Cold War diplomatic reconfigurations, the rise of political Islam, the collapse of the Soviet Union and its aftermath, and the events surrounding 9/11. By engaging with a range of primary and secondary source readings, students will examine how Americans historically have made sense of their nation's role in the world, and how historians explain important aspects of U.S. foreign policy.

Class Format: discussion

Requirements/Evaluation: class participation, pop quizzes, short papers, a midterm exam, and a final exam

Prerequisites: none

Enrollment Limit: 40

Enrollment Preferences: first- and second-year students, then History majors

HIST 264 (S) Environmental History

Cross-listings: ENVI 229 HIST 264

Secondary Cross-listing

This course is an introduction to Environmental History: the study of how people have shaped environments, how environments have shaped human histories, and how cultural change and material change are intertwined. As such, it challenges traditional divides between the humanities and the sciences. Taking U.S. environmental history as our focus, we will strive to understand the historical roots of contemporary environmental problems, such as species extinction, pollution, and climate change. We will take field trips to learn to read landscapes for their histories and to examine how past environments are represented in museum exhibits, digital projects, and physical landscapes. And we will develop original arguments and essays based on archival research. It is imperative that we understand this history if we are to make informed and ethical environmental decisions at the local, national, and global scale.

Class Format: with field trips

Requirements/Evaluation: several short essays; final research project

Prerequisites: ENVI 101 or permission of instructor

Enrollment Limit: 18

Enrollment Preferences: Environmental Studies majors and concentrators; History majors

Expected Class Size: 15

HIST 265 (F) Race, Power, & Food History (DPE)

Cross-listings: HIST 265 ENVI 246 AMST 245

Secondary Cross-listing

Have you ever wondered why Spam is so popular in Hawaii and why Thai food is available all across the United States? Are you curious why black-eyed peas and collards are considered "soul food"? In this course, we will answer these questions by digging into the histories of global environmental transformation through colonialism, slavery, and international migration. We will consider the production and consumption of food as a locus of power over the last 300 years. Beginning with the rise of the Atlantic slave trade and continuing through the 20th century, we trace the global movement of plants, foods, flavors, workers, businesses, and agricultural knowledge. Major units include rice production by enslaved people in the Americas; Asian American food histories during the Cold War; and fat studies critiques of obesity discourse. We will discuss food justice, food sovereignty, and contemporary movements for food sustainability in the context of these histories and our contemporary world. Readings are interdisciplinary, but our emphasis will be on historical analyses of race, labor, environment, health, and gender.

Requirements/Evaluation: two to three papers on assigned topics (4-6 pages); one longer final paper (8-10 pages); participation in discussion and online activities

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Environmental Studies majors and concentrators; American Studies majors; Public Health concentrators; history majors

Primary Cross-listing

This course will probe the domestic history of the U.S. from 1919 to 1939 and the cultural, economic, political, and social changes accompanying America's evolution into a modern society. Themes include: developments in work, leisure, and consumption; impact of depression on the organization of the public and private sectors; persistence of traditional values such as individualism and the success ethos in shaping responses to change; and the evolving diversity of America and the American experience.

Class Format: This course will be taught remotely and will feature both asynchronous and synchronous instruction. Virtual course meetings will revolve around synchronous discussion and remote learners will be expected to attend class regularly and participate actively in each session held via Zoom (or a similar platform).

Requirements/Evaluation: Students will be graded on class participation and will have two take-home essay examinations (a midterm and a final, each 6-8 pages). In addition, students will write two short response papers and will complete an interpretative essay (5-7 pages) focused on art from the WPA Federal Art Project.

Prerequisites: none

HIST 270 (F) Sport and the Global Color Line  (DPE)

Cross-listings: LEAD 270  HIST 270  AFR 270

Primary Cross-listing

Throughout the twentieth century, African Americans have broken racial barriers, confronted racial stereotypes, and garnered unprecedented success within popular culture, most notably sport. In this course, students will explore the relationship of the black athlete to the color line. We will complicate the historical view of sport as a site of professional advancement and race reform by demonstrating how societal racial practices were reconstructed within athletics. In essence, this course will emphasize the role sport performed in structuring racial exclusion as athletic arenas—like movie theaters, railroads, schools, and other public sites—shaped what Historian Grace Elizabeth Hale has termed the "culture of segregation." Though our primary focus will be on the experiences African Americans encountered, we will also probe the color line beyond its typical black-white binary. Thus, we will examine the achievements and altercations that other ethnic and racial groups realized in their transnational push for equality and inclusion.

Class Format: Lecture and discussion.

Requirements/Evaluation: Students will be graded on class participation and will have two take-home midterm essay examination (4-6 pages). In addition, students will write two or three response papers (2-3 pages) and a final research paper.

Prerequisites: None.
Enrollment Limit: 40
Enrollment Preferences: Open to all students with completion of course admission survey if overenrolled.

HIST 273 (F) Going Nuclear: American Culture in the Atomic Age
Cross-listings: SOC 224 HIST 273
Secondary Cross-listing
This course will examine the historical development and use of the nuclear bomb. Among other features of the early atomic age, the course will look at the Manhattan Project, the delivery of the bombs for combat, and the destructive effects of the bomb's initial use in Hiroshima and Nagasaki and ongoing testing in the Marshall Islands. The class will investigate the role of the nuclear arms race in the Cold War, the consequences of nuclear production on specific communities, and the implications of the atomic age on our critical understanding of technological innovation more generally. We will also consider the saliency of competing narratives interpreting America's decision (and continuing policies) to build, use, and stockpile nuclear weapons. Employing both sociological and historical perspectives, we will explore the interactions between science, politics, and culture in the nuclear age.
Requirements/Evaluation: a midterm, a final exam, and a 10- to 12-page research paper
Prerequisites: none
Enrollment Limit: 20
Enrollment Preferences: Preference given to sociology and history majors.
Expected Class Size: 20
Grading: no pass/fail option, yes fifth course option

HIST 274 (F) Race, Land and Settler (Racial) Capitalism: Ongoing Topics in (Dis)/(Re)possession
Cross-listings: ENVI 247 AMST 234 AFR 234 HIST 274
Secondary Cross-listing
This sequential studio course serves as an introduction to ongoing topics in colonialism, racial thinking, African Diaspora studies, Global, Caribbean, and local studies. We will examine how race, gender and class operate under racial capitalism and settler colonialism. The readings in this class will center the works of critical geographers, caribbeanist, scholars of the African Diaspora, Indigenous theorists, among other critical, anti-capitalist or decolonial scholars. Reading in this course will take up the question(s) of land and land-making; race, racialization, and racial thinking; alongside questions of space and place as they all relate to the various processes, projects and methods of (dis)(re)possession. This course is the first part of a complementary course, which will be offered in the Spring, titled, "Race, Land, Space and (Dis)(Re)possession: Critical Topics in Environmental Injustice and Subaltern Geographies," which tracks both the "historical breaks" and ongoing processes of (dis)(re)possession to more contemporary materializations. Weekly in-class discussion will be combined with guest lectures in order to provide the opportunity for exploring how race, space and (dis)(re)possession can be understood geographically, and to also explain how a range of these territorializing processes operate in the transnational
and local contexts. Those who take this studio course can expect to be actively engaged in directing their learning experience through research/final creative projects of their own selection. Sound, music and other audio engagements will also complement discussions in this course. Therefore, the capacity of deep listening, in-and-out of class, is mandatory. Sample topics covered in the course include the following: indigeneity and Blackness; dispossession and accumulation; environmental imperialism, war and colonial resistance. You are strongly encouraged to participate in both courses in this complementary sequence, but are not required to do so.

Requirements/Evaluation: The following requirements serve as the basis for course evaluation: Attendance and Participation 30%; Serve as Discussion Leader Once 20%; Weekly 300-500-word Critical Response Papers 20%; One Final Creative Project, which can take any number of forms, including the conventional research paper (8-12 double-spaced pages plus bibliography). More creative projects might include, a pamphlet or zine, a written play or theatrical performance, or an op-ed. We will discuss further possibilities in class. 30%

HIST 275  (S)  Race, Land, Dis/Re-possession: Critical Topics in Environmental Injustice and Subaltern Geographies

Cross-listings: AFR 235  AMST 235  GBST 235  HIST 275  ENVI 253

Secondary Cross-listing

This course is an introduction to ongoing and contemporary topics in colonialism, racial thinking, African Diaspora and, Global and Caribbean studies, studies of 'the environment,' and dispossession. We will examine how race, gender and class operate under racial capitalism and settler colonialism as ongoing, sometimes continuous and discontinuous processes. The readings will center the works of critical geographers, caribbeanist, scholars of the African Diaspora, and other critical, anti-capitalist or decolonial scholars. Readings, as in AFR 234, will take up the question(s) of land and land-making; race, racialization, and racial thinking; of space and place as they all relate to the various processes, projects and methods of (dis)(re)possession, both past and contemporary. We will interrogate temporal binaries, settler time, notions of [the] "progress(ives)" and other bifurcated understandings of the world. This course is the second part of a complementary course, titled, "Race, Land and Settler (Racial) Capitalism," which focuses on the historical geography of processes of (dis)(re)possession from a Black and Indigenous Atlantic perspective. In this iteration, weekly in-class discussion will be combined with guest lectures to provide the opportunity for exploring how race, space and (dis)(re)possession can be understood geographically, and to explain how a range of these territorializing processes operate. Sound, music and other audio will complement discussions. Therefore, the capacity of deep listening, in-and-out of class, is a grounding. Sample topics covered in the course include: indigeneity and Blackness; (dis)possession and accumulation; plantation geographies and economies; housing and houselessness; the problem of parks and conservation; prisons and carceral geographies; Black geographies; environmental racism and colonial resistance. You are strongly encouraged to participate in both courses in this sequence, but are not required to do so.

Requirements/Evaluation: The following requirements serve as the basis for course evaluation: Attendance and Participation 30%; Serve as Discussion Leader Once 20%; Weekly 300-500-word Critical Response Papers 20%; One Final Creative Project, which can take any number of forms, including the conventional research paper (8-12 double-spaced pages plus bibliography). HIST 276 (S) Stockbridge-Munsee Mohican Community Histories, Presents, and Futures (DPE)

The ancestral and continuing homelands of the Stockbridge-Munsee Mohican Community (SMC) are where Williams College is located, a fact that the
institution formally recognized in Fall 2021 through a land acknowledgment. This was one step toward building more meaningful relations between the
College and the sovereign tribal nation, which has been displaced through violent, painful processes directly shaped by the Williams family, while also
maintaining enduring relations with these homelands. This course addresses needs to continue work of learning and repair by "educating beyond the
land acknowledgment." It centers SMC experiences, knowledge, and goals, and provides space for students to work on projects directly meaningful for
the community, including the Tribal Historic Preservation Office (THPO) that is based locally through an official partnership with the college. It will have
strong collaborative and experiential components, plus ethical commitments to highlighting the tribal nation's active forms of stewardship,
knowledge-keeping, and intellectual as well as political sovereignty. The exact shape of the syllabus and projects will be determined in close
conversation and collaboration with the Stockbridge-Munsee Community. Depending on goals/interests, potential areas of focus might include SMC
homelands; archaeological research and its importance for place-stewardship; political sovereignty, governance, and leadership; histories and impacts
of European colonialism among SMC people; SMC traditions of diplomacy and peacemaking; strategic uses of archives and documents in protecting
community wellbeing and resisting dispossession; the "Many Trails" of forced removal westward; establishment of the SMC in Menominee homelands;
20th and 21st-century experiences, knowledge-keeping, and continuing connections with eastern homelands; repatriation of ancestors and
belongings; language revitalization, Land Back, education, and economic sovereignty; and other topics.

Requirements/Evaluation: The focus of this seminar is experiential, collaborative, and community-based learning and project work. Seminar
meetings will include discussion of readings/multimedia (especially works produced by SMC members), and meetings and dialogues with community
members (in person or virtually as schedules and COVID permits). Class members' active, engaged participation in trips to area places of significance
will be essential components as well. In small groups class members will work on projects of significance for the SMC, and may share out their work
at the end of the term in multiple forms.

Prerequisites: Open to all students. If the course over-enrolls, students may be asked to share a brief statement of interest.

Enrollment Limit: 15

Enrollment Preferences: If the course over-enrolls, first- and second-year students will have preference.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course is a collaboration with the Stockbridge-Munsee Mohican Community that foregrounds community
knowledge, projects, and goals. It offers students grounding in topics and methods specific to the SMC as well as in Native American and Indigenous
Studies. It also presents critical perspectives on settler colonialism and its historical as well as ongoing impacts.

HIST 280 (S) Emancipation to BlackLivesMatter

Cross-listings: AFR 280 HIST 280 LEAD 280

Primary Cross-listing
This introductory course surveys the cultural, political, and social history of African Americans from Reconstruction to the present. It offers a balance between a "top-down" and "bottom-up" approach and focuses primarily on African Americans' quest for citizenship, equality, justice, and opportunity. In addition to examining major historical developments and popular figures within the modern black past, we will explore the lesser-known histories of everyday people who helped shape the black freedom struggle. In so doing, we will interrogate conventional narratives of progressive movements since emancipation. Some of the main topics include: the transition from slavery to freedom; the rise of Jim Crow and the politics of racial uplift; the Great Migration and the emergence of the New Negro; the Great Depression and the New Deal; World War II and the struggle for economic and racial inclusion; the postwar period and the intersecting movements of Civil Rights and Black Power; and the impacts of deindustrialization and mass incarceration on the black community. We will end with a discussion of the Obama years and Black Lives Matter.

Requirements/Evaluation: Students will be graded on class participation and will have two take-home essay examinations (a midterm and a final, each 6-8 pages). In addition, students will write two response papers (2-3 pages) and will complete a mapping project based on The Negro Motorist Green Handbook.

Prerequisites: none

Enrollment Limit: 40

Enrollment Preferences: Students with demonstrated interest in material. If the course is overenrolled, students will be asked to complete a questionnaire.

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

HIST 281 (S) African American History, 1619-1865

Cross-listings: AFR 246 HIST 281

Primary Cross-listing

This course provides an introduction to the history of African Americans in United States during the colonial, early republic, and antebellum eras. The experience of enslavement necessarily dominates this history, and it is the contours and nuances of slavery-and the development of racial classifications-that give this course its focus. We will also explore African cultural influences, the significance of gender, the lives of free blacks, and the cultural and intellectual significance of the abolitionist movement. The course closes on the themes that emerge from the Civil War, and on the meaning of freedom and emancipation. Our readings will include primary sources and secondary literature. Class meetings will combine lecture and discussion. Informed participation in class discussion is essential. This Power etc course explores the experiences and expressions of the culturally diverse peoples of African descent in the New World (and the Old), as well as the myriad ways in which they confront, negotiate, and at times challenge dominant U.S. and/or European hierarchies of race, culture, gender and class.

Requirements/Evaluation: class discussion, short informal writing assignments, three formal papers from 3-7 pages, and a final exam

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: first- and second-year students

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

HIST 286  (F)  Conquests and (Im)migrations: Latina/o History, 1848 to the Present  (DPE)

Cross-listings:  LATS 286  HIST 286

Secondary Cross-listing

The first Latinx communities were formed in 1848 when the United States conquered half of Mexico's territory. In 1898 the United States annexed Puerto Rico and has retained sovereignty to this day. These early conquests and continuing im/migrations created Mexican and Puerto Rican communities in the United States. U.S. imperialism continued to shape the im/migrations that created Cuban, Dominican, Salvadoran, Guatemalan and other Latinx communities in the United States. This course explores U.S. military, political, and economic interventions and their impact on im/migrations and the making of Latinx communities. We also explore the impact of U.S. employers' and the U.S. government's recruitment of low wage workers in shaping im/migrations, destinations, and the formation of Latinx working-class communities. Im/migration and refugee policies have long defined who is eligible to enter and how, as well as who is deemed eligible for citizenship and belonging. Within this context, Latinas and Latinos have developed survival and family reunification strategies for themselves, their families, and their communities.

Class Format: This course is a discussion format. It will be offered in a "hybrid" format with synchronous class meetings and group discussion sections, offered in-person and remote.

Requirements/Evaluation: Class participation with short 1-2 page writing assignments; two 4-5 page essays, and a final 5-7 page essay. All writing assignments are based on course materials.

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: LATS concentrators, History majors, or those intending to become concentrators or majors, seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

HIST 292  (F)  History of Sexuality

Cross-listings:  REL 241  HIST 292  GBST 241  WGSS 239

Secondary Cross-listing

Is sexuality an immutable aspect of who we are or is it socially constructed? How have people understood sex and sexuality throughout history? Why does religion have any say in the sexual lives of individuals and society? What are sexual transgressions and why are they punished? Is sex a commodity that can be exchanged for money? Is sex political? This course will explore these questions through a historical approach, focusing in particular on the shifting understanding of sex and sexuality across historical time and different geographical regions. In investigating the category of sexuality, this course will push us to consider three key questions: 1) Is sexuality a useful category for historical analysis, 2) how have our assumptions regarding sexuality and sexual ethics taken shape and changed over time and 3) how do social, cultural, political, and economic conditions affect changing meanings of sexuality. Historical studies will be read in conjunction with different theoretical frameworks about sexuality. Reading historical accounts of sexuality alongside theoretical pieces will allow us to consider how historians construct an argument and the influence of theoretical frameworks in shaping scholarship. Some of the theorists we will read in the course include: Michel Foucault, David Halperin, Afsaneh Najmabadi, Valerie Traub, and Carla Freccero.

Requirements/Evaluation: reading responses, two essays, and final research paper

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Religion, History, and Women's, Gender and Sexuality Studies majors

HIST 296 (S) Human Rights and National Security: Seeking Balance in the United States
Cross-listings: LEAD 296 HIST 296

Primary Cross-listing

This course will ask if ensuring collective security and preserving individual rights are inherently contradictory or if they may, in fact, be mutually reinforcing. Focusing on developments and issues within the United States since its founding, the class will explore how Americans have sought to reconcile concerns about national security and a broad array of rights in the past, and the implications of this history for contemporary debates. The course will challenge students to consider how debates over national security and rights have reflected broader partisan divides and served diverse political objectives. Moreover, students will explore how these debates reflected competing visions of national identity and purpose, and question how and why the costs of security measures disproportionately burdened people based on race and religious identification. The course will initially survey these issues through a historical lens, demonstrating how questions of security and rights have been present since the nation's founding. It will draw on key moments in U.S. history to explore issues of foreign subversion, dissent, surveillance, habeas corpus, presidential power in times of war, and border security and immigration. Familiarity with historic precedents will ensure that students are prepared to grapple with a closer examination of contemporary studies of refugees and immigration; cybersecurity and surveillance; domestic terrorism and hate crimes; and counter-terrorist detention and interrogation. Students will be assessed on participation, short writing assignments, and a group podcast project.

Requirements/Evaluation: Students will be assessed on participation, short writing assignments, and a group podcast project.

HIST 301 (S) Approaching the Past: Practices of Modern History

What is history? What is it that historians do? In this course, students will explore how and why we historians practice our craft. The first section of the course will examine how historians think about and come to know the past. Issues of historical truth, fact, and objectivity will be considered. And we will discuss what questions to ask of different types of evidence, from material objects to oral histories. Next, we will explore how historians attempt to make sense of the past. We will consider the perspectives, scale, and categories of analysis that historians can bring to bear on the past, and how history can be written. Finally, the third section of the course will pose questions about the purposes, uses, and misuses of history. We will ask how historians might engage with those outside of academia; what moral and political responsibilities historians should assume; how history is related to memory making; and why history education has been so contentious. Each week, we will focus on some theoretical material as well as readings on a broad range of topics, across time and geography, that concretely illustrate the methodological issues at stake.
**HIST 301 (S) Approaching the Past: Varieties of Historical Thinking**

This course is designed to acquaint students with some of the ways historians have thought about the past. Beginning with Thucydides' *The Peloponnesian War*, the work of twelve historians will be studied closely and critically over the course of the semester. In the process, students not only will become familiar with various important historical approaches but will also be encouraged to examine their own assumptions about the past and about how and why—or even if—we know it. We will meet weekly to define, understand, and assess the different ways historians considered in the course have thought about the past.

**Requirements/Evaluation:** in preparation for class discussion, students are required to produce a one-page reader response to the assigned reading each week, which will form the basis for class discussion. The student’s grade is based on these reader responses and participation in class discussion.

**Prerequisites:** restricted to History majors and sophomores committed to majoring in History

**Enrollment Limit:** 15

**Enrollment Preferences:** senior, then junior, History majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

Not offered current academic year
**HIST 301 (F) Approaching the Past: The Historian's Task**

What is the historian's task? In this seminar we will consider a variety of answers to this question by looking at how historians have practiced their craft from antiquity to the present. In the first half of the course, we will read historians from across the globe to see how the study of the past has differed across human societies from antiquity until the nineteenth century. What do their approaches have in common, and what distinguishes them? In the second half of the course we will investigate the modern historical tradition from the early twentieth century to the present, including the Annales school, economic and environmental history, microhistory, and subaltern studies. Throughout, we will discuss what lessons we can draw for our own practice as historians. Authors to be read include Herodotus, al-Mas'udi, Ranke, Bloch, Guha among others.

**Requirements/Evaluation:** Attendance and active participation, two short (5-7 pp.) papers, in-class presentations, final research proposal and bibliography, and a longer (10-12 pp.) final research paper.

**Prerequisites:** Restricted to History majors and sophomores planning to major in History

**Enrollment Limit:** 19

**Enrollment Preferences:** The course is designed for junior and senior History majors; sophomores may enroll with instructor consent.

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**HIST 301 (S) Approaching the Past: The Use and Abuse of History**

Is history, like beauty, in the eye of the beholder? What is history and who gets to decide? How and where is history consumed and by whom? This course examines the use and abuse of history from the early twentieth century to the present especially how history has been impacted by the digital sphere (tv, films, social media), the rise of nationalism and the processes of globalization. First, students will grapple with what constitute notions of truth, objectivity and facts and how terminology has changed over the last 100 years. Next, we will evaluate various influential methodological trends that have impacted how history has been written and consider what was said and left unsaid, which perspectives were privileged and whose voices were marginalized. Finally, we will analyze the state of history today and how it appears in people's daily lives and especially how history is used and abused in public discourse on various media platforms. How is historical memory formed today?

**Requirements/Evaluation:** Class participation, oral presentations, several short (3-4 page) papers, and a final project.

**Prerequisites:** Restricted to History majors and sophomores planning to major in History

**Enrollment Limit:** 15

**Enrollment Preferences:** Senior then junior History majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**HIST 301 (S) Approaching the Past: Contemplating American Power**

Historians have long debated how best to approach the study of U.S. “diplomatic history,” which is now often subsumed under the more capacious descriptor “The United States and the World.” In the 1960s, prevailing orthodox interpretations of American power—often patriotic and elitist—gave way to challenges from New Left revisionist historians who focused largely on economic motives for American imperialism. By the 1970s, however, the once dominant historical field of diplomatic history was beset by a sense of crisis; its practitioners consumed with anxiety over their marginalization in a discipline that embraced social and cultural theories that that seemed to render the narrow study of Western white men in power increasingly obsolete. For the past half-century, historians of American foreign relations have engaged in a sustained and ever-shifting debate, not only about the nature of
American power, but over what can and should be included within the field's parameters. Today, annual meetings of the Society for American Foreign Relation--and its marquee journal, Diplomatic History--feature scholarship ranging from "traditional" approaches to those centered on gender, sexuality, race, cultural exchange, emotion, environmental studies, sports, music, and more. Yet, debates still rage about whether this broadening has enriched the study of American power, or diluted it to the point of meaninglessness while discouraging young scholars from pursuing critical research on high-level diplomacy. In this course, we will grapple with key historiographical schools and critical debates, and assess the current state-of-the-field of diplomatic history.

Requirements/Evaluation: Participation, short papers, presentations, and a longer final paper

HIST 302  (F)  Islamic Law: Past and Present
Cross-listings: ARAB 243  WGSS 243  REL 243  HIST 302

Secondary Cross-listing

From fear of the Shari'a to its implementation in so called "Islamic countries," Islamic law is perhaps best associated with draconian punishments and the oppression of women. Islamic law is ever present in our public discourse today and yet little is known about it. This course is designed to give students a foundation in the substantive teachings of Islamic law. Islamic law stretches back over 1400 years and is grounded in the Quran, the life example of the Prophet Muhammad, and juridical discourse. Teetering between legal and ethical discourse, the Shari'a moves between what we normally consider law as well as ethics and etiquette. The course will explore four key aspects of the law: its historical development, its ethical and legal content, the law in practice, and the transformation of Islamic law through colonialism and into the contemporary. Specific areas we will cover include: ritual piety, family and personal status law, criminal law, and dietary rules.

Requirements/Evaluation: weekly responses, four 2- to 3-page essays
Prerequisites: none
Enrollment Limit: 19
Enrollment Preferences: majors
Expected Class Size: 10
Grading: yes pass/fail option, yes fifth course option

HIST 303  (S)  Food in the Middle East: A History  (DPE)
Cross-listings: ARAB 303  HIST 303

Primary Cross-listing

In this course we examine the rich culinary history of the Middle East first among the three major religions in the region (Judaism, Christianity, and Islam), then during the time of major Islamic Empires such as the Abbasids and Ottomans, and finally in the modern period. Using an array of primary
and secondary sources, we explore the social, religious, literary, and economic place of food. We will study the consumption of an attitudes toward specific foodstuffs, gauging the medicinal and culinary value of spices, the historical taboos against drinking coffee and alcohol, and the dispute over various dishes within modern nationalist constructions. We will also investigate how Middle Eastern peoples from different ethnic, geographic, and religious backgrounds have historically used food to express their distinct cultural, national, and gendered identities.

Requirements/Evaluation: attendance, participation, map exercise, leading discussion, 3 short essays, final paper/research project

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: History and Arabic Studies majors, seniors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

HIST 304  (S)  Sacred Custodians: Environmental Conservation in Africa  (DPE)

Cross-listings: AFR 335  ENVI 304  GBST 304  HIST 304

Primary Cross-listing

In this seminar we will explore environmental conservation in Africa. In particular we will look at African ideas, ethics, and approaches to environmental conservation. Are there African ideas, ethics, and activities that are uniquely conservationist in nature? We will explore well-known African leaders to understand what spurred them to become conservationists, how they interpreted and communicated environmental crises. For example, Wangari Maathai is a world-renowned female scientist who established the Green Belt Movement in Kenya. This movement focuses on addressing the problem of deforestation. Ken Saro-Wiwa was an activist in Nigeria who fought for and alongside local communities against multinational oil corporations. We will examine these and other African conservation practices alongside popular images of environmental crisis that place blame for environmental degradation on Africans. Students will be invited to critically study histories of environmental management on the continent and the emergence, development, and impact of the idea of conservation. We will unpack the rich histories of conservation efforts in Africa, such as resource extraction, game parks, desertification, wildlife and hunting, traditional practices, and climate change.

Requirements/Evaluation: Requirements/Evaluation: active participation in discussion, map quiz, reading reflections, critical reflections on films, a case study (5-7 pages), and one exam.

Prerequisites: None

Enrollment Limit: 20

Enrollment Preferences: If course is over-enrolled, preference to History Majors and students with a demonstrated interest in African studies. If there's sufficient enrollment, this course will be taught in 2 sections, 1 in-person section and 1 remote section.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AFR 335 (D2) ENVI 304 (D2) GBST 304 (D2) HIST 304 (D2)

Difference, Power, and Equity Notes: This course will intensively explore the question of how various global and local actors have defined environmental degradation and promoted approaches to conservation in Africa. It guides students through an examination of the different power dynamics that have shaped environmental conservation thought and practices on the continent. This course, therefore, provides a critical lens through which to examine the inequalities rooted in race, gender, and other forms of difference

Attributes: ENVI Humanities, Arts + Social Science Electives
HIST 305 (S) A History of Health and Healing in Africa (DPE)

Cross-listings: HIST 305  GBST 305  AFR 304

Primary Cross-listing

This class will explore the history of health and healing in Africa, with emphasis on the colonial and post-colonial eras. During the semester we will explore diverse medical and social interventions in African health over the past 150 years. How have African societies understood healthy communities and public health? We will examine this question through the study of spirit possession and other African healing practices but also how they have intersected with different biomedical practices and public health programs. We will also study the patterns and social impacts of new diseases in the twentieth century, as well as transformations in the understanding and treatment of diseases long present on the continent. In particular we will explore shifting understandings of the causes, treatment, and social implications of sleeping sickness, malaria, and HIV/AIDS. The development of colonial rule, shifting environmental conditions, changing diets, and urbanization all impacted the disease landscape, as well as the way African societies have understood public health. Indeed, the themes of health, medicine and disease provide a useful lens for understanding important social transformations across the continent.

Requirements/Evaluation: active participation in discussion, map quiz, reading reflections, a primary source analysis paper (3-5 pages), presentation, and one research paper (8-12 pages).

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: if course is over-enrolled, preference to history majors and students with a demonstrated interest in African studies

Expected Class Size: 25

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)  (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

HIST 305 (D2) GBST 305 (D2) AFR 304 (D2)

Difference, Power, and Equity Notes: This course explores transformations in how Africans in the recent past have experienced, practiced and conceptualized health and healing. These transformations have been triggered by the expansion of global biomedicine, new and lethal epidemics, old diseases in changing environments, and new political and economic decisions by policymakers. The history of health and healing in Africa provides a critical lens through which to examine societal imbalances and inequalities.

HIST 306 (S) Indigenous Narratives: From the Fourth World to the Global South (DPE) (WS)

Cross-listings: GBST 369  HIST 306  COMP 369  ARAB 369

Secondary Cross-listing

In the late 20th century, world literature has witnessed a "boom" in indigenous literature. Many critics and historians describe this global re-emergence of the subaltern and the indigenous in terms of literary justice fostered by post-colonial studies and the adoption of the Declaration of the Rights of Persons Belonging to National or Ethnic, Religious and Linguistic Minorities, by the UN General Assembly on December 18, 1992. In this course, we will investigate this "indigenous boom" by reading novels and short stories from the Americas, the Middle East and North Africa from the 1970s to the present. Through these trans-regional and trans-historical peregrinations, our principal goal will be to examine and compare narratives about conquest, settler colonialism, colonial nationalism, indigeneity, sovereignty, indigenous epistemology and philosophy. At the same time, we will consider the following questions: How did pioneering indigenous women writers, such as the Laguna Pueblo Leslie Marmon Silko in the US and the Mayan playwrights of La Fomma in Chiapas, Mexico lead the feminist front of the indigenous literary renaissance? How did Palestinian folktales, Amazigh poetics in the Maghreb, and Mayan dream narratives in Mexico and Guatemala produce narratives of decolonial history? What does the aesthetics of magical realism in Arabic, Quechua and Spanish, respectively, as evident in the works of the Kurdish writer Salim Barakat (Syria) and the mestizo writer José María Arguedas (Peru) tell us about the intersection of race, ethnicity, and indigenous epistemology? What is the connection between the recent "boom" of English translations of Indigenous texts and neoliberalism, multiculturalism and neo-colonialism? Ultimately, our goal is to trace how these texts contributed to global indigenous literature and the trans-historical and trans-geographical connections between them.
**Requirements/Evaluation:** active class participation, several short response assignments (3-4 pages), two film reviews (1 page), a performance project, and a final paper (7- to 10-pages)

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Comparative Literature majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**Writing Skills Notes:** This course will enable students to write weekly while engaging with various forms of writing skills: articulating arguments in short response papers (3-4 pages each), developing visual criticism through writing two film reviews, (1 page each), journaling through writing a personal reflections on a performance project, and honing research language in producing a final paper of 7-10 pages. Instructor's feedback and peer review sessions will include review of drafts and argumentative structures.

**Difference, Power, and Equity Notes:** At the heart of this course is the history of global Indigenous struggle for liberation and decolonization. The various novels, short stories, poems, films and other texts that students will engage with narrate histories of colonial dispossession, racial oppression, economic subjugation and dehumanization of minoritized Indigenous communities in the Americas, North Africa and the Middle East.

**HIST 307 (F) To Die For? Nationalism in the Middle East (DPE)**

**Cross-listings:** HIST 307 ARAB 307

**Primary Cross-listing**

In 1932, or twelve years into his rule and twelve years after the establishment of Iraq, King Faysal I lamented that there were "no Iraqi people but only unimaginable masses of human beings, devoid of any patriotic idea, imbued with religious traditions and absurdities, connected by no common tie." This course will consider how true the King's statement still holds by evaluating the various attempts at state and nation building in the modern Middle East. Some of the more prominent questions that this course will examine include: What is a nation? What are the essential characteristics of a nation? Who are a people? Why are people ready to die for the nation? And who is included and excluded in the nationalist narrative? After assessing some of the more influential theories of nationalism, we will explore the historical experience of nationalism and national identity in Egypt, Israel, Turkey, Iran, and Iraq. What has been at the basis of nationhood? How did European concepts of nation translate into the Middle Eastern context? What was the role of religion in these modern societies? How do traditional notions of gender effect concepts of citizenship? We will also explore some of the unresolved issues facing the various nations of the Middle East, such as unfulfilled nationalist aspirations, disputes over land and borders, and challenges to sovereignty.

**Requirements/Evaluation:** There will be several options to fulfill the requirements of this course including a weekly journal, oral exam or a final research paper (12-15 pages).

**Prerequisites:** None.

**Enrollment Limit:** 20

**Enrollment Preferences:** History and Arabic Studies majors, seniors, and students with a demonstrated interest in the Middle East.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

HIST 307 (D2) ARAB 307 (D2)

**Difference, Power, and Equity Notes:** This course examines the power of the state to decide who is included and not included in the nationalist narrative. How does it seek to promote unity and how does it explain differences within and outside of society? Though nationalism can be a very
powerful unifying factor, this course will also consider examples where nationalism has the opposite effect.

HIST 311  **Women Warriors, Colonial Soldiers, and Slave Armies: Soldiering and Warfare in African History**  (DPE)

Soldiering is one of the oldest professions in African history. Throughout the continent's long history, ordinary soldiers have risen to become kings, queens, presidents, and held other positions of significance. Soldiers in African history have hailed from diverse backgrounds, ranging from the enslaved to those from the nobility. Notable soldiers in African history have been both men and women. Certainly, in Africa as in other world regions there is a tendency to associate the military profession with men. Yet, there have been famous female military warriors in African history, some of the most famous ones being Queen Nzinga in the seventeenth century; the all-female military units in the kingdom of Dahomey, known for their rigor and being effective fighters; and, more recently, Alice Lakwena who commanded a rebellion that nearly brought down the Ugandan government in the late twentieth century. Some of the other themes which we will explore include how warfare was organized from the precolonial era to more recent times; the impact of changing technologies on warfare and the everyday life of armed soldiers; colonial conquest and the soldiers who fought for Europeans and those who resisted; recruitment criteria during the colonial period, and colonial military identities; service in the military as labor and rebellions and mutinies over pay and work conditions; the army and nationalism. Throughout the course we will challenge the enduring Western image and stereotype of Africa as a violent place by focusing on a) the changing conditions that have pushed individuals and communities to go to war, and b) by examining how Africans have initiated and resolved conflict. Students will analyze a variety of resources including soldiers' biographies, films, oral traditions, and archival sources that will help them to come up with their own arguments about the role of the soldiers and the military in Africa.

**Requirements/Evaluation:** active participation in discussion, map quiz, response papers, a short analytic paper (3-5 pages), presentation, and one research paper (8-12 pages).

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** if course is over-enrolled, preference to history majors and students with a demonstrated interest in African studies

**Expected Class Size:** 20

**Grading:**

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** This course examines the critical questions of how and why Africans have waged military campaigns, and how they have inspired others to join them. From the pre-colonial era to the present, all forms of military action in Africa were in many respects expressions of societal imbalances based on ethnicity, race, gender, generation, and class.

HIST 312  **(S) The Mughal Empire: Power, Art, and Religion in India**

Cross-listings: GBST 312  REL 312  ASIA 312  HIST 312

**Primary Cross-listing**

Established in the early 1500s, the Mughal Empire was one of the grandest and the longest to rule the Indian subcontinent for over three hundred years. Commanding unprecedented resources and administering a population of 100 to 150 million at its zenith—much larger than any European empire in the early modern world—the Mughals established a centralized administration, with a vast complex of personnel, money, and information networks. Mughal emperors were also political and cultural innovators of global repute. Moreover, while the Mughal dynasty was brought to an end with British colonial rule over India in 1857, the Mughal administrative structures and cultural influences continued to have a lasting impact on the British and later Indian states that followed. Centered around the intersection of the themes of power, patronage of art and architecture and religion, this course will ask: What factors contributed to the durability of the Mughal Empire for three centuries? How did global trade and innovations in taxation contribute to its wealth and stability? How did this dynasty of Muslim monarchs rule over diverse, and largely non-Muslim populations? How did they combine Persian cultural elements with regional ones to establish an empire that was truly Indian in nature? How were the Mughals viewed in their contemporary world of gunpowder empires like the Safavids of Persia and the Ottomans of Turkey? Readings will include the best of the recent scholarship on this vastly influential empire and a rich collection of primary sources, including emperor's memoirs, accounts of European travelers, and racy biographies, which will allow students make their own analysis. They will also have the opportunity to interpret paintings (some of which are held in the WCMA collections) and architecture. They will also discuss how the Mughals are remembered in South Asian film and music.

**Requirements/Evaluation:** participation, several short essays, one final paper
**Prerequisites:** none, open to first-year students with instructor permission

**Enrollment Limit:** 25

**Enrollment Preferences:** History majors and potential History majors

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**HIST 313 (F) The People's Republic: China since 1949**

**Cross-listings:** HIST 313 ASIA 313

**Primary Cross-listing**

This course provides a close examination of the six decades of the history of the People's Republic of China, from the 1949 Revolution to the present day. Through readings and discussion, we will explore the multiple political, economic, social, and cultural factors that contributed to the idealism of the "golden age" of Communist Party leadership (1949-65), the political violence of the Cultural Revolution (1966-76), the profound transformation of the Reform Era (1978-present) as well as the motors of change in China today. Course materials will include films, novels, and ethnographies, as well as secondary analyses. Please note that this is a discussion seminar and not a survey course.

**Requirements/Evaluation:** active class participation, several short papers and a final research paper

**Prerequisites:** none (HIST 213 recommended)

**Enrollment Limit:** 25

**Enrollment Preferences:** junior and senior History and Asian Studies majors

**Expected Class Size:** 12-20

**Grading:** yes pass/fail option, no fifth course option

**HIST 314 (F) Emperors of Heaven and Earth: Mughal Power and Art in India, 1525-1707**

**Cross-listings:** HIST 314 ARTH 314 ASST 314 ASIA 314

**Primary Cross-listing**

The Mughal dynasty ruled over most of northern India from the 16th to the 19th centuries. The Mughal Empire was the grandest and longest to rule the Indian subcontinent—much larger than any European empire in the early modern world—and it continued to have a lasting impact on South Asia. Mughals established a centralized administration with a vast complex of personnel, money and information networks. Styling themselves as 'Emperors of Heaven and Earth', the Mughal kings were also globally viewed as political innovators and unprecedented patrons of art. Their visual practices were as much a part of their imperial ideologies as their administrative and military measures. This co-taught course combines the disciplines of Art History and History to explore the intricate workings of Mughal politics and ideologies. The first of its kind to bring an interdisciplinary approach to teaching South Asia at Williams, the course asks: How did the Mughals sustain their empire for three centuries? How did they use art and politics to rule over diverse and largely non-Muslim populations? How did these Muslim imperial patrons merge Persian and Central Asian cultural values with preexisting...
Indian forms of administrative and artistic expression? How does Mughal culture continue to shape the South Asian imagination today? Readings will include a variety of visual and literary texts. We will delve deep into the world of biographies, travel accounts, poetry, architecture and a plethora of artworks. Students will take a hands-on approach to Mughal painting through several visits to the WCMA and a dedicated Object Lab. The primary aim of this co-taught course is to introduce students to a multifaceted picture of one of the greatest empires in pre-colonial world history. Another goal is to familiarize them with a wide range of visual and written primary sources and develop a vocabulary for 'reading' these.

**Requirements/Evaluation:** class participation and weekly responses to readings, 4-5 short papers and a final paper

**Prerequisites:** students who have previously taken HIST312 will not be permitted to take this course; no other prerequisites

**Enrollment Limit:** none

**Enrollment Preferences:** graduating seniors

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**HIST 315 (F) Minorities and the State in Modern East Asia** (DPE)

**Cross-listings:** ASIA 315  HIST 315

**Primary Cross-listing**

This course examines the relationships between minority peoples and the institution of the state in East Asia, focusing mostly but not exclusively on the early modern and modern periods (17th-20th centuries). We will explore the histories of the Ainu people of Japan, the "Small Peoples" of Russian Siberia, the Tibetan, Uighur and riverine communities of Mainland China, as well as the Hill Peoples of Southeast Asia. It also examines non-indigenous minority groups, such as conquest elites, mixed-race communities, and others. We will analyze how the transition to modernity, evolving understandings of race, gender, class, nation, the impact of imperialism and globalization all influenced the history of East Asian minority peoples. What, if anything, do all of these groups have in common? What do their histories reveal about the history of East Asia and of the countries in which they live? How are the lives of minority groups in East Asia changing today? What can their experiences reveal to us about the larger world?

The class is structured as a reading-intensive seminar. Students will engage in and lead discussions, compose reading reaction papers and a final analytical essay. Students will be expected to use scholarly works in order to construct cogent, relevant arguments, which they will communicate both orally and in writing. Students will evaluate primary sources in order to engage with the people they study as directly as possible. Students will lead discussions on complex topics and develop as leaders and team members in professional settings. This course will present students with an opportunity to hone critical thinking and information literacy skills to a high level. All of you will have to analyze and process complex and often contradictory information, certainly in your personal lives and very likely in your professional lives.

**Class Format:** This discussion-intensive class requires students to lead several discussion sections during the semester.

**Requirements/Evaluation:** Map assignment, discussion participation, leading discussion (four times), three-page response essays (five times), final six-page research essay or presentation

**Prerequisites:** None

**Enrollment Limit:** 25

**Enrollment Preferences:** History majors, Asian Studies concentrators, then all others

**Expected Class Size:** 15-20

**Grading:** yes pass/fail option, yes fifth course option

HIST 316 (S) A History of the Samurai
Cross-listings: HIST 316 ASIA 318

Primary Cross-listing
It is difficult to find a person unaware of the samurai. However, most people, both in Japan and abroad, engage with their idealized images rather than as an actual historical phenomenon. The aim of this course is to bring the samurai to life as a distinct status group that left an indelible mark on the history of Japan, and thereby to separate fact from fiction. We will also explore the creation of iconic images of the samurai, which continue to influence worldwide popular culture. We will use academic readings, primary sources, and other media to examine the samurai from their origins during the Heian period (8th to 12th centuries) to their official dissolution in the late 19th century. We will focus on their development as a special status group and explore how they managed to maintain their corporate identity for so long. We will trace the evolution of the samurai from rural enforcers to territorial magnates to bureaucrats. This evolution affected and was affected by the development of samurai warfare, ethics, aesthetics, religious practices, ideas relating to gender roles and other aspects of samurai life, which we will explore. We will see how these ideas and practices mediated their relations with household, society, and government. Finally, we will examine why samurai status was abolished at the start of the Meiji period, and how former samurai transformed into modern citizens. Students will engage in discussion, write essays, and complete immersive historical simulation assignments.

Class Format: This class features a semester-long immersive historical simulation where students work in teams to create samurai clans and navigate historical, as well as historically plausible, scenarios.

Requirements/Evaluation: Class participation, map creation assignment, four 2-page essays, semester-long immersive simulation (Samurai clan creation), final 6-page essay

Prerequisites: None

Enrollment Limit: 25

Enrollment Preferences: History majors, Asian Studies concentrators, then all others

HIST 317 (S) Everyday Modernity in Japan
Cross-listings: ASIA 310 HIST 317

Primary Cross-listing
This course asks one overarching question: What is everyday life like in modern Japan? There, one often hears the words "modern" contrasted with "traditional." When talking about Japan itself, the former is usually coded as "western," and the latter as "Japanese." Many Japanese politicians and cultural authorities, with the help of Orientalist westerners, are happy to highlight this distinction to promote notions of Japanese uniqueness. However, though modernization in Japan did usher in tremendous, often traumatic changes, not every aspect of "modern" Japanese life came from the west, and not all western imports were/are unwelcome. Moreover, many cultural imports, such as concrete buildings and the consumption of red meat, are now interwoven into the fabric of daily life in Japan. This course examines the complex history of modernity in Japan within living memory, highlighting on its presence in the daily lives of ordinary residents of Japan. What do people eat? Where do they live? How do they think about themselves and ethnic, linguistic, religious, and regional identities

Attributes: HIST Group B Electives - Asia
their neighbors? We will start with the Pacific War (1937-45), but focus especially closely on postwar and contemporary Japan. We will first get a sense of the chronology and major themes in Japanese history from this time period, then explore five units, “sites of modernity” that zoom in on different but interrelated aspects of ordinary Japanese life: 1) Total War, 2) The City, 3) Work, 4) Food, 5) Race and Ethnicity. Sources and data will be drawn from scholarly works, videos, movies, websites, maps, brochures and ephemera, as well as other sources. Students will analyze these sources, discuss them and complete various assignments.

**Requirements/Evaluation:** Discussion participation, in-class exam, two 6-page analytic essays, job application assignment, syllabus unit design assignment

**HIST 318 (F) Nationalism in East Asia**

**Cross-listings:** ASIA 354  PSCI 354  HIST 318

**Secondary Cross-listing**

Nationalism is a major political issue in contemporary East Asia. From anti-Japanese demonstrations in China, to tensions on the Korea peninsula, to competitive elections in Taiwan, to controversies in Japan about how history is portrayed in high school textbooks, national identity is hotly debated and politically mobilized all across the region. This course begins with an examination of the general phenomena of nationalism and national identity and their historical development in East Asia. It then considers how nationalism is manifest in the contemporary politics and foreign relations of China, Japan, South Korea, North Korea and Taiwan.

**HIST 319 (F) Gender and the Family in Chinese History  (DPE)**

**Cross-listings:** WGSS 319  ASST 319  HIST 319  ASIA 319

**Primary Cross-listing**

Although sometimes claimed as part of a set of immutable “Asian values,” the Chinese family has not remained fixed or stable over time. In this
course, we will use the framework of "family" to gain insight into gender, generation, and sexuality in different historical periods. Beginning in the late imperial period (16th-18th Centuries), we will examine the religious, marital, sexual, and child-rearing practices associated with traditional ideals of family. We will also examine the wide variety of "heterodox" practices that existed alongside these ideals, debates over and critiques of gender, family, and sexuality in the twentieth century and in China today.

Class Format: Remote in Fall 2020. Emphasis will be on synchronous discussions and small group work via Zoom (or similar).

Requirements/Evaluation: active participation in discussions and group work, short skills-based writing assignments (2-4 pgs) and short essays (5-7 pgs) leading toward a final paper.

Prerequisites: none; open to first year-students with instructors permission

Enrollment Limit: 15

Enrollment Preferences: History, Asian Studies, and WGSS majors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

HIST 320  (S)  Emotions in Modern Japanese History

Cross-listings: ASIA 320  ASST 320  HIST 320

Primary Cross-listing

Emotions have been integral to the human experience--to relationships between people, political decision making, economic behavior, individual and communal identities, international affairs, and national projects. This course will consider a full range of emotions including fear, insecurity, pride, anxiety, desire, anger, and happiness. And it will examine these emotions as both actors in history and subjects of historical inquiry. We will ask how emotions have reflected and shaped the making of modern Japan. What role have emotions played in steering the course of Japanese history, from the modernizing revolutions of the late 1800s, imperialism, colonialism, and war, to the navigation of both affluence and economic insecurity in the postwar era? How have emotions been talked about and represented in modern Japan? We will also discuss different ways of researching and writing a history of emotions.

Class Format: remote with synchronous, seminar-style discussion

Requirements/Evaluation: class discussion; response papers; research paper (12-15 pages)

HIST 321  (S)  History of U.S.-Japan Relations, 1853-Present  (DPE)

Cross-listings: LEAD 321  ASST 321  HIST 321  ASIA 321
An unabating tension between conflict and compromise has been an undercurrent of U.S.-Japan relations since the 1850s, at times erupting into clashes reaching the scale of world war and at times allowing for measured collaboration. We will explore the U.S.-Japan relationship from the perspectives of both countries with a focus on how culture, domestic concerns, economic and political aims, international contexts, and race have helped shape its course and nature. This course will fulfill the Difference, Power, and Equity requirement by examining not just the diplomatic relationship between the U.S. and Japan, but also how various types of interactions have influenced the dynamics of power between these two countries and have shaped the ways in which each country has understood and portrayed the other.

**Class Format:** remote with synchronous, seminar-style discussion

**Requirements/Evaluation:** class participation, response papers (500 words), one short paper (5 pages), and a research paper (12-15 pages)

**Prerequisites:** none; open to first-year students with instructors permission

**Enrollment Limit:** 15

**HIST 325 (F) Faith and Profit in the Medieval Mediterranean**

**Cross-listings:** HIST 325 REL 325

**Primary Cross-listing**

In many historical societies, there have been tensions between the demands of economic and religious life. What can I sell, what should I do with money, and how shall I interact with strangers? What is the relationship between religious ideals and the habits of everyday life? These questions can become especially acute when representatives of two or more competing belief systems interact with each other. The medieval Mediterranean provides numerous rich examples of societies and individuals facing these questions. In this class, we will look at how medieval Jews, Christians, and Muslims resolved these and other dilemmas in the market societies surrounding the Mediterranean basin, as they created their own forms of religious law and economic philosophy. In the process, we will gain a more profound understanding of the roots of modern debates about capitalism, property, and economic justice.

**Requirements/Evaluation:** Attendance and participation, two short papers, one final 12-15-page research paper

**Prerequisites:** None

Fall 2022
HIST 327 (S) A History of the German Democratic Republic

This seminar is a cultural history of the German Democratic Republic that focuses on the lives and experiences of East Germans from 1949 to 1990 and beyond. The course relies heavily on primary sources, including films, works of literature and art, ego documents such as memoirs, diaries, and letters, as well as the documentary, The Children of Golzow, that covers the lives of a handful of East Germans from 1960 to 2007. Proceeding chronologically, the course will consider the emergence of the GDR out of the Second World War and the Third Reich between 1945 and 1950; the GDR during the 1950s, including the workers’ uprising and the brief liberalization that occurred in its aftermath; the GDR in the shadow of the Wall during the 1960s; the GDR during the 1970s under Erich Honecker with its emphasis on consumerism; the GDR during the last decade of its existence during the 1980s with increasing economic stagnation, environmental degradation, popular disillusionment, and the ascendance of the Stasi state; and, finally, the collapse of the GDR and the subsequent experience of its former citizen in the Federal Republic of Germany after 1989.

Requirements/Evaluation: The course will be taught in a discussion format. Evaluation will be based upon participation in class discussion, two interpretative essays, each of approximately five pages, and a final eight-page paper due at the end of the semester.

Prerequisites: None

Enrollment Limit: 25

Enrollment Preferences: History majors, seniors, and then juniors

Expected Class Size: 25

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: HIST Group C Electives - Europe and Russia

Not offered current academic year

HIST 328 (S) The Making and Unmaking of the United Kingdom

England may be a very old country, but the United Kingdom (technically the United Kingdom of Great Britain and Northern Ireland) is a relatively new concoction, newer in fact than the United States of America. Although James VI of Scotland ascended both the English and Irish thrones as James I in 1603, it was only in 1707 that the Acts of Union united the two separate kingdoms of Scotland and England into one nation, Great Britain. And it was only in 1800 that further Acts of Union brought Ireland into the fold, creating the United Kingdom of Great Britain and Ireland. This would itself only last until 1922 when, after bloody civil war, Ireland was partitioned, leaving only the northern six counties remaining in the United Kingdom. Largely through discussion, this course will explore the troubled making and unmaking of the United Kingdom since 1689. After considering the meaning of the nation, nationalism, and national identity, it will focus on specific moments in the history of that making and unmaking. Topics will include: the revolution of 1688-89 and subsequent Scottish Highland support for the discredited Jacobites (followers of ousted monarch, James II); Anglo-Scottish commercial interests that fueled the Acts of Union in 1707; the defeat of the Jacobites in the last battle on British soil in 1746; Anglo-Irish relations in the eighteenth century that fueled the creation of the United Kingdom in 1800 against the backdrop of the French Revolution; the nineteenth-century movement for Irish Home Rule, culminating in the Easter Rising in 1916 and the partition of the island; the more recent resurgence of Scottish and Welsh nationalism, leading to the establishment of the Welsh and Scottish parliaments and a referendum on Scottish independence; and, finally, the current dilemma of Northern Ireland. Although primarily a political history of the four nations that comprise the United Kingdom, the course will also focus on the cultural meanings of Britishness in the eighteenth century, the imperial dimensions of national belonging in the nineteenth century, multi-racial attempts to recast Britishness against the backdrop of postwar imperial decline, and recent, right-wing formations of Englishness in the context of the fragmentation of the United Kingdom and Britain's exit from the European Union.

Class Format: this is primarily a discussion course with the occasional lecture that will frame the material for discussion

Requirements/Evaluation: course evaluation will be based on regular attendance and participation in discussion, the preparation of four response papers/discussion agendas, the writing of two 6-8 page interpretive essays, and a final, take-home examination

Prerequisites: no prerequisites, although some familiarity with the contours of modern European history would be useful

Enrollment Limit: 25

Enrollment Preferences: preference given to History majors

Expected Class Size: 12-20

Grading: no pass/fail option, yes fifth course option
HIST 329  (S)  The History of Witch-Hunting and Witchcraft in Medieval and Early Modern Europe
Between the fifteenth and eighteenth centuries, some 50,000 people—overwhelmingly women, but also some men and children—were hunted, prosecuted and executed for witchcraft all over Europe and its colonies. In this seminar, we investigate through the reading of primary and secondary sources why and how this phenomenon developed in the early middle ages, and then erupted and subsided in the early modern period. We also examine the various methodologies and arguments that historians have employed and debated over the past decades to try and explain why and how witch hunting, witchcraft beliefs and prosecutions influenced and impacted European cultures and societies. Lastly, the study of witch-hunting and witchcraft will also inform our understanding of its place in the religious, political, legal, social, and cultural development of medieval and early modern Europe, as well as of its connections to the histories of European persecution, heresy, antisemitism, gender and state formations, demonology, magic, and race.

Requirements/Evaluation: Participation. Three essays (750 words) on a primary source, a secondary source, and witchcraft trial. A 15 minute presentation to the class on a historical work of witchcraft scholarship. A research-paper prospectus and preliminary bibliography. A final 10-12 page research paper on a witchcraft topic of choice in consultation with the instructor.
Prerequisites: No prerequisites. Open to first-year students with permission of instructor.
Enrollment Limit: 16
Expected Class Size: 16
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2)
Attributes: HIST Group C Electives - Europe and Russia
Not offered current academic year

HIST 330  (S)  Reformations: Faith, Politics, and the World
The Protestant Reformation of the sixteenth century was one of the major transformations in the history of Christianity, a faith whose 2.2 billion adherents make it the largest religion in the world today. Martin Luther and his followers sparked a schism that changed what it meant to be a Christian, and, by various reckonings, helped to create the state as we know it, the modern self, capitalism and even, as an unintended consequence, secularism. As inhabitants of a post-Protestant society, we have much to learn about the world in which we live from studying the Reformation and its legacies. While considering classic interpretations, this seminar will also probe recent research on the plural Reformations: not just Protestant but also Catholic, and not solely the elite movement of Luther and John Calvin but also the Reformation of women and peasants. What was at stake in these sweeping transformations of what it meant to be a Christian? We will consider theological debates about human agency, the changing relationship of religion and the state, female mysticism, religious warfare, iconoclasm, the arrival of Protestantism in New England, and toleration. We will work intensively in Chapin Library, examining books of hours, Bibles, missals, psalters, and primers. The seminar will also visit WCMA and the Hancock Shaker Village. Authors to be read include Luther, Calvin, Teresa of Ávila, Jean Bodin, Ignatius of Loyola, and John Winthrop. Note: due to the constraints of rare-book research, enrollment is capped at 12.

Requirements/Evaluation: two short papers (5-7 pages) and a longer final paper (10-12 pages)
Prerequisites: none
Enrollment Limit: 12
Expected Class Size: 12
Grading: no pass/fail option, yes fifth course option
Distributions: (D2)
This course is cross-listed and the prefixes carry the following divisional credit:
HIST 331 (F) European Intellectual History from Aquinas to Kant
The scholars and philosophers of early modern Europe set the agenda for much of modern thought concerning epistemology, morality, religion, and politics. Many of their debates still inform our intellectual world: How do we know what we know? Is human nature intrinsically selfish? What is the nature of God, and of His revelation? Should we prefer individual freedom or political stability? Our seminar will retrace the long and winding path from the intellectual culture of late medieval Europe to that of the Enlightenment. We will try to understand how a Christian culture of manuscript books, whose inquiries were conducted in Latin, transformed into a secular culture of public debate in new printed publications such as journals and newspapers in vernacular languages (English, French, German, etc.). In the process, we will encounter the foundational movements that structured European thought and the making of knowledge in these centuries: scholasticism, humanism, the new philosophy and the Enlightenment. Ultimately, we will recover the arguments of major thinkers and consider what they can teach us today. Authors to be read include Petrarch, Christine de Pizan, Thomas More, Descartes, Leibniz, Montesquieu and Rousseau.

Requirements/Evaluation: attendance and participation; two short papers; a longer final paper
Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: juniors and senior History majors
Expected Class Size: 15
Grading: no pass/fail option, yes fifth course option

HIST 332 (F) Queer Europe: Sexualities and Politics since 1850 (DPE)
This course explores the construction, articulation, and politics of queer sexual desire in Europe from the mid-nineteenth century to the present. By placing queer sexualities in their broader social and political context, the course examines the ways in which sexuality has become central to questions of identity, both personal and national, in modern European society. Topics include: ways of thinking about the queer past; women’s “friendships” in Victorian Britain; the role of the new science of sexology in specifying various “sexual perversions”; the rise of sexual undergrounds in the context of European urbanization; the birth of campaigns for “homosexual emancipation”; attempts to regulate and suppress “deviant” sexualities, especially under the fascist and Nazi regimes in the 1930s; the effects of the postwar consumer revolution on the practices of sexual selfhood; the postwar “sex change” debates; the politics of 1950s homophile organizing and the 1970s Gay Liberation Movement; and recent debates about migrant queer identities in an increasingly multicultural Europe. The course will focus primarily on experiences in Britain, France, and Germany, but with some detours to Italy and Russia. Readings will be drawn from sexological texts, political tracts, memoirs, and the writings of recent historians and theorists. Several films will be screened and will also be central to our discussions of the changing meanings of sexual selfhood in modern European societies.

Class Format: This course will be taught as a discussion course, with discussions focused on the assigned readings.
Requirements/Evaluation: The class will be taught entirely in discussion mode and students will be expected regularly to contribute to the discussion of the readings and films for the course. Evaluation will be based on the quality of those contributions, the posting of three 3-page graded response papers on the readings (chosen by the students) and two interpretive essays of approximately 8 pages each.
Prerequisites: None; open to all students.
Enrollment Limit: 25
Enrollment Preferences: Junior and Senior History majors, along with Women's, Gender and Sexuality Studies majors, will be given enrollment preference if the class is over-enrolled. But other students are welcome if space is available.
Expected Class Size: 15-20
Grading: no pass/fail option, yes fifth course option
Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

HIST 332 (D2) WGSS 331 (D2)

Difference, Power, and Equity Notes: "Queer Europe" is a DPE course insofar as it explores the mechanisms by which sexual difference has been constituted, contested, and experienced and addresses how what we assume to be the "sexual norm" has a profoundly political history. It focuses on the means by which norms are created and enforced through the operations of power and on how those norms have been challenged and resisted by individuals who have come to understand themselves outside the normative categories of sexual selfhood.

HIST 335 (F) Weimar Germany

The Weimar Republic has been examined and re-examined, not only in an effort to account for the failure of democracy and the rise of Hitler in Germany but also for its remarkable artistic achievements. Using a variety of primary documents, including movies, works of art and literature, as well as more traditional historical sources and the writings of historians, this course will consider the social, political, and cultural history of the Weimar Republic. At issue in the course will be the relationship between the political and social instability and the cultural blossoming that characterized Germany during the 1920s. We will also consider whether the Weimar Republic in general, and Weimar culture, in particular are better understood as the product of Germany's past or as harbingers of its future.

Class Format: This course will be taught via discussion conducted entirely remotely in bi-weekly Zoom class meetings.

Requirements/Evaluation: participation in class discussion, two essays, each of approximately 5 pages, and one 8-page paper due at the end of the semester

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: students with background in European history, or History majors

Expected Class Size: 10-12

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: HIST Group C Electives - Europe and Russia

Not offered current academic year

HIST 336 (S) National-Socialist Germany

This course is a history of National-Socialist Germany based to a considerable extent on primary documents. Students will use the documents to reconstruct the history of the Third Reich and to articulate and assess some of the principal historiographical debates relating to National-Socialist Germany. The course will consider the following topics: the failure of the Weimar Republic and the rise of National Socialism; the consolidation of Nazi rule; the experiential reality of the Volksgemeinschaft; the popularity of National Socialism; youth and women in the Third Reich; Nazi culture; Nazi racism and image of the Jew; Gestapo terror; the pre-war persecution of Jews; popular German anti-Semitism; the regime's euthanasia program; the Nazi Empire; the experience of war in Russia; the implementation of the "Final Solution to the Jewish Problem"; German knowledge of and complicity in the "Final Solution"; the experience of "total war" on the home front; resistance to National Socialism; and the collapse of the Third Reich. The course will focus especially on how ordinary Germans experienced and participated in the history through which they lived. We will take an empathic approach to National-Socialist Germany and to the Germans who lived through this period, attempting to understand why they felt, thought, and acted as they did. We will also consider the epistemological and ethical problems involved in attempting to empathize with Nazis.

Class Format: discussion

Requirements/Evaluation: active and effective participation in class discussion, two 5-page analytic essays on two of the topics considered in the course, and a final 7-page interpretative essay: the two analytic essays on an assigned course topic (50%); the final interpretative essay (30%); class participation (20%)

Prerequisites: none; open to all
HIST 338  (F)  The History of the Holocaust
Cross-listings: HIST 338  JWST 338  REL 296

Primary Cross-listing

In twenty-first century United States, the murder of approximately six million European Jews by Nazi Germany remains a central event in our political, moral, and cultural universe. Nevertheless, the Holocaust still confounds historians¿ efforts to understand both the motivations of the perpetrators and the suffering of the victims. In this course, we will study the origins and unfolding of Nazi Germany¿s genocidal policies, taking into consideration the perspectives of those who carried out mass murder as well as the experiences and responses of Jews and other victim groups to persecution. We will also examine the Holocaust within the larger context of the history of World War II in Europe and historians¿ debates about Germany¿s exterminatory war aims. Course materials will include diaries, speeches, bureaucratic documents, memoirs, films, and historical scholarship.

Class Format: mostly discussion

Requirements/Evaluation: class participation, weekly reading responses, a map quiz, two papers (5-7 pages) on class readings, a final research paper (10-12 pages)

Prerequisites: none; open to first-year students with instructors permission

Enrollment Limit: 25

Enrollment Preferences: History majors and Jewish Studies concentrators

Expected Class Size: 20-25
Grading: yes pass/fail option, yes fifth course option

HIST 339  The German Democratic Republic: A Cultural History

This course is a history of the German Democratic Republic largely as experienced by its citizens. Using primarily cultural documents, novels, films, works of art, and documentaries, along with more traditional historical documents, the course will seek to reconstruct and analyze the experience of East Germans from 1945 until 1989 and beyond. Topics to be considered include the legacy of the Third Reich and the lost war, the founding of the socialist state, the impact of Marxist ideology on the lives of East Germans, the Ulbricht era, the impact of the building of the Wall in 1961, the Honecker era and the emergence of the Stasi state, the end of the GDR in 1989, and the experiences of East Germans in unified Germany.

Requirements/Evaluation: Two interpretative essays and a longer final paper.

Prerequisites: None

Enrollment Limit: 25

Enrollment Preferences: History majors, seniors, juniors, sophomores, in that order

Expected Class Size: 25

Grading:

Distributions: (D2)

HIST 340 (F) Anticolonial Europe: A History of Transnational Solidarity (DPE)

This seminar examines the history and paradoxes of European anticolonialism from the turn of the twentieth century to the 1970s. By following the anticolonial networks that developed in four European cities -- Paris, London, Berlin, and Moscow, it interrogates how political activists -- from both the Global South and North -- collaborated to establish a more racially egalitarian world order. It evaluates how events such as the First World War and the formation of the UN transformed their collective political projects. Finally, it investigates the multiple intellectual and political traditions which activists drew upon to contest Europe's racialized hegemony. Students can expect to gain an introduction to the 20th century's European-based anticolonial movements, as well as methods of transnational and global history.

Requirements/Evaluation: Class participation, one 5-7-page historiographical essay, and one 10-12-page research paper

Prerequisites: None

Enrollment Limit: 25

Enrollment Preferences: History majors, seniors, and then juniors

Expected Class Size: 25

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course investigates the legacies of Europe's racialized hegemony. Students learn about how anticolonial activists in the twentieth century navigated questions of class, race, and national identity. Additionally, they learn how historians have used different historical methodologies to write the history of anticolonialism more inclusively.

HIST 346 (F) Modern Brazil (DPE)

Cross-listings: AFR 346  HIST 346

Primary Cross-listing

Brazil has been the "country of the future" longer than it has been an independent nation. Soon after Europeans descended on its shores, Brazil was hailed as a land of resources so rich and diverse that they would inevitably produce great wealth and global power for its inhabitants. Although this has often contributed to an exaggerated patriotism, it has also fostered ambiguity-for if the label suggests Brazil's potential, it also underlines the country's failure to live up to that promise. This course will examine Brazil's modern history by taking up major themes from Independence to the present. Beginning with a "bloodless" independence that sparked massive civil wars, we will analyze the hierarchies that have characterized Brazilian society. The course will give particular attention to themes of race, gender, sexuality, and citizenship; national culture and modernity; and democracy and authoritarianism in social and political relations.

Class Format: discussion

Requirements/Evaluation: class participation will count for 20% of final grade; each of two 5-page papers will count for 25%; and a final 8- to 10-page paper will count for 30%

Prerequisites: none; open to first-year students with instructors permission

Enrollment Limit: 25

Enrollment Preferences: History majors, Latino/a Studies concentrators

Expected Class Size: 20-25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AFR 346 (D2) HIST 346 (D2)

Difference, Power, and Equity Notes: The course--in all of its readings, discussion, papers--centers on the formation of different and dynamic identities in 19th- through 21st-century Brazil. Throughout the semester we examine how Brazilians created, recreated, and/or rejected categories of difference and how these resulting actions connected to broad political and cultural changes. Links to current questions--like the struggles of communities of quilombolas (descendants of runaway or freed slaves)--receive particular attention
HIST 347  (S)  Democracy and Dictatorship in Latin America  (DPE)

The scarcity of stable and democratic governments in Latin America has frustrated observers across the region and beyond for almost 200 years. This course will examine the historical creation of both democratic and anti-democratic regimes in different national cases, seeking to identify the conditions that have fostered the apparent persistence of dictatorial tendencies as well as diverse forms of pro-democratic and social justice activism. Our main cases will be Brazil, Argentina, Mexico, Peru, and the countries of Central America, but we will address the region as a whole. In this regard we will look at the social and economic forces as well as the political actors and ideologies that have contributed to distinct, if often parallel, outcomes. At the same time, we will also question the criteria we use to label regimes "democratic" or "dictatorial"—and the implications of our choice of criteria.

Requirements/Evaluation:  class participation, response papers, two short papers, and a longer (10-page) final essay
Prerequisites:  none
Enrollment Limit:  25
Enrollment Preferences:  History majors
Expected Class Size:  22-25
Grading:  yes pass/fail option,  yes fifth course option
Distributions:  (D2)  (DPE)
Difference, Power, and Equity Notes: This course examines the production of unequal power relations along racial/ethnic, gender, national, and regional lines. Furthermore, it analyzes the creation of diverse—and biased—categories by which Latin Americans and their political movements and systems have been evaluated since the nineteenth century.

HIST 352  (F)(S)  American Maritime History  (DPE) (WS)

Cross-listings:  HIST 352  MAST 352
Secondary Cross-listing

This course explores themes in American maritime history from the colonial era to the 21st century. We will consider the dynamic relationship between the sea and American life, and the broad influence that each has had on the other. This relationship led to interactions with the water as a highway for the transportation of not just people and goods, but powerful new forces and ideas. The water creates a unique space for the formation of new communities and identities, while also acting as an important, and often exploited, resource. We will sample from different fields of inquiry including labor, environmental, cultural, and political history to gain a deeper understanding of diverse people's complex interactions with the oceans and seas.

Class Format: Seminars, discussions, and field seminars
Requirements/Evaluation:  Participation in class discussions, activities, and presentations, regular papers, and a final independent research project
Prerequisites:  None
Enrollment Limit:  27
Enrollment Preferences:  If course over-enrolls, preference will be given to sophomores and juniors
Expected Class Size:  22
Grading:  no pass/fail option,  no fifth course option
Unit Notes:  Offered only at Mystic Seaport
Distributions:  (D2)  (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
Writing Skills Notes: Students must complete regular writing assignments including a final 10- to 15-page paper. Additionally, students will participate in several in-class writing workshops and peer critiques. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: Maritime activity has long provided opportunities for some while creating tremendous hardships for others. From the slave trade and the encounters between native and European mariners to the power wielded by multi-national shipping conglomerates, this course investigates contests over power, empire, and capitalism as they played out on the maritime stage.

HIST 354 (F) The Revolutionary Generation: Galaxy of Leaders
Cross-listings: PSCI 257 LEAD 285 HIST 354
Secondary Cross-listing
The American Revolution produced a galaxy of brilliant and creative statesmen and intellectuals: Washington, Hamilton, Jefferson, Madison, Adams. In this seminar, we will study their astounding accomplishments--a successful war of independence, a Constitution and Bill of Rights, enduring democratic political institutions, and a nascent party system. But mostly we will focus on their ideas, for they were thinking revolutionaries. We will examine in depth and in detail their superb writings, their letters and speeches as well as Madison and Hamilton's Federalist essays. We will also read recent interpretations of the founding generation by Gordon Wood, Joseph Ellis, Bernard Bailyn, and others.

Requirements/Evaluation: three papers, weekly class presentations, and active participation in all discussions
Prerequisites: none; courses in Leadership Studies or Political Theory or early American History are very helpful for admission to this seminar
Enrollment Limit: 10
Enrollment Preferences: students with a background in Leadership Studies, American History or American Political Science
Expected Class Size: 10

HIST 355 (F) The CIA and American Foreign Policy
Cross-listings: PSCI 361 LEAD 361 HIST 355
Secondary Cross-listing
Despite an American aversion to espionage captured by Secretary of State Henry Stimson's oft-cited (yet unsubstantiated) remark, "Gentlemen don't read each other's mail," intelligence history in the United States dates back to the Revolutionary War. Still, it took the shock of Pearl Harbor for the United States to establish a permanent peacetime civilian intelligence service independent of another federal department--the Central Intelligence Agency. Since then, the agency and others which comprise the loose entity called the Intelligence Community (IC) have played a pivotal albeit intensely controversial role in US foreign and national security policies. Yet their roles and missions remain largely misunderstood and divisive, as attested to by recent debates surrounding the multiple investigations of the 9/11 tragedy, the flawed pre-war estimates of Iraq's Weapons of Mass
Destruction (WMD) capabilities, the reporting on Benghazi, the Snowden revelations, and much more. This course seeks to provide greater understanding of the relationship between intelligence and US foreign and national security policy by examining the CIA's and IC's roles and responsibilities, illuminating their history alongside the history of America and the World, assessing their successes and failures, evaluating their reforms, and correlating their behavior and capabilities with US values and institutions.

Requirements/Evaluation: Midterm, several short papers, and a research paper.
Prerequisites: None
Enrollment Limit: 14
Enrollment Preferences: Political Science and History Majors, prior coursework in American foreign policy.

HIST 358  (S)  The Roosevelt Style of Leadership
Cross-listings: LEAD 325  HIST 358

Secondary Cross-listing
In this seminar, we will study the political and moral leadership of Theodore, Franklin and Eleanor Roosevelt. The three Roosevelts transformed and expanded the role of government in American society, bringing about fundamental and lasting change. What were their leadership strategies and styles? How did TR and FDR differ in their approaches to leadership? Were the ideas behind TR's "Square Deal" and FDR's "New Deal" similar? How did Dr. New Deal become Dr. Win-the-War? How did they balance political deal-making with bold, principled leadership? What kind of leadership role did Eleanor Roosevelt play? In addition to studying biographies and especially the writings and speeches of TR, FDR, and ER, we will do research using the Proquest data base of historical newspapers, to see history as it was being made.

Requirements/Evaluation: Participation in class discussions, oral reports, several short papers and one research paper.
Prerequisites: Courses in Leadership Studies and American Political Science and American History are very helpful for admission to this seminar
Enrollment Limit: 12
Enrollment Preferences: Leadership Studies concentrators and students with a background in American history and Political Science

HIST 360  (F)  Mapping North America: Critical Cartographies  (DPE)
This course examines histories of mapping: what maps show, and what places the practices of cartography have tended to erase, distort, or conceal. Focusing on North America, it examines how Native Americans, African-Americans, and Euro-colonial peoples strongly contested the meanings and representations of "place." Course topics include Indigenous mapping traditions and concepts of homelands spaces; European navigational strategies and colonialism; urban planning; and scientific as well as military depictions of particular lands and waters, especially west of the Mississippi River. The course teaches strategies for employing maps as primary sources, and ways of understanding the historical and ideological circumstances of their production and circulation. It will offer opportunities to critically engage cartographic materials in Williams College's archival and museum collections,
and to develop independent research projects.

Class Format: Remote class. Class will center on weekly Zoom discussions in a seminar format, plus virtual one-on-one discussions with the instructor about writing projects.

Requirements/Evaluation: class discussion, response papers, short analytic essays, final project

Prerequisites: one History or American Studies course

Enrollment Limit: 15

Enrollment Preferences: sophomore, junior, and senior History and American Studies majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course offers critical perspectives on mapping and the close connections between representations of space/place and the exercise as well as contestation of power. Particular attention is devoted to Native American/Indigenous mapping and "counter-mapping" projects and methodologies, as well as scholarship from the African diaspora that stresses the active role of mapping in creating and also resisting racialized social regimes.

HIST 361  (F)  The Atlantic World: Connections, Crossings, and Confluences  (DPE)

Cross-listings: AMST 360  HIST 361

Primary Cross-listing

Early Americans inhabited an interconnected world through which people, beliefs, and objects circulated. This course explores the "Atlantic World" as both a place and a concept: an ocean surrounded by diverse communities and empires, and an imagined space of shared or competing affiliations. Moving from the tenth century to the nineteenth, it examines ecological, cultural, political, economic, intellectual, and religious exchanges among Native Americans, Europeans and colonizers, and Africans and African Americans. It introduces both conceptual dimensions of this Atlantic paradigm and case studies that investigate its human subtleties, with the goal of examining early American history through a transnational lens. The course will take up the stories of Wabanaki mariners and Norse/Viking expansionists; Pocahontas, a trio of Inuit people, and myriad other Indigenous travelers to Europe; West African survivors of the Middle Passage and their enslaved descendants who pushed for survival and recognition of their humanity overseas; New England religious dissidents, intellectuals, and profiteers from Caribbean slavery; Touissant L'Ouverture and the reverberations of the Haitian Revolution; and whaling ship crews who pursued cetaceans ever farther out at sea, among other topics. The course also delves into new methodologies for telling histories that have been unevenly presented or seemingly silenced in traditional documentary archives, probing ways that oral traditions, songs, archaeology, material culture, and other forms of expression and representation can help recast the nature and meanings of these connected spaces and histories. Additionally, it provides an opportunity to engage with original materials pertaining to Atlantic World histories in the Williams College Archives/Special Collections and Art Museum.

Class Format: will alternate with seminar-type discussion of readings

Requirements/Evaluation: active participation in class discussion, several short essays based on readings and discussion topics, museum/archives exercise, final essay

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: sophomore, junior, and senior History majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AMST 360 (D2) HIST 361 (D2)

Difference, Power, and Equity Notes: This course examines the formation, expression, and articulation of racial, ethnic, cultural, and other forms of difference in the historical Atlantic World, and the ways that peoples of Indigenous and African descent engaged with and challenged European colonization. It devotes substantial time to critical methodologies that re-center voices oftentimes treated as "silenced" or "absent" in older literatures,
and helps students build fluencies in recovering and analyzing these lives.

**HIST 366 (S) What They Saw in America**

**Cross-listings:** SOC 244  AMST 244  HIST 366

**Secondary Cross-listing**

This course traces the travels and writings of four important observers of the United States: Alexis de Tocqueville, Max Weber, G.K. Chesterton, and Sayyid Qutb. The course will consider their respective journeys: Where did they go? With whom did they talk? What did they see? The historical scope and varying national origins of the observers provide a unique and useful outsider’s view of America--one that sheds light on persisting qualities of American national character and gives insight into the nature and substance of international attitudes toward the United States over time. The course will analyze the common themes found in the visitors’ respective writings about America and will pay particular attention to their insights on religion, democracy, agrarianism, capitalism, and race.

**Requirements/Evaluation:** A midterm examination, two short essays, and a final paper.

**HIST 367 (F) Black History is Labor History**

**Cross-listings:** AFR 367  HIST 367

**Primary Cross-listing**

This seminar explores labor history in relation to black people, spanning the colonial period to the early twenty-first century. It racializes the history of work by tracing the long story of black labor in the U.S. from the plantation to the plant. Whereas the bulk of the course will analyze black labor and labor movements in the twentieth century, specifically focusing on the push for economic inclusion and mobility amid employment, societal and union-related racial discrimination, we will examine what involuntary black labor meant in the context of slavery and the construction of a capitalist economy. Likewise, we will devote attention to black workers with regard to such topics as antiunionism, deindustrialization, economic inequality, Fordism, informal economies, Jim and Jane Crow, labor radicalism and violence, New Deal and welfare, the rise of civil rights unionism, and slavery and capitalism, among other themes.

**Requirements/Evaluation:** Students are expected to participate actively and will write two comparative essays (5-7 and 6-8 pages) and two primary source analyses (1-2 pages), all of which will be letter-graded and returned with comments. In addition, students will write a final research paper (10-12 pages) in consultation with the instructor and will be required to submit a topic proposal and outline, an annotated bibliography, and a peer-reviewed draft of the final paper.

**Prerequisites:** Recommended for students with sophomore standing or above and first-year students who both have taken a 200-level history course and have received instructor permission to enroll into the course.

**Enrollment Limit:** 25

**Enrollment Preferences:** HIST and AFR majors followed by students with sophomore, junior, or senior standing. If the course is overenrolled, students will be given a questionnaire and only first-year students who have completed a 200-level history course will be enrolled.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option
Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
AFR 367 (D2) HIST 367 (D2)

Writing Skills Notes: Students will be required to write two comparative essays (5-7 and 6-8 pages) and two primary source analyses (1-2 pages), all of which will be letter-graded and returned with comments. In addition, students will write a final research paper (10-12 pages). Throughout the semester, these writing assignments will total roughly 22-30 pages. Students can expect to have line-edited feedback on their papers with substantial and timely, writing-related suggestions for improvement.

Difference, Power, and Equity Notes: This course racializes the study of labor history, focusing on black people and their experiences in the United States from the plantation to the plant. It challenges students to confront and to redefine what it means to labor, grasping how slavery, segregation, and systemic inequalities amid black people's pursuit of citizenship, equality, and freedom have shaped their economic, political, and social conditions and identities.

HIST 368 (F) Framing American Slavery (DPE)

Cross-listings: AFR 363 AMST 368 HIST 368

Primary Cross-listing
Readings in American Slavery  This course will delve into how and what historians have written about US slavery for the last century or so. Rather than marching through time, like we might in a survey course, we'll explore the nooks and crannies of slavery's history. We'll consider gender and sexuality, labor and capitalism, regional difference, maritime culture, and every day life. We'll compare histories produced well before the Civil Rights Movement to books written afterward. We'll consider the obstacles and challenges Black scholars faced in the academy and consider the significance of their work. Finally, we'll examine slavery's role in today's world, beginning with the institution's relationship with American universities and continuing on to the recent protests against monuments and statues.

Requirements/Evaluation: Four written essays/reviews, final paper. Students must also complete reading and contribute to class discussions.

Prerequisites: None

Enrollment Limit: 12

Enrollment Preferences: Priority given to History, American Studies, and Africana Studies concentrators/ majors.

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
AFR 363 (D2) AMST 368 (D2) HIST 368 (D2)

Difference, Power, and Equity Notes: This course will explicitly examine how power worked and changed during the centuries of legal slavery in the United States. Since lawmakers joined power and violence to definitions of whiteness and blackness, we will study how these definitions emerged and changed over time. Students will address issues of violence, legal and extra legal means of continuing slavery through changing political and economic conditions. Additionally, the course will consider the racial barriers in the academy.

Not offered current academic year

Cross-listings: AFR 370 HIST 370

Secondary Cross-listing
The ending of the Second World War in 1945 coincided with the dawn of a new nationalism in the modern Caribbean. The British territories were beginning their shift away from colonialism and charting a path toward independence that would arrive in the early 1960s. Their independent neighbors contended with US imperialism which greatly shaped questions of race, nationalism, and sovereignty. By the 1960s much of the region faced crises
that grew out of the tensions of the postwar period. This course examines closely these transformations in the Caribbean. It is divided into three parts. The course begins with an examination of the ideas about race, state development and empire that dominated Caribbean intellectual discourse of the 1940s. Key texts for this period include the works of Caribbean intellectuals such as Roger Mais, Una Marson, CLR James, and Jacques Roumain who considered the possibilities of racial equality and democracy in the postcolonial Caribbean. The course then looks more closely at 1950s attempts to forge greater Caribbean unity during the early Cold War years. West Indian Federation and the circuits of travel within the Caribbean are given special focus. Finally, the course will discuss challenges of the postcolonial Caribbean by looking at the circumstances and wider responses to regional radicalism in the 1960s. The key events that will be examined in this section include the Duvalier dictatorship, the Cuban Missile Crisis, and black power in Jamaica in 1968.

Requirements/Evaluation: class participation, 3-4 short papers (5-7 pages)
Prerequisites: none
Enrollment Limit: 19
Enrollment Preferences: Africana Studies concentrators
Expected Class Size: 15
Grading: no pass/fail option, no fifth course option
Distributions: (D2)
This course is cross-listed and the prefixes carry the following divisional credit:

HIST 372 (F) The North American West: Histories and Meanings
This course will explore the various and contested histories of the geographical region in North America that Americans often call "the West." With porous boundaries; changing empires and national borders; an extraordinarily diverse mix of peoples; and most importantly, continuous Indigenous presence to the present day, this region poses foundational questions about the construction of American history. What if, from the vantage point of the 1780s, we look not at the founding of the United States in the East but at the elaboration of the Spanish mission system in California and other parts of the Southwest? What if, instead of understanding "the West" as a place that people migrated "to" from "the East," we think about "the West" as a place diversely inhabited for thousands of years that experienced very sudden and violent forms of military conquest and settler colonialism, as well as waves of migration from many different compass points around the globe? And where do Americans narratives of western "individualism" fit into the histories of massive federal interventions in "the West"? We will take up these and many other questions as we examine topics from the era before Europeans arrived in North America to the present day.

Requirements/Evaluation: class participation; 3 brief writing assignments (2-4 pages); one 6-8 page research paper, based on a primary source; 24-hour take-home exam.
Prerequisites: none
Enrollment Limit: 12
Enrollment Preferences: History majors and students who have taken previous History courses.
Expected Class Size: 12
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2)

HIST 376 (S) Sex, Gender, and the Law in U.S. History (DPE)
This course explores how the law in America has defined and regulated gender and sexuality. We will evaluate how the law has dictated different roles for men and women, how sexual acts have been designated as legal or illegal, and the ways that race, class, and nationality have complicated the definition and regulation of gender and sexuality. We will examine how assumptions about gender and sexuality have informed the creation and development of American law, contested interpretations of the Constitution, and the changing meanings of citizenship. We will consider how seemingly
gender neutral laws have yielded varied effects for men and women across race and class divides, challenging some differences while naturalizing others. Finally, we will examine the power and shortcomings of appeals to formal legal equality waged by diverse groups and individuals. Throughout the course, we will consider the various methodologies and approaches of the interdisciplinary field of legal history. Topics to be covered will include the Constitution, slavery, marriage, divorce, custody, inheritance, immigration, sexual violence, reproduction, abortion, privacy, suffrage, jury duty, work, and military service.

Requirements/Evaluation: four papers, including three 4- to 6-page papers, and one final paper of 8-10 pages
Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: History majors, Women's, Gender and Sexuality Studies majors
Expected Class Size: 20
Grading: no pass/fail option, yes fifth course option

Difference, Power, and Equity Notes: This course fulfills the DPE requirement because it examines the legal, social, and political constructions and theorizations of difference, power, and equity. It examines the ways that individuals and groups have organized across various axes of difference to fight for legal equality, and explores how those individuals and groups have experienced legal equality and legal inequality in varied ways.

HIST 379 (S) Black Women in the United States (DPE)
Cross-listings: HIST 379  WGSS 379  AFR 379
Primary Cross-listing
As slaves and free women, activists, domestics, artists and writers, African Americans have played exciting and often unexpected roles in U.S. political, social, and cultural history. In this course we will examine black women's lives from the earliest importation of slaves from Africa and the Caribbean through to the expansion of slavery, the Civil War, freedom, Jim Crow, the Civil Rights movements, and up to the present day. Consistent themes we will explore are the significance of gender in African American history and the changing roles and public perceptions of black women both inside and outside the black community. We will read and discuss a combination of primary and secondary sources; we will also consider music, art, and literature, as well as more standard "historical" texts.

Class Format: discussion
Requirements/Evaluation: student participation, three papers, and a brief oral presentation
Prerequisites: none
Enrollment Limit: 15
Enrollment Preferences: History, WGSS, and American Studies Majors, and Africana Concentrators.
Expected Class Size: 12
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (DPE)
This course is cross-listed and the prefixes carry the following divisional credit:
HIST 379 (D2) WGSS 379 (D2) AFR 379 (D2)
Difference, Power, and Equity Notes: This course meets the Difference,Power, and Equity requirement. The course focuses on empathetic understanding, power, and privilege, especially in relation to class, gender, and race within a U.S. context. We will study the ways in which the conflicts arose within the Black community and how Black women, usually without official positions as leaders, emerged as organizers and leaders in political and social movements.

HIST 383 (F) Religion and American Capitalism
Cross-listings: REL 283  HIST 383
Secondary Cross-listing

Was Jesus a revolutionary socialist or a savvy salesman? Does capitalism bring prosperity to the virtuous or lead us to worship Mammon? Shall the meek inherit the earth or should the hand of the diligent rule? Is it holy to be poor or is prosperity our moral duty? These questions have long preoccupied religious believers, and their changing answers have transformed the history of American capitalism. This course invites students to study that history, from the early 19th century to the present. It will cover such topics as: utopian communes; the political economy of slavery; working-class religion and labor organizing; Christian and Jewish socialism; big business and the Prosperity Gospel; 'New Age' spirituality and the counterculture; liberation theology and racial capitalism; and conservative Christianity in the age of Wal-Mart and Chick-Fil-A.

Requirements/Evaluation: Participation in group discussion; five response papers (300-400 words); two essays (4-6 pp); final research paper (8-10 pp).

Prerequisites: None; open to all students.

Enrollment Limit: 15

Enrollment Preferences: Religion and History majors.

Expected Class Size: 15

SEM Section: 01 Cancelled

HIST 385 (F) Latinx Activism: From the Local to the Transnational (DPE) (WS)

Cross-listings: LATS 385 HIST 385

Primary Cross-listing

Latinas/os/x's have long sought inclusion in the U.S. polity and society, while the meanings of inclusion and the means to achieve it have shifted historically. For Latinxs, activism is often shaped by the specific dynamics of each group's migration to the United States and by their arrival into a particular context. Home country politics and transnational connections can remain important. Yet local activism to meet immediate needs and to address critical issues becomes important as well. Working within existing structures, Latinx communities have at times questioned and challenged those existing structures, as activists have addressed a wide variety of often intersecting issues. This course roots itself in the historical progression of Puerto Rican and Mexican-American activism, before turning to the social and political movements of the late 1960s and 1970s, as shaped by Puerto Ricans, Chicano/as, Cubans, and Dominicans. The 1980s witnessed increased immigration from several Central and South American countries, arriving in the context of reactions to those political and social movements, as well as increased U.S. intervention in their countries of origin—a context that again shaped both local and transnational activism. Students' final projects will be anchored within this historical framing and within the lens of local and transnational activism, while moving forward in time to consider more contemporary dimensions of Latinx activism.

Class Format: This is a discussion-based and writing intensive course, so reading and full participation is important. Students will be expected to read each other's work and to provide thoughtful and constructive feedback.

Requirements/Evaluation: Class participation and presentations; several 3-4 page essays; final paper of 12-15 pages, as well as proposal, bibliography, and drafts

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: History majors and Latina/o Studies concentrators, seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

LATS 385 (D2) HIST 385 (D2)
Writing Skills Notes: Several writing assignments of 3-4 pages provide the foundation for 12-15 page final papers. In consultation with the professor, students select a topic and submit a 3-4 page proposal with a bibliography. Students submit a draft for a workshop session with other students. A final presentation is another opportunity to hone arguments and use of evidence, as well as to receive feedback on revised drafts from the professor.

Difference, Power, and Equity Notes: This course examines how Latinx communities have sought inclusion in U.S. society and polity, in the face of marginalization based on race, ethnicity, class, gender, sexuality, and/or political perspective, as well as other intersecting markers of difference. Questions of difference, power, and equity are analyzed at the structural, community, and individual levels.

HIST 388 (F) Decolonization and the Cold War
The second half of the twentieth century came to be defined by two distinct, yet overlapping and intertwined phenomena: the Cold War and decolonization. In the two decades that followed the end of WWII, forty new nation-states were born amidst the bipolar struggle for global supremacy between the Soviet Union and the United States. Those new nations were swept up in the Cold War competition in ways that profoundly influenced their paths to independence and their postcolonial orders, but they often had transformative effects on the Soviet-American rivalry as well. In this course, students will focus on two related questions: How did decolonization influence the Cold War and the international behavior and priorities of the two superpowers? And what impact did the Cold War exert on the developing states and societies of Asia, Africa, the Middle East, and Latin America? Course materials will consist of scholarly texts, primary sources, memoirs, films, and fiction.

Requirements/Evaluation: class participation, several short papers, and a 10- to 12-page final paper
Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: History majors; juniors and seniors

HIST 389 (S) The Vietnam Wars (DPE)

Cross-listings: LEAD 389 HIST 389 ASIA 389 ASST 389

Primary Cross-listing
This course explores Vietnam's twentieth century wars, including an anti-colonial war against France (1946-1954), a massive Cold War conflict involving the United States (1965-1973), and postcolonial confrontations with China and Cambodia in the late-1970s. Course materials will focus primarily on Vietnam's domestic politics and its relations with other countries. Lectures, readings, films, and discussions will explore the process by which Vietnam's anti-colonial struggle became one of the central conflicts of the Cold War, and examine the ramifications of that fact for all parties involved. The impact of these wars can hardly be overstated, as they affected the trajectory of French decolonization, altered America's domestic politics and foreign policy, invigorated anti-colonial movements across the Third World, and left Vietnam isolated in the international community. Students will read a number of scholarly texts, primary sources, memoirs, and novels to explore everything from high-level international diplomacy to personal experiences of conflict and dramatic social change wrought by decolonization and decades of warfare.

Class Format: This course will be fully remote. The course format will prioritize synchronous discussions and small group work via Zoom.

Requirements/Evaluation: class participation, several short papers, and a 10- to 12-page final paper
Prerequisites: none; open to all
Enrollment Limit: 15
Enrollment Preferences: History and Asian Studies majors
Expected Class Size: 10-15
Grading: yes pass/fail option, yes fifth course option
This course is cross-listed and the prefixes carry the following divisional credit:

LEAD 389 HIST 389 ASIA 389 ASST 389

**Difference, Power, and Equity Notes:** This course traces Vietnam's anti-colonial movements from colonization to liberation. Students will examine power struggles among Vietnamese nationalists from a variety of different religious, class, ideological, and regional backgrounds, as well as Vietnam's diplomatic and military rivalries with France, China, the Soviet Union, and the United States. Readings will focus on Vietnamese voices to explore how the country surmounted seemingly impossible international power dynamics.

**HIST 390 (S) Race, gender and science: A Black, Brown, and Queer inquiry into Science and Technology Studies** (DPE)

**Cross-listings:** HIST 390 STS 302

**Secondary Cross-listing**

The protests that followed the murder of George Floyd have brought to the fore the realities of racism and violence that Black, Indigenous and People of Color experience daily. They also motivated a long overdue reckoning in various fields and institutions with the legacy of structural racism, and of colonial history. The history of modern science, technology and medicine is intractably connected to questions of race, gender, sexuality and colonialism. Scientific knowledge has been influenced by debates related to human difference and to colonialism, and has also contributed to the production of ideas around difference and distinction as well as around equality and equity. In this course, we will take a deeper look into different episodes in the history of modern science, technology and medicine, and will engage in a Black, Brown and Queer reading and investigation of science and technology. The course will offer a deep historical and methodological introduction to STS, as well as to a number of critical disciplines, such as Critical Race Theory, Postcolonial and decolonial theory, queer theory, in relation to science, technology and medicine. This course can serve as an alternative to STS 101.

**Class Format:** The course will be held remotely

**Requirements/Evaluation:** 2 response papers (3-5 pages each) + final project (could be a 10-15p paper or creative project of any kind)

**Prerequisites:** Previous courses in STS, history, CRT, WGS, or similar disciplines is preferred but not necessary.

**Enrollment Limit:** 10

**Enrollment Preferences:** Juniors and Seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**HIST 391 (S) When India was the World: Trade, Travel and History in the Indian Ocean** (DPE) (WS)

**Cross-listings:** GBST 391 ASST 391 ASIA 391 HIST 391

**Primary Cross-listing**

What do Ibrahim Ben Yiju, a Jewish merchant from 11th century Yemen, Ibn Batutah, a Muslim scholar from 15th century Morocco and Captain Kidd, a 17th century English pirate have in common? All three men travelled and lived in the Indian Ocean region! This course explores the history of one of the world's oldest maritime highways that has connected the diverse cultures of Asia, Africa and Europe for millennia, thus making it a vital element in the birth of globalization. Moving away from conventional land-centric histories, we will focus instead on understanding the human past through oceanic interactions. South Asian ports and port cities remained the fulcrum of the Indian Ocean world throughout its history; traders, travellers, nobles, scholars, pilgrims and pirates from all over the world travelled to the Indian coast in search of adventure, spices, knowledge and wealth. Thus we will primarily focus on India's role in the Indian Ocean roughly from the rise of Islam in the seventh century CE through the expansion of various
European communities in the region and the subsequent rise of the global economy and colonialism in the nineteenth century. Rather than following a strict temporal chronology we will concentrate on themes such as travel and adventure; trade and exchange; trust and friendship; religion and society; pilgrimage; piracy; the culture of port cities; and food across time.

Requirements/Evaluation: class participation and weekly responses to readings, 4 short papers (4-5 pages), an oral presentation and final research (10 pages) paper based on any one of the 4 papers written during the course.

Prerequisites: none; open to all

Enrollment Limit: 15

Enrollment Preferences: history majors and students with demonstrable interest in maritime/Indian Ocean history

Expected Class Size: 10-12

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

GBST 391 (D2) ASST 391 (D2) ASIA 391 (D2) HIST 391 (D2)

Writing Skills Notes: Students will write 4 short papers (4-5 pages) each and receive detailed feedback from the instructor. One of the four papers will become the basis of a final research paper (10-12 pages) on which each student will work closely with the instructor and receive feedback on improving research and writing skills.

Difference, Power, and Equity Notes: This course questions the conventional view that global interconnectedness was the result of Europe’s discovery of ‘new worlds’. Instead, it centers non-European actors in facilitating global networks before colonialism. Throughout, students will critically engage questions of how Asian and African players forged and shaped global connections across the Indian Ocean arena and examine the ways in which these contributions have been overshadowed in traditional historiography.

HIST 393 (S) Sister Revolutions in France and America

Cross-listings: LEAD 212 HIST 393

Secondary Cross-listing

In the late-eighteenth century, two revolutions burst forth—they were the most striking and consequential events in modern history, decisive turning-points that transformed society and politics. The American Revolution led to an enduring and stable democratic republic whereas the French Revolution was followed by a turbulent succession of Empires and restorations of the monarchy. France did not have a sustainable republic until 1870. We will analyze in detail and in depth the ideas and theories of the leaders of both revolutions in order to understand why the American Revolution took a moderate course and why the French Revolution took a more radical course and plunged into violence and terror. We will read the writings of Washington, Jefferson, Madison, Hamilton, Rousseau, Robespierre, Saint-Just, Tocqueville, Edmund Burke and others.

Requirements/Evaluation: three papers, several class presentations, and active participation in class discussions

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: students with backgrounds in American history, French history or Political Science

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

HIST 396 (F) The Pivotal Decade—The 1970s Origins of Contemporary America
Cross-listings: HIST 396 LEAD 396

Primary Cross-listing

Often overshadowed by the long 1960s and the conservative ascendancy of the 1980s, the 1970s provides an important transitional moment for the United States. It was also a decade fraught with contradictions. On the one hand, Americans experienced widespread disillusionment with the power of the federal government to promote and protect the minority from the majority. Historians seeking to understand the collapse of the welfare state or the origins of white resistance to civil rights’ initiatives often point to the 1970s as the time when the federal government shifted the burden of the social welfare system onto the market, state and local governments, and onto poor people themselves. And yet, the 1970s also saw an explosion of progressive social activism, as the women’s movement, the gay rights movement, and the environmental movement, among others, all came into their own. Likewise, this was a time when U.S. realignment internationally and military overextension intersected with new hegemonies of human rights regimes, multinational corporations, and “globalization.” This course will emphasize a wide array of social movements and activism—both left and right—and the interplay among formal politics, grassroots organizing, and popular culture. It will ask students to consider how and why the 1970s catalyzed many of the domestic and international dynamics and debates that define American politics and society today. Students will be assessed on participation, short response papers, and an individual research project culminating in a poster presentation. In Fall 2022, this course will be offered at both Amherst and Williams College campuses. There will be an end of the semester symposium at Williams College that all enrolled students are required to attend as part of the final project.

Requirements/Evaluation: Students will be assessed on participation, short response papers, and an individual research project culminating in a poster presentation

Prerequisites: None

HIST 409  (F) Crescent, Cross, and Star. Religion and Politics in the Middle East

Cross-listings: GBST 409 ARAB 409 HIST 409

Primary Cross-listing

Is religion the most powerful force in the Middle East? Is religion becoming more prominent in the political sphere and what impact will that have on religious minorities and the status of women in the Middle East? Using a case study and historical approach, this course will consider the development of religiously inspired political ideologies in the Middle East in the 19th and 20th century. We will explore the experience of Iran, Turkey, Israel, Egypt, Saudi Arabia, Lebanon and Jordan and evaluate role of religious actors, institutions, and ideologies in constructing national identities, policymaking, state-building, regime change, conflict, and war.

Requirements/Evaluation: class participation and a 25-page research paper

Prerequisites: none; preference will be given to History, Jewish Studies and Arabic Studies Majors and to those who have taken History 207

Enrollment Limit: 19

Enrollment Preferences: History majors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:
**HIST 413 (F) The Big Ideas: Intended and Unintended Consequence of Human Ambition**  (DPE) (WS)

**Cross-listings:** ARAB 413  GBST 413  HIST 413  ENVI 413

**Primary Cross-listing**

What have been the most consequential ideas of the last 100 years? This course will explore some of the more audacious and ambitious plans to alter natural and urban environments in the late 19th century to the early part of the 21st, specifically those that sought to improve the human condition through science, engineering, and technology. By building big bold things, politicians around the globe sought to bring prosperity to their nation and embark on a path of modernity and independence. Through an intellectual, political and environmental history of major construction projects such as the building of the Suez Canal and the Aswan Dam, extensive river valley developments in Iran, Turkey and Iraq, and utopian and futuristic city planning in western Asia, students will consider how, with the benefit of hindsight, to best evaluate the feasibility of such bold schemes. Who has benefitted and who has not, what have been some of the unanticipated consequences, what was sacrificed or neglected, and what do these projects tell us about the larger processes of global capitalism, decolonization, and climate change?

**Requirements/Evaluation:** A presentation, shorter writing assignments and a longer research paper (20-25 pages) in the end. Students will submit shorter drafts of final paper in order to receive constructive feedback prior to final submission.

**Prerequisites:** None

**Enrollment Limit:** 15

**Enrollment Preferences:** Seniors, especially History, Arabic and Environmental Studies majors.

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

ARAB 413 (D2) GBST 413 (D2) HIST 413 (D2) ENVI 413 (D2)

**Writing Skills Notes:** A 20-25 page research paper will be required at the end of the semester. Prior to getting to that point, students will submit an annotated bibliography, a two page proposal, a five and eventually a 10 page draft. Each draft will receive extensive comments and suggestions from peers and instructor. In this way, the student will think about the process of writing and the best way to set themselves up for success.

**Difference, Power, and Equity Notes:** This course examines how a number of different nations in Africa and Asia sought to improve the living conditions of the masses through major construction project. Though ostensibly these schemes were supposed to improve the livelihood of all, often they primarily benefitted the few - the urban elite - and not the general population. This course will therefore explore how certain class, gender and racial lines were solidified and maintained through economic development plans.

**HIST 416 (F) The Many Lives of Tokyo**  (WS)

**Cross-listings:** ASIA 317  HIST 416  ASIA 416

**Primary Cross-listing**

The city of Tokyo has had many lives from its early modern founding as the shogun's capital of Edo to its contemporary incarnation as a global megacity. This seminar explores how and why the city has changed--how an unassuming fishing village was transformed over four centuries into a vibrant early modern city of over a million people, the heart of a modern nation and metropole of an expansive empire, an emblem of urban cosmopolitanism, and a sprawling metropolis. Our focus will be on how people have lived, conceived, and shaped Edo/Tokyo. We will consider how different and various people have moved through the city; where and how they have lived, worked, and enjoyed themselves; how they have interacted with the natural and built environments; and how they have expressed their discontents with, and aspirations for, the city. Topics to be examined include: physical expansion, urbanization, and suburbanization; destruction and reconstruction from fires, earthquakes, and war; cultivation of
opportunities to consume; and creation of urban popular cultures. The centerpiece of the seminar is the research and writing of a substantial and original paper that delves into a question of interest to you about the history of Tokyo.

**Requirements/Evaluation:** class participation, discussion posts, response papers, and a research paper (20-25 pages)

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** History majors and Asian Studies concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**HIST 430 (S) Postcolonial Reparations: Trauma, History, and Memory after European Imperialism** (DPE) (WS)

**Cross-listings:** JWST 430 HIST 430

**Primary Cross-listing**

How have European states responded to calls to acknowledge and atone for the crimes of Empire? This course places recent calls for reparations in a historical context. Weaving together a wide-range of historical and contemporary case studies -- including the Conference on Jewish Material Claims Against Germany (1951), Germany's official recognition of the Herero Genocide (2021), and ongoing debates in France about the restitution of colonial-era looted art, this course investigates how the language and mechanisms of restorative justice have historically developed, evaluates which past efforts of restorative justice were successful and why, and examines what role historical memory and historians-as-activists should play in campaigns that seek reparations for colonial injustices. In doing so, it evaluates how activists have deployed scholarly vocabularies on memory, justice, and violence in a number of national and international contexts.

**Requirements/Evaluation:** Class participation, weekly 500-word discussion posts and a 20-page research paper

**Prerequisites:** None

**Enrollment Limit:** 15

**Enrollment Preferences:** History majors, seniors, and then juniors

**Expected Class Size:** 10-15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

JWST 430 (D2) HIST 430 (D2)

**Writing Skills Notes:** This is an intensive writing seminar for advanced history majors. We focus on how to write a journal-length piece of original historical research, while evaluating the strengths and weaknesses of other scholarly pieces. Students receive feedback on multiple drafts of their final research papers and participate in two workshop seminars in which they provide feedback on the papers of their peers.

**Difference, Power, and Equity Notes:** This course asks how contemporary political and social justice movements can -- or ought to -- address political and economic inequities between the Global South and North, introduces students to how questions of race and national belonging have informed contemporary debates on restorative justice, and exposes the persistence of some global and historically-situated inequities.

Spring 2023

SEM Section: 01 W 1:10 pm - 3:50 pm Charlotte A. Kiechel
Where are Jews in colonial history? Where is colonialism in Jewish history? In many ways, these questions haunt contemporary Jewish and often world politics. Indeed, in the twenty-first century, the relationship between Jews and colonialism has been present in debates about Zionism, the history of capitalism, Jewish-Muslim relations, the wider Middle East, the future of European identity, the aims and roots of American empire, and the intersections of race and religion in colonial domination. And yet, typically, the subject of Jews and colonialism is more polemicized or avoided than probed. This course will seek to address this lacunae by introducing students to new historical scholarship that has begun tracing these questions. Students will consider the ways in which imperial legal forms, economic structures, and cultural and intellectual underpinnings shaped Jewish lives from the British antipodes to French North Africa, and throughout the Russian and Ottoman Empires, as well as in metropolitan Europe. Among other issues, we will ask: How did Jews become defined and define themselves in the colonial venture? In their various roles in colonial empires, are Jews best understood as subjects or agents of empire or are there more fruitful ways to conceptualize their engagement? What was the impact of anti-colonial struggles on modern Jewish politics and historical development? The course will approach this topic thematically rather than as a comprehensive survey. By introducing students to some of the key debates in this emerging field, we will consider what it takes to construct a successful historical argument and how to engage critically with works in an emerging field. A semester-long writing project will expand students capacities to pose thoughtful historical questions; conduct research and gather compelling evidence; read deeply and critically; carefully assess evidence; and write inquiry-based essays.

Requirements/Evaluation: Class participation; brief weekly writing on the readings; a final research paper written in stages, including two "research updates"; an analysis of a source; a research proposal; a rough draft of one paper section; a rough draft of the paper; and a final 25-page paper.

Prerequisites: None; open to all students (however, a background in European history and/or Jewish Studies will be helpful).

Enrollment Limit: 15

Enrollment Preferences: Junior and Senior History Majors and Jewish Studies Concentrators

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

JWST 433 (D2) HIST 433 (D2)

Writing Skills Notes: Before each course, students will submit a 2-3 paragraph critique and a list of 3 questions for discussion. The final assignment will be a research paper (approximately 25 pages) or historiographical essay. Assignments en route to the final deadline, include: 1) two early "research updates" to document process and progress; 2) analysis of a source; 3) research proposal; 4) rough draft of a section; 5) draft of paper; 6) final paper. Only some work will graded, but all will receive feedback.

Difference, Power, and Equity Notes: This course considers the complex ways that religion, ethnicity and national identities shaped the colonial and post-colonial world. Never controlling or collectively representing a European power, Jews were also rarely situated at the bottom of any colonial hierarchy, sometimes occupying more than one social or political role in a single colonial territory. This course provides insight into the many ways hierarchies of power could operate in colonial and post-colonial settings.

present and its implications for humanitarianism. Beginning in the first half of the semester and with greater intensity in the second half of the semester, you will conduct independent archival research on some aspect of the history of the Jewish diaspora using the digitized archives of the American Jewish Joint Distribution Committee that will culminate in a twenty-plus-page paper. In the second half, the seminar will continue to meet weekly as a research colloquium, to provide a forum for you to present your research and drafts in progress and to give feedback on fellow students’ work. In this seminar, we are not merely studying history; you are actually doing history. That is to say, you will be more than students of history in this course: you will become historians in your own right. Over the semester, you will learn how to pose historical questions; to engage critically with readings beyond summarizing them; to synthesize an enormous amount of source material; and to learn how to write more clearly. By the end of the semester, the goal is for each student to produce a polished research paper based on substantial engagement with archival sources and relevant secondary literature that will serve as a capstone to your coursework at Williams or as a potential jumping-off point for future research projects, including a senior thesis in History or Jewish Studies.

Requirements/Evaluation: class participation, several short papers, oral presentations, and a 20-page research paper

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: History majors and Jewish Studies concentrators

Expected Class Size: 10

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
REL 335 (D2) HIST 434 (D2) JWST 434 (D2)

Writing Skills Notes: Students will write two drafts of their research paper before submitting the final paper for a grade. They will receive timely comments on drafts from professor and peers, to be incorporated into their final paper.

HIST 454 (S) Land, Memory, Materiality: Histories and Futures of Indigenous North American Arts (DPE)

Cross-listings: ARTH 561 HIST 454

Secondary Cross-listing

This course engages Indigenous North American traditions of creative expression, remembrance, and representation in historical, contemporary, and future-facing ways. Drawing upon diverse Native American and First Nations theories and practices, it ranges widely across the continent to consider Indigenous arts and material culture within specific cultural, socioeconomic, and political contexts. Part of the course is grounded in the Native Northeast, including the Indigenous homelands of the Stockbridge-Munsee Mohican Community in which the Graduate Art Program and Williams College are situated. Other units will focus on continuities and transformations in artistic and maker-traditions within and across specific Indigenous nations and communities. The course is especially interested in connections between past and present, and the innovative ways Indigenous artists, makers, and knowledge-keepers have reckoned with what has come before, while also mapping meaningful future pathways. Topics will include repatriation and community-led restorative efforts to bring home ancestors and important heritage items "collected" over the centuries following 1492; concepts and practices of cultural, intellectual, visual, and political sovereignty; decolonizing museums; the complex dynamics of collaboration; Indigenous, African-American, and Afro-Indigenous artistic connections and solidarities; and Indigenous challenges to Eurocentric and settler colonial approaches to preservation, interpretation, and classification. Seminar members will develop familiarity with methods and ethics grounded in Native American and Indigenous Studies, and with new scholarship by leading and emerging critics and creators.

Class Format: The course will feature seminar discussions as well as local trips to museums, libraries, and archives with pertinent collections and exhibitions.

Requirements/Evaluation: Engaged participation in discussions; in-class presentations; short writing assignments in preparation for final project; final original research and interpretive project, with presentation to seminar.

Prerequisites: For undergraduates, at least two prior courses in or related to History, Art History, Native American and Indigenous Studies, and/or Museum Studies.

Enrollment Limit: 16

Enrollment Preferences: Priority for Graduate Art students. Four seats are reserved for undergraduates, with preference to junior and senior majors
in Art History and History. Undergraduates should email a brief statement of interest to cd10@williams.edu.

Expected Class Size: 16

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

ARTH 561 (D1) HIST 454 (D2)

Difference, Power, and Equity Notes: The course centers theories, experiences, and expressions from Native American/Indigenous communities, scholars, and artists/makers, while engaging foundational and new work in Native American and Indigenous Studies (NAIS). The course also provides students with critical tools for reckoning with settler colonialism and its historical as well as enduring impacts in Indigenous contexts; and with race, ethnicity, sovereignty, and tribal nationhood as key interpretive frames.

HIST 455  (S)  The Afterlives of Objects: Telling American Histories through Material Culture and Museums  (DPE)

Cross-listings:  HIST 455  AMST 455

Primary Cross-listing

Material culture studies examine relationships between people and objects. Tangible artifacts like furniture, clothing, ceramics, tools, and buildings give insight into communities’ identities, aspirations, and struggles. This course approaches American histories through objects, and considers how interdisciplinary methodologies can reveal alternative understandings of the past. The course traces changing theories and practices of preservation, curation, and display; shifting conceptions of "heritage" among diverse peoples; and ethical challenges posed by Native American and African American items held in museums, particularly in relation to repatriation considerations. The course involves a staged set of class visits to work with collections at the Williams College Archives/Special Collections and Art Museum as well as local/regional repositories and historic sites. While the scope of the course is continental and at times transoceanic, it includes substantial focus on the Northeast/New England and the material assemblages and landscapes that shape western Massachusetts. Students will build familiarity with appropriate techniques for handling objects, cultivate skills for developing and carrying out an original research project, and explore diverse modes of analysis and expression for telling the stories of objects and their associated communities.

Requirements/Evaluation: active participation in class discussion and museum visits, in-class presentation about one week’s readings, research project prospectus, research project

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: junior and senior History and American Studies majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

HIST 455 (D2) AMST 455 (D2)

Difference, Power, and Equity Notes: This course examines diverse historical experiences of North American peoples, including Native Americans and African Americans, in conjunction with responses to Euro-American settler colonialism. It introduces students to foundational methodologies in object studies including decolonizing approaches, and explores key debates about possession, interpretation, and repatriation of objects to descendant communities, such as the Native American Graves Protection and Repatriation Act (NAGPRA).

HIST 457  (S)  Floridas  (DPE) (WS)

Florida, the sunshine state with 1350 miles of coastline was once an outpost of Spain’s 17th century empire. Its history comprises Disney World, the
largest Cuban community outside of Cuba, a haven for enslaved Catholics in the 17th century and for an aging, largely white middle class in the 20th. It is the site of the nation's oldest city, and the home to range of Native peoples. A land of swamps, plantations, cities, islands, strip malls and theme parks is now ground zero in climate change discussions. This "purple state" has decided more than one presidential election. This course will explore the history of the many Floridas. We will move roughly through time as we seek to understand Florida and its place in United States culture. Why do people often think of Florida as "not quite southern" although it borders Georgia and Alabama? When and why did Spain colonize the area? How did they lose it? What is the history of the original inhabitants of Florida and how does that story help us understand it now?

Requirements/Evaluation: class discussion, three short writing assignments and a final research paper of 15-20 pages on a topic that grows out of our reading

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: seniors and History majors

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: Students will be writing three shorter papers throughout the semester. Two of these will be building up towards the final research paper. The third will be more "experimental"... perhaps a piece of historical fiction or eye witness account. The final paper should exceed 15 pages. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: We will consider how Florida has defined itself, and been defined throughout American history largely based on various groups that occupied space with combinations of military, technological and economic power. This class will investigate the histories and dynamics of these various occupations and settlements, paying close attention the conflicts over space in rural and urban areas. Histories of African Americans and Native people will be central to our investigation.

HIST 462 (S) For the Soul of Mankind: The Cold War and American Foreign Relations (WS)
The United States emerged from the Second World War with unprecedented power and influence; for the first time it was poised to take on a level of global leadership that it had long shirked. Yet the U.S. faced an uncertain world, marked by the ascendance of the communist-led Soviet Union as a rival superpower, the impending decolonization of European empires, the emergence of a nuclear arms race, and a host of changes to domestic American life. What ensued was a 45-year Cold War--a battle for the soul of mankind--marked by American officials' relentless determination to combat the threat of communism at home and abroad. This course explores a range of scholarly approaches to that conflict, focusing on high-level diplomacy, hot wars, propaganda, the cultural cold war, and more. In addition to reading and discussing works that exemplify key approaches to studying America's Cold War, students will develop an original research topic and research and write a 20- to 25-page paper, based in primary sources, on a Cold War-related topic of their choosing.

Requirements/Evaluation: evaluation will be based on class participation, several short papers, and a 20- to 25-page research paper

Prerequisites: None

Enrollment Limit: 15

Enrollment Preferences: Advanced history majors

Expected Class Size: 10-20

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will produce a 20-25 page final paper through a series of scaffolded assignments, each of which will receive feedback from the professor as well as a group of peers. Assignments leading up to the final research paper include a 4-6 page historiography paper, a 2-3 page draft introduction, and a completed initial draft.

HIST 470 (S) Latinx Migrations: Stories and Histories (WS)

Cross-listings: HIST 470 LATS 470

Primary Cross-listing

Latinx migration histories are often told with sweeping data and within broad historical contexts. While these are important, the voices of the people leaving their home countries and coming to the United States can be lost or buried. During the 1970s, the emerging subfield of social history asserted the need to craft histories that took into consideration the everyday lives of everyday people. Oral history emerged a key tool in capturing the personal stories too often missed in historical archives. At the same time, Puerto Rican Studies, Chicano Studies, and later, Latinx Studies emerged to tell the histories of groups too often omitted from or misrepresented in the scholarship. These fields relied on traditions of testimonios or storytelling. This course focuses on Latinx oral histories, autobiographies, and other first person narratives to explore how people are impacted by and experience those broad historical contexts, as well as how the decisions they make and the actions they take shape those broad historical contexts. This course examines first person narratives in the context of specific Latinx groups in particular historical, geographical, and social contexts, while interrogating the methodological and interpretive challenges of working with oral histories and other first-person primary sources.

Requirements/Evaluation: class participation and presentations; short writing assignments; proposal, bibliography, and drafts of final paper; final paper of 15 to 20 pages

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: History majors and Latina/o Studies concentrators, seniors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

HIST 470 (D2) LATS 470 (D2)

Writing Skills Notes: This research seminar supports students as they define an appropriate topic, identify and use primary and secondary sources, and complete a 15-20 page final paper. Several short writing assignments focus on interpretations of primary sources and on honing in on scholars’ key arguments in secondary sources. The final paper is written in stages, including a proposal with a bibliography, a draft for workshopping with other students, and a final presentation along a revised draft.

HIST 478 (S) Cold War Landscapes

Cross-listings: AMST 478 ENVI 478 HIST 478

Primary Cross-listing

The Cold War between the United States and the Soviet Union set in motion dramatic changes to the natural and built environments of many nations between 1945 and 1991. Nuclear test and missile launch sites, naval installations, military production operations, and border securitizations are just a few of the most obvious ways in which the stand-off between the two countries altered rural and urban landscapes around the world. But one can also see the Cold War as setting in motion less immediately direct but nonetheless profound changes to the way that many people saw and planned for the environments around them, as evidenced, for instance, by the rise of the American suburb, the reconstruction of postwar Europe, and agricultural and industrial initiatives in nations across the globe. We will begin this seminar by exploring several distinct "Cold War landscapes" in the United States and North America. We will then move on to examining others in Europe and the Soviet Union. Our approach to our topics will be interdisciplinary throughout the semester, with the additional goal of helping students frame their final projects. Students are encouraged to write their research papers on any geographical area of the world that interests them.

Requirements/Evaluation: class participation and semi-weekly critical writing on the reading; students will also be expected to keep up through the stages of the research paper process, which will involve submitting a short research plan, annotated bibliography, outline, and a rough draft, as well as the final 20- to 25-page paper.

Prerequisites: none

Enrollment Limit: 15
Enrollment Preferences: History, ENVI, and AMST majors if over-enrolled

HIST 480  (F) Media and Society in Africa  (DPE)  (WS)

Cross-listings: HIST 480 GBST 480 AFR 381

Primary Cross-listing

The Media have long played important roles in African societies. As early as the second half of the 19th century, African intellectuals were using print technology to address the people. As radio technology was in its infancy during the first half of the twentieth century, Africans were gathering around re-diffusion stations and later around single receivers to listen to news and entertainment programming. In this tutorial, we will examine these histories of media and media technologies on the continent. Ultimately, we will explore the roles that media played in serving particular community needs and how communities also adapted new media technologies to fit local conditions. Media content has historically been determined based on standards beyond viewers’, readers’ and listeners’ control. We will examine the influences that editors and political leaders on the continent have exerted on content as well as what forces they responded to. We will also further explore the media’s role in major events on the continent, from governmental changes to the ending of apartheid in South Africa and the role that media have played in areas of conflict.

Requirements/Evaluation: Students will be evaluated based on a series of 5-7-page tutorial response papers and 2-page critiques, as well as preparedness for and performance in weekly tutorial discussions.

Prerequisites: This course open to all students

Enrollment Limit: 10

Enrollment Preferences: Preference will be given to history majors and students with prior experience with African history. If the course is over-enrolled, students may be asked to complete a questionnaire to determine enrollment

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

HIST 480 GBST 480 AFR 381

Writing Skills Notes: Students will alternate weekly between writing 5-7-page tutorial papers and 2-page critiques of their peers’ writing. Formal writing assignments throughout the semester will total at least 40 pages. Students will receive regular feedback and critiques- both oral and written - from the professor, as well as oral critiques from tutorial partners.

Difference, Power, and Equity Notes: Modern media developed in Africa as means of control and cultivating dutiful colonial subjects. However, media then emerged as sites of contestation and even tools with which colonial subjects challenged colonial rule. They have continued to be revealing sites for issues of gender, race, class, and ethnicity. As such, this course immensely explores diversity, power and equity and how these all-important societal concerns are expressed through the media in Africa.

Fall 2022

TUT Section: T1  TBA  Benjamin Twagira

HIST 481  (F) History of Taiwan  (WS)

Cross-listings: ASIA 481  HIST 481

Primary Cross-listing

Almost all discussions of contemporary Taiwan reference the fierce debate over its sovereignty and international status: is the island of Taiwan an
independent nation, or an "inalienable part" of the much larger and more powerful People's Republic of China? Part of the argument for Taiwan's separate nationhood derives from its claim to a unique history different from that of the P.R.C.. In this tutorial course, we will look closely at the distinctive aspects of Taiwan's history that underlie this claim, including its aboriginal populations, maritime history, experience of Japanese colonialism, settlement by mainland Chinese after World War II, role in the Cold War, and the development of a Taiwanese ethnic and political identity in the postwar period. We will also examine contemporary arguments for Taiwan as part of China. The goal of the course is neither to debate nor resolve the "Taiwan question", but to explore the history and historical arguments that inform it.

Requirements/Evaluation: weekly papers and critiques
Prerequisites: none
Enrollment Limit: 10
Enrollment Preferences: History and Asian Studies majors/concentrators
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option

TUT Section: T1   TBA   Anne Reinhardt

HIST 482  (F) Race and American Foreign Relations  (WS)

From its origins, American society has been suffused with notions of white superiority and racial hierarchies that have underpinned the nation's foreign policy. Ideologies of race factored heavily into the nineteenth century process by which the United States expanded its territorial control across the North American continent and established an empire of its own. Racialized thinking persisted at the heart of U.S. foreign relations in the twentieth century, influencing everything from the administration of empire in the Caribbean and the Pacific and commercial expansion into central America to the decision to use nuclear weapons against Japan, the diplomatic path to war in Vietnam, and more. The defeat of fascism and Nazism in World War II posed serious challenges to the premises of white supremacy, while ushering in a Cold War that would become inextricably bound with the process of decolonization. American diplomats were forced to recon with the challenges domestic racism posed to their foreign policy goals, while black internationalists became increasingly involved with global struggles for liberation and equality. While the global color line grew more hotly contested, white supremacist thinking proved as enduring as it was mutable. This upper division tutorial surveys leading scholarship on a range of topics that centers race as a category for understanding American foreign relations.

Class Format: This tutorial can be take entirely remotely. On campus students may request in-person tutorial sessions, pending the agreement of other students and the availability of appropriate rooms.
Requirements/Evaluation: Students will be evaluated based on a series of 5-7-page tutorial response papers and 2-page critiques, as well as preparedness for and performance in weekly tutorial discussions.
Prerequisites: None, open to all students
Enrollment Limit: 10
Enrollment Preferences: Preference will be given to history majors and students with prior coursework related to U.S. foreign relations. If the course is overenrolled, students may be asked to complete a questionnaire to determine enrollment.
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D2) (WS)

Writing Skills Notes: Students will alternate weekly between writing 5-7-page tutorial papers and 2-page critiques of their peers' writing. Formal writing assignments throughout the semester will total at least 40 pages. Students will receive regular written feedback on their writing from the professor, as well as oral critiques from the professor and tutorial partners.
HIST 483  (S)  Sport and Diplomacy  (DPE) (WS)
Sport has emerged in recent years as a hot topic of study among diplomatic historians. Once considered a marginal topic, sport is now seen as a critical window into the world of international relations. Recent works address not only official state policies pertaining to international sport, but also issues of nationalism, imperialism, racial ideologies, transnational migration, public diplomacy, culture in foreign relations, and the role of sport governing bodies in the international system. In this tutorial, students will read key essays and monographs that contribute to this emerging literature, alongside state-of-the-field essays that explore the methodological and thematic approaches that historians have used to grapple with the complex interactions between countries, peoples, and cultures that occur within the realm of sport.

Class Format: This course will be remote. If conditions allow, I may set up in-person tutorial sessions for on-campus students.

Requirements/Evaluation: Students will write and present orally six essays (5-7 pages each) on assigned readings each week; students not presenting an essay in a given week will produce a 2-3 page written critique

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: History majors and students with some prior course work in foreign relations and/or international history

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)  (DPE) (WS)

Writing Skills Notes: Students will each write six (6) tutorial papers of 5-7 pages and six (6) critiques of 2-3 pages. The professor will provide weekly written feedback on each of these papers, and they will be discussed at length in tutorial sessions.

Difference, Power, and Equity Notes: Modern sport emerged in a colonial context as a means of asserting and maintaining control and has become a key site of contestation over the color line in both domestic and international contexts. International sport competitions like the Olympics and the World Cup have served as proxies for military power and showcases for national cultures in ways that have both revealed and concealed ongoing racial tensions. This course explores diversity, power, and equity in international sport.

Attributes: HIST Group F Electives - U.S. + Canada  HIST Group G Electives - Global History

HIST 484  (F)  Victorian Psychology from the Phrenologists to Freud  (WS)
Although the Victorian era has traditionally been considered a psycho-social model of emotional inhibition and sexual prudery, recent studies, by scholars in various disciplines, have demonstrated that this characterization grossly oversimplifies the attitudes toward emotional and sexual life held by Europeans and Americans in the second half of the nineteenth century. This course will investigate professional and popular ideas about human psychology during the Victorian era. We will attempt to define and understand what people thought and felt about insanity, the unconscious, dreams, sexuality, the relationship between natural impulses and civilized society, child psychology and development, the psychological differences between men and women, the relationship between the physical and the psychical. The course will concentrate on the close reading and analysis of primary documents from the era.

Class Format: Once they have been selected, student pairs will meet with the professor for an hour at a regularly scheduled time each week.

Requirements/Evaluation: Students will meet with the instructor in pairs once a week. Every other week each student will present a paper of approximately 5-7 pages on a topic determined by the instructor, due by 5pm the day before the tutorial meeting. The student not writing the paper will critique the paper written by their tutorial partner. Each student will write six papers and serve as a critic on the six papers of their tutorial partner.

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: Junior and senior History majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Unit Notes: Fulfills the department's seminar requirement for graduation with a degree in History

Distributions: (D2)  (WS)
HIST 485  (S)  Freud: A Tutorial  (WS)

Cross-listings:  PSYC 158  HIST 485

Primary Cross-listing

This tutorial is devoted to the systematic reading of the principal works of Sigmund Freud, one of the deepest, subtlest, and most influential thinkers of the last one-hundred years. Students will read Freud's work more or less chronologically, beginning with his writings on hysteria and concluding with his deeply pessimistic essay, Civilization and its Discontents. In tutorial, we will consider the development of Freud's thought over the course of his professional life: his general psychological writings on the nature and functioning of the human psyche, his clinical writings on psychoanalysis as a form of treatment, and his cultural writings on art and artists, on the origin of human society, on religion, and on the relation of the individual to society and civilization. We will not be considering the relevance of Freud's ideas for purposes that transcend his own psychological agenda in the tutorial. Nor will we be much concerned with assessing whether Freud was "right" or "wrong" or whether his thought has clinical relevance today. Instead, we will seek to understand Freud as much as possible on his terms and not on ours, as a historical figure of originality, complexity and contradiction, whose thought deserves close reading and deep understanding within the context of Freud's thought itself.

Class Format: students will write and present orally six essays of 6-7 pages on assigned reading every other week; students not presenting an essay in a given week will be responsible for critiquing the presented essay

Requirements/Evaluation: student grades will be assigned only at the end of the semester based on their papers, their critiques, and their performance in tutorial discussion

Prerequisites: none

Enrollment Limit:  10

Enrollment Preferences:  juniors and seniors and History majors needing a 400-level seminar or tutorial to fulfill the requirements for a degree in History

Expected Class Size:  10

Grading:  no pass/fail option, no fifth course option

Unit Notes:  fulfills History's 400-level graduation requirement

Distributions:  (D2)  (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 158 (D2)  HIST 485 (D2)

Writing Skills Notes: As a tutorial, this course is by definition writing skills, both in terms of the number of papers that students will produce (six) and in terms of the focus on writing during every tutorial session. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

HIST 486  (F)  Islam in European Culture from Muhammad to Modernity

From the Crusades to modern colonialism, the relationship between Muslims and Western Christians has often been recounted as the clash of two opposing civilizations, a history of warfare and of incompatible values. This tutorial takes a different point of departure, namely the recent scholarly recognition that relationships between Muslims and Western Christians were often rooted in the intimacy of frequent interaction. We will delve into the many ways in which Muslim peoples shaped European culture from the Middle Ages to the present. We will explore different domains, from one of the first translations of the Qur'an into any language, the Latin version done in Toledo in 1143, to the many goods made by Muslim craftsmen that filled the homes of Renaissance Europe, and the roles of early modern Muslims as captives, slaves, diplomats, travelers, and converts. In the modern period, Muslims continued to inflect European culture both as colonial subjects and as domestic minorities, producing and inspiring art, imaginative literature, and critiques of European power. Our investigation will encompass music, visual art and film in addition to written works. How do we make sense of this intricately interwoven history? And what are its legacies for the present? Sources both primary and secondary will include Leo Africanus, Lady Montagu, Montesquieu, Mozart, al-Tahtawi, Flaubert, Sayyid Qutb and Fatima Mernissi.

Requirements/Evaluation: Five tutorial papers (5-7 pages.) and five shorter responses; occasional presentations.
HIST 487 (F) Archive Stories (WS)
What is an archive? What stories are to be found in the archives and what stories do we tell ourselves about the meaning and function of the archive? For many years now, and certainly since the publication of the French theorist Jacques Derrida's essay, Archive Fever, historians, archivists, and cultural theorists have been asking questions about the archive as much as they have been engaged in the actual practice of archiving, or making use of material found in archives. This tutorial considers some of those questions. It is not a hands-on course about how to use an archive, nor a celebration of material found in archives. Rather it consists of a series of broad enquiries into the history of the archive, the politics of collecting, and the political and social function of the archive in various societies. Each week a specific topic will be addressed, collectively illustrative of the breadth of recent enquiries into the logic of the archive. Topics will include, amongst others: the urge to archive in the Renaissance; the nature of the historian's encounter with "the past" in the archive; the function of the archive in the creation of the modern nation state; the power relations embodied in the colonial archive; the construction of contemporary group identities through the practices of archiving; the recent desire to archive everything, not merely the written document; and the new archives of cyberspace.

Requirements/Evaluation:
each student will write five 6- to 7-page essays, prepare five critiques of their tutorial partner's work, and write a final paper about their work on the Williams archives

Prerequisites:
open to all junior and senior History majors and others with permission of instructor

Enrollment Limit: 10

Enrollment Preferences: History majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Not offered current academic year

HIST 488 (F) Sites of Memory and American Wars (WS)
This tutorial will examine the ways that U.S. military ventures have been memorialized through a variety of physical sites, including landscapes, monuments and statues, museums, and other depictions. Given the enormous national conversation and reconsideration of many of these sites over the last decade, we will ask such questions as: How and why has the memorialization of U.S. wars changed since the country's founding? Who determines what is preserved and what stories are told? What is the relationship between individual experiences, collective memories, and national narratives? What do "sites of memory" tell us about society's views of wars and soldiers and about the United States? Throughout, we will pay attention to how these sites reflect historical understandings of the time and have also served as focal points of social and political protests.

Class Format: Students will be assigned a tutorial partner, and tutorial pairs will meet with the professor for one hour each week at a regularly scheduled meeting time.

Requirements/Evaluation: This course follows a typical tutorial format; every other week, students will write and present orally a 5- to 7-page essay
on the assigned readings; on alternate weeks, students will write a 2-page critique. During two of the weeks of the semester (around the middle of the semester and at the end), all students will write papers that explore a common question or theme.

**Prerequisites:** None

**Enrollment Limit:** 10

**Enrollment Preferences:** History majors and students with previous coursework in History.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** At the start of the semester, students will outline what their writing goals are for the semester, and they will receive weekly feedback on their writing from the professor and from their tutorial partner. The final writing assignment will afford students the chance to reflect on their previous papers and the semester's course content.

**HIST 489 (F) Appropriating History. Who Owns the Past?** (DPE) (WS)

**Cross-listings:** HIST 489  ARAB 408

**Primary Cross-listing**

Who owns the past? How have modern states appropriated history? The political use of history is a critical ingredient in any nationalist discourse. In such narratives, the selective utilization of archaeology and ancient history often serves important functions in articulating a conscious and deliberate national history. Thus, in nationalist renderings, archaeological sites and artifacts are not merely relics of the past; they can also be potent and conspicuous symbols of national identity for the modern nation-state. In the Middle East, with its rich archaeological heritage, the relationship among politics, nationalism, and archeology has been particularly strong and interesting. This tutorial addresses the powerful nexus between history and nationalism with a special emphasis on the Middle East. It will explore the battle over who controls history and the "stuff" of history such as antiquities, land, heritage sites, and museum exhibitions and how that control has expressed itself in several Middle Eastern countries, including Iraq, Israel, Turkey, Egypt, Lebanon, and Iran. Furthermore, it will discuss how archaeology entered the political discourse, the ethics of repatriation and appropriation, and archaeology's role in contested terrains and political disputes.

**Class Format:** This tutorial can be taken entirely Remote. On campus students may request in-person tutorial sessions, pending the agreement of other students and the availability of appropriate rooms.

**Requirements/Evaluation:** Format: tutorial. Requirements: 5-7 page essays or 2-3 response papers due each week

**Prerequisites:** None, though a demonstrated interest in the Middle East is important.

**Enrollment Limit:** 10

**Enrollment Preferences:** Seniors and to History and Arabic Studies majors.

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

HIST 489 (D2) ARAB 408 (D2)

**Writing Skills Notes:** As a tutorial, students will receive extensive feedback on their writing each week both from the professor and their partner. Further, students will be given the opportunity to rewrite two of their papers in light of the criticism that they receive during the semester.

**Difference, Power, and Equity Notes:** This is a tutorial on a particular form of power, namely how the powerful seek to control the past. The ultimate question that this tutorial seeks to answer is: who owns the past? Which history is emphasized and which histories are overlooked? How do modern nation states in different Middle Eastern states cherry-pick the past in order to maintain and develop a national narrative that is suitable to the political and economic powers often at the expense of religious or linguistic minorities.

HIST 490  (S) Memory, History, and the Extermination of the Jews of Europe  (WS)
Cross-listings:  HIST 490  JWST 490

Primary Cross-listing

This course is about the postwar legacy of the Holocaust. Nazi Germany's extermination of European Jews has become a moral and cultural
touchstone for people in Europe and in many other parts of the world. This tutorial explores a series of topics from the immediate aftermath of the
Second World War to the present. Engaging with a wide-range of sources, we will wrestle with historical, legal, moral, political, and cultural issues and
debates that have emerged out of the confrontation with the extermination of the Jews of Europe. They include: Why was the Holocaust
"unprecedented" and "unimaginable"? Is it a Jewish story or universal story? Does the Holocaust raise different issues than other historical events for
the historian? How should the Holocaust be represented in words and images, and what are the implications of different means of representing it? Has
Germany faced up to its past? Were Germans also victims of World War II? Who were the "bystanders" as compared to the "perpetrators"? Were the
postwar trials of perpetrators a travesty of justice? What "lessons" have we learned and should we learn from the Holocaust? By the end of the course, the
students will have grappled with the ongoing controversies that have arisen among scholars, artists, governments, and lay people about the meaning
of the Holocaust for the postwar world. In a world in which extraordinary acts of violence continue to be perpetrated and many nations' pasts are
marked by episodes of extreme criminality and/or trauma, exploring the manner by which one such episode has been remembered, avenged, and
adjudicated has relevance for considering other societies' efforts to confront their own traumatic pasts.

Class Format: tutorial; class time consists of weekly one-hour sessions with the instructor and a fellow student

Requirements/Evaluation: Every other week the student will write and present orally a 5- to 7-page paper on the assigned readings of that week; on
alternate weeks, the student will write a 2-page critique of the fellow student's paper; a final written paper on the issues raised in the tutorial to cap off
the semester's work.

HIST 491  (S) The Suburbs

Cross-listings:  AMST 490  HIST 491  ENVI 491

Primary Cross-listing

The suburbs transformed the United States. At the broadest level, they profoundly altered spatial residential geography (especially in terms of race),
consumer expectations and behavior, governmental policies, cultural norms and assumptions, societal connections, and Americans' relationship to
nature. More specifically, the different waves of post-World War II suburban development have both reflected large-scale shifts in how power and
money have operated in the American political economy; and set in motion deep-seated changes in electoral politics, in Americans' understandings of
how their income should be used, and in how the built landscape should be re-imagined. This tutorial will explore the rich historical literature that has
emerged over the last twenty years to provide students with a history of the suburbs, to see the suburbs as more than simply collections of houses that
drew individual homeowners who wanted to leave urban areas. We will focus most of our attention on the period from 1945 through the 1980s. Some
of the questions we will consider will include: how did the first wave of suburban development bring together postwar racial and Cold War ideologies?
Is it possible, as one historian has argued, that suburbs actually created the environmental movement of the 1960s? And how have historians
understood the role that suburbs played in America's conservative political turn, leading to the election of Ronald Reagan?

Class Format: Students will be assigned a tutorial partner, and tutorial pairs will meet with the professor for one hour each week at a regularly
scheduled meeting time.
**Requirements/Evaluation:** typical tutorial format; every other week, students will write and present orally a 5- to 7-page essay on the assigned readings; on alternate weeks, students will write a 2-page critique. During two of the weeks of the semester (around the middle of the semester and at the end), all students will write papers that explore a common question or theme.

**HIST 492 (S) Making Race in Early Modern Europe** (DPE)

In modern scholarship, racism has most often been portrayed as a child of the European Enlightenment, a set of ideas about embodied human difference and its heritability that arose after the abandonment of the Biblical account of human creation and the rise of a new natural science. This tutorial asks: what racial ideas and practices preceded the Enlightenment? Beginning in the late Middle Ages, Europeans participated in enormous economic and cultural transformations, including increased global mobility and the establishment of new, transoceanic empires. Intensified interactions with people in the Americas, Africa, and Asia shaped European understandings of human difference, as did the burgeoning Atlantic economy and its cruelties. In this tutorial, we will place the emergence of modern racism in a long-term perspective, reconstructing the deep history out of which Enlightenment racial theory emerged. Proceeding both chronologically and thematically, we will consider how the major global transformations of the sixteenth through eighteenth centuries shaped European racial understandings with enduring consequence. In the process, we will develop a conceptual vocabulary to describe in a historically sensitive manner how embodied human difference has been interpreted differently across space and time. Throughout, we will read a variety of historical primary sources in conjunction with recent scholarship. Ultimately, our historical study will afford a comparative perspective on contemporary views of races and racism.

**Requirements/Evaluation:** Attendance and active participation; weekly tutorial papers (5 "long" papers and 5 responses).

**Prerequisites:** 200- or 300-level History classes

**Enrollment Limit:** 10

**Enrollment Preferences:** Junior and seniors; History majors.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** The aim of the tutorial is threefold: (i) to introduce students to the comparative study of race across time and place, in order to help them contextualize and historicize the racial dispensation of the contemporary US; (ii) to treat the history of race not just as a history of ideas and theories, but of practices of race- and knowledge-making; (iii) to advance our understanding of the past through a dialectical process of empirical research and theoretical interpretation.

**HIST 493 (F) Senior Thesis: Research Seminar**

This seminar is intended solely for writers of senior theses during their first semester. Although each student's major work for the year will be the writing of a thesis in consultation with an individual advisor, students are also required to meet in the context of the thesis seminar in order to present and critique each other's proposals and drafts and to discuss common problems in the research and design of a long analytical essay. For students
proceeding to HIST 494, performance in the fall semester will be factored into the thesis grade calculated at the end of the year. The quality of a student's performance in the seminar segment of History 493, as well as their performance in all aspects of the May colloquium at which theses are presented and critiqued, figure in the overall grade the student earns for History 493-494 and the departmental decision to award Honors or Highest Honors at Commencement.

Requirements/Evaluation: class participation and completed written work, and will determine if a student will continue in the thesis program

Prerequisites: limited to seniors accepted into the History Department's Thesis Program

Enrollment Limit: none

Enrollment Preferences: limited to seniors accepted into the History Department's Thesis Program

Expected Class Size: 10-15

HIST 495 (S) The Medieval World System: Globalization before 1500 (WS)
In recent years, scholars have turned increasing attention to global history in the pre-modern period. This tutorial takes as its focus the global Middle Ages: roughly speaking, the period between 500 and 1500 CE. This was a period that saw mass-produced consumer goods cross from China to India, East Africa, and the Middle East, inspiring admiration and imitation in multiple different markets. It saw games, music, and forms of literature become popular across continents, and saw religious communities forge networks spanning thousands of kilometers. To study the global Middle Ages is to place exchange and networks, both commercial and cultural, at the heart of our analysis. We will read and analyze many accounts by medieval travelers, merchants, and pilgrims who crossed Afro-Eurasia, alongside works by modern historians and archaeologists who have pieced together the patterns of movement and exchange that tied together the diverse societies of pre-modern Afro-Eurasia.

Requirements/Evaluation: Students will meet in pairs with the instructor once a week. Every other week each student will present a paper of approximately 5-7 pages on a topic determined by the instructor, due by 5pm the day before the tutorial meeting. The student not writing the paper will critique the paper written by their tutorial partner. Each student will write six papers and serve as a critic on the six papers of their tutorial partner.

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: Junior and senior History majors

Expected Class Size: 10
Grading: no pass/fail option, no fifth course option

HIST 496  (F)  Gandhi: History, Ideas and Legacy  (WS)

Cross-listings: REL 412  LEAD 412  ASIA 412  GBST 412  ASST 412  LEAD 322  HIST 496

Primary Cross-listing

This course studies the life, work, and ideas of M.K. Gandhi (1869-1948), one of the most influential thinkers of the non-western world. Gandhi is well known today for his philosophy of non-violent resistance and its application in India’s freedom struggle as well as his influence on the work of leaders like Martin Luther King and Nelson Mandela. Hailed as the 'father of the Indian nation', however, Gandhi is not only known for his political ideas but also for his deep engagement with aspect of everyday human behavior and morality: truth, vegetarianism, sex and celibacy, to name just a few of his obsessions which contributed to making his broader philosophy. It is this commitment to a morally pure life that earned him the title of 'Mahatma' or Great Soul in India. This tutorial will focus on three key aspects of Gandhi: his ideas of peaceful protest as means of social and political change, his contemplations on moral philosophy, and on his legacy in modern India and the world. Students will read a combination of Gandhi’s own writings as well as journal articles, monographs and films. The course will probe questions such as: What was the context and nature of Gandhian nationalism? Did it help to integrate the Indian nation? Was Gandhi truly a Great Soul, a saint or a shrewd politician? In what ways is Gandhi received and remembered by the Indian nation today? How does understanding a figure like Gandhi facilitate our understanding of modern nationalism, citizenship and political action?

Class Format: REMOTE. This tutorial will be taught remotely but will otherwise follow the usual tutorial format of weekly hour-long meetings, pairing students who will alternatively write papers and critiques each week.

Requirements/Evaluation: 5-7-page essays or 2-page critique due each week and a final report (3-4 pages) at the end of the semester.

Prerequisites: None, except students who have taken HIST488T will not be permitted to take this class.

Enrollment Limit: 10

Enrollment Preferences: Senior history majors and students who have previously taken HIST221. Students who have previously taken HIST488T will not be permitted to take this class.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option
Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

INTERDISCIPLINARY STUDIES (No Div)

This program is designed to facilitate and promote innovations in curricular offerings in relation both to interdisciplinary conceptual focus and experimental pedagogical form. It provides support for faculty efforts to develop a curriculum that creatively responds to intellectual needs and modes of teaching/learning that currently fall outside the conventional pattern. Faculty members interested in offering courses that fall outside the aegis of departmental or existing interdisciplinary programs submit such courses directly to the Committee on Educational Affairs by the Registrar’s deadline for course submission in early spring. Courses that fit within the curricula of departments and interdisciplinary programs, even if interdisciplinary or experimental in nature, are found listed within those departments and programs.

**INTR 219** (F) **Women and Girls in (Inter)National Politics** (DPE)

**Writing Skills Notes:** Three thesis papers at five pages each (each receiving critical feedback from professor); one thesis paper revision with critical feedback from professor and peers, including one letter of revision explaining the student's revision process; one keyword glossary where students develop rigorous definitions of course key terms; one roundtable discussion based on the final paper.

**Difference, Power, and Equity Notes:** This course focuses on anti-colonial struggles against European powers. Research will include the concept of "internal colonies" in the US.

*Not offered current academic year*

**INTR 343 (S) Representations of Racial-Sexual Violence from Enslavement to Emancipation**

**Cross-listings:** INTR 343  AFR 343  AMST 343  WGSS 343

**Primary Cross-listing**

This tutorial examines representations of and resistance to racial-sexual violence in American society, from colonial America to contemporary US culture. Interdisciplinary texts cover history, politics, literature, film, feminist studies, American studies, lgbtq and ethnic/black studies. Books include *Southern Horrors; Intimate Matters; Scenes of Subjection; Trauma and Recovery; The Delectable Negro; At the Dark End of the Street;* films include *Birth of a Nation; Bush Mama; To Kill a Mockingbird.* The primary focus is on racial and sexual vulnerability to violence and mobilization for freedom from the 18th-21st centuries.

**Class Format:** students provide primary and response papers and discuss their analyses and theories of social and interpersonal violence

**Requirements/Evaluation:** weekly primary and response papers

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** preference given to juniors and seniors

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

INTR 343 (D2) AFR 343 (D2) AMST 343 (D2) WGSS 343 (D2)

**Attributes:** AMST Critical and Cultural Theory Electives  JLST Interdepartmental Electives  WGSS Racial Sexual + Cultural Diversity Courses

*Not offered current academic year*

**Cross-listings:** AFR 372  AMST 400  GBST 400  INTR 400  PSCI 379

**Primary Cross-listing**

This seminar focuses on the entwined histories of liberation movements against racism, enslavement, and imperialism in the US, Cuba and Africa. Readings include: Hugh Thomas, *Cuba: A History; Che Guevara: The Motorcycle Diaries; Walter Rodney, How Europe Underdeveloped Africa; Laird Bergad, The Comparative Histories of Slavery in Brazil, Cuba, and the United States; Thomas Sankara, Women's Liberation and the African Freedom Struggle; Nelson Mandela and Fidel Castro, How Far We Slaves Have Come!* Students will read and analyze texts, screen documentaries, collectively compile a comprehensive bibliography, and present group analyses. The seminar is open to all students; however, priority is given to seniors majoring in American Studies.

**Requirements/Evaluation:** Reading and analysis of texts, collective compilation of a comprehensive bibliography, presentation of group analyses; two brief papers due at midterm and the end of the semester

**Prerequisites:** None

**Enrollment Limit:** 12

**Enrollment Preferences:** Seniors majoring in American Studies

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
Difference, Power, and Equity Notes: This course addresses international, anti-colonial solidarity between Blacks in the US, Cuba, Africa. It tracks the evolution of "racial capitalism," noting intersections between enslavers in the US and Cuba, and accumulation of wealth through the Atlantic slave trade. Students will analyze the powers of the enslaved, tracing history, political economies, culture, violence, and dispossession, to emphasize resistance to human bondage and successful and compromised revolutions in Cuba and the US.

Attributes: AMST 400-level Senior Seminars
The study of Italian in the target language encourages students to gain a deep appreciation of the language, culture and literature through active participation and meaningful experience with the culture on its own terms. Italian courses at Williams are therefore conducted exclusively in Italian in order to enhance and reinforce the emotive and cognitive involvement of the students as they are introduced to the Italian world-view in a lively and natural manner. Students desirous of more contact with Italian are encouraged to attend the weekly Italian Table in the designated college dining hall. More information can be found at cfllc.williams.edu/italian.

**RLIT 101  (F)  Elementary Italian**

This course is designed for beginners. Its goal is to give students the opportunity to develop a basic oral/aural and reading/writing proficiency in Italian. During the semester, you will be given training in grammar, pronunciation, aural-oral skills, reading, and writing in Italian by studying a wide range of communication patterns and real-life situations. At the end of the semester, you will be able to use Italian to talk about yourself, describe your family, town, friends, and discuss your interests. You will also be able to talk in Italian about the present and past events and converse with your peers about your daily activities. Your listening skills will allow you to understand short dialogues and conversations, watch clips from mainstream Italian films, and write short compositions. **Conducted entirely in Italian.** The course is taught in person.

**Class Format:** five hours a week with the professor

**Requirements/Evaluation:** participation, homework, compositions, quizzes, an oral exam, oral presentation, midterm and final exams

**Prerequisites:** none; not open to those who have had one year or more of high school Italian

**Enrollment Limit:** 20

**Enrollment Preferences:** instructor will prioritize on the basis of study abroad plans and year at Williams

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** students registered for RLIT 101-102 are required to attend and pass the sustaining program during Winter Study; credit granted only if both semesters (RLIT 101 and 102) are taken

**Distributions:** (D1)

**Fall 2022**

**SEM Section:** 01    M-F 9:00 am - 9:50 am    Michele Monserrati

**RLIT 102  (S)  Elementary Italian**

This course is designed for beginners who already have some basic knowledge of Italian. Its goal is to give students the opportunity to review and expand their oral/aural and reading/writing proficiency in Italian. During the semester, you will continue to learn grammar, vocabulary, pronunciation while improving your aural-oral skills, reading, and writing in Italian. The instructor will present you with a wide range of communication patterns and real-life situations to achieve these goals. At the end of the semester, you will be able to use Italian to talk about yourself, your life, describe your town and history, dreams and interests, and express your opinion on complex topics. You will also be able to talk in Italian about the present, past, and future events and express doubts and hopes. You will understand more complex conversations and clips from mainstream Italian films and write more extended compositions. **Conducted entirely in Italian.**

**Class Format:** Students will meet four times a week with me and once a week with the TA in small groups of 2-3 students.

**Requirements/Evaluation:** participation, homework, compositions, quizzes, an oral exam, oral presentation, midterm and final exams

**Prerequisites:** RLIT 101; not open to those who have had one year or more of high school Italian

**Enrollment Limit:** 20

**Enrollment Preferences:** instructor will prioritize on the basis of study abroad plans and year at Williams
Expected Class Size: 20
Grading: no pass/fail option, no fifth course option

Unit Notes: students registered for RLIT 101-102 are required to attend and pass the sustaining program during the winter study period; credit granted only if both semesters (RLIT 101 and 102) are taken

Distributions: (D1)

Spring 2023
SEM Section: 01 M-F 10:00 am - 10:50 am Michele Monserrati

RLIT 105 (F) Pathway to Proficiency
The course taught in Italian aims primarily to fine-tune the student's speaking, reading, and writing ability while introducing the formal study of Italian culture and society by analyzing short literary texts, articles, films, and plays. This course will also explore Italy's lesser-known cultural and natural sites in an attempt to highlight what Italy has to offer in terms of eco-friendly and sustainable tourism and cultural diversity. In the wake of Black Lives Matter's quest for social justice, a part of this course will be dedicated to Italian black writers and artists to explore how the Italian colonial past affects Italy's racial discourse and the construction of its national identity. Students will review and expand the previous semesters' grammar structures to achieve a higher level of fluency and sophistication in language production. Italian 105 is intended for study-abroad returnees and other advanced speakers; students who have been particularly successful in Italian 101-102 are also encouraged to enroll. The course is taught in person.

Requirements/Evaluation: oral presentations, midterm and final exams, tests, compositions, participation
Prerequisites: RLIT 101/102 or by permission of the instructor
Enrollment Limit: 15
Enrollment Preferences: Students from 101/102 classes, as well as study-abroad returnees.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

Fall 2022
SEM Section: 01 MWF 10:00 am - 10:50 am Michele Monserrati

Winter Study ---------------------------------------------------------------

RLIT 88 (W) Italian Sustaining Program
Students registered for RLIT 101-102 are required to attend and pass the Italian Sustaining Program. However, students are also required to register for a regular Winter Study course. Once the regular Winter Study registration process is complete, the Registrar's Office will automatically enroll you in the Sustaining Program, check your class schedule to confirm enrollment.

Grading: pass/fail option only
Not offered current academic year

RLIT 99 (W) Independent Study: Italian
Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

Class Format: independent study
Grading: pass/fail only
Not offered current academic year
Department Mission Statement and Curricular Goal

The mission of the Department of Asian Languages, Literatures, and Cultures is to produce “global citizens” who will be able to make contributions in different sectors of society in a globalized and diverse world with multilingual abilities, intercultural communicative competence, and multicultural leadership skills. Graduates of our department will not only achieve proficiency in at least one Asian language but also become competent in intercultural communication. They will develop interpretive and analytical skills using both primary texts and secondary sources and become familiar with the textual and cultural traditions in Asia.

The department offers three distinct major tracks: Chinese, Japanese, and East Asian Languages & Cultures. Each major requires a minimum of ten courses. Up to four study-away credits can be counted toward a major.

Learning Objectives for the Chinese Major

Students who complete the requirements for a major in Chinese will be able to:

- Attain the Advanced level in speaking, listening and reading, and Intermediate High level in writing based on the ACTFL proficiency guidelines.
- Read and analyze basic texts written in Classical Chinese.
- Gain intercultural communicative skills to competently navigate a wide range of social and cultural contexts in Chinese-speaking environments.
- Critically read and analyze a variety of Chinese-language primary sources for academic and professional purposes.
- Engage critically with important aspects of the historical and cultural developments and trends in China’s diverse and complex past and present.
- Acquire the skills to enable them to continue their engagement with the target language and culture as lifelong learners and users of Chinese.

The Major

In order to develop proficiency and intercultural communicative skills in the language, students are required to complete at least eight Mandarin Chinese language courses (CHIN 101, 102, 201, 202, 301, 302, 401, 402) and at least one course in Classical Chinese (CHIN 312). To gain a deeper understanding of Chinese cultural traditions, students should take at least one Chinese core elective in Chinese literary, linguistic, or cultural studies (taught either in English or in Chinese) with prefixes and primary cross-listings in CHIN.

Students placed out of lower-level language courses can take additional approved electives to replace the language course requirement. Electives include core language courses, core electives, and ASIA courses in the program of Asian Studies.

Learning Objectives for the Japanese Major

Students who complete the requirements for a major in Japanese will be able to:

- Demonstrate linguistic competency/proficiency in comprehending, speaking, reading, and writing in Japanese at the ACTFL Intermediate High to Advanced levels.
- Critically read and analyze a variety of Japanese primary sources for academic and professional purposes.
- Critically engage with Japanese culture, past and present, recognizing its diversity and vibrancy.
- Navigate a wide range of social and cultural contexts by communicating effectively and appropriately with people of other cultures in their local and global communities.
• Continue their engagement with Japanese language and culture as lifelong learners and users of Japanese.

THE MAJOR

In order to develop proficiency and intercultural communicative skills in the language, students are required to complete at least eight Japanese language courses (JAPN 101, 102, 201, 202, 301, 302, 401, 402), at least one Japanese core elective in Japanese literary, linguistic, or cultural studies (taught either in English or in Japanese) with prefixes and primary cross-listings in JAPN, and one approved elective related to Japanese language and culture (including additional JAPN core electives, additional Asian language courses, or Japanese studies courses offered in art, comparative literature, history, music, political science, religion, etc.).

Students placed out of lower-level language courses can take additional approved electives to replace the language course requirement. Electives include core language courses, core electives, and ASIA courses in the program of Asian Studies.

Learning Objectives for the East Asian Languages and Cultures Major

Students who complete the requirements for a major in East Asian Languages and Cultures will be able to:

• Attain a minimum of Intermediate High level in speaking, listening and reading of either Chinese or Japanese, and Intermediate Low level in writing in the language based on the ACTFL proficiency guidelines.

• Acquire research, problem-solving, and critical thinking skills by engaging in linguistic or literary analysis in the field of Chinese studies or Japanese studies.

• Obtain basic intercultural communicative skills to navigate some social and cultural contexts in Chinese- or Japanese-speaking environments.

• Continue their engagement with an Asian language and culture as lifelong learners and users of the target language.

• Students who choose the dual-language option will attain the Advanced level in speaking, listening, and reading in either Chinese or Japanese, and the intermediate level in a second Asian language based on the ACTFL proficiency guidelines.

THE MAJOR

East Asian Languages and Cultures (EALC) major: In order to develop proficiency and intercultural communicative skills in the language, students are required to complete at least six language courses (or attain a minimum proficiency equivalent to the completion of 302) in one East Asian language offered by the department (currently Chinese Mandarin and Japanese). To gain a deeper understanding of the Chinese or Japanese cultural traditions and to develop research skills in the Chinese or Japanese fields, they should take at least two Chinese/Japanese core electives in literary, linguistic, or cultural studies in their primary focus of study with prefixes and primary cross-listings in CHIN/JAPN, and two approved electives related to Chinese/Japanese language and culture (including additional CHIN/JAPN core electives, additional Asian language courses, or Chinese/Japanese studies courses offered in art, comparative literature, history, music, political science, religion, etc.).

Students placed out of lower-level language courses can take additional approved electives to replace the language course requirement. Electives include core language courses, core electives, and ASIA courses in the program of Asian Studies.

This major offers students who are able to complete the 402 level in either Chinese or Japanese by the end of their sophomore year a dual-language option which will allow them to learn a second Asian language and reach the Intermediate level in speaking that language by the time of graduation. Please consult with the chair or language coordinator for more information about this option.

LANGUAGE PLACEMENT

Students who have studied or otherwise developed some familiarity with Chinese or Japanese language before coming to Williams and who wish to continue their language study at the college should complete a placement evaluation before pre-registering for a language course. More information about the Chinese placement evaluation can be found at https://chinese.williams.edu/faq/. Students who wish to take the Japanese placement test should contact the Japanese faculty.

THE DEGREE WITH HONORS

The department offers students the option of pursuing a degree with Honors in Chinese, Japanese, or East Asian Languages and Cultures through writing an honors thesis. Honors theses allow students a unique opportunity to undertake an examination of topics and texts with a greater depth than regular courses allow. The great majority of students who undertake the challenge of writing an honors thesis find it to be one of their most rewarding academic experiences at Williams.

Students interested in pursuing a degree with Honors should begin thinking about their thesis topic and materials as early as possible. This is particularly true for students who need to gather materials or conduct research abroad, as this will typically take place during their junior year or the summer between their junior and senior years. It is the responsibility of the student to approach faculty members to inquire about their willingness to serve as a thesis advisor. Ideally, students should have previously taken a course with that faculty member in an area related to the subject matter of the thesis. Faculty members will usually only advise a single thesis per year, and never more than two, with students who first approach the faculty member about serving as advisor being given priority. It is recommended that students approach the faculty members with whom they are interested in
working for their thesis by the end of the fall semester of their junior year.

Students must submit a proposal to the department chair and their intended advisor before they pre-register for senior year courses in the spring of their junior year. The proposal should include a statement of the topic, a general description of the types of materials available for study and how the study will be carried out, and the name of the faculty member who will serve as advisor. If the department approves the thesis proposal, the student should enroll in CHIN 493-W31-494, or JAPN 493-W31-494, depending on their major track. Please note that admission to the honors thesis program will normally be limited to students with a consistent record of honors-level work, as indicated by at least a B+ average in their courses for the major.

Students will typically meet with their advisor once a week at a set time other than office hours. The advisor will present the student with a set of deadlines for different stages in the thesis, ranging from a bibliography to the final draft. While these deadlines will vary for different advisors and theses, two deadlines will apply to all theses, whether analytic or translation. 1) Students must submit a finished first chapter or substantial section of polished translation by the last day of the first semester reading period. If the student misses this deadline, he or she will not be allowed to continue the thesis. 2) The finished thesis is due to the advisor by 4:00 pm on the Monday two weeks after the last day of Spring Recess. The student should submit three copies of the thesis at this time. There will be no extensions.

The department will assign two readers, separate from the advisor, to each thesis. The readers will give a written assessment of the thesis that will be an important factor in the final determination of the student’s grades for the thesis and what honors designation, if any, will be given. These written comments will be shared with the student. Within two weeks after submission, the department will schedule an oral defense. This will be a one to one-and-a-half hour session in which the student will give a public presentation of his or her thesis to members of the department and invited guests followed by a question and answer period. A final, corrected copy of the thesis must be submitted to the Technical Services Department of Sawyer Library by 4:00 P.M. on the last day of the final examination period.

In order to qualify for Honors, the department must agree that the student has earned two semester grades of B+ or higher, based on his or her thesis and oral defense. Students whose thesis and defense are deemed by the department to be of exceptional merit will be awarded Highest Honors. A letter from the department chair will inform students of these decisions.

COVID-19 CHANGES
Due to the pandemic, the department has reduced the number of courses required for its majors for the graduating classes of ’22, and ’23. For these years, the minimum requirements are nine courses as follows:

Chinese major: CHIN 101, 102, 201, 202, 301, 302, 401, 402, 312.
Japanese major: JAPN 101, 102, 202, 202, 301, 302, 401, 402, one approved elective.
East Asian Languages and Cultures major: at least six CHIN/JAPN language courses (or a minimum proficiency equivalent to the completion of 302), two CHIN/JAPN core electives, and one approved elective.

Students with higher language proficiency who are placed out of any of the core language courses (101 through 402) can take an equal number of faculty-approved electives taught either in Chinese/Japanese or in English on literature, linguistics, culture studies or related Chinese or Japanese studies disciplines (e.g., art history, history, political science) to fulfill the core language requirement.

Students who plan to study abroad either during the summer or during their junior year MUST consult with department faculty for advice.

STUDY ABROAD
Students intending to major in the department are strongly encouraged to study in Asia at some point during their time at Williams—for a summer or for a semester or full year. Study-abroad in an immersive environment in the target culture is an indispensable step toward advanced proficiency in a second language. Prospective majors or language students who are planning to study abroad must attend the fall semester study-abroad information sessions organized by the department or discuss their plans with department faculty as far in advance as possible. The department administers the Linen Grants for Summer Study in Asia which fund selected students’ summer intensive language study or research projects. Up to four study-abroad courses may be transferred and counted toward graduation and toward the majors offered in the department. Students MUST contact the department faculty BEFORE assuming study-away credit will be granted toward the major in the department. Upon return, students should ask their study-away program to send their transcript to the Registrar’s office so that the appropriate number of credits can be transferred and granted by the department chair.

DEPARTMENT EMAIL LISTS
To be informed about the events, activities and funding opportunities in the department, please use your Williams login to sign up for one or more of the following GLOW special interest email lists.

“DALLC Majors and Faculty” (open to all current and prospective Chinese, Japanese, or East Asian Languages and Cultures majors):

JAPN 101 (F)  Elementary Japanese
An introduction to modern spoken and written Japanese, the course aims to instill proficiency in Japanese by developing four necessary skills of speaking, listening, reading, and writing to successfully interact with native speakers. The relationship between language and culture and the sociolinguistically appropriate use of language will be stressed throughout. Audio, video and computer--assisted learning materials will be used extensively. Classes consist of a combination of "act" classes, conducted exclusively in Japanese, where students use the language in various types of drills and communicative activities, and "fact" classes, conducted in Japanese and English, where students learn about the language and culture.

Class Format: fact classes, three hours per week; act classes three hours per week
Requirements/Evaluation: daily classroom performance, homework, quizzes, a midterm, and a final exam
Prerequisites: none
Enrollment Limit: 20
Enrollment Preferences: current or prospective majors in the Department of Asian Languages, Literatures, and Cultures
Expected Class Size: 15
Grading: no pass/fail option, yes fifth course option
Unit Notes: students registered for JAPN 101-102 are required to attend and pass the sustaining program during the Winter Study period; credit granted only if both semesters (JAPN 101 and 102) are taken
Distributions: (D1)

Fall 2022

Spring 2023
JAPN 131 (F) Introduction to Japanese Linguistics: Past, Present and Future of Japanese Language

Cross-listings: ASIA 131 JAPN 131

Primary Cross-listing

This course is to understand of how and why the Japanese language has developed to its present form and usage. We will first learn basic concepts and methodologies of linguistics, such as how to formally analyze the patterns of speech sounds (phonetics and phonology), word formation (morphology), sentence structures (syntax), and meaning (semantics and pragmatics). Then, based on sociolinguistics, linguistic typology, anthropological and cognitive linguistics frameworks, we will investigate variations and usages of the Japanese language. Topics will include polite language and honorifics, gender and women’s language, onomatopoeia, linguistic landscape, Japanese dialects, language conflicts, language rights (Okinawans, Ainu, and Koreans in Japan), and multilingualism. The course format combines lectures, seminars, and student-facilitated discussions. There will be small quizzes, homework assignments, a final research paper, and a poster presentation of the final project. Although there is no prerequisite, intermediate Japanese proficiency or equivalent is beneficial when analyzing primary data.

Class Format: combination of lecture and discussion

Requirements/Evaluation: quizzes, one or two discussion facilitation, mid-term exam, poster presentation, and an 8- to 10-page final paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: current or prospective majors in the Department of Asian Languages, Literatures, and Cultures

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:

ASIA 131 (D1) JAPN 131 (D1)

Attributes: Linguistics

Fall 2022

JAPN 201 (F) Intermediate Japanese

This course is a continuation of First-Year Japanese 101-102, further developing the four skills of speaking, listening, reading, and writing. The same general methodology will be used. Upon completing the course, students will have been introduced to most of the major structural patterns of contemporary Japanese and will be able to read simple expository prose.

Class Format: fact classes, three hours per week; act classes three hours per week

Requirements/Evaluation: daily performance, homework, quizzes, chapter tests, and a final exam

Prerequisites: JAPN 101-102 or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: current or prospective majors in the Department of Asian Languages, Literatures, and Cultures

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Distributions: (D1)

Fall 2022
JAPN 202 (S) Intermediate Japanese
This course is a continuation of Japanese 201, further developing the four skills of speaking, listening, reading, and writing. The same general methodology will be used. Upon completing the course, students will have been introduced to most of the major structural patterns of contemporary Japanese and will be able to read simple expository prose.

Class Format: fact classes, three hours per week; act classes three hours per week
Requirements/Evaluation: daily performance, homework, quizzes, chapter tests, and a final exam
Prerequisites: JAPN 201 or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: current or prospective majors in the Department of Asian Languages, Literatures, and Cultures

JAPN 220 (S) Being Korean in Japan (DPE)
Cross-listings: JAPN 220 ASIA 220 ASST 220
Primary Cross-listing
Who are Zainichi Koreans (Koreans in Japan)? How are they different from Koreans in Korea or in the United States? Contemporary Korean TV dramas and films have depicted Koreans as attractive and successful people appealing to Hallyu (Korean Wave) fans around the world. However, Zainichi Koreans, who are the largest ethnic minority in Japan, have been frequently portrayed as abusive husbands/fathers, pitiful wives/mothers, or juvenile delinquents in both Japanese and Korean cinema and literature. Through close readings of films, novels, and short essays, we will explore little-known yet significant representations of Zainichi Koreans by focusing on Japanese and Korean historical contexts. By doing so, we will discover new aspects of transnational exchange not only between Japanese and Koreans, but also between South and North Koreans in Japan. All class materials will be available in English translation or with English subtitles.

Requirements/Evaluation: attendance/participation; short written responses; midterm essay; group presentation; final essay
Prerequisites: none
Enrollment Limit: 16
Enrollment Preferences: Open to all students, but if over-enrolled, priority will be given to Asian Studies and Japanese majors
Expected Class Size: 16
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1) (DPE)
This course is cross-listed and the prefixes carry the following divisional credit:
JAPN 220 (D1) ASIA 220 (D1) ASST 220 (D1)
Difference, Power, and Equity Notes: This course looks at the dynamics of unequal power in the social marginality of Korean immigrants in Japan. Exploring historical contexts, students will analyze how the ethnic particularity of the Korean minority has engaged with and against Japanese society. Students will also examine how we might associate the minority culture and history with extensive global issues, including the relationships between environmental problems and minorities, wars and women, and imperialism and migration.
Attributes: GBST Borders, Exiles + Diaspora Studies Electives GBST East Asian Studies Electives
Not offered current academic year
JAPN 223 (S) Japanese Food Culture in a Global Context (DPE)

Primary Cross-listing

The bourgeoning popularity of Japanese food on a global scale has resulted in a surge of new research, literature, and films. Conversely, the effects of globalization have transformed the dining experience within Japan to be ever more multiethnic. This interdisciplinary course explores the complex relationship between food and culture in Japan, and the emergence of Japanese cuisine as a global phenomenon, referring to a variety of materials and practices. Topics to be addressed include modernization, nation-building, militarization, globalization, the environment, and popular culture.

Requirements/Evaluation: active class participation, three response papers, two small written report (including class presentations), and one research paper and presentation

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: current or prospective majors in the Department of Asian Languages, Literatures, and Cultures

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

JAPN 223 (D1) COMP 223 (D1)

Difference, Power, and Equity Notes: This course explores the complex relationship between food and culture in and out of Japan, in relation to a variety of topics such as modernization, nation-building, militarization, globalization, environmentally sustainable development, and popular culture. Students will have the opportunity to critically analyze how various social/cultural, historical, and political contexts shaped and unveled (in)difference, (dis)power, and (in)equity in food production and consumption.

Spring 2023

SEM Section: 01 Cancelled

JAPN 240 (S) Toward Healing Trauma in Japanese and Korean Cinema (DPE)

Primary Cross-listing

This course examines Japanese and Korean cinema from the 1930s to the present, with a focus on narratives of trauma. We will analyze cinematic representations of social conflicts caused by continuous negotiations of tradition and progress, gender and identity, and everyday life and war wounds in the transition from imperial/colonial to post-imperial/post-colonial periods. Along with exploring historical contexts, we will compare the ways in which Japanese and Korean filmmakers have confronted social injustice by addressing the pain of trauma. In doing so, we will discover the meanings of cultural confrontation in the process of healing and reconciliation in our society. All readings and screenings will be available in English translation or with English subtitles.

Requirements/Evaluation: class attendance and participation, weekly GLOW posts, two short essays (4-5 pages each), and a final project

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Open to all students, but if over-enrolled, priority will be given to majors in the Department of Asian Languages, Literatures, and Cultures

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

ASIA 240 (D1) JAPN 240 (D1)

Difference, Power, and Equity Notes: This course traces the trajectories of Japanese and Korean films that deal with contentious issues which have
left deep scars in society, including the legacies of Japanese colonialism and Cold War politics in East Asia. Students will have the opportunity to think critically about the implications of such cultural representations of social wounds and injustice on the way toward reconciliation.

Not offered current academic year

JAPN 301  (F)  Upper-Intermediate Japanese
This course is a continuation of Japanese 201 and 202. Students will further develop the four skills of speaking, listening, reading, and writing, while consolidating the foundations built in Elementary and Intermediate Japanese. The same general methodology will be used. In this course, students begin to emphasize vocabulary building through the study of situationally oriented materials stressing communicative competence. The reading of expository prose in both semi-authentic and authentic materials of intermediate difficulty will also receive some extensive attention.

Class Format: three 75-minute classes
Requirements/Evaluation: daily performance, homework, quizzes, a midterm, and a final exam
Prerequisites: JAPN 202 or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: current or prospective majors in the Department of Asian Languages, Literatures, and Cultures
Expected Class Size: 8
Grading: no pass/fail option, no fifth course option
Distributions: (D1)

Fall 2022
LEC Section: 01    MWF 8:30 am - 9:45 am     Shinko Kagaya

JAPN 302  (S)  Upper-Intermediate Japanese
This course is a continuation of Japanese 301. Students will further develop the four skills of speaking, listening, reading, and writing, while consolidating the foundations built in Elementary and Intermediate Japanese. In this course, students work on the reading skills for comprehending primary source materials and expository prose of intermediate difficulty; the communication skills for conducting practical conversations and presentations; and the listening skills for interpreting various types of information.

Class Format: three 75-minute classes
Requirements/Evaluation: daily performance, homework, quizzes, a midterm, and a final exam
Prerequisites: JAPN 301 or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: current or prospective majors in the Department of Asian Languages, Literatures, and Cultures
Expected Class Size: 8
Grading: no pass/fail option, no fifth course option
Distributions: (D1)

THE PROGRAM IN JEWISH STUDIES

Jewish Studies is an interdisciplinary field that encompasses the texts, history, languages, philosophy, and culture of Jews and Judaism as they have changed over three millennia and throughout the world. The program offers courses in multiple disciplines including but not limited to Religion, Classics, History, Philosophy, Anthropology, Sociology, and Comparative Literature. Across these disciplines, the program examines topics such as religious belief and practice, textual interpretation, the development of Zionism, life in the Diaspora, the historicization and memorialization of the Holocaust, and historical, political and philosophical questions surrounding Jewish identity. Investigating the foundations and development of these various Jewish topics, as well as their interaction with and influence on other traditions, provides an opportunity to explore the continuities and diversity of Jewish life and thought. Students will gain exposure to a common body of knowledge and scholarly approaches through which to engage in their own rich and varied intellectual explorations of Jewish and related topics.

CONCENTRATION IN JEWISH STUDIES

The concentration in Jewish Studies requires five courses with at least two different prefixes: one gateway course, two core courses, one elective, and one capstone course. Senior concentrators should consult with the chair about arrangements for a capstone course.

Gateway Courses (can also count as core courses):

REL 203 / JWST 101(F) SEM Judaism: Before The Law

Elective Courses

Students may meet the elective requirement with a course partially related to Jewish Studies or another core course. In an elective course partially related to Jewish Studies, a student will normally focus at least one of the major writing assignments on a topic relevant to Jewish Studies or approximately one-third of the course will be devoted to Jewish subjects. The list of relevant electives changes regularly, so the course catalog should be checked for details. Listed below are examples of courses partially related to Jewish Studies. Students may meet the elective requirement with a course not listed here, subject to the approval of the Chair of Jewish Studies.

THE DEGREE WITH HONORS IN JEWISH STUDIES

The degree with honors offers students the opportunity to undertake advanced research under the supervision of one or more of the faculty members in Jewish Studies. Students normally must have at least a 3.5 GPA in the concentration and secure a faculty sponsor to be eligible. In addition to completing the five courses required for the concentration, candidates must enroll in either JWST 493 and a Winter Study course or a
Winter Study course and JWST 494 in their senior year, and prepare a substantial written thesis. Honors in Jewish Studies may be granted to concentrators after an approved candidate completes an honors thesis and is awarded an honors grade by her/his advisor and one other faculty reader. Students interested in becoming candidates for honors should consult with the program in the spring of the junior year.

**Croghan Professorship**

Each year, in addition to the regular course offerings listed above, Williams sponsors the Croghan Bicentennial Visiting Professor in Religion who offers one course in Judaism and/or Christianity.

**OVERSEAS STUDIES**

Studying in Israel is highly recommended for students interested in Jewish Studies. Many students have spent a semester or year at Hebrew University, Tel Aviv University, or the University of Haifa. With the approval of the Jewish Studies program chair, students may count a study-abroad program towards up to two core requirements.

**FAQ**

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

**Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

**What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description.

**Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

No.

**Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

No.

**Are there specific major requirements that cannot be fulfilled while on study away?**

Yes. Gateway course and Capstone course.

**Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

No.

**Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:**

None to date.

**FUNDING**

The Bronfman Fund for Judaic Studies was established in 1980 by Edgar M. Bronfman ’50, Samuel Bronfman II ’75, and Matthew Bronfman ’80. The Bronfman Fund provides opportunities for the Williams community to learn about Jewish history and culture, both within the College’s formal curriculum and through the planning of major events on Jewish themes.

The Morris Wiener and Stephen R. Wiener ’56 Fund for Jewish Studies was established in 1997 through the estate of Stephen R. Wiener ’56. The Wiener gifts have provided an endowment to support a faculty position in modern Jewish thought, and are used to underwrite an annual lecture, forum or event relevant to contemporary Jewish life.

**JWST 101 (F) Judaism: Before The Law**

**Cross-listings:** REL 203  JWST 101

**Secondary Cross-listing**

This course introduces the academic study of Judaism through a humanistic exploration of “the Law” as a concept in Jewish thought and practice. Coverage will include the Law of Moses in the Hebrew Bible, the rabbinic distinction between “Oral Law” and “Written Law,” medieval philosophical justifications for the Law, modern interpretations of the Law as Moral Law, Hasidic challenges to the centrality of the Law, and twentieth-century
Jewish fiction that is haunted by a felt absence of the Law. Topics may also include the nature of rabbinic authority, methods of Jewish legal interpretation and innovation, and Jewish law as it pertains specifically to women, gentiles, idolaters, food consumption, and the Land of Israel. Course materials will include classical sources such as the Talmud and Midrash, modern philosophical texts, Franz Kafka's The Trial with his parable "Before The Law," ethnographic accounts of contemporary Jewish observance, and much else. All readings will be in translation.

Requirements/Evaluation: class participation, three short papers, and a final longer paper

JWST 205 (S) Ancient Wisdom Literature

Cross-listings: JWST 205 CLAS 205 REL 205 COMP 217

Secondary Cross-listing

The Biblical books of Proverbs, Ecclesiastes, and Job are often grouped together under the Hebrew category of hokhmah, 'wisdom.' Although these books are very different in content, they can all be interpreted as meditations on ethical and practical philosophy. In this way, they represent the Hebrew Bible's canonical embrace of a widespread Near Eastern literary phenomenon. From the instructional literature of Egypt and Mesopotamia to Greek didactic poetry and fables, ancient Mediterranean cultures offer a wide range of texts that engage the issues of personal behavior, leadership, and justice. Starting with the central wisdom books of the Hebrew Bible and moving through relevant material from the Apocrypha, New Testament, and the Egyptian and Babylonian traditions, this course will examine the literature of wisdom throughout the ancient world with an eye toward understanding its various social, political, and philosophical contexts. We will then consider the Greek wisdom tradition in such texts as Hesiod's Works and Days, Aesop's fables, and fragments from the pre-Socratic philosophers. Finally, we will explore the influence of these ancient sources on later expressions of wisdom in medieval European literature, as well as more recent examples such as Benjamin Franklin's Poor Richard's Almanack. All readings are in translation.

Requirements/Evaluation: class participation, short written assignments, and two longer papers

JWST 206 (S) The Book of Job and Joban Literature

Cross-listings: JWST 206 REL 206 COMP 206

Secondary Cross-listing

The Book of Job has often been described as the most philosophical book of the Hebrew Bible. The story of one man's struggle to understand the
cause of his suffering and his relationship to God represents the finest flowering of the Near Eastern wisdom literature tradition. Through its exploration of fundamental issues concerning human suffering, fate and divinity, and the nature of philosophical self-examination, Job has served as a touchstone for the entire history of existential literature. At the same time, the sheer poetic force of the story has inspired some of the greatest artistic and literary meditations in the Western tradition. This course will engage in a close reading of the Book of Job in its full cultural, religious, and historical context with special attention to its literary, philosophical, and psychological dimensions. We will then proceed to investigate key modern works in several genres that involve Joban motifs, themes, and text both explicitly and implicitly. These texts will include Franz Kafka's *The Trial*, Archibald MacLeish's *J.B.*, Robert Frost's "Masque of Reason," Carl Jung's *Answer to Job*, and William Blake's *Illustrations to the Book of Job*. All readings are in translation.

Class Format: For the spring of 2021, this course will be taught online. The seminar will meet at the regularly scheduled time twice a week.

Requirements/Evaluation: Evaluation will be based on class participation, weekly short written assignments, and two longer papers.

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: If the course is overenrolled, preference will be given to students who have already taken a course in biblical literature.

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

---

JWST 207 (F) From Adam to Noah: Literary Imagination and the Primeval History in Genesis

Cross-listings: COMP 250 REL 207 JWST 207 CLAS 207

Secondary Cross-listing

How long did Adam and Eve live in the Garden of Eden? What was the mark of Cain? Why did Enoch not die? Who was Noah's wife? How did Giants survive the Flood? These are only a few of the fascinating questions that ancient readers and interpreters of the Book of Genesis asked and attempted to answer. The first ten chapters of Genesis present a tantalizingly brief narrative account of the earliest history of humankind. The text moves swiftly from the Creation to the Flood and its immediate aftermath, but this masterful economy of style leaves many details unexplained. This course will explore the rich and varied literary traditions associated with the primeval history in the Genesis. Through a close reading of ancient noncanonical sources such as the Book of Enoch, Jubilees, and the Life of Adam and Eve, as well as Jewish traditions represented in Josephus, Philo, and Rabbinic literature and other accounts presented in early Christian and Gnostic texts, we will investigate the ways in which the elliptical style of Genesis generated a massive body of ancient folklore, creative exegesis, and explicit literary re-imagining of the early history of humankind. We will then turn to some continuations of these variant traditions in medieval literature, with particular attention to the material on the figures of Cain and Noah. All readings are in translation.

Class Format: For the fall of 2020, this course will taught online. The seminar will meet at the regularly scheduled time twice a week.

Requirements/Evaluation: Class participation and several writing assignments.

Prerequisites: None.

JWST 208 (S)  Genesis: The Family Saga

Cross-listings: COMP 207  REL 208  JWST 208

Secondary Cross-listing

The Book of Genesis has rightly been described as the masterpiece of Hebrew biblical narrative. In particular, the continuous tale that begins with Abraham and Sarah and extends four generations to the children of Jacob, Leah, and Rachel is one of the most extraordinary examples of literary artistry in any time or tradition. As one family wrestles with the promise of becoming a chosen people, the narrative explores themes of marriage, parenthood, sibling rivalry, land, violence, wandering, and, above all, the complex relationship between humanity and God. This course will examine those themes through a close reading of Genesis in translation, from Abraham and Sarah's first appearance on the scene to the death of Jacob. We will consider the text from multiple perspectives with an eye toward understanding the literary, philosophical, and psychological dimensions that continue to amaze and perplex readers to this day.

Requirements/Evaluation: class participation, a series of short writing assignments, and two longer papers

Not offered current academic year

JWST 209 (S)  Jewish America

Cross-listings: REL 209  JWST 209

Secondary Cross-listing

Who and what counts as "Jewish" in America? Does stand-up comedy have a distinctly Jewish pedigree? What about neoconservatism? How is it possible to answer such questions without falling into what David Hollinger has called the "booster-bigot trap"? How is it possible, that is, to avoid answers that uncritically celebrate "Jewish contributions" or perniciously suggest "Jewish influence"? This course will explore the various meanings of Jewishness in American culture as expressed by artists, rabbis, activists, intellectuals, boosters, bigots and others. We will seek to avoid the booster-bigot trap by focusing vigilantly on what is at stake wherever Jewishness is invoked, defined or ascribed. We will draw methodological support from scholars like Hollinger, Jonathan Freedman, Laura Levitt, Yuri Slezkine, Shaul Magid, Andrea Most and others. Particular attention will be given to the appearance of Jewish themes and involvement in popular culture and political action, as well as to Jewish American communal institutions, the everyday lives of Jewish Americans, and Jewish variations on American religion. Coursework will involve some historical, sociological and ethnographic readings, but will focus primarily on close analysis of films, literary fiction, stand-up comedy, political magazines, theological texts, and television shows. We may, for instance, watch films like The Jazz Singer (1927 and 1980), Exodus and Annie Hall; read John Updike's Bech: A Book, Philip Roth's Operation Stylock or Cynthia Ozick's The Puttermesser Papers; listen to the comedy of Mort Sahl, Lenny Bruce and Sarah Silverman; read from Henry Ford's Dearborn Independent, the Menorah Journal or Commentary; study works by Rabbis Stephen Wise, Abraham Joshua Heschel and Meir Kahane; and watch episodes of Bridget Loves Bernie, Northern Exposure and Curb Your Enthusiasm. We will also study arguments about the role and meaning of Jewishness in American secularization, "therapeutic culture," the civil rights movement, the sexual revolution, and feminism.

Requirements/Evaluation: class participation, two short papers, a midterm take-home exam, and a final paper interpreting an example of Jewishness in America chosen by the student

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: Religion majors, Jewish Studies concentrators, and students who are interested in either of these options

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

**JWST 222 (F) The Jewish Art of Interpretation**

**Cross-listings:** JWST 222 REL 222 COMP 211

**Secondary Cross-listing**

*Turn it and turn it, for everything is in it.* This famous rabbinic dictum offers an enigmatic yet comprehensive account of the principles that have defined the Jewish practice of interpretation for over two millennia. The imperative to keep a text, word, image, or concept in constant motion, in order to generate as many meanings and cross-meanings as possible, challenges us to transform the act of interpretation itself into a virtuosic craft or art that can engage the human imagination as diversely and powerfully as the creation of the works being interpreted. At the same time, emphasis on the dynamism between text and interpreter should dispel the notion that only expansive works have expansive meanings. If interpretation itself is an art, then even the shortest text can contain "everything" within it when it participates in that art. This course will engage students in a radical experiment in the art of interpretation. Through a deep encounter with a selection of miniature texts, ranging from ancient rabbinic proverbs and medieval fables to the modern parables and fragments of Franz Kafka, as well as folklore and jokelore from every period in Jewish history up to the present, we will develop an interpretive practice that combines analytic, critical, and creative principles in both written and oral contexts. The goal throughout is to explore interactively how the making of meaning is an integral part of the human experience.

**Requirements/Evaluation:** class participation, regular short written and oral assignments, and a final project  
**Prerequisites:** none  
**Enrollment Limit:** 18  
**Expected Class Size:** 18
JWST 230 (F) Modern European Jewish History, 1789-1948

**Cross-listings:** HIST 230 JWST 230

**Secondary Cross-listing**

What does it mean to be a Jew? The vexed question of Jewish identity emerged anew at the end of the eighteenth century in Europe and has dominated Jewish history throughout the modern period. Although Jewish emancipation and citizenship followed different paths in different parts of Europe, in general Jews were confronted by unprecedented opportunities for integration into non-Jewish society and unprecedented challenges to Jewish communal life. Focusing primarily on France and Germany, and to a lesser extent on the Polish lands, this course will introduce students to the major social, cultural, religious, and political transformations that shaped the lives of European Jews from the outbreak of the French Revolution to the aftermath of World War II. We will explore such topics as emancipation, Jewish diversity, the reform of Judaism, competing political ideologies, Jewish-gentile relations, the rise of modern antisemitism, the role of Jewish women, interwar Jewish life and culture, Jewish responses to Nazism and the Holocaust, and the situation of Jews in the immediate postwar period. In addition to broad historical treatments, course materials will include memoirs, diaries, and fiction.

JWST 249 (S) Anti-Semitism (DPE)

**Cross-listings:** JWST 249 REL 249

**Secondary Cross-listing**

This course will investigate intellectual traditions, political movements, and cultural objects that portray Jews, Jewishness, or Judaism as essentially pernicious. We will analyze materials from a variety of times and places, including the ancient world, the medieval period, and the present day. We will assess the impact of anti-Semitism on the lives of Jews and non-Jews. But we will also read theoretical approaches to the study of anti-Semitism that raise key questions for our investigation. Where does the term “anti-Semitism” come from and how exactly should it be defined? Is anti-Semitism a continuous phenomenon that connects every claim of Jewish perniciousness, wherever it is alleged, for over two thousand years of human history? Or should every context be treated as fundamentally distinct, so that the claim of Jewish perniciousness is presumed to have a distinct meaning, origin, and purpose in each case? What motivates charges of Jewish perniciousness? What are the particular threats typically alleged to be posed by Jews, Jewishness, and Judaism? How do constructions of Jewish perniciousness fit with constructions of race, gender, ethnicity, religion, class, sexuality, and nationality in different times and places?

**Requirements/Evaluation:** Three 5-7 page papers, class participation

**Prerequisites:** none

**Enrollment Limit:** 15
Enrollment Preferences: Jewish Studies concentrators, Religion majors, and students who have taken JWST 203

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
JWST 249 (D2) REL 249 (D2)

Difference, Power, and Equity Notes: This course will introduce students to discursive, institutional, and social structures that have organized the stigmatization, domination, and persecution of Jews in various geographic locations for over two thousand years. An understanding of these structures is crucial to understanding contemporary dynamics of difference and power. Students will also learn how anti-Semitism intersects with constructions of race, gender, class, religion, ethnicity, and nation.

JWST 259 (S) Ethics of Jewish American Fiction

Cross-listings: ENGL 259 JWST 259 REL 259

Secondary Cross-listing

After the Second World War, Jewish American writers who wrote about Jewish characters and Jewish themes were increasingly celebrated as central figures in American fiction. Isaac Bashevis Singer, Bernard Malamud, Saul Bellow, Cynthia Ozick and Philip Roth are among those who gained prominence in this period. These writers were literary innovators and often addressed broad humanistic themes. But they also struggled with profound questions that arose in the postwar period about Jewishness, the legacy of the Holocaust, and what it means to be an American. In this course we will read the above authors and others. We will focus, in particular, on the distinctive ethical and political ideas, emotions, and aspirations that animate their work. The course will begin with a study of theoretical approaches that will provide the basis for our ethical criticism: we will read, for instance, Lionel Trilling, Wayne Booth, Martha Nussbaum, and Noël Carroll. Then we will delve into the fiction, following a trail that begins in the postwar period and continues in fictions by Erica Jong, Rebecca Goldstein, Michael Chabon, Gary Shteyngart, and others. Can we find a distinctive Jewish American ethics in Jewish American fiction?

Requirements/Evaluation: class participation, one take-home exam on theoretical approaches to ethical criticism; four short essays

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Religion majors, Jewish Studies concentrators, and English majors

Expected Class Size: 18

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)

JWST 268 (F) Where are all the Jews? (DPE) (WS)

Cross-listings: REL 268 ARAB 363 COMP 363 JWST 268

Secondary Cross-listing

Until four decades ago, many Maghrebi and Middle Eastern cities and villages teemed with Jewish populations. However, the creation of the Alliance Israélite Universelle's schools (1830s), the establishment of the State of Israel in 1948, the decolonization process in the Maghreb and the Middle East, and the Arab defeat in the Six-Day War accelerated the departure of Arab and Berber Jews from their homelands to other destinations, including France, Israel, Canada, the United States, and different Latin American countries. Arab and Berber Jews' departure from their ancestral lands left a socioeconomic and cultural void that Maghrebi and Middle Eastern cultural production has finally started to address, albeit shyly. The course will help students understand the depth of Jewish life in the Maghreb and the Middle East, and interrogate the local and global factors that led to their disappearance from both social and cultural memories for a long time. Reading fiction, autobiographies, ethnographies, historiographical works, and
anthropological texts alongside documentaries films, the students will understand how literature and film have become a locus in which amnesia about
Arab/Berber Jews is actively contested by recreating a bygone world. Resisting both conflict and nostalgia as the primary determinants of
Jewish-Muslim relations, the course will help students think about multiple ways in which Jews and Muslims formed communities of citizens despite
their differences and disagreements.

Class Format: The course will be offered both in-person and remotely. Students enrolled remotely are required to watch the recorded videos of the
in-person sessions in order to stay abreast of the discussions that take place in the classroom and enrich their engagement with the materials
assigned in the course.

Requirements/Evaluation: 400-word weekly, focused responses on Glow; a book review (600 words); two five-page papers as mid-terms; one
ten-page final paper; one presentation.

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: students interested in critical and comparative literary, religious or historical studies.

Expected Class Size: 19

Grading: no pass/fail option, yes fifth course option

Distributions: (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
REL 268 (D2) ARAB 363 (D1) COMP 363 (D1) JWST 268 (D2)

Writing Skills Notes: Students are required to present an outline of their papers before submitting a draft paper. The professor will give feedback on
each written work to improve students’ writing skills. Students are required to incorporate the feedback to improve their drafts before they become final.
Students will receive detailed and consistent feedback about their writing in Arabic language. Students will receive from the instructor timely comments
on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: Students in this course will understand the historical process that lead to the disappearance of Arab/Berber
Jews. Students also will work out alternative ways to grasp Jewish-Muslim relations beyond nostalgia and conflict. Finally, students enrolled in the
course will grapple with and try to disentangle the complexity of Jewish-Muslim citizenship in both pre-colonial and postcolonial contexts.

Attributes: JWST Core Electives

JWST 280 (F) Art at its Limits: Representing the Holocaust (DPE) (WS)

Cross-listings: COMP 280 JWST 280 GERM 280

Secondary Cross-listing

The Holocaust poses unique challenges to art: it is an event that unsettles the very notion of representation while, at the same time, also demanding it.
Art, after all, is a mode of witnessing as well as a form of commemoration; it allows survivors to record their testimony and later generations to
remember. Yet the representation of suffering can all too easily become exploitative or aestheticizing, it can turn pain into entertainment and history
into fiction. How, then, do writers, artists, and filmmakers navigate the representation of the Shoah if it resists comprehension and undermines
traditional forms of narrative? In this course, we will ask if and how art can do justice to a catastrophe of such magnitude as the Holocaust by
analyzing different forms of media from a variety of cultural backgrounds. What can poetry offer that remains foreclosed to prose? Was Art
Spiegelman’s graphic novel *Maus* really in bad taste? How should documentaries approach the Shoah, and is there a place for Hollywood films in
the archives of commemoration? Texts among others by Tadeusz Borowski, Tadeusz Ró’ewicz, Art Spiegelman, Paul Celan, Primo Levi, Sylvia Plath,
Hannah Arendt, Theodor W. Adorno, Jacques Derrida, and Maurice Blanchot; films by Quentin Tarantino, Claude Lanzmann, Pawe’ Pawlikowski, and
Steven Spielberg.

Requirements/Evaluation: three 2-page critical responses, oral presentation, final project

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: German and Comparative Literature majors

Expected Class Size: 14

Grading: no pass/fail option, yes fifth course option

Distributions: (D1) (DPE) (WS)
This course is cross-listed and the prefixes carry the following divisional credit:

COMP 280 (D1) JWST 280 (D2) GERM 280 (D1)

Writing Skills Notes: Three 2-page papers spaced over the course of the semester on which students will receive detailed feedback and which they will be able to revise; the final project will either be a 10-page paper or a creative project accompanied by a 4-page reflection that will consider the creative component in relation to the themes of the course. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: This course will examine how art can help us think about the catastrophic abuses of power in the Third Reich. While many of the texts we will examine focus on the stories of Jewish people, the class will also consider how the narratives of other persecuted groups, including the Sinti and Roma, people with disabilities, and LGBTQ victims and survivors, relate to and differ from these experiences.

JWST 334 (S) Imagining Joseph

Cross-listings: REL 334 JWST 334 COMP 334 ANTH 334

Secondary Cross-listing

Beloved son, rival brother, faithful servant, dreamer, seer, object of desire, lover, husband, bureaucrat, Joseph is one of the most fully-limned and compelling figures in the Jewish, Christian, and Muslim scriptural traditions. The story of Joseph unfolds over fourteen chapters in the Hebrew Bible, and is the subject of the fourth longest sura in the Qur'an. Through millennia, the story of Joseph has inspired a wealth of interpretations, commentary, apocrypha, re-tellings, and back-story, including an apocryphal book of scripture about Joseph and his wife, Asenath, Sufi poetry about Joseph and Zuleikha (Potiphar's wife), a trilogy by the 20th century German novelist Thomas Mann, a musical by Andrew Lloyd Weber, and many expressions in Western visual art. The course will explore these various expressions, looking to them for the ways in which Joseph has captured the imaginations of peoples and cultures across time and space. The course will be organized as a collaborative seminar in which the class will read the foundational scriptures together, followed by thematic discussions to which students will contribute insights from their own readings of particular peripheral texts. Students will learn the pleasures of close and intense exegetical reading in approaching the Hebrew Bible and Qur'an, as well as the more expansive pleasures of linking post-scriptural expressions together.

Requirements/Evaluation: occasional response papers; substantial final project and paper; class participation

Prerequisites: none

Enrollment Limit: 12

JWST 338 (F) The History of the Holocaust

Cross-listings: HIST 338 JWST 338 REL 296

Secondary Cross-listing

In twenty-first century United States, the murder of approximately six million European Jews by Nazi Germany remains a central event in our political, moral, and cultural universe. Nevertheless, the Holocaust still confounds historians' efforts to understand both the motivations of the perpetrators and the suffering of the victims. In this course, we will study the origins and unfolding of Nazi Germany's genocidal policies, taking into consideration the perspectives of those who carried out mass murder as well as the experiences and responses of Jews and other victim groups to persecution. We will also examine the Holocaust within the larger context of the history of World War II in Europe and historians' debates about Germany's exterminatory war aims. Course materials will include diaries, speeches, bureaucratic documents, memoirs, films, and historical scholarship.
Class Format: mostly discussion

Requirements/Evaluation: class participation, weekly reading responses, a map quiz, two papers (5-7 pages) on class readings, a final research paper (10-12 pages)

Prerequisites: none; open to first-year students with instructors permission

Enrollment Limit: 25

Enrollment Preferences: History majors and Jewish Studies concentrators

Expected Class Size: 20-25

Grading: yes pass/fail option, yes fifth course option

JWST 339  (S)  Politics in Dark Times: Hannah Arendt  (WS)

Cross-listings: PSCI 339 JWST 339

Secondary Cross-listing

Hannah Arendt (1906-75) bore witness to some of the darkest moments in the history of politics. Born a Jew in Germany, Arendt lived through--and reflected deeply on--two world wars, the rise of totalitarianism, and the detonation of the first atomic bomb. She narrowly escaped imprisonment by the Gestapo and internment in a refugee camp in Vichy France before fleeing to New York. Yet, in the face of these horrors, Arendt never lost her faith in political action as a way to express and renew what she called "love of the world." She wrote luminously about the darkness that comes when terror extinguishes politics and the shining, almost miraculous events of freedom through which politics is sometimes renewed. In this tutorial, we will investigate what Arendt's vision of politics stands to offer to those struggling to comprehend and transform the darkest aspects of the contemporary political world. Our time and Arendt's are similarly darkened by the shadows of racism, xenophobia, inequality, terror, the mass displacement of refugees, and the mass dissemination of lies. It may be tempting to conclude from these similarities--as some recent commentators have--that we are witnessing the return of "totalitarianism" as Arendt understood it. She would be the first to refuse to use inherited concepts as if they were keys to unlock the present. Her words and her example should impel us to reject shortcuts to authentic understanding, the "unending activity by which...we come to terms with and reconcile ourselves to reality." We will turn to Arendt as an interlocutor, not a guide, as we seek to reconcile ourselves to the contingency and specificity of past and present political realities. And we will search her works and our world for embers of hope that even seemingly inexorable political tragedies may yet be interrupted by assertions of freedom in political action.

Requirements/Evaluation: five 5-page papers; five 2-page responses; participation

Prerequisites: a prior course in political theory, philosophy, or critical theory, or permission of the instructor

Enrollment Limit: 10

Enrollment Preferences: Political Theory concentrators, Political Science majors

JWST 430  (S)  Postcolonial Reparations: Trauma, History, and Memory after European Imperialism  (DPE) (WS)

Cross-listings: JWST 430 HIST 430
How have European states responded to calls to acknowledge and atone for the crimes of Empire? This course places recent calls for reparations in a historical context. Weaving together a wide-range of historical and contemporary case studies -- including the Conference on Jewish Material Claims Against Germany (1951), Germany's official recognition of the Herero Genocide (2021), and ongoing debates in France about the restitution of colonial-era looted art, this course investigates how the language and mechanisms of restorative justice have historically developed, evaluates which past efforts of restorative justice were successful and why, and examines what role historical memory and historians-as-activists should play in campaigns that seek reparations for colonial injustices. In doing so, it evaluates how activists have deployed scholarly vocabularies on memory, justice, and violence in a number of national and international contexts.

Requirements/Evaluation:  Class participation, weekly 500-word discussion posts and a 20-page research paper

Prerequisites:  None

Enrollment Limit:  15

Enrollment Preferences:  History majors, seniors, and then juniors

Expected Class Size:  10-15

Grading:  no pass/fail option, no fifth course option

Distributions:  (D2)  (DPE)  (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
JWST 430  (D2)  HIST 430  (D2)

Writing Skills Notes:  This is an intensive writing seminar for advanced history majors. We focus on how to write a journal-length piece of original historical research, while evaluating the strengths and weaknesses of other scholarly pieces. Students receive feedback on multiple drafts of their final research papers and participate in two workshop seminars in which they provide feedback on the papers of their peers.

Difference, Power, and Equity Notes:  This course asks how contemporary political and social justice movements can -- or ought to -- address political and economic inequities between the Global South and North, introduces students to how questions of race and national belonging have informed contemporary debates on restorative justice, and exposes the persistence of some global and historically-situated inequities.

JWST 433  (F) Colonialism and the Jews  (DPE)  (WS)

Cross-listings:  JWST 433  HIST 433

Secondary Cross-listing

Where are Jews in colonial history? Where is colonialism in Jewish history? In many ways, these questions haunt contemporary Jewish and often world politics. Indeed, in the twenty-first century, the relationship between Jews and colonialism has been present in debates about Zionism, the history of capitalism, Jewish-Muslim relations, the wider Middle East, the future of European identity, the aims and roots of American empire, and the intersections of race and religion in colonial domination. And yet, typically, the subject of Jews and colonialism is more polemicized or avoided than probed. This course will seek to address this lacunae by introducing students to new historical scholarship that has begun tracing these questions. Students will consider the ways in which imperial legal forms, economic structures, and cultural and intellectual underpinnings shaped Jewish lives from the British antipodes to French North Africa, and throughout the Russian and Ottoman Empires, as well as in metropolitan Europe. Among other issues, we will ask: How did Jews become defined and define themselves in the colonial venture? In their various roles in colonial empires, are Jews best understood as subjects or agents of empire or are there more fruitful ways to conceptualize their engagement? What was the impact of anti-colonial struggles on modern Jewish politics and historical development? The course will approach this topic thematically rather than as a comprehensive survey. By introducing students to some of the key debates in this emerging field, we will consider what it takes to construct a successful historical argument and how to engage critically with works in an emerging field. A semester-long writing project will expand students capacities to pose thoughtful historical questions; conduct research and gather compelling evidence; read deeply and critically; carefully assess evidence; and write inquiry-based essays.

Requirements/Evaluation:  Class participation; brief weekly writing on the readings; a final research paper written in stages, including two "research updates"; an analysis of a source; a research proposal; a rough draft of one paper section; a rough draft of the paper; and a final 25-page paper.

Prerequisites:  None; open to all students (however, a background in European history and/or Jewish Studies will be helpful).
Enrollment Limit: 15

Enrollment Preferences: Junior and Senior History Majors and Jewish Studies Concentrators

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

JWST 433 (D2) HIST 433 (D2)

Writing Skills Notes: Before each course, students will submit a 2-3 paragraph critique and a list of 3 questions for discussion. The final assignment will be a research paper (approximately 25 pages) or historiographical essay. Assignments en route to the final deadline, include: 1) two early "research updates" to document process and progress; 2) analysis of a source; 3) research proposal; 4) rough draft of a section; 5) draft of paper; 6) final paper. Only some work will graded, but all will receive feedback.

Difference, Power, and Equity Notes: This course considers the complex ways that religion, ethnicity and national identities shaped the colonial and post-colonial world. Never controlling or collectively representing a European power, Jews were also rarely situated at the bottom of any colonial hierarchy, sometimes occupying more than one social or political role in a single colonial territory. This course provides insight into the many ways hierarchies of power could operate in colonial and post-colonial settings.

JWST 434 (S) The Meaning of Diaspora and the Jews of Europe (WS)

Cross-listings: REL 335 HIST 434 JWST 434

Secondary Cross-listing

Dispersion, exile, migration, statelessness are all aspects of diaspora. In the study of diasporic peoples and cultures, the Jews have long figured as the archetype. As a result, Jewish political figures, intellectuals, social activists and scholars have played a central role in discussions of the meaning of diaspora, including debates about its political and social implications, economic value, and cultural significance. In the first half of the semester, in discussions of common readings, we will examine various historical interpretations of Jews' diasporic existence from the nineteenth century to the present and its implications for humanitarianism. Beginning in the first half of the semester and with greater intensity in the second half of the semester, you will conduct independent archival research on some aspect of the history of the Jewish diaspora using the digitized archives of the American Jewish Joint Distribution Committee that will culminate in a twenty-plus-page paper. In the second half, the seminar will continue to meet weekly as a research colloquium, to provide a forum for you to present your research and drafts in progress and to give feedback on fellow students' work. In this seminar, we are not merely studying history; you are actually doing history. That is to say, you will be more than students of history in this course; you will become historians in your own right. Over the semester, you will learn how to pose historical questions; to engage critically with readings beyond summarizing them; to synthesize an enormous amount of source material; and to learn how to write more clearly. By the end of the semester, the goal is for each student to produce a polished research paper based on substantial engagement with archival sources and relevant secondary literature that will serve as a capstone to your coursework at Williams or as a potential jumping-off point for future research projects, including a senior thesis in History or Jewish Studies.

Requirements/Evaluation: class participation, several short papers, oral presentations, and a 20-page research paper

JWST 490  (S) Memory, History, and the Extermination of the Jews of Europe  (WS)

Cross-listings: HIST 490  JWST 490

Secondary Cross-listing

This course is about the postwar legacy of the Holocaust. Nazi Germany’s extermination of European Jews has become a moral and cultural touchstone for people in Europe and in many other parts of the world. This tutorial explores a series of topics from the immediate aftermath of the Second World War to the present. Engaging with a wide-range of sources, we will wrestle with historical, legal, moral, political, and cultural issues and debates that have emerged out of the confrontation with the extermination of the Jews of Europe. They include: Why was the Holocaust “unprecedented” and “unimaginable”? Is it a Jewish story or universal story? Does the Holocaust raise different issues than other historical events for the historian? How should the Holocaust be represented in words and images, and what are the implications of different means of representing it? Has Germany faced up to its past? Were Germans also victims of World War II? Who were the “bystanders” as compared to the “perpetrators”? Were the postwar trials of perpetrators a travesty of justice? What “lessons” have we learned and should we learn from the Holocaust? By the end of the course, students will have grappled with the ongoing controversies that have arisen among scholars, artists, governments, and lay people about the meaning of the Holocaust for the postwar world. In a world in which extraordinary acts of violence continue to be perpetrated and many nations’ pasts are marked by episodes of extreme criminality and/or trauma, exploring the manner by which one such episode has been remembered, avenged, and adjudicated has relevance for considering other societies’ efforts to confront their own traumatic pasts.

Class Format: tutorial; class time consists of weekly one-hour sessions with the instructor and a fellow student

Requirements/Evaluation: Every other week the student will write and present orally a 5- to 7-page paper on the assigned readings of that week; on alternate weeks, the student will write a 2-page critique of the fellow student's paper; a final written paper on the issues raised in the tutorial to cap off the semester's work.

Prerequisites: permission of instructor

JWST 492  (S) Modern Jewish Political Theory

Cross-listings:  PSCI 375  JWST 492  REL 330

Secondary Cross-listing

By the late 19th century, Jews across Europe were faced with an urgent political problem. Amidst burgeoning national self-consciousness throughout the continent, despite the liberatory promises of the Enlightenment, Jews remained a vulnerable, segregated, and stigmatized minority population. Jews had to decide where to pin their hopes. Should they ally themselves with the liberals or the communists? Should they embrace nationalism or cosmopolitanism? Should they, perhaps, abandon Europe altogether and re-constitute themselves elsewhere? If so, should they focus their efforts on relocation to the historical land of Israel? Or could they go anywhere? Wherever they might go, should they aspire to build a modern Jewish nation-state, a semi-autonomous Jewish community, or some other arrangement? Should this coincide with the cultivation of a distinctively Jewish modern language? If so, should it be Hebrew or Yiddish? In this course we will assess various answers to these questions proffered by Jewish political thinkers in the modern period. We will pay particular attention to the construction of "Jews" and "Judaism" in these arguments. And we will ask
persistently: what constitutes a "Jewish justification" for a political claim in modern Jewish political theory? Coverage will include: Jewish liberalism, political Zionism, Yiddishist autonomism, messianic quietism, and other views. We will read mostly primary sources, including texts by: Hermann Cohen, Theodore Herzl, Chaim Zhitlowsky, Franz Rosenzweig, Leo Strauss, Hannah Arendt, and many others.

**Requirements/Evaluation:** six short (1-2 pages) response papers; two 6- to 8-page papers, each analyzing a different view in depth; a final 18- to 20-page paper that incorporates the two previously submitted 6-8 page papers, but also compares the two views and adjudicates between them

**Prerequisites:** none

Justice and Law Studies is an interdepartmental program designed to give students a background in and framework for understanding the ways that philosophers, government officials, and others think about justice, and the related ways in which societies marshal power and implement law. This liberal arts program provides tools for thinking critically and arguing about what justice might entail, how it works in practice, and how rules, aspirations, laws, and norms evolve over time and in different parts of the world.

THE CONCENTRATION

The concentration in Justice and Law Studies consists of six courses: an interdisciplinary introductory course, four electives taken from at least two departments, and a senior seminar. Electives are listed below. Other courses, not listed below, may be approved by the Chair.

Students may declare a program concentration at any point during their academic career.

Senior Seminar

In 2018-19, the senior seminar will be *The Unwritten Constitution* taught by Professor Hirsch.

STUDY ABROAD
Students who study abroad should consult with the program chair to ensure that they can complete the requirements. Courses abroad may qualify as JLST electives if appropriate.

**JLST 101 (S) Introduction to Justice and Law**

This course will examine various aspects of America's legal system, including its historical and constitutional underpinnings; the processes of resolving disputes, e.g., trials, plea-bargaining, and civil settlement; and the roles of diverse participants in the system, e.g., judges, jurors, litigants, lawyers, and legislators. The course will emphasize the deeply interdisciplinary nature of law, exploring the law's intersections with politics, history, economics, anthropology, statistics, psychology, philosophy, art, sports, science, religion, and cyberspace.

**Class Format:** lecture-discussion

**Requirements/Evaluation:** three papers, a final exam, and class participation; attendance is mandatory; Williams' honor code applies to all assignments

**Prerequisites:** none

**Enrollment Limit:** 40

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

**Spring 2023**

LEC Section: 01    MWF 11:00 am - 12:15 pm    Alan Hirsch

**JLST 272 (S) Free Will and Responsibility (WS)**

**Cross-listings:** PHIL 272  JLST 272

**Secondary Cross-listing**

Our practice of holding people responsible seems justified as long as their choices are free. But when does a choice qualify as free? Must it be unaffected by any outside influences? If so, freedom may seem impossible since we're all deeply influenced by factors ranging from the general laws of nature to specific features of our genetic endowment and social environment (including religion, political ideology, and advertising). These affect not only our particular choices but also, more fundamentally, who we are and what we value. The real question, then, seems to be whether, and how, free choice is possible amidst all of these influences. We'll attempt to answer this question by examining recent philosophical work on the nature of free will and responsibility.

**Class Format:** This tutorial will meet remotely by Zoom on a fixed weekly schedule agreed to by the instructor and participants.

**Requirements/Evaluation:** Five tutorial papers (5-6 pages in length) and five critiques (2-3 pages in length)

**Prerequisites:** one PHIL course

**Enrollment Limit:** 10

**Enrollment Preferences:** current and prospective Philosophy majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 272 (D2) JLST 272 (D2)

**Writing Skills Notes:** Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating weeks, evenly spaced throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

**Attributes:** PHIL Contemporary Value Theory Courses

Not offered current academic year
JLST 397 (F) Independent Study: Legal Studies
Legal Studies independent study. Open only under the supervision of a member of the Legal Studies Advisory Committee.

Grading: yes pass/fail option, yes fifth course option
Distributions: (D2)

Not offered current academic year

Spring 2023
IND Section: 01 TBA Alan Hirsch

JLST 401 (S) The Unwritten Constitution

"The eight thousand words of America's written constitution only begin to map out the basic ground rules that actually govern our land." So begins Akhil Amar's book America's Unwritten Constitution. Amar recasts the debate over whether America has a "living Constitution," a debate usually revolving around whether change in constitutional meaning requires resort to the formal amendment process or can be achieved through judicial interpretation. Amar supports the latter view, but proposes something far-reaching: history itself effectively amends the Constitution. Thus, for example, he argues that speeches by Martin Luther King and precedents set by George Washington, as well as the daily activities and assumptions of ordinary Americans, have become constitutional subtext requiring consideration when we interpret the Constitution. Is that notion convincing? Preposterous? A healthy way of understanding the inevitable intersection of law, history, and politics? A transparent excuse to read one's own views into the Constitution? Through a careful reading of Amar, and other important constitutional theorists, we will probe different ways of thinking about the supreme law of the land.

Requirements/Evaluation: three papers and class participation
Prerequisites: PSCI 216 or PSCI 217 (or consent of the instructor)
Enrollment Limit: 19
Enrollment Preferences: Justice and Law Studies concentrators
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2)

Spring 2023
SEM Section: 01 MWF 8:30 am - 9:45 am Alan Hirsch
The course offerings in Classics enable students to explore the ancient Greek, Roman, and Mediterranean worlds from various perspectives, including literature, history, art, archaeology, philosophy, and religion. Courses are of two types: language (Greek and Latin) and courses in which all the readings are in English translation (Classical Studies). The 100-level language courses are intensive introductions to Greek and Latin grammar and reading skills; the 200-level language courses combine grammar review with primary readings from Greek or Latin texts of key historical periods; Latin 302 and the 400-level language courses are seminars that explore in depth selected authors or topics and the methods of analysis appropriate to each of them. Classical Studies courses offer introductions to and more specialized study of the literature, visual and material culture, history, and other aspects of the Greek and Roman worlds.

MAJOR

Majors and prospective majors are encouraged to consult with the department’s faculty to ensure a well-balanced and comprehensive selection of Classics courses appropriate to their individual interests. A course in ancient history is strongly recommended. Majors may also benefit from advice on courses offered in other departments that would complement their particular interests in Classics. A reading knowledge of French, German, and Italian is useful for advanced study in Classics and is required in at least two of these modern languages by graduate programs in classics, ancient history, classical art and archaeology, and medieval studies.

The department offers two routes to the major: Route A emphasizes more coursework in Greek and Latin, while Route B emphasizes more Classical Studies courses.

Route A: (1) Six courses in Greek and/or Latin, with at least two 400-level courses in one language. (2) Three additional courses from the offerings in Greek, Latin, or Classical Studies or from approved courses in other departments and programs.

Route B: (1) One course each from any two of the following categories: literature (CLAS 101 or CLAS 102); visual and material culture (CLAS 209 or CLAS 210); history (CLAS 222 or CLAS 223). (2) Four courses in Greek or Latin with at least one at the 400-level, or the four-course sequence CLLA 101, 102, 201, and 302. (3) Three additional courses from the offerings in Classical Studies or from approved courses in other departments and programs.

Classics Colloquium: All Classics majors in residence are expected to participate fully in the life of the department through attendance at lectures and other departmental events.

THE DEGREE WITH HONORS IN CLASSICS

Students who wish to be considered for the degree with honors will normally prepare a thesis or pursue appropriate independent study in one semester and winter study of their senior year. The thesis or independent study offers students the opportunity to work in depth on a topic of their choosing and to apply and develop the techniques and critical methods with which they have become acquainted during their regular course work. It may also include relevant work with members of other departments. In order to write a thesis, students normally must have a minimum GPA of 3.3 in their major courses and must submit a thesis proposal that earns departmental approval before the end of the spring semester of their junior year. To be awarded the degree with honors in Classics, the student is required to have taken a minimum of ten semester courses in the department (not including the thesis or independent study) and to have demonstrated original or superior ability in studies in the field both through course work and through the thesis or equivalent independent study.

COURSE NUMBERING SYSTEM

Language Courses: The numbering of courses through the 300 level reflects the prerequisites involved. The only prerequisite for any 400-level course is Greek 201 or Latin 302. The rotation of 400-level courses is arranged to permit exposure, in a three- to four-year period, to most of the important periods and genres of Greek and Latin literature. Students may enter the rotation at 100-level, 200-level, or 300-level, depending on previous experience.

Classical Studies Courses: The numbering of these courses does not reflect a strict sequence, and most of them do not assume prior experience in Classics or a cross-listed field. The following pairs of courses offer excellent introductions to key areas of study within Classics: CLAS
STUDY AWAY

We strongly encourage Classics majors to study away in their junior year, at programs in Italy (especially the semester-length program at the Intercollegiate Center for Classical Studies in Rome), at programs in Greece (especially the College Year in Athens, which students need only attend for one semester), and in the Williams at Oxford Program. Our majors have also had excellent Classics experiences in other study-abroad programs in Italy and Greece and at various universities in Europe and the United Kingdom. In addition, we encourage students to take advantage of opportunities available in the summer: study abroad programs in Italy and Greece, archaeological digs, or even carefully planned individual travel to sites in Greece, Italy or other areas of the ancient Mediterranean world. When the college cannot do so, the department may be able to provide some financial support for summer study abroad. The department’s faculty are always available to advise students, the chair has materials to share, and students can visit the department’s website for information and links to helpful sites. Majors who are considering studying away should especially consult with faculty members about the implications for language study.

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g., syllabi and/or course descriptions), though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Complete syllabus and course description, including readings/assignments.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

No.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

No, but students should consult with the department about language sequences.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

None to date.

CLLA 101 (F) Introduction to Latin

This is a full-year course on the fundamentals of the Latin language. We focus throughout on learning grammar and vocabulary, and we regularly incorporate selections from literature, inscriptions, and other sources. Over time, we gradually increase the emphasis on reading selections from Latin poetry (e.g., Ovid's Metamorphoses) and prose (e.g., Piny's Letters).

Requirements/Evaluation: frequent quizzes, classroom exercises, two midterms, a final project

Prerequisites: none; this course is designed for the student with no previous preparation in Latin or with only a little Latin who wishes a refresher; students with some previous experience in Latin may want to enroll in CLLA 102 only (consult the department)

Enrollment Limit: 15

Enrollment Preferences: Classics majors or intended Classics majors, first years and sophomores

Expected Class Size: 8-10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: credit granted only if both semesters (CLLA 101 and 102) are taken
Distributions: (D1)

Fall 2022
LEC Section: 01  MWF 11:00 am - 12:15 pm  Nicole G. Brown

CLLA 102 (S) Introduction to Latin
This is a full-year course on the fundamentals of the Latin language. We focus throughout on learning grammar and vocabulary, and we regularly incorporate selections from literature, inscriptions, and other sources. Over time, we gradually increase the emphasis on reading selections from Latin poetry (e.g., Ovid's *Metamorphoses*) and prose (e.g., Piny's *Letters*).

Class Format: recitation/discussion
Requirements/Evaluation: frequent quizzes, tests, classroom exercises, and a final exam
Prerequisites: CLLA 101 or permission of department
Enrollment Limit: 18
Enrollment Preferences: Students who have completed CLLA 101
Expected Class Size: 10-12
Grading: yes pass/fail option, yes fifth course option
Unit Notes: credit granted only if both semesters (CLLA 101 and 102) are taken
Distributions: (D1)

Spring 2023
LEC Section: 01  MWF 11:00 am - 12:15 pm  Nicole G. Brown

CLLA 201 (F) Intermediate Latin: The Late Republic
This course aims to strengthen skills gained in previous study. In order to develop greater fluency and familiarity with classical Latin, we will read, translate, and analyze Cicero's *Pro Caelio* and selected short poems of Catullus. Both authors are brilliant stylists, though each writes in a very different mode. Taken together, these texts offer an excellent introduction to the expressive capacity of Latin in prose and verse. They also open up intriguing overlapping perspectives on the social, sexual, and political mores of late Republican Rome. We will consider the cultural context and implications of these texts as time permits.

Requirements/Evaluation: Engaged participation in class, occasional quizzes and short written assignments, a midterm and final exam
Prerequisites: CLLA 101-102 or 3-4 years of Latin in secondary school; consult the department
Enrollment Limit: 12
Enrollment Preferences: Classics majors and prospective majors
Expected Class Size: 10
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

Fall 2022
SEM Section: 01  MWF 10:00 am - 10:50 am  Amanda R. Wilcox

CLLA 302 (S) Vergil's Aeneid
This course is a comprehensive introduction to Vergil's *Aeneid*. Students will develop their ability to read and translate the Latin text of the poem, while at the same time exploring the major interpretive issues surrounding the definitive Roman epic. Through a combination of close reading and large-scale analysis, we will investigate the poem's literary, social, and political dimensions with special attention to Vergil's consummate poetic craftsmanship.

Requirements/Evaluation: Class participation, a midterm exam, a final paper, and a final exam.
Prerequisites: CLLA 201 or permission of instructor
CLLA 403 (S) The Invention of Love: Catullus and the Roman Elegists
This course will explore the development of Latin love poetry in the first century BCE. Beginning with Catullus, we will examine the influence of Greek lyric poetry on the evolution of the genre as well as Roman attitudes toward love exhibited in other literature of the Late Republic. We will then turn to the full development of the elegiac form in the love poems of Propertius, Tibullus, and Sulpicia. Finally, we will explore the transformation of the genre in Ovid's Amores. The goal throughout is to investigate the conventions, innovations, and problems of expressing personal desire and longing amid the social and political upheaval of the transition from Republic to Principate.

Class Format: This course will be offered hybrid, with remote and in-person students joining synchronous meetings together over zoom. The exact logistics of this format may be adjusted in consultation with enrolled students.

Requirements/Evaluation: evaluation will be based on class participation, a midterm exam, a final paper, and a final exam
Prerequisites: CLLA 302 or permission of instructor
Enrollment Limit: 12
Enrollment Preferences: Classics majors
Expected Class Size: 10-12
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)
Not offered current academic year

CLLA 405 (S) Livy and Tacitus: Myth, History and Morality in Ancient Rome
We will begin the semester in mythical Rome by reading selections from Book 1 of Livy's history in which Roman values, practices and institutions are given their origin stories, and the mythical figures of Rome's past are established as moral exempla for Rome's present. We will examine how Livy deploys the storyteller's art to excite his readers' pathos, indignation and sympathy; we will examine as well how he constructs Rome's past through the filter of his own Augustan present. Writing more than a century after Livy, Tacitus offers a different and jaded view of Augustus and his legacy, one conditioned by his own experiences living through the terrors of the reign of Domitian. His compressed and fastidious prose is the vehicle for complex and gripping accounts of imperial scandals and tragedies as well as of individual acts of heroism and nobility. We will read primarily selections from Tacitus' Annals as well as selections from either his Germania or Agricola.

Class Format: discussion
Requirements/Evaluation: Evaluation will be based on class preparation and participation, an 8- to 10-page paper, a midterm, and a final exam
Prerequisites: CLLA 302 or permission of instructor
Enrollment Limit: 12
Enrollment Preferences: Classics majors
Expected Class Size: 6-8
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)
CLLA 406 (F) Horace's Odes
This course will explore the poetic delights of Horace's extraordinary experiment in crafting Latin personal verse using Greek lyric forms. We will immerse ourselves in the poems' intricate construction and examine how they engage such themes as love and friendship, landscape and memory, youth and old age, politics, and morality. At the same time, we will consider the variety of voices and perspectives within the poems and their complex relationship both to Greek and Latin poetic traditions and to Horace's own contemporary world. The goal throughout is to investigate the literary, social, political, and philosophical dimensions of the odes, as well as their consummate poetic artistry.

Requirements/Evaluation: class participation, a midterm exam, a final paper, and a final exam
Prerequisites: CLLA 302 or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: Classics majors
Expected Class Size: 10
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)
Not offered current academic year

CLLA 407 (S) Caesar and Cicero
The one a brilliant strategist, the other preeminent in the courts, Caesar and Cicero were both master politicians whose ambitions for their country and themselves brought them into bitter conflict. Their combined oeuvres provide compelling, detailed accounts of the events and personalities that ended the Roman republic and ushered in an era of prolonged civil war. Moreover, despite striking stylistic differences, their works jointly are regarded as the acme of classical Latin prose. In this course we will read extensive selections from Caesar's commentaries and Cicero's speeches and correspondence, aiming throughout at better understanding their rhetorical brilliance and pragmatic persuasive goals.

Class Format: discussion
Requirements/Evaluation: class participation, several short written assignments (such as article reviews), a midterm exam and essay of moderate length, plus a final exam and longer paper
Prerequisites: CLLA 302 or permission of instructor
Enrollment Limit: 12
Expected Class Size: 6-9
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)
Not offered current academic year

CLLA 408 (F) Roman Comedy
The comic plays that still survive all had their first productions within roughly forty years between 200 and 160 BCE, as Rome rapidly expanded its military, economic, and political reach beyond the Apennine peninsula. They present critically important evidence for how Roman literature and cultural identity developed in the second century, and they document formulas for slapstick action and low-brow jokes that remain in use even today. Staged in Greek costume and featuring ostensibly Greek characters, the comedies revel in mocking stereotypical Roman values but ultimately reassert them. Sometimes what the Romans found funny is all too familiar; sometimes it's shocking. Our main focus will be on the Mostellaria of Plautus, often translated as "The Haunted House." Characteristic of its genre, the Mostellaria focuses on generational conflict within a household, especially between father and son. To enrich our conversation, we will read several other comedies in translation as well as selected scholarly investigations of this play, its genre, and the historical context.

Class Format: Discussion/recitation. For the fall of 2020, this course will be taught online. The seminar will meet at the regularly scheduled time twice per week.
Requirements/Evaluation: Evaluation will be based on class participation, several written assignments of varying length, and possibly short quizzes as well as a midterm exam and a final exam and/or essay.
Prerequisites: CLLA 302 or permission of instructor
Enrollment Limit: 12
Enrollment Preferences: If the course is oversubscribed, preference will be given to majors and potential majors in Classics and Comparative Studies.
CLLA 409  (F) Seneca and the Self
This course considers ethical and literary dimensions of self-fashioning, self-examination, and the conception of selfhood in the Stoic philosophy of the younger Seneca through close reading of extensive selections from his philosophical works and tragedies. The focus of this course lies squarely in the first century CE and on the analysis of Seneca's own texts. We begin, however, with an introduction to the ethics of Roman Stoicism through the persona theory of Panaetius as transmitted by Cicero's De Officiis. Moreover, we will read and discuss reflections on selfhood from some of Seneca's most famous philosophical and literary heirs, including Montaigne, Emerson, and Foucault, both to enrich our understanding of his work and to gain an appreciation of his considerable influence on later writing about the self.
Requirements/Evaluation: class participation, several short written and oral assignments, midterm and final exams, and a final paper
Prerequisites: CLLA 302 or permission of instructor
Enrollment Limit: 12

Fall 2022
SEM Section: 01  TF 2:35 pm - 3:50 pm  Amanda R. Wilcox

CLLA 414  (F) Vergil’s Eclogues and Georgics
This course will explore the two major works of Vergil that precede the Aeneid: the Eclogues, a series of ten pastoral poems that range widely across personal, political, and mythological themes; and the Georgics, a longer didactic poem in four books that uses an agricultural framework to examine issues of life, death, power, suffering, and love. The goal throughout is to investigate the literary, political, and social dimensions of the poems with special attention to their relationship to earlier models, as well as their exquisite poetic craftsmanship
Requirements/Evaluation: class participation, a midterm exam, a final paper, and a final exam
Prerequisites: CLLA 302 or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: Classics majors

CLLA 415  (S) Ovid’s Metamorphoses
This course will explore Ovid's greatest work, an epic poem in fifteen books entitled Metamorphoses. Ovid's poem narrates the story of the world from its beginning down to his own day, the reign of Augustus, via a series of tales closely woven together through the theme of change. We will translate and discuss large portions of the Latin text along with selections from contemporary scholarship in order to consider the poem in its original political and cultural context as well as its relationship to earlier models and its post-classical reception.
Requirements/Evaluation: class participation, a midterm exam, a final paper, and a final exam
Prerequisites: CLLA 302 or permission of instructor
Enrollment Limit: 12
Enrollment Preferences: Classics majors
Expected Class Size: 10
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

Not offered current academic year
Latina and Latino Studies is an interdisciplinary, comparative, and relational field of study that examines the histories, representations, and experiences of Latinas, Latinos, and Latinx in the United States. Latinas, Latinos, and Latinx include peoples who come from or whose ancestors come from Latin America and the Spanish-speaking Caribbean. The program seeks to cover the widest range of experiences, encompassing Mexican-Americans, Puerto Ricans, Cubans, and Dominicans, as well as migrations from a wide variety of Central and South American countries.

Courses, most of which use a comparative and relational approach, seek to provide students with the tools to continue their work in areas of their particular interest. Focusing on a diverse group with a long history in the United States, which is also one of the fastest-growing populations in the contemporary era, provides an opportunity to study complex dynamics globally and within the context of the United States. The program examines topics such as the political and economic causes of migration, the impact of globalization, economic incorporation, racialization, the formation and reformulations of identities and communities, religious and spiritual practices, the uses of urban spaces, inter-ethnic relations, artistic expression, aesthetics, and visual and popular culture.

THE CONCENTRATION
The concentration in Latina/o Studies requires five courses. Students are required to take the introductory course (LATS 105), one 400-level Latina/o Studies seminar, and three electives. Two electives must be core electives, and one elective can be a related course in Comparative Race and Ethnic Studies or in Countries of Origin and Transnationalism. The three electives must include two different areas of study, and at least one elective must be at the 300 or 400 level. Additional courses may be approved by the Chair. Students, especially those considering graduate work or professional careers in the field, are encouraged to enroll in Spanish language courses at Williams.

Required course:

One of the following 400-level seminars:

HIST 470 / LATS 470(S) SEM Latinx Migrations: Stories and Histories
Taught by: Carmen Whalen
Catalog details

LATS 409 / WGSS 409 / AMST 411 SEM Transnationalism and Difference: Comparative Perspectives
Taught by: Maria Elena Cepeda
Catalog details

LATS 410(F) SEM Arquivistas: An Archival Storytelling Course
Taught by: Nelly Rosario
Catalog details

LATS 420 / ENVI 421 SEM Latinx Ecologies
Taught by: Jacqueline Hidalgo
Catalog details

Two of the following core electives:

HIST 385 / LATS 385(F) SEM Latinx Activism: From the Local to the Transnational
Taught by: Carmen Whalen
Catalog details

LATS 105(F) LEC Latina/o Identities: Constructions, Contestations, and Expressions
LATS 114 / AMST 114 SEM Of Caravans and Narcos: U.S. Media Narratives about Central and South America
Taught by: Edgar Sandoval, Carmen Whalen
Catalog details

LATS 203 / ARTH 203 / WGSS 203 / AMST 205(F) LEC Chicana/o/x Film and Video
Taught by: Maria Elena Cepeda
Catalog details

LATS 219 / REL 215(F) SEM Religion & Bible in Latinx Literature, Memoir, Art & Film
Taught by: C. Ondine Chavoya
Catalog details

LATS 221 / REL 224(S) SEM U.S. Latinx Religions
Taught by: Efrain Agosto
Catalog details

LATS 222 / ENGL 252(F) LEC Ficciones: A Course on Fiction
Taught by: Nelly Rosario
Catalog details

LATS 224 / AMST 224 / REL 224(S) SEM U.S. Latinx Religions
Taught by: Efrain Agosto
Catalog details

LATS 230(S) LEC Cities, Suburbs, and Rural Places
Taught by: Edgar Sandoval
Catalog details

LATS 232 / ENGL 232(S) SEM We the People in the Stacks: Democracy and Literatures of Archives
Taught by: Nelly Rosario
Catalog details

LATS 240 / COMP 210 / AMST 240(S) SEM Latina/o/x Language Politics: Hybrid Voices
Taught by: Maria Elena Cepeda
Catalog details

LATS 253 / REL 292 LEC Religion and Politics in the Caribbean and the Diaspora: Puerto Rico and Cuba
Taught by: Efrain Agosto
Catalog details

LATS 286 / HIST 286 LEC Conquests and (Im)migrations: Latina/o History, 1848 to the Present
Taught by: Carmen Whalen
Catalog details

LATS 313 / AMST 313 / WGSS 313 / AFR 326(S) SEM Gender, Race, and the Power of Personal Aesthetics
Taught by: Maria Elena Cepeda
Catalog details

LATS 315(S) SEM Research Design in Geography: Social Science Perspectives
Taught by: Edgar Sandoval
Catalog details

LATS 316 SEM The Graphic Narrative: A “Global South” Perspective
Taught by: TBA
Catalog details

LATS 330(S) SEM DNA + Latinx: Decoding the “Cosmic Race”
Taught by: Nelly Rosario
Catalog details

LATS 335(F) LEC Contemporary Immigration Landscapes
Taught by: Edgar Sandoval
Catalog details

LATS 344 / AMST 361 / WGSS 361(F) SEM Marking Presence: Reading Disability in/to Latina/o/x Media
Taught by: Maria Elena Cepeda
Catalog details

LATS 346 / AMST 346 SEM Latinas/os and the Media: From Production to Consumption
Taught by: Maria Elena Cepeda
Catalog details

LATS 347 SEM Feeling Latinx Cinema: No Popcorn Included

**THE DEGREE WITH HONORS**

Honors in Latina/o Studies may be granted to concentrators after an approved candidate completes an honors project, delivers a public presentation of the work, and is awarded an honors grade by their advisor and two other faculty readers. In consultation with the advisor and the chair, faculty readers may be from outside the Latina/o Studies Program.

The honors project will be completed over one semester plus winter study. It may consist of a conventional research thesis of 40-70 pages or of other forms of presentation (e.g., video, art, theater). It may also combine a shorter research thesis with another medium.

To be accepted as a candidate for honors in Latina/o Studies, a student must meet these criteria:

- Submit and earn approval of a project proposal in May of the junior year. The proposal should be no longer than 5 pages and should lay out the project’s aim and methodology, identify the student’s advisor for the work, and include evidence of competence in the necessary media for projects that include non-thesis forms.
- Achieve a grade point average generally of at least 3.33 in LATS courses at the time of application.
- Students admitted to the honors program must submit a 5-to 8-page revised proposal, with an annotated bibliography, by the second week of classes in the fall semester of their senior year. They should register either for LATS 493 in the fall semester and LATS 031 in Winter Study, or for LATS 031 in Winter Study and LATS 494 in the spring semester. These courses will be in addition to the 5 courses that make up the regular concentration.

**STUDY ABROAD**

Study abroad and other off-campus programs offer excellent opportunities for students to build on, and expand, the intellectual interests they develop as part of the Latina/o Studies concentration. Through their connections to various institutions in the U.S. and other nations, Latina/o Studies faculty can help place students in U.S. borderlands programs as well as programs in Mexico, Cuba, and other “countries of origin.” Any student seeking to include courses as part of a concentration in Latina/o Studies should feel free to contact the Program chair or other faculty. A maximum of 1 course taken away from Williams can count (as an elective) toward the completion of the concentration.

**FAQ**

- Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.
- **Can your department or program typically pre-approve courses for major/concentration credit?**
  - Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.
- **What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**
  - Course title and description. Although syllabus and description, including readings and assignments, would be preferable.
- **Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**
  - Yes. 1 of 5 for the concentration and can only count as an elective.
- **Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**
  - No.
- **Are there specific major requirements that cannot be fulfilled while on study away?**
  - Yes. Requirements that cannot be fulfilled: Intro Course, Senior Seminar, 2 Core Electives.
Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

No.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

None to date.

LATS 105  (F)  Latina/o Identities: Constructions, Contestations, and Expressions
What, or who, is a Hispanic or Latina/o/x? How have these shifting terms tried to encompass the identities and experiences of such large and diverse groups of peoples? In this course, we focus on the complex nature of "identity," as we delve into the interdisciplinary field that has emerged to give voice to groups that were too often excluded from or misrepresented in academic disciplines and discourses. Viewing identities as historically and socially constructed, we assess how racial, ethnic, class, and gendered identities take shape within specific contexts in the Hispanic Caribbean and Latin America, as well as in the United States. We examine the impact of (im)migration and the rearticulation of identities in the United States, as we consider that each group has a unique history, settlement pattern, community formation, and transnational activities. Identity is also a contested terrain. As immigrants and migrants arrive, the United States' policymakers, the media, and others seek to define the "newcomers" along with long-term Latina/o citizens. At the same time, Latinas/os rearticulate, live, assert, and express their own sense of identity. We examine these diverse expressions as they relate to questions of class, race, ethnicity, gender, sexual orientation, and national origins.

Class Format: This is a discussion based course.

Requirements/Evaluation: participation and several short papers (1-5 pages) throughout the semester

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Latina/o Studies concentrators

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Unit Notes: This is a required course for concentration in Latina/o Studies

LATS 114  (S)  Of Caravans and Narcos: U.S. Media Narratives about Central and South America  (DPE)

Cross-listings: AMST 114  LATS 114

Primary Cross-listing

What do contemporary U.S. media discourses about Central and South America reveal about relationships of power in the Americas? How does the systematic analysis of visual, textual, and sonic media discourse enhance our comprehension of broader social dynamics? How do South and Central Americans in the diaspora actively counter dominant media narratives about their communities? And what does it mean to center the unique histories, cultures, and political contexts of diasporic Central and South Americans within Latina/o/x Studies? Drawing from a wide range of scholarly materials and media platforms, this interdisciplinary course assumes a transnational approach to these issues, with an emphasis on how to conduct effective discourse analysis of everyday media texts. Above all, we will highlight the ways in which ethno-racial identity, gender, sexuality, class, and nation intersect to inform mainstream U.S. media narratives and our understandings of past and present modes of representation.

Class Format: discussion

Requirements/Evaluation: two short (5- to 7-page) essays; one class presentation; final take-home examination (5-7 pages)

Prerequisites: none
**Enrollment Limit:** 12  
**Enrollment Preferences:** LATS concentrators by seniority; AMST majors by seniority  
**Expected Class Size:** 12  
**Grading:** no pass/fail option, no fifth course option  
**Distributions:** (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AMST 114 (D2) LATS 114 (D2)

**Difference, Power, and Equity Notes:** This course encourages students to develop critical thinking skills regarding the intersection of categories of difference (including ethno-racial identity, gender, sexuality, class, and nation) employing a variety of scholarly materials and every day media texts. Students will be encouraged to consider past and current relationships of power across the Americas with an eye towards how attitudes towards Central and South Americans shape representations of these communities in the Global North.

**Attributes:** LATS Core Electives

**LATS 203 (F) Chicana/o/x Film and Video**

**Cross-listings:** AMST 205  WGSS 203  LATS 203  ARTH 203

**Primary Cross-listing**

Hollywood cinema has long been fascinated with the border between the United States and Mexico. This course will examine representations of the U.S.-Mexico border, Mexican Americans, and Chicanxs in both Hollywood film and independent media. We will consider how positions on nationalism, race, gender, identity, migration, and history are represented and negotiated through film. We will begin by analyzing Hollywood "border" and gang films before approaching Chicana/o/x-produced features, independent narratives, and experimental work. This course will explore issues of film and ideology, genre and representation, nationalist resistance and feminist critiques, queer theory and the performative aspects of identity. Through a focus on Chicana/o/x representation, the course explores a wide spectrum of film history (from the silent era to the present) and considers numerous genres.

**Class Format:** Discussion-oriented lecture class. In addition to class meetings and readings, students will be expected to watch 3-5 hours of film per week on GLOW or in the library.

**Requirements/Evaluation:** one short paper, mid-term exam, final exam and take home essays  
**Prerequisites:** none  
**Enrollment Limit:** 16  
**Enrollment Preferences:** Art majors; LATS concentrators  
**Expected Class Size:** 14  
**Grading:** yes pass/fail option, yes fifth course option

**LATS 219 (F) Religion & Bible in Latinx Literature, Memoir, Art & Film**

**Cross-listings:** LATS 219 REL 215

**Primary Cross-listing**

This course will examine how a broad, but selective, range of Latinx writers and artists -- particularly in fiction, film, visual arts, and biography -- depict, describe, and discuss religious themes, including from the Bible and other relevant "scriptures." Latinx-authored novels memoirs, and autobiographies, artwork by Latina/x visual artists, and films on Latinx themes and communities will be read and viewed to facilitate discussion about what it means to be religious and Latinx; how Latinx peoples read and depict their scriptures; and how such depictions promote or deter understanding of Latinidad in the U.S.A.

**Requirements/Evaluation:** In this course, students will read and write short essays about novels and memoirs (4-5 pages), critically analyze film and artwork in short papers (3-4 pages), and write a research paper (8-10 pages) that analyzes the nexus of Latinx religion and art, whether fiction, film, memoir, or the visual arts. Attendance, participation, Glow discussion forums, and written assignments will all constitute assessment tools for this course.

**Prerequisites:** No prerequisites.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students with at least one prior Religion course will be given preference if an enrollment overload. Also sophomores, juniors, and seniors will be given preference over first year students.

**Expected Class Size:** 15-20

**Grading:** yes pass/fail option, yes fifth course option

ENGL 252 (D1) LATS 222 (D2)

**Difference, Power, and Equity Notes:** Student work will encourage personal and cultural expression, with the opportunity to analyze the shaping of social differences, dynamics of unequal power, and processes of change.

**Attributes:** LATS Core Electives

---

LATS 224 (S) U.S. Latinx Religions

**Cross-listings:** AMST 224 REL 224 LATS 224

**Primary Cross-listing**

In this course, we will engage aspects of Latinx religious experiences, practices, and expressions in the United States of America. Given the plurality of Latinx communities and religious lives in the U.S.A., we can only consider select contexts that help us understand the challenges of studying and defining the "religious" and "hybridity" in Latinx contexts. We will survey certain selected religious traditions and practices --such as popular Catholic devotions to Guadalupe, crypto-Judaism, curanderismo, Latinx Muslims, and Santería--by focusing on particular moments of religious expression as elucidated in specific historiographies, ethnographies, art, literature, and film.

**Class Format:** discussion

**Requirements/Evaluation:** class participation, short writing exercises, a 3-page essay, a 5-page essay, and an 8-12-page final review essay/project

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** LATS concentrators and AMST and REL majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

LATS 230 (S) Cities, Suburbs, and Rural Places

Long associated with cities in the scholarly and popular imagination, immigrants have increasingly settled in U.S. suburbs. Through the lens of new destinations for (im)migrants, this course introduces spatial methods, perspectives, and concepts to understand cities, suburbs, and rural places and the relationships between these various spaces. We ask how geographically specific forces and actors shape these trends, as well as the spatially...
uneven outcomes of complex processes like globalization. This interdisciplinary course considers economic, social and cultural, environmental, and political approaches through a range of textual materials (academic, literary, popular). Rooted in urban, suburban, and rural geographies, as well as critical race geographies, we explore what these approaches are and what they add to our understanding of “new” im/migrant destinations and to Latinx lived experiences in these various spaces.

Class Format: This is a discussion course. While I will spend some time at the beginning of the class lecturing, most of the time will be spent in class discussions.

Requirements/Evaluation: Class participation with short discussion post responses, weekly in-class writing, three 4-8 page essays, a midterm, and a final examination. All writing materials and exams are based on coursework.

Prerequisites: None

Enrollment Limit: 25

Enrollment Preferences: LATS concentrators or those intending to become LATS concentrators

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

Attributes: LATS Core Electives
In this course we will focus on issues of language and identity in the contemporary cultural production and lived experience of various Latina/o/x communities. How are cultural values and material conditions expressed through Latina/o/x language and literature? How does Latina/o/x identity challenge traditional notions of the relationship between language, culture, and nation? In what ways might Latina/o/x linguistic practices serve as tools for social change? Departing from an overview of common linguistic ideologies, we will examine code-switching, bilingual education, recent linguistic legislation, and the English Only movement. Throughout the course we will survey texts culled from a variety of literary genres as well, including autobiography, novels, and poetry. Both directly and/or indirectly, these texts address Latina/o/x language politics, as well as the broader themes of power, community, ethno-racial identity, gender, sexuality, class, and hybridity.

Requirements/Evaluation: participation, two essays, final written reflection

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: Latina/o Studies concentrators, American Studies majors, Comparative Literature majors by seniority

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

LATS 253 (S) Religion and Politics in the Caribbean and the Diaspora: Puerto Rico and Cuba

Cross-listings: LATS 253 REL 292

Primary Cross-listing

This course explores the role of religion in Caribbean history and politics, with a focus on Puerto Rico and Cuba. These Caribbean islands have lived out contested colonized histories and experiences, as well as diasporic realities on the US mainland. The US government and military have played a significant role in both since the turn of the last century, forcibly shaping their economies and politics. Religion, particularly the Protestant missionary enterprise since the US invasions in 1898, has also shaped histories and politics on the islands and throughout their diasporas. We will explore the role and impact of Protestant religion in these historically indigenous, African descendant, and Roman Catholic religious spaces, as well as how these religious engagements and theologies impacted migration and the creation of diasporic communities in the US. We will analyze the role of religion in imperialist endeavors, as well as in solidarity movements. Puerto Rican and Cuban historical luminaries, such as Pedro Albizu Campos and Jose Marti, who struggled against Spanish colonialism in Puerto Rico and Cuba respectively, had not only political but religious visions for better prospects for their homelands. By understanding the intertwining of religion and politics in Puerto Rico, Cuba and their diasporic communities, we will have the tools to consider the implications for other Caribbean nations, such as the Dominican Republic, as well as other Latin American countries that have experienced US interventions and the creation of diasporic communities.

Class Format: This course will follow a discussion format, in which students are expected to come to class prepared to address the assigned readings, to have completed short assignments in preparation for discussions, to make presentations to the class, and/or to lead discussions.

Requirements/Evaluation: Evaluation in this course will be based on class participation, short 1 to 2-page writing assignments every other week based on readings and assigned videos/films; a five-page midterm essay on an aspect of Puerto Rican or Cuban political/religious reality discussed in class, and final 7-page research essay on a theme in the course agreed upon by student and professor.

Prerequisites: None

Enrollment Limit: 25

Enrollment Preferences: LATS concentrators and Religion majors, and those with expressed interest in these fields

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)
This course is cross-listed and the prefixes carry the following divisional credit:
LATS 253 (D2) REL 292 (D2)

Attributes: LATS Core Electives

Not offered current academic year

LATS 285 (F) The Bible and Migration: Latinx Perspectives

Cross-listings: REL 286  LATS 285

Secondary Cross-listing

This course seeks to understand migration in the current historical moment, around the globe but especially on the US border. The lenses through which we will explore migration include Religion, with special focus on the Christian Bible. We will explore instances of and reflections on migration in the Bible, as well as various interpretations of the Bible emerging today in debates over migration. The course will approach US migration from the perspective of Latinx communities in the US - historically, culturally, politically, and religiously. Readings will include: The Bible, monographs and essays on the Bible and Migration, especially from the perspectives of Latinx authors and thinkers.

Requirements/Evaluation: Participation in class discussions; two to three short essays (3-5 pages each) analyzing selected readings; a longer final research paper (7-10 pages) on an aspect of Bible and Migration of interest to the student defined in consultation with the professor.

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Religion majors and Latinx Studies concentrators, and those interested in these areas of study

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

LATS 286 (F) Conquests and (Im)migrations: Latina/o History, 1848 to the Present  (DPE)

Cross-listings: LATS 286  HIST 286

Primary Cross-listing

The first Latinx communities were formed in 1848 when the United States conquered half of Mexico's territory. In 1898 the United States annexed Puerto Rico and has retained sovereignty to this day. These early conquests and continuing im/migrations created Mexican and Puerto Rican communities in the United States. U.S. imperialism continued to shape the im/migrations that created Cuban, Dominican, Salvadoran, Guatemalan and other Latinx communities in the United States. This course explores U.S. military, political, and economic interventions and their impact on im/migrations and the making of Latinx communities. We also explore the impact of U.S. employers' and the U.S. government's recruitment of low wage workers in shaping im/migrations, destinations, and the formation of Latinx working-class communities. Im/migration and refugee policies have long defined who is eligible to enter and how, as well as who is deemed eligible for citizenship and belonging. Within this context, Latinas and Latinos have developed survival and family reunification strategies for themselves, their families, and their communities.

Class Format: This course is a discussion format. It will be offered in a "hybrid" format with synchronous class meetings and group discussion sections, offered in-person and remote.

Requirements/Evaluation: Class participation with short 1-2 page writing assignments; two 4-5 page essays, and a final 5-7 page essay. All writing assignments are based on course materials.

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: LATS concentrators, History majors, or those intending to become concentrators or majors, seniors

Not offered current academic year

LATS 313 (S) Gender, Race, and the Power of Personal Aesthetics

Cross-listings: WGSS 313 AFR 326 AMST 313 LATS 313

Primary Cross-listing
This course focuses on the politics of personal style among women and females of color in an era of viral video clips, the 24-hour news cycle, and e-commerce sites dedicated to the dermatological concerns of "minority" females. With a comparative, transnational emphasis on the ways in which gender, sexuality, ethno-racial identity, neoliberal capitalism and class inform standards of beauty and ideas about the body, we will examine a variety of materials including commercial websites, podcasts, histories, personal narratives, ethnographies, sociological case studies, and feminist theory. Departing from the assumption that personal aesthetics are intimately tied to issues of power and privilege, we will engage the following questions: What are the everyday functions of personal style among women and femmes of color? Is it feasible to assert that an easily identifiable "African American," "Latina/x," "Arab American" or "Asian American" female aesthetic exists? What role do transnational media play in the development and circulation of popular aesthetic forms? How might the belief in personal style as activist strategy complicate traditional understandings of feminist political activity?

Requirements/Evaluation: participation, one student-led discussion period, two written essays of 5-7 pages, final written reflection.
Prerequisites: LATS 105, AMST 201, AFR 200, WGSS 101 or permission of instructor; first year students are not permitted to take this course.
Enrollment Limit: 12

Enrollment Preferences: Latina/o Studies concentrators, American Studies majors, Africana Studies majors, and Women's, Gender and Sexuality Studies majors by seniority. If the class is overenrolled students may be asked to submit a brief writing sample.

LATS 315 (S) Research Design in Geography: Social Science Perspectives (WS)

How do you design a research project? Which methods of data collection and analysis are appropriate for research questions in Latinx Studies? This course provides an introduction to the process of designing and carrying out a research project, including related to Latinidades, or a plurality of Latinx identities. It introduces students to how social science knowledge is produced to understand the research process, how research emerges, and how we affect research. Course objectives for students are: 1) to design social science research effectively; 2) to critically evaluate the research design of others; 3) to strengthen their academic research and writing skills; and 4) to develop an appreciation for how knowledge is acquired, organized, and communicated. Students will iteratively develop an original research proposal involving several pieces of synthesis. Through applying different research methods to case studies in Latinx Studies, students will understand that the complexity of the issues affecting Latinx communities requires
thoughtful research. Students will receive practical training in research protocols, organization methods, project management, and analytical approaches.

**Class Format:** This class will have short lectures with most of the time dedicated to group discussions. Students should expect to carry out research methods outside of class.

**Requirements/Evaluation:** Class participation. Assignments where students carry out research methods. Five writing assignments of various page lengths (1-10 pgs) compose students' research proposal project. Each component of the project will be revised by students after professor feedback. These revisions will culminate into a final paper (~20 pages). There will be a final exam.

**Prerequisites:** N/A

**Enrollment Limit:** 20

**Enrollment Preferences:** LATS concentrators or those intending to become LATS concentrators; juniors interested in a senior honors thesis;

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will have five writing assignments that build upon each other, from the statement of research topic, initial research questions, annotated bib, draft lit review, and proposed methodology. Students receive critical feedback on grammar, style, and argument and submit revised versions of their assignments. Students submit a completed research project proposal as their final paper.

**Attributes:** LATS Core Electives

**LATS 316 (F) The Graphic Narrative: A "Global South" Perspective** (DPE)

"[I]n a media-saturated world in which a huge preponderance of the world's news images are controlled and diffused by a handful of men' a stream of comic book images and words, assertively etched' can provide a remarkable antidote." --Edward Said, *Introduction to Palestine* by Joe Sacco. This course examines graphic narratives (and related texts and film) rooted in the "Global South," with particular emphasis on Latina/o and Latin American experiences. We will focus on how each author/artist deploys visual and narrative elements to express social, political, economic, and cultural realities. Regular assignments will offer students opportunities to create their own graphic narratives.

**Requirements/Evaluation:** attendance and class participation, short writing exercises, 4- to 5-page midterm paper (close-reading a text), 10- to 15-page final creative paper

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Latina/o Studies concentrators

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** Readings in the course offer students the opportunity to analyze the shaping of social differences, dynamics of unequal power, and processes of change.

**Attributes:** LATS Core Electives

---

**LATS 327 (S) Racial and Religious Mixture** (DPE)

**Cross-listings:** REL 314  LATS 327  AFR 357  AMST 327

**Primary Cross-listing**

The very term "mixture" implies that two or more distinct substances have been brought together. Distinctions of race and religion are social fictions; yet, the lived ramifications of these social fictions involve tense struggles over the boundaries of racial and religious communities. These boundaries are not just ideas but also practices. In the history of the Americas, mixed racial and religious identities and experiences have more often been the result of violent clashes than romantic encounters. Still, the romanticization of the New World as a geography that makes such mixtures possible
reaches back to the earliest days of Spanish conquest in the Americas. This course critically reconsiders varying ways that racial and religious mixtures have been imagined, defined, challenged, negotiated, and survived under imaginative and legal rubrics of mestizaje, creolization, transculturation, passing, syncretism, religious hybridity, and mixed race studies.

**Class Format:** mostly discussion

**Requirements/Evaluation:** participation, short writing exercises, a 3-page first essay, a 5- to 8-page second essay, and a 10- to 14-page final paper

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** seniors, concentrators, majors, those with prior relevant coursework

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

REL 314 (D2) LATS 327 (D2) AFR 357 (D2) AMST 327 (D2)

**Difference, Power, and Equity Notes:** Focusing on how different peoples have critically theorized and made meaning about and out of racial and religious differences and interconnections, this Difference, Power, and Equity course investigates the ways that knowledge about mixture and difference--and their roles in hierarchical distributions of social and political power--have been critically constructed and transformed.

**LATS 330 (S) DNA + Latinx: Decoding the “Cosmic Race” (DPE)**

Scientists working to assemble maps of the human genome have found a goldmine in the DNA of Latinx, Latin American, and other populations that derive ancestry from multiple continents. This interdisciplinary course explores Latinidades through a genealogical lens: What culture-specific issues emerge around history, identity, ethics, forensics, immigration, commerce, surveillance, art, science, and medicine? Through discussion, materials, and activities that engage personal, historical, and scientific perspectives, this course offers students the opportunity to explore the many codes embedded in the double-helix. Readings include scholarship out of Stanford University’s Bustamante Lab, *The Cosmic Race* by José Vasconcelos, *The Cosmic Serpent* by Jeremy Narby, *Bird of Paradise: How I Became Latina* by Raquel Cepeda, and *The Social Life of DNA: Race, Reparations, and Reconciliation After the Genome* by Alondra Nelson.

**Requirements/Evaluation:** attendance and class participation, writing exercises, 4- to 5-page midterm paper (close-reading a text), 10- to 15-page final writing portfolio

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Latina/o Studies concentrators

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**LATS 335 (F) Contemporary Immigration Landscapes**

What is the relationship between racial formations, transnational migrations, and power? How do geometries of power shape our relationship to place? This course examines geographies of transnational migration, bringing together insights from critical race theory, queer theory, Indigenous studies, and postcolonial theories to enrich our understanding of human geography. We will look at the use of ethnic and racial formations as a bridge between cultural and political geography in the contemporary US immigration landscape. Through an interdisciplinary exploration of ‘migration,’ we will examine
the depth and range of experiences of migrants and how these communities' lives are structured through various axes of difference, such as race, gender, sexuality, class, and documentation status. We will give attention to the variegated landscape of immigration enforcement and its relationship to issues of labor, political economy, and environmental justice, among others. Through materials that embrace both historical and contemporary perspectives, this course will help students develop a critical understanding of how space matters when considering transnational processes of migration as well as migrant communities' cultural place-making practices throughout the US. This course asks students to compare and contrast the intellectual genealogies covered and apply these theories of transnational racial formations to case studies that focus on political interventions for social justice (such as UndocuQueers in the immigrant justice movement).

Requirements/Evaluation: Class Participation (20%): Preparation for, and active participation in, class discussions. Short writing assignments weekly around class readings. Pair share (10%): Two engage class with thoughts for one 30 minute class segment. Essays (20% each): Two 4-5 page essays. Final Paper (30%): An examination of the articulation of Latinx migrations and belonging in a case study that interrogates and builds on a major course theme, approximately 12 pages double-spaced, plus references / endnotes / images.

LATS 341 (S) Performing Masculinity in Global Popular Culture (DPE)

Cross Listings: AMST 358 LATS 341 THEA 341 WGSS 347 SOC 340

Secondary Cross-listing

This course examines popular cultural contexts, asking what it means to be a man in contemporary societies. We focus on the manufacture and marketing of masculinity in advertising, fashion, TV/film, theater, popular music, and the shifting contours of masculinity in everyday life, asking: how does political economy change the ideal shape, appearance, and performance of men? How have products - ranging from beer to deodorant to cigarettes -- had their use value articulated in gendered ways? Why must masculinity be the purview of "males" at all; how can we change discourses to better include performances of female masculinities, butch-identified women, and trans men? We will pay particular attention to racialized, queer, and subaltern masculinities. Some of our case studies include: the short half-life of the boy band in the US and in Asia (e.g., K-Pop), hip hop masculinities, and the curious blend of chastity and homoeroticism that constitutes masculinity in the contemporary vampire genre. Through these and other examples, we learn to recognize masculinity as a performance shaped by the political economy of a given culture.

Requirements/Evaluation: masculinity reflections, mid-term essay exam (or quizzes), visual rhetorical analyses of pop culture images

Prerequisites: none

Enrollment Limit: 20

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AMST 358 (D2) LATS 341 (D2) THEA 341 (D1) WGSS 347 (D2) SOC 340 (D2)

Difference, Power, and Equity Notes: This course examines the construction of masculinity as it relates to intersecting identities such as race, sexuality, class, and global political economic considerations. Key to understanding masculinity are questions about the diversity of experiences of masculinity, cultural variations of gender norms, privilege, agency, patriarchy, heteronormativity, and interlocking systems of oppression.

LATS 344  (F) Marking Presence: Reading Disability into Latina/o/x Media  (DPE)

Cross-listings:  LATS 344  WGSS 361  AMST 361

Primary Cross-listing

This course spans Divisions I, II, and III in its exploration of the representation of disability and Latina/o/x identity in the contemporary US context. Employing Angharad Valdivia’s (2020) notion of “marking presence” to describe the intentional ways in which Latina/o/x subjects gain and hold on to mainstream media space, the class places the fields of Disability Studies, Latina/o/x Studies, Gender Studies and Media Studies into conversation. We address the following questions and others: What does media reveal to us about the place of disability and Latinidad in contemporary US life, particularly as these categories intersect with questions of gender, sexuality, national identity and citizenship? How might we read Latinidad and disability into media texts in which they are not otherwise centered? What are the advantages of deploying mainstream media presence as a claim to power for disabled Latina/o/x individuals, particularly those who are multiply marginalized? What are the limitations of such an approach? We will focus on these questions, as well as deploy various media examples (podcasts, social media, film, television and music) alongside scholarly texts to explore topics impacting the Latina/o/x communities such as the relationship between migration and trauma, the gendered archetype of the Latina "Loca,” disability in academia, temporality and disability ("Crip Time"), the politics of self-care amongst Latinas/xs in the neoliberal context, and the very legal, cultural, and social category of "disabled" itself within dominant society as well as Latina/o/x communities.

Requirements/Evaluation:  Two short (5-6 page) essays; One media analysis exercise; One final reflection letter.

Prerequisites:  None.

Enrollment Limit:  12

Enrollment Preferences:  Preference given to LATS concentrators, AMST majors and WGSS majors by seniority.

Expected Class Size:  12

Grading:  yes pass/fail option,  no fifth course option

LATS 346  (F) Latinas/os and the Media: From Production to Consumption

Cross-listings:  LATS 346  AMST 346

Primary Cross-listing

This interdisciplinary course focuses on the areas of Latina/o media production, policy, content, and consumption in an attempt to answer the following questions, among others: How do Latinas/os construct identity (and have their identities constructed for them) through the media? How can we best understand the complex relationship between consumer, producer, and media text? How are Latina/o stereotypes constructed and circulated in mass media? Where do issues of Latina/o consumer agency come into play? In what ways does popular media impact our understanding of ethno-racial identities, gender, sexuality, class, language, and nation?

Requirements/Evaluation:  student participation, one 2- to 3-page close reading exercise, and an original 10- to 12 page research paper conducted in stages

Prerequisites:  LATS 105 or permission of the instructor; no first-year students are permitted to take this course

Enrollment Limit:  12
Enrollment Preferences: Latina/o Studies concentrators or American Studies majors by seniority

LATS 347 (S) Feeling Latinx Cinema: No Popcorn Included

When we consider going to the movies to be pure entertainment and escapism, we may be wrong. This course will introduce students to Latinx films through a critical practice showcasing the experience of feeling, especially when matters of Latinidades, identity formation, and transculturation are at stake. If watching a film constitutes an affective and ideological transaction for spectators in the domain of the national cultural imaginary, how does the actual viewing materialize a lived and felt experience through interpellation and reception? Students will embark on a film festival to examine the history of Latinx representation and structures of feeling on the silver screen from the silent era to In the Heights and Spielberg’s West Side Story. Each film will be approached and tackled from specific points of entry and theoretical frames, such as border crossing and migration, education and assimilation, hegemonic stereotyping and cultural citizenship, fiction and history, race and ethnicity, the geo-politics of emplacement in the barrio and gentrification, feminist and queer subjectivity, and fame and the American Dream. Among the films to be analyzed in class are: El Norte, Coco, Sleep Dealer, La Ofrenda, La Mission, Popi, Chicago Boricua, Selena, Nothing Like the Holidays, and Vivo.

Class Format: discussion

Requirements/Evaluation: Evaluation will be based on attendance, class participation; short writing assignments; individual presentations and group discussions; a 12 page final paper.

Prerequisites: none

LATS 358 (S) Latinx Installation and Site-Specific Art (WS)

Cross-listings: LATS 358 ARTH 358

Primary Cross-listing

This course will explore the various forms of installation and site-specific artworks created by Latinx artists for both museums and public space. We will examine the ways in which Latinx artists have used space as a material in the production of artworks and how this impacts the works' meanings and the viewer's experience. Within the context of U.S. Latinx culture and history, we will connect notions of space with ideas about cultural citizenship, civil rights, and social justice. A variety of art forms will be studied, from traditional to experimental, including murals, sculpture, performance, video, and several multimedia, interactive, or participatory projects. While establishing a historical lineage and theoretical frameworks for analyzing this growing genre, we will pay particular attention to how these works engage urban space and often challenge the institutional assumptions of museums and curatorial practice. Likewise, we will examine the important debates associated with various public art and museum installation controversies.

Class Format: discussion

Requirements/Evaluation: two short papers, periodic research reports, final research paper, and presentation

Prerequisites: LATS 105 or ARTH 102 or permission of instructor; GRADART exempt from ARTH 102 prerequisite

Enrollment Limit: 12

LATS 385 (F) Latinx Activism: From the Local to the Transnational (DPE) (WS)

Cross-listings: LATS 385 HIST 385

Secondary Cross-listing

Latinas/os/x’s have long sought inclusion in the U.S. polity and society, while the meanings of inclusion and the means to achieve it have shifted historically. For Latinxs, activism is often shaped by the specific dynamics of each group’s migration to the United States and by their arrival into a particular context. Home country politics and transnational connections can remain important. Yet local activism to meet immediate needs and to address critical issues becomes important as well. Working within existing structures, Latinx communities have at times questioned and challenged those existing structures, as activists have addressed a wide variety of often intersecting issues. This course roots itself in the historical progression of Puerto Rican and Mexican-American activism, before turning to the social and political movements of the late 1960s and 1970s, as shaped by Puerto Ricans, Chicanos/as, Cubans, and Dominicans. The 1980s witnessed increased immigration from several Central and South American countries, arriving in the context of reactions to those political and social movements, as well as increased U.S. intervention in their countries of origin—a context that again shaped both local and transnational activism. Students' final projects will be anchored within this historical framing and within the lens of local and transnational activism, while moving forward in time to consider more contemporary dimensions of Latinx activism.

Class Format: This is a discussion-based and writing intensive course, so reading and full participation is important. Students will be expected to read
each other's work and to provide thoughtful and constructive feedback.

**Requirements/Evaluation:** Class participation and presentations; several 3-4 page essays; final paper of 12-15 pages, as well as proposal, bibliography, and drafts

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** History majors and Latina/o Studies concentrators, seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

LATS 385 (D2) HIST 385 (D2)

**Writing Skills Notes:** Several writing assignments of 3-4 pages provide the foundation for 12-15 page final papers. In consultation with the professor, students select a topic and submit a 3-4 page proposal with a bibliography. Students submit a draft for a workshop session with other students. A final presentation is another opportunity to hone arguments and use of evidence, as well as to receive feedback on revised drafts from the professor.

**Difference, Power, and Equity Notes:** This course examines how Latinx communities have sought inclusion in U.S. society and polity, in the face of marginalization based on race, ethnicity, class, gender, sexuality, and/or political perspective, as well as other intersecting markers of difference. Questions of difference, power, and equity are analyzed at the structural, community, and individual levels.

**Cross-listings:** AMST 403  LATS 403  AFR 333

**Secondary Cross-listing**

The most exciting and forward-thinking writing in the English language today is being done by formally experimental writers of color. Their texts push the boundaries of aesthetic form while simultaneously engaging questions of culture, politics, and history. This course argues not only for the centrality of minority experimental work to English literature but a fundamental rethinking of English literary studies so as to confront the field's imbedded assumptions about race, a legacy of British colonialism, and to make the idea of the aesthetic more open to ideas generated in critical race studies, diaspora studies, American studies, and those fields that grapple more directly with history and politics. In the critical realms of English, work by
minority writers is often relegated to its own segregated spaces, categorized by ethnic identity, or tokenized as "add-ons" to more "central" or "fundamental" categories of literature (such as Modernism, poetics, the avant-garde). Recent work by Asian American, African American, Native American and Latino/a writers challenges our assumptions and preconceptions about ethnic literature, American literature, English literature, formal experimentation, genre categorization, and so on. This writing forces us to examine our received notions about literature, literary methodologies, and race. Close reading need not be opposed to critical analyses of ideologies. Formal experimentation need not be opposed to racial identity nor should it be divorced from history and politics, even, or especially, a radical politics.

**Requirements/Evaluation:** one shorter paper (7-8 pp.), one final paper or creative project (10-12 pp.), two short response papers, a presentation, and participation

In the age of digital communications and mobile applications such as WhatsApp and Skype, transnational living has rapidly emerged as the norm as opposed to the exception. However, what does it really mean to "be transnational"? How are the lived experiences of transnational individuals and communities shaped by categories of difference such as gender, ethno-racial identity, sexuality, and class? What impacts do the growing number of transnational citizens and residents in the U.S. have on our understanding of "American" identity in the local, national, and global contexts? In this interdisciplinary seminar we will analyze recent theories regarding the origins and impacts of transnationalism. Particular attention will be paid throughout the semester to the intersections of gender, ethno-racial identity, sexuality, and class in connection with everyday transnational dynamics. The broad range of case studies examined includes Central American, Colombia, the Dominican Republic, Haiti, Indonesia, Jamaica, Mexico, the Middle East, and Peru.

**Class Format:** This course will follow a discussion format.

**Requirements/Evaluation:** student participation, an original 12-15 page semester-long research paper conducted in stages, and student presentation

**Prerequisites:** LATS 105, WGSS 101 or AMST 201; junior or senior standing

Archival storytelling: the "creative practice of resurfacing hidden, untapped, and untold historical treasures and reimagining that content in various storytelling presentations that speak to modern-day audiences" (Arbo Radiko). In this generative writing and critical-practice course, students explore/inhabit the role of writers and storytellers as preservers of history and culture. With a focus on documenting and/or reimagining Latinidades, the course invites students to address: the unique narrative forms archives may take beyond collections of artifacts; how archives can inform the creation--and definition--of literary work; the relationship between archives and power; information the archivist/storyteller may choose to include or omit, reveal or conceal; how the archivist/storyteller might practice what scholars Michelle Caswell and Marika Cifor call "radical empathy," one that takes into account the diverse affective roles and responsibilities of the: archivist, records creator, records subject, records user, and community member. The course is designed to help students address the above through assignments that build towards final projects. Through the creative process, students learn to: research, compile, and analyze materials from various open-access repositories; identify and write emergent stories from collected material; and present these stories to the public using narrative elements and tools in the digital humanities. Projects may include virtual exhibits, data stories, annotated maps, historical fiction, ekphrastic poetry, finding aids, and interactive timelines. Projects may also examine the Latinx experience on campus, building on archival efforts initiated by students for the LATS Program 15th Anniversary Exhibit at Williams College Library.

**Requirements/Evaluation:** Assignments and in-class exercises; attendance; participation; peer review

**Prerequisites:** n/a

**Enrollment Limit:** 19

**Enrollment Preferences:** LATS concentrators; students who haven't taken creative-writing courses but are interested in the topic; students interested in the digital humanities; students who have met their other curricular requirements

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**Writing Skills Notes:** Two five-page papers (each receiving critical feedback from professor on grammar, style, and argument); a midterm project proposal with critical feedback from professor and peers; one taxonomy glossary based on course readings and proposed project; one annotated bibliography; artist statement and notes on craft; one final paper submitted with corresponding creative project.

**Difference, Power, and Equity Notes:** This course examines various forms of difference, power, and equity related to creating and engaging archives. In exploring and creating archives themselves, students pay close attention to any omissions and concealments in the documentation of historical memory, particularly in relation to diverse Latinx experiences.

**Attributes:** LATS 400-level Seminars

**LATS 420 (S) Latinx Ecologies**

**Cross-listings:** LATS 420 ENVI 421

**Primary Cross-listing**

An August 2015 Latino Decisions poll found that Latinxs, more than other ethnic groups in the U.S.A., are deeply concerned about climate change and the "environment". How and why might some Latinxs be disproportionately impacted by climate change? How have a few distinct Latinx theorists and activists imagined and constructed ecology? How are struggles for environmental justice related to broader Latinx concerns with and constructions of place? This seminar will examine a few moments in distinct Latinx histories and geographies such as California migrant farmworkers and the struggle over pesticides, urban movements over waste management such as the Young Lords' garbage offensive, food justice movements and urban gardening, as well as literary and theological representations of affective and sacred ecologies such as Helena María Viramontes' *Their Dogs Came With Them* and Ecuadoran-U.S. ecofeminist Jeanette Rodríguez's theological texts. Evaluation will be based on class participation, presentations, annotated bibliography, short writing assignments, writing workshop participation, and a final 20-page research paper.

**Requirements/Evaluation:** class participation, presentations, annotated bibliography, short writing assignments, writing workshop participation, and a final 20-page research paper

**Prerequisites:** none

Secondary Cross-listing
This seminar examines connections between Latinx and Latin American art through a series of recent exhibitions organized as part of a Getty initiative entitled Pacific Standard Time: LA/LA that opened in 2017. While the chronological span for the overall project reaches from Pre-Colombian art to present, we will focus on modern and contemporary art after the 1960s and consider key themes of art and activism, borders and diaspora, globalization and modernism, and popular culture and science fiction in the visual arts. Diverse in scope, these shows explored important developments in the arts of the Americas from the late-20th and 21st centuries, including, abstraction, Chicano muralism, Conceptual art, craft, feminist art, Kinetic art, Modernist design and architecture, social practice, and queer activism. Students will pursue individual research projects directly related to the art exhibitions we study, and examine photography, performance, painting, sculpture (including installation and participatory art), and video by artists both canonical and lesser known. Student projects will analyze the critical responses to the exhibitions while also exploring the roles of archives, art criticism, and curatorial practice in contemporary art history.

Requirements/Evaluation: several short writing and research assignments, oral presentations, class participation, and a final research paper of 16-20 pages

Prerequisites: ARTH 102 (graduate students are exempt from the prerequisite)

Enrollment Limit: 15

Enrollment Preferences: senior Art majors and senior Latina/o Studies concentrators

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
ARTH 440 (D1) LATS 440 (D2)

Writing Skills Notes: There will be considerable focus on writing and peer-editing as a means of shaping critical thinking. We will treat writing as a process; revision is built into the syllabus. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: Course themes of art and activism, borders and diaspora, globalization and modernism in the visual arts and how they intersect with the exploration of difference, power, and equity and the various ways that artists have produced works and developed practices that critically probe this intersection. Through discussion, presentations, and writing assignments students will develop skills in analyzing artworks and exhibitions that respond to and/or document social inequality and social injustice.

Cross-listings: ARTH 462 AMST 462 ARTH 562 LATS 462

Secondary Cross-listing
In this course, we will study the visual arts and culture of California after 1960 and consider the region's place in modern art history. We will focus on a series of recent exhibitions organized as part of a Getty initiative entitled Pacific Standard Time. Diverse in scope, these shows explored important
developments in postwar art in California, including feminist art, African American assemblage, Chicano collectives, Modernist architecture, craft, and queer activism. In this seminar, we will pursue research projects directly related to the art exhibitions we study, and examine southern California conceptualism, photography, performance, painting, sculpture (including assemblage and installation), and video by artists both canonical and lesser known. Student projects will analyze the critical responses to the exhibitions, while also exploring the roles of archives, art criticism, and curatorial practice in contemporary art history.

**Requirements/Evaluation:** Several short writing and research assignments, oral presentations, class participation, and a final research paper of 16-20 pages written in stages over the course of the semester. The course will feature synchronous online class meetings with some small discussion groups. Student presentations will be recorded offline and posted to GLOW.

**Prerequisites:** ARTH 102 - Grad Art exempt from ARTH 102 prerequisite

**Enrollment Limit:** 12

**Enrollment Preferences:** senior Art major and senior Latina/o Studies concentrators

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**LATS 470 (S) Latinx Migrations: Stories and Histories (WS)**

**Cross-listings:** HIST 470 LATS 470

**Secondary Cross-listing**

Latinx migration histories are often told with sweeping data and within broad historical contexts. While these are important, the voices of the people leaving their home countries and coming to the United States can be lost or buried. During the 1970s, the emerging subfield of social history asserted the need to craft histories that took into consideration the everyday lives of everyday people. Oral history emerged a key tool in capturing the personal stories too often missed in historical archives. At the same time, Puerto Rican Studies, Chicano Studies, and later, Latinx Studies emerged to tell the histories of groups too often omitted from or misrepresented in the scholarship. These fields relied on traditions of testimonios or storytelling. This course focuses on Latinx oral histories, autobiographies, and other first person narratives to explore how people are impacted by and experience those broad historical contexts, as well as how the decisions they make and the actions they take shape those broad historical contexts. This course examines first person narratives in the context of specific Latinx groups in particular historical, geographical, and social contexts, while interrogating the methodological and interpretive challenges of working with oral histories and other first-person primary sources.

**Requirements/Evaluation:** class participation and presentations; short writing assignments; proposal, bibliography, and drafts of final paper; final paper of 15 to 20 pages

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** History majors and Latina/o Studies concentrators, seniors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**
Writing Skills Notes: This research seminar supports students as they define an appropriate topic, identify and use primary and secondary sources, and complete a 15-20 page final paper. Several short writing assignments focus on interpretations of primary sources and on honing in on scholars’ key arguments in secondary sources. The final paper is written in stages, including a proposal with a bibliography, a draft for workshopping with other students, and a final presentation along a revised draft.

Leadership Studies focuses on the universal phenomenon of leadership in human groups. Leadership Studies asks what leadership means within a wide variety of social contexts—whether in a family, a team, a theatre company, a philanthropy, a university, a multinational corporation, or a nation-state waging war. It seeks to understand the dynamics of the relationships between leaders and followers. It studies authority, power, and influence. It seeks to grasp the bases of legitimacy that leaders claim, and followers grant, in all of these relationships.

Through a wide range of courses in the social sciences and the humanities, the curriculum addresses a number of questions. How do we define leadership? What are the bases of leaders’ legitimacy in different historical contexts? How should we understand the variation between leaders emerging through tradition, charisma, and legal sanction? How do different types of leaders exercise and maintain their authority? What are the distinctive habits of mind of leaders in different cultural settings? What are the moral dilemmas that leaders across all settings face? What are the typical challenges to established leadership? How does one analyze the experiences of leaders in widely disparate contexts to generate systematic comparative understandings of why history judges some leaders great and others failures? How and why do these evaluations about the efficacy of leaders shift over time?

To meet the requirements of the concentration, students must complete one of the two sequences outlined below (6 courses total). Additional and/or substitute electives are offered each year; students should consult the course offerings in the catalog for the full list of elective offerings in a given year and contact the chair if they wish to suggest additional courses that might count toward the concentration.

**LEADERSHIP STUDIES—TRADITIONAL TRACK**

The introductory course:

LEAD/PSCI 125 Visionaries, Pragmatists, and Demagogues: An Introduction to Leadership Studies

One required course on ethical issues related to leadership, typically:

PHIL 119(S) SEM Justice, Democracy and Freedom
- Taught by: Jana Sawicki
  Catalog details

PSCI 203(F, S) SEM Introduction to Political Theory
- Taught by: Mark Reinhardt, Nimu Njoya
  Catalog details

Two core courses dealing with specific facets or domains of leadership, such as:

ARTH 501 / LEAD 301 / ARTH 401(S) SEM Museums: History and Practice
- Taught by: Michael Conforti
  Catalog details

ASTR 240 / LEAD 240 / STS 240(F) CON Great Astronomers and Their Original Publications
- Taught by: Jay Pasachoff
  Catalog details

HIST 207 / GBST 102 / ARAB 207 / LEAD 207 / JWST 217 / REL 239 LEC The Modern Middle East
- Taught by: Magnús Bernhardsson
  Catalog details

LEAD 205 / PSCI 212 LEC From Tocqueville to Trump: Leadership and the Making of American Democracy
Taught by: Mason Williams
Catalog details
LEAD 212 / HIST 393 SEM Sister Revolutions in France and America

Taught by: Susan Dunn
Catalog details
LEAD 285 / PSCI 257 / HIST 354(F) SEM The Revolutionary Generation: Galaxy of Leaders

Taught by: TBA
Catalog details
LEAD 320 / PSCI 320(F) SEM Heroes and Villains: Iconic Leadership and the Politics of Memory

Taught by: Mason Williams
Catalog details
LEAD 425 / PSCI 357(S) SEM Leadership and the Anxieties of Democracy

Taught by: Mason Williams
Catalog details
PSCI 215 / LEAD 215(S) SEM Race and Inequality in the American City

Taught by: Mason Williams

Taught by: George Crane
Catalog details
PSCI 345 / ASIA 345 SEM The Meaning of Life and Politics in Ancient Chinese Thought

One Leadership Studies Winter Study course (listed separately in the catalog)

Capstone course:

LEAD 425 Leadership and the Anxieties of Democracy

LEADERSHIP STUDIES—KAPLAN PROGRAM IN U.S. FOREIGN POLICY TRACK

An introductory course:

HIST 262 The United States and the World, 1776 to 1914

HIST 263 The United States and the World, 1914 to the Present

PSCI/LEAD 120 America and the World

LEAD/PSCI 125 Visionaries, Pragmatists, and Demagogues: An Introduction to Leadership Studies

One required course on issues related to American domestic leadership, such as:

LEAD 125 / PSCI 125(F) SEM Visionaries, Pragmatists, and Demagogues: An Introduction to Leadership Studies

Taught by: Mason Williams
Catalog details
LEAD 205 / PSCI 212 LEC From Tocqueville to Trump: Leadership and the Making of American Democracy

Taught by: Mason Williams
Catalog details
LEAD 258 / PSCI 258 SEM The Media and American Democracy

Taught by: Ted Gup
Catalog details
LEAD 285 / PSCI 257 / HIST 354(F) SEM The Revolutionary Generation: Galaxy of Leaders
Taught by: TBA
Catalog details

LEAD 320 / PSCI 320(F) SEM Heroes and Villains: Iconic Leadership and the Politics of Memory
Taught by: Mason Williams
Catalog details

PSCI 218 / LEAD 218 SEM The American Presidency
Taught by: Nicole Mellow
Catalog details

PSCI 310 / LEAD 332 SEM New York City Politics from the Blackout to Bloomberg
Taught by: Mason Williams
Catalog details

Three required courses dealing with specific facets of American foreign policy leadership, such as:

HIST 388 SEM Decolonization and the Cold War
Taught by: Jessica Chapman
Catalog details

HIST 389 / ASIA 389 / LEAD 389 SEM The Vietnam Wars
Taught by: Jessica Chapman
Catalog details

PSCI 225 / LEAD 225(S) LEC International Security
Taught by: Galen E Jackson
Catalog details

PSCI 262 / HIST 261 / LEAD 262 LEC America and the Cold War
Taught by: TBA
Catalog details

PSCI 266 LEC The United States and Latin America
Taught by: James Mahon
Catalog details

PSCI 364 TUT Noam Chomsky and the Radical Critique of American Foreign Policy
Taught by: James McAllister
Catalog details

One capstone course:

LEAD/PSCI 327 Leadership and Strategy

LEAD 330/PSCI 420 The Nuclear Revolution

LEAD/PSCI 365 U.S. Grand Strategy

PSCI 361 The CIA and American Foreign Policy

LEAD 425 Leadership and the Anxieties of Democracy

(There is no official Winter Study component to the American Foreign Policy Leadership track; students who wish to count a Winter Study course toward that track should contact the chair.)

For either track, students should check with the program chair to see if other courses not listed here might count as electives.

HONORS IN LEADERSHIP STUDIES

Although there currently is no Honors route in the Leadership Studies program, it often is possible for students pursuing the concentration to undertake an Honors project within their major disciplines on topics that enables them to develop and explore their interests in Leadership Studies. Faculty in the program are happy to discuss this possibility with concentrators and to help them develop suitable Honors thesis topics. In some cases, depending on the topic and the department involved, a faculty member in the program might also be able to serve as an official or unofficial co-supervisor for an Honors project in another discipline.

FAQ

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the program chair.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken
while on study away?

Course title and description.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

Not formally, but, typically, one course per semester abroad is counted toward the concentration.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes: the introductory course and the senior capstone.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes: the introductory course has historically been taught only in one semester (usually the fall).

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

None to date.

LEAD 120  (S)  America and the World

Cross-listings:  LEAD 120  GBST 101  PSCI 120  GBST 103

Secondary Cross-listing

This course will help students understand the US role in the world. US wealth and military power force its leaders to make choices that no other leaders in the world confront. Students will learn to evaluate the decisions that US leaders have made on a wide range of difficult foreign policy issues, including: rising Chinese power; Russian moves in Ukraine; nuclear proliferation to Iran; terrorist threats; humanitarian disasters in Syria and Libya; and long-term challenges like climate change. We will not only describe American involvement in various international issues but also seek to understand the reasons why the US perhaps should or should not be involved, and we will see why such careful reasoning only sometimes gains traction in actual US foreign policy debates. Finally, we will assess whether US foreign policy decisions are coherent - that is, whether the US can be said to follow a “grand strategy.” By the end of the course, students will develop their ability to think about foreign policy issues, improving their ability to participate in public life as engaged citizens.

Class Format: discussion

Requirements/Evaluation:  short papers, class participation, and final exercise

Prerequisites:  none

Enrollment Limit:  12

Enrollment Preferences:  first-years and sophomores

Expected Class Size:  12

Grading:  no pass/fail option, no fifth course option

Distributions:  (D2)

Not offered current academic year

LEAD 125  (F)  Visionaries, Pragmatists, and Demagogues: An Introduction to Leadership Studies

Cross-listings:  LEAD 125  PSCI 125

Primary Cross-listing

This course introduces students to the major issues in the study of leadership, a central concept in the study of politics. The first part of the course will
examine key theoretical problems that have occupied political thinkers from Plato and Confucius to Machiavelli and the American framers: What makes a leader successful? What kinds of regimes best serve to encourage good leaders and to constrain bad ones? What is the relationship between leadership and morality-can the ends justify the means? What functions does leadership fill, and what challenges do leaders face, in modern democratic states? The second half of the course will look at leaders in action, charting the efforts of politicians, intellectuals, and grassroots activists to shape the worlds in which they live. Case studies will include anti-slavery politics and the American Civil War; the global crises of the 1930s and 1940s; and the social movements of the 1960s and 1970s. In addition to active class participation, students will be expected to write a 5-page proposal for a research paper on a leader of their choice, a 10-page research paper, an in-class midterm exam, and a cumulative, in-class final exam.

Requirements/Evaluation: active class participation, 5-page research proposal, 10-page research paper, in-class midterm exam, and a cumulative in-class final exam

Prerequisites: none
Enrollment Limit: 25

Enrollment Preferences: first-year students and sophomores

LEAD 127 (S) America First? The Trump Era and the Future of World Politics

Cross-listings: LEAD 127 PSCI 127

Secondary Cross-listing

"America First" was a slogan and a perspective on foreign policy adopted by isolationists like Charles Lindberg in the 1930's. In the aftermath of Pearl Harbor and the Second World War, a strong bipartisan consensus emerged around the principles of liberal international internationalism and "America First" perspectives were marginalized in American politics. However, with the election of Donald Trump, the American presidency is now in the hands of someone who proudly claims the America first mantle. This course provides a historical and theoretical context for understanding what is unique about President Trump's approach to American foreign policy in the 21st century. Particular attention will be devoted to the contrast between the views of Trump and those of the American foreign policy establishment over issues such as NATO, nuclear proliferation, Russia, immigration, terrorism, free trade, and conflicts in the Middle East.

Requirements/Evaluation: two analytical essays, short response papers, and final group project

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: potential political science majors and leadership studies concentrators (foreign policy track)

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Not offered current academic year

LEAD 205 (S) From Tocqueville to Trump: Leadership and the Making of American Democracy (DPE)
Cross-listings: LEAD 205  PSCI 212

Primary Cross-listing

America's founders didn't mean to create a democracy. But since the Revolution, leaders have been fighting to make real for all Americans the promise of government of, by, and for the people. In this course, we will look at how leaders have marshaled ideas, social movements, and technological changes to expand the scope of American democracy--and the reasons they have sometimes failed. We will examine how founders such as Benjamin Franklin and James Madison envisioned the relation between the people and the government; how workers, African Americans, and women fought to participate in American politics; and how globalization, polarization, and inequality are straining American democracy and political leadership in the 21st century. We will examine leadership to better understand American democracy--and vice versa. We will ask: What explains why some leaders have succeeded where others have failed? Have some periods of American democratic politics been more amenable to particular kinds of leadership than others? What makes American political leadership distinctive in international comparison? Who, exactly, has been permitted to participate in American politics, and on what terms? How has the relation between the governors and the governed changed over time, and what factors and events have shaped those relations? How has America's democratic experiment compared with (and interacted with) democracy elsewhere in the world? Is America really a democracy at all?

Requirements/Evaluation: bi-weekly short writing assignments, term paper, midterm and final in-class exams

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Leadership Studies concentrators and Political Science majors

Expected Class Size: 25

Grading: no pass/fail option, no fifth course option

LEAD 212 (S) Sister Revolutions in France and America

Cross-listings: LEAD 212  HIST 393

Primary Cross-listing

In the late-eighteenth century, two revolutions burst forth—they were the most striking and consequential events in modern history, decisive turning-points that transformed society and politics. The American Revolution led to an enduring and stable democratic republic whereas the French Revolution was followed by a turbulent succession of Empires and restorations of the monarchy. France did not have a sustainable republic until 1870. We will analyze in detail and in depth the ideas and theories of the leaders of both revolutions in order to understand why the American Revolution took a moderate course and why the French Revolution took a more radical course and plunged into violence and terror. We will read the writings of Washington, Jefferson, Madison, Hamilton, Rousseau, Robespierre, Saint-Just, Tocqueville, Edmund Burke and others.

Requirements/Evaluation: three papers, several class presentations, and active participation in class discussions

LEAD 214 (F) The Economics of National Defense

Cross-listings: ECON 217  LEAD 214

Secondary Cross-listing

National defense is one of the largest components of the US Federal Budget (~15%) and remains a significant part of the nation's GDP (~3%). The study of defense economics in this course will apply principles of microeconomics and macroeconomics to analyze, within the context of national security strategy and policy, issues concerning resource allocation in wartime and peacetime, labor supply and demand, industrial organization and defense acquisition, and the formation and maintenance of alliances. While the focus of the course will be on economics, to provide context on what makes defense economics a special topic, we will also consider questions unique to the military such as how to deter conflict, how to fight wars, how to provide humanitarian assistance and protection to civilians in conflict or disaster areas, and how the national defense may adapt to issues like climate change. We will also consider historical examples from America's wars--e.g., the Civil War, World War 2, Vietnam, and the more recent conflicts in Iraq and Afghanistan. The plan is to use a variety of sources--academic materials, popular media such as news footage and films, and guest speakers--to provide a full-range of perspective on the course topics.

Class Format: Mix of lecture and discussion

Requirements/Evaluation: Individual Papers, Group Paper and Presentation, Midterm and Final Exam

Prerequisites: ECON 110 and ECON 120

Enrollment Limit: 25

Enrollment Preferences: Juniors and seniors

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option
LEAD 215  (S)  Race and Inequality in the American City
Cross-listings:  LEAD 215  PSCI 215

Secondary Cross-listing
In the past half-century, American cities have gotten both much richer and much poorer. The making of “luxury cities” has gone hand-in-hand with persistent, concentrated poverty, extreme racial segregation, mass incarceration, and failing public services-social problems borne primarily by people of color. This course will examine the political underpinnings of inequality in American cities, with particular attention to the racialization of inequality. Among the topics we will cover are: the structures of urban political power; housing and employment discrimination; the War on Crime and the War on Drugs (and their consequence, mass incarceration); education; and gentrification. We will ask: How have city leaders and social movements engaged with urban problems? How have they tried to make cities more decent, just, and sustainable? Under what circumstances has positive leadership produced beneficial outcomes, and in what circumstances has it produced perverse outcomes? We will engage primarily with political science, but also with scholarship in other disciplines, including sociology, history, geography, and legal studies, all of which share an interest in the questions we will be exploring. Students will leave this course with a deeper understanding of contemporary urban problems, a knowledge of the political structures within which those problems are embedded, and a better sense of the challenges and opportunities leaders face in contemporary urban America.

Requirements/Evaluation:  class participation; several short essays and a longer paper with presentation
Prerequisites:  none
Enrollment Limit:  25
Enrollment Preferences:  Political Science majors and Leadership Studies concentrators
Expected Class Size:  25
Grading:  no pass/fail option,  no fifth course option

LEAD 216  (F) American Constitutionalism I: Structures of Power
Cross-listings:  PSCI 216  LEAD 216

Secondary Cross-listing
How has the American Constitution been debated and understood over time? What is the relationship between constitutional and political change? This course examines the historical development of American constitutional law and politics from the Founding to the present. Our focus is on structures of power -- the limits on congressional lawmaker, growth of presidential authority, establishment of judicial review, conflicts among the three branches of the federal government, and boundaries between the federal and state and local governments. The specific disputes under these rubrics range from secession to impeachment, gun control to child labor, waging war to spurring commerce; the historical periods to be covered include the Marshall and Taney Court years, the Civil War and Reconstruction, the Progressive Era, the New Deal, the Warren Court, and the contemporary conservative ascendancy. Readings are drawn from Supreme Court opinions, presidential addresses, congressional debates and statutes, political party platforms, key tracts of American political thought, and secondary scholarship on constitutional development. Throughout the semester, our goal will be less to remember elaborate doctrinal rules and multi-part constitutional "tests" than to understand the changing nature of, and changing relationship between, constitutional power and constitutional meaning in American history.

Class Format: discussion
How has the American Constitution been debated and understood over time? What is the relationship between constitutional and political change? This course examines the historical development of American constitutional law and politics from the Founding to the present. Our focus is on rights and liberties -- freedom of speech and religion, property, criminal process, autonomy and privacy, and equality. The specific disputes under these rubrics range from abortion to affirmative action, hate speech to capital punishment, school prayer to same-sex marriage; the historical periods to be covered include the early republic, the ante-bellum era, the Civil War and Reconstruction, World Wars I and II, the Warren Court, and contemporary America. Readings are drawn from Supreme Court opinions, presidential addresses, congressional debates and statutes, political party platforms, key tracts of American political thought, and secondary scholarship on constitutional development. Throughout the semester, our goal will be less to remember elaborate doctrinal rules and multi-part constitutional "tests" than to understand the changing nature of, and changing relationship between, constitutional rights and constitutional meaning in American history.

LEAD 218 (S) The American Presidency

Cross-listings: PSCI 218 LEAD 218

Secondary Cross-listing

Many argue that the presidency has been fundamentally changed by the tenure of Donald Trump. Is this right? To study the presidency is to study
human nature and individual personality, constitution and institution, rules and norms, strategy and contingency. This course will examine the problems and paradoxes that attend the exercise of the most powerful political office in the world's oldest democracy: Can an executive office be constructed with sufficient energy to govern and also be democratically accountable? What are the limits on presidential power? How much do we attribute the shaping of politics to the agency of the individual in the office and to what extent are politics the result of structural, cultural, and institutional factors? Are the politics of the presidency different in foreign and domestic policy? How are national security concerns balanced with the protection of civil rights and liberties? How is the office and purpose of the presidency affected by an economic order predicated on private capital? By the character of the occupant? Exploration of these and other questions will lead us to examine topics such as presidential selection, the bases of presidential power, character and leadership issues, congressional-executive interactions, social movement and interest group relations, and the media. Attention will focus largely on the modern presidency, though older historical examples will also be used to help us gain perspective on these problems.

Class Format: This course will be taught as a hybrid class, with a mixture of in-person and remote sessions for all students. The course will feature both seminar discussion and several small group research projects.

Requirements/Evaluation: three 5 to 7 page papers, small group projects, and class participation involving weekly writing

Prerequisites: none

Enrollment Limit: 12

**LEAD 221 (F) Examining Inconvenient Truths: Climate Science meets U.S. Senate Politics** (WS)

Cross-listings: GEOS 221 ENVI 222 LEAD 221

Secondary Cross-listing

Former President Barack Obama once said: "There’s one issue that will define the contours of this century more dramatically than any other, and that is the urgent threat of a changing climate." While consensus regarding the causes and impacts of climate change has been growing steadily among scientists and researchers (and to some extent, the general public) over the past two decades, the U.S. has yet to confront this issue in a manner consistent with its urgency. This lack of action in the U.S. is at least partly due to the fact that science provides necessary but insufficient information towards crafting effective climate change legislation and the unfortunate fact that climate change has become a highly partisan issue. The primary objective of this tutorial will be to help students develop a greater understanding of the difficulties associated with crafting climate change legislation, with an emphasis on the role of science and politics within the legislative process. To this end, the tutorial will address how the underlying scientific complexities embedded in most climate policies (e.g., offsets, carbon capture and sequestration, uncertainty and complexity of the climate system, leakage) must be balanced by and blended with the different operational value systems (e.g., economic, social, cultural, religious) that underlie U.S. politics. Over the course of this tutorial, students will develop a nuanced sense of how and when science can support the development of comprehensive national climate change legislation within the current partisan climate. This course will take a practical approach, where students will craft weekly policy oriented documents (e.g., policy memos, action memos, research briefs) targeted to selected members of the current U.S. Senate Environment and Public Works Committee, the committee that has historically held jurisdiction over a majority of the major climate change bills that have moved through the legislative process. This course is in the Oceans and Climate group for the Geosciences major.

Requirements/Evaluation: weekly papers (2 - 5 pages in length) and a final oral presentation

Prerequisites: none

LEAD 223 (S) Roman History

Cross-listings: CLAS 223 HIST 223 LEAD 223

Secondary Cross-listing

The history of ancient Rome can be seen as an account of formative events, practices, and thought in the history of western culture; it also is the history of the most far-reaching experience of diverse cultures, beliefs, and practices known in the Western tradition until modern times. By studying Roman history from Rome’s emergence in central Italy in the 7th century BCE through the reign of the emperor Constantine in the early fourth century CE, we will see the complex and fascinating results of an ambitious, self-confident nation's evolution, transformation, and expansion throughout the Mediterranean world. We will consider questions such as, How did a republic with an aversion to autocratic rule and devotion to libertas understand its existence as an imperial power as well as its own elite's dominant rule over Romans and non-Romans alike? How and why did the Roman republic and its deeply entrenched republican ideology give way to the effective rule by one man, Augustus, and the increasingly monarchical rule of the emperors who followed? Did Roman political life in the later republic cause the violence that left it in crisis, or did the persistence of violence in Roman life account for the nature of Roman politics? Who were the non-elites of Rome, Italy, and the Roman empire that often get left in the shadows in our ancient sources? Who were the important writers, politicians, poets, philosophers, and innovators whose works constitute a rich cultural heritage worthy of both appreciation and critique? Throughout the course there will be an emphasis on the problems of historical and cultural interpretation, on how the Roman experience is relevant to our own, and, importantly, on the pleasures of historical investigation. Readings for this course will include a variety of original sources, a range of scholarly essays on specific topics, and a textbook that will provide our chronological framework.

Class Format: This course will be taught in hybrid mode. Assignments will consist of readings, case studies, short writing assignments and student-led discussions both in-class and via GLOW. Some elements will be offered asynchronously and/or optionally depending on the needs of students studying remotely. Please email the instructor with any questions you have about the structure or nature of the class or about what to expect if you are studying remotely.

Requirements/Evaluation: Class preparation and participation, several short response papers, one longer 6- to 8-page paper, a midterm exam, and a final exam. Students who have a B+ average or better at the end of the semester may substitute a 10 to 15-page research paper for the final exam.

Prerequisites: None; open to all

Enrollment Limit: 20

Enrollment Preferences: Preference given to students who are or are considering majoring in Classics or History, or who are concentrating in Leadership Studies. Preference is then given to first-year students and sophomores.

LEAD 225 (S) International Security

Cross-listings: PSCI 225 LEAD 225

Secondary Cross-listing

This is a course about war and peace. It deals with some of the most foundational questions that concern scholars of security studies: What accounts for great power conflict and cooperation? Is intense security competition between major states inevitable, or can they get along, provided their main interests are protected? Does the structure of the international system necessarily cause conflict? Do particularly aggressive states? Can wars occur "by accident"? When and why do states choose to use military force? What role does statecraft play in matters of war and peace? How do nuclear
weapons affect great power politics? The course will consider these questions from an interdisciplinary perspective that combines political science concepts with an historical approach to the evidence. The bulk of the course deals with the major events in the history of great power politics, such as the causes and conduct of World War I and World War II; the origins and course of the Cold War; the nuclear revolution; and the post-Cold War period. The course concludes with an examination of a number of major contemporary policy debates in security studies.

Requirements/Evaluation: class participation, two 6- to 8-page papers, final

LEAD 226 (S) Aid, Arms, and Armies: The Politics of Intervention in Africa (DPE)
Cross-listings: PSCI 226 LEAD 226 GBST 226
Secondary Cross-listing
Comprised of nearly 50 countries and home to over 1 billion people, sub-Saharan Africa is remarkable in its diversity, particularly in regards to a number of outcomes central to the study of political science. It has also been a central site of numerous and profoundly impactful interventions for centuries, from the slave trade and colonialism to proxy wars and structural adjustment programs. This class investigates the many types of intervention—including military, humanitarian, and resource extraction—as well as identifying the diverse actors conducting these interventions, from missionaries to mercenaries, the World Bank to the world’s leading states (e.g. United States, China, France). We interrogate how these interventions have shaped a number of key political, economic, and social outcomes for African countries, highlighting both case studies as well as common themes. We will also keep an eye out for lessons learned and the future of international interventions—the politics of foreign investment, humanitarian assistance, and multilateral partnerships.

Requirements/Evaluation: Participation, Midterm, Final, 3 Short Response Papers
Prerequisites: None
Enrollment Limit: 25
Enrollment Preferences: Political Science majors and Leadership Studies Concentrators

LEAD 227 (S) International Relations of the Middle East
**Cross-listings:** LEAD 227  PSCI 227

**Secondary Cross-listing**

This is a course about the Middle East in international politics. The structure of the course combines political science concepts with a detailed survey of the region's diplomatic history. Classes will be taught remotely. The basic format of the course will be to combine brief lectures--either posted on the class website beforehand or given at the start of each class--with an in-depth discussion of each class session's topic. The goal of these discussions is to generate debates over the conceptual, historical, and policy significance of the subjects that we cover. Specifically, the first section of the course will cover the emergence of the Persian Gulf as an area of strategic importance in international politics; U.S. policy toward Saudi Arabia and Iran after World War II; the origins of the Arab-Israeli dispute; the June 1967 and October 1973 Middle East conflicts; Egyptian-Israeli peace; the Iranian Revolution and the Iran-Iraq War; the 1991 Persian Gulf War and its consequences; and the rise of Al Qaeda, Hezbollah, and Hamas. The second part of the course focuses on the Iraq War and its consequences; the rise of ISIS; the Arab Spring; Turkey's changing foreign relations; and the war in Syria. The last section of the course covers contemporary policy challenges confronting the Middle East.

**Class Format:** This course will be taught remotely. There will be brief lectures, which will be either put on the work website prior to class or given at the start of each class. But the class will mainly consist of in-depth, synchronous classroom discussions.

**Requirements/Evaluation:** class participation, two 6- to 8-page papers, final

**Prerequisites:** none

**LEAD 239 (S) Music in the Global Cold War**  (WS)

**Cross-listings:** MUS 239  LEAD 239

**Secondary Cross-listing**

Throughout the Cold War (1947-1991), music was deployed as a weapon, as a source of nationalist and ideological inspiration, as a form of political protest and resistance, and as propaganda. Music both echoed and helped shape political views and, therefore, prompted various forms of regulation and censorship (McCarthyism in the U.S.; the Union of Soviet Composers). To counter Soviet claims of American cultural inferiority and racism, the U.S. sponsored numerous musical diplomacy efforts showcasing both jazz (Armstrong; Ellington; Brubeck) and classical musicians and composers (Bernstein; American orchestras). Cold War politics and the threat of nuclear war influenced musical styles (Copland; Soviet Socialist Realism; the popular American folk music revival; serialism; rock behind the Iron Curtain), specific musical events (Tokyo East West Music Encounter; concerts celebrating the fall of the Berlin Wall), and individual careers (Shostakovich; Robeson; Van Cliburn). To investigate music's political roles and capacity for expressing communist and democratic capitalist ideologies, we will adopt a case study approach. The Cold War was a global political and, frequently, militaristic struggle. Though our focus will be on music in the U.S.S.R. and U.S.A., we will also consider musical developments impacted by the Cold War throughout Western and Eastern Europe, in Latin America, and in East Asia.

**Class Format:** Hybrid, meeting twice per week. Class discussion will be central to this course.

**Requirements/Evaluation:** 20% = Participation; 20% = Paper #1, 5-6 pages; 25% = Paper #2, 8 pages; 35% = Paper #3, 12 pages, due during exam period

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** Students with relevant experience in Political Science, History, or Music studies.

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)  (WS)
LEAD 240  (F)  Great Astronomers and Their Original Publications  (WS)

Cross-listings:  STS 240  ASTR 240  LEAD 240

Secondary Cross-listing

In this course we will study some of the greatest figures in astronomy and consider their leadership in advancing progress in the field. We will consider their lives and works, especially as represented by original copies of their books and other publications. These great astronomers include: 16th century, Nicolaus Copernicus (heliocentric universe); Tycho Brahe (best pre-telescopic observations); 17th century, Galileo (discoveries with his first astronomical telescope, 1610; sunspots, 1613; Dialogo, 1632); Johannes Kepler (laws of planetary motion, 1609, 1619, Rudolphine Tables 1627); Johannes Hevelius and Elisabeth Hevelius (atlases of the Moon and of stars, 1647, and 1687); Isaac Newton (Principia Mathematica: laws of universal gravitation and of motion, 1687); 18th century, Edmond Halley (Miscellanea curiosa, eclipse maps, 1715, 1724); John Flamsteed and Margaret Flamsteed (Atlas Coelestis, 1729); and William Herschel and Caroline Herschel (1781, 1798). Also, from more recent times in which original works are often articles rather than books: 20th century, Albert Einstein (special relativity, 1905; general relativity, 1916); Marie Curie (radioactivity); Cecilia Payne-Gaposchkin (hydrogen dominating stars, 1929), Edwin Hubble (Hubble's law, 1929); George Ellery Hale (Mt. Wilson Observatory 100" telescope, 1917; Palomar Observatory 200" telescope, 1948), Vera Rubin (dark matter, 1970s); Jocelyn Bell Burnell (pulsar discovery, 1968); and 21st century: Wendy Freedman (Universe's expansion rate, 2000s). First editions will be available in Williams' Chapin Library of rare books, where we will meet in an adjacent classroom. We will also consider how such original materials are collected and preserved, and look at examples from the wider world of rarities, such as a leaf from the Gutenberg Bible (c. 1453) and a Shakespeare First Folio (1623, with a discussion of astronomical references in Shakespeare's plays). The course will be taught in collaboration between an astronomer and a rare-books librarian, with remote lectures by experts from around the world.

Class Format: Meeting on campus in the Chapin Library classroom (Sawyer 452)

Requirements/Evaluation:  class participation, two 5-page intermediate papers, and a final 15-page paper; student choice of additional readings from a provided reading list

Prerequisites:  none

Enrollment Limit:  12

LEAD 254  (F)  Sovereignty, Resistance, and Resilience: Native American Histories to 1865  (DPE)

Cross-listings:  HIST 254  AMST 254  LEAD 254

Secondary Cross-listing

This course surveys Native American/Indigenous North American histories from creation through the mid-nineteenth century, tracing the complex ways
that tribal nations and communities have shaped North America. Equally important, it reckons with the ongoing effects of these pasts in the twenty-first century, and communities' own forms of interpretation and critique. It also introduces foundational methodologies in Native American and Indigenous Studies (NAIS) and strategies for pursuing decolonizing scholarship and action. Beginning with the diverse Indigenous societies that have inhabited the Americas for millennia before Columbus's arrival, it foregrounds the complexity of Native peoples, nations, and worldviews situated in particular homelands, as well as accounts of beginnings and migrations. It addresses how Native peoples confronted grievous epidemics resulting from the "Columbian Exchange," and contended with Euro-colonial projects of "discovery" and colonization. Indigenous nations' multifaceted efforts to maintain sovereignty and homelands through eras of pervasive violence and removal are addressed, as well as forms of relations and kinship with African-American and Afro-Indigenous people. It concludes with how different Native communities negotiated the tumultuous era of the Civil War and created pathways for endurance and security in its aftermath. The course centers on Indigenous actors--intellectuals, diplomats, legal strategists, knowledge keepers, spiritual leaders, artists, and many others--and consistently connects historical events with present-day matters of land, historical memory, education, caretaking, and activism. Additionally, it provides an opportunity to engage with original materials in the Williams College Archives/Special Collections and Art Museum. While the scope of the course is continental and transoceanic, it devotes significant attention to the Native Northeast and the Stockbridge-Munsee Mohican homelands in which Williams College is located.

Requirements/Evaluation: Attendance at lectures, active participation in class discussion, several short essays based on readings and discussion topics, museum/archives exercise, final essay/project.

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: History majors, followed by first- and second-year students

LEAD 258 (F) The Media and American Democracy

Cross-listings: LEAD 258 PSCI 258

Primary Cross-listing

The course examines the relationship between the press and government, its watchdog function, how social media and the Internet are changing its role, the emergence of independent investigative bodies such as Pro Publica, and the myriad ways in which the press has helped shape American history, for better or worse. The course goes behind the headlines to examine the delicate interplay between government and press, peels back the familiar classics of American journalism, but also incorporates the current conflicts and tensions between the press and government. In the new age, how does the press define or redefine balance, neutrality, the quest for objectivity, and restraint. Who is a journalist, a once relatively easy question, but one now fraught with complexity? There has been a tectonic shift in the fundamental standards and practices of the press in recent years. What are those changes and how does it augur for the future of the press and democratic institutions?

Requirements/Evaluation: Several short papers, 10-15 page research paper.

Prerequisites: None

Enrollment Limit: 14

Enrollment Preferences: Preference to Leadership Studies concentrators and Political Science majors.

LEAD 262  (S)  America and the Cold War

Cross-listings: HIST 261  PSCI 262  LEAD 262

Secondary Cross-listing
This course examines the rise and fall of the Cold War, focusing on four central issues. First, why did America and the Soviet Union become bitter rivals shortly after the defeat of Nazi Germany? Second, was one side primarily responsible for the length and intensity of the Cold War in Europe? Third, how did the Cold War in Europe lead to events in other areas of the world, such as Cuba and Vietnam? Finally, could the Cold War have been ended long before the collapse of the Soviet Union in 1989? Political scientists and historians continue to argue vigorously about the answers to all these questions. We examine both traditional and revisionist explanations of the Cold War, as well as the new findings that have emerged from the partial opening of Soviet and Eastern European archives. The final section of the course examines how scholarly interpretations of the Cold War continue to influence how policymakers approach contemporary issues in American foreign policy.

Class Format: lecture/discussion
Requirements/Evaluation: one medium length paper, an in-class midterm and final exam, and a series of short assignments

LEAD 270  (F)  Sport and the Global Color Line  (DPE)

Cross-listings: LEAD 270  HIST 270  AFR 270

Secondary Cross-listing
Throughout the twentieth century, African Americans have broken racial barriers, confronted racial stereotypes, and garnered unprecedented success within popular culture, most notably sport. In this course, students will explore the relationship of the black athlete to the color line. We will complicate the historical view of sport as a site of professional advancement and race reform by demonstrating how societal racial practices were reconstructed within athletics. In essence, this course will emphasize the role sport performed in structuring racial exclusion as athletic arenas--like movie theaters, railroads, schools, and other public sites--shaped what Historian Grace Elizabeth Hale has termed the "culture of segregation." Though our primary focus will be on the experiences African Americans encountered, we will also probe the color line beyond its typical black-white binary. Thus, we will examine the achievements and altercations that other ethnic and racial groups realized in their transnational push for equality and inclusion.

Class Format: Lecture and discussion.
Requirements/Evaluation: Students will be graded on class participation and will have two take-home midterm essay examination (4-6 pages). In addition, students will write two or three response papers (2-3 pages) and a final research paper.
Prerequisites: None.
Enrollment Limit: 40
Enrollment Preferences: Open to all students with completion of course admission survey if overenrolled.
Expected Class Size: 25
Grading: yes pass/fail option, no fifth course option
Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
LEAD 270 (D2) HIST 270 (D2) AFR 270 (D2)

Difference, Power, and Equity Notes: This course will prompt students to evaluate the commercialization and commodification, perceptions and portrayals of minority athletes in popular media forms. Students will trace the emerging ideas, shifts, and trends in the depiction of race and in the process of racialization.

Cross-listings: AFR 280  HIST 280  LEAD 280

Secondary Cross-listing
This introductory course surveys the cultural, political, and social history of African Americans from Reconstruction to the present. It offers a balance between a "top-down" and "bottom-up" approach and focuses primarily on African Americans' quest for citizenship, equality, justice, and opportunity. In addition to examining major historical developments and popular figures within the modern black past, we will explore the lesser-known histories of everyday people who helped shaped the black freedom struggle. In so doing, we will interrogate conventional narratives of progressive movements since emancipation. Some of the main topics include: the transition from slavery to freedom; the rise of Jim Crow and the politics of racial uplift; the Great Migration and the emergence of the New Negro; the Great Depression and the New Deal; World War II and the struggle for economic and racial inclusion; the postwar period and the intersecting movements of Civil Rights and Black Power; and the impacts of deindustrialization and mass incarceration on the black community. We will end with a discussion of the Obama years and Black Lives Matter.

Requirements/Evaluation: Students will be graded on class participation and will have two take-home essay examinations (a midterm and a final, each 6-8 pages). In addition, students will write two response papers (2-3 pages) and will complete a mapping project based on The Negro Motorist Green Handbook.

Prerequisites: none
Enrollment Limit: 40
Enrollment Preferences: Students with demonstrated interest in material. If the course is overenrolled, students will be asked to complete a questionnaire.

Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option

LEAD 285  (F)  The Revolutionary Generation: Galaxy of Leaders
Cross-listings: PSCI 257  LEAD 285  HIST 354

Primary Cross-listing
The American Revolution produced a galaxy of brilliant and creative statesmen and intellectuals: Washington, Hamilton, Jefferson, Madison, Adams. In this seminar, we will study their astounding accomplishments—a successful war of independence, a Constitution and Bill of Rights, enduring democratic political institutions, and a nascent party system. But mostly we will focus on their ideas, for they were thinking revolutionaries. We will examine in depth and in detail their superb writings, their letters and speeches as well as Madison and Hamilton's Federalist essays. We will also read recent interpretations of the founding generation by Gordon Wood, Joseph Ellis, Bernard Bailyn, and others.

Requirements/Evaluation: three papers, weekly class presentations, and active participation in all discussions
LEAD 296  (S)  Human Rights and National Security: Seeking Balance in the United States

Cross-listings:  LEAD 296  HIST 296

Secondary Cross-listing

This course will ask if ensuring collective security and preserving individual rights are inherently contradictory or if they may, in fact, be mutually reinforcing. Focusing on developments and issues within the United States since its founding, the class will explore how Americans have sought to reconcile concerns about national security and a broad array of rights in the past, and the implications of this history for contemporary debates. The course will challenge students to consider how debates over national security and rights have reflected broader partisan divides and served diverse political objectives. Moreover, students will explore how these debates reflected competing visions of national identity and purpose, and question how and why the costs of security measures disproportionately burdened people based on race and religious identification. The course will initially survey these issues through a historical lens, demonstrating how questions of security and rights have been present since the nation's founding. It will draw on key moments in U.S. history to explore issues of foreign subversion, dissent, surveillance, habeas corpus, presidential power in times of war, and border security and immigration. Familiarity with historic precedents will ensure that students are prepared to grapple with a closer examination of contemporary studies of refugees and immigration; cybersecurity and surveillance; domestic terrorism and hate crimes; and counter-terrorist detention and interrogation. Students will be assessed on participation, short writing assignments, and a group podcast project.

Requirements/Evaluation:  Students will be assessed on participation, short writing assignments, and a group podcast project.

LEAD 301  (S)  Museums: History and Practice

Cross-listings:  LEAD 301  ARTH 501  ARTH 401

Secondary Cross-listing

Art museums not only express the political, economic and cultural values of their period of formation, but the evolution of those values that have
resulted in today's institutions. Looking at museums past and present internationally, seminar participants will envision the future of museums as we recognize programmatic and re-organizational developments in our own moment of civic and social unrest. The class will consider this future while examining existing governance and management policies and practices, the role of architecture and installation in interpretation and experience, guidelines in the accessioning and deaccessioning of works of art, and issues in repatriation and restitution of cultural property. Surveying museums ranging in size and type from the "encyclopedic" to newly established contemporary arts institutions and alternative spaces, we will investigate current trends in acquisition, exhibition and educational programming in light of a changing canon. In addition, class discussions will have a special focus on how museums might strive to balance their traditional scholarly and artistic roles with their future civic and social responsibilities, doing so while maintaining financial stability in the increasingly market-driven, metric-conscious, not-for-profit environment of our time.

Requirements/Evaluation: oral presentations and discussion in class and one seminar paper (with class presentation) at the end of the semester

Prerequisites: undergraduates should email michael.conforti@williams.edu to schedule a discussion before registering for the course

Enrollment Limit: 10

Enrollment Preferences: graduate students, then senior art history majors, then other undergraduates

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

LEAD 311  (F)  Congress

Cross-listings: PSCI 311 LEAD 311

Secondary Cross-listing

Even before the pandemic, scholars, pundits, and the public thought Congress was in a state of crisis. Riven by polarized partisanship and gridlock, the most powerful assembly in the world seemed incapable of representing citizens and addressing problems. This seminar focuses on how Congress organizes itself to act as a collective body. In an organization comprised of equals, how and why do some senators and representatives acquire more power and authority than others? How does Congress act as an institution and not just a platform for 535 individuals? Why does Congress not act, especially when the U.S. confronts so many pressing problems, and how do legislators justify inaction? In what ways does this institution promote or hinder the legitimacy, responsiveness, and responsibility expected of a democratic governing institution?

Requirements/Evaluation: class participation, two short papers, and a final research paper

American Political Thought (WS)

Cross-listings: PSCI 312 LEAD 312

Secondary Cross-listing

From democracy to liberty, equality to community, foundational ideas -- about what makes for good government, about what constitutes the good society, about what is necessary to lead a good life -- define the American political tradition and consume the American political imagination. Designed not only to uncover these (sometimes melodious, sometimes cacophonous) values but also to place current ideological debates about them in a broader developmental context, this tutorial will offer a topical tour of American political thinking from the birth of nationalism in the colonial period to the remaking of conservatism and liberalism in the early twenty-first century. Utilizing primary source material ranging from presidential speeches to party platforms, newspaper editorials to novels, we will seek to interrogate -- reconciling where possible, distinguishing where necessary, interpreting in all instances -- the disparate visions and assessments of the American political experience offered by politicians, artists, intellectuals, activists, and ordinary citizens over the course of more than two centuries. Our focus, then, is nothing less than the story of America -- as told by those who lived it.

Class Format: For spring 2021, this course will be taught remotely, with a few synchronous seminar classes at the start and end of the course bookending weekly synchronous tutorial sessions.

Requirements/Evaluation: five 5- to 7-page essays, five 2- to 3-page critiques, and a revised and extended 10- to 12-page final essay

How Change Happens in American Politics

Cross-listings: PSCI 314 LEAD 314

Secondary Cross-listing

An unprecedented assault on the U.S. Capitol, the rise of white nationalism, a pandemic, a volatile economy, racial reckoning, and rapidly evolving environmental crises have all rocked American politics in the last year. What might we expect to come next? From the Founding to the present, the American political order has undergone cataclysmic and thoroughgoing transformations, yet it has also proven to be remarkably enduring. How can this be? Where do we find continuities and where upheavals? What accounts for the continuities, and what for the changes? What sorts of transformations have been possible, and who or what has made them possible? Finally, what are the costs of change (and of continuity)--and who pays them? The goal of this course is to assess American political change, or lack of, and to gain a sense of the role that political leaders have played in driving change. We will examine when and how individuals and leadership have mattered vis-à-vis broader historical and contextual factors, including economic developments, demographic change, war, and constitutional and institutional parameters. After examining general models of change and of leadership, we will consider specific case studies, such as civil rights for African-Americans, gender equality, labor advances, social conservatism, and populism. We will consider some of the complicated legacies of change. Finally, we will look at arguments that America has been "exceptional"--or, unlike other countries--as well as critiques of these arguments, to help us gain an understanding of future prospects for political transformation.

Requirements/Evaluation: participation in weekly meetings as well as weekly essays or critiques

Prerequisites: previous course in American politics or American history

Enrollment Limit: 10

Enrollment Preferences: Political Science majors and Leadership Studies concentrators

Expected Class Size: 10
LEAD 315 (S) Parties in American Politics

Cross-listings: PSCI 315  LEAD 315

Secondary Cross-listing

Is the American party system bankrupt? It has been said that parties are essential to democracy, and in the U.S., political parties have played a central role in extending democracy and organizing power. But their worth is a continuing subject of debate. Parties have been celebrated for linking citizens to their government and providing the coherency and unity needed to govern in a political system of separated powers. Yet they have also been disparaged for inflaming divisions among people and grid-locking the government. Other critics take aim at the two-party system itself, claiming that the major parties fail to offer meaningful choices to citizens. This course will investigate this debate over parties by examining their nature and role in American political life, both past and present. Throughout the course, we will explore such questions as: What constitutes a party? For whom do they function? How and why have they changed over time? Why a two-party system, and what role do third parties play? Is partisanship good or bad for democracy? For governance? What is the relationship between parties and presidents? How does partisanship become tribalism or hyper-partisanship, and can this be prevented? This semester, we will explore answers to these questions in a tutorial-style seminar format.

Class Format: This course will be taught remotely in a quasi-tutorial style format with students meeting with the instructor weekly in small discussion groups.

Requirements/Evaluation: Students will be responsible for writing three 5-page papers and three 2-page critiques. Students will also be asked to take responsibility for managing discussion and presenting work at different points in the semester.

Prerequisites: PSCI course at the 200 or 300 level or permission of instructor

LEAD 320 (F) Heroes and Villains: Iconic Leadership and the Politics of Memory (WS)

Cross-listings: PSCI 320 LEAD 320

Primary Cross-listing

Americans have been arguing intensely in recent years about how we should remember the leaders from our nation's past. Does Thomas Jefferson's statue belong on a university campus? Should college dorms be named for John C. Calhoun and Woodrow Wilson? Should Harriet Tubman's portrait replace Andrew Jackson's on the $20 bill? In this course we will look at how people in the United States and elsewhere have used their leaders’ images to hash out larger political issues of national identity, purpose, and membership. Why has historical commemoration gotten so contentious—or has it always been contentious? What's really at stake when we depict our leaders? How (if at all) should we reconcile contemporary morality with historical context in assessing the leaders from our past? To address these questions, we will study portrayals of some of the most famous leaders in American history—including Alexander Hamilton, Abraham Lincoln, and Martin Luther King, Jr. Our sources will include political speeches, literature, film, and journalism as well as monuments and museum exhibits; though our examples will be drawn mostly from the United States, our conceptual framework will be transnational. As a final assignment, students will write an 18-20 page research paper on a topic of their choice related to the core themes of the course.

Requirements/Evaluation: Seminar participation, research proposal, peer workshop, research paper, in-class research presentation

Prerequisites: previous course in Leadership Studies, or Political Science, or permission of instructor

LEAD 321  (S)  History of U.S.-Japan Relations, 1853-Present  (DPE)

Cross-listings:  LEAD 321  ASST 321  HIST 321  ASIA 321

Secondary Cross-listing
An unabating tension between conflict and compromise has been an undercurrent of U.S.-Japan relations since the 1850s, at times erupting into clashes reaching the scale of world war and at times allowing for measured collaboration. We will explore the U.S.-Japan relationship from the perspectives of both countries with a focus on how culture, domestic concerns, economic and political aims, international contexts, and race have helped shape its course and nature. This course will fulfill the Difference, Power, and Equity requirement by examining not just the diplomatic relationship between the U.S. and Japan, but also how various types of interactions have influenced the dynamics of power between these two countries and have shaped the ways in which each country has understood and portrayed the other.

Class Format: remote with synchronous, seminar-style discussion

Requirements/Evaluation:  class participation, response papers (500 words), one short paper (5 pages), and a research paper (12-15 pages)

Prerequisites:  none; open to first-year students with instructors permission

Enrollment Limit:  15

LEAD 322  (F)  Gandhi: History, Ideas and Legacy  (WS)

Cross-listings:  REL 412  LEAD 412  ASIA 412  GBST 412  ASST 412  LEAD 322  HIST 496

Secondary Cross-listing
This course studies the life, work, and ideas of M.K. Gandhi (1869-1948), one of the most influential thinkers of the non-western world. Gandhi is well known today for his philosophy of non-violent resistance and its application in India's freedom struggle as well as his influence on the work of leaders like Martin Luther King and Nelson Mandela. Hailed as the 'father of the Indian nation', however, Gandhi is not only known for his political ideas but also for his deep engagement with aspect of everyday human behavior and morality: truth, vegetarianism, sex and celibacy, to name just a few of his obsessions which contributed to making his broader philosophy. It is this commitment to a morally pure life that earned him the title of 'Mahatma' or Great Soul in India. This tutorial will focus on three key aspects of Gandhi: his ideas of peaceful protest as means of social and political change, his contemplations on moral philosophy, and on his legacy in modern India and the world. Students will read a combination of Gandhi's own writings as well as journal articles, monographs and films. The course will probe questions such as: What was the context and nature of Gandhian nationalism? Did it help to integrate the Indian nation? Was Gandhi truly a Great Soul, a saint or a shrewd politician? In what ways is Gandhi received and remembered by the Indian nation today? How does understanding a figure like Gandhi facilitate our understanding of modern nationalism, citizenship and political action?

Class Format: REMOTE. This tutorial will be taught remotely but will otherwise follow the usual tutorial format of weekly hour-long meetings, pairing students who will alternatively write papers and critiques each week.

Requirements/Evaluation:  5-7-page essays  or  2-page critique due each week and a final report (3-4 pages) at the end of the semester.

Prerequisites:  None, except students who have taken HIST488T will not be permitted to take this class.

Enrollment Limit:  10

Enrollment Preferences:  Senior history majors and students who have previously taken HIST221.  Students who have previously taken HIST488T will not be permitted to take this class.
LEAD 324 (F) Migration Governance: A Global Perspective  (DPE)

Cross-listings: GBST 321  PSCI 322  LEAD 324

Secondary Cross-listing
This class is interested in thinking critically and empirically about one of the most polarizing and relevant issues of our time: how countries regulate cross-border mobility. Currently over 281 million international migrants live in a country different from where they were born, about 1 out of every 30 humans in the world and a population that has roughly doubled since 1990. How are international organizations and domestic governments regulating this level of unprecedented global mobility in destination countries as well as countries of origin? Throughout the semester we interrogate three themes central to migration politics (and political science): rights, access, and agency. The course is organized with a focus on legal status: which "categories" of people (i.e. illegal migrants, refugees) have differential access to rights, services, and representation depending on how they are classified where they live (and where they are from). We will critically analyze how those categories are constructed at the international and domestic levels, as well as how those categorizations are also racialized, politicized, and gendered. While we address current debates over migration governance in the United States, we situate US migration policy within the contemporary global context. The course places the US in conversation not only with European countries, but also (and especially) considerations of migration governance in destination countries in Latin America, the Middle East, Asia and Africa. We also attend to the emigration governance of diaspora citizens particularly from the Global South. Students will have the opportunity to apply course readings to real-world contexts through guest speakers from global organizations at the frontlines of migration policy (UNHCR, Doctors without Borders), and filmmakers documenting border crossing around the world.

Requirements/Evaluation: Participation, 3 Short Response Papers, Research Paper (15 pages)
Prerequisites: PSCI 202 or PSCI 204 or permission of the instructor

Enrollment Limit: 15

Enrollment Preferences: Political Science majors and Leadership Studies Concentrators

**Primary Cross-listing**

In this seminar, we will study the political and moral leadership of Theodore, Franklin and Eleanor Roosevelt. The three Roosevelts transformed and expanded the role of government in American society, bringing about fundamental and lasting change. What were their leadership strategies and styles? How did TR and FDR differ in their approaches to leadership? Were the ideas behind TR's "Square Deal" and FDR's "New Deal" similar? How did Dr. New Deal become Dr. Win-the-War? How did they balance political deal-making with bold, principled leadership? What kind of leadership role did Eleanor Roosevelt play? In addition to studying biographies and especially the writings and speeches of TR, FDR, and ER, we will do research using the Proquest data base of historical newspapers, to see history as it was being made.

**Requirements/Evaluation:** Participation in class discussions, oral reports, several short papers and one research paper.

**LEAD 330  (F) Senior Seminar: The Nuclear Revolution**

**Cross-listings:** LEAD 420  LEAD 330  PSCI 420

**Secondary Cross-listing**

This is a course about international politics in the nuclear age. In broad terms, it focuses on a very basic question: Does international politics still work essentially the same way as it did in the prenuclear era, or has it undergone a "revolution," in the most fundamental sense of the word? The structure of the course combines political science concepts and historical case studies, with the goal of generating in-depth classroom debates over key conceptual, historical, and policy questions. Classes will be taught remotely. The basic format of the course will be to combine very brief lectures with detailed class discussions of each session's topic. The course will begin--by focusing on the Manhattan Project--with a brief technical overview of nuclear physics, nuclear technologies, and the design and effects of nuclear weapons. The course will then examine the following subjects: the dropping of the atomic bombs on Japan; theories of the nuclear revolution; the early Cold War period; the development and implications of thermonuclear weapons; the Berlin and Cuban missile crises; nuclear accidents; nuclear terrorism and illicit nuclear networks; the future of nuclear energy; regional nuclear programs; preventive strikes on nuclear facilities; nuclear proliferation; and contemporary policy debates.

**Class Format:** This course will be taught remotely. All class discussions will be synchronous.

**Requirements/Evaluation:** class participation, three 8- to 10-page papers

LEAD 332 (F) New York City Politics from the Blackout to Bloomberg (WS)

Cross-listings: PSCI 310 LEAD 332 PSCI 332

Secondary Cross-listing

This course examines New York City’s political history from the 1970s to the present—a period during which the city underwent staggering economic and social changes. In the mid-1970s, New York was a poster child of urban crisis, plagued by arson and housing abandonment, crime, the loss of residents and jobs, and failing public services. By the early 21st century, the city had largely met these challenges and was once again one of the most diverse and economically vital places on earth—but also one marked by profound inequality. This course will examine how New Yorkers have contested core issues of capitalism and democracy—how those contests have played out as the city itself has changed and how they have shaped contemporary New York. Broad themes will include the city’s role as a showcase for neoliberalism, neoconservatism, technocratic centrism, and progressivism; the politics of race, immigration, and belonging; the relation of city, state, and national governments; and the sources of contemporary forms of inequality. Specific topics will include policing, school reform, and gentrification. As the primary assignment in the course, students will design, research, and write a 20-page paper on a topic of their choice.

Requirements/Evaluation: active class participation, 2-page preliminary proposal, 10-page research proposal, 2-page peer feedback, 18- to 20-page research paper

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: Political Science majors and Leadership Studies concentrators

LEAD 360 (F) The Political Thought of Frantz Fanon (WS)

Cross-listings: PSCI 370 PHIL 360 AFR 360 LEAD 360

Secondary Cross-listing

Martinican psychiatrist, philosopher, and revolutionary Frantz Fanon was among the leading critical theorists and Africana thinkers of the twentieth century. Fanon ushered in the decolonial turn in critical theory, a move calling on those both within and outside of Europe to challenge the coloniality of the age and to forge a new vision of politics in the postcolonial period. This course is an advanced seminar devoted to a comprehensive examination of Fanon’s political thought. We will begin with an analysis of primary texts by Fanon and end by considering how Fanon has been interpreted by his contemporaries as well as activists and critical theorists writing today.

Requirements/Evaluation: attendance and participation, weekly online reading response papers, a class presentation, two 7-page essays, and one 20-page final research paper

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Africana Studies concentrators, Leadership Studies concentrators, and Political Science majors

Expected Class Size: 10

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
Writing Skills Notes: Students write weekly online reading response papers, two 7-page essays, and one 20-page final research paper. Students receive written feedback from me throughout, meet with me 1-on-1 to discuss 7-page essays to then revise/re-submit and also receive written feedback before final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

LEAD 361  (F) The CIA and American Foreign Policy

Cross-listings: PSCI 361 LEAD 361 HIST 355

Secondary Cross-listing

Despite an American aversion to espionage captured by Secretary of State Henry Stimson's oft-cited (yet unsubstantiated) remark, "Gentlemen don't read each other's mail," intelligence history in the United States dates back to the Revolutionary War. Still, it took the shock of Pearl Harbor for the United States to establish a permanent peacetime civilian intelligence service independent of another federal department—the Central Intelligence Agency. Since then, the agency and others which comprise the loose entity called the Intelligence Community (IC) have played a pivotal albeit intensely controversial role in US foreign and national security policies. Yet their roles and missions remain largely misunderstood and divisive, as attested to by recent debates surrounding the multiple investigations of the 9/11 tragedy, the flawed pre-war estimates of Iraq's Weapons of Mass Destruction (WMD) capabilities, the reporting on Benghazi, the Snowden revelations, and much more. This course seeks to provide greater understanding of the relationship between intelligence and US foreign and national security policy by examining the CIA's and IC's roles and responsibilities, illuminating their history alongside the history of America and the World, assessing their successes and failures, evaluating their reforms, and correlating their behavior and capabilities with US values and institutions.

Requirements/Evaluation: Midterm, several short papers, and a research paper.

Prerequisites: None

Enrollment Limit: 14

Enrollment Preferences: Political Science and History Majors, prior coursework in American foreign policy.

LEAD 389  (S) The Vietnam Wars  (DPE)

Cross-listings: LEAD 389 HIST 389 ASIA 389 ASST 389

Secondary Cross-listing

This course explores Vietnam's twentieth century wars, including an anti-colonial war against France (1946-1954), a massive Cold War conflict involving the United States (1965-1973), and postcolonial confrontations with China and Cambodia in the late-1970s. Course materials will focus primarily on Vietnam's domestic politics and its relations with other countries. Lectures, readings, films, and discussions will explore the process by which Vietnam's anti-colonial struggle became one of the central conflicts of the Cold War, and examine the ramifications of that fact for all parties involved. The impact of these wars can hardly be overstated, as they affected the trajectory of French decolonization, altered America's domestic politics and foreign policy, invigorated anti-colonial movements across the Third World, and left Vietnam isolated in the international community. Students will read a number of scholarly texts, primary sources, memoirs, and novels to explore everything from high-level international diplomacy to personal experiences of conflict and dramatic social change wrought by decolonization and decades of warfare.

Class Format: This course will be fully remote. The course format will prioritize synchronous discussions and small group work via Zoom.

Requirements/Evaluation: class participation, several short papers, and a 10- to 12-page final paper

Prerequisites: none; open to all
Enrollment Limit: 15
Enrollment Preferences: History and Asian Studies majors
Expected Class Size: 10-15
Grading: yes pass/fail option, yes fifth course option

Difference, Power, and Equity Notes: This course traces Vietnam's anti-colonial movements from colonization to liberation. Students will examine power struggles among Vietnamese nationalists from a variety of different religious, class, ideological, and regional backgrounds, as well as Vietnam's diplomatic and military rivalries with France, China, the Soviet Union, and the United States. Readings will focus on Vietnamese voices to explore how the country surmounted seemingly impossible international power dynamics.

LEAD 396 (F) The Pivotal Decade--The 1970s Origins of Contemporary America
Cross-listings: HIST 396 LEAD 396

Secondary Cross-listing

Often overshadowed by the long 1960s and the conservative ascendancy of the 1980s, the 1970s provides an important transitional moment for the United States. It was also a decade fraught with contradictions. On the one hand, Americans experienced widespread disillusionment with the power of the federal government to promote and protect the minority from the majority. Historians seeking to understand the collapse of the welfare state or the origins of white resistance to civil rights' initiatives often point to the 1970s as the time when the federal government shifted the burden of the social welfare system onto the market, state and local governments, and onto poor people themselves. And yet, the 1970s also saw an explosion of progressive social activism, as the women's movement, the gay rights movement, and the environmental movement, among others, all came into their own. Likewise, this was a time when U.S. realignment internationally and military overextension intersected with new hegemonies of human rights regimes, multinational corporations, and "globalization." This course will emphasize a wide array of social movements and activism--both left and right--and the interplay among formal politics, grassroots organizing, and popular culture. It will ask students to consider how and why the 1970s catalyzed many of the domestic and international dynamics and debates that define American politics and society today. Students will be assessed on participation, short response papers, and an individual research project culminating in a poster presentation. In Fall 2022, this course will be offered at both Amherst and Williams College campuses. There will be an end of the semester symposium at Williams College that all enrolled students are required to attend as part of the final project.

LEAD 425  (S)  Leadership and the Anxieties of Democracy

Cross-listings:  PSCI 357  LEAD 425

Primary Cross-listing
This capstone course examines the challenges and opportunities facing political leaders in contemporary liberal democracies. We will begin by surveying institutional constraints confronting contemporary political leaders: globalization, sclerotic institutions, polarization, endemic racism, and a changing media environment, among others. Then, we will look at some important factors that shape how followers approach would-be leaders: inequality and economic precarity; identity and group consciousness; notions of membership, community, and hierarchy; and declining local institutions. While the course will focus primarily on the United States, our conceptual framework will be global; though our main interest will be contemporary, we will also examine previous eras in which democratic leadership has come under great pressure. Our primary questions will be these: Why does transformative leadership seem so difficult today? How does political leadership in the 21st century differ from leadership in earlier eras? What conditions are necessary to sustain effective leadership in the contemporary world? As a final assignment, students will craft an 18-20-page research paper on a topic of their choice related to the themes of the course.

Requirements/Evaluation:  Seminar participation, research proposal, peer workshop, research paper, in-class research presentation
Prerequisites:  LEAD 125 or permission of the instructor
Enrollment Limit:  15
Enrollment Preferences:  Open to Leadership Studies concentrators or with the permission of the instructor; preference given to Political Science majors

How is language structured? What are the social forces associated with the development of language? How does the mind process and produce language? What are the best methods for teaching and learning a new language? Linguistics is a vibrant and multifaceted field that bridges the academic and the everyday. From Sociolinguistics to Linguistic Anthropology to Applied Linguistics, each of the various disciplines associated with the general area of Linguistics provides an illuminating perspective on the ways in which language works.

At Williams, students can gain insight into the intricacies of linguistic functions in courses located in several different academic units.

Linguistics

ANTH 162  (S)  Languages of East Asia

Cross-listings:  CHIN 162  ANTH 162  ASIA 162  GBST 162

Secondary Cross-listing

A survey of the Chinese, Japanese, and Korean languages in their linguistic and cultural context. Working with various types of multimedia including audio, video, animation, and texts, we'll take up the phonetics, phonology, morphology, syntax, and lexicon of these three major East Asian languages, including also their history and writing systems as well as how they function in the societies where they are spoken. Though the emphasis of the course is on linguistic description and analysis, there will also be an applied component, as part of which we'll learn several dozen common expressions in each language. Some of the questions to be discussed are: What are the similarities and differences among these three languages? How are and how aren't they related? How did the modern standard form of each develop and what is its relationship to any non-standard languages or dialects? How do these three languages reflect sociolinguistic phenomena such as gender, class, and politeness? How do the writing systems of these languages function and what is the role of Chinese characters in them? What has been the influence of Classical Chinese on Modern Chinese, Japanese, and Korean? How have these languages changed due to influence from English and other languages? And what are the prospects for their future development, including the influence of computers and digital communications? While this course is not intended as a comprehensive introduction to linguistics, it does introduce many basic terms and concepts from that discipline.

Class Format: combination of lecture, discussion, and language practice

Requirements/Evaluation:  three quizzes, two 2- to 3-page papers, an oral presentation, and an 8- to 10-page term paper

Prerequisites:  none (lectures, class discussions, and readings in English; no prior background in linguistics or any Asian language required)

Enrollment Limit:  25

Enrollment Preferences:  open to all with preference to first-year students and sophomores as well as majors/concentrators in CHIN, JAPN, EALC, ANTH, ASIA and GBST

Expected Class Size:  20

Grading:  yes pass/fail option, yes fifth course option

ANTH 262  (S)  Language and Power

"A language is a dialect with an army." This (originally Yiddish) aphorism points to ways in which language, often imagined to be a neutral or apolitical medium of communication, proves in practice to be a social domain fully implicated in the operations of power. How do we create community - and social exclusion - by the way that we talk? What role does speech play in the accumulation of cultural capital? How are racism and colonialism
sustained or subverted by language practices, and how can speech transform the world? This introduction to linguistic anthropology draws together classic works of linguistic and semiotic theory with studies of the politics of actual speech grounded in rich and particular cultural and historical contexts, from witchcraft accusations in rural France to the partition of Hindi and Urdu in colonial South Asia. Students will gain familiarity with key concepts (speech acts, performatives, code-switching, language ideology), themes and debates in the social scientific study of language. Assignments include regular postings of 1-page critical response papers and an ethnographic project analyzing a series of speech events in our local community.

Requirements/Evaluation: Regular postings of critical response papers and an ethnographic final project.

Prerequisites: None.

Enrollment Limit: 20

Enrollment Preferences: Students in all fields of study are most welcome. If overenrolled, priority will be given to Anthropology or Sociology majors or final-year students.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

ARAB 224 (S) Second Language Learning: The Learner, the Classroom, and the Social World

Learning a second language is one of the most exhilarating, rewarding, and eye-opening experiences of a life-time. Millions of people around the globe embark on a journey of exploration of target languages and cultures while reflecting on the self and home culture(s) in the process. This course introduces you to core issues related to the learning of a second language. What are the processes involved in learning a second language? What does it mean to know another language? Is second language learning similar to first language learning? Why are some language learners more successful than others? What individual variables do learners bring to the learning process? How can classrooms facilitate second language learning? How do learners perceive teachers’ feedback? How does the specific socio-cultural context impact language learning? How does learning about the target culture feed into language learning? How does the learner’s identity evolve in the process of second language learning? These are some key second language learning questions that we will examine in this class. Readings are drawn from studies on the learning of different languages.

Requirements/Evaluation: Active class participation, assignments, article presentation and leading a class discussion, language learner interview, exam, a final project.

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: If the course is overenrolled preference will be first given to Arabic majors, then seniors, then juniors.

ASIA 131 (F) Introduction to Japanese Linguistics: Past, Present and Future of Japanese Language

Cross-listings: ASIA 131 JAPN 131

Secondary Cross-listing

This course is to understand of how and why the Japanese language has developed to its present form and usage. We will first learn basic concepts and methodologies of linguistics, such as how to formally analyze the patterns of speech sounds (phonetics and phonology), word formation (morphology), sentence structures (syntax), and meaning (semantics and pragmatics). Then, based on sociolinguistics, linguistic typology, anthropological and cognitive linguistics frameworks, we will investigate variations and usages of the Japanese language. Topics will include polite language and honorifics, gender and women’s language, onomatopoeia, linguistic landscape, Japanese dialects, language conflicts, language rights (Okinawans, Ainu, and Koreans in Japan), and multilingualism. The course format combines lectures, seminars, and student-facilitated discussions.
There will be small quizzes, homework assignments, a final research paper, and a poster presentation of the final project. Although there is no prerequisite, intermediate Japanese proficiency or equivalent is beneficial when analyzing primary data.

**Class Format:** combination of lecture and discussion

**Requirements/Evaluation:** quizzes, one or two discussion facilitation, mid-term exam, poster presentation, and an 8- to 10-page final paper

**Prerequisites:** none

CHIN 272 (S) The History and Mythology of Chinese Scripts

Cross-listings: STS 272 CHIN 272 COMP 272

Primary Cross-listing

Written scripts using what are most often called “Chinese characters” have an attested history of over 3000 years and have been used all over the world to represent a range of different languages. In this course we will examine the history and development of Chinese characters from their earliest extant examples on sacrificial animal bones to their often amusingly misguided use for contemporary tattoos. We will look at historical evidence and mythology, carefully constructed grammatological studies and wild orientalist imaginings. Some topics will include: comparisons between the development of Chinese characters and other written scripts, the relationship between Chinese characters and the languages of China, the use of Chinese characters to write non-Chinese languages, Chinese characters in art and calligraphy, theories of connections between Chinese characters and Chinese philosophy and literature, issues of education and literacy, and the future of Chinese characters in the digital age.

Class Format: discussion

Requirements/Evaluation: quizzes, short writing assignments, a midterm, and a final exam

Fall 2022
The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip and oatmeal raisin. There are two ways to understand "Many students took every class." According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

Requirements/Evaluation: Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

Prerequisites: No prerequisites

Enrollment Limit: 20

Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

COGS 390 (S) Discourse Dynamics (WS)

Primary Cross-listing

It'd be perfectly natural to say "I might've left the stove on", then check the stove, then say "I didn't leave the stove on". But perform those exact same steps in a different order--check the stove, say "I didn't leave the stove on", then say "I might've left the stove on"--and something's gone quite wrong. Conversation is dynamic--the back and forth exchange of information is a process that grows and adapts to the surrounding context. The order in which you say things matters, and it matters for what you communicate what actions you take and what events happen around you. In this course, we will investigate dynamic communicative phenomena and discuss competing theoretical explanations about how they're interpreted. Of particular interest will be the extent to which discourse dynamics are built into the meanings of linguistic expressions vs. the extent to which they're consequences of our rational cognition. Is a sentence’s relation to previously uttered sentences similar to its relation to extra-linguistic events? How much inference goes into interpreting what’s said? In pursuing the answers to these questions, we will discuss both classic and contemporary theories from philosophy and linguistics.
**Requirements/Evaluation:** Four short papers (3-4 pages), take-home midterm paper (5-7) pages, take-home final paper (6-8 pages)

**Prerequisites:** At least one philosophy or cognitive science course (any level), or permission of instructor.

**Enrollment Limit:** 19

**Enrollment Preferences:** Preference given to seniors and philosophy/cognitive science majors, then to students who have taken 200-Level Intro to Formal Linguistics

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

COGS 390 (D2) PHIL 390 (D2)

**Writing Skills Notes:** There will be four short papers (3-4 pages each) that will receive written comments on substance, argument structure, and writing style. These will be designed to include sections that, upon revision in light of comments, can be incorporated into the longer midterm and final papers (5-7 pages and 6-8 pages respectively). Students will be required to meet with the instructor before the midterm and final papers to discuss outlines and revisions of short papers.

This course is to understand of how and why the Japanese language has developed to its present form and usage. We will first learn basic concepts and methodologies of linguistics, such as how to formally analyze the patterns of speech sounds (phonetics and phonology), word formation (morphology), sentence structures (syntax), and meaning (semantics and pragmatics). Then, based on sociolinguistics, linguistic typology, anthropological and cognitive linguistics frameworks, we will investigate variations and usages of the Japanese language. Topics will include polite language and honorifics, gender and women's language, onomatopoeia, linguistic landscape, Japanese dialects, language conflicts, language rights (Okinawans, Ainu, and Koreans in Japan), and multilingualism. The course format combines lectures, seminars, and student-facilitated discussions. There will be small quizzes, homework assignments, a final research paper, and a poster presentation of the final project. Although there is no prerequisite, intermediate Japanese proficiency or equivalent is beneficial when analyzing primary data.

Class Format: combination of lecture and discussion

Requirements/Evaluation: quizzes, one or two discussion facilitation, mid-term exam, poster presentation, and an 8- to 10-page final paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: current or prospective majors in the Department of Asian Languages, Literatures, and Cultures

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:
PHIL 118 (F)(S) Meaning, Communication and Society (DPE) (WS)

The primary way we interact with others is through the use of language. We use language to communicate meanings in order to accomplish a variety of goals: to convey information, make requests, establish rules, utilize power, issue protests, and much more. We coordinate our lives through sounds from mouths, signs from hands, and squiggles on paper because somehow sounds, signs, and squiggles have meanings. This course is an investigation into how language is used to express meaning, and how such expression can have real interpersonal and societal impact. Using resources from philosophy and linguistics, we will study various ways in which literal and non-literal uses of language influence our social lives. Of particular interest will be how language can be used to establish, reinforce, and resist power relationships involving race and gender.

Requirements/Evaluation:  Weekly short papers (500-1000 words), take-home midterm paper (5-6 pages), take-home final paper (7-8) pages, with comments on writing given on short papers and midterm

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Preference given to first year students and philosophy majors.

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)  (DPE) (WS)

Writing Skills Notes: There will be short writing assignments that will receive comments on content, writing style, and argument structure every week except when midterm/final papers are due. The midterm/final papers will incorporate revisions from previous short papers.

Difference, Power, and Equity Notes: This course has a focus on the role of language in relationships involving power, oppression, and group inclusion between individuals belonging to various socio-political identities.

Attributes: Linguistics

PHIL 203 (F) Logic and Language (QFR)

Logic is the study of reasoning and argument. More particularly, it concerns itself with the difference between good and bad reasoning, between strong and weak arguments. We all examine the virtues and vices of good arguments in both informal and formal systems. The goals of this course are to improve the critical thinking of the students, to introduce them to sentential and predicate logic, to familiarize them with enough formal logic to enable them to read some of the great works of philosophy, which use formal logic (such as Wittgenstein's Tractatus), and to examine some of the connections between logic and philosophy.

Class Format: discussion

Requirements/Evaluation: a midterm, a final, frequent homework and problem sets

Prerequisites: none

Enrollment Limit: 40/sect

Enrollment Preferences: Philosophy majors, seniors, juniors, sophomores, first-years in that order.

Expected Class Size: 40/sect

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)
Quantitative/Formal Reasoning Notes: The main part of the course is learning two formal languages of logic: sentential logic and predicate logic.

Attributes: Linguistics  PHIL Contemp Metaphysics + Epistemology Courses

Not offered current academic year

PHIL 221  (F)  Introduction to Formal Linguistics  (QFR)

Cross-listings: COGS 224  PHIL 221

Secondary Cross-listing

The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie," and that there's no such thing as a cookie that is both chocolate chip and oatmeal raisin. There are two ways to understand "Many students took every class": According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

Requirements/Evaluation: Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

Prerequisites: No prerequisites

Enrollment Limit: 20

Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

COGS 224  (D2)  PHIL 221  (D2)

Quantitative/Formal Reasoning Notes: This course teaches the fundamentals of the formal analysis of language. Students will learn to provide translation schemes from English to a logical language (typed lambda calculus).

PHIL 222  (F)(S)  Minds, Brains, and Intelligent Behavior: An Introduction to Cognitive Science

Cross-listings: PSYC 222  PHIL 222  COGS 222

Secondary Cross-listing

This course will emphasize interdisciplinary approaches to the study of intelligent systems, both natural and artificial. Cognitive science synthesizes research from cognitive psychology, computer science, linguistics, neuroscience, and contemporary philosophy. Special attention will be given to the philosophical foundations of cognitive science, representation and computation in symbolic and connectionist architectures, concept acquisition, problem solving, perception, language, semantics, reasoning, and artificial intelligence.

Requirements/Evaluation: midterm and final exams, and weekly exercises

Prerequisites: PSYC 101 or any PHIL course or CSCI 134 or permission of instructor; background in more than one of these is recommended.

Enrollment Limit: 20

Enrollment Preferences: sophomore and first-year students, with additional preference given to students who satisfy more of the prerequisites.

There is no need to contact the instructor to indicate special interest in the course.
PHIL 310 (F) Wittgenstein’s Later Philosophy (WS)

Ludwig Wittgenstein (1889-1951) is probably the greatest philosopher of the 20th century. His later work, best known through posthumously published *Philosophical Investigations*, continues to influence contemporary thinking about language, mind, action, knowledge, ethics, religion, aesthetics, culture, and of course, philosophy itself. Understanding later Wittgenstein is thus vital for engaging in contemporary philosophy, but neither the interpretation nor the evaluation of his thought is straightforward or easy. Later Wittgenstein is a controversial, polarizing figure; but serious reading of his work is invariably intellectually enriching and fertile. This tutorial aims to provide students with the skills necessary for careful, serious and thorough reading of Wittgenstein’s later philosophy. In the first part of the course, we will read Wittgenstein’s *Philosophical Investigations*, one of the greatest books ever written. In the second part of the course, we will read *On Certainty*, and selections from other of Wittgenstein’s posthumously published works: *Zettel*, *Philosophical Grammar*, *Remarks on the Philosophy of Psychology*, *Culture and Value*, *Lectures and Conversations on Aesthetics, Psychology and Religious Belief*, and *The Big Typescript.* Throughout the course, we will consult and discuss the important secondary literature on Wittgenstein, and analyze different philosophical presuppositions and goals that motivate particular readings. The central topics of the course will be: meaning, rule following, human languages; private experiences and other minds; intention and action; knowledge and skepticism; and especially, the methods and nature of philosophy.

**Requirements/Evaluation:** tutorial attendance and participation; bi-weekly tutorial papers, each about 5 pages long (totaling 6 per student); bi-weekly oral responses to the paper of the tutorial partner

**Prerequisites:** two Philosophy courses

**Enrollment Limit:** 10

**Enrollment Preferences:** preference will be given to students who already took a course on Wittgenstein, for example, PHIL 309

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will write two short (about 800 words) seminar papers; five 5-7 pages long papers; five 2-3 pages long comments on their tutorial partner's papers; and a final paper (also 5-7 pages long) which will be a revision of one of the previously written papers. Students will get regular feedback from their tutorial partner and from the instructor on the substance of their work as well as on their oral and writing skills, with suggestions for improvement.

which you say things matters, and it matters for what you communicate what actions you take and what events happen around you. In this course, we will investigate dynamic communicative phenomena and discuss competing theoretical explanations about how they're interpreted. Of particular interest will be the extent to which discourse dynamics are built into the meanings of linguistic expressions vs. the extent to which they're consequences of our rational cognition. Is a sentence's relation to previously uttered sentences similar to its relation to extra-linguistic events? How much inference goes into interpreting what's said? In pursuing the answers to these questions, we will discuss both classic and contemporary theories from philosophy and linguistics.

Requirements/Evaluation: Four short papers (3-4 pages), take-home midterm paper (5-7) pages, take-home final paper (6-8 pages)
Prerequisites: At least one philosophy or cognitive science course (any level), or permission of instructor.
Enrollment Limit: 19
Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors, then to students who have taken 200-Level Intro to Formal Linguistics
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (WS)
This course is cross-listed and the prefixes carry the following divisional credit:
COGS 390 (D2) PHIL 390 (D2)
Writing Skills Notes: There will be four short papers (3-4 pages each) that will receive written comments on substance, argument structure, and writing style. These will be designed to include sections that, upon revision in light of comments, can be incorporated into the longer midterm and final papers (5-7 pages and 6-8 pages respectively). Students will be required to meet with the instructor before the midterm and final papers to discuss outlines and revisions of short papers.

Lisa Gilbert, Associate Professor of Geosciences and Marine Sciences
ENVIRONMENTAL STUDIES

Environmental issues call upon citizens, organizations, and governments to grasp complex scientific concepts, address conflicting human values, and make difficult economic, political and ethical choices. A proper understanding of environmental issues is therefore an interdisciplinary exercise. The concentration in Maritime Studies is designed to help students to:

- Effectively address complex environmental issues by integrating perspectives from the natural sciences, the social sciences, and the arts and humanities;
- Understand ecological principles and the nature of living systems;
• Apply scientific methods to collect environmental data and evaluate environmental quality;
• Understand the political and economic factors that inform, enable, and constrain environmental policy;
• Understand the social, cultural, and historical factors that shape environmental thought, history, and behavior;
• Develop significant understanding of one or more of the essential methodological approaches required in addressing environmental challenges;
• Apply their learning in a practical setting.

The program is administered by the Center for Environmental Studies (CES), located in the Class of 1966 Environmental Center. Founded in 1967, CES was one of the first environmental studies programs at a liberal arts college. In addition to the academic program described below, CES is the focus of a varied set of activities in which students lead and participate, often with other members of the Williams community. CES offers extensive resources including databases, funding for student-organizations, and student initiated activities, and generous support for summer research and internships. The Class of 1966 Center, a Living Building and the Program’s home, includes a classroom, living room, study rooms, kitchen, as well as student gardens. The CES manages the Hopkins Memorial Forest, a 2600-acre natural area northwest of campus, in which there are field-study sites and a laboratory, and where passive-recreation opportunities may be found in all seasons. CES also operates the Environmental Analysis Laboratory in Morley Science Center. The Maritime Studies concentration builds on the course offerings of the Williams-Mystic Maritime Studies Program at Mystic Seaport.

ADVISING

Concentrators (or first-years and sophomores interested in the concentration offered by CES) are encouraged to talk at any time with the Chair or Associate Director of Environmental Studies, or any other members of CES or Maritime Studies for advice. All incoming concentrators will choose a faculty advisor in the spring of their sophomore year.

Advisors for 2019-20: Henry Art, Sarah Gardner, Pia Kohler, Laura Martin, Mea Cook, James Manigault-Bryant.

CONCENTRATION IN MARITIME STUDIES

The Maritime Studies concentration provides students with an opportunity to explore how humans interact with the environment, including the maritime environment. Understanding the oceans and our interactions with them is of increasing importance in this era of climate change, sea-level rise, fisheries crises, and the internationalization of the high seas. We encourage students to investigate our WaterWorld from the perspectives of the humanities, social sciences, and physical sciences. Maritime Studies is an interdisciplinary, cross-divisional program that includes the literature, history, policy issues, and science of the ocean. Candidates for the concentration in Maritime Studies must complete a minimum of seven courses: the interdisciplinary introductory course (GEOS 104 Oceanography), four intermediate core courses (at Williams-Mystic), an elective, and the senior seminar.

Students who have completed other study-away programs that emphasize maritime studies should consult with the CES chair about the possibility of completing the Maritime Studies concentration.

Required Courses (7 courses)

Introductory Course

MAST/ENVI/GEOS 104 Oceanography

Students who take MAST 211/GEOS 210 Oceanographic Processes at Williams-Mystic can substitute an extra elective in lieu of GEOS 104.

Capstone Course

ENVI/MAST 412 Senior Seminar: Perspectives on Environmental Studies

Core Courses (taken as part of Williams-Mystic program at Mystic Seaport):

MAST/ENGL 231 Literature of the Sea
MAST 311/BIOL 231 Marine Ecology OR MAST 211/GEOS 210 Oceanographic Processes
MAST/ENVI 351/ PSCI 319 Marine Policy
MAST/HIST 352 America and the Sea, 1600-Present

Elective Courses

Elective courses are listed based on either a clear maritime statement in the course description or broad practical/theoretical applicability to maritime studies. Concentrators will take a minimum of one course from the list below. If concentrators find other courses in the catalog that they believe meet the requirements for a MAST elective, they may bring them to the attention of the Chair or Associate Director.
INDEPENDENT STUDY AND WINTER STUDY

In addition to courses fulfilling the Maritime Studies concentration requirements, the following courses are offered:

- MAST 397, 398 Independent Study: Maritime Studies
- MAST 493-W31-494 Senior Thesis: Maritime Studies

Winter study courses play an important role in the program, offering opportunities to learn about aspects of environmental studies with which students would like to become more familiar. We encourage students to bear in mind their interests in the environment and maritime studies when reviewing each year’s Winter Study offerings.

HONORS IN MARITIME STUDIES

Candidates for honors in Maritime Studies will complete a thesis in their senior year. The project will involve original research (archive, museum, field, or laboratory) followed by on-campus analysis and write-up of results. The thesis may either be a one-semester plus winter study project, or a full year (two semesters plus winter study). In either case, data collection during the summer before the senior year may be necessary. In some cases, the thesis project may be a continuation and expansion of the student’s Williams-Mystic research project. Honors will be awarded if the thesis shows a high degree of scholarship, originality, and intellectual insight.
MAST 104 (F) Oceanography

Cross-listings: MAST 104 GEOS 104 ENVI 104

Secondary Cross-listing

The oceans cover three quarters of Earth’s surface, yet oceanography as a modern science is relatively young: the first systematic explorations of the geology, biology, physics and chemistry of the oceans began in the late 19th century. This introduction to ocean science includes the creation and destruction of ocean basins with plate tectonics; the source and transport of seafloor sediments and the archive of Earth history they contain; currents, tides, and waves; photosynthesis and the transfer of energy and matter in ocean food webs; the composition and origin of seawater, and how its chemistry traces biological, physical and geological processes; oceans and climate change; and human impacts.

Class Format: three 50-minute lecture/discussion meetings each week; 2-hour lab every second week; one all-day field trip to the Atlantic coast of New England.

Requirements/Evaluation: lab activities (25%), homework (25%), quizzes (5%), three exams (45%)

Prerequisites: none

Enrollment Limit: 48

Enrollment Preferences: first year and second year students, Geosciences majors, Maritime Studies concentrators

Expected Class Size: 48

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

MAST 211 (F)(S) Oceanographic Processes

Cross-listings: GEOS 210 MAST 211

Primary Cross-listing

Part of the Williams-Mystic Coastal and Ocean Studies Program, this course provides an introduction to physical, geological, chemical, and biological oceanography. Using local field sites as well as places visited on field seminars, we will investigate why the Earth has oceans, why they are salty, how they move and flow, reasons for sea level change on both long and short timescales, and how our oceans interact with the atmosphere to control global climate. We will emphasise societal interactions with the ocean, and will consider coastal processes including land loss. We will apply an environmental justice and anti-racist lens to our discussions. Field work will take place on shores in southern New England, as well as during field seminars on the Atlantic ocean, the West Coast and the Mississippi River Delta. This course is in the Oceans and Climate group for the Geosciences major.

Class Format: Flipped classroom will focus on active learning using data-based exercises. Mini-symposia will involve student research and discussion.

Requirements/Evaluation: graded lab exercises, mini-symposium participation, and a research project

Prerequisites: none

Enrollment Limit: 24

Enrollment Preferences: none

Expected Class Size: 10
Grading: no pass/fail option, no fifth course option

Unit Notes: This course is taught at our Mystic Seaport campus. Students must be enrolled in the Williams-Mystic Coastal and Ocean Studies Program.

Distributions: (D3)

MAST 226  (S)  The Oceans and Climate  (WS)

Cross-listings: GEOS 226  ENVI 226  ENVI 252  MAST 226

Secondary Cross-listing
The oceans are a fundamental part of Earth’s climate system. Ocean currents redistribute heat and water vapor around the globe, controlling temperature and precipitation patterns. Marine phytoplankton blooms and air-sea gas exchange modulate the atmospheric carbon dioxide concentration. The dynamic interaction of the atmosphere and the sea surface results in multi-year climate variations such as the El Niño-Southern Oscillation. This course will examine gradual and abrupt climate shifts from Earth’s history and the ocean’s role in driving, amplifying or dampening the changes, the ocean’s response to anthropogenic greenhouse gas emissions, and the projected impacts of continued emissions and climate change on the ocean in the coming decades and millennia. We will analyze articles from the scientific literature that lay out the theory on the ocean’s influence on climate, reconstruct past climate and ocean changes, test the mechanisms responsible for those changes, and with that knowledge, project the consequences of continued anthropogenic greenhouse gas emissions. Topics may include the climate effects of opening and closing seaways with plate tectonics, ocean feedbacks that amplify the intensity of ice ages, the instability of ocean circulation during ice-sheet retreat, the evolution of the El Niño-Southern Oscillation with changing carbon dioxide through the geologic past and the next century, ocean heat and carbon dioxide uptake during the last century and into the future, and the impact on sea level, seafloor methane reservoirs, ocean acidification, oxygenation and marine ecosystems. This course is in the Oceans and Climate group for the Geosciences major.

Requirements/Evaluation: evaluation will be based on the critical analysis of reading from the scientific literature through discussion, writing and revision

Prerequisites: at least one GEOS course

Enrollment Limit: 10

Enrollment Preferences: students with a strong interest in Geosciences and Geosciences majors

MAST 231  (F)(S)  Literature of the Sea  (DPE)
The ocean, and human relationships with it, have been central features of literatures and cultures around the world for more than a thousand years. But since literary study is typically based around authors' homelands, careful examination of the oceanic experience is often pushed to the periphery—an "empty space" to be crossed between nations, a "vast darkness" antithetical to human life, or a mirror for land-born concerns. Increasingly, however, scholars and readers are centering the sea and stories about it as a means stepping outside human frameworks of space and time, situating the complex emotions and narratives inspired by the ocean into a complex network of geologic history and teeming other-than-human life. This course examines a wide range of texts and perspectives on the ocean and human relationships with it. Doing so will help us consider how literature both plays into and subverts dominant viewpoints of the ocean. Through texts that consider 19th-century whaling, the Middle Passage, the postcolonial Caribbean, and islands throughout the Pacific Ocean, we will explore a range of questions, including: What can we learn from examining efforts to write about the ocean? How do ocean stories help individuals understand themselves, their communities, and their place in global environments? What can the range of cultural and literary perspectives on our "single, global ocean" reveal about the ways different people are both connected with and profoundly distant from each other? Most importantly, we will practice, as a classroom community, different strategies for carefully reading texts while connecting them to cultural traditions, surrounding environments, and personal experiences.

Class Format: weekly roundtable discussions, including coastal and near-shore field trips and multiple field seminars.

Requirements/Evaluation: regular papers, class participation, journal-writing, and a final assignment

Prerequisites: N/A

Enrollment Limit: 25

Enrollment Preferences: Williams-Mystic Students only

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Unit Notes: offered only at Mystic Seaport

MAST 263 (S) The Global Ocean: An Interdisciplinary Introduction

Cross-listings: MAST 263 ENVI 263

Primary Cross-listing

Though it covers most of the planet, the ocean's importance to everyday life is easy to overlook. Its roles as a cultural symbol, resource, highway, and climate regulator make it essential to life around the world. This interdisciplinary course, team-taught by the faculty of the Williams-Mystic Program, will examine key issues in each of the world's oceans while introducing students to the ways these issues connect multiple disciplines and transcend physical, political, and imaginary ocean boundaries. By drawing on the expertise of the five professors -- from humanities, social sciences, and sciences -- this course facilitates the critical study of the ocean from an interdisciplinary perspective and helps them consider their own role in the shifting relationship between humanity and the ocean. This seminar-style course will meet twice a week online, with students assessed by their participation, response papers, and final project, while helping them apply interdisciplinary skills to pressing sustainability issues connecting the environment and society.

Class Format: Remote, including Zoom seminar meetings twice a week
MAST 265  (F)  Coral Reefs: Ecology, Threats, & Conservation

Cross-listings:  ENVI 265  BIOL 165  MAST 265

Primary Cross-listing

Coral reefs are a fascinating ecosystem found throughout the world's tropical oceans. Corals can thrive in nutrient-poor oceans because of the mutualistic relationship with algal symbionts. And as a foundational species, corals provide a habitat for numerous species, possibly the highest diversity found on the planet. However, these complex and beautiful ecosystems are declining worldwide from a variety of local and global threats. In this course, we will explore coral reef ecology through an in-depth examination of the biotic and abiotic factors contributing to the ecosystem's functioning. We will also investigate the causes and consequences of threats to coral reefs, such as ocean warming, ocean acidification, and resource extraction. Finally, we will identify the many efforts worldwide to conserve coral reefs and promote their resilience. In this seminar course, offered remotely, you will demonstrate your proficiency through knowledge assessments, short writing reflections, a virtual coral fragmentation experiment, and a creative advocacy project. This course aims to deepen your awareness of the complex species interactions on coral reefs and the physical factors affecting coral survival while fostering hope through current conservation efforts.

Class Format: Remote, including Zoom seminar meetings twice a week

Requirements/Evaluation:  Four 1-paragraph discussion board post, One 20-question knowledge assessment (quiz), Three 2-page writing reflections, One lab results and discussion write-up 2-3 pages figures included, and a creative (medium is student choice) advocacy project.

Prerequisites:  none, open to all students

Enrollment Limit:  20

Enrollment Preferences:  1. First-Year, 2. Sophomores

Expected Class Size:  16

Grading:  yes pass/fail option,  yes fifth course option

Unit Notes:  Does not count for Biology major credit.

Distributions:  (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 265 (D3) BIOL 165 (D3) MAST 265 (D3)

Attributes:  ENVI Natural World Electives

Not offered current academic year

MAST 266  (S)  Reading Water  (WS)

Cross-listings:  ENVI 266  MAST 266

Primary Cross-listing

Water has such profound and far-reaching influence on individuals, societies, and the planet that it simultaneously risks going overlooked and appearing clichéd. Human beings are made of it and need it to live, yet will die if immersed in it. It is venerated by cultures around the world, yet most people either cannot access clean water, or don't know where their clean water is piped in from. It covers the earth's surface, and has shaped it over eons, yet scientists are still not sure how it came to be here in the first place. This wide-ranging influence also presents challenges for traditional
academic structures; thinking about water demands crossing times, spaces, and disciplines. This course will explore the wide-ranging and diverse ways water impacts individuals, cultures, and the environments they call home by drawing on a range of content: hydrology, literature, political theory, storytelling, geography, and more. To do this, we will also develop and examine methods of critically reading as "non-experts"—reading scientific articles as rhetorical objects and reading for scientific principles in literature, for instance—to explore what interdisciplinary thinking opens up (and inhibits), and thus how to effectively engage with and create interdisciplinary work. The goal here is not to define water's cultural or scientific importance, or to determine which disciplines "best" combine to explain water, or to come up with humanities-based solutions to "the water crisis." Rather, these texts, and the water that flows through them will help us explore the opportunities and limits of human perceptions of the other-than-human world. It will help us consider the extent to which those perceptions both shape, and are shaped by, a seemingly simple molecule. And it will help us imagine epistemologies and ontologies that account for the ways water simultaneously flows through us, around us, and through the deep geological history of the planet. Course Texts: Tristan Gooley -- *How to Read Water* (selections) Vandana Shiva -- *Water Wars* (selections) Luna Leopold -- *Water, Rivers, and Creeks* (selections) Richard White -- *The Organic Machine* Linda Hogan -- *Solar Storms* Marc Reisner -- *Cadillac Desert* Jesmyn Ward -- *Salvage the Bones* John McPhee -- "Atchafalaya" Emmi Itäranta -- *Memory of Water* Brenda Hillman -- "The Hydrology of California"

**Class Format:** This class will be remote, meeting synchronously. The class will be primarily discussion-based, and will ask students to lead and structure discussions. Students will have questions, reflections, and insights prepared before class, and use those to drive our in-class activities.

**Requirements/Evaluation:** 100pg of reading a week, give or take. Approx 20-25 pages of written work throughout the semester.

**Prerequisites:** None

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference to majors, and then to sophomores and juniors, respectively.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ENVI 266 (D1) MAST 266 (D1)

**Writing Skills Notes:** Students will write four papers of increasing complexity that will require workshopping and drafts. Each of these papers will receive forward-looking writing feedback from me. The first paper centers on paragraph-level stylistic choices, the second on argument/evidence connections, the third on genre, and the final paper synthesizes these writing skills. In addition, students’ final grades will allow for revision of earlier papers to encourage and assess growth of writing skills.

Not offered current academic year

**MAST 268 (S) Debating Ocean Biodiversity at the Intersection of Science and Policy**

**Cross-listings:** ENVI 268 MAST 268

**Primary Cross-listing**

Biodiversity in the ocean is facing an onslaught of challenges, both directly and indirectly. It is likely that we are undergoing a sixth mass extinction event, where diversity of life on earth is stunningly at risk. Fortunately, however, we are also finding innovative ways to solve issues and attempt to stave off these dramatic changes to our ecosystems. These solutions potentially have both positive and negative effects. Difficult tradeoffs must be weighed and decisions must be made as people wrestle with known knowns, known unknowns, and unknown unknowns. In this class, we will explore five issues that relate to biodiversity in the ocean. You will have the opportunity to investigate one side of an issue, to collect supporting information, and to advocate for your position all while learning about current biodiversity issues in the ocean. You will be challenged to weigh conflicting evidence to find a positive outcome. Throughout the class you will practice critical thinking, evaluation, and synthesizing skills as you work with multiple viewpoints. Class time will include lecture, in-class group work, and student-led debates of timely, controversial issues. You will be assessed on summaries of information, reflections on topics, and a final project on an issue of your choice relating to ocean biodiversity.

**Class Format:** Remote, including Zoom seminar meetings twice a week

**Requirements/Evaluation:** Five 2-page papers, participation, and a 6-8 page final paper

**Prerequisites:** none, open to all students

**Enrollment Limit:** 20

**Enrollment Preferences:** 1. first years, 2. sophomores, 3. MAST concentrators

**Expected Class Size:** 15
**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

**MAST 311 (F)(S) Marine Ecology**

**Cross-listings:** MAST 311 BIOL 231

**Primary Cross-listing**

We have explored only a fraction of the ocean, with about 10% of marine species classified and 20% of the ocean mapped. Many discoveries remain to be made, and marine ecology is one technique to uncover new insights. The field of marine ecology, rooted in the theory of evolution, describes the mechanisms and processes that drive the diversity, abundance, and distribution of marine organisms. The goal is to document natural patterns and make predictions about how species will respond to environmental changes by investigating the relationship between the abiotic environment and biotic interactions. This course will take a deep dive into the unique challenges to life in the ocean. You will compare and contrast different marine ecosystems, such as coral reefs, kelp forests, and the deep sea. You will also practice a marine ecologist's skillset as you design, carry out, and analyze your own research project, which will improve your scientific writing, data analysis, and communication skills. Importantly, you will connect your research and course topics to larger marine conservation issues and broader societal impacts.

**Class Format:** including coastal and near-shore field trips, 10 days offshore, and a laboratory or field research project

**Requirements/Evaluation:** two tests, a research project, and a presentation

**Prerequisites:** BIOL 101 or GEOS/MAST 104, or permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** none

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** This course is only offered through the Williams-Mystic Maritime Studies Program located in Mystic, CT. satisfies the distribution requirement for the Biology major.

**Distributions:** (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

**MAST 351 (F)(S) Marine Policy** (DPE) (WS)

**Cross-listings:** MAST 351 ENVI 351 PSCI 319

**Primary Cross-listing**

Coastal communities are home to nearly 40% of the U.S. population, but occupy only a small percentage of our country's total land area. Intense population density, critical transportation infrastructure, significant economic productivity, and rich cultural and historic value mark our coastal regions as nationally significant. But, coastal and ocean-based climate-induced impacts such as sea level rise, ocean warming and acidification pose extraordinary challenges to our coastal communities, and are not borne equally by all communities. This seminar considers our relationship with our
ocean and coastal environments and the foundational role our oceans and coasts play in our Nation’s environmental and economic sustainability as well as ocean and coastal climate resiliency. Through the lens of coastal and ocean governance and policy-making, we critically examine conflict of use issues relative to climate change, climate justice, coastal zone management, fisheries, ocean and coastal pollution and marine biodiversity.

Class Format: This class is taught only at Williams-Mystic in Mystic, Connecticut and includes coastal and near-shore interdisciplinary field seminars, and 10 days offshore.

Requirements/Evaluation: Weekly Readings; Class Participation; Small and large group strategy exercises (written and oral); Written Research Project: issues paper and draft research paper; Final Research Project: multiple formats available

Prerequisites: none

Enrollment Limit: 23

Enrollment Preferences: must be enrolled at Williams-Mystic in Mystic, Connecticut

Expected Class Size: 22

Grading: no pass/fail option, no fifth course option

Unit Notes: must be enrolled at Williams-Mystic in Mystic, Connecticut

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

MAST 351 (D2) ENVI 351 (D2) PSCI 319 (D2)

Writing Skills Notes: Each student will write one 3-5 page research issues paper and one 8-10 page draft research paper as well as a final project with written components equaling 5-8 pages. Each submission receives written feedback from the professor, including research guidance, input on grammar, structure, language, analysis. Students also receive verbal feedback in individual conferences to discuss research paper organization, analysis, structure and grammar as well as final project input.

Difference, Power, and Equity Notes: Coastal and ocean policy issues relating to climate change, coastal zone management, fisheries, ocean pollution and marine biodiversity impact environmental and climate justice. Students examine coastal governance while considering the disproportionate burdens on underrepresented populations in U.S. coastal communities caused by climate change and coastal policies. Students analyze multi-disciplinary evidence and work to strengthen their integrative, analytical, writing, and advocacy skills.

MAST 352 (F)(S) American Maritime History (DPE) (WS)

Cross-listings: HIST 352 MAST 352

Primary Cross-listing

This course explores themes in American maritime history from the colonial era to the 21st century. We will consider the dynamic relationship between the sea and American life, and the broad influence that each has had on the other. This relationship led to interactions with the water as a highway for the transportation of not just people and goods, but powerful new forces and ideas. The water creates a unique space for the formation of new communities and identities, while also acting as an important, and often exploited, resource. We will sample from different fields of inquiry including labor, environmental, cultural, and political history to gain a deeper understanding of diverse people's complex interactions with the oceans and seas.

Class Format: Seminars, discussions, and field seminars

Requirements/Evaluation: Participation in class discussions, activities, and presentations, regular papers, and a final independent research project

Prerequisites: None

Enrollment Limit: 27

Enrollment Preferences: If course over-enrolls, preference will be given to sophomores and juniors

Expected Class Size: 22

Grading: no pass/fail option, no fifth course option
Unit Notes: Offered only at Mystic Seaport

Distributions:  (D2)  (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
HIST 352 (D2) MAST 352 (D2)

Writing Skills Notes: Students must complete regular writing assignments including a final 10- to 15-page paper. Additionally, students will participate in several in-class writing workshops and peer critiques. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: Maritime activity has long provided opportunities for some while creating tremendous hardships for others. From the slave trade and the encounters between native and European mariners to the power wielded by multi-national shipping conglomerates, this course investigates contests over power, empire, and capitalism as they played out on the maritime stage.

MAST 402  (S) Senior Seminar: Perspectives on Environmental Studies  (WS)
Cross-listings:  MAST 402  ENVI 412
Secondary Cross-listing

The Environmental Studies and Maritime Studies programs provide students with an opportunity to explore the myriad ways that humans interact with diverse environments at scales ranging from local to global. The capstone course for Environmental Studies and Maritime Studies, this seminar brings together students who have specialized in the humanities, social studies and the sciences to exchange ideas across these disciplines. Over the course of the seminar, students will develop a sustained independent research project on a topic of their choice, and they will have opportunities throughout the semester to meet with guest speakers to discuss environmental work outside the academy.

Requirements/Evaluation:  active participation, discussion leading, several smaller assignments and multi-step capstone project
Prerequisites:  declared major/concentration in Environmental Studies or Maritime Studies, ideally to be taken in final semester at Williams
Enrollment Limit:  14
MAST 404 (F) Coastal Processes and Geomorphology (QFR)

Secondary Cross-listing
Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces—wind, waves, storms, and people—that shape the coastal zone, as well as the geologic formations—sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs—that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

Class Format: lecture two times a week with a lab one time per week
Requirements/Evaluation: lab reports, quizzes, and an independent research project
Prerequisites: Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.
Enrollment Limit:  12
Enrollment Preferences: senior Geosciences majors, then juniors
Expected Class Size:  10
Grading:  yes pass/fail option, yes fifth course option
Unit Notes: As a 400-level seminar, this capstone course is intended to build on and extend knowledge and skills students have developed during previous courses in the major. This course counts toward the GEOS Group B Electives - Sediments + Life.
Distributions:  (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:

MATERIALS SCIENCE STUDIES (Div III)

Materials Science is an interdisciplinary field which combines microscopic physics and chemistry in order to understand and control the properties of materials such as plastics, semiconductors, metals, liquid crystals, and biomaterials. Williams students with an interest in the properties of materials or in pursuing careers in materials science or a variety of engineering disciplines would benefit from following the courses in this program.

MTSC Courses

CHEM 336  (F) Materials Chemistry
Materials have defined much of what is possible in our daily lives. Materials scientists are at the center of imagining and delivering progress, as they improve existing materials and develop new ones to meet today’s needs. Materials science focuses on the relationships between the structure, processing, properties, and performance of materials. In this course, we will explore how the properties and potential applications of a solid are related to its atomic and molecular structure, as well as to its organization on larger length scales than are traditionally considered in chemistry. We will cover a variety of different types of materials including metals, ceramics, polymers, and composites. We will examine some of the latest developments in materials science, including new strategies for the synthesis of materials on different length scales, as well as a variety of potential applications of emerging technologies.

Class Format: three hours per week
Requirements/Evaluation: problem sets, reviews of research articles, two exams, and oral presentations
Prerequisites: CHEM 155 or 256 and 251/255
Enrollment Limit: 20
Enrollment Preferences: Chemistry majors
Expected Class Size: 20
Grading: no pass/fail option, yes fifth course option
Distributions: (D3)
Attributes: MTSC Courses
Not offered current academic year

CHEM 348  (S) Polymer Chemistry
From synthetic to natural macromolecules, we encounter polymers everywhere and every day. This course explores the multitude of synthetic techniques available and discusses how structure defines function. Topics include polymer types, concept of molecular weight, structure-property relationships and polymer synthesis methods including condensation and chain (anionic, cationic, radical) polymerizations. Fundamentals of composition and physical properties of polymers, and methods of characterization are also covered. Examples of polymer functionalization, self-assembly, and surface modification are also discussed.

Class Format: lecture, three hours per week and laboratory, four hours per week
Requirements/Evaluation: evaluation is based on problem sets, participation, two exams, laboratory work, and a final project
Prerequisites: CHEM 251/255
Enrollment Limit: 12
Enrollment Preferences: Chemistry majors
Expected Class Size: 12
Grading: no pass/fail option, no fifth course option
Distributions: (D3)
Attributes: BIMO Interdepartmental Electives MTSC Courses
CHEM 364 (S) Instrumental Methods of Analysis

Cross-listings: ENVI 364  CHEM 364

Primary Cross-listing

Instrumental methods of analysis provide scientists with different lenses to observe and elucidate fundamental chemical phenomena and to measure parameters and properties at the atomic, molecular, and bulk scales. This course introduces a framework for learning about a variety of instrumental techniques that typically include chromatography, mass spectrometry, thermal methods, atomic and molecular absorption and emission spectroscopy, X-ray diffraction, and optical and electron microscopies. Students complete two 5-6 week long laboratory projects and gain hands-on experience and project planning skills to study molecules and materials of interest. This practical experience is complemented by lectures that cover the theory and broader applications of these techniques. Students also explore the primary literature and highlight recent advances in instrumental methods that address today's analytical questions. The skills learned are useful in a wide variety of scientific areas and will prepare you well for research endeavors.

Class Format: lecture, two times per week and laboratory, four hours per week; periodic small group meetings to plan laboratory research projects

Requirements/Evaluation: Weekly data analysis and project planning assignments for laboratory and analysis of readings for class, problem sets, two project reports and presentations, one oral presentation of an application of instrumental methods, a final independent literature project and presentation; demonstrated progress in research skills, and project engagement.

Prerequisites: CHEM 155 or 256 and 251/255; may be taken concurrently with CHEM 256 with permission of instructor

Enrollment Limit: 8/lab

Enrollment Preferences: Chemistry and Environmental Studies majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

GEOS 202 (F) Mineralogy

This course could be subtitled "An Introduction to Earth Materials and Analytical Techniques." As the basis for all subsequent solid-earth courses in the major, it provides a systematic framework for the study of minerals--Earth's building blocks: their physical and chemical properties at all scales and the common analytical methods used to identify and interpret them. The course progresses from hand-specimen morphology and crystallography through element distribution and crystal chemistry to the phase relations, compositional variation, and mineral associations within major rock-forming mineral systems. Laboratory work includes the determination of crystal symmetry; mineral separation; the principles and applications of optical emission spectroscopy; wavelength- and energy-dispersive x-ray spectrochemical analysis; x-ray diffraction; the use of the petrographic microscope; and the identification of important minerals in hand specimen and thin section. This course is in the Solid Earth group for the Geosciences major.

Class Format: Lecture three hours per week and laboratory three hours per week; independent study of minerals in hand specimen; one afternoon field trip

Requirements/Evaluation: one hour test, lab work, and a final exam

Prerequisites: one 100-level GEOS course or permission of instructor

Enrollment Limit: 14

Enrollment Preferences: sophomores and juniors planning to take GEOS 301, 302 and/or 303 in the subsequent year

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D3)
GEOS 234 (S) Introduction to Materials Science  (QFR)

Cross-listings: GEOS 234  PHYS 234

Secondary Cross-listing

Materials Science is the study of how the microscopic structure of materials—whether steel, carbon fiber, glass, wood, plastic, or mayonnaise—determines their macroscopic mechanical, thermal, electric, and other properties. Topics of this course include classifying materials; material structure; thermodynamics and phase transformations; material properties and testing; how solids bend, flow, and ultimately break; and how to choose the right material for design applications. Materials Science is a highly interdisciplinary field and as a result the course prerequisites are broad but also flexible. Interested students who are unsure about their preparation are strongly encouraged to contact the instructor.

Class Format: lecture (3 hours per week) plus three to four small-group laboratory sessions throughout the semester (to be scheduled with instructor)

Requirements/Evaluation: weekly problem sets, class participation, and midterm and final exams, all of which have a substantial quantitative component

Prerequisites: high school physics and chemistry, preferably at the AP level, and MATH 140 or AP Calculus (BC), and one 200-level PHYS, CHEM, or GEOS course; or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: based on students' scientific background and seniority

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: This course does not count toward the Geosciences major.

Distributions:  (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MAJOR IN MATHEMATICS

The major in Mathematics is designed to meet two goals: to introduce some of the central ideas in a variety of areas of mathematics and statistics, and to develop problem-solving ability by teaching students to combine creative thinking with rigorous reasoning. Mathematics is a gateway to many career paths including statistics, teaching, consulting, business, engineering, finance, actuarial studies and applied mathematics. Students are strongly encouraged to consult with the department faculty on choosing courses appropriate to an individualized program of study.

REQUIREMENTS (9 courses plus colloquium)

The major in Mathematics consists of nine courses taken at Williams plus the colloquium requirement. Mathematics is highly cumulative, and students should plan a route to completing the major that ensures the proper sequencing and prerequisites for all needed courses. Note that not all upper level courses are offered every year.

Calculus (2 courses)

- Mathematics 140 Calculus II
- Mathematics 150 or 151 Multivariable Calculus
Applied/Discrete Mathematics/Statistics (1 course)

- or Mathematics 210 Mathematical Methods for Scientists (Same as Physics 210)
- or Mathematics 200 Discrete Mathematics
- or Statistics 201 Statistics and Data Analysis
- Mathematics 309 Differential Equations
- or a more advanced applied/discrete/statistics course with prior department approval

Core Courses (3 courses)

- Mathematics 250 Linear Algebra
- Mathematics 350 Real Analysis or Mathematics 351 Applied Real Analysis
- Mathematics 355 Abstract Algebra

Completion (3 courses plus colloquium)

- Two mathematics or statistics electives from courses numbered 300 and above
- One Senior Seminar: Any mathematics or statistics course numbered between 400 and 479, taken in the junior or senior year.
- Participation in the Department Colloquium, in which all senior majors present a talk on a mathematical or statistical topic of their choice. Each major must attend at least 20 colloquia (reduced to 15 during the Academic Year 2020-2021), and up to 5 attendances may be counted in their junior year. Students engaged in study away may petition the department in advance to count up to 5 suitable colloquia attendances from their study away program.

Pass/Fail policies during the Academic Year 2020-2021

Information about the Department of Mathematics and Statistics Pass/Fail policies during the Academic Year 2020-2021 can be found here.

ADVANCED PLACEMENT

Students who come to Williams with advanced placement will be moved up in the Mathematics major, and should consult with faculty to be placed in the best class reflecting their experience and background. A student who places out of a course substitutes another course of equal or higher level in Mathematics or Statistics to complete the nine course major. Students should select courses best suited to their preparation and goals, and consult with the department faculty concerning appropriate courses and placement. The department reserves the right to refuse registration in any course for which the student is overqualified.

For Example, a student starting in MATH 130 might take MATH 130 and 140 the first year, MATH 150 and MATH 200 the second year, MATH 250 and MATH 350 the third year, MATH 355 and a senior seminar the fourth year, plus the two required electives some time. Students are encouraged to consult freely with any math faculty about course selection and anything else.

CALCULUS PLACEMENT

Recommended placement for students who have taken an Advanced Placement Examination in Calculus (AB or BC) is:

- BC 1, 2 or AB 2, 3 Math 140
- AB 4 or 5 Math 150
- BC 3, 4 or 5 Math 151

Consult with department faculty for any Calculus or Statistics placement questions. Students who have had calculus in high school, whether or not they took the Advanced Placement Examination, are barred from 130 unless they obtain permission from the instructor.

NOTES

Substitutions, Study Abroad, and Transfer Credit: In some cases, and with prior permission of the Mathematics and Statistics Department, appropriate courses from other institutions or a course from another Williams department may be substituted for electives. Programs like the "Budapest Semester in Mathematics" are recommended for majors who wish to focus on mathematics away. The department, though, normally accommodates students who select other study away programs. The department offers its core courses in both the fall and the spring to allow students to spend more easily a semester away.

Double Counting: No course may count towards two different majors.

Planning Courses: Core courses Mathematics 350/351 and 355, are normally offered every year. Most other 300-level topics are offered in alternate years. Topology, Complex Analysis, and second courses in real analysis and abstract algebra are normally offered at least every other year.
Each 400-level topic is normally offered every two to four years. Students should check with the department before planning far into the future.

**Course Admission:** Courses are normally open to all students meeting the prerequisites, subject to any course caps. Students with questions about the level at which courses are conducted are invited to consult department faculty.

**FAQ**

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

**Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in many cases, though students should be sure to contact the department.

**What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description, and complete syllabus including readings/assigments.

**Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

No.

**Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

Yes. They have to be approved MATH/STAT courses.

**Are there specific major requirements that cannot be fulfilled while on study away?**

Yes. Colloquium requirement, Senior Seminar requirement.

**Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**

Yes. The highly cumulative structure of the major.

**Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:**

None to date.

**THE DEGREE WITH HONORS IN MATHEMATICS**

The degree with honors in Mathematics is awarded to the student who has demonstrated outstanding intellectual achievement in a program of study which extends beyond the requirements of the major. The principal considerations for recommending a student for the degree with honors will be: Mastery of core material and skills, breadth and, particularly, depth of knowledge beyond the core material, ability to pursue independent study of mathematics or statistics, originality in methods of investigation, and, where appropriate, creativity in research.

An honors program normally consists of two semesters (MATH/STAT 493 and 494) and a winter study (WSP 031) of independent research, culminating in a thesis and a presentation. Under certain circumstances, the honors work can consist of coordinated study involving a one semester (MATH/STAT 493 or 494) and a winter study (WSP 030) of independent research, culminating in a “minithesis” and a presentation. Note that during the Academic Year 2020-2021 the winter study requirement for thesis and “minithesis” is waved. At least one semester should be in addition to the major requirements, and thesis courses do not count as 400-level senior seminars.

An honors program in actuarial studies requires significant achievement on four appropriate examinations of the Society of Actuaries.

Highest honors will be reserved for the rare student who has displayed exceptional ability, achievement or originality. Such a student usually will have written a thesis, or pursued actuarial honors and written a mini-thesis. An outstanding student who writes a mini-thesis, or pursues actuarial honors and writes a paper, might also be considered. In all cases, the award of honors and highest honors is the decision of the Department.

**APPLIED MATHEMATICS TRACK**

Students interested in applied mathematics, engineering, or other sciences should consider:

- Mathematics 140 Calculus II
- Mathematics 150 or 151 Multivariable Calculus
- Statistics 201 Statistics and Data Analysis
- Mathematics 250 Linear Algebra
- Mathematics 351 Applied Real Analysis
- Mathematics 355 Abstract Algebra
Some programming or numerical analysis (e.g. MATH 361, 318T, or anything if you’ve had CSCI 134)

MATH 309 or Post-core Differential Equations/Numerical Methods

Senior seminar (e.g. Math Ecology MATH 410T or Mathematical Modeling MATH 433)

Other recommended courses: complex analysis, discrete mathematics (e.g. combinatorics or graph theory), operations research, optimization, probability, statistics, appropriate courses in Biology, Chemistry, Computer Science, Economics, Neuroscience, Physics, etc.

Williams has exchange and joint programs with good engineering schools. Interested students should consult the section on engineering near the beginning of the Bulletin and the Williams pre-engineering advisor for further information.

GRADUATE SCHOOL TRACK

Students interested in continuing their study of mathematics in graduate school should consider:

Mathematics 140 Calculus II
Mathematics 150 or 151 Multivariable Calculus
Mathematics 250 Linear Algebra
Mathematics 350 Real Analysis
Mathematics 355 Abstract Algebra
Complex Analysis
Topology
Some second semester analysis
Some second semester algebra
Some post-core geometry
Thesis

[With prior permission, in unusual circumstances, senior seminar can be waived in favor of harder post-core electives.]

Students headed for graduate school generally take more than this relatively small number of courses required for a liberal arts major. Reading knowledge of a foreign language (French, German, or Russian) can be helpful.

Students interested in studying statistics in graduate school should take STAT 201, 346, 360, a 400 level statistics course and MATH 350/351 and 341 in addition to their other math requirements.

OTHER CAREER PATHS

Other Graduate and Professional Schools: An increasing number of graduate and professional schools require mathematics and statistics as a prerequisite to admission or to attaining their degree. Students interested in graduate or professional training in business, medicine, economics, or psychology are advised to find out the requirements in those fields early in their college careers.

Statistics and Actuarial Science: Students interested in statistics or actuarial science should consider Mathematics 341, Statistics courses, and Economics 255. Additionally, students should consider taking some number of the actuarial exams given by the Society of Actuaries, which can constitute part of an honors program in actuarial studies (see section on honors above).

Teaching: Students interested in teaching mathematics at the elementary or secondary school level should consider courses on teaching, number theory, geometry, statistics, and practice as a tutor or teaching assistant. Winter study courses that provide a teaching practicum are also highly recommended. Consult the Program in Teaching (Professor Susan Engel) and the Office of Career Counseling.

Business and Finance: Students interested in careers in business or finance should consider Mathematics 333 and Statistics courses. Since these courses address different needs, students should consult with the instructors to determine which seem to be most appropriate for individuals.

There are three types of 300-level courses. There are the core courses: Real Analysis, MATH 350/351, and Abstract Algebra Math 355. There are the "precore" courses, which do not have the core courses as prerequisites and have numbers 300-349. Finally, there are those courses that have an Abstract Algebra or Real Analysis prerequisite, which are numbered 360-399.
This course will be an introduction to logic and number theory, with emphasis throughout on mathematics as a way of thinking. Have you ever wondered what keeps your credit card information safe every time you buy something online? Number theory! Number Theory is one of the oldest branches of mathematics. In this course, we will discover the beauty and usefulness of numbers, from ancient Greece to modern cryptography. We will look for patterns, make conjectures, and learn how to prove these conjectures. Starting with nothing more than basic high school algebra, we will develop the logic and critical thinking skills required to realize and prove mathematical results. Topics to be covered include the meaning and content of proof, prime numbers, divisibility, rationality, modular arithmetic, Fermat's Last Theorem, the Golden ratio, Fibonacci numbers, coding theory, and unique factorization. This course is meant to give you an appreciation for numbers and mathematics and to enhance your logical reasoning skills. Although most people will not use calculus or geometry in their jobs or everyday lives, mathematics enhances our abilities to think logically and reason effectively. This skill is useful in all aspects of life. Number theory, in particular, is a great area of mathematics that allows one to jump in right away without a lot of pre-requisite knowledge. We will look at examples, look for patterns, make conjectures, and we will spend a lot of time learning how to rigorously prove those conjectures.

**Class Format:** Students will attend lecture Monday - Thursday mornings from 10am - noon. In the afternoons, students will attend interactive math labs from approximately 1 - 3 pm Monday - Thursday.

**Requirements/Evaluation:** Evaluation will be based on daily homework and activities, exams, projects, and participation in class and math labs.

**Prerequisites:** Permission of a dean.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students who need to make up a deficiency.

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** This course is designed to count for both full semester, Winter Study, and QFR credit. Once a dean approves enrollment, the Registrar's Office will register students in both MATH 100 and MATH 40.

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** We will be proving theorems and learning mathematical logic.

Not offered current academic year
MATH 119 (F) The Mathematics of Pandemics: From the Spread of Infections to Cost-Benefit Analyses of Responses (QFR)
The goal of the class is to help students learn to ask the right questions, and to gather and analyze the data needed to answer them, to understand the covid pandemic and the worldwide responses. Through local experts and numerous guest speakers playing key roles in these problems, we will discuss numerous aspects, from mathematical models for virus propagation to analyzing the economic, educational, social and emotional consequences of lockdowns and social distancing; from moral and legal dilemmas created by the pandemic and responses to the international political scene and relations between countries. Offered as Math 119 or Math 312 (those taking as Math 312 will have some of the readings replaced with more technical modeling papers and subsequent homework). Pre-requisites: None for Math 119; for Math 312 linear algebra is recommended.

Requirements/Evaluation:  Homework, writing, class participation.
Prerequisites: none
Enrollment Limit: 30
Enrollment Preferences: all students will have an equal chance; if possible none will be turned away.
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: We will discuss mathematical models and use statistics to analyze data.

Not offered current academic year

MATH 130 (F)(S) Calculus I (QFR)
Calculus permits the computation of velocities and other instantaneous rates of change by a limiting process called differentiation. The same process also solves "max-min" problems: how to maximize profit or minimize pollution. A second limiting process, called integration, permits the computation of areas and accumulations of income or medicines. The Fundamental Theorem of Calculus provides a useful and surprising link between the two processes. Subtopics include trigonometry, exponential growth, and logarithms.

Requirements/Evaluation:  Weekly homework and quizzes, 2 exams during the semester, and one final
Prerequisites:  MATH 102 (or demonstrated proficiency on a diagnostic test); this is an introductory course for students who have not seen calculus before
Enrollment Limit: 50
Enrollment Preferences:  first-year students
Expected Class Size: 20
Grading:  yes pass/fail option, yes fifth course option
Unit Notes:  students who have previously taken a calculus course may not enroll in MATH 130 without the permission of instructor
Distributions:  (D3) (QFR)
Quantative/Formal Reasoning Notes:  This a calculus course.

Fall 2022
LEC Section: 01    MWF 11:00 am - 11:50 am    Lori A. Pedersen
LEC Section: 02    MWF 12:00 pm - 12:50 pm    Lori A. Pedersen

Spring 2023
LEC Section: 01 MWF 10:00 am - 10:50 am Lori A. Pedersen

MATH 140  (F)(S) Calculus II (QFR)
Calculus answers two basic questions: how fast is something changing (the derivative) and how much is there (the integral). This course is about integration, and the miracle that unites the derivative and the integral (the Fundamental Theorem of Calculus.) Understanding calculus requires in part the understanding of methods of integration. This course will also solve equations involving derivatives (“differential equations”) for population growth or pollution levels. Exponential and logarithmic functions and trigonometric and inverse functions will also play an important role. This course is the right starting point for students who have seen derivatives, but not necessarily integrals, before.

Requirements/Evaluation: homework, quizzes, and/or exams
Prerequisites: MATH 130 or equivalent; students who have received the equivalent of advanced placement of AB 4, BC 3 or higher may not enroll in MATH 140 without the permission of instructor
Enrollment Limit: 50
Enrollment Preferences: based on who needs calculus the soonest
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Unit Notes: students who have higher advanced placement must enroll in MATH 150 or above
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is a math class

Fall 2022
LEC Section: 01 MWF 9:00 am - 9:50 am Bhagya Athukorallage
LEC Section: 02 MWF 10:00 am - 10:50 am Bhagya Athukorallage

Spring 2023
LEC Section: 01 MWF 11:00 am - 11:50 am Lori A. Pedersen

MATH 150  (F)(S) Multivariable Calculus (QFR)
Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives, multiple integrals. There is also a unit on infinite series, sometimes with applications to differential equations.

Requirements/Evaluation: Problem sets and exams
Prerequisites: MATH 140 or equivalent, such as satisfactory performance on an Advanced Placement Examination
Enrollment Limit: 50
Enrollment Preferences: Preference will be given to prospective math and stats majors, or students who need this as a course to serve as a prerequisite for other courses.
Expected Class Size: 40
Grading: yes pass/fail option, yes fifth course option
Unit Notes: Students with the equivalent of advanced placement of AB 4 or above should enroll in MATH 150, students with a BC 3 or higher should enroll in Math 151 when it is being offered, and Math 150 otherwise.
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: mathematics

Fall 2022
LEC Section: 01 MWF 10:00 am - 10:50 am Colin C. Adams
LEC Section: 02 MWF 11:00 am - 11:50 am Colin C. Adams
LEC Section: 03 MWF 12:00 pm - 12:50 pm Colin C. Adams

Spring 2023
Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives and multiple integrals. The goal of the course is Stokes Theorem, a deep and profound generalization of the Fundamental Theorem of Calculus. The difference between this course and MATH 150 is that MATH 150 covers infinite series instead of Stokes Theorem. Students with the equivalent of BC 3 or higher should enroll in MATH 151, as well as students who have taken the equivalent of an integral calculus and who have already been exposed to infinite series. For further clarification as to whether MATH 150 or MATH 151 is appropriate, please consult a member of the math/stat department.

**Requirements/Evaluation:** problem sets and exams

**Prerequisites:** AP BC 3 or higher or integral calculus with infinite series

**Enrollment Limit:** 50

**Enrollment Preferences:** First-years, sophomores, and juniors

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** MATH 151 satisfies any MATH 150 prerequisite; credit will not be given for both MATH 150 and MATH 151

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course builds quantitative skills

**Fall 2022**

LEC Section: 01  MWF 8:00 am - 8:50 am  Susan R. Loepp

LEC Section: 02  MWF 9:00 am - 9:50 am  Susan R. Loepp

LEC Section: 03  MWF 10:00 am - 10:50 am  Susan R. Loepp

**MATH 197 (F) Independent Study: Mathematics**

Directed 100-level independent study in Mathematics.

**Requirements/Evaluation:** decided by the department

**Prerequisites:** permission of department

**Enrollment Limit:** 20

**Enrollment Preferences:** decided by the department

**Expected Class Size:** 1

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

**Fall 2022**

IND Section: 01  TBA  Mihai Stoiciu

**MATH 198 (S) Independent Study: Mathematics**

Directed 100-level independent study in Mathematics.

**Prerequisites:** permission of the department

**Enrollment Limit:** 20

**Enrollment Preferences:** decided by the department

**Expected Class Size:** 1

**Grading:** yes pass/fail option, yes fifth course option
MATH 200  (F)(S) Discrete Mathematics  (QFR)

In contrast to calculus, which is the study of continuous processes, this course examines the structure and properties of finite sets. Topics to be covered include mathematical logic, elementary number theory, mathematical induction, set theory, functions, relations, elementary combinatorics and probability, and graphs. Emphasis will be given on the methods and styles of mathematical proofs, in order to prepare the students for more advanced math courses.

Requirements/Evaluation:  Fall: Homework, proof portfolio, group work, presentations, quizzes/exams, reflections.  Spring: The grade will be based on homework and 4 exams.

Prerequisites: Calculus at the level of an AP course or Williams College Math 130 or 140. Students who have taken a 300-level or 400-level math course should obtain permission of the instructor before enrolling.

Enrollment Limit:  40

Enrollment Preferences: Preference given to first and second year students intending to major in mathematics or computer science.

Expected Class Size:  40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)  (QFR)

Quantative/Formal Reasoning Notes: This course involves developing the formal mathematical language of logic and set theory. It also involves using quantitative tools to solve problems relating to combinatorics, probability, and other fields of discrete mathematics.

Fall 2022
LEC Section: 01  TR 8:30 am - 9:45 am  Daniel Condon

LEC Section: 02  TR 9:55 am - 11:10 am  Ralph E. Morrison

MATH 210  (S) Mathematical Methods for Scientists  (QFR)

Cross-listings: PHYS 210  MATH 210

Secondary Cross-listing
This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit:  50

Enrollment Preferences: sophomores and juniors

Expected Class Size:  30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
Quantitative/Formal Reasoning Notes: This course will have weekly problem sets using advanced calculus methods.

Spring 2023
LEC Section: 01    TR 9:55 am - 11:10 am     Daniel P. Aalberts

MATH 250  (F)(S)  Linear Algebra  (QFR)
Many social, political, economic, biological, and physical phenomena can be described, at least approximately, by linear relations. In the study of systems of linear equations one may ask: When does a solution exist? When is it unique? How does one find it? How can one interpret it geometrically? This course develops the theoretical structure underlying answers to these and other questions and includes the study of matrices, vector spaces, linear independence and bases, linear transformations, determinants and inner products. Course work is balanced between theoretical and computational, with attention to improving mathematical style and sophistication.

Requirements/Evaluation:  homework and exams
Prerequisites: MATH 150/151 or MATH 200
Enrollment Limit:  60
Enrollment Preferences:  Students who have officially declared a major that requires Math 250.
Expected Class Size:  40
Grading:  yes pass/fail option,    yes fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: In this course, students will engage in both quantitative and formal reasoning.

MATH 298  (S)  Independent Study: Mathematics
Directed 200-level independent study in Mathematics.
MATH 303 (F) Introduction to Dynamics, p-Adics, and Measure (QFR)
At its most basic level a dynamical system consists of a set of points and a transformation or map acting on the set (i.e., sending points in the set to other points in the set). In this setting we can already ask about the existence, and prevalence, of periodic points (points that come back to themselves). One can also ask about the orbit of a point: the set of points that is obtained as one iteratively applies the transformation the point. An important dynamical notion that comes up here is that of chaos. The course will start by studying basic dynamical systems using notions from calculus. Then we will introduce the p-adic numbers and use them to study dynamical systems. The course will end with an exploration of the notion of measure and its connection with dynamical systems.

Requirements/Evaluation: Homework, class participation, exams.
Prerequisites: Math 250.
Enrollment Limit: 30
Enrollment Preferences: Juniors
Expected Class Size: 20
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Mathematics

Not offered current academic year

MATH 307 (F)(S) Computational Linear Algebra (QFR)
Linear algebra is of central importance in the quantitative sciences, including application areas such as image and signal processing, data mining, computational finance, structural biology, and much more. When the problems must be solved computationally, approximation, round-off errors, convergence, and efficiency matter, and traditional linear algebra techniques may fail to succeed. We will adopt linear algebra techniques on a large scale, implement them computationally, and apply them to core problems in scientific computing. Topics may include: systems of linear and nonlinear equations; approximation and statistical function estimation; optimization; interpolation; data scraping; singular value decomposition; and more. This course could also be considered a course in numerical analysis or computational science.

Class Format: This course is taught in a flipped classroom format. Students read and watch lecture videos prior to each class session. The instructor uses class time for discussion and collaborative learning activities. This course will be a good fit for students with a strong interest in applied mathematics and a willingness to devote significant effort to learning/doing computer programming.

Requirements/Evaluation: Students will complete checkpoint quizzes, regularly assigned homework problems and projects, and reflective writing assignments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows the policy of "ungrading." Over the course of the semester, students will develop a rubric to assess their own learning and will evaluate themselves according to this rubric.
Prerequisites: MATH 250; COMP 134 or equivalent prior experience with computer programming (in any language)
Enrollment Limit: 24
Enrollment Preferences: Preference given to majors and prospective majors.
Expected Class Size: 24
Grading: yes pass/fail option, yes fifth course option
Distributions:  (D3)  (QFR)

Quantitative/Formal Reasoning Notes: This course involves developing the formal mathematical language of linear algebra. It also involves using quantitative tools to solve problems relating to a wide range of applications in the physical and social sciences.

MATH 308  (F)(S)  Mathematical and Computational Approaches to Social Justice  (DPE) (QFR)

Cross-listings:  STS 363  WGSS 363  AMST 363  MATH 308

Primary Cross-listing

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial group will carry out a substantial project in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science.

Class Format: This is a research-based tutorial.

Requirements/Evaluation: To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows an "ungrading" methodology.

Prerequisites: Across each 3 - 5 person tutorial group: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

Enrollment Limit:  20

Enrollment Preferences: Students will be admitted in groups of 3 - 5 based on a proposal submitted prior to registration. The instructor is happy to facilitate formation of groups and to give feedback on draft proposals. Contact the instructor early, prior to preregistration.

Expected Class Size:  20

Grading:  yes pass/fail option,  no fifth course option

Distributions:  (D3)  (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 363 (D2)  WGSS 363 (D2)  AMST 363 (D2)  MATH 308 (D3)

Difference, Power, and Equity Notes: Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

Quantitative/Formal Reasoning Notes: Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

Fall 2022

Spring 2023
TUT Section: T1    TBA     Chad M. Topaz

MATH 309  (F)(S)  Differential Equations  (QFR)

Ordinary differential equations (ODEs) frequently arise as models of phenomena in the natural and social sciences. This course presents core ideas of ODEs from an applied standpoint. Topics covered early in the course may include numerical solutions, separation of variables, integrating factors, and constant coefficient linear equations. Later, we will focus on nonlinear ODEs, for which it is usually impossible to find analytical solutions. Tools from dynamical systems will be introduced to allow us to obtain information about the behavior of the ODEs without explicitly knowing the solution.

Requirements/Evaluation: quizzes/exams, problem sets, participation

Prerequisites: MATH 150/151 and MATH 250
MATH 311 (F) Advanced topics in applied mathematics (QFR)
Applied mathematics is an expansive field that uses mathematical methods to explore problems that arise in biology, physics, engineering, and many other disciplines. In this course, we will explore a diversity of methods that may include stochastic processes, optimization, signal processing, and numerical analysis. We will also explore how these methods can be utilized to understand questions in other disciplines.

Requirements/Evaluation: This course will have some combination of problem sets, presentations, exams, and a final project
Prerequisites: Differential equations (Math 309) or permission of the instructor
Enrollment Limit: 10
Enrollment Preferences: If over-enrolled, the instructor will request a statement of interest
Expected Class Size: 10
Grading: yes pass/fail option, no fifth course option
Distributions: (D3) (QFR)

Fall 2022
TUT Section: T1 TBA Julie C. Blackwood

MATH 312 (F) The Mathematics of Pandemics: From the Spread of Infections to Cost-Benefit Analyses of Responses (QFR)
The goal of the class is to help students learn to ask the right questions, and to gather and analyze the data needed to answer them, to understand the covid pandemic and the worldwide responses. Through local experts and numerous guest speakers playing key roles in these problems, we will discuss numerous aspects, from mathematical models for virus propagation to analyzing the economic, educational, social and emotional consequences of lockdowns and social distancing; from moral and legal dilemmas created by the pandemic and responses to the international political scene and relations between countries. Offered as Math 119 or Math 312 (those taking as Math 312 will have some of the readings replaced with more technical modeling papers and subsequent homework). Pre-requisites: None for Math 119; for Math 312 linear algebra is recommended.
Requirements/Evaluation: Class participation, writing, homework problems.
Prerequisites: Linear algebra recommended.
Enrollment Limit: none
Enrollment Preferences: all students will have an equal chance; if possible none will be turned away.
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: We will discuss mathematical models and use statistics to analyze data.

Not offered current academic year
MATH 313 (S) Introduction to Number Theory (QFR)
The study of numbers dates back thousands of years, and is fundamental in mathematics. In this course, we will investigate both classical and modern questions about numbers. In particular, we will explore the integers, and examine issues involving primes, divisibility, and congruences. We will also look at the ideas of numbers and primes in more general settings, and consider fascinating questions that are simple to understand, but can be quite difficult to answer.

Requirements/Evaluation: Problem sets and exams
Prerequisites: MATH 250 or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: Students who have not taken Math 355 and seniors who need the course to complete the major and have no other options.
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course requires working with various number systems, performing explicit computations, and proving mathematical results using logical reasoning practices.

Spring 2023
LEC Section: 01 MWF 10:00 am - 10:50 am Susan R. Loepp

MATH 314 (S) Cryptography (QFR)
An introduction to the techniques and practices used to keep secrets over non-secure lines of communication, including classical cryptosystems, the data encryption standard, the RSA algorithm, discrete logarithms, hash functions, and digital signatures. In addition to the specific material, there will also be an emphasis on strengthening mathematical problem solving skills, technical reading, and mathematical communication.

Requirements/Evaluation: exams, homework, and quizzes
Prerequisites: MATH 250
Enrollment Limit: 30
Enrollment Preferences: graduating seniors and Math majors
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: The course will contain mathematical proofs.
Not offered current academic year

MATH 315 (S) Methods for Solving Diophantine Equations (QFR)
A Diophantine equation is an equation with integer (or rational) coefficients that is to be solved in integers (or rational numbers). A focus of study for hundreds of years, Diophantine analysis remains a vibrant area of research. It has yielded a multitude of beautiful results and has wide ranging applications in other areas of mathematics, in cryptography, and in the natural sciences. In this project-based tutorial, we will focus on studying and implementing various methods for solving previously unsolved infinite families of Diophantine equations. Depending on their interests, students may choose one or several methods to apply to open problems in the field. Please note that this tutorial will be held virtually.

Requirements/Evaluation: The grade for this course will be a combination of weekly problem sets, weekly oral presentations (approx. 15 min. each), quarterly self-reflections, and a final written project manuscript that will be continually edited throughout the semester (minimum of 5 pages).
Prerequisites: MATH 250 or permission of the instructor
Enrollment Limit: 10
Enrollment Preferences: Sophomores, Juniors, and Seniors based on a short questionnaire of interests. In the event of over-enrollment, preference will be given to those that need the course to graduate.
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course requires working with various number systems, performing explicit computations, and proving mathematical results using logical reasoning practices.

Not offered current academic year

MATH 317 (F) Introduction to Operations Research (QFR)

In the first N math classes of your career, you can be misled as to what the world is truly like. How? You're given exact problems and told to find exact solutions. The real world is sadly far more complicated. Frequently we cannot exactly solve problems; moreover, the problems we try to solve are themselves merely approximations to the world! We are forced to develop techniques to approximate not just solutions, but even the statement of the problem. Additionally, we often need the solutions quickly. Operations Research, which was born as a discipline during the tumultuous events of World War II, deals with efficiently finding optimal solutions. In this course we build analytic and programming techniques to efficiently tackle many problems. We will review many algorithms from earlier in your mathematical or CS career, with special attention now given to analyzing their run-time and seeing how they can be improved. The culmination of the course is a development of linear programming and an exploration of what it can do and what are its limitations. For those wishing to take this as a Stats course, the final project must have a substantial stats component approved by the instructor.

Prerequisites: Linear Algebra (MATH 250) and one other 200-level or higher CSCI, MATH or STATS course, or permission of the instructor.

Requirements/Evaluation: homework, exams, projects

Prerequisites: MATH 150, MATH 250 and one other 200-level or higher CSCI, MATH or STATS course, or permission from the instructor.

Enrollment Limit: 40

Enrollment Preferences: Computer Science, Mathematics and Statistics majors

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Unit Notes: http://web.williams.edu/Mathematics/sjmiller/public_html/317/

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: 300 level mathematics course.

Fall 2022
LEC Section: 01 MWF 9:00 am - 9:50 am Steven J. Miller

MATH 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)

Cross-listings: MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

Secondary Cross-listing

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

Class Format: The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

Requirements/Evaluation: lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

Prerequisites: BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

Enrollment Limit: 12
Enrollment Preferences: seniors, then juniors, then sophomores
Expected Class Size: 12
Grading: yes pass/fail option, no fifth course option
Unit Notes: does not satisfy the distribution requirement for the Biology major
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)
Quantitative/Formal Reasoning Notes: Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

LAB Section: 02   TR 1:00 pm - 4:00 pm   Lois M. Banta

MATH 321 (S) Knot Theory  (QFR)
Take a piece of string, tie a knot in it, and glue the ends together. The result is a knotted circle, known as a knot. For the last 100 years, mathematicians have studied knots, asking such questions as, "Given a nasty tangled knot, how do you tell if it can be untangled without cutting it open?" Some of the most interesting advances in knot theory have occurred in the last ten years. This course is an introduction to the theory of knots. Among other topics, we will cover methods of knot tabulation, surfaces applied to knots, polynomials associated to knots, and relationships between knot theory and chemistry and physics. In addition to learning the theory, we will look at open problems in the field.
Requirements/Evaluation: problem sets, midterms, a paper and a final exam
Prerequisites: MATH 250 or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: seniors, junior, sophomores, first year
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is a quantitative course.
Not offered current academic year

MATH 325 (F) Set Theory  (QFR)
Set theory is the traditional foundational language for all of mathematics. We will be discussing the Zermelo-Fraenkel axioms, including the Axiom of Choice and the Continuum Hypothesis, basic independence results and, if time permits, incompleteness theorems. At one time, these issues tore at the foundations of mathematics. They are still vital for understanding the nature of mathematical truth.
Requirements/Evaluation: exams and homework
Prerequisites: MATH 250
Enrollment Limit: 30
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Materials/Lab Fee: textbook cost
Distributions: (D3) (QFR)
Not offered current academic year

MATH 328 (S) Combinatorics  (QFR)
Combinatorics is a branch of mathematics that focuses on enumerating, examining, and investigating the existence of discrete mathematical structures with certain properties. This course provides an introduction to the fundamental structures and techniques in combinatorics including enumerative methods, generating functions, partition theory, the principle of inclusion and exclusion, and partially ordered sets.

Class Format: interactive activities and discussion
Requirements/Evaluation: quizzes/exams, homework, activities
Prerequisites: MATH 200 and MATH 250
Enrollment Limit: 30
Enrollment Preferences: discretion of the instructor
Expected Class Size: 25
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Not offered current academic year

MATH 329 (F) Discrete Geometry (QFR)
Discrete geometry is one of the oldest and most consistently vibrant areas of mathematics, stretching from the Platonic Solids of antiquity to the modern day applications of convex optimization and linear programming. In this course we will learn about polygons and their higher-dimensional cousins, polyhedra and polytopes, and the various ways to describe, compute, and classify such objects. We will learn how these objects and ideas can be applied to other areas, from computation and optimization to studying areas of math like algebraic geometry. Throughout this course we will be engaging with mathematical work and literature from as old as 500 BCE and as recent as "posted to the internet yesterday."
Requirements/Evaluation: Problem sets, exams, and a final project
Prerequisites: MATH 200 or Math 250, or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: Sophomores, juniors, and seniors
Expected Class Size: 20
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: All of the content in this course is quantitative or formal reasoning.
Not offered current academic year

MATH 334 (F) Graph Theory (QFR)
A graph is a collection of vertices, joined together by edges. In this course, we will study the sorts of structures that can be encoded in graphs, along with the properties of those graphs. We'll learn about such classes of graphs as multi-partite, planar, and perfect graphs, and will see applications to such optimization problems as minimum colorings of graphs, maximum matchings in graphs, and network flows.
Requirements/Evaluation: problem sets, exams, and a short final project
Prerequisites: MATH 200 or MATH 250
Enrollment Limit: 30
Enrollment Preferences: Math majors
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: This course involves the writing of mathematical proofs.

Fall 2022
LEC Section: 01    MWF 11:00 am - 11:50 am     Ralph E. Morrison
Given goals, options, and uncertainty, how does one make a rational choice? What happens when we interact with others who are also choosing? How might this play out over time? We will first cover the principles of decision theory including preference, uncertainty, utility, imperfect information, and rational choice. The majority of the course will be spent on the main topics of game theory: sequential games, bimatrix games, parlor games, Nash equilibria, bargaining, repeated games, Bayesian belief, and signaling. Applying these principles to populations that evolve over time through variation, selection, and copying, we will develop basic models of the dynamics of evolution.

Class Format: lecture

Requirements/Evaluation: Weekly homework, midterm exams, and a final.

Prerequisites: Math 150/151 and Math 250. Some background in probability and differential equations is highly recommended.

Enrollment Limit: 35

Enrollment Preferences: Math majors.

Expected Class Size: 35

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Lots of math.

Not offered current academic year

MATH 338 (S) Intermediate Logic (QFR)

Cross-listings: PHIL 338 MATH 338

Secondary Cross-listing

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have take PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

Requirements/Evaluation: problem sets and exams

Prerequisites: some class in which student has studied formal reasoning

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors; juniors and seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 338 (D2) MATH 338 (D3)

Quantative/Formal Reasoning Notes: This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

Spring 2023

SEM Section: 01 Cancelled
MATH 340  Applications of Mathematics to the Real World  (QFR)

Often for real world applications one does not need to find the optimal solution, which can be extremely difficult, but instead just find something close, or at least better than what is currently being done. We will develop material and techniques from mathematics, statistics and allied fields with an eye to applications. In addition to standard homework assignments and exams there will be a group project where students will work with a local business, write a report and present the results. Pre-requisites are multivariable calculus and linear algebra, or permission of the instructor. Knowledge of some statistics or programming is beneficial but not required.

Class Format: In addition to standard lectures and assignments, we will be partnering with local businesses to apply mathematics to solve real world problems.

Requirements/Evaluation: Lectures and class participation, homework, exams and encouragement to do a project. We already have several local businesses with projects for students. Working on a project will entail meeting with officials from the company, clearly defining what the problem is, and writing a solution. This will include a presentation, a write-up, and potentially implementable code. Based on previous similar courses, these papers typically run from 10 to 40 pages.

Prerequisites: Mathematics 150 or 151, and Linear Algebra, or permission of the instructor.

Enrollment Limit: 40

Enrollment Preferences: Students who have taken at least one statistics or computer science class

Expected Class Size: 25

Grading:  

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is a 300 level mathematics class

Not offered current academic year

MATH 341  (F)(S)  Probability  (QFR)

Cross-listings: STAT 341  MATH 341

Primary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 150 and MATH 250 or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STAT 341 (D3) MATH 341 (D3)

Quantitative/Formal Reasoning Notes: This is a 300-level Math/Stat course.

Fall 2022

Spring 2023

LEC Section: 01  TF 2:35 pm - 3:50 pm  Mihai Stoiciu

MATH 342  (F)  Logic  (QFR)
This course will introduce the main ideas and basic results of mathematical logic, and explain their applications to other areas of mathematics and computer science. We will begin with a study of first-order logic, covering structures and definability, theories, models and categoricity, as well as formal proofs. We will prove Gödel's completeness and compactness theorems and the Lowenheim-Skolem theorems. The course will briefly dive into computability theory, enough to prove Gödel's Incompleteness theorems and basic undecidability results.

Requirements/Evaluation: Evaluation based on homework, exams, and class participation.

Prerequisites: Math 250 - Linear Algebra

Enrollment Limit: 20

Enrollment Preferences: Junior and Senior Math Majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Mathematics course in logic and applications.

Fall 2022
LEC Section: 01  MWF 9:00 am - 9:50 am  Jenna Zomback

MATH 344 (S) The Mathematics of Sports  (QFR)
The purpose of this class is to use sports as a springboard to study applications of mathematics, especially in gathering data to build and test models and develop predictive statistics. Examples will be drawn from baseball, basketball, cross country, football, hockey, soccer, track, as well as class choices. Pre-requisites are linear algebra (Math 250) and either a 200 level statistics class or a 100 level programming class, or permission of the instructor.

Requirements/Evaluation: Homework, exams, projects

Prerequisites: Math 250: Linear Algebra

Enrollment Limit: 40

Enrollment Preferences: None. If the course is over-enrolled preference will be given to math and stats majors, and then if needed by performance on a small assignment.

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is a 300 level mathematics course.

Spring 2023
LEC Section: 01  MWF 10:00 am - 10:50 am  Steven J. Miller

MATH 345 (S) Introduction to Numerical Analysis  (QFR)
Numerical analysis is the study of algorithms that use numerical approximation to solve problems which arise in scientific applications. This course provides an introduction to the theory, development, and analysis of algorithms for obtaining numerical solutions. Topics discussed in the course include: Error Analysis and Convergence Rates of Algorithms; Root Finding for Nonlinear Equations; Approximating Functions using Lagrange Interpolation and Cubic Spline Approximation; Numerical Differentiation and Integration; Numerical Solution of Ordinary Differential Equations; Iterative Methods for Solving Linear Systems

Requirements/Evaluation: Evaluation will be based on homework, projects, and exams.

Prerequisites: Math 250

Enrollment Limit: 30

Enrollment Preferences: Mathematics and Statistics majors.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)  (QFR)

Quantative/Formal Reasoning Notes: This is an advanced mathematics class that will cover the fundamental ideas of Numerical Analysis. The students will study in-depth various algorithms that provide numerical solutions to various questions in science.

Spring 2023
LEC Section: 01    TR 8:30 am - 9:45 am     Bhagya Athukorallage

MATH 350  (F)(S)  Real Analysis  (QFR)
Why is the product of two negative numbers positive? Why do we depict the real numbers as a line? Why is this line continuous, and what do we mean when we say that? Perhaps most fundamentally, what is a real number? Real analysis addresses such questions, delving into the structure of real numbers and functions of them. Along the way we'll discuss sequences and limits, series, completeness, compactness, derivatives and integrals, and metric spaces. Results covered will include the Cantor-Schroeder-Bernstein theorem, the monotone convergence theorem, the Bolzano-Weierstrass theorem, the Cauchy criterion, Dirichlet's and Riemann's rearrangement theorem, the Heine-Borel theorem, the intermediate value theorem, and many others. This course is excellent preparation for graduate studies in mathematics, statistics, and economics.

Requirements/Evaluation: Problem sets, exams, and an expository essay.
Prerequisites: MATH 250 or permission of instructor.
Enrollment Limit: 40
Enrollment Preferences: Juniors and Seniors.
Expected Class Size: 25
Grading: no pass/fail option, yes fifth course option
Distributions: (D3)  (QFR)

Spring 2023
LEC Section: 01    MR 2:35 pm - 3:50 pm     Mihai Stoiciu

MATH 355  (F)(S)  Abstract Algebra  (QFR)
Algebra gives us tools to solve equations. The integers, the rationals, and the real numbers have special properties which make algebra work according to the circumstances. In this course, we generalize algebraic processes and the sets upon which they operate in order to better understand, theoretically, when equations can and cannot be solved. We define and study abstract algebraic structures such as groups, rings, and fields, as well as the concepts of factor group, quotient ring, homomorphism, isomorphism, and various types of field extensions. This course introduces students to abstract rigorous mathematics.

Requirements/Evaluation: Problem sets and exams
Prerequisites: MATH 250 or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: Students who have officially declared a major that requires Math 355.
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

MATH 361 (F) Theory of Computation (QFR)
Cross-listings: MATH 361 CSCI 361
Secondary Cross-listing
This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Class Format: Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

Requirements/Evaluation: online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination
Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor
Enrollment Limit: 48(12/con)
Enrollment Preferences: current or expected Computer Science majors
Expected Class Size: 48
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
MATH 361 (D3) CSCI 361 (D3)

CON Section: 02 MWF 11:00 am - 12:15 pm Aaron M. Williams
MATH 374 (F) Topology  (QFR)

In Real Analysis you learned about metric spaces—any set of objects endowed with a way of measuring distance—and the topology of sets in such spaces (open, closed, bounded, etc). In this course we flip this on its head: we explore how to develop analysis (limits, continuity, etc) in spaces where the topology is known but the metric is not. This will lead us to a bizarre and fascinating version of geometry in which we cannot distinguish between shapes that can be continuously deformed into one another. Not only does this theory turn out to be beautiful in the abstract, it plays an important role in math, physics, and data analysis. This course is excellent preparation for graduate programs in mathematics.

Requirements/Evaluation:  Problem sets, exams, an expository essay.
Prerequisites:  MATH 350 or 351; not open to students who have taken MATH 323. If you didn't cover metric spaces in real analysis, that's OK!
Enrollment Limit:  30
Enrollment Preferences:  Juniors and seniors
Expected Class Size:  20
Grading:  no pass/fail option, yes fifth course option
Distributions:  (D3)  (QFR)
Quantative/Formal Reasoning Notes:  It's math.

Fall 2022
LEC Section: 01    TR 9:55 am - 11:10 am     Leo Goldmakher

MATH 383  (F) Complex Analysis  (QFR)

The calculus of complex-valued functions turns out to have unexpected simplicity and power. As an example of simplicity, every complex-differentiable function is automatically infinitely differentiable. As examples of power, the so-called "residue calculus" permits the computation of "impossible" integrals, and "conformal mapping" reduces physical problems on very general domains to problems on the round disc. The easiest proof of the Fundamental Theorem of Algebra, not to mention the first proof of the Prime Number Theorem, used complex analysis.

Requirements/Evaluation:  homework, classwork, and exams
Prerequisites:  MATH 350 or MATH 351 or permission of instructor
Enrollment Limit:  40
Enrollment Preferences:  40
Expected Class Size:  30
Grading:  yes pass/fail option, yes fifth course option
Unit Notes:  this course is not a senior seminar, so it does not fulfill the senior seminar requirement for the Math major
Distributions:  (D3)  (QFR)
Quantative/Formal Reasoning Notes:  Advanced mathematics course with weekly or daily problem sets.
Not offered current academic year

MATH 390  Undergraduate Research Topics in Algebra  (QFR)

The well-known trace map on matrices can be generalized to a map on other algebraic objects. Undergraduates, graduates students and experts in Representation Theory, Commutative Algebra and Algebraic Geometry have been driving recent developments in the theory of trace modules and finding exciting new applications in all of these fields. This course will serve as an introduction to mathematical research with the aim of producing original research in modern trace theory. Students in this tutorial will read and synthesize research papers, discuss the formation of research questions in pure mathematics, and engage in original mathematical research.

Requirements/Evaluation:  oral presentations; writing assignments (summarizing papers, reflections on mathematical research, original research);
participation in the course project

**Prerequisites:** Math 355

**Enrollment Limit:** 10

**Enrollment Preferences:** Juniors and Seniors

**Expected Class Size:** 7

**Grading:**

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is post-core math class; students will be required to produce mathematical proofs.

*Not offered current academic year*

**MATH 391 (F) Introduction to computer algebra** (QFR)

Students will learn new mathematics in the context of computer-based exposition, experimentation, and interaction. They will gain proficiency with Sage, GAP, Macaulay2, or Mathematica, and possibly one of the more-specialized systems SnapPea, kenzo, magma, MATLAB, Perseus, coq, etc. Individuals and teams will build interactive demonstrations of mathematical theorems, which will then be appreciated by the instructor and the rest of the class. No prior programming experience is expected.

**Class Format:** Class will be held online, but there will be recorded components, asynchronous interactive components, and outside-of-class small-group online meetings.

**Requirements/Evaluation:** exams, homework, projects

**Prerequisites:** Math 355 or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** math majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** Mathematical programming requires complete synthesis of abstract concepts to produce computer code, which is necessarily formal.

*Not offered current academic year*

**MATH 392 (S) Undergraduate Research Topics in Graph Theory** (WS) (QFR)

Graph theory is a vibrant area of research with many applications to the social sciences, psychology, and economics. In this project-based tutorial, students will select among the presented topics and will develop research questions and undertake original research in the field. Student assessment is based on drafts of research project manuscript and presentations.

**Requirements/Evaluation:** presentations and written project manuscript

**Prerequisites:** MATH 355 or permission of the instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** programming experience, students with interests in the intersection of combinatorics and graph theory

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (WS) (QFR)

**Writing Skills Notes:** This course will require multiple revisions of a manuscript related to the research project at hand. The final result will be a 10-20 page research article and the course will be designed as a writing intensive course.

**Quantitative/Formal Reasoning Notes:** The course deals with mathematical research in graph theory and is a quantitative and formal reasoning course.

*Not offered current academic year*

**MATH 393 (S) Research Topics in Combinatorics** (WS) (QFR)
Combinatorics provides techniques and tools to enumerate, examine, and investigate the existence of discrete mathematical structures with certain properties. There are numerous areas of applications including algebra, discrete geometry, and number theory. In this project-based research course students will work in small groups to learn combinatorial techniques and tools in order to develop research questions and begin tackling unsolved problems in combinatorics.

Requirements/Evaluation: Students will be evaluated through written drafts of a manuscript and its revisions and multiple in-class presentation.

Prerequisites: Math 355

Enrollment Limit: 19

Enrollment Preferences: Post-core mathematics majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS) (QFR)

Writing Skills Notes: The main goal of this course is to undertake original research in combinatorics, as such student assessment is based on developing positive collaboration skills, and improving technical written and oral skills in mathematics through manuscript draft submissions and in-class presentations. Students will provide multiple drafts of their manuscript and in right of this the course will be writing intensive.

Quantative/Formal Reasoning Notes: The main goal of this course is to undertake original research in the math field of mathematics. See above for more details.

Spring 2023

SEM Section: 01 Cancelled

MATH 394 (S) Galois Theory (QFR)

Some equations--such as \( x^5 - 1 = 0 \)--are easy to solve. Others--such as \( x^5 - x - 1 = 0 \)--are very hard, if not impossible (using standard mathematical operations). Galois discovered a deep connection between field theory and group theory that led to a criterion for checking whether or not a given polynomial can be easily solved. His discovery also led to many other breakthroughs, for example proving the impossibility of squaring the circle or trisecting a typical angle using compass and straightedge. From these not-so-humble beginnings, Galois theory has become a fundamental concept in modern mathematics, from topology to number theory. In this course we will develop the theory and explore its applications to other areas of math.

Requirements/Evaluation: written homeworks and exams

Prerequisites: MATH 355

Enrollment Limit: 50

Enrollment Preferences: discretion of the instructor

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: this course is not a senior seminar, so it does not fulfill the senior seminar requirement for the Math major

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a math class

Not offered current academic year

MATH 397 (F) Independent Study: Mathematics

Directed 300-level independent study in Mathematics.

Prerequisites: permission of department

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Fall 2022

IND Section: 01 TBA Mihai Stoiciu
MATH 398 (S) Independent Study: Mathematics
Directed 300-level independent study in Mathematics.
Prerequisites: permission of department
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)

Spring 2023
IND Section: 01 TBA Mihai Stoiciu

MATH 401 (S) Functional Analysis (QFR)
Functional analysis can be viewed as linear algebra on infinite-dimensional spaces. It is a central topic in Mathematics, which brings together and extends ideas from analysis, algebra, and geometry. Functional analysis also provides the rigorous mathematical background for several areas of theoretical physics (especially quantum mechanics). We will introduce infinite-dimensional spaces (Banach and Hilbert spaces) and study their properties. These spaces are often spaces of functions (for example, the space of square-integrable functions). We will consider linear operators on Hilbert spaces and investigate their spectral properties. A special attention will be dedicated to various operators arising from mathematical physics, especially the Schrödinger operator.
Class Format: lecture
Requirements/Evaluation: weekly problem sets, two midterm exams, final exam
Prerequisites: MATH 350 or 351 or permission of instructor
Enrollment Limit: 40
Enrollment Preferences: Mathematics and Physics majors; seniors
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is an advance course in Mathematical Analysis.
Not offered current academic year

MATH 402 (F) Measure Theory and Hilbert Spaces (QFR)
How large is the unit square? One might measure the number of individual points in the square (uncountably infinite), the area of the square (1), or the dimension of the square (2). But what about for more complicated sets, e.g., the set of all rational points in the unit square? What's the area of this set? What's the dimension? In this course we'll come up with precise ways to measure size -- length, area, volume, dimension -- that apply to a broad array of sets. Along the way we'll encounter Lebesgue measure and Lebesgue integration, Hausdorff measure and fractals, space-filling curves and the Banach-Tarski paradox. We will also investigate Hilbert spaces, mathematical objects that combine the tidiness of linear algebra with the power of analysis and are fundamental to the study of differential equations, functional analysis, harmonic analysis, and ergodic theory, and also apply to fields like quantum mechanics and machine learning. This material provides good preparation for graduate studies in mathematics, statistics and economics.
Class Format: Discussion-based course held remotely.
Requirements/Evaluation: performance on homework assignments and exams
Prerequisites: MATH 350 or MATH 351 or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: Seniors
Expected Class Size: 20
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Math
MATH 404  (F)  Random Matrix Theory  (QFR)

Initiated by research in multivariate statistics and nuclear physics, the study of random matrices is nowadays an active and exciting area of mathematics, with numerous applications to theoretical physics, number theory, functional analysis, optimal control, and finance. Random Matrix Theory provides understanding of various properties (most notably, statistics of eigenvalues) of matrices with random coefficients. This course will provide an introduction to the basic theory of random matrices, starting with a quick review of Linear Algebra and Probability Theory. We will continue with the study of Wigner matrices and prove the celebrated Wigner's Semicircle Law, which brings together important ideas from analysis and combinatorics. After this, we will turn our attention to Gaussian ensembles and investigate the Gaussian Orthogonal Ensemble (GOE) and the Gaussian Unitary Ensemble (GUE). The last lectures of the course will be dedicated to random Schrödinger operators and their spectral properties (in particular, the phenomenon called Anderson localization). Applications of Random Matrix Theory to theoretical physics, number theory, statistics, and finance will be discussed throughout the semester.

Requirements/Evaluation:  homework assignments and exams  
Prerequisites: experience with Real Analysis (MATH 350 or MATH 351) and with Probability (MATH 341 or STAT 201)  
Enrollment Limit:  40  
Enrollment Preferences:  Mathematics and Statistics majors  
Expected Class Size:  20  
Grading:  yes pass/fail option,  yes fifth course option  
Distributions:  (D3)  (QFR)  
Quantitative/Formal Reasoning Notes: This course expands ideas in probability and statistics from random variables (1x1 random matrices) to nxn random matrices. The students will learn to model complex physical phenomena using random matrices and study them using rigorous mathematical tools and concepts.  
Not offered current academic year

MATH 405  (S)  Representation Theory and Special Functions  (QFR)

Representation theory is at the heart of much of modern mathematics. It provides a link between ideas of symmetries, groups and matrices. It has applications from number theory to Fourier Analysis to elementary particle theory. In part, representation theory is a method for producing interesting functions. While not having a single definition, special functions are "functions that have names." Over the last few hundred years, scientists have needed to define and develop certain families of functions, in order to describe different physical phenomena. These families started to be named, and include Bessel functions, Hermite functions, Laguerre functions and more generally hypergeometric functions. In recent years it has been seen that these different types of functions are best understood through the lens of symmetry and in particular via representation theory. This course will be an introduction to representation theory, starting with finite groups, while at the same time being an introduction to special functions. Thus the course will be a mix of abstract algebra, matrices, calculus and analysis.

Requirements/Evaluation:  By exams and homework  
Prerequisites:  Math 350 or Math 351, and Math 355  
Enrollment Limit:  50  
Enrollment Preferences:  By instructor preference  
Expected Class Size:  10  
Grading:  yes pass/fail option,  yes fifth course option  
Distributions:  (D3)  (QFR)  
Quantitative/Formal Reasoning Notes: This is a math course  
Not offered current academic year

MATH 408  (F)  L-Functions and Sphere Packing  (QFR)

Optimal packing problems arise in many important problems, and have been a source of excellent mathematics for centuries. The Kepler Problem (what is the most efficient way to pack balls in three-space) is a good example. The original formulation has been used in such diverse areas as stacking cannonballs on battleships to grocers preparing fruit displays, and its generalizations allow the creation of powerful error detection and
correction codes. While the solution of the Kepler Problem is now known, the higher dimensional version is very much open. There has been remarkable progress in the last few years, with number theory playing a key role in these results. We will develop sufficient background material to understand many of these problems and the current state of the field. Pre-requisites are real analysis.

Requirements/Evaluation: Class participation, homework, exams and participation in writing a textbook on the material. Each student will be responsible for working on a chapter of a book based on this material. In addition to obtaining critical writing feedback from myself and my co-author (who is a world expert in the subject), depending on timing we will also be able to share comments from an editor of a major publishing house or a referee. Chapters can range from short snapshots of a subject, on the order of 5 pages, to longer technical derivations of perhaps 10-30 pages.

Prerequisites: Math 350 or 351

Enrollment Limit: 40

Enrollment Preferences: Senior math majors, students planning on graduate study in a STEM field

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is a 400 level math class

Not offered current academic year

MATH 409 (F) The Little Questions (QFR)

Using math competitions such as the Putnam Exam as a springboard, in this class we follow the dictum of the Ross Program and "think deeply of simple things". The two main goals of this course are to prepare students for competitive math competitions, and to get a sense of the mathematical landscape encompassing elementary number theory, combinatorics, graph theory, and group theory (among others). While elementary frequently is not synonymous with easy, we will see many beautiful proofs and 'a-ha' moments in the course of our investigations. Students will be encouraged to explore these topics at levels compatible with their backgrounds.

Requirements/Evaluation: Homework, exams, presentations.

Prerequisites: Real Analysis (either Math 350 or 351) and Abstract Algebra (Math 355), or permission of the instructor.

Enrollment Limit: 30

Enrollment Preferences: Math/stat senior majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is a 400 level math class.

Fall 2022
LEC Section: 01 MWF 10:00 am - 10:50 am Steven J. Miller

MATH 411 (F) Commutative Algebra (QFR)

Commutative Algebra is an essential area of mathematics that provides indispensable tools to many areas, including Number Theory and Algebraic Geometry. This course will introduce you to the fundamental concepts for the study of commutative rings, with a special focus on the notion of "prime ideals," and how they generalize the well-known notion of primality in the set of integers. Commutative algebra has applications ranging from algebraic geometry to coding theory. For example, one can use commutative algebra to create error correcting codes. It is perhaps most often used, however, to study curves and surfaces in different spaces. To understand these structures, one must study polynomial rings over fields. This course will be an introduction to commutative algebra. Possible topics include polynomial rings, localizations, primary decomposition, completions, and modules.

Requirements/Evaluation: homework and exams

Prerequisites: MATH 355 or permission of instructor

Enrollment Limit: 25

Enrollment Preferences: Math majors

Expected Class Size: 15
MATH 412 (S) Mathematical Biology (QFR)
This course will provide an introduction to the many ways in which mathematics can be used to understand, analyze, and predict biological dynamics. We will learn how to construct mathematical models that capture essential properties of biological processes while maintaining analytic tractability. Analytic techniques, such as stability and bifurcation analysis, will be introduced in the context of both continuous and discrete time models. Additionally, students will couple these analytic tools with numerical simulation to gain a more global picture of the biological dynamics. Possible biological applications include, but are not limited to, single and multi-species population dynamics, neural and biological oscillators, tumor cell growth, and infectious disease dynamics.

Requirements/Evaluation: problem sets, quizzes/exams, participation, final project and paper
Prerequisites: MATH 250 and MATH 309, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: if over-enrolled, will have students submit reasons for taking class; preference to those with interest in both subjects
Expected Class Size: 20
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: The course will introduce methods for developing and analyzing mathematical models.
Attributes: PHLH Methods in Public Health

Spring 2023
LEC Section: 01 TBA Julie C. Blackwood

MATH 419 (S) Algebraic Number Theory (QFR)
We all know that integers can be factored into prime numbers and that this factorization is essentially unique. In more general settings, it often still makes sense to factor numbers into "primes," but the factorization is not necessarily unique! This surprising fact was the downfall of Lamé's attempted proof of Fermat's Last Theorem in 1847. Although a valid proof was not discovered until over 150 years later, this error gave rise to a new branch of mathematics: algebraic number theory. In this course, we will study factorization and other number-theoretic notions in more abstract algebraic settings, and we will see a beautiful interplay between groups, rings, and fields.

Requirements/Evaluation: homework assignments and exams
Prerequisites: MATH 355, or permission of instructor
Enrollment Limit: 25
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Not offered current academic year

MATH 420 (S) Analytic Number Theory (QFR)
How many primes are smaller than x? How many divisors does an integer n have? How many different numbers appear in the N x N multiplication table? Precise formulas for these quantities probably don't exist, but over the past 150 years tremendous progress has been made towards understanding these and similar questions using tools and methods from analysis. The goal of this tutorial is to explain and motivate the ubiquitous appearance of analysis in modern number theory—a surprising fact, given that analysis is concerned with continuous functions, while number theory is concerned with discrete objects (integers, primes, divisors, etc.). Topics to be covered will include some subset of the following: asymptotic analysis, partial and Euler-Maclaurin summation, counting divisors and Dirichlet's hyperbola method, the randomness of prime factorization and the Erdos-Kac theorem, the partition function and the saddle point method, the prime number theorem and the Riemann zeta function, primes in arithmetic
progressions and Dirichlet L-functions, the Goldbach conjecture and the circle method, and sieve methods and gaps between primes.

**Requirements/Evaluation:** Regularly preparing lectures and writing expository essays in LaTeX. No exams.

**Prerequisites:** MATH 350 or MATH 351 and familiarity with basic modular arithmetic are hard prerequisites. Familiarity with complex analysis and abstract algebra recommended, but not required.

**Enrollment Limit:** 10

**Enrollment Preferences:** Students with complex analysis background will be given priority.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** It's math.

**Not offered current academic year**

**MATH 422 (F) Algebraic Topology** (QFR)

Is a sphere really different from a torus? Can a sphere be continuously deformed to a point? Algebraic Topology concerns itself with the classification and study of topological spaces via algebraic methods. The key question is this: How do we really know when two spaces are different and in what senses can we claim they are the same? Our answer will use several algebraic tools such as groups and their normal subgroups. In this course we will develop several notions of "equality" starting with the existence of homeomorphisms between spaces. We will then explore several weakenings of this notion, such as homotopy equivalence, having isomorphic homology or fundamental groups, and having homeomorphic universal covers.

**Requirements/Evaluation:** homework and exams

**Prerequisites:** MATH 355 or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** Math majors primarily, the juniors and seniors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Not offered current academic year**

**MATH 426 (F) Differential Topology** (QFR)

Differential topology marries the rubber-like deformations of topology with the computational exactness of calculus. This sub field of mathematics asks and answers questions like "Can you take an integral on the surface of doughnut?" and includes far-reaching applications in relativity and robotics. This tutorial will provide an elementary and intuitive introduction to differential topology. We will begin with the definition of a manifold and end with a generalized understanding of Stokes Theorem.

**Requirements/Evaluation:** weekly homework, weekly presentations, and final paper

**Prerequisites:** MATH 350 (students who have not taken MATH 250 may enroll only with permission of the instructor)

**Enrollment Limit:** 10

**Enrollment Preferences:** seniors, majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** There will be weekly math problem sets.

**Not offered current academic year**

**MATH 427 (S) Tiling Theory** (QFR)

Since people first used stones and bricks to tile the floors of their domiciles, tiling has been an area of interest. Practitioners include artists, engineers, designers, architects, crystallographers, scientists and mathematicians. This course will be an investigation into the mathematical theory of tiling. The course will focus on tilings of the plane, including topics such as the symmetry groups of tilings, types of tilings, random tilings, the classification of
tilings and aperiodic tilings. We will also look at tilings of the sphere, tilings of the hyperbolic plane, and tilings in higher dimensions, including "knotted tilings".

Requirements/Evaluation: problem assignments, exams and a presentation/paper
Prerequisites: MATH 250 Linear Algebra and MATH 355 Abstract Algebra

Enrollment Limit: 30
Enrollment Preferences: senior majors, seniors, juniors, sophomores, first-year students (this is a senior seminar, one of which is required for all senior majors, so they have first preference)
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: Mathematics course

Spring 2023
LEC Section: 01 MWF 9:00 am - 9:50 am Colin C. Adams

MATH 428 (S) Catching Robbers and Spreading Information (QFR)

Cops and robbers is a widely studied game played on graphs that has connections to searching algorithms on networks. The cop number of a graph is the smallest number of cops needed to guarantee that the cops can catch a robber in the graph. Similar combinatorial games such as "zero forcing" can be used to model the spread of information. The idea of "throttling" is to spread the information (or catch the robber) as efficiently as possible. This course will survey some of the main results about cops and robbers and the cop number. We will also explore recent research on throttling for cops and robbers, zero forcing, and other variants.

Class Format: interactive activities and discussion
Requirements/Evaluation: problem sets, investigation journal, final presentation
Prerequisites: MATH 200 and MATH 355
Enrollment Limit: 25
Enrollment Preferences: seniors
Expected Class Size: 20
Grading: yes pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: The course will involve mathematical proofs.

Not offered current academic year

MATH 433 (S) Mathematical Modeling (QFR)

Mathematical modeling means (1) translating a real-life problem into a mathematical object, (2) studying that object using mathematical techniques, and (3) interpreting the results in order to learn something about the real-life problem. Mathematical modeling is used in biology, economics, chemistry, geology, sociology, political science, art, and countless other fields. This is an advanced, seminar-style, course appropriate for students who have strong enthusiasm for applied mathematics, data science, and collaborative teamwork.

Class Format: To afford students flexibility during the COVID pandemic, this course is taught online, largely asynchronously. There is no lecture component. Students will read research literature, work on structured and open-ended projects, and participate in synchronous small-group meetings with the instructor via videoconference. The vast majority of work in this course requires students to collaborate with each other.

Requirements/Evaluation: Students will complete reading assignments, writing assignments, modeling activities, research projects, and will record several presentations to be shared with the rest of the class. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows the policy of "ungrading." Over the course of the semester, students will develop a rubric to assess their own learning and will evaluate themselves according to this rubric.
Prerequisites: MATH 250; MATH 309 or similar; and some experience with computer programming (equivalent to CSCI 134 or MATH 307).
Enrollment Limit: 20
Enrollment Preferences: Professor's discretion
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course focuses substantially on using mathematical and statistical tools and frameworks to describe, predict, and understand real-world systems.
Not offered current academic year

MATH 434 (F) Applied Dynamics and Optimal Control (QFR)
We seek to understand how dynamical systems evolve, how that evolution depends on the various parameters of the system, and how we might manipulate those parameters to optimize an outcome. We will explore the language of dynamics by deepening our understanding of differential and difference equations, study parameter dependence and bifurcations, and explore optimal control through Pontryagin's maximum principle and Hamilton-Jacobi-Bellman equations. These tools have broad application in ecology, economics, finance, and engineering, and we will draw on basic models from these fields to motivate our study.
Requirements/Evaluation: exams and homework assignments
Prerequisites: MATH 209 or PHYS 210, and MATH 350 or 351, or permission of the instructor
Enrollment Limit: 20
Enrollment Preferences: Preference will be given to senior math majors.
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is a 400 level math course.
Not offered current academic year

MATH 435 (F) Chip-firing Games on Graphs (QFR)
Starting with a graph (a collection of nodes connected by edges), place an integer number of poker chips on each vertex. Move these chips around according to "chip-firing moves", where a vertex donates a chip along each edge. These simple and intuitive games quickly lead to challenging mathematics with applications ranging from dynamical systems to algebraic geometry. In this course we'll build up a mathematical framework for studying chip-firing games, drawing on linear algebra and group theory. We'll discover algorithms for winning these games, and study their complexity; and we'll prove graph-theoretic versions of famous results like the Riemann-Roch theorem. A key component of this course will be research projects that draw on open questions about chip-firing.
Requirements/Evaluation: Weekly homework for the first eight weeks, four quizzes spaced evenly throughout the semester, and a cumulative project worked on throughout the semester (10-20 pages)
Prerequisites: Math 250 and Math 355
Enrollment Limit: 25
Enrollment Preferences: Math majors who need the course to graduate
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: All topics are quantitative
Not offered current academic year

MATH 441 (F) Information Theory and Applications
Cross-listings: MATH 441 CSCI 441 STAT 441
Secondary Cross-listing
What is information? And how do we communicate information effectively? This course will introduce students to the fundamental ideas of Information
Theory including entropy, communication channels, mutual information, and Kolmogorov complexity. These ideas have surprising connections to a fields as diverse as physics (statistical mechanics, thermodynamics), mathematics (ergodic theory and number theory), statistics and machine learning (Fisher information, Occam's razor), and electrical engineering (communication theory).

Requirements/Evaluation: Weekly homeworks, midterm(s), final exam.
Prerequisites: Math/Stat 341; Math 150 or 151; or permission of instructor.
Enrollment Limit: 30
Enrollment Preferences: Seniors; mathematics and statistics majors.
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)
This course is cross-listed and the prefixes carry the following divisional credit:
MATH 441 (D3) CSCI 441 (D3) STAT 441 (D3)
Not offered current academic year

MATH 442  (F) Introduction to Descriptive Set Theory  (QFR)
Descriptive set theory (DST) combines techniques from analysis, topology, set theory, combinatorics, and other areas of mathematics to study definable (typically Borel) subsets of Polish spaces. The first part of this course will cover the topics necessary to understand the main objects of study in DST: we will develop comfort with point-set topology (enough to juggle with Polish spaces and Borel sets), and set theory (just well-orderings and cardinality). The second part of the course will feature selected topics in descriptive set theory: for example, trees, the perfect set property, Baire category, and infinite games.
Requirements/Evaluation: Evaluation based on homework, exams, and classroom participation.
Prerequisites: Math 250 - Linear Algebra, Math 350/351 Real Analysis/Applied Real Analysis
Enrollment Limit: 14
Enrollment Preferences: Senior Math Majors, then non-Senior Math Majors
Expected Class Size: 14
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: Mathematics course in descriptive set theory.

Fall 2022
LEC Section: 01    MWF 11:00 am - 11:50 am     Jenna  Zomback

MATH 453  (S) Partial Differential Equations  (QFR)
In this course, we further explore the world of differential equations. Mainly, we cover topics in partial differential equations. Partial Differential Equations (PDEs) are fundamental to the modeling of many natural phenomena, arising in many fields, including fluid mechanics, heat and mass transfer, electromagnetic theory, finance, elasticity, and more. The goals of this course are to discuss the following topics: classification of PDEs in terms of order, linearity and homogeneity; physical interpretation of canonical PDEs; solution techniques, including separation of variables, series solutions, integral transforms, and the method of characteristics.
Requirements/Evaluation: Evaluation will be based on homework, projects, and exams.
Prerequisites: MATH 150-151; MATH/PHYS 210 or MATH 309
Enrollment Limit: 20
Enrollment Preferences: Mathematics and Physics majors.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: This is an advanced mathematics class dedicated to the study of partial differential equations (PDEs). These
equations are the most important mathematical tools for the study of complex physical phenomena such as waves and fluids (including both air and water), heat transfer, electromagnetism, and finance.

Spring 2023
LEC Section: 01    TR 11:20 am - 12:35 pm    Bhagya Athukorallage

MATH 456 (F) Representation Theory (QFR)
Representation theory has applications in fields such as physics (via models for elementary particles), engineering (considering symmetries of structures), and even in voting theory (voting for committees in agreeable societies). This course will introduce the concepts and techniques of the representation theory of finite groups, and will focus on the representation theory of the symmetric group. We will undertake this study through a variety of perspectives, including general representation theory, combinatorial algorithms, and symmetric functions.
Requirements/Evaluation: evaluation will be based primarily on homework, in class presentations, and exams
Prerequisites: MATH 355
Enrollment Limit: 40
Enrollment Preferences: junior and senior Math majors
Expected Class Size: 15
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is a 400-level Math course.
Not offered current academic year

MATH 458 (S) Algebraic Combinatorics (WS) (QFR)
Algebraic combinatorics is a branch of mathematics at the intersection of combinatorics and algebra. On the one hand, we study combinatorial structures using algebraic techniques, while on the other we use combinatorial arguments and methods to solve problems in algebra. In this collaborative project-based course, students will select among the presented topics, develop research questions, and undertake original research in the field. Student assessment is based building positive and supportive collaborative working relationships with their peers, drafts of research project manuscript, and oral presentations.
Requirements/Evaluation: Drafts of manuscript, oral presentations, reflections, peer collaboration skills
Prerequisites: MATH 200 and MATH 355
Enrollment Limit: 25
Enrollment Preferences: Senior mathematics majors, students with programming experience, students with interests in algebra and combinatorics.
Expected Class Size: 20
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (WS) (QFR)
Writing Skills Notes: This course will require multiple revisions of a manuscript on the mathematical tent and collaborative work. The final result will be a 10-20 page research article and the course will be designed as a writing intensive course.
Quantitative/Formal Reasoning Notes: This is a mathematics course in the area of algebraic combinatorics and is a quantitative and formal reasoning course.
Not offered current academic year

MATH 474 (S) Tropical Geometry (QFR)
This course offers an introduction to tropical geometry, a young subject that has already established deep connections between itself and pure and applied mathematics. We will study a rich variety of objects arising from polynomials over the min-plus semiring, where addition is defined as taking a minimum, and multiplication is defined as usual addition. We will learn how these polyhedral objects connect to other areas of mathematics like algebraic geometry, and how they can be applied to solve problems in scheduling theory, phylogenetics, and other diverse fields.
Class Format: Hybrid; if possible we will have classes in person, with remote students attending via Zoom.
MATH 481 (S) Measure theory and Hilbert spaces (QFR)

How large is the unit square? One might measure the number of individual points in the square (uncountably infinite), the area of the square (1), or the dimension of the square (2). But what about for more complicated sets, e.g., the set of all rational points in the unit square? What's the area of this set? What's the dimension? In this course we'll come up with precise ways to measure size---length, area, volume, dimension, etc.---that apply to a broad array of sets. Along the way we'll encounter Lebesgue measure and Lebesgue integration, Hausdorff measure and fractals, space-filling curves and the Banach-Tarski paradox. We will also investigate Hilbert spaces, mathematical objects that combine the tidiness of linear algebra with the power of analysis and are fundamental to the study of differential equations, functional analysis, harmonic analysis, and ergodic theory, and also apply to fields like quantum mechanics and machine learning. This material provides excellent preparation for graduate studies in mathematics, statistics and economics.

Requirements/Evaluation: Problem sets, exams, an expository essay
Prerequisites: At least one previous course that has Math 350 or 351 as a prerequisite (eg Math 374, 383, 401, 404, 408, 420, 426, 485), or permission of instructor.
Enrollment Limit: 20
Enrollment Preferences: Juniors and seniors.
Expected Class Size: 10
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It's math.

Spring 2023

MATH 482 (F) Homological Algebra (QFR)

Though a relatively young subfield of mathematics, Homological Algebra has earned its place by supplying powerful tools to solve questions in the much older fields of Commutative Algebra, Algebraic Geometry and Representation Theory. This class will introduce theorems and tools of Homological Algebra, grounding its results in applications to polynomial rings and their quotients. We will focus on some early groundbreaking results and learn some of Homological Algebra's most-used constructions. Possible topics include tensor products, chain complexes, homology, Ext, Tor and Hilbert's Syzygy Theorem.

Requirements/Evaluation: homework and exams
Prerequisites: MATH 355
Enrollment Limit: 20
Enrollment Preferences: junior and senior math majors
Expected Class Size: 12
Grading: no pass/fail option, yes fifth course option
Unit Notes: this course is not a senior seminar, so it does not fulfill the senior seminar requirement for the Math major
Distributions: (D3) (QFR)
MATH 493 (F) Senior Honors Thesis: Mathematics
Mathematics senior honors thesis; this is part of a full-year thesis (493-494). Each student carries out an individual research project under the direction of a faculty member that culminates in a thesis. See description under The Degree with Honors in Mathematics.
Grading: yes pass/fail option, yes fifth course option

MAJOR IN STATISTICS

The major in Statistics is designed to meet three goals: to introduce some of the central ideas of information and data science, to develop problem-solving ability by teaching students to combine creative thinking with rigorous reasoning, and to develop interdisciplinary skills by applying statistics to an application area of interest.

REQUIREMENTS (10 courses plus colloquium)

The major in Statistics consists of ten courses plus a colloquium requirement. The major includes courses in mathematics, computer science and statistics. Students interested in continuing their study of statistics in graduate school should strongly consider taking Math 350/351 in addition to the other requirements.

Mathematics (2 courses)

MATH 150 or 151 Multivariable Calculus or equivalent high school course

MATH 250 Linear Algebra

Except in unusual circumstances, students planning to major in statistics should complete the calculus sequence (MATH 130, 140, 150/151)
before the spring of the sophomore year, at the latest. MATH 150 is a prerequisite for STAT 201 and MATH 250 is a prerequisite for STAT 346.

**Computer Science (1 course)**

CSCI 134 Intro to Computer Science or CSCI 135 Diving into the Deluge of Data or CSCI 136 Data Structures and Advanced Programming or some other course in the Computer Science Department with prior approval of the Math/Stat department.

**Core Courses (4 courses)**

- STAT 201 Statistics and Data Analysis, STAT 202 Introduction to Statistical Modeling or STAT 302 Applied Statistical Modeling
- STAT 346 Regression and Forecasting
- STAT 341 Probability
- STAT 360 Inferential Statistics

**Continuation (2 courses)**

Any two courses among the 300 or 400 level courses in the department with a STAT prefix.

**Capstone Course (1 course)**

The capstone course is a 400-level STAT course taken in the senior year. Although the specific methodological emphasis of the course may vary from year to year, an in-depth project with both a written report and an oral presentation is typically part of the capstone course.

**Pass/Fail policies during the Academic Year 2020-2021**

Information about the Department of Mathematics and Statistics Pass/Fail policies during the Academic Year 2020-2021 can be found [here](#).

**Colloquium Requirement**

Participation in the Department Colloquium, in which each senior major presents a talk on a mathematical or statistical topic of their choice. Each major must also attend at least 20 colloquia (15 during the Academic Year 2020-2021), and up to 5 attendances may be counted in their junior year. Up to 5 colloquia in mathematics or computer science may also be counted. Students engaged in study away may petition the department in advance to count up to 5 suitable colloquia attendances from their study away program.

**PLACEMENT**

Students with an AP Stat score of 5 or 4 are placed in the advanced introductory course Stat 202.

**NOTES**

**Substitutions, Study Abroad, and Transfer Credit:** In some cases, and with prior permission of the Mathematics and Statistics Department, appropriate courses from other institutions may be substituted for the application and continuation requirements, but at least eight courses must be taken from the Department of Mathematics and Statistics at Williams.

These can, with prior permission, include courses taken away. Students with transfer credit should contact the department about special arrangements.

**Double Counting:** No course may count towards two different majors.

**Early Senior Capstone Course:** In exceptional circumstances, with the prior permission of the department, a student may be allowed to satisfy the Senior Capstone Course requirement in the junior year, provided that the student has completed at least three 300-level statistics courses before enrolling in the capstone course.

**Planning Courses:** Core courses are normally offered every year. Other 300 and 400 level statistics courses are offered on an irregular basis. Students should check with the department before planning far into the future.

**Course Admission:** Courses are normally open to all students meeting the prerequisites, subject to any course caps. Students with questions about the level at which courses are conducted are invited to consult department faculty.

**FAQ**

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

**Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in many cases, though students should be sure to contact the department.

**What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description, and complete syllabus including readings/assignments.

**Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study**
No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. They have to be approved MATH/STAT courses.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. Colloquium requirement, Senior Seminar requirement.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. The highly cumulative structure of the major.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

None to date.

THE DEGREE WITH HONORS IN STATISTICS

The degree with honors in Statistics is awarded to the student who has demonstrated outstanding intellectual achievement in a program of study which extends beyond the requirements of the major. The principal considerations for recommending a student for the degree with honors will be: Mastery of core material and skills, breadth and, particularly, depth of knowledge beyond the core material, ability to pursue independent study of statistics, originality in methods of investigation, and, where appropriate, creativity in research.

An honors program normally consists of two semesters (STAT 493 and 494) and a winter study (WSP 031) of independent research, culminating in a thesis and a presentation. During the Academic Year 2020-2021 the winter study requirement for the honors program in Statistics is waived. One of STAT 493 or STAT 494 can count as a continuation course, but not both. Neither counts as the 400-level senior capstone course.

An honors program in actuarial studies requires significant achievement on four appropriate examinations of the Society of Actuaries.

Highest honors will be reserved for the rare student who has displayed exceptional ability, achievement or originality. Such a student usually will have written a thesis or pursued actuarial honors. In all cases, the award of honors and highest honors is the decision of the Department.

STAT 101 (F)(S) Elementary Statistics and Data Analysis (QFR)

It is impossible to be an informed citizen in today’s world without an understanding of data. Whether it is opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines, etc, we need to be able to interpret and gain information from statistics. This course will introduce the common methods used to analyze and present data with an emphasis on interpretation and informed decision making.

Requirements/Evaluation: weekly homework, quizzes, exams, and a project

Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test)

Enrollment Limit: 50

Enrollment Preferences: juniors and seniors

Expected Class Size: 35

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students with MATH130 but no statistics should enroll in STAT161; students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202.

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: It is a quantitative course.

Spring 2023

LEC Section: 01   TF 1:10 pm - 2:25 pm   Elizabeth M. Upton
STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)

This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

Requirements/Evaluation: Weekly homework, quizzes, two midterms and a final exam (midterms include take-home components), and a data analysis project. Students will need to become familiar with the statistical software STATA.

Prerequisites: MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

Enrollment Limit: 40

Enrollment Preferences: Economics majors, sophomores

Expected Class Size: 40

Grading: yes pass/fail option, no fifth course option

Unit Notes: Students with calculus background should consider STAT 201. Students without any calculus background should consider STAT 101. Students with AP Stat 4 or 5 should consider Stat 202. Please refer to the placement chart on the Math&Stat department website for more information.

Enrollment Limit: 20

Enrollment Preferences: decided by the department

Expected Class Size: 1

Grading: yes pass/fail option, yes fifth course option
Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, “Data, data, data! I can't make bricks without clay.” In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

Requirements/Evaluation: weekly homework and projects, midterm exams, and a final exam.

Prerequisites: MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent

Enrollment Limit: 30

Enrollment Preferences: Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students will learn to interpret, choose, carry out, and communicate analyses of data.

Attributes: COGS Related Courses, PHLH Statistics Courses
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

STAT 302 (S) Applied Statistical Modeling (QFR)
Data may come from various sources and studies with different purpose of analysis. Statistical modeling provides a unified framework to embrace different data types, and focuses on the goals of understanding relationships, assessing differences and making predictions. We will explore different types of statistical models (linear regression, ANOVA, logistic regression etc), and focus on their conditions, the interactive modeling process, as well as the statistical inference tools for drawing conclusions from them. Throughout the course, real datasets will be modeled for interesting questions about the world, and the limitations will be addressed as well.

Class Format: Hybrid format
**Requirements/Evaluation:** weekly homework assignments, quizzes, exams and a course project.

**Prerequisites:** One of the following: i) STAT 201; ii) MATH 140 and STAT 101/161/AP Statistics 4/5; iii) Permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** Students interested in statistics who have background in calculus and intro stat. Students cannot take STAT 302 either simultaneously or after STAT 346.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** It is an intermediate statistics class with prerequisites that are QFR courses

Not offered current academic year

**STAT 310  (F)  Data Visualization  (QFR)**

This course is about preparing, visualizing, reporting and presenting different types of data. We will start with creating common plots (e.g., barcharts, histograms, density plots, boxplots, time series and lattice plots), but also discuss visualizing results of statistical models, such as linear or logistic regression models. We will use the ggplot library in R but then switch to the plotly library for interactive graphs with mouse-over and click events. Using R's shiny and DT libraries, we will learn how to create and publish web-apps and dashboards that explore datasets and support online filtering. We will end the class with creating web apps that contain multiple graphs or maps which react to user inputs (such as selecting which variables to plot) or provide real time monitoring of streaming data. Throughout, we will use version control software (Github) to organize and keep track of our code. This course will be taught in a semi-flipped style. While the instructor will introduce certain topics, students will often be responsible for reading material ahead of time and then work individually or in pairs to reproduce material or implement it on their own data.

**Requirements/Evaluation:** Grading will almost entirely be based on class participation, individual and team-work, project presentations and the student's portfolio.

**Prerequisites:** Stat 201/202/302; Good knowledge of R

**Enrollment Limit:** 15

**Enrollment Preferences:** Preference may be given to stats majors who need the course in order to graduate, but then random selection.

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course teaches how to organize and present data graphically, but also how to critique existing data visualizations.

Not offered current academic year

**STAT 315  (S)  Applied Machine Learning  (QFR)**

How does Netflix recommend films based on your viewing history? How does Facebook group its users and send out targeted ads? How did Google select from thousands of search terms to predict flu? Machine learning (ML) is a rapidly growing field that is concerned with algorithms and models to find patterns in data and solve these practical problems at the intersection between statistics, data science and computer science. This course provides a broad introduction to ideas and methods in machine learning, with emphasis on statistical intuitions and practical data analysis. Topics including regularized regression, SVM, supervised/unsupervised learning, text analysis, neural networks will be covered. Students will use R extensively throughout the course while getting introduced to some ML tools in Python.

**Class Format:** Hybrid format. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Requirements/Evaluation:** weekly homework, one class project, and two or three exams

**Prerequisites:** MATH 140, and STAT 201/202, or equivalent; or permission of instructor. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

**Enrollment Limit:** 15

**Enrollment Preferences:** Seniors.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a statistics class with a focus on mathematical, computational, and data analysis skills as well as appropriate practical application of analysis methods.

Not offered current academic year

STAT 319 (S) Statistical Computing (QFR)

This course introduces a variety of computational and data-centric topics of applied statistics, which are broadly useful for acquiring, manipulating, visualizing, and analyzing data. We begin with the R language, which will be used extensively throughout the course. Then we'll introduce a variety of other useful tools, including the UNIX environment, scripting analyses using bash, databases and the SQL language, alternative data formats, techniques for visualizing high-dimensional data, and text manipulation using regular expressions. We'll also cover some modern statistical techniques along the way, which are made possible thanks to advances in computational power. This course is strongly computer oriented, and assignments will be project-based.

Requirements/Evaluation: based primarily on projects, homework, and exams

Prerequisites: STAT 201 or 202 and CSCI 134, 135, or 136

Enrollment Limit: 30

Enrollment Preferences: juniors and seniors, Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses statistical tools and programming techniques to acquire data, create visualizations, and make future predictions.

Not offered current academic year

STAT 335 (S) Biostatistics and Epidemiology (QFR)

Epidemiology is the study of disease and disability in human populations, while biostatistics focuses on the development and application of statistical methods to address questions that arise in medicine, public health, or biology. This course will begin with epidemiological study designs and core concepts in epidemiology, followed by key statistical methods in public health research. Topics will include multiple regression, analysis of categorical data (two sample methods, sets of 2x2 tables, RxC tables, and logistic regression), survival analysis (Cox proportional hazards model), and a brief introduction to regression with correlated data.

Class Format: Hybrid format

Requirements/Evaluation: evaluation will be primarily based on weekly homework, two midterm exams, a final exam, and a data analysis project

Prerequisites: STAT 201, STAT 202 and MATH 140, or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Junior and senior statistics majors; public health concentrators

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a statistics course with a focus on quantitative methods relevant to public health studies.

Attributes: PHLH Statistics Courses

Not offered current academic year

STAT 341 (F)(S) Probability (QFR)

Cross-listings: STAT 341 MATH 341

Secondary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide
applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

Requirements/Evaluation: homework, classwork, and exams
Prerequisites: MATH 150 and MATH 250 or permission of the instructor
Enrollment Limit: 30
Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
STAT 341 (D3) MATH 341 (D3)

Quantative/Formal Reasoning Notes: This is a 300-level Math/Stat course.

Fall 2022
LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu

Spring 2023
LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu

STAT 342 (S) Introduction to Stochastic Processes (QFR)

Stochastic processes are mathematical models for random phenomena evolving in time or space. Examples include the number of people in a queue at time t or the accumulated claims paid by an insurance company in an interval of time t. This course introduces the basic concepts and techniques of stochastic processes used to construct models for a variety of problems of practical interest. The theory of Markov chains will guide our discussion as we cover topics such as martingales, random walks, Poisson process, birth and death processes, and Brownian motion.

Requirements/Evaluation: weekly homework/labs, classwork, and exams
Prerequisites: STAT 341
Enrollment Limit: 30
Enrollment Preferences: senior Statistics majors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is a statistics class with a focus on mathematical skills and translating real world phenomena into mathematical descriptions.

Not offered current academic year

STAT 344 (F) Statistical Design of Experiments (QFR)

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially e-commerce, are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look at both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

Requirements/Evaluation: Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).
Prerequisites: STAT 161 or 201 or 202, or equivalent, and Math 140 or equivalent, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: Statistics majors, seniors, juniors, sophomores, first years

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2022
LEC Section: 01 MWF 10:00 am - 10:50 am Richard D. De Veaux

STAT 346 (F)(S) Regression Theory and Applications (QFR)

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

Requirements/Evaluation: Weekly homework, theory and data analysis exams, final course project.

Prerequisites: MATH 250, and at least one of STAT 201 or 202. Or permission of the instructor.

Enrollment Limit: 30

Enrollment Preferences: Statistics Majors

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

Fall 2022
LEC Section: 01 TR 9:55 am - 11:10 am Xizhen Cai

Spring 2023
LEC Section: 01 TR 9:55 am - 11:10 am Elizabeth M. Upton

STAT 355 (F) Multivariate Statistical Analysis (QFR)

To better understand complex processes, we study how variables are related to one another, and how they work in combination. Therefore, we want to make inferences about more than one variable at time? Elementary statistical methods might not apply. In this course, we study the tools and the intuition that are necessary to analyze and describe such data sets. Topics covered will include data visualization techniques for high dimensional data sets, parametric and non-parametric techniques to estimate joint distributions, techniques for combining variables, as well as classification and clustering algorithms.

Class Format: This will be a hybrid course for students who are both remote and in-person, with a mix of synchronous and asynchronous elements

Requirements/Evaluation: homework, project/presentations, possibly one or two exams.

Prerequisites: MATH 250, and STAT 346 or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: students interested in statistics which have solid background in math and stat

Expected Class Size: 10

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: It is an advanced statistics class with prerequisites that are QFR courses
Not offered current academic year

STAT 356  (F)  Time Series Analysis  (QFR)
Time series -- data collected over time -- crop up in applications from economics to engineering to transit. But because the observations are generally not independent, we need special methods to investigate them. This course will include exploratory methods and modeling for time series, including descriptive methods and checking for significance, and a foray into the frequency domain. We will emphasize applications to a variety of real data, explored using R.

Class Format: Introductory lectures will be available asynchronously as text and video; synchronous sessions will discuss questions from lecture, dive further into the material, and work on examples. You'll use chat and discussion boards to build community, study with classmates, and ask questions outside of class time. There will also be optional synchronous office hours/review sessions.

Requirements/Evaluation: Evaluation is primarily based on quizzes and projects (on topics that interest you!). You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While most assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to live and online discussions, and working together with classmates on practice problems.

Prerequisites: STAT 346 (may be taken concurrently) or permission of instructor

Enrollment Limit:  15

Enrollment Preferences:  Statistics majors, seniors

Expected Class Size:  15

Grading:  yes pass/fail option, yes fifth course option

Distributions:  (D3)  (QFR)

Quantitative/Formal Reasoning Notes:  This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2022
LEC Section: 01  Cancelled

STAT 358  (S)  Introduction to Categorical Data Analysis  (QFR)

This course focuses on methods for analyzing categorical response data. In contrast to continuous data, categorical data consist of observations classified into two or more categories. Traditional tools of statistical data analysis (such as linear regression) are not designed to handle such data and pose inappropriate assumptions. We will develop methods specifically designed for modeling categorical data, with applications in the social and biological sciences as well as in medical research, engineering and economics. This course has two parts. The first part will discuss statistical inference for parameters of categorical distributions (Bernoulli, Binomial, Multinomial, Poisson) and for measures of association arising in contingency tables (difference and ratio of proportions and odds ratios). Inferential methods covered include Wald, score and likelihood ratio tests and confidence intervals, as well as the bootstrap. The longer second part will focus on statistical modeling of categorical response data via generalized linear models, with a heavy focus on logistic regression models with both quantitative and categorical predictors and their interactions. Model fitting and inference will be based on maximum likelihood and carried out via R.

Requirements/Evaluation:  Weekly homework assignments consisting of exercises from the textbook as well as data analysis problems, carried out using R. Occasional short in-class quizzes at the beginning of class. One Midterm (with both in-class and take-home component). Final Project with presentation. Final exam. Homework accounts for roughly 15% of the grade, quizzes for another 15%, midterm (in-class and take-home combined) and final for about 30% each, and project for the remaining 10%.

Prerequisites:  STAT 346: Regression and Forecasting

Enrollment Limit:  15

Enrollment Preferences:  stats majors

Expected Class Size:  15

Grading:  yes pass/fail option, yes fifth course option

Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: Students learn how to analyze data and communicate results.

Not offered current academic year

STAT 360 (S) Statistical Inference (QFR)
How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.

Class Format: For the Spring 2021 semester, synchronous zoom lectures are planned, where the instructor uses Google's jamboard to interact with students

Requirements/Evaluation: Homework, Quizzes, Exams
Prerequisites: MATH 250, STAT 201 or 202, STAT 341
Enrollment Limit: 15
Enrollment Preferences: Statistics majors
Expected Class Size: 15
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: A rigorous mathematical course laying the foundation for reasoning with data

Spring 2023
LEC Section: 01 TR 11:20 am - 12:35 pm Daniel B. Turek

STAT 365 (F) Bayesian Statistics (QFR)
The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes' Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.

Requirements/Evaluation: homework and exams
Prerequisites: STAT 201 and MATH 150 and 250, or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: juniors and seniors, Statistics majors
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Fall 2022
LEC Section: 01 TR 11:20 am - 12:35 pm Daniel B. Turek

STAT 368 (S) Modern Nonparametric Statistics (QFR)
Many statistical procedures and tools are based on a set of assumptions, such as normality or other parametric models. But, what if some or all of these assumptions are not valid and the adopted models are miss-specified? This question leads to an active and fascinating field in modern statistics

Quantitative/Formal Reasoning Notes: Students learn how to analyze data and communicate results...
called nonparametric statistics, where few assumptions are made on data's distribution or the model structure to ensure great model flexibility and robustness. In this course, we start with a brief overview of classic rank-based tests (Wilcoxon, K-S test), and focus primarily on modern nonparametric inferential techniques, such as nonparametric density estimation, nonparametric regression, selection of smoothing parameter (cross-validation), bootstrap, randomization-based inference, clustering, and nonparametric Bayes. Throughout the semester we will examine these new methodologies and apply them on simulated and real datasets using R.

**Requirements/Evaluation:** performance on exams, homework, and a project

**Prerequisites:** STAT 201 and STAT 346, or permission of instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** senior Statistics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is a statistics class with a focus on mathematical, computational, and data analysis skills as well as appropriate practical application of analysis methods.

*Not offered current academic year*

**STAT 372** (S) **Longitudinal Data Analysis** (QFR)

This course explores modern statistical methods for drawing scientific inferences from longitudinal data, i.e., data collected repeatedly on experimental units over time. The independence assumption made for most classical statistical methods does not hold with this data structure because we have multiple measurements on each individual. Topics will include linear and generalized linear models for correlated data, including marginal and random effect models, as well as computational issues and methods for fitting these models. As time permits, we will also investigate joint modeling of longitudinal and time-to-event data. We will consider many applications in the social and biological sciences.

**Requirements/Evaluation:** performance on exams, weekly homework, and a project

**Prerequisites:** STAT 201 and STAT 346

**Enrollment Limit:** 15

**Enrollment Preferences:** junior and senior Statistics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** The course will cover a variety of statistical analysis methods for longitudinal data.

**Attributes:** PHLH Statistics Courses

Spring 2023

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

Fall 2022

IND Section: 01 TBA Richard D. De Veaux

**STAT 398** (S) **Independent Study: Statistics**

Directed independent study in Statistics.
**STAT 410 (F) Statistical Genetics (QFR)**

Genetic studies explore patterns of genetic variation in populations and the effect of genes on diseases or traits. This course provides an introduction to statistical and computational methods for genetic studies. Topics will include Mendelian traits (such as single nucleotide polymorphisms), genome-wide association studies, pathway-based analysis, and methods for population genetics. Students will be introduced to some of the major computational tools for genetic analysis, including PLINK and R/Bioconductor. The necessary background in genetics and biology will be provided alongside the statistical and computational methods.

**Requirements/Evaluation:** project work, homework, exams, and contribution to discussion

**Prerequisites:** STAT 346 and STAT 360, or permission of instructor

**Enrollment Limit:** 14

**Enrollment Preferences:** Statistics majors, juniors and seniors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is a statistics class with a focus on mathematical, computational, and data analysis skills as well as appropriate practical application of analysis methods.

**Attributes:** BIGP Courses PHLH Statistics Courses

---

**STAT 441 (F) Information Theory and Applications**

**Cross-listings:** MATH 441 CSCI 441 STAT 441

**Primary Cross-listing**

What is information? And how do we communicate information effectively? This course will introduce students to the fundamental ideas of Information Theory including entropy, communication channels, mutual information, and Kolmogorov complexity. These ideas have surprising connections to a fields as diverse as physics (statistical mechanics, thermodynamics), mathematics (ergodic theory and number theory), statistics and machine learning (Fisher information, Occam's razor), and electrical engineering (communication theory).

**Requirements/Evaluation:** Weekly homeworks, midterm(s), final exam.

**Prerequisites:** Math/Stat 341; Math 150 or 151; or permission of instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** Seniors; mathematics and statistics majors.

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

---

**STAT 442 (S) Statistical Learning and Data Mining (QFR)**

In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often
unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

Class Format: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Requirements/Evaluation: weekly homework, exams and an end-of-term project

Prerequisites: MATH/STAT 341 and STAT 346, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is an advanced statistics class involving theory and application of statistical methods to data.

Spring 2023
LEC Section: 01    TR 9:55 am - 11:10 am     Xizhen Cai

STAT 458  (F)  Generalized Linear Models- Theory and Applications  (QFR)
This course will explore generalized linear models (GLMs)--the extension of linear models, discussed in Stat346, to response variables that have specific non-normal distributions, such as counts and proportions. We will consider the general structure and theory of GLMs and see their use in a range of applications. As time permits, we will also examine extensions of these models for clustered data such as mixed effects models and generalized estimating equations.

Requirements/Evaluation: Weekly homework consisting of theoretical exercises and data analyses carried out in R. Short frequent quizzes and one midterm (with an in-class and take-home component). Final project and final exam.

Prerequisites: STAT 346, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Seniors and Statistics majors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Fall 2022

MUSIC (Div I)

Chair: Ed Gollin, Professor of Music

- Kris Allen, Lyell B. Clay Artist in Residence in Jazz Activities/Lecturer in Music, Director of the Jazz Ensemble
- M. Jennifer Bloxam, Herbert H. Lehman Professor of Music
- Corinna S. Campbell, Associate Professor of Music
- Ronald L. Feldman, Artist in Residence in Orchestral and Instrumental Activities/Lecturer in Music, Director of the Berkshire Symphony
- Matthew A. Gold, Artist in Residence in Percussion and Contemporary Music Performance
- Ed Gollin, Chair and Professor of Music
- Wang Guowei, Artist in Residence in Chinese Music Performance and Director of the Williams College Chinese Music Ensemble
- Marjorie W. Hirsch, Professor of Music; on leave Fall 2022
- Joanna Kurkowicz, Lyell B. Clay Artist in Residence, Violin and Concertmaster, Berkshire Symphony
- Anna C. Lenti, Lyell B. Clay Artist in Residence and Director of Choral/Vocal Activities, Lecturer in Music
- Tendai Muparutsa, Artist in Residence in African Music Performance, Lecturer in Music, Director of Zambezi, Co-Director of Kusika
- Benjamin S. Ory, Visiting Assistant Professor of Music; Fall 2022
- Ileana Perez Velazquez, Professor of Music
- Daniel E. Prindle, Lecturer in Music
- Tim Pyper, Lecturer in Music
- W. Anthony Sheppard, Marylin & Arthur Levitt Professor of Music; on leave Spring 2023
- Doris J. Stevenson, Lyell B. Clay Artist in Residence, Piano
- Zachary Wadsworth, Associate Professor of Music
- Brad Wells, Lyell B. Clay Artist in Residence and Director of Choral/Vocal Activities, Lecturer in Music

COURSES AND COURSE-NUMBERING

100-level courses are introductory in nature. They aim to acquaint students with a variety of topics in music, ranging from the materials of music (introductory music theory and musicianship) to various musical cultures (African, American, Asian, Caribbean, and European) and styles within those cultures (classical, folk, and popular). Most 100-level courses are designed for the general student and have no prerequisites; they assume no prior musical training, and are open to all students interested in increasing their understanding and appreciation of music. The two 100-level courses that can serve to satisfy specific music theory requirements for the music major (MUS 103 and 104a or 104b) require a working knowledge of musical notation; these courses are geared to potential majors and students with strong instrumental or vocal background, and are particularly suitable for first-year students interested in taking more advanced courses in music.

200-level courses offer students the opportunity to explore a range of more specialized musical topics, from performance, technology, and musicianship-based classes to courses focused on specific styles, periods, composers, and examinations of meaning in music. Most regular 200-level courses have no prerequisites but do require the ability to read music, and are usually open to all students who can do so, regardless of class year. Some 200-level tutorials and writing intensive courses have no prerequisites and do not require the ability to read music, but the workload and more advanced approach to the subject matter makes these courses best suited to sophomores, juniors, and seniors. The two 200-level courses that complete the music theory requirements for the music major (MUS 201 and 202) have prerequisites; these courses are geared to potential majors, majors, and students with strong instrumental or vocal background.

300-level courses are designed for sophomores, juniors, and seniors with a background in instrumental or vocal performance and fluency in reading musical notation to focus on specialized topics. Some 300-level courses are experiential in nature, including performance-based coursework in conducting, composition, arranging, orchestration, and improvisation. Others are advanced courses in music theory and analysis, musicology, or ethnomusicology, taught in a seminar context that emphasizes original research and analysis.

400-level courses are intended for advanced juniors and seniors, usually music majors, wishing to pursue thesis, independent study, or small
seminar coursework in composition, theory and analysis, musicology, ethnomusicology, or performance, under the guidance of an individual faculty advisor.

**MAJOR**

A minimum of ten courses are required for the major, as detailed below.

**Four courses in Music Theory and Musicianship to be taken in sequence:**

Music 103

Music 104a (Music Theory and Musicianship I) or Music 104b (Jazz Theory and Improvisation I)

Music 201

Music 202

**Three courses in European and American Music History:**

Music 231

Music 232

Music 233

Majors may choose to replace a maximum of one of these three specific courses with a course in music history covering aspects of the same period. The courses that may substitute for MUS 231, 232, and 233 are listed below:

Music 231: 164, 234 or 261

Music 232: 143, 146, 165, or 166

Music 233: 118, 119, 138, 150, 151, 238, 239, 244, 251, 252, 254, or 316

**One course in World Music/Ethnomusicology from the following:**

**DANC 201 / AFR 201 / MUS 220(F) STU African Dance and Percussion**

Taught by: Sandra Burton, Tendai Muparutsa

Catalog details

**DANC 202 / AFR 206 / MUS 221(S) STU African Dance and Percussion**

Taught by: Sandra Burton, Tendai Muparutsa

Catalog details

**MUS 111(F) LEC Music in Global Circulation**

Taught by: Corinna Campbell

Catalog details

**MUS 125 / DANC 125(S) SEM Music and Social Dance in Latin America**

Taught by: Corinna Campbell

Catalog details

**MUS 177 / WGSS 177(S) SEM Gender and Sexuality in Music**

Taught by: Corinna Campbell

Catalog details

**MUS 211(F) SEM Music, Nationalism, and Popular Culture**

Taught by: Corinna Campbell

Catalog details

**MUS 222 / AFR 223 SEM Politics of Performance/Performing Politics in Contemporary Africa**

Taught by: Corinna Campbell

Catalog details

**MUS 323 / THEA 321 / DANC 323 SEM Arts Organizing in Africa and the Diaspora**

Taught by: Corinna Campbell

Catalog details

**Two electives:**

One must be taken in the senior year and at the 400-level to serve as a capstone course. The second semester of a year-long honors thesis, MUS 494, will satisfy the 400-level elective requirement; for students in the class of 2024 and subsequent years, Advanced Musical Performance, MUS 491 or 492, will not satisfy the 400-level capstone elective. The other elective may be fulfilled in any semester by any Music course but must be taken in addition to courses selected to satisfy the history, theory, and world music/ethnomusicology requirements detailed above.

Majors are required to participate in faculty-directed departmental ensembles for at least four semesters.
Majors must enroll in partial credit music lessons for at least two semesters.

THE DEGREE WITH HONORS IN MUSIC

Three routes provide the opportunity for honors or highest honors consideration in the Music major:

Composition: A Composition thesis must include one major work completed during the senior year supported by a 10- to 15-page discussion of the student’s work or analysis of a major 20th century or contemporary work. The student’s general portfolio of compositions completed during the junior and senior years will also be considered in determining honors.

Performance: A Performance thesis must include an honors recital given during the spring of the senior year supported by a 15- to 20-page discussion of one or more of the works performed. The student’s general performance career will also be considered in determining honors.

History, Theory and Analysis, or Ethnomusicology: A written Historical, Theoretical/Analytical, or Ethnomusicological thesis between 65 and 80 pages in length. A written thesis should offer new insights based on original research. A public oral thesis defense is also required.

In order for a thesis proposal to be approved, a student must have at least a 3.3 GPA in Music courses (this GPA must be maintained in order to receive honors), and must have demonstrated outstanding ability and experience through coursework and performance in the proposed thesis area. Students are encouraged to seek the advice of their potential thesis advisor early in the junior year and no later than the first month of the second semester. A 1- to 2-page proposal written in consultation with the faculty advisor must be received by the Music chair by the end of spring break.

Honors candidates must enroll in Music 493(F)-W31-494(S) during their senior year. A student who is highly qualified for honors work, but is unable to pursue a year-long project for compelling reasons, may petition the department for permission to pursue a WS/one-semester thesis. The standards for evaluating such a thesis remain the same. Completed thesis is due by April 15.

LESSONS

Courses in individual vocal or instrumental instruction are fully subsidized for all students who meet the lesson commitment. (See Music 281-288 and Advanced Musical Performance 391, 392, 491, 492). For further information, check the Music Department webpage or contact the Department of Music.

STUDY ABROAD

One study abroad course may satisfy the one free elective requirement for the major, if approved by the department. A second study abroad course might satisfy any one of the specific required courses if the proposed course is clearly equivalent and if the substitution is approved by the department. Majors planning to study abroad should meet with the department chair to propose specific study abroad courses that might be approved to satisfy major requirements under this policy. No more than two courses taken abroad may count toward the major. Music lesson courses and ensemble participation pursued while studying abroad may count toward the performance requirements with approval of the department.

MUS 101  (F)  Listening to Music: An Introduction to the Western Classical Tradition

When you listen to music -- on your phone or computer, on the radio, at a concert -- how much do you really hear? This course refines students’ listening skills through study of the major composers, styles, and genres of the Western classical tradition. We will explore music from the Baroque, Classical, Romantic, and Modern eras, including works by Bach, Mozart, Beethoven, Chopin, Tchaikovsky, Brahms, Stravinsky, and other composers. Genres to be covered include the symphony, string quartet, sonata, opera, song, and choral music.

Requirements/Evaluation: Grades will be based on participation, GLOW posts, several quizzes, a midterm exam, and a final exam. Attendance at two Williams concerts required if conditions permit.

Prerequisites: none; intended for non-major students with little or no formal training in music

Enrollment Limit: 19

Enrollment Preferences: first-years, sophomores and any student who expresses a strong interest in the course

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

MUS 102  (F)  Introduction to Music Theory
The course presents an introduction to the materials and structures of music. Through a variety of applied and theoretical exercises and projects, students will develop an understanding of the elements of music (e.g. pitch, scales, triads, rhythm, meter, and their notation) and explore their combination and interaction in the larger-scale organization of works of classical, jazz and popular music (i.e. harmony, counterpoint, form, rhetoric). Practical musicianship skills will be developed through singing, keyboard, and rhythmic exercises.

Requirements/Evaluation: regular worksheets (1-2 pages), written and applied quizzes, three model composition projects, midterm and final exam, participation

Prerequisites: none

Enrollment Limit: 16

Enrollment Preferences: first-year students

Expected Class Size: 16

Grading: no pass/fail option, yes fifth course option

Distributions: (D1)

Fall 2022

LEC Section: 01 MR 1:10 pm - 2:25 pm Zachary Wadsworth

MUS 103  (F)  Music Theory and Musicianship I

MUS 103 and 104 are designed for potential majors and for students with strong instrumental or vocal backgrounds. Students entering MUS 103 should have a solid understanding of musical rudiments (intervals, scales, keys) and reading proficiency in both bass and treble clefs. A short diagnostic exam will be administered at the first class meeting of MUS 103 to determine if a student requires any additional work to complement and fortify course work during the early weeks of the semester, or whether placement in MUS 102 would be more appropriate. Students with a strong background in music theory may take a placement exam during First Days to see whether they can pass out of one or both semesters. MUS 103 and 104 are required for the music major. MUS 103 presents the materials, structures and procedures of tonal music, with an emphasis on the harmonic and contrapuntal practice of the baroque and classical periods (ca. 1650-1825). The course explores triadic harmony, voice leading, and counterpoint with an emphasis on the chorale style of J.S. Bach and his predecessors. Keyboard harmony and figured bass exercises, sight singing, dictation, analysis of repertoire, written exercises and emulation projects will develop both an intellectual and an aural understanding of music of the period. Projects include chorale harmonization, arranging, and the composition of canons.

Class Format: In addition to the two lecture meetings each week, the class requires three weekly lab meetings (for keyboard skills, music writing skills, and aural skills).

Requirements/Evaluation: weekly written work, written and applied quizzes, and midyear and final projects

Enrollment Limit: 24

Enrollment Preferences: first-years, potential Music majors, and those with strong musicianship backgrounds

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D1)

Fall 2022

LEC Section: 01 TR 11:20 am - 12:35 pm Ed Gollin

LAB Section: 02 MWF 9:00 am - 9:50 am Ed Gollin, Daniel E. Prindle, Tim Pyper

LAB Section: 03 MWF 10:00 am - 10:50 am Ed Gollin, Daniel E. Prindle, Tim Pyper

LAB Section: 04 MWF 11:00 am - 11:50 am Ed Gollin, Daniel E. Prindle, Tim Pyper

MUS 104  (S)  Music Theory and Musicianship I

Music 104 continues the practical musicianship work of Music 103, while expanding the scope of harmonic topics to include seventh chords and chromatic harmony. Music 104 further explores the transformation of chorale harmony in contrapuntal works of the eighteenth century. Projects include the composition of preludes and fugues on baroque models.

Class Format: lecture two days a week; lab meetings (for keyboard skills, music writing skills, and ear training) three days a week
**Requirements/Evaluation:** weekly written work, written and applied quizzes, and midterm and final projects

**Prerequisites:** MUS 103

**Enrollment Limit:** 24

**Enrollment Preferences:** first-year students, potential or declared Music majors, and those with strong musicianship backgrounds

**Expected Class Size:** 21

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1)

**MUS 104 (S) Jazz Theory and Improvisation I**

**Cross-listings:** MUS 104  AFR 212

**Primary Cross-listing**

The theory and application of basic techniques in jazz improvisation and performance styles, including blues forms, swing, bebop, modally based composition etc. Appropriate for students with basic skill on their instrument and some theoretical knowledge including all key signatures, major/minor keys and modes, intervals, triads and basic seventh chords and their functions within keys. This is a performance practice course and instrumental competence is essential. Vocalists and drummers will be encouraged to study the piano; pianists guitarists and bassists should be able to sight read chords on a jazz lead sheet.

**Class Format:** alternates between lecture style exposition of theoretical topics and a master class where students will perform and be evaluated on assigned repertoire

**Requirements/Evaluation:** weekly assignments,(e.g., harmonic analysis and exercises in transposition and transcription), a midterm, a transcription project and the end of semester concert, as well as improvement as measured in weekly class performance

**Prerequisites:** MUS 103 and/or permission of instructor; musical literacy required as per above description; private study on student's individual instruction strongly encouraged

**Enrollment Limit:** 15

**Enrollment Preferences:** prospective Music majors, then Jazz Ensemble members, then Music majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** this course will share aural skills labs with MUS 104a; students considering taking this course should consult the lab times and plan their schedules accordingly

**Distributions:** (D1)

**This course is cross-listed and the prefixes carry the following divisional credit:**

**MUS 110 (F)(S) Electronic Music Genres, a Creative Approach**

In this course, students will study the theoretical and practical fundamentals of audio technology, MIDI production, sound design, and interactive composition. Students are not required to have any background in Music Technology. We will start by covering the basics of Electronic Music but the class will move at a fast pace covering more advance subjects in a short period of time. We will go over concepts of Physics acoustic, MIDI (sequencing, etc), Sound editing, Digital Signal Processing Effects, Sound Synthesis, and Interactive electronic music composition using Ableton Live, Max4Live, as well as Max MSP for students to learn how to program their own virtual synthesizers and/ or algorithmic composition to create interactive
music in real time. Electronic Music Composition is a central part of the class. Students can choose any aesthetic of their choice for the composition projects, since the the focus of the class is on teaching students the technological tools to create the music of their choice. Students will be encouraged to mix different styles of music creating fusion.

Requirements/Evaluation: Four fusion composition projects and weekly presentation of students mini-projects focused on the electronic music techniques studied in class, and based on student research of musical styles chosen for their projects.

Prerequisites: One of the following: MUS 102, MUS 103, or permission of instructor for those students that have taken music lessons in their previous school: please contact iperez@williams.edu

Enrollment Limit: 8

Enrollment Preferences: Music majors, students with previous experience in Music.

Expected Class Size: 8

Grading: no pass/fail option, yes fifth course option

Distributions: (D1)

MUS 111  (F)  Music in Global Circulation  (DPE)
This course introduces a variety of musical genres and practices from around the world, alongside a discussion of the processes and politics of their global circulation. Through learning about a combination of contemporary styles and longstanding musical traditions spanning a broad geographical range, students will develop a working knowledge of musical terms, concepts, and influential musicians. Beyond engaging with music's sound and structure, we will address its capacity to express personal and group identity, and its ability to both reflect and shape broader social ideas and circumstances. In particular, we will consider music's global circulation, and how its contents and meanings reflect those processes. Genres covered in the course vary intermittently but often include: “throat singing” genres in Tuva and Sardinia, Zimbabwean mbira and Chimurenga music, Argentine Tango, Ghanaian azonto and highlife, Balinese gamelan, and North Indian classical music. No prior musical training is required.

Requirements/Evaluation: class attendance and participation, regular short assignments/study questions, three 5-7 page written assignments, and an 8-10 page final paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: current or prospective majors in Music, upperclassmen.

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Distributions: (D1)  (DPE)

Difference, Power, and Equity Notes: Not only are students exposed to a wide range of musical material from across the globe, they also consider how music becomes meaningful and powerful in light of local contexts and the politics of circulation. Discussions and written assignments address issues including gender identity, economic disparity, the politics of cultural preservation, and music's potential in situations of political unrest.

LEC Section: 01 TR 9:55 am - 11:10 am Corinna S. Campbell

MUS 118  (S)  Hearing Race in America, 1890-1955  (DPE)
The rise of Rock ‘n’ Roll in the mid-1950s has typically been viewed as a temporary confluence in American culture, suggesting possibilities for musical and racial integration even as various forms of appropriation and exclusion were perpetuated. This course will explore the earlier multiple musical streams that merged at this moment. We will start by engaging with contemporary and historical perspectives on race, adopting a radically interdisciplinary approach. Our focus will then be on several of the most prominent vernacular and commercial forms of American music during this
period: ragtime, blues, early jazz, rhythm and blues, Tin Pan Alley, country and western, bluegrass, Tex-Mex/Tejano conjunto, "Latin jazz," and Cajun/zydeco. Prior to the 1950s, these musical styles were segregated, at least in terms of production and marketing. How did racial assumptions and histories shape the creation, dissemination, and reception of this music? Can we hear the multiple ways in which race played out in American music in the first half of the twentieth century?

Class Format: lecture/discussion

Requirements/Evaluation: Evaluation will be based on a 5-page paper, a midterm, a 7-page paper, a final exam, and on class participation.

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Random selection.

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: We will focus on how racial imagination and systemic racism shaped the creation, marketing, and reception of multiple genres and styles in American popular music from 1890 to 1955. Before embarking on this historical study, we will first become familiar with current theories of race and with dominant American perceptions of race c. 1900. Perceptions of difference (in multiple forms), realities of market power, and issues of artistic and financial equity directly impacted music in this period.

MUS 125 (S) Music and Social Dance in Latin America (DPE)

Cross-listings: MUS 125 DANC 125

Primary Cross-listing

This course offers a full-spectrum introduction to a number of Latin American social dance forms, including samba, salsa, tango, and the Suriname Maroon genre, awasa. Through critical listening and viewing assignments, performance workshops, and readings from disciplines spanning ethnomusicology, anthropology, dance studies, Latin American studies and history, students will combine a technical understanding of the musical and choreographic features of these genres with a consideration of their broader contexts and social impact. Among the questions that will drive class discussions are: How do sound and movement interrelate? What aspects of gender, sexuality, class, race and ethnicity arise in the performance and consumption of Latin American genres of social dance? How do high political, economic, and personal stakes emerge through activities more commonly associated with play and leisure? This class is driven by academic inquiry into these various social dance practices; it does not prioritize gaining performance skills in the genres discussed. While there will be experiential components included throughout the course (for instance music or dance workshops), the majority of the class will be conducted in a discussion/seminar format. While the ability to read musical notation is helpful, it is not required.

Class Format: seminar/studio

Requirements/Evaluation: Regular short assignments, three 5-7 page papers, final project or paper (10-12pgs)

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: upperclassmen, majors in music, dance, Latino/a studies.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Unit Notes: MUS World Music/Ethnomusicology

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

MUS 125 (D1) DANC 125 (D1)

Difference, Power, and Equity Notes: Together, the music and dance genres discussed here indicate the diversity of social dance practices within Latin America, broadly conceived. Each unit of the course delves into aspects of political, historical, and cultural context and their resonance within the realm of music and dance. Specific attention is paid to racial and intercultural aspects each genre's formulation, practice, and circulation, as well as the politics of representation in embodied expression.

Attributes: GBST Latin American Studies Electives MUS World Music/Ethnomusicology
MUS 143 (F) The Symphony
This course traces the European symphonic tradition from the late eighteenth century through the mid-twentieth century, focusing on works by Mozart, Haydn, Beethoven, Berlioz, Liszt, Mendelssohn, Schumann, Brahms, Dvorak, Mahler, Strauss, and Shostakovich. We will examine developments in musical form and harmony, social contexts for listening, and contemporary aesthetic debates about the nature of genius, the idea of musical tradition, and the narrative capacity of instrumental music.

Class Format: lecture/discussion
Requirements/Evaluation: students will be evaluated on three 3- to 5-page essays, two exams, and short weekly assignments, ability to read music not required
Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: first-years and sophomores
Expected Class Size: 10
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

Fall 2022
LEC Section: 01 TR 11:20 am - 12:35 pm Benjamin S. Ory

MUS 149 (S) The Language of Film Music
Filmmakers have relied on music from the earliest days of silent movies (often accompanied by live musical performance) to our present age of slickly-produced online video. Along the way, trends have arisen (and have been artfully thwarted) in countless film scores, whether constructed from preexisting works or specially crafted by composers like Max Steiner, Duke Ellington, Bernard Herrmann, John Williams, James Horner, Micachu, or Björk. In this class, we will look at and listen to films from different periods and cultures, observing which techniques evolved, which have changed very little, and considering when an idea is borrowed and when it might actually be new. We will also discuss the impact this language has on the experience of the viewer, and how film music functions in the wider culture. Assignments will consist of listening/viewing, responding in writing, and re-interpreting film clips with music you will compose or borrow.

Requirements/Evaluation: Evaluations include: several short writing and creative assignments, two quizzes, a midterm essay, and a final creative project.
Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: given to juniors and seniors
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)
Attributes: FMST Core Courses

LEC Section: 01 MR 2:35 pm - 3:50 pm Zachary Wadsworth

MUS 150 (S) The Broadway Musical (DPE)
Cross-listings: MUS 150 THEA 150

Primary Cross-listing
Named for a specific road but enjoying a global impact, the Broadway musical has intersected with multiple styles and societal concerns over the past
century. In this course, we explore the American musical theater's roots and relationship to opera, operetta, vaudeville, minstrelsy, and Tin Pan Alley. Traveling through the genre's history, we will encounter a wide range of musical styles, including ragtime, jazz, rock, and hip hop, and will explore several genre transformations, such as movies made into musicals and musicals into movies. We will develop a range of analytical skills as we investigate connections between choreography, lyrics, music, staging, and production. Throughout the semester, we will consider the genre's representations and reflections of ethnicity, race, sexuality, and class. The syllabus includes representative works by Gilbert and Sullivan, Cohan, Gershwin, Kern, Weill, Rodgers and Hammerstein, Lerner and Loewe, Bernstein, Sondheim, Lloyd Webber, and Miranda, with particular focus on such works as Showboat, Oklahoma!, Guys and Dolls, West Side Story, Hair, Rent, and Hamilton.

Class Format: discussion
Requirements/Evaluation: a midterm, a brief paper, an 8-page paper, and a final exam
Prerequisites: none
Enrollment Limit: 30
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
MUS 150 (D1) THEA 150 (D1)

Difference, Power, and Equity Notes: We will develop skills aimed at analyzing and interpreting how perceptions of race, gender, and class shaped, and were shaped by, Broadway. We will consider the extent to which, for example, blackface minstrelsy and ethnic-based humor persisted and how specific musicals aimed to engage with critical social and political issues throughout the genre's history. Musicals have played a major role in the contested and ongoing endeavor to define "America."

Not offered current academic year

MUS 151 (F) History of Jazz
"There are only three things that America will be remembered for 200 years from now when they study the civilization: The Constitution, Jazz Music and Baseball. These are the three most beautiful things this culture's ever created."—(Gerald Early) Jazz is the most common name for a great African American Art form that still defies definition. Over the past century this elastic tradition has laid down firm roots for numerous other American and World musics, while itself in the throes of a seemingly permanent identity crisis. Jazz is perennially declared dead or dying yet consistently summoned by advertisers to lend vitality and sex appeal to liquor or automobiles. By any name and regardless of its health status, jazz has a rich history of conservative innovators, at once restless and reverent, who made fascinating leaps of creativity out of inspiration or necessity. This "listening intensive" class will look at the past century of jazz music through ideas, "what-if" questions and movements that changed the way the music was created, presented and perceived. Both musical concepts (such as syncopation and cross instrumental-influence) and cultural connections (racial, technological and economic) will be examined, giving us freedom to link similar kinds of musical thought across disparate settings and decades. Our inquiry will include (but not be limited to) the lives and music of Louis Armstrong, Fletcher Henderson, Mary Lou Williams, Duke Ellington, Charlie Parker, Thelonious Monk, Dizzy Gillespie, Art Blakey, John Lewis, Miles Davis, John Coltrane, and Wayne Shorter.

Class Format: All meetings online. Some meetings will be in smaller discussion groups
Requirements/Evaluation: class participation including regular reading and listening assignments; 4 quizzes, two short papers/projects
Prerequisites: none
Enrollment Limit: 20
Enrollment Preferences: first-years and sophomores
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

MUS 164 (F) Bach and Handel: Their Music in High Baroque Culture
This course explores the lives and music of two great composers of the High Baroque, Johann Sebastian Bach and George Frideric Handel. We will
examine their dramatically contrasting life experiences and musical pursuits within the larger social and cultural framework of the period: Bach as a provincial composer, servant to minor German aristocrats and the Lutheran Church, virtuoso organist and pedagogue; Handel as a cosmopolitan celebrity and entrepreneur, creator of operatic and instrumental entertainments for both the Italian and English nobility and the paying public. Development of listening skills and understanding of Baroque music styles, genres, and forms will be stressed. Bach’s Brandenburg Concerti and Mass in B-minor, and Handel’s opera Giulio Cesare and Water Music Suite are just a few of the works to be discussed and enjoyed.

Class Format: discussion, two meetings per week, and a field trip may be required

Requirements/Evaluation: participation, two papers, a midterm, and a final exam
Prerequisites: none
Enrollment Limit: 20
Enrollment Preferences: first-year students and sophomores
Expected Class Size: 10
Grading: yes pass/fail option, no fifth course option
Distributions: (D1)

Not offered current academic year

MUS 165  (F)  Mozart

This course will examine the extraordinary life and musical genius of Wolfgang Amadeus Mozart. Through lectures, discussion, readings, and guided listening, students will gain appreciation of Mozart's classical compositional style and familiarity with many of his greatest works. The class will explore Mozart's pivotal position as a musician in Viennese society; his strange combination of bawdy behavior and sublime artistry; his relationship with his domineering father Leopold, as well as with Haydn, Beethoven, and Salieri; and the myths about Mozart that have sprung up in the two centuries since his death.

Class Format: discussion

Requirements/Evaluation: class participation, listening quizzes, two short papers, a midterm exam, and a final exam
Prerequisites: none
Enrollment Limit: 19
Enrollment Preferences: students with demonstrated interest in music
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

Not offered current academic year

MUS 166  (S)  Beethoven

This course provides an introduction to the life and music of Ludwig van Beethoven. The composer's difficult childhood, loss of hearing, secret affair with his "Immortal Beloved," tempestuous relationship with his suicidal nephew, along with political, philosophical, social, and cultural developments of the late 18th and early 19th centuries, will provide context for our study of his artistic achievements. Students will listen to a broad selection of Beethoven's music, including sonatas, string quartets, symphonies, overtures, concertos, choral works, and opera. Some of the topics we will discuss include the nature of his genius, his compositional methods, his influence on later composers such as Schubert, Wagner, and Brahms, Beethoven in popular culture, and the continuing impact of his music around the globe.

Class Format: lecture/discussion

Requirements/Evaluation: class participation, two 5-7 page papers, several listening quizzes, midterm and final exams
Prerequisites: none
Enrollment Limit: 19
Enrollment Preferences: students with a demonstrated interest in music
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)
MUS 174 (S) The Singing Voice: Structure, Styles and Meaning

What makes an opera singer sound different than a pop singer? How does the sound of each contribute to musical meaning for listeners? And why is the former granted a higher status and the latter a wider audience? This course examines the world of singing styles and engages these styles from multiple angles: through listening, readings, film viewing and, importantly, through singing. We examine histories of styles, cultural contexts as well as basic physiology, acoustics and techniques. We will explore the basics of yodeling, overtone singing and belting, among other styles. Familiarity with musical notation recommended.

Class Format: studio/brief lectures

Requirements/Evaluation: Two quizzes, regular journaling, a final paper (6-8 page) and a presentation.

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: juniors and seniors

Expected Class Size: 10

Grading: yes pass/fail option, no fifth course option

Distributions: (D1)

SEM Section: 01 MR 1:10 pm - 2:25 pm Brad Wells

MUS 175 (F) Sound Art, Public Music

Cross-listings: MUS 175 ARTS 273

Primary Cross-listing

Western music performance traditionally occurs within contained spaces in which performer and audience adhere to designated locations and follow tacit scripts: seats/stage; applause/bows, etc. In recent years, traditional boundaries and expectations of performance and reception have loosened, often moving into public spaces: from sound art installations to ambient music, from interactive sound sculpture to radio art to social media driven flash mobs. This course examines the work of pioneers in public music and sound art including Alvin Lucier, Bill Fontana, John Cage, Hildegard Westerkamp, Brian Eno, Elizabeth A. Baker and Christine Sun Kim, among others. The course will alternate between study and analysis of particular artistic strategies and the creation of sound art works inspired by ideas and creators we are studying.

Requirements/Evaluation: class participation, 3 short (1- to 2-page) essays, a response journal and the creation of five sound art works

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: juniors and seniors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: ARTS elective

Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:

SEM Section: 01 MR 1:10 pm - 2:25 pm Brad Wells

MUS 177 (S) Gender and Sexuality in Music (DPE)

Cross-listings: WGSS 177 MUS 177
This course explores key themes in the expression of gender and sexuality through music. It draws from primarily 21st century examples, across cultures and genres, ranging from pop boy bands to Indian bhangra dance to the musical avant-garde. Themes will include: communicating gendered ideals, dance and embodiment, transgressive performances, biography and subjectivity, intersectionality, music and sexual violence, and marketing. We will explore the ways in which ideas and identities related to sex and gender are formulated and mobilized in music's performance and consumption. Inevitably, issues of sound and stagecraft intersect with factors such as race, age, and class, further informing these experiences. Students will consider their own processes of identifying and interpreting expressions of gender and sexuality in sound and movement, and contemplate the role of culture and society in informing those interpretations.

Requirements/Evaluation: attendance/participation, intermittent GLOW posts and short assignments (2 pgs or less), midterm project, and either a 12-page final paper or a project with supplementary paper (length to be determined in consultation with the instructor).

Prerequisites: open to all students; familiarity with musical terminology is helpful but not required

Enrollment Limit: 20

Enrollment Preferences: WGSS and MUSC majors/prospective majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 177 (D2) MUS 177 (D1)

Difference, Power, and Equity Notes: This course critically examines the ways in which music constructs and reflects gendered and sexual identities in intersectional space. We discuss how normative viewpoints come to be accepted and interpreted as 'natural,' and how musicians and audiences have maneuvered within and against those socio-political expectations. Music and readings span a wide range of sources—elite, popular, counter-cultural; from Euro-American sources to genres hailing from Brazil, Korea, and India.

MUS 179 (F) James Baldwin's Song

Cross-listings: AFR 128 COMP 129 MUS 179

Secondary Cross-listing

"It is only in his music [. . ] that the Negro in America has been able to tell his story. It is a story which otherwise has yet to be told and which no American is prepared to hear," wrote James Baldwin in Notes of a Native Son in 1955. In this course, we strive to listen more closely to racialized experience through James Baldwin's musical literature. Through analysis and creation of music, we hope to better understand cultural difference and collective humanity. In this course, we closely analyze James Baldwin's use of song names, creation of musician characters, and replication of musical elements in his writing. Baldwin's musical word play crosses historical and genre boundaries. So we will explore texts from his early to late career, such as the gospel music of his youth in the semi-autobiographical novel Go Tell It on the Mountain, the metaphor of the blues in the play written during the civil-rights movement Blues for Mr. Charlie, the jazz musician protagonist in "Sonny's Blues" written after World War II in Paris, and his only musical recording in A Lover's Question set down near the end of his life. In addition to closely analyzing James Baldwin's attention to music throughout his literature, students will learn basic music writing and production skills. The tutorial will draw on a range of musical resources, including playlists, music workshops, guest lectures and performances. All of these resources will guide students to a more attuned hearing not only of music but also of the African American experience it reflects. By the end of the course, students will have written several short 1-2 page close analysis essays and song lyrics. For their final project, students will produce an original song based on key insights from the course. No musical experience is required, though an openness to learn and practice songwriting is expected.

Requirements/Evaluation: Several short 1-2 page close analysis essays of Baldwin's work, oral peer feedback presentations, song lyrics, and an original song composition for the final project

Prerequisites: None

Enrollment Limit: 10
Enrollment Preferences: This course is specifically for first-year students and they will receive preference in this class; a statement of interest will be solicited from pre-registrants.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

MUS 201  (F)  Music Theory and Musicianship II

Music 201 continues to greater degrees the study of music techniques from the common practice period by means of analysis, composition, written exercises, sightsinging, and dictation. We will expand our understanding of chromaticism. We will learn how chromaticism is used as a voice-leading tool, and how it participates in music even at deeper levels of the structure. We will learn about innovations that occurred from the early 19th century through the beginning of the 20th century and will trace the origins for these new harmonic tendencies. We will also learn how composers create larger formal structures.

Class Format: Remote. In addition to the scheduled lecture block, the class requires a weekly aural-skills meeting, to be scheduled in the first week of class. The one-on-one meeting will take place with a lab instructor for approximately 10-15 minutes

Requirements/Evaluation: homework, theory quizzes, analysis papers, compositional projects, final project, class attendance, preparation, participation, and on the results of the lab portion of the class

Prerequisites: MUS 104

Enrollment Limit: 12

Enrollment Preferences: Music majors and potential Music majors

MUS 211 (F) Music, Nationalism, and Popular Culture (DPE)
This course surveys the manner, function, and contexts through which sound and ideas of national belonging are linked. We will consider influential and iconic musicians (e.g. Umm Kalthoum, Amalia Rodriguez, Bob Marley, Carlos Gardel), international forums for the expression of national sentiment (the Olympics, Miss Universe and Eurovision competitions), and a wide range of instruments, genres, and anthems that are strong conduits for national sentiment. Drawing on the work of critical theorists including Benedict Anderson, Michael Herzfeld, and Homi K. Bhabha, we will pursue a number of analytical questions: What parallels exist between musical and political structure? How do nations adjust as their policies and demographics change? How are cultural forms implicated in postcolonial nation building projects? What marginal populations or expressive forms are included, excluded, or appropriated in the formation of national identity? Finally, what differences emerge as we change our focus from a national to an international perspective, or from officially endorsed representations of national culture to unofficial popular forms of entertainment?

Requirements/Evaluation: Class participation, regular short (1 page) written responses, two 5- to 6-page papers, a Final Paper/Project

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Upperclass students and music majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option
Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: Owing to its global focus and attention to power and privilege in political and musical structures, this course meets the DPE requirement. Topics include the use of music for social control and subversion in Mobutu's Zaire, its affective power in U.S. campaign ads, and the ways in which constructions of 'folk music' impact power differentials in a national political structure. Assignments help students develop an awareness of the specific strategies whereby music mobilizes national ideologies.

MUS 220  (F)  African Dance and Percussion

Cross-listings: AFR 201  MUS 220  DANC 201

Secondary Cross-listing

We will examine two forms that embody continuity of tradition or the impact of societal, political or economic change. Lamban was created by the Djeli, popularly called Griots served many roles in the kingdoms of Ghana and Old Mali from the 12th century to current times. This dance and music form continues as folklore in modern day Guinea, Senegal, Mali and The Gambia where it is practiced by the Mandinka people. Bira is an ancient and contemporary spiritual practice of Zimbabwe's Shona people. While these forms are enduring cultural practices, Kpanlogo from the modern West African state of Ghana represents the post-colonial identity of this nation's youth and their aspirations for independence at the end of the 1950s. We will also consider the introduction of these forms outside of their origin. This course can be taken for academic and/or PE credit

Class Format: class hours will be used to learn and use the dance and music of at least two forms including historical context, a group and individual research project or paper. When possible, our process will include guest artists and field trips to see live performance as well as use of the archives at Jacob's Pillow Dance Festival.

Requirements/Evaluation: discussion of assignments, group response performances, and short research paper. Students enrolled for PE credit are responsible only for the performance-based projects

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: students who have taken a 100 level dance course of DANC 202; have experience in a campus-based performance ensemble; or have permission of the instructors

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Cross-listings: AFR 206  MUS 221  DANC 202

Secondary Cross-listing

Before the 20th century, the African continent was the source of dance and music that influenced new forms rooted on and off the continent. These forms are shaped by the impact of religion, colonialism, national political movements, travel, immigration, and the continuing emergence of technology. In South Africa, the labor conditions of miners instigated the creation of Isicathulo, Gum boots, and in Brazil the history of colonialism is a factor that anchors Samba as a sustaining cultural and socioeconomic force. The birth of Hip Hop in the 20th century finds populations across the globe using its music, dance, lyrics, and swagger as a vehicle for individual and group voice. Hip Hop thrives as a cultural presence in most countries of the African
continent and in the Americas. We will examine the factors that moved this form from the Bronx, New York, to Johannesburg, South Africa, and Rio, Brazil. We will examine at least two of these forms learning dance and music technique and composition material that will inform their practice. Each of these genres generated new physical practices, new and enduring communities while continuing to embody specific histories that have moved beyond their place of origin. What is their status in this century?

Class Format: class hours will be divided among discussion of media and readings; rehearsal of dance and music techniques; field trips to view performances; research at the Jacob Pillow's archives; and interaction with visiting artists

Requirements/Evaluation: a series of discussion, research, and individual and group projects; all of which will inform collaboration on mid-term and final projects

Prerequisites: none

Enrollment Limit: 16

Enrollment Preferences: students who have taken DANC 107, 108 or DANC 201; have experience in a campus based performance ensemble; or have permission of the instructors

MUS 222 (F) Politics of Performance/Performing Politics in Contemporary Africa (DPE) (WS)

Cross-listings: MUS 222 AFR 223

Primary Cross-listing

Using select examples from throughout Africa, this course highlights genres, artists, and works that engage with social and ideological change. Students practice critical listening and performance analysis, while also considering the social contexts that render these performances meaningful and provocative. Topics include: challenges to mass mediated stereotypes of African populations, the social and economic impact of cultural tourism, music as a form of social critique, changing attitudes toward women and the LGBTQIA community, music and global aid organizations, issues of migration and displacement, and the changing roles of traditional musical occupations. Popular genres-among them Afrobeat, kwaito, soukous, rai, mbalax, Chimurenga music, and a variety of rap and hip-hop styles-are discussed alongside numerous traditional and ceremonial genres, national/political anthems, and concert pieces. Active participation in class discussion is an important component of this course.

Class Format: this class places a strong emphasis on discussion

Requirements/Evaluation: in-class preparation and participation, bi-weekly short writing assignments, a midterm paper and a final project

Prerequisites: some familiarity with music terminology encouraged

Enrollment Limit: 15

Enrollment Preferences: sophomores, juniors, or seniors who are current or prospective Music majors, as well as current and prospective Africana Studies and Latina/o Studies concentrators

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

MUS 222 (D1) AFR 223 (D2)

Writing Skills Notes: Students receive regular feedback on multiple short assignments throughout the semester. Particular focus is dedicated to crafting and substantiating written arguments.
Difference, Power, and Equity Notes: Throughout the course, students engage with case studies concerning specific socio-political contexts within Africa, with an emphasis placed on music’s role as a social agent. Topics include representational politics, music as a tool for the powerful as well as the politically disempowered, and music’s role in conflict resolution.

MUS 231  (S) Music in History I: Bach and Before
This course explores 1000 years of music-making in Western Europe, beginning with the philosophical and theoretical origins of this music in ancient Greece and extending to the life and music of J.S. Bach. Topics covered include how the sound of music changed over a millennium; the different functions it served and how genres developed to serve these functions; the lives of the men and women who composed, performed, and wrote about music; and how the changing notation and theory of music related to its practice over the centuries. At the same time, the course provides an introduction to the modern study of music history, sampling a broad range of recent scholarship reflecting an array of critical approaches to the study of early music in our own day.

Class Format: lecture-discussion

Requirements/Evaluation: in-class and online participation, two medium length papers, unit tests and final exam

Prerequisites: ability to read music; open to qualified non-majors with the permission of instructor

Enrollment Limit: 15

Enrollment Preferences: music majors, those planning to major in music, and any student with a strong background and interest in music.

Expected Class Size: 8

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Required course for Music majors. Music majors may not take MUS 231 as pass/fail or 5th course option if they are using it to fulfill the Medieval/Renaissance/Baroque music history requirement for the music major.

MUS 232  (S) Music in History II: Classical and Romantic Music
MUS 232 traces the development of Western art music from 1750 to 1900. Through listening, reading, and score analysis, we will study a broad range of composers and genres, Classical and Romantic aesthetics, and connections between music and political, philosophical, social, and cultural developments of the period. Composers include Haydn, Mozart, Beethoven, Schubert, Robert Schumann, Clara Schumann, Fanny Mendelssohn Hensel, Berlioz, Chopin, Liszt, Verdi, Wagner, Brahms, Tchaikovsky, Mahler, and others. Some of the topics we will discuss include the changing role of composers in society, music's relationship to the other arts, challenges faced by female composers, controversies surrounding music and meaning, the interaction of music and drama in opera, and musical nationalism.

Class Format: lecture-discussion

Requirements/Evaluation: class participation, two 5-6 page papers, GLOW posts, midterm and final exams

Prerequisites: ability to read music

Enrollment Limit: 15

Enrollment Preferences: Music majors, those planning to major, and any student with a strong interest in music

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Music majors may not take MUS 232 as pass/fail or 5th course option if they are using it to fulfill the Classical-Romantic music history requirement for the music major.

Spring 2023
MUS 233  (F) Music in History III: Musics of the Twentieth Century
A survey of musics in both Western and non-Western society from the close of the nineteenth century to the present. Emphasis will be on the contextual study of the music of major composers of Western art music, on the musical expressions of selected areas of world music such as Africa, Asia, India, and the Americas, and on the intermingling of musical influences of pop, jazz, and art music. Our study will focus on issues of exoticism and globalization.

Class Format: discussion

Requirements/Evaluation: class participation, two papers, a midterm, and a final exam

Prerequisites: ability to read music

Enrollment Limit: 15

Enrollment Preferences: Music majors or students with some musical background.

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

MUS 234  (F) Soundscapes of Renaissance Europe
What was the sonic experience of living in late-medieval and early-modern Europe? This course will explore the sights and sounds of daily life for cultural elites as well as the average urban resident. Although it is often vocal polyphony that first comes to mind when thinking about Renaissance music, acoustic environments were complex, noisy, and diverse. This course aims to reflect that heterogeneity: topics include bells, processions, music and architecture, instrumental music, plainchant, visual depictions of music-making, and uses of music to project power, as well as sacred and secular vocal polyphony. Students will zoom in on cities, courts, and churches, especially the musical centers of Bruges, Florence, Ferrara, the Imperial Court of Holy Roman Emperor Charles V, and Bavaria. The course will examine music by some of the most important composers of the era, including Guillaume Du Fay, Josquin des Prez, Philippe Verdelot, Nicolas Gombert, and Orlando di Lasso.

Class Format: Meeting twice per week. Class discussion will be central to this course.

Requirements/Evaluation: in-class preparation and participation, short mid-term paper, final presentation, and final paper

Prerequisites: ability to read musical notation

Enrollment Limit: 20

Enrollment Preferences: music majors, those planning to major in music, or any student with a strong interest in music or Renaissance Europe

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

MUS 239  (S) Music in the Global Cold War  (WS)
Cross-listings: MUS 239  LEAD 239

Primary Cross-listing
Throughout the Cold War (1947-1991), music was deployed as a weapon, as a source of nationalist and ideological inspiration, as a form of political protest and resistance, and as propaganda. Music both echoed and helped shape political views and, therefore, prompted various forms of regulation and censorship (McCarthyism in the U.S.; the Union of Soviet Composers). To counter Soviet claims of American cultural inferiority and racism, the
U.S. sponsored numerous musical diplomacy efforts showcasing both jazz (Armstrong; Ellington; Brubeck) and classical musicians and composers (Bernstein; American orchestras). Cold War politics and the threat of nuclear war influenced musical styles (Copland; Soviet Socialist Realism; the popular American folk music revival; serialism; rock behind the Iron Curtain), specific musical events (Tokyo East West Music Encounter; concerts celebrating the fall of the Berlin Wall), and individual careers (Shostakovich; Robeson; Van Cliburn). To investigate music's political roles and capacity for expressing communist and democratic capitalist ideologies, we will adopt a case study approach. The Cold War was a global political and, frequently, militaristic struggle. Though our focus will be on music in the U.S.S.R. and U.S.A., we will also consider musical developments impacted by the Cold War throughout Western and Eastern Europe, in Latin America, and in East Asia.

Class Format: Hybrid, meeting twice per week. Class discussion will be central to this course.

Requirements/Evaluation: 20% = Participation; 20% = Paper #1, 5-6 pages; 25% = Paper #2, 8 pages; 35% = Paper #3, 12 pages, due during exam period

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Students with relevant experience in Political Science, History, or Music studies.

Writing Skills Notes: Students will write three papers during the semester: a 6 page, 8 page, and a 12 page paper. Drafts of papers 2 and 3 will be required prior to the due dates listed below. This is a "writing skills" course. Students will receive detailed comments on each paper, allowing them to build upon those comments in subsequent writing assignments.

Not offered current academic year

MUS 252 (F) Introduction to the Music of John Coltrane

Cross-listings: AFR 242 MUS 252

Primary Cross-listing

This course offers the serious music student an opportunity to study the unique body of work produced by saxophonist and composer John Coltrane (1926-1967). The course traces the evolution of Coltrane's compositional and performance styles in the context of the musical and cultural environment in which they developed. Emphasis placed on Coltrane's musical style, representing a unique synthesis of influences, including jazz, world, and European Classical music and spirituality. Substantial listening and reading assignments, including a biography and related criticism, as well as detailed score analysis and study, are required.

Requirements/Evaluation: in-class participation including small quizzes, midterm, class presentation, and final paper

Prerequisites: MUS 103 and/or 203 strongly recommended; musical literacy sufficient to deal with the material and/or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: musically literate students and Music majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

MUS 254 (S) Bebop: The (R)evolution of Modern Jazz

Cross-listings: AFR 254 MUS 254

Primary Cross-listing
In the 1940s, Jazz turned a corner, transitioning from the functional and popular music of the swing era to the increasingly complex art music known as bebop. The practitioners of this new sub-genre were seen not as showmen or entertainers, but (in the words of poet Ralph Ellison) as "frozen faced introverts, dedicated to chaos." This music was simultaneously old and new, a musical evolution interpreted through the lens of cultural revolution. This class will survey the lives, music and continuing impact of bebop's most pivotal figures: Charlie Parker, Thelonious Monk, Dizzy Gillespie, Bud Powell and Kenny Clarke among many others. Through score study, guided listening and performance, the class will examine the melodic, harmonic and rhythmic innovations associated with this pivotal era in jazz history. We will evaluate, compare and contrast examples of contemporary theoretical scholarship concerning this musical vocabulary and it's evolution. Intersections between the music and parallel artistic, social and political movements will also be addressed.

Requirements/Evaluation: weekly reading, listening, musical memorization and performance. Short written responses to discussion prompts and participation in class discussion; quizzes on assigned readings and listening, and final exam

Prerequisites: MUS 104b or permission of instructor, instrumental or vocal proficiency.

Enrollment Limit: 12

Enrollment Preferences: Music majors, Jazz Ensemble members, Africana Studies concentrators

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

MUS 261 (S) Lost Voices of Medieval and Renaissance Women (WS)

Cross-listings: MUS 261 WGSS 261

Primary Cross-listing

Remarkably few female voices from the first 1500 years of music in the West are audible today; most of the extant music and poetry of these centuries was composed by men to communicate male perspectives on matters worldly and divine. In this course we will listen to the experiences and viewpoints of medieval and Renaissance women as expressed through their poetry and song. We will ask how these women, whose lives were shaped either by the requirements of monastic culture or by the complex dynamics of aristocratic court culture, negotiated their places and made their voices heard within the patriarchal society of their time. We will examine how the contrasting environments of church and court informed the different outlooks, ideas, and aesthetics expressed in the words and music of their songs. Along the way, we will critically assess how these lost voices have been recreated to speak to us today through recordings and film. Our exploration begins in Byzantium and travels through Germany to France, Spain, and Italy. Along the way we encounter the Greek chant of the 9th century Byzantine abbess Kassia, the Latin poetry, chant, and sacred music drama of the 12th century German polymath St. Hildegard of Bingen, and the elegant poems and courtly melodies of the Countess of Dia and Queen Blanche of Castile in 12th and 13th century France. Heading south, we explore 14th century sacred polyphony at the royal convent of Las Huelgas in northern Spain, and voyage cross the Mediterranean to sample the lively musical life of 15th and 16th century cloistered female communities in northern Italy. We conclude our journey with a comparison of three remarkable 16th century women: the archduchess Margaret of Austria, Governor of the Hapsburg Netherlands, and poet-composer of French chansons; Sister Leonora d'Este, an Italian princess who spent her life enclosed in a Venetian convent, and likely authored a collection of anonymous Latin motets; and Maddelena Casulana, a northern Italian composer of madrigals, and the first women to publish music under her own name. Her introduction to her first book of madrigals encapsulates the aim of this course: "I want to show the world, as much as I can in this profession of music, the vain error of men that they alone possess the gifts of intellect and artistry, and that such gifts are never given to women."

Requirements/Evaluation: Evaluation based on participation, three essays totaling 20-25 pages, three short peer reviews, and a final project presentation.

Prerequisites: Ability to read music helpful but not required.

Enrollment Limit: 10

Enrollment Preferences: Current or prospective Music and Women's Gender & Sexuality Studies majors, then seniors, juniors, and sophomores.
MUS 272  (S)  Music and Meaning  (WS)
Nearly everyone finds music meaningful, but what exactly does it mean? Without the help of words, this largely non-referential art presents special challenges to interpretation. While most would agree that musical sounds can do such things as mimic the rumbling of thunder, evoke the countryside, suggest the act of chasing, or express rage, the capacity of music to convey meaning remains controversial among scholars, performers, and listeners. Some, following music critic Eduard Hanslick, assert that musical works are essentially "tonally moving forms"—patterns of sound with no reference to the world outside themselves; a work’s meaning derives solely from the interplay of musical elements. Others counter that music can signify aspects of human experience, its sounds and structures not merely referring to the outside world but even relating complex narratives. Certain writers have argued that, without the assistance of language, what music signifies remains vague, while others insist that the meaning of music is actually more precise than that of words. In this tutorial course, we will explore a range of questions regarding musical meaning. How can combinations of pitches, rhythms, and instrumental timbres signify something beyond themselves? Is the subject of musical meaning more relevant to some historical styles or genres than others? How can we determine the meaning(s) of a work? Should we concentrate on formal processes within the music? Consider socially constructed meanings? Seek the composer’s intentions? Emphasize our personal responses? What makes some interpretations more convincing than others? In grappling with these questions, students will engage with writings by Agawu, Cone, Hanslick, Kramer, Langer, Lewin, Newcomb, and Schopenhauer, among others. Music to be studied includes works by Beethoven, Schubert, Chopin, Brahms, Mahler, Tchaikovsky, Ravel, Stravinsky, Glass, and Adams.

Class Format: This course will be taught remotely. During the first and last weeks of the semester, students will attend one or two online group classes; in the other weeks, students will meet with the instructor in pairs for a one-hour, online session at a mutually convenient time.

Requirements/Evaluation: Students will write and present a 5- to 6-page paper every other week and a 1- to 2-page response to their partner’s paper in the alternate weeks; evaluation will be based on five papers/presentations, and five responses.

Prerequisites: Ability to read music, or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Any student who expresses a strong interest in the course

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (WS)

Writing Skills Notes: In this tutorial course, students will write and present a 5- to 6-page paper every other week (five papers total) and a 1- to 2-page response to their partner’s paper in the alternate weeks (five responses total). Through discussion in the tutorial sessions and comments on the papers, the course will place strong emphasis on developing students’ critical thinking and writing skills.

Not offered current academic year

MUS 273  (F)  Dangerous Music  (WS)
As a largely non-referential art whose meanings are far from transparent, music might seem to pose little danger. How could mere sounds represent a threat? Yet precisely because its meanings can be obscure, enabling it to achieve its ends surreptitiously, music has intertwined with danger throughout history. With its power to stir the emotions, stimulate bodily movement, encode messages, and foment rebellion, music has often been perceived as an agent of harm. Plato claimed that too much music could make a man effeminate or neurotic, and warned that certain musical modes, melodies, and rhythms promote licentious behavior and anarchic societies. Puritans, Victorians, and totalitarians, as well as opponents of ragtime, rock ’n roll, and rap, have also accused certain musical genres or styles of exerting dangerous influences, and sought to limit or suppress them. In Afghanistan, the Taliban banned music altogether. While music has often been unfairly accused, its potential for placing people in actual danger is undeniable. Works that are played at ear-splitting decibel levels, that call upon performers to injure themselves, that are used as a form of psychological torture, or that incite violence demand reconsideration of the widely shared view that music is fundamentally a form of entertainment.
**Requirements/Evaluation**: evaluation will be based on participation, five 5-6 page papers/presentations, and five 1-2 page responses

**Prerequisites**: an ability to read music is desirable but not required

**Enrollment Limit**: 10

**Enrollment Preferences**: students with demonstrated interest in music

**Expected Class Size**: 10

**Grading**: no pass/fail option, no fifth course option

**Distributions**: (D1) (WS)

**Writing Skills Notes**: Students will write five 5-6 page papers and five 1-2 page responses, and will receive extensive feedback on their writing.

Not offered current academic year

**MUS 275 (S) Shakespeare through Music**

The plays of William Shakespeare are replete with references to music, and in his day included singing and even dancing as part of the narrative. As his plays entered the global canon, composers and choreographers, along with musicians and dancers, have contributed as avidly to interpreting Shakespeare's plots and characters as have theater directors and actors across the world. This tutorial course will focus on three plays—the tragedies *Romeo and Juliet* and *Othello*, and the comedy *Midsummer Night's Dream*—in order to compare and contrast a broad range of ways in which music works to tell these stories and portray these characters. We will consider these three plays in genres ranging from symphony orchestra, opera, and ballet to film scores, modern dance, jazz, musical theater, and popular song. Music from the Renaissance to the present day will be explored, including composers such as Purcell, Mendelssohn, Tchaikovsky, Verdi, Prokofiev, Bernstein, Britten, Ellington, and Costello. We will also examine film scores ranging from the silent era through such directors as Max Reinhardt, Orson Welles, Franco Zeffirelli, and Baz Luhrmann. Through comparative analysis of different approaches to relating Shakespeare's plays through music, this tutorial aims to develop both critical listening to music and critical thinking about music.

**Requirements/Evaluation**: each student will write five 6- to 7-page essays, and provide five peer reviews; evaluation will be based on the quality of written work and discussion

**Prerequisites**: none

**Enrollment Limit**: 10

**Enrollment Preferences**: Students majoring or planning to major in Music, English, or Theater.

**Expected Class Size**: 6

**Grading**: no pass/fail option, no fifth course option

**Distributions**: (D1)

Spring 2023

TUT Section: T1  M 7:00 pm - 9:40 pm  M. Jennifer Bloxam

**MUS 278 (S) Carmen, 1845 to Now** (DPE) (WS)

**Cross-listings**: MUS 278  WGSS 248

**Primary Cross-listing**

The story of the gypsy *femme fatale* Carmen has endured for over 150 years. In Western culture and beyond, she exemplifies the seductive, exotic, independent, and dangerous woman who drives an upstanding man to a life of crime and finally murder. This course explores a broad array of treatments of this archetypal and problematic narrative, starting with Prosper Mérimée's 1845 novella on which Bizet based his famous 1875 opera *Carmen*. We will consider various staged and film versions of the opera itself, including Francesco Rosi's stunning 1984 movie, and discuss various other film transformations of the story, from DeMille's 1915 silent film through Hammerstein's 1954 all-black musical *Carmen Jones*, to the MTV version *A Hip Hopera* of 2004. Comic approaches will also be assessed, from Charlie Chaplin's *Carmen Burlesque* of 1915 through Spike Jones' 1952 *Carmen Murdered!* and *The Naked Carmen* of 1970. We will explore provocative dance interpretations ranging from Carlos Saura's 1983 flamenco version through David Boumê's choreography in his 2001 gay reading called *The Car Man*. Our journey concludes with a comparison of two post-colonial sub-Saharan African films—the Senegalese director Ramaka's *Karmen Geï* (2001) and *U-Carmen eKhayelitsha* (2005) by the South African director Domford-May—that push critical reaction to Bizet's story and music beyond Western cultural boundaries.

**Class Format**: Remote format. After four initial 75-minute group meetings to discuss Mérimée's novella and Bizet's music, students will meet with the
instructor in pairs for one hour each week. The scheduled class time is obligatory only for the first two weeks, after which weekly pair meetings will be individually scheduled.

Requirements/Evaluation: Each student will write a 5- to 6-page essay every other week (five in all), and provide 2-page written and oral peer reviews in alternate weeks; evaluation will be based on the quality of written work, discussions, and oral presentation.

Prerequisites: None; ability to read music useful but not necessary

Enrollment Limit: 10

Enrollment Preferences: Preference given to current or prospective Music and Women's Gender & Sexuality Studies majors, then seniors and juniors.

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

MUS 278 (D1) WGS 248 (D2)

Writing Skills Notes: Students will write five short essays of 5-6 pages each, and receive oral and written feedback addressing structure, argumentation, and style from their tutorial partner and the instructor on every essay.

Difference, Power, and Equity Notes: This course satisfies the DPE requirement through a critical examination of the ways in which the Carmen story has served as a stage on which multifaceted textual and musical constructions and conflicts express the power dynamics between individual and group identities, encompassing gender and sexuality, nationality, race, ethnicity, and class.

Not offered current academic year

MUS 279  (F)  American Pop Orientalism  (DPE) (WS)

This tutorial will investigate the representation of Asians and Asian Americans in American popular culture since the late nineteenth century. Our focus will be on music's role in Orientalist representation in a wide variety of media and genres, including Hollywood film, television, popular song, music videos, Broadway musicals, hip hop, and novels. We will begin with major texts in cultural theory (Said, Bhabha) and will attempt throughout the semester to revise and refine their tenets. Can American Orientalism be distinguished in any fundamental way from nineteenth-century European imperialist thought? How does Orientalist representation calibrate when the "exotic others" being represented are themselves Americans? Our own critical thought will be sharpened through analysis and interpretation of specific works, such as Madame Butterfly, "Chinatown, My Chinatown," Sayonara, Flower Drum Song, Miss Saigon, Rising Sun, M. Butterfly, Aladdin, and Weezer's Pinkerton. We will end the semester by considering the current state of Orientalism in American popular culture.

Requirements/Evaluation: five 5- to 6-page essays and five critical oral responses

Prerequisites: previous related coursework and/or musical experience is desirable, but is not required

Enrollment Limit: 10

Enrollment Preferences: students with prior related course experience

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (DPE) (WS)

Writing Skills Notes: Students will receive detailed comments on each paper, allowing them to build upon those comments in subsequent writing assignments. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: Students will develop analytical and interpretive skills applicable to their future engagements with a wide range of art forms as we investigate the musical, literary, and visual techniques employed in works of exotic representation. We will focus on how popular culture has shaped and reflected perceptions of race and gender in American history since the late 19th century.

Attributes: AMST Arts in Context Electives  ASAM Core Courses

MUS 281  (F)(S)  Individual Vocal and Instrumental Instruction

Individual vocal or instrumental lessons offered as a partial credit fifth course. Students are encouraged to take this course for a letter grade. (Note: partial credit music lessons taken pass/fail do not count as one of the three pass/fail options available to students for regular semester courses.)
Students are required to prepare for 10 lessons during the semester with a minimum expectation of one hour practice per day and to perform publicly on at least one departmental studio recital during the semester. Lessons are scheduled TBA based upon instructor schedule. Make-up lessons are given at the discretion of the instructor. Courses in individual vocal or instrumental instruction are fully subsidized for all students who meet the 10 lesson commitment. There is no registration via Williams Student Records. To register for the course, a student must first contact the appropriate teacher; they may do this using the inquiry form. The inquiry form, an outline of the registration process, and the lesson registration deadlines are available on the Music Department website at https://music.williams.edu/courses/#individual-vocal-and-instrumental-instruction. Students will be reassigned to course numbers 281-288 based on the number of semesters of instruction already taken in one particular section. Specific instrument or voice sections are as follows: 01 Bassoon, 02 Cello, 03 Clarinet, 04 Bass, 05 Flute, 06 Guitar, 07 Harpsichord, 08 Horn, 09 Jazz Piano, 10 Oboe, 11 Organ, 12 Percussion, 13 Piano, 14 Classical Saxophone, 15 Trumpet, 16 Viola, 17 Violin, 18 Voice, 19 Jazz Bass, 20 Jazz Vocal, 21 Trombone, 22 Harp, 23 Jazz Drum, 24 Jazz Saxophone, 25 Jazz Trumpet, 26 Euphonium, 27 Tuba, 28 African Drumming, 29 Jazz Guitar, 30 Mbira, 31 Vocal/Songwriting, 32 Jazz Trombone 33 Sitar, 34 Tabla, 35 Erhu, 36 Yangqin, 37 Zheng, 38 Liuqin/Pipa, 39 Zhongguan

Requirements/Evaluation: Lesson preparation, public performance, and progress throughout the semester.
Prerequisites: permission of the individual instructor; enrollment limits apply to each section based upon studio space and student qualifications
Enrollment Limit: none
Enrollment Preferences: none
Expected Class Size: NA
Grading: yes pass/fail option, half credit fifth course option
Unit Notes: Enrollment in more than one studio must be approved each semester by the chair beforehand.
Distributions: No divisional credit

MUS 291 (F)(S) Chamber Music Workshop

Classical and Jazz Chamber Music and other small departmental ensembles (including Chamber Choir, Percussion Ensemble, Chinese Music Ensemble, and Brass Ensemble) coached by faculty on a weekly basis culminating in a performance. Offered as a partial credit fifth course. Students are encouraged to take this course for a letter grade, but as with all fifth courses, pass/fail is also an option. Students in ad hoc groups organized each semester by the director of the chamber music or jazz programs are required to prepare for 10 one-hour coaching sessions during the semester. It is recommended that each group rehearse a minimum of 2 hours each week in preparation of the coaching. Each ensemble is responsible for keeping a weekly log of rehearsal times and attendance. The logs are to be handed in to the coaches at the end of the semester. In addition students are expected to practice the assigned music individually and are required to perform on the Classical or Jazz Chamber Music concert at the end of the semester. For students in continuing departmental small ensembles, students are expected to practice the assigned music individually and keep a log of their practices, attend all rehearsals, and participate in all concerts presented during the semester. To register for the course, a student must contact the Chamber Music Performance Coordinator, and fill out a registration contract to be signed by the Coordinator, the coach, and the student. Information on the registration process is available on the Music Department website https://music.williams.edu/courses under "Chamber Music Workshop." The ensembles will be organized based on skill levels and the instruments represented.

Requirements/Evaluation: preparation for weekly coachings
Prerequisites: permission of the Chamber Music Staff; enrollment limits will depend upon instructor availability
Enrollment Limit: 12
Enrollment Preferences: more advanced students, to be determined by audition as necessary
Expected Class Size: 12
Grading: yes pass/fail option, half credit fifth course option
Unit Notes: students should register for 291 for their first semester enrolled in this course and should use the numbers 292-298 for subsequent semesters; registration is through the Music department
Distributions: No divisional credit
**MUS 301 (F) Counterpoint**

Counterpoint, the study of the ways independent melodic lines can be joined in music, has been essential to musical and compositional instruction for centuries. Counterpoint was taught by Mozart, studied by Beethoven, and to this day remains an integral part of compositional training. The course will introduce students to species counterpoint in two and three voices—exercises that develop discipline in polyphonic writing, hearing, and thinking. The exercises will focus on the constraints of sixteenth-century vocal polyphony (music of Palestrina and Lassus) but will illustrate how such contrapuntal discipline is also manifest in music of Corelli, Bach, Brahms and Debussy.

Class Format: Hybrid—lectures will be a mix of pre-recorded video content, and working through sample exercises in person or online as conditions require.

Requirements/Evaluation: written exercises and emulation projects

Prerequisites: MUS 103 or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Music majors and those with previous music theory training

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

---

**MUS 307 (F)S Composition III**

Advanced individual instruction in composition. Projects will be initiated largely by the students with guidance from the instructor. Student is responsible for arranging performance of their own work. Student may enroll for up to four semesters by taking these courses in sequence, with the lower numbered course being the prerequisite for the next higher numbered course. May not be taken in conjunction with Music 493 or 494, the honors courses in composition.

Requirements/Evaluation: satisfactory completion of student-initiated projects

Prerequisites: MUS 205, 206 and permission of instructor

Enrollment Limit: 4

Enrollment Preferences: Music majors

Expected Class Size: 2

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

**MUS 308 (F)S Composition IV**

Advanced individual instruction in composition. Projects will be initiated largely by the students with guidance from the instructor. Student is responsible for arranging performance of their own work. Student may enroll for up to four semesters by taking these courses in sequence, with the lower numbered course being the prerequisite for the next higher numbered course. May not be taken in conjunction with Music 493 or 494, the honors courses in composition.

Requirements/Evaluation: satisfactory completion of student-initiated projects
MUS 309  (F)  Jazz Arranging and Composition

This is a course designed to acquaint the student with the basic principles of composing and arranging for Jazz Ensemble, beginning with lead sheet format and progressing through the big band. Intensive score study and some transcription from selected recordings required. Evaluation will be based on the successful completion and performance of original arrangements and/or compositions during the semester, to include several lead sheet compositions, one quintet and one sextet arrangement, and one arrangement for big band. Students must attend extra small ensemble and large ensemble rehearsals when work is being rehearsed and/or performed. A solid background in jazz chord/scale theory is required.

Class Format: weekly lecture and targeted ensemble rehearsals generally last 2 hours total; additional individual tutorial style meetings are generally an hour a week, more frequently and for longer amounts of time as needed

Requirements/Evaluation:  project based 4-5 compositions/arrangements

Prerequisites:  MUS 104B or permission of the instructor

Enrollment Limit:  10

Enrollment Preferences:  Jazz Ensemble Members, Music Majors

Expected Class Size:  3-5

Grading:  yes pass/fail option,  yes fifth course option

Distributions:  (D1)

MUS 316  (F) Music in Asian American History  (DPE) (WS)

Cross-listings:  MUS 316 AMST 366

Primary Cross-listing

Is "Asian American music" all music made by Asian Americans, music by Asian Americans specifically drawing on Asian heritage, or music engaging with Asian American issues? This course embraces all three definitions and the full diversity of Asian American musical experience. We will study the historical soundscapes of immigrant communities (Chinese opera in North America; Southeast Asian war refugees) and how specific traumatic political events shaped musical life (Japanese American internment camps). We will encounter works by major classical composers (Chou Wen-Chung; Chen Yi; Tan Dun; Bright Sheng) and will investigate the careers and reception of prominent classical musicians (Midori; Seiji Ozawa; Yo-Yo Ma). Afro-Asian fusions, inspired by civil rights protest movements, manifested in jazz (Jon Jang; Fred Ho; Anthony Brown; Hiroshima; Vijay Iyer) and hip hop (MC Jin; Awkwafina; Desi rappers). Asian Americans have been active in popular music at home and abroad (Don Ho; Yoko Ono; Wang Leehom; Mitski). Finally, we will investigate communal forms of Asian American music making that have crossed racialized and gendered boundaries (taiko drumming; Indonesian gamelan; belly dance; Suzuki method). This seminar is designed to develop research skills, as we pursue original fieldwork, archival research, and oral history interviews.

Requirements/Evaluation:  Active class participation; two short papers (5-6 pp.) and a research term paper (12-15 pp.).
Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: Students with curricular experience in Asian American history or music studies.

Expected Class Size: 10

Grading: no pass/fail option, yes fifth course option

Distributions: (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

MUS 316 (D1) AMST 366 (D2)

Writing Skills Notes: Students will write three papers during the semester: two 5-6 page papers and a 12-15 page research paper, written in stages. Students will receive detailed comments on each paper and at each stage of the research paper process, allowing them to build upon those comments in subsequent writing assignments.

Difference, Power, and Equity Notes: Political and cultural forces of exclusion not only determined Asian American musical participation in American music history but have shaped Asian American styles of music. We will study the history of Asian American political struggles as they have intersected with music and how Asian Americans have at certain points sought allegiance through music with other marginalized groups. We will explore as well popular media representations of Asian American musicians revealing race-based assumptions.

Fall 2022

SEM Section: 01 W 1:10 pm - 3:50 pm W. Anthony Sheppard

MUS 323 (S) Arts Organizing in Africa and the Diaspora (DPE)

Cross-listings: THEA 321 MUS 323 DANC 323

Primary Cross-listing

At the heart of this class is the question, how do artists and organizations use the performing arts to effect social change in their communities? Drawing from a number of case studies from throughout Africa and the African Diaspora, we will first endeavor to understand and contextualize issues related to education, social uplift, the environment, and the economy as they relate to specific communities. We will then examine how a series of organizations (from grassroots campaigns to multinational initiatives) utilize the performing arts in response to those issues. Among the issues we will discuss at length are: -How do performers and organizations navigate the interplay between showcasing the performance talents of individuals and groups and foregrounding an issue or cause? More broadly, what dilemmas emerge as social and aesthetic imperatives intermingle? -What are the dynamics between people acting on a local level within their communities and their various international partnerships and audiences? -How can government or NGO sponsorship help and/or hinder systemic change? By the end of the semester, students will be equipped with conceptual frameworks and critical vocabularies that can help them ascertain the functions of performance within larger organizations and in service to complex societal issues. Throughout the course, we will watch and listen to a variety of performances from traditional genres to hip-hop, however this class is less about learning to perform or analyze any particular genre than it is about thinking through how performance is used as a vehicle for social change. Case studies will include youth outreach and uplift in Tanzania through the United African Alliance, campaigns to promote girls’ education in Benin and Zimbabwe, community-wide decolonizing initiatives through the Yole!Africa Center in the Democratic Republic of Congo, and the cultural reclamation of a mining town in Suriname through the arts organization, Stichting Kibii.

Class Format: This is a remote course.

Requirements/Evaluation: Four case study profiles, midterm essay (5-7 pages), and a final project. Regular participation in class discussion.

Prerequisites: None

Enrollment Limit: 15

Enrollment Preferences: If the course exceeds the maximum enrollment, selection will be made based on students explanations for why they want to take the class.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

THEA 321 (D1) MUS 323 (D1) DANC 323 (D1)
Difference, Power, and Equity Notes: This course interrogates on a fundamental level issues of power and equity. Using the performing arts as a critical lens, we discuss a series of social and environmental challenges that communities of African descent face. These are in direct dialogue with global systems of power and economic factors. Issues include: environment, education, local communities’ interactions with multinational corporations, and representational politics in performance.

Attributes: MUS World Music/Ethnomusicology

Not offered current academic year

MUS 352  (S)  Interplay: Collaborative Traditions in Jazz

"Meaningful theorizing about jazz improvisation at the level of the ensemble must take the interactive, collaborative context of musical invention as a point of departure" - Ingrid Monson, Saying Something. Collaboration gives birth to specific musical moments, shapes the dramatic arc of whole pieces and performances, and is the foundation out of which the styles and larger artistic identities of individuals and groups arise. This class is an opportunity for advanced students of jazz music to investigate the uniquely collaborative nature of jazz language assimilation and communication. Participants will transcribe and analyze examples of musical interplay from the recorded works of the Miles Davis Quintet of the 1960's, the John Coltrane Quartet of the 1960's, and other notable jazz ensembles. They will also undertake a thorough profile of a modern-day ensemble, including a performance-based final project. Essays on jazz aesthetics by Berliner, Monson, Hobson and Rinzler among others will serve to broaden our discussions as we examine the ideas of musical collaboration and group identity through social and commercial lenses.

Class Format: hybrid

Requirements/Evaluation: an assortment of weekly writing/listening/transcription/analysis/composition/performance projects

Prerequisites: advanced jazz theory and performance skills, permission of instructor, MUS 104b, 204 highly suggested

Enrollment Limit: 10

Enrollment Preferences: Music majors, jazz ensemble members

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D1)

Not offered current academic year

MUS 381  (S)  Choral Conducting

The purpose of this course is to become fully acquainted with the fundamentals of conducting gesture, score study, and rehearsal technique as it relates to the choral rehearsal. Using the class as the primary practice choir, students will learn to express specific musical ideas and concepts through conducting patterns and body language, and will develop fluency and ease in these mediums through the study of varied repertoire and techniques. Regular videotaping of conducting sessions will provide opportunities for students to study themselves. Repertoire will include a broad survey of works from the early Renaissance to early 21st century, accompanied and a cappella, and issues of conducting ensembles at various skill levels will be addressed.

Class Format: coaching sessions

Requirements/Evaluation: regular conducting assignments and final projects

Prerequisites: MUS 103 and 104

Enrollment Limit: 6

Enrollment Preferences: upperclass students

Expected Class Size: 4

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

MUS 382  (F)  Orchestral Conducting

This course will introduce and develop a broad range of subjects associated with conducting, including: leadership, rehearsal techniques, physical and
aural skills, interpretation, performance practices, and programming. Related areas to be discussed include: balance, intonation, rhythm, articulation, bowings, and complex meters. Weekly conducting and score reading assignments will form the core of the workload. Larger projects may include conducting existing instrumental ensembles, and along with score reading, will be the basis of the midterm and final exams. This course includes instrument demos, and conducting videos.

Class Format: lab

Requirements/Evaluation: class participation, regular conducting assignments, midterm and final projects

Prerequisites: membership in a Music Department ensemble preferred, permission of instructor

Enrollment Limit: 6

Enrollment Preferences: Music department ensemble members/upperclass students

Expected Class Size: 2-4

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

MUS 471  (S)  Timbre

Timbre is central to the experience of all music and often enables us to identify styles and cultures nearly instantaneously. However, timbre is not commonly discussed in detail since our technical vocabulary for describing this musical element has been comparatively limited. Our work in this seminar will involve readings in music theory and history, ethnomusicology, and cognitive studies as well as in the emerging field of sound studies as we attempt to define timbre, explore its manifestations in a wide variety of music, and develop an analytical approach and descriptive vocabulary tailored specifically to this musical element. We will consider how composers and performers of both art and popular musics have wielded timbre as an expressive device and how technology may allow us to analyze details of timbral performance and perception. We will investigate the relationship between timbre and orchestration, from the rise of Haydn's orchestra to the Klangfarbenmelodie of Schoenberg. We will consider extremes of timbral distortion in both vocal and electric guitar effects in rock music as well in such traditions as Korean p'ansori and will explore various forms of speech music and the work of composers of spectral music to expand our case studies. Finally, our own experiments with timbral effects will bring our seminar to bear on our musical performance.

Class Format: Hybrid.

Requirements/Evaluation: evaluation will be based on papers, presentations, and class participation

Prerequisites: MUS 103-104, and two from MUS 231, 232, or 233 (or equivalents). MUS 201-202 are also recommended but not required.

Enrollment Limit: 10

Enrollment Preferences: senior Music majors, junior Music majors

Expected Class Size: 5

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

MUS 474  (S)  Music and Corporeality  (WS)

Music is often said to derive its own special quality from the fact that it exists outside of visual representation and is not contained within a physical form, yet musical sound and practice are created through and act upon bodies in numerous ways. This course aims to address how music and bodies shape and respond to one another. Drawing from sources across musical sub-disciplines and extending to fields including cognitive science, sound studies, performance studies, and anthropology, we will follow four lines of inquiry related to music and corporeality: 1.) Embodied practices: techniques and pedagogies in performance and in listening (including praxis [Bourdieu], Deep Listening [Oliveros, Becker], Alexander Technique); 2.) Music’s physical effects and affects: pleasure and pain, the vocalic body [Bonefant, Connor, Barthes], cognitive processes; 3.) Ideological moves: questioning the universality of music and of bodies and Cartesian dualism; 4.) Music and bodies at their limits: cyberfeminism, futurism, disembodiment, ecstasy, questions of artificiality/virtuality. Musical examples will be drawn from classical and popular sources from Euro/American
 idioms and beyond, predominantly from the late 20th and 21st centuries.

Requirements/Evaluation: midterm project, final paper (including rough draft and final copy) and presentation, intermittent 1- to 3-page papers and exercises

Prerequisites: familiarity with music terminology and the ability to read music notation is expected; questions can be directed to the instructor

Enrollment Limit: 12

Enrollment Preferences: senior and junior Music majors

Expected Class Size: 8

Grading: no pass/fail option, yes fifth course option

Distributions: (D1) (WS)

Writing Skills Notes: This course culminates in a final presentation and paper, meant to showcase the student's critical achievements, including their ability to formulate and substantiate their argument. Assignments and exercises throughout the course are aimed at honing students' ability to write and present effectively.

Not offered current academic year

MUS 475 (S) Hearing Through Seeing: Music and Visuality (WS)

We hear music, but seldom is the experience purely aural -- the visual also plays a crucial role. Sound and sight converge when we observe musicians performing in concert venues, patterns of notes and rhythms on the musical score, pictures and text on album and sheet music covers, moving images on screens in films, music videos, and video games. A programmatic work conjures specific images, even whole narratives, in our "mind's eye," or imagination. A work of absolute music, such as a fugue or symphony, can do so as well, although what we envision here may be largely abstract. With hybrid genres, such as opera, musical theater, and dance, the musical and the visual jointly command our attention, often in a spectacular display.

This seminar explores myriad ways that "seeing" mediates our experience of hearing, making, and understanding music. We will examine a broad range of topics, including synesthesia; visuality in performance and interpretation; visual metaphors such as line, color, and space in music analysis and criticism; music and representation; intersections between music and painting, sculpture, and architecture; operatic staging; illuminated music manuscripts; eye music and graphic notation; and sound and image in digital media.

Class Format: Students will give four presentations based on the subjects of their papers.

Requirements/Evaluation: evaluation will be based on three 5-6 page papers and presentations, a final 8-10 page paper and presentation, and class participation

Prerequisites: ability to read music

Enrollment Limit: 8

Enrollment Preferences: junior and senior music majors, and any student with a demonstrated interest in music

Expected Class Size: 8

Grading: no pass/fail option, yes fifth course option

Unit Notes: satisfies the 400-level course requirement for the music major

Distributions: (D1) (WS)

Writing Skills Notes: Students will write three 5-6 page papers and a final 8-10 page paper. They will receive detailed feedback on their writing and will have the opportunity to revise their work.

Prerequisites: permission of department
Enrollment Limit: none
Enrollment Preferences: none
Expected Class Size: NA
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

Spring 2023
IND Section: 01 TBA Ed Gollin
Neuroscience is a rapidly growing interdisciplinary field concerned with understanding the relationship between brain, mind, and behavior. The interdisciplinary nature of the field is apparent when surveying those who call themselves neuroscientists. Among these are anatomists, physiologists, chemists, psychologists, philosophers, molecular biologists, computer scientists, linguists, and ethologists. The areas that neuroscience addresses are equally diverse and range from physiological and molecular studies of single neurons, to investigations of how systems of neurons produce phenomena such as vision and movement, to the study of the neural basis of complex cognitive phenomena such as memory, language, and consciousness. Applications of neuroscience research are rapidly growing and include the development of drugs to treat neurodegenerative disorders such as Alzheimer’s disease and Parkinson’s disease, the use of noninvasive techniques for imaging the human brain such as fMRI and near infrared optical imaging, and the development of methods for repair of the damaged human brain such as the use of brain explants and implants. Combining this wide range of approaches and research methods to study a single remarkably complex organ—the brain—and the behavioral outcomes of its activity requires a unique interdisciplinary approach. The Neuroscience Program is designed to provide students with the opportunity to explore this approach.

THE PROGRAM

The program in neuroscience consists of seven courses: The Cell (Biology 101); Introductory Psychology (Psychology 101); Neuroscience (Neuroscience 201); Topics in Neuroscience (Neuroscience 401); and three electives. Either Biology 101 or Psychology 101 must be taken prior to enrolling in the core course, Neuroscience (Neuroscience 201), which is the foundational neuroscience course and provides the background for upper-level electives in the concentration. Ideally, Neuroscience is taken the fall of the sophomore year. Electives are designed to provide in-depth coverage of specific areas within the field and many electives include laboratory experiences. At least one elective course is required from those designated as Group A (Neuroscience courses cross-listed with Biology). At least one elective course is required from those designated as Group B (Neuroscience courses cross-listed with Psychology). A third required elective may come from Group A or Group B offerings or it may come from Group C which consists of courses that are not cross-listed with neuroscience but include significant neuroscience content. Students may also petition the advisory committee to consider courses that are not listed among these groups including neuroscience-related courses that may be taken while studying abroad. Topics in Neuroscience (Neuroscience 401) is designed to provide an integrative culminating experience and is taken by all senior concentrators during the senior year.

Required Courses

**Biol 101(F) LEC The Cell**
- Taught by: Cynthia Holland, Tim Lebestky
Catalog details

**NSCI 201 / BIOL 212 / PSYC 212(F) LEC Neuroscience**
- Taught by: Matt Carter, Shannon Moore
Catalog details

**NSCI 401(S) SEM Topics in Neuroscience**
- Taught by: Matt Carter
Catalog details

**PSYC 101(F, S) LEC Introductory Psychology**
Elective Courses

Three elective courses are required. At least one elective must be from Group A and at least one elective must be from Group B. The third elective may come from Group A, Group B, or Group C. Students may also consult the Chair to consider courses that are not listed among these groups including neuroscience-related courses that may be taken while studying abroad.

THE DEGREE WITH HONORS IN NEUROSCIENCE

The degree with honors in Neuroscience provides students with the opportunity to undertake an original research project under the supervision of one or more of the Neuroscience faculty. In addition to completing the requirements of the Neuroscience Program, candidates for an honors degree must enroll in Neuroscience 493-W31-494 and write a thesis based on an original research project. Presentation of a thesis, however, should not be interpreted as a guarantee of a degree with honors. Students interested in pursuing a degree with honors should contact the Neuroscience Advisory Committee by winter study of their junior year.

STUDY ABROAD
FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions). Securing syllabi is often difficult, so a discussion with the program Chair is certainly necessary. Under no circumstances should a student assume that a course taken at another institution will count toward the concentration.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

The program Chair and advisory committee will consider the course title, course description, and complete syllabus, including readings/assignments. Exams or other written work will also be considered. Written work may be requested if the course description suggests that it is only tangentially related to the field of neuroscience. Written work would, therefore, need to demonstrate that there was sufficient emphasis on neuroscience material.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

Yes. Generally there is a maximum of 2 credits that can be completed through a study abroad program.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. NSCI 201 and NSCI 401 cannot generally be completed abroad. NSCI should be taken during the sophomore year if possible and includes a laboratory component that is rarely comparable in study abroad courses.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

NSCI 201 is only taught during the fall semester. As such, students planning to study away should plan to take it during the sophomore year.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

Some students (rarely) have failed to discuss the course in advance of their study abroad experiences. They may also have assumed that approval of a course by another department (e.g., Biology or Psychology) would necessarily mean that they would receive Neuroscience credit for the course. This is not necessarily the case.

NSCI 201 (F) Neuroscience

Cross-listings: BIOL 212 NSCI 201 PSYC 212

Primary Cross-listing

This course is designed to give an overview of the field of neuroscience progressing from a molecular level onwards to individual neurons, neural circuits, and ultimately regulated output behaviors of the nervous system. Topics include a survey of the structure and function of the nervous system, basic neurophysiology and neurochemistry, development, learning and memory, sensory and motor systems, and clinical disorders. Throughout the course, many examples from current research in neuroscience are used to illustrate the concepts being considered. The lab portion of the course will emphasize a) practical hands-on exercises that amplify the material presented in class; b) interpreting and analyzing data; c) presenting the results in written form and placing them in the context of published work; and d) reading and critiquing scientific papers.

Requirements/Evaluation: Evaluation will be based on participation in discussion groups, exercises, problem sets and quizzes performed in small groups, lab reports, midterm exams, and a final exam.

Prerequisites: PSYC 101 or BIOL 101; open to first-year students only with permission of instructor

Enrollment Limit: 72

Enrollment Preferences: Sophomores and Biology and Psychology majors

Expected Class Size: 72
NSCI 311  (F)  Neural Systems and Circuits

Cross-listings:  BIOL 311  NSCI 311

Secondary Cross-listing

This course will examine the functional organization of the mammalian brain, emphasizing both neuroanatomy and neurophysiology. How do specific populations of neurons and their connections encode sensory information, form perceptions of the external and internal environment, make cognitive decisions, and execute movements? How does the brain produce feelings of reward/motivation and aversion/pain? How does the nervous system regulate homeostatic functions such as sleep, food intake, and thirst? We will explore these questions using a holistic, integrative approach, considering molecular/cellular mechanisms, physiological characterizations of neurons, and connectivity among brain systems. Journal article discussions will complement course topics, providing experience in reading, understanding, and critiquing primary research papers. Writing an original literature review article will provide experience in expository writing and anonymous peer review. Laboratory sessions will provide experience in examining macroscopic and microscopic neural structures, as well as performing experiments to elucidate the structure and function of neural systems using classical and cutting-edge techniques.

Requirements/Evaluation:  Class participation, completion of labs, literature review assignment, hour exams, a final exam

Prerequisites:  BIOL 212 (same as PSYC 212 or NSCI 201) or BIOL 205

Enrollment Limit:  24

Enrollment Preferences:  Biology majors and Neuroscience concentrators

Expected Class Size:  24

Grading:  yes pass/fail option,  no fifth course option

Unit Notes:  does not satisfy the distribution requirement for the Biology major

Distributions:  (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

BIOL 311 (D3) NSCI 311 (D3)

Attributes:  NSCI Group A Electives

Not offered current academic year

NSCI 312  (F)  Sensory Biology

Cross-listings:  BIOL 312  NSCI 312

Secondary Cross-listing

How do animals sense properties of the physical world? How do they convert physical or chemical energy to a signal within a cell that carries information? How is that information represented? What are the limits on what can be sensed? We will look for answers to these questions by investigating the molecular and cellular mechanisms of sensory transduction and how these mechanisms constrain the types of information that the nervous system encodes and processes. We will also ask how natural selection shapes the type of sensory information that animals extract from the world, and what adaptations allow some species to have "special" senses. Some of the examples we will consider are: bat echolocation (hair cells in the ear), detecting visual motion (amacrine cells in the mammalian retina), the constant reshaping of the olfactory system (chemical mapping of odors),
what makes a touch stimulus noxious, and enhanced color vision (in birds, bees, and shrimp). Laboratory exercises will focus on the nematode *C. elegans*, an important model system, to explore and extend how we understand touch, temperature sensation, chemosensation, and light sensation.

**Requirements/Evaluation:** Four take-home exams, an independent group research project (proposal, followed by results/discussion), presentation about a non-standard sensory system, many short online quizzes, and lab + class participation.

**Prerequisites:** BIOL 101 and either BIOL 212/NSCI 201 or BIOL 205

**Enrollment Limit:** 24

**Enrollment Preferences:** Preference to senior Biology majors who need a 300-level course; then to senior Neuroscience concentrators who need a Group A elective; then to Biology majors. Not open to students who have taken Biology 213.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**NSCI 313  (F)  Opioids and the Opioid Crisis: The Neuroscience Behind an Epidemic**

**Cross-listings:** NSCI 313 PSYC 313

**Secondary Cross-listing**

Opioid misuse, including addiction, has emerged as a major health epidemic in the United States. This course will explore the science of opioids as well as the historical and societal context surrounding their use and abuse. We will examine the neurobiological mechanisms through which opioids interact with pain pathways and reward circuits within the brain and we will explore how changes in these systems contribute to opioid tolerance, dependence, and addiction. We will consider how genetic, environmental and behavioral factors can powerfully influence these processes. Finally, we will consider alternative approaches to pain management as well as interventions for the treatment of opioid abuse. Students will be expected to design and conduct an empirical project related to the course material. Critical evaluation of peer-reviewed primary literature from animal and human studies will serve as a foundation for class discussions. Evaluation will be based on class presentations, participation in discussions and empirical projects, written assignments, and a poster presentation of the empirical project.

**Requirements/Evaluation:** class presentations, participation in discussions and empirical projects, five short position papers (approximately 2 pages double-spaced), an APA style empirical paper (approximately 20 pages double-spaced) and poster presentation of the empirical project.

**Prerequisites:** PSYC 212 (same as BIOL 212 or NSCI 201)

**Enrollment Limit:** 16

**Enrollment Preferences:** Psychology majors and Neuroscience concentrators

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**NSCI 314  (S)  Learning and Memory in Health and Disease**
Cross-listings: PSYC 314  NSCI 314

Secondary Cross-listing

This class will examine the neuroscientific basis of different types of learning and memory (such as declarative memory, motor memory, and associative memory), including the brain circuits, cellular mechanisms, and signaling pathways that mediate these different processes. In addition, we will explore how these processes can be disrupted in different diseases and disorders (such as Alzheimer's disease or post-traumatic stress disorder) and we will discuss the strategies and targets for therapeutic intervention. Class meetings will include a mix of lectures, discussions, and student presentations. Critical evaluation of peer-reviewed studies involving both human and animal models will serve as a foundation for class discussions. Working in small teams, students will also design and conduct an empirical project related to the course material.

Requirements/Evaluation: In-class presentations and participation in discussions, completion of an empirical research project which will include a project proposal (3-5 pages), data collection and analysis, and a final report (10-20 pages) along with a poster presentation.

Prerequisites: PSYC 212/NSCI 201/BIOL 212

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

NSCI 319  (F)  Neuroethics  (WS)

Cross-listings: PSYC 319  NSCI 319  STS 319

Secondary Cross-listing

Neuroscience studies the brain and mind, and thereby some of the most profound aspects of human existence. In the last decade, advances in our understanding of brain function and in our ability to manipulate brain function have raised significant ethical challenges. This tutorial will explore a variety of important neuroethical questions. Potential topics will include pharmacological manipulation of "abnormal" personality; the use of "cosmetic pharmacology" to enhance cognition; the use of brain imaging to detect deception or to understand the ability, personality or vulnerability of an individual; the relationship between brain activity and consciousness; manipulation of memories; the neuroscience of morality and decision making. In addition to exploring these and other ethical issues, we will explore the basic science underlying them.

Requirements/Evaluation: six 5-page position papers and five 2-page response papers as well as participation in discussions

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201); or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 319 (D3) NSCI 319 (D3) STS 319 (D2)

Writing Skills Notes: In alternating weeks, each student in a tutorial pair will write a 5-page essay based on the assigned readings. Essays will be discussed during tutorial meetings and written feedback from the professor will be provided for each essay. At the end of the semester, students will choose one of their prior essays to revise as their final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.
NSCI 322  (F)  From Order to Disorder(s): The Role of Genes & the Environment in Psychopathology

Cross-listings:  NSCI 322  PSYC 312

Secondary Cross-listing
This course examines how experimental methods in neuroscience can be used to understand the role of nature (genes) and nurture (the environment) in shaping the brain and behavior. In particular, we will explore how neuroscience informs our understanding of psychiatric disorders such as anxiety, depression, and schizophrenia. We will investigate the biological underpinning of these disorders as well as their treatments. Readings will include human studies as well as work based on animal models. Topics will include: the ways in which environmental and genetic factors shape risk and resiliency in the context of psychiatric disease, the neural circuits and peripheral systems that contribute to psychopathology, and the mechanisms through which interventions may act. In the laboratory component of the course, students will gain hands-on experience in using animal models to study complex behavior and their associated neural mechanisms.

Requirements/Evaluation:  class presentations, participation in discussions, two article previews (1-2 pages each), literature review (5 pages), research project proposal (5 pages), oral presentation of project proposal.

Prerequisites:  PSYC 212 (same as BIOL 212 or NSCI 201)

Enrollment Limit:  19

Enrollment Preferences:  Psychology majors and Neuroscience concentrators

Expected Class Size:  19

Grading:  no pass/fail option,  no fifth course option

Attributes:  BIGP Courses  NSCI Group B Electives  PSYC Area 1 - Behavioral Neuroscience

NSCI 347  (S)  Neurobiology of Emotion

Cross-listings:  BIOL 407  NSCI 347

Secondary Cross-listing
Emotion is influenced and governed by a number of neural circuits and substrates, and emotional states can be influenced by memory, cognition, and many external stimuli. We will read and discuss articles about mammalian neuroanatomy associated with emotion as defined by classic lesion studies, pharmacology, electrophysiology, fMRI imaging, knockout and optogenetic mouse studies, for investigating neural circuit function in order to gain an understanding of the central circuits and neurotransmitter systems that are implicated in emotional processing. We will focus initially on the neural circuits involved in fear, as a model for how human and animal emotion and physiology is studied, with special sessions on emotional responses to music and art, as well as discussions about burgeoning neurobiological research into the emotion of disgust. The larger goal of the course is to give students opportunities and experience in critical evaluation and discussion of primary scientific literature, and to develop and refine strategies on how to use scientific evidence in building arguments in essays.

Class Format:  three hours per week

Requirements/Evaluation:  class participation and several short papers

Prerequisites:  BIOL212/NSCI201; open to juniors and seniors

Enrollment Limit:  12

Enrollment Preferences:  senior Biology majors who have not taken a 400-level Biology course; then to eligible NSCI concentrators
Expected Class Size: 12
Grading: no pass/fail option, no fifth course option

NSCI 401 (S) Topics in Neuroscience
Neuroscientists explore issues inherent in the study of brain and behavior. The overall objective of this seminar is to create a culminating senior experience in which previous course work in specific areas in the Neuroscience Program can be brought to bear in a synthetic, interdisciplinary approach to understanding complex problems. The specific goals for students in this seminar are to evaluate original research and critically examine the experimental evidence for theoretical issues in the discipline. Topics and instructional formats will vary somewhat from year to year, but in all cases the course will emphasize an integrative approach in which students will be asked to consider topics from a range of perspectives including molecular, cellular, systems, behavioral and clinical neuroscience. Previous topics have included autism, depression, stress, neurogenesis, novel neuromodulators, language, retrograde messengers, synaptic plasticity, and learning and memory.
**NSCI 455 (S) Neural Regeneration**

**Cross-listings:** NSCI 455 BIOL 455

**Secondary Cross-listing**

Injury to the human nervous system can cause lasting impairment, but non-mammalian animals have prodigious capacity to regenerate neurons, regrow axons, and repair scars. What accounts for these differences? Regeneration can occur in multiple modes: replacement of injured neurons, repairs such as axonal regrowth to reconnect to a target structure, or repurposing existing neurons for new tasks through neural plasticity. We will explore the molecular foundations that underlie neuronal proliferation, neural plasticity, and inflammatory responses. We will consider the potential for translating these findings to inform treatments for humans who suffer from neural injury or neurodegenerative disease. Class discussions will focus on readings from the primary literature.

**Class Format:** Discussion, 3 hours per week

**Requirements/Evaluation:** Evaluation will be based on class participation, brief weekly responses, and four short research proposals.

**Prerequisites:** BIOL 212/NSCI 201 or permission of instructor.

**Enrollment Limit:** 10

**Enrollment Preferences:** Biology seniors who have not yet taken a 400 level course and Neuroscience senior concentrators who need a Group A elective.

Spring 2023
HON Section: 01 TBA Tim J. Lebestky
To engage in philosophy is to ask a variety of questions about the world and our place in it—questions that we confront in our everyday lives or that underlie our ordinary practices. What is a good, meaningful, or happy human life (ethics and politics)? What do we owe non-human species and future generations (applied ethics/practical philosophy)? Does god exist? (metaphysics)? What can we know, and what makes a belief or statement true (epistemology)? Are there objective standards for judging works of art? Thus, philosophers also address questions relevant to many disciplines.

The program in philosophy is designed to aid students in thinking about such questions, by acquainting them with influential work in the field, past and present, and by giving them tools to grapple with these issues themselves. The program emphasizes training in clear, critical thinking and in effective writing. Most of our courses are offered as small seminars or tutorials in which students have multiple opportunities to develop skills in reasoning and writing interpretive and critical essays.

MAJOR

The Philosophy major consists of nine semester courses: three required courses and six electives. The required courses are: any 100-level philosophy course, Philosophy 201 (History of Ancient Greek Philosophy) or Philosophy 202 (History of Modern Philosophy), and Philosophy 401 (Senior Seminar). The six electives are structured by a distribution requirement. Students must take at least one course in each of three areas: Contemporary Metaphysics and Epistemology [M&E], Contemporary Value Theory [V], and History [H]. These requirements apply to majors in the Class of 2018 and after.

Courses taught in other departments at Williams or at other institutions will not count toward the distribution requirement (Williams-Exeter tutorials may count, however, with the approval of the Department Chair). Up to two cross-listed courses taught in other departments may count as electives toward the major. No more than one 100-level course may count toward the major (and one 100-level course is required for the major—no exceptions).

We recommend the following trajectory through the major:

By the end of the first year, take a 100-level philosophy course (this is typically the first step in the major) and one other philosophy course.

By the end of the second year, complete a 100-level philosophy course, Phil 201 or Phil 202, and at least one other philosophy course. (If you will be away for the whole of your junior year, you should complete at least five courses by the end of the second year, preferably six.)

By the end of the junior year, complete a 100-level philosophy course, Phil 201 or Phil 202, and at least four other philosophy courses.

Other recommendations: take at least one tutorial; distribute your six electives evenly across the three distribution baskets; take a logic course; and take both PHIL 201 and PHIL 202.

The Degree with Honors in Philosophy

The degree with honors in Philosophy is awarded to students who have demonstrated outstanding achievement in a program of study that extends beyond the requirements of the major. This additional required work can take the form either of a senior essay written over one semester plus winter study (maximum 40 pages) or a year-long thesis (maximum 75 pages). Students planning to pursue a degree with honors must first write a brief proposal after having consulted with an advisor, then submit the proposal to the Department in mid-March (before spring break) of the junior year. To be eligible for honors candidates must have GPAs of 3.6 or higher in their courses in philosophy at the end of the junior and senior years. A
recommendation for graduation with honors will be made on the basis of the thoroughness, independence, and originality of the student's written work as well as their performance in a defense that will be organized by their advisor in consultation with the Chair.

STUDY AWAY

The Williams-Exeter Programme at Oxford (WEPO): the first full Oxford philosophy tutorial will count as the equivalent of two full-semester philosophy courses at Williams; the second full Oxford philosophy tutorial will count as the equivalent of one full-semester philosophy course at Williams, for a total of three Williams philosophy courses. Courses must be pre-approved by the Chair of the Philosophy Department, who will also determine which, if any, courses will count toward the philosophy major distribution requirements.

Courses taken in other Study Away programs: Students may petition the Philosophy Department for credit for philosophy courses taken at their Study Away institution. They should consult with the department Chair before they commit to a program. Final determinations will be made on the basis of the course syllabus and the quality of the student's written work for the course. Typically, courses taken while studying away will not fulfill distribution requirements for the philosophy major at Williams.

PHILOSOPHY RELATED COURSES

The following courses offered in other departments, while not cross-listed with Philosophy, may be of interest to philosophy students:

**HIST 331 SEM** European Intellectual History from Aquinas to Kant
- Taught by: Alexander Bevilacqua
- [Catalog details](#)

**PHIL 100 (W) Philosophy of Sex** (WS)

What is sex? Are the current biological explanations of human sexuality sufficient to explain the meaning that sex has in our lives? Is human sexuality subject to ethical evaluations? Should it be regulated by social customs and sanctions, by law, or should sexual choices and practices be left to individuals? In thinking about these broad questions, we will also consider some more specific ones: What is sexual orientation, and does it constitute a person's sexual identity? Are there pathological sexual desires and practices, and if so, how should we distinguish them from normal and healthy sexuality? Is anything wrong with adultery, promiscuity, polyamory, pornography, or with exchanging sex for money? What counts as consensual sex, and are all consensual sexual relationships ethically acceptable? The course will place special emphasis on developing the following skills: close, analytical reading; recognizing, reconstructing and evaluating claims, and reasons that support them; producing original ideas and arguments; participating in vigorous discussions in a respectful and reasonable manner; speaking and listening skills; and writing clear, polished, well-argued
papers, generated through several revisions.

Class Format: The course will meet approximately 20 hours per week, Monday through Thursday, between 11am and 4pm; there will be an hour long lunch break. The course will consist of short lectures, substantive class discussions, one-on-one writing workshops, and tutorial-style meetings. There will be daily reading and writing assignments.

Requirements/Evaluation: Class preparedness and participation in discussions; frequent short writing assignments; a longer (4-5 pages) tutorial-style paper, developed through several revisions; a response to the tutorial partner's paper.

Prerequisites: Permission of a Dean.

Enrollment Limit: 18

Enrollment Preferences: Students who need to make up a deficiency. To be determined in consultation with the Dean's office.

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Unit Notes: This course is designed to count for both full semester, Winter Study, and Writing Skills credit. Once a dean approves enrollment, the Registrar's Office will register students in both PHIL 100 and PHIL 42.

Distributions: (D2) (WS)

Writing Skills Notes: Lectures and discussions about writing skills, from sentence-level to the overall structure of the paper and arguments that support its central claim. There will be detailed comments on student's short written assignments, some of which will be revised and resubmitted. The final tutorial-style paper will be revised several times. The course will include writing workshops for one or two students at a time.

Not offered current academic year

PHIL 104  (S)  Philosophy and Tragedy

Tragedy and philosophy were two of the finest achievements of classical Athenian civilization, and each attempts to reveal to the reader something fundamental about our shared human condition. The worldview that underlies classical tragedy, however, seems markedly different from the one that we find in classical philosophy. While Plato and Aristotle differ on many points, they share the belief that the cosmos and the human place within it can be understood by rational means. Furthermore, they share the conviction that the most important components of a successful life are within the control of the individual human being. The picture that we find in the works of the tragedians, Aeschylus, Sophocles and Euripides is markedly different. The tragedians emphasize the ways in which the cosmos and our role in it resists any attempt to be understood, and emphasize the ways in which the success or failure of our lives often turns on things completely beyond our control. The view of the tragedians can lead to a thoroughgoing nihilism according to which --the best thing of all [for a human being] is never to have been—but the next best thing is to die soon (Aristotle's *Eudemus* as quoted in Nietzsche's *Birth of Tragedy*; see also Sophocles' *Oedipus at Colonus*)." Despite these rather grim pronouncements, tragic drama has continued to fascinate and educate generations. Furthermore, philosophers have continued to revisit the existential questions vividly raised by Greek tragedy. In this course, we will examine a number of Greek tragedies and philosophical writing on tragedy and the tragic. We will read the *Oresteia* and *Prometheus Bound* by Aeschylus, Sophocles' *Theban Cycle*, and the *Hippolytus, Bacchae and Philoctetes* by Euripides. As we read through these plays, we will also examine a number of philosophical works about tragedy. We will begin with Aristotle's *Poetics* and will continue with Hume's *Of Tragedy*, Hegel's various writings on tragedy, and Nietzsche's *The Birth of Tragedy*. If possible, we will arrange to see a live performance of a Greek tragedy.

Requirements/Evaluation: five papers, five responses and a final paper in multiple drafts; each week one student will write a paper responding to the week's readings and the other student will write a response to that paper

Prerequisites: none; this tutorial is an appropriate first course in PHIL

Enrollment Limit: 10

Enrollment Preferences: first-year students

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Not offered current academic year

PHIL 109  (F)  Skepticism and Relativism  (WS)

Intellectually, we are ready skeptics and relativists. We doubt, we point out that no one can be certain in what she believes, and we are suspicious of declarations of transcendent reason or truth (unless they are our own). Emboldened by our confidence in skeptical arguments, we claim that
knowledge is inevitably limited, that it depends on one's perspective, and that everything one believes is relative to context or culture. No domain of inquiry is immune to this destructive skepticism and confident relativism. Science is only "true" for some people, agnosticism is the only alternative to foolish superstition, and moral relativism and, consequently, nihilism are obvious. But is the best conclusion we can come to with respect to our intellectual endeavors that skepticism always carries the day and that nothing at all is true? In this tutorial, we will investigate the nature of skepticism and the varieties of relativism it encourages. Our readings will come primarily from philosophy, but will be supplemented with material from anthropology, physics, psychology, and linguistics. We will look at relativism with respect to reason and truth in general as well as with respect to science, religion, and morality. Along the way, we will need to come to grips with the following surprising fact. With few exceptions, thoroughgoing skepticism and relativism have not been the prevailing views of the greatest minds in the history of philosophy. Were they simply too unsophisticated and confused to understand what is for us the irresistible power of skepticism and relativism? Or might it be that our skepticism and relativism are the result of our own laziness and failure? Of course, this question cannot really be answered, nor is there any value in trying to answer it, and any "answer" will only be "true" for you. Right?

Requirements/Evaluation: participants will present substantial written work in the tutorial every other week, and will be responsible for commenting on their tutorial partner's work.

Prerequisites: none; this tutorial is an appropriate first course in PHIL.

Enrollment Limit: 8

Enrollment Preferences: This tutorial was specifically designed for first-year students, and they will be given preference. Do not write to the instructor indicating a special interest, this will make no difference. If oversubscribed, students will be selected randomly.

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Students will write a tutorial essay every other week and will receive written feedback on composition and structure. Essays later in the semester will reflect the writing lessons of earlier in the semester.

Fall 2022

TUT Section: T1 TBA Joseph L. Cruz

PHIL 114 (F) Freedom and Society (WS)

Freedom is widely held as one of our fundamental values. But how often do we ask: What is freedom? and Why do we value it? In the first unit of this course, we will consider the relationship between freedom and social order. Do our society's laws limit our freedom in order to make us safe? Or do our laws somehow enhance or enable our freedom? We will read Thomas Hobbes, John Locke, and Jean-Jacques Rousseau in seeking answers to these questions. We will then turn to some specific social forms in the second unit, and ask whether they promote or preclude our freedom. We will read Adam Smith and Karl Marx on capitalism, Simone de Beauvoir on gender, and Charles Mills on race.

Requirements/Evaluation: short weekly essays; longer midterm and final papers

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: first-years and sophomores

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Students will complete weekly 2-page essays, and receive regular feedback on their ability to formulate a thesis and adduce an argument in defending their thesis. In addition, students will write two 6-page essays -- each of which will build on their previous short essays -- as their midterm and final projects.

Attributes: JLST Interdepartmental Electives

Not offered current academic year
PHIL 115 (S) Personal Identity (WS)

Through lectures, discussions, close readings and assigned writings, we will consider a variety of philosophical questions about the nature of persons, and personal identity through time. Persons are subjects of experiences, have thoughts and feelings, motivation and agency; a person is thought of as continuous over time, and as related to, recognized and respected by other persons. Thus, the concept of person plays a significant role in most branches of philosophy, e.g. metaphysics, epistemology, moral and political philosophy, philosophy of mind. Conceptions of person are equally important in science (especially in psychology), law, and the arts. Questions about persons are of central importance for a myriad of our theories and practices, and for the ways in which we live our lives. The aim of this course is to explore and evaluate a number of rival conceptions of persons and personal identity over time. Some of the questions which we will discuss are: What is a person? How do I know that I am one? What constitutes my knowledge of myself as a person, and does that knowledge differ in any significant respect from my knowledge of physical objects and of other people? Our starting and central question will be: What makes me the particular person that I am, and how is my identity as this individual person preserved over time? The course will place special emphasis on developing students' intellectual skills in close, analytical reading; reconstructing and evaluating claims and reasons that support them; producing original ideas and arguments, orally and in writing; responding to the claims and arguments presented in texts and in class; and writing clear, polished, well-argued papers.

Requirements/Evaluation: Class attendance, preparedness and participation; additional small group weekly meetings; 12 short writing assignments. No final paper and no exam.

Prerequisites: none; open to first year students

Enrollment Limit: 12

Enrollment Preferences: freshmen, sophomores, and philosophy majors who need a 100 level course to satisfy requirement for the major

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Students will write weekly short assignments (at most 1000 words long), six of which will be letter-graded (but only five best assignments will count for the final grade). All assignments will receive detailed comments on substance as well as on writing skills and strategies.

Not offered current academic year

PHIL 116 (S) Perception and Reality (WS)

This course is an introduction to philosophy through three major themes: The nature of the universe, the existence of gods, and the mind/body problem. Throughout, we will appeal to reason and evidence in forming our best beliefs. Our discussions will range over historical and contemporary works in the Western tradition.

Requirements/Evaluation: active participation; four (5-6 page) essays

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Strong preference given to first-years and sophomores; there is no need to email the professor in advance to indicate a special interest in the course.

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Students will craft 4 six page essays, and each will receive extensive comments on structure and composition with an eye toward developing skills in philosophical writing.

Spring 2023

SEM Section: 01 TR 11:20 am - 12:35 pm Joseph L. Cruz

PHIL 117 (F)(S) Arguing about God (WS)

"Faith is a fine invention," according to Emily Dickinson's poem, "when gentlemen can see; but microscopes are prudent in an emergency." This
introduction to philosophy will see how far the microscopes of reason and logic can carry us in traditional arguments about the existence and nature of God. We will closely analyze classical arguments by Augustine, Avicenna, Aquinas, Anselm, Maimonides, Descartes, and others. Pascal's wager is a different approach: it argues that even though proof of the existence of God is unavailable, you will maximize your expected utility by believing. We will examine the wager in its original home of Pascal's Pensees, and look at William James' related article, "The Will to Believe." The millennia old problem of whether human suffering is compatible with God's perfection is called "the problem of evil." We will examine this issue in Hume's Dialogues Concerning Natural Religion, classic sources and contemporary articles. Students should be aware that, in the classic tradition, this class resembles a logic course.

Class Format: seminar

Requirements/Evaluation: 5 short papers

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: first-years and sophomores

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Unit Notes: meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Five 4 or 5 page papers, evenly spaced throughout the semester. Students will receive timely comments on their writing skills, with suggestions for improvement.

Fall 2022

SEM Section: 01    TR 9:55 am - 11:10 am     Steven B. Gerrard

Spring 2023

SEM Section: 01    TR 9:55 am - 11:10 am     Steven B. Gerrard

PHIL 118 (F)(S) Meaning, Communication and Society (DPE) (WS)

The primary way we interact with others is through the use of language. We use language to communicate meanings in order to accomplish a variety of goals: to convey information, make requests, establish rules, utilize power, issue protests, and much more. We coordinate our lives through sounds from mouths, signs from hands, and squiggles on paper because somehow sounds, signs, and squiggles have meanings. This course is an investigation into how language is used to express meaning, and how such expression can have real interpersonal and societal impact. Using resources from philosophy and linguistics, we will study various ways in which literal and non-literal uses of language influence our social lives. Of particular interest will be how language can be used to establish, reinforce, and resist power relationships involving race and gender.

Requirements/Evaluation: Weekly short papers (500-1000 words), take-home midterm paper (5-6 pages), take-home final paper (7-8) pages, with comments on writing given on short papers and midterm

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Preference given to first year students and philosophy majors.

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: There will be short writing assignments that will receive comments on content, writing style, and argument structure every week except when midterm/final papers are due. The midterm/final papers will incorporate revisions from previous short papers.

Difference, Power, and Equity Notes: This course has a focus on the role of language in relationships involving power, oppression, and group inclusion between individuals belonging to various socio-political identities.

Attributes: Linguistics

Fall 2022

SEM Section: 01    TF 2:35 pm - 3:50 pm     Christian De Leon
PHIL 119 (S) Justice, Democracy and Freedom (WS)
How can we live well with others? What social and political arrangements are most conducive to fostering human well-being and the common good? Is democratic rule always best? What confers legitimacy on the power and authority of governments? How do various political philosophers understand and define political equality, freedom and justice? What is the difference between political justice, and social justice? We turn first to two of Plato's most famous dialogues, _The Apology_ and _The Republic_. The remainder of the course is devoted to political writings by other figures in the Western philosophical tradition (e.g., Aristotle, Hobbes, Locke, Rousseau, Marx and J.S. Mill). While discussing these historical texts, we continually reflect on their relevance for thinking about the problems facing liberal democracies today, particularly the U.S.

**Class Format:** Class participation will consist of various individual and group exercises designed to give students hands on experiences thinking on their feet, collaborating with others, etc.

**Requirements/Evaluation:** Seven short responses, 300-500 words each (first two are pass/fail), in which students will be asked to engage a particular part of the assigned text (e.g., explaining what a passage means, drawing connections between different parts of the text, identifying an argument, responding to an argument, etc); two 6-page papers based on professors prompts; and class participation.

**Prerequisites:** None. Open to any student interested in the sources of our current understandings of justice, freedom and the strengths and weaknesses of democratic governance structures.

**Enrollment Limit:** 19

**Enrollment Preferences:** In the case of over enrollment preference will be given to majors, first years and sophomores

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Professor will provide detailed comments on short and long writing responses and provide occasional peer review opportunities, handouts and discussions of frequent types of errors, different possible approaches to writing and drafting, and the importance of editing and seeking the assistance of writing tutors. Students will be encouraged, but are not required, to make appointments to discuss ideas and drafts.

**Attributes:** JLST Interdepartmental Electives LEAD Ethical Issues of Leadership
Distributions:  (D2)  (WS)

Writing Skills Notes: Students will write three tutorial papers of 5-7 pages in length, one of which they will revise and resubmit, as well as two 2-3 page papers. In each, students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

Attributes: JLST Interdepartmental Electives

Fall 2022

TUT Section: T1   TBA   Julie A. Pedroni

PHIL 123  (F) Objectivity in Ethics  (WS)
Is morality simply a matter of opinion? In this course we'll examine several influential attempts to provide a rational foundation for morality, along with Nietzsche's wholesale rejection of these efforts. Readings will include work by Plato, Hobbes, Kant, Mill, Nietzsche, and contemporary authors.
Requirements/Evaluation: participation in discussion; short response papers; four 5-page papers, evenly spaced throughout the semester
Prerequisites: none
Enrollment Limit: 19
Enrollment Preferences: first-years and sophomores, and students who need to fulfill their 100-level requirement for the philosophy major
Expected Class Size: 19
Grading: no pass/fail option, no fifth course option
Unit Notes: meets 100-level PHIL major requirement
Distributions:  (D2)  (WS)
Writing Skills Notes: Four 5-page papers, evenly spaced throughout the semester. Students will receive timely comments on their writing skills, with suggestions for improvement.
Not offered current academic year

PHIL 125  (F) Introduction to the Philosophy of Law  (WS)
This tutorial, designed especially for first year students, is a philosophy course, not a prelaw course. We will examine basic questions in the philosophy of law: What is the relationship between law and morality? Why should one obey the law (if one should)? When, if ever, is paternalistic interference by the state into the lives of its citizens justified? We will look at civil disobedience and theories of legal interpretation. We will pay special attention to the first amendment and questions concerning free speech and hate speech. We will read classic works (such as John Stuart Mill, On Liberty and H. L. A. Hart, The Concept of Law), contemporary articles, and United States Supreme Court cases.
Class Format: meeting with the instructor in pairs for an hour each week
Requirements/Evaluation: a 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and revise and re-write
Prerequisites: none
Enrollment Limit: 10
Enrollment Preferences: first-year students
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions:  (D2)  (WS)
Writing Skills Notes: A 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and revise and re-write one of their papers. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.
Not offered current academic year

PHIL 126  (F) Paradoxes  (WS)
There are three grains of sand on my desk. This is unfortunate, but at least there isn't a heap of sand on my desk. That would be really worrisome. On the other hand, there is a heap of sand in my backyard. I don't know how exactly how many grains of sand are in this heap, but let's say 100,000. My daughter removes one grain of sand. I don't know why, she just does. It seems like there is still a heap of sand in my backyard. In fact, it seems like you can't change a heap of sand into something that isn't a heap of sand by removing one grain of sand. Right? But now we have a problem. By repeated application of the same reasoning, it seems that even after she removes 99,997 grains of sand--I don't know what she wants with all this sand, but I'm starting to worry about that girl--there is still a heap of sand in my backyard. But three grains isn't enough for a heap. So there is not a heap in my backyard. Now I'm confused. Where did my reasoning go wrong? What we have here is an example of the sorites paradox. It is a paradox, because I started with seemingly true statements and used valid reasoning to arrive at contradictory conclusions. We can learn a lot about logic, language, epistemology and metaphysics by thinking through and attempting to resolve paradoxes. In this class, we'll work together to think through some ancient and contemporary paradoxes. We'll also work on writing lucid prose that displays precisely the logical structure of arguments, engages in focused critique of these arguments, and forcefully presents arguments of our own. Other topics could include: Zeno's paradoxes of motion and plurality, the liar's paradox, the surprise-exam paradox, paradoxes of material constitution, Newcomb's Problem, and the Prisoner's Dilemma.

Requirements/Evaluation: (i) short response papers; (ii) midterm paper (~5-6 pages) (iii) Final term-paper (~10 pages) in multiple drafts; (iv) Active and informed participation in class discussions.

Prerequisites: none
Enrollment Limit: 19
Enrollment Preferences: First and second year students. Prospective philosophy majors.
Expected Class Size: 15-19
Grading: no pass/fail option, yes fifth course option
Unit Notes: Meets 100-level PHIL major requirement
Distributions: (D2) (WS)

Writing Skills Notes: Students will write a number of short papers. Both the content and the writing will be evaluated. These papers will focus on clear and precise presentation and evaluation of arguments. There will be a midterm paper revising an earlier short paper. There will be a final term-paper written in multiple drafts.
PHIL 128 (S) Utopias and Dystopias (WS)
The touchstone of our course will be Plato's *Republic*: the first and perhaps greatest utopia as well as perhaps the greatest work in political philosophy. We will prepare for the *Republic* by reading two Socratic dialogues: the *Euthyphro* and the *Meno*. After several weeks on the *Republic* we will turn to Shakespeare's last play: *The Tempest*. From there it is a natural transition to Aldous Huxley's *Brave New World*.

**Requirements/Evaluation:** several short papers totaling at least twenty pages

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** first-years and sophomores

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** meets 100-level PHIL major requirement

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Five 4 or 5 page papers, evenly spaced throughout the semester. Students will receive timely comments on their writing skills, with suggestions for improvement.

*Not offered current academic year*

---

PHIL 201 (F) History of Ancient Greek Philosophy

**Cross-listings:** CLAS 203 PHIL 201

**Primary Cross-listing**

Very few people believe that everything is water, that we knew everything before birth, that philosophers ought to rule the state, or that the earth is at the center of the cosmos. Why then should we spend our time studying people who in addition to having these surprising beliefs have been dead for 2500 years? First of all, Greek thinkers, especially Plato and Aristotle, radically shaped the trajectory of western thought in every area of philosophy. No one can have an adequate understanding of western intellectual history without some familiarity with the Greeks, and we might think that an understanding of our intellectual history can deepen our understanding of our own situation. More importantly, many of the thinkers that we will read in this class are simply excellent philosophers, and it is worthwhile for anyone interested in philosophical problems to read treatments of these problems by excellent philosophers. We will begin the course by looking briefly at some of the Presocratic philosophers active in the Mediterranean world of the seventh through fifth centuries BCE, and some of the sophists active in the fifth century. We will then turn to several of Plato's dialogues, examining Plato's portrayal of Socrates and his development of a new and profoundly powerful philosophical conception. Finally, we will examine some of Aristotle's works on metaphysics, epistemology and ethics, considering some of the ways Aristotle's thought responds to that of predecessors.

**Requirements/Evaluation:** There will be a midterm and final exam. There will also be short writing assignments.

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy and Classics Majors.

**Expected Class Size:** 15-20

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** Philosophy majors must take either PHIL 201 or PHIL 202 (and are encouraged to take both)

**Distributions:** (D2)

**This course is cross-listed and the prefixes carry the following divisional credit:**

LEC Section: 01 MW 11:00 am - 12:15 pm Keith E. McPartland

PHIL 202 (S) History of Modern European Philosophy
This course is a survey of 17th- and 18th-century European philosophy, with a focus on metaphysics and epistemology. Topics will include: What can we know through our senses? Can we know anything through reason alone? What is the mind? What is the body? What is the relationship between the mind and the body? What are space and time? Are we rationally justified in drawing causal inferences? Are we justified in believing in God? Authors will include: Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, and Kant.

Requirements/Evaluation: Students will write 4-5 essays, of 5-6 pages each

Prerequisites: It is recommended that students have taken a 100-level Philosophy course, though not strictly required.

Enrollment Limit: 20

Enrollment Preferences: Enrollment preference will be given to majors, prospective majors, students who have taken a 100-level PHIL course, and first-years and sophomores.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Unit Notes: Philosophy majors must take either PHIL 201 or PHIL 202 (and can take both)

Distributions: (D2)

Spring 2023

LEC Section: 01  MW 11:00 am - 12:15 pm  Justin B. Shaddock

PHIL 203  (F) Logic and Language  (QFR)

Logic is the study of reasoning and argument. More particularly, it concerns itself with the difference between good and bad reasoning, between strong and weak arguments. We all examine the virtues and vices of good arguments in both informal and formal systems. The goals of this course are to improve the critical thinking of the students, to introduce them to sentential and predicate logic, to familiarize them with enough formal logic to enable them to read some of the great works of philosophy, which use formal logic (such as Wittgenstein's Tractatus), and to examine some of the connections between logic and philosophy.

Class Format: discussion

Requirements/Evaluation: a midterm, a final, frequent homework and problem sets

Prerequisites: none

Enrollment Limit: 40/sect

Enrollment Preferences: Philosophy majors, seniors, juniors, sophomores, first-years in that order.

Expected Class Size: 40/sect

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The main part of the course is learning two formal languages of logic: sentential logic predicate logic

Attributes: Linguistics  PHIL Contemp Metaphysics + Epistemology Courses

PHIL 207  (S) Contemporary Philosophy of Mind

The philosophy of mind has been one of the most active areas of philosophical inquiry over the last century, and it has taken a place at the center of the field. Whether the mind can be fully understood within a scientific framework has taken on an exciting urgency. In this course we will investigate the broad topics of consciousness and thought by surveying the many approaches to mind that yield the contemporary debates.

Requirements/Evaluation: weekly two page papers on focused topics and two 8- to 10-page papers

Prerequisites: at least one prior 100- or 200-level PHIL course

Enrollment Limit: 19

Enrollment Preferences: prospective Philosophy majors and Cognitive Science concentrators

Expected Class Size: 14

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)
PHIL 209 (S) Philosophy of Science

Cross-listings: STS 209  PHIL 209

Primary Cross-listing

It is a generally held belief, in our time and culture, that science is the best source of our knowledge of the world, and of ourselves. The aim of this course is to examine the origins, grounds, and nature of this belief. We will analyze and discuss various accounts of scientific method, structure and justification of scientific theories, scientific choice, change, and the idea that scientific knowledge is progressive in a cumulative way. The course will begin with the “received view” of science, advanced by logical empiricists, which assumes the objectivity and the rationality of science and argues that induction is the main scientific method. We will then discuss philosophies of science which emerged out of various criticisms of this view - especially those of Popper, Lakatos, Kuhn and Feyerabend - and the challenges to the assumptions of scientific objectivity and rationality their works provoked. This discussion will lead us to the relativist and social-constructivist views developed within contemporary science studies. Finally, we will analyze the current debate about cognitive credentials of science and about proper approaches to the study of science, which came to be known as “the science wars.”

Class Format: short lecture component in each class

Requirements/Evaluation: class attendance, preparedness and participation; two short assignments; three five pages long papers, the last of which will be the final paper, due a week after the end of classes

Prerequisites: one PHIL course, or two STS courses, or declared major in a natural science, or permission of the instructor

Enrollment Limit: 19

Enrollment Preferences: Philosophy majors and prospective majors, then Div III majors.

Expected Class Size: 10-15

PHIL 211 (S) Ethics of Public Health (WS)

From questions about contact tracing apps to racial and age disparities in health risk and outcomes, the COVID-19 pandemic has foregrounded the importance of ethics as a key concern in public health policies and activities. Moreover, the ethical issues that are implicated in responses to the pandemic reflect the range of those manifested across the field of public health as a whole. In this course, we will survey the ethics of public health through the lens of the COVID-19 pandemic, investigating concepts and arguments that are central to the ethics of public health research and practice. For example, we will examine the ethics of disease surveillance, treatment and vaccine research, resource allocation and rationing, compulsion and voluntariness in public health measures, and social determinants of health outcomes, among other topics. To do this, we will need to become familiar with key ethical theories; think deeply about such concepts as privacy, paternalism and autonomy, exploitation, cost-benefit analysis and justice; and compare the function of these concepts in the context of the COVID-19 pandemic with the way they work in responses to other public health concerns.

Requirements/Evaluation: Biweekly 5-7 page papers, oral commentaries, and tutorial discussions.

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: declared and prospective Philosophy majors and Public Health concentrators, students with a specific curricular need for the course, and students with a high level of interest who are unlikely to have an opportunity to take the course in a future term
PHIL 213  (F)  Biomedical Ethics  (WS)

Much like the construction of medical knowledge itself, it is from specific cases that general principles of biomedical ethics arise and are systematized into a theoretical framework, and it is to cases they must return, if they are to be both useful and comprehensible to those making decisions within the biomedical context. In this tutorial we will exploit this characteristic of biomedical ethics by using a case-based approach to examining core concepts of the field. The first portion of the course will be devoted to developing and understanding four moral principles which have come to be accepted as canonical: respect for autonomy, beneficence, nonmaleficence, and justice. The remainder of the course will consider key concepts at the core of medical ethics and central issues for the field, such as privacy and confidentiality, the distinction between killing and "letting die," and therapy vs. research. To this end, each week we will (1) read philosophical material focused on one principle or concept, and (2) consider in detail one bioethics case in which the principle or concept has special application or relevance. In some weeks, students will be asked to choose from a small set which case they would like to address; in others the case will be assigned.

Requirements/Evaluation: bi-weekly papers, oral commentaries, and tutorial discussions

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: PHIL majors, PHLH concentrators, those who have a curricular need for the course, those who have been dropped from the course in previous semesters due to over enrollment

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write six tutorial papers of 5-7 pages in length, one of which they will revise and resubmit. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

Attributes: PHIL Contemporary Value Theory Courses  PHLH Bioethics + Interpretations of Health
will try to understand the mental lives of non-human animals. Secondly, we will try to make sense of the moral dimensions of our relationship to animals. Throughout we will aim to fuse a rigorous scientific perspective with more humanistic themes and philosophical inquiry. Topics include sentence, animal cognition, language in non-human animals, empathy and evolution, the history of domestication, animal rights, cross-cultural views on animals, arguments against and for vegetarianism and veganism, the morality of zoos, hunting and fishing, and pets and happiness.

**Class Format:** This course is wholly remote and can only be taken synchronously (i.e., students will be expected to attend seminar on zoom during the scheduled time and no recording will be made).

**Requirements/Evaluation:** four 3-to-4 page papers and one 8-to-10 page final paper. In addition, students are required to attend remotely at least four talks in the speaker series associated with the course. These will be during the Friday course time slot. (When there is no speaker, there will not be class during that slot, so class itself will be solely on Mondays and Wednesdays.)

**Prerequisites:** none, though at least one course in philosophy is recommended.

**Enrollment Limit:** 16

**Enrollment Preferences:** students with at least one previous philosophy or cognitive science course; there is no need to email the professor in advance to indicate special interest in the course.

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** meets Contemporary Metaphysics & Epistemology requirement only if registration is under PHIL

**Distributions:** (D2)

PHIL 224 (S) Marx, Nietzsche and Freud (WS)

Each of the controversial and provocative figures whom we will read in this course have exerted a tremendous influence in our understandings of what it means to be a modern subject. Each questioned the emancipatory effect of reason and freedom as well as idealist accounts of moral progress in human history. Each identified the limits, whether historical or innate, of our human capacity to know ourselves and our world, and to live harmoniously with others. All three have had a profound influence on literature, social theory, and critical theories of the 20th and 21st centuries. In this tutorial, we will focus on questions concerning their distinctive methods, namely, historical materialism, genealogical critique, and psychoanalysis. We examine key concepts such as: capitalism, alienation, false consciousness, the death of God, nihilism, the unconscious, ego, id, superego, and the death drive.

Class Format: We may devote one week of the semester to roundtable discussions.

Requirements/Evaluation: Bi-weekly papers, 2-3 page commentaries, and tutorial discussions.

Prerequisites: One of the following: 100-level Philosophy course or permission of instructor. Exposure to history of modern European philosophy and/or intellectual history will be very helpful.

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors or prospective majors and students with background and interest in modern philosophy and critical
theories

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students write five or six 5-7 page tutorial papers. They each receive regular written and oral feedback to improve their ability to present clear and effective written arguments and interpretations.

**Attributes:** PHIL History Courses

Not offered current academic year

**PHIL 225 (S) Existentialism**

We will study the philosophical and literary works of Soren Kierkegaard, Friedrich Nietzsche, Jean-Paul Sartre, Simone de Beauvoir, and other Existentialist thinkers of the students' choosing. One of our guiding questions will be: What makes a thinker an "Existentialist"? The answer is not merely that they ask the question, "What gives meaning to a human life?" And, it's not merely that their answer invokes our freedom to determine our own identities. More than this, Existentialists emphasize the subjective relation we bear to our belief systems, moral codes, and personal identities. Existentialists investigate deeply irrational phenomena of human life, including anxiety, boredom, tragedy, despair, death, faith, sexuality, love, hate, sadism, masochism, and authenticity. And, Existentialists express their thought in philosophical treatises as often as in literary works. In this course we will seek to comprehend the dimensions in which Existentialism is a distinctive intellectual tradition.

**Class Format:** Students will meet in pairs or trios with the instructor for 60 minutes each week.

**Requirements/Evaluation:** Students will take turns as the lead writer one week, and the respondent the next. The week's lead writer will write a 5- to 6-page essay on the assigned reading, due 36 hours before the meeting. The week's respondent will write a 2-page essay on the leader's essay due at the time of the meeting. At the meetings, both students will present their essays and hold a discussion. Students will be evaluated cumulatively on their essays and contributions to discussion.

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** preference to Philosophy majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PHIL History Courses

**PHIL 228 (F) Feminist Bioethics (WS)**

**Cross-listings:** PHIL 228 STS 228 WGSS 228

**Primary Cross-listing**

In this course we will explore the ways in which feminist approaches to moral thinking have influenced both the methodology and the content of contemporary bioethics. The first portion of the course will address the emergence of the "Ethics of Care," critically assessing its origins in feminist theory, its development within the context of the caring professions, and its potential as a general approach to bioethical reasoning. The second portion of the course will use feminist philosophy to inform our understanding of the ways in which gender structures the individual's interactions with the health care system. To do this we will explore topics that might traditionally be considered "women's issues" in healthcare, such as medicine and body image (e.g., cosmetic surgery, eating disorders), reproductive and genetic technologies, and research on women and their health care needs. In addition we'll also look at feminist analyses of topics that traditionally have not been regarded as "gendered," such as resource allocation and end of life issues.

**Class Format:** discussion

**Requirements/Evaluation:** active participation in class discussions; periodic short papers (2-3 pages); midterm and final paper (5-7 and 7-10 pages, respectively); and one oral presentation

**Prerequisites:** none, although previous coursework in WGSS is desirable

**Enrollment Limit:** 19
Enrollment Preferences: prospective and declared majors or concentrators in PHIL, WGSS, STS, and PHLH, especially those who need the course to satisfy major or concentration requirements

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Unit Notes: meets Contemporary Value Theory requirement only if registration is under PHIL

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
PHIL 228 (D2) STS 228 (D2) WGSS 228 (D2)

Writing Skills Notes: Students will write periodic short papers (2-3 pages each), a midterm paper (5-7 pages) and a final paper (7-10 pages). Short papers focus on concepts, arguments, and writing skills needed in the midterm and final papers, in which students are expected to describe and evaluate arguments from assigned readings, and to present clear and effective arguments in support of their own ethical positions. Students receive feedback on all papers and have the opportunity to revise midterm and final papers.

PHIL 231 (F) Ancient Political Thought

Cross-listings: PHIL 231 PSCI 231

Secondary Cross-listing

The core activity of this seminar is the careful reading and sustained discussion of selected works by Plato and Aristotle, but we will also engage such other thinkers as Epictetus and Augustine, and, from a political and theoretical point of view, selections from the Hebrew Bible and New Testament. Among the questions that we will address: What is justice? How can it be known and pursued? How is political power generated and exercised? What are the social and ethical prerequisites—and consequences—of democracy? Must the freedom or fulfillment of some people require the subordination of others? Does freedom require leading (or avoiding) a political life? What distinguishes that kind of life from others? What does it mean to be "philosophical" or to think "theoretically" about politics? Although we will attempt to engage the readings on their own terms, we will also ask how the vast differences between the ancient world and our own undercut or enhance the texts' ability to illuminate the dilemmas of political life for us.

Class Format: discussion

Requirements/Evaluation: three 7- to 8-page papers

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Political Science majors

Expected Class Size: 18

Grading: yes pass/fail option, yes fifth course option

PHIL 232 (F) Modern Political Thought

Cross-listings: PSCI 232 PHIL 232

Secondary Cross-listing

This course is a chronological survey of major works of political theory from the 16th to the 20th century. In discussions and writing, we will explore the diverse visions of modernity and of politics offered by such thinkers as Machiavelli, Hobbes, Locke, Rousseau, Marx, Mill, and Freud. They help us
ask: What is freedom? Who is equal? Who should rule? With what limits and justifications? What form of government best serves the people? Who are the people, anyway? And on what grounds can we justify confidence in our provisional answers to such questions? Class will be primarily driven by discussion, often preceded by brief lectures. Attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

Class Format: Class meetings will be conducted remotely using zoom.

Requirements/Evaluation: three papers of 4-6 pages; class participation; brief informal writing tasks inside and outside of class meetings

Prerequisites: none; open to all

Enrollment Limit: 12

Enrollment Preferences: Political Theory concentrators, then Political Science majors

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

PHIL 235  (S)  Morality and Partiality: Loyalty, Friendship, Patriotism  (WS)

The aim of this tutorial is to critically examine the nature, importance, and ethical value of personal attachments and loyalties. Loyalty is frequently expected by family, friends and lovers, and demanded by institutions, religious, political and ethnic communities, as well as by the state. A person incapable of loyalty is often characterized as fickle, cold, self-serving and sometimes even pathological. However, the status of loyalty as a virtue has always been suspect: it has been argued that it is incompatible with impartiality, fairness and equality, and claimed that it is always exclusionary. So, some relationships with other people—such as friendships, familial ties, love, patriotism—seem to be ethically desirable, central to the quality of our lives, and yet prima facie in tension with the widely held belief that morality requires impartiality and equal treatment of all human beings. Are we ever justified in having more concern, and doing more, for our friends, family, community or nation? Does morality require that we always subordinate our personal relationships to universal principles? Is Patriotism incompatible with cosmopolitanism, and if so, which of the two should we value? If loyalty is a virtue, what are the proper limits of its cultivation and expression?

Class Format: tutorial pairs will meet with the instructor for one hour a week, and on their own for another hour.

Requirements/Evaluation: tutorial attendance and participation; bi-weekly tutorial papers, each about 5 pages long (totaling 6 per student); bi-weekly oral responses to the paper of the tutorial partner

Prerequisites: none; open to first year students

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will get regular and detailed feedback on their writing skills, from word choice and sentence structure to overall structure of the paper.

Attributes: PHIL Contemporary Value Theory Courses

Not offered current academic year

PHIL 236  (F)  Contemporary Ethical Theory  (WS)

This course will examine central questions in normative ethics, including the following: Which features of actions are morally important and why (e.g., their motive, their intrinsic nature, or their consequences)? Which characteristics of persons give them moral status? How should moral equality be understood, and what is its foundation? When should we give morality priority over personal commitments and relationships, and why? What makes an individual’s life go well? Are we capable of disinterested altruism, or are we motivated solely by self-interest? By which methods should we pursue these questions? We will examine these and related issues by looking in depth at contemporary defenses of consequentialist, deontological, and
contractualist theories.

Class Format: This tutorial will meet remotely by Zoom on a fixed weekly schedule agreed upon by the instructor and participants.

Requirements/Evaluation: Six tutorial papers (5-6 pages in length) and six critiques (2-3 pages in length).

Prerequisites: at least one PHIL course or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Current and prospective philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating weeks, spaced evenly throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

PHIL 239 (S) The Ethics of Artificial Intelligence

Cross-listings: STS 239 PHIL 239

Primary Cross-listing

We will someday live alongside artificially intelligent beings who equal or exceed us. Commentators ranging from technology magnates to physics geniuses—not to mention decades of apocalyptic science fiction—have urged that that future is nothing short of an existential threat to human beings. Whether this is hyperbole or wise prognostication, it cannot be denied that the rise of AI will be a tectonic shift for culture, technology, and our fundamental sense of ourselves. When AI is fully realized, it is likely to be amongst the most important things to happen to our species. Some challenges we face are broad and about the future, though perhaps not the far future. How can we ensure that AI’s will act morally? Is a world with AI’s overall better or worse for us? How do we create legal and policy frameworks that cover a new kind of thinking being? If they are conscious, will AI’s have dignity and rights? Other questions are pressing and immediate: Artificial intelligence techniques are used today to help decide whether someone gets a bank loan, is eligible to be released on bail, or in need of particular medical treatment. And right now there are autonomous vehicles deciding how to behave in traffic, and autonomous weapons capable of delivering lethal force. Is it moral for us to pass along these sorts of decisions to AI’s? What if they are biased, unbeknownst to us? What if they are more fair? In this course we will engage ethical questions surrounding the seeming inevitability of AI.

Class Format: mixture of lectures and discussion

Requirements/Evaluation: four short (3- to 4-page) writing assignments and a final essay (8-10 pages)

Prerequisites: none

**PHIL 241 (S) Contemporary Metaphysics**

Our focus in this class is going to be on the nature of causation. We make causal judgments constantly in our everyday lives and in scientific contexts. It turns out, however, to be surprisingly difficult to say what causation is. We will begin the course by looking at Hume's and Kant's discussion of causation. We will then turn to a variety of more recent attempts to give a clear characterization of causation. In addition to examining general accounts of causation, we will examine particular problems that come up in thinking about mental causation and causation in indeterministic contexts.

**Requirements/Evaluation:** one 10 page midterm paper and one 15 page final paper which will involve draft and revision, possible short response papers, and active participation in seminar

**Prerequisites:** one PHIL course; familiarity with formal logic helpful but not required; or permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Philosophy Majors

PHIL 244  (S)  Environmental Ethics  (WS)

**Cross-listings:**  ENVI 244  PHIL 244

**Secondary Cross-listing**

What ethical standards should guide our individual and societal choices when those choices affect current and future environmental conditions? This course will introduce students to fundamental concepts, methods, and issues in environmental ethics. Initial tutorial meetings will focus on theoretical materials that will background later discussions and will include classic readings from the environmental ethics literature (e.g., Leopold, Taylor, Rolston). Most sessions will pair readings about key concepts with specific cases that raise complex ethical issues, including the concept of moral standing and, e.g., people who do not yet exist, non-human individuals, species, and complex living systems; the concept of moral responsibility and complicity in environmentally damaging practices; the legitimacy of cost-benefit analysis as an environmental policy tool; and the valuation of human lives.

**Requirements/Evaluation:** five essays (5-7 pages each) and five prepared oral responses to partners' essays; evaluation will be based on essays, oral responses, and quality of discussion

**Prerequisites:** ENVI 101 or one course in PHIL

**Enrollment Limit:** 10

**Enrollment Preferences:** declared and prospective Environmental Studies majors and concentrators

**Expected Class Size:** 10

**Grading:**  no pass/fail option,  no fifth course option

**Unit Notes:** meets Value Theory requirement only if registration is under PHIL

**Distributions:**  (D2)  (WS)

**Writing Skills Notes:** Students will write five tutorial papers of 5-7 pages in length, one of which they will revise and submit at the end of the term. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

In this course, we follow the Indian philosophical conversation concerning the self and the nature of consciousness, particularly as they are found in its various Yogic traditions. We start with some of the Hindu views about the self and the mind and consider their ethical implications. We then consider a range of Buddhist critiques of these views, focusing more particularly on the Madhyamaka, which radicalizes the critique of the self into a global anti-realist and skeptical stance. We also examine the Yogacara school, which offers a process view of reality focusing on the analysis of experience. We conclude by considering some of the later Hindu holistic views of the self as responses to the Buddhist critique. In this way we come to realize that far from being the irrational foil of "the West," Indian tradition is a rich resource for thinking through some of the central questions that have challenged philosophers in both traditions.

**PHIL 250 (S) Philosophy of Economics** (WS)

The status of economics as a predictive science has been most prominently brought into question, historically, by three unpredicted yet extremely important economic events: the Great Depression of the 1930s, stagflation of the 1970s, and bursting of the mortgage bubble in 2008. The issue of prediction was also raised by economist Donald McCloskey who, in 1988, asked his fellow economists, "If you're so smart, why ain't you rich?" Some critics find predictive failures of economists unsurprising, given the frequent reliance of the latter on assumptions known to be false (e.g., that economic agents are always selfish, have perfect information, and never make mistakes) and on models that unavoidably ignore potentially relevant factors. Perhaps, then, economics is not primarily a predictive science, but instead a descriptive, historical, and/or mathematical one. In this course, relying on works by economists and philosophers, we examine the status of economics as an academic discipline, focusing on its assumptions, methods, and results.

**Requirements/Evaluation:** six 6- to 8-page essays, six 2- to 3-page response papers, participation in discussions

**PHIL 251 (S) Offensive Art**

Twenty-four centuries ago Plato argued for censorship of art. In the last century New York City mayor Rudy Giuliani attempted to shut down the Brooklyn Museum "Sensations" exhibit because he claimed it offended Christians, and the Cincinnati Contemporary Arts Center was prosecuted for exhibiting allegedly obscene photographs by Robert Mapplethorpe. Just today (15 February 2022) The New York Times removed some solutions from
their recently purchased game Wordle, saying that words such as "pussy", "slave", and "wench" are "offensive or insensitive". At Williams College a mural was removed from The Log and Herman Rosse's painting "Carnival of Life" was removed from the '62 Center. What should be done about offensive art? What is offensive art? Does it matter who is offended? Does offensive art harm? Is there a difference between being offended and being harmed? Is there a difference between cultural appropriation and cultural appreciation? What are the responsibilities of museum curators and theater producers when presenting art that might offend? Who gets to decide the answer to these questions; indeed, who gets to decide what questions to ask? We will attempt answers by studying classical works (such as Plato's Republic and John Stuart Mill's On Liberty), contemporary articles, and works of art in various media. Trigger Warning: all the works of art studied in this class will be chosen partly because they have offended a significant number of people. You are very likely to be offended by some of the art we discuss. This will be the only trigger warning for the class; if you don't want to be offended then this course is not for you.

Requirements/Evaluation: several short responses (including op-eds on current controversies) and longer final projects (a 12- to 15-page paper or equivalent work in other media)

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: seniors, juniors, then sophomores in that order

PHIL 272 (S) Free Will and Responsibility (WS)

Cross-listings: PHIL 272  JLST 272

Primary Cross-listing

Our practice of holding people responsible seems justified as long as their choices are free. But when does a choice qualify as free? Must it be unaffected by any outside influences? If so, freedom may seem impossible since we're all deeply influenced by factors ranging from the general laws of nature to specific features of our genetic endowment and social environment (including religion, political ideology, and advertising). These affect not only our particular choices but also, more fundamentally, who we are and what we value. The real question, then, seems to be whether, and how, free choice is possible amidst all of these influences. We'll attempt to answer this question by examining recent philosophical work on the nature of free will and responsibility.

Class Format: This tutorial will meet remotely by Zoom on a fixed weekly schedule agreed to by the instructor and participants.

Requirements/Evaluation: Five tutorial papers (5-6 pages in length) and five critiques (2-3 pages in length)

Prerequisites: one PHIL course

Writing Skills Notes: Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating weeks, evenly spaced throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

Attributes: PHIL Contemporary Value Theory Courses

Not offered current academic year
PHIL 281 (S) Philosophy of Religion  (WS)

Cross-listings: PHIL 281 REL 302

Primary Cross-listing

Our goal will be to determine how far reason can justify belief in God. We will examine well-known philosophical arguments for and against the existence of God (including the ontological argument, the cosmological argument, the teleological argument, the argument from religious experience, and the argument from evil). For each argument, we will first look at historically important formulations and then turn to contemporary reformulations. Our aim will be to identify and evaluate the strongest version of each argument. After working through these arguments, we will reflect more generally on the proper roles of reason and faith in justifying religious belief. Near the end of the semester, we'll also examine some evolutionary explanations of religious belief. Our tools in this course will be logic and reason, even when we are trying to determine what the limits of reason might be. Authors will include Plato, Anselm, Aquinas, Pascal, Paley, Hume, Kant, Kierkegaard, and several contemporary philosophers.

Class Format: students meet with instructor in pairs for an hour each week; emphasis will be placed on developing skills in reading, interpretation and oral argument as well as critical reasoning and writing

Requirements/Evaluation: five 5-page papers and five 2-page papers

Prerequisites: one PHIL course

Enrollment Limit: 10

Enrollment Preferences: current and prospective Philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 281 (D2) REL 302 (D2)

Writing Skills Notes: Five 5-page papers and five 2-page papers, evenly spaced throughout the semester. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

PHIL 288 (F) Embodiment and Consciousness: A Cross-Cultural Exploration

Cross-listings: REL 288 PHIL 288

Secondary Cross-listing

This course examines some of the central questions raised by the study of the consciousness: the place of intentionality, the role of emotions, the relation with the body, the nature of subjectivity, the scope of reflexivity, the nature of perceptual presence, etc. In confronting these difficult questions, we do not proceed purely theoretically but consider the contributions of various observation-based traditions, from Buddhist psychology and meditative practices to phenomenology to neurosciences. We begin by examining some of the central concepts of Buddhist psychology, its treatment of the mind as a selfless stream of consciousness, its examination of the variety of mental factors and its accounts of the relation between cognition and affects. We also introduce the practice of meditation as a way to observe the mind and raise questions concerning the place of its study in the mind-sciences. We pursue this reflection by examining the views of James, Husserl, Sartre and Merleau-Ponty, particularly as they concern the methods for the study of the mind and the relation between consciousness, reflexivity and the body. In this way, we develop a rich array of analytical tools and observational practices to further our understanding of the mind. But we also question the value of these tools based on first person approaches by relating them to the third person studies of the mind. In this way, we come to appreciate the importance of considering the biology on which mental processes are based and the light that this approach throws on the nature of consciousness. We conclude by considering the relation between first and third person studies of the mind, focusing on the concept of the embodied mind as a fruitful bridge between these different traditions.

Requirements/Evaluation: regular practice of meditation, a class presentation, a short essay (6-pages); a long final research paper (15 pages)

Prerequisites: any introduction to philosophy and at least two upper level courses in PHIL, at least one of which meets the Contemporary Metaphysics or Epistemology distribution requirement for the major, no exceptions;

Enrollment Limit: 18

Enrollment Preferences: Religion and Philosophy majors

Expected Class Size: 18
Most thoughtful human beings spend a good deal of time musing about how we ought to live and about what counts as a good life for a human being. The philosophers of ancient Greece and Rome were among the first thinkers to develop rigorous arguments in response to such musings. Much of the moral philosophy produced in Greece and Rome remains as relevant today as when it was written. In this course, we will examine some central texts in ancient Greek and Roman moral philosophy. We will begin by reading some of Plato’s early dialogues and his "Republic." We will then turn to Aristotle’s "Nicomachean Ethics." We will then examine writings in the Stoic and Epicurean traditions, as well as Cicero’s "On the Ends of Good and Evil." As we proceed through the course, we will look at the way in which each thinker characterizes happiness, virtue and the relation between the two. We will also pay close attention to the way in which each of these thinkers takes the practice of philosophy to play a key role in our realization of the good human life.

Requirements/Evaluation: several short response pieces; a final paper of 10-15 pages; active participation in seminar discussion

Prerequisites: Phil 201 will be helpful but is not necessary.

Enrollment Limit: 15

Enrollment Preferences: Philosophy majors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

CLAS 306 (D1) PHIL 306 (D2)

Attributes: PHIL History Courses

No thinker has done more to shape the Western intellectual tradition than Augustine (354-430 CE), and no book displays Augustine's dynamic vision of reality more compellingly than the "Confessions." Its probing and intimate reflections on the meaning of human life, the nature of God and mind, time and eternity, will and world, good and evil, love and sexuality have challenged every generation since Augustine’s own. The seminar will be structured around a close, critically engaged reading of the "Confessions" (in English translation) and will give attention to its historical context and significance as well as to its philosophical and theological ideas. (There will be optional, supplementary opportunity to engage with the Latin text for interested students with some facility with Latin.)

Class Format: The course will be taught in a hybrid (partly in-person, partly remote) or wholly remote format—a final decision about format will be made in early September, prior to the first class. Class meetings (in whatever format) will consist primarily in student presentations and open, directed
PHIL 310  (F)  Wittgenstein's Later Philosophy  (WS)

Ludwig Wittgenstein (1889-1951) is probably the greatest philosopher of the 20th century. His later work, best known through posthumously published Philosophical Investigations, continues to influence contemporary thinking about language, mind, action, knowledge, ethics, religion, aesthetics, culture, and of course, philosophy itself. Understanding later Wittgenstein is thus vital for engaging in contemporary philosophy, but neither the interpretation nor the evaluation of his thought is straightforward or easy. Later Wittgenstein is a controversial, polarizing figure; but serious reading of his work is invariably intellectually enriching and fertile. This tutorial aims to provide students with the skills necessary for careful, serious and thorough reading of Wittgenstein’s later philosophy. In the first part of the course, we will read Wittgenstein’s Philosophical Investigations, one of the greatest books ever written. In the second part of the course, we will read On Certainty, and selections from other of Wittgenstein's posthumously published works: Zettel, Philosophical Grammar, Remarks on the Philosophy of Psychology, Culture and Value, Lectures and Conversations on Aesthetics, Psychology and Religious Belief, and The Big Typescript. Throughout the course, we will consult and discuss the important secondary literature on Wittgenstein, and analyze different philosophical presuppositions and goals that motivate particular readings. The central topics of the course will be: meaning, rule following, human languages; private experiences and other minds; intention and action; knowledge and skepticism; and especially, the methods and nature of philosophy.

**Requirements/Evaluation:**  tutorial attendance and participation; bi-weekly tutorial papers, each about 5 pages long (totaling 6 per student); bi-weekly oral responses to the paper of the tutorial partner

**Prerequisites:**  two Philosophy courses

**Enrollment Limit:**  10

**Enrollment Preferences:**  preference will be given to students who already took a course on Wittgenstein, for example, PHIL 309

**Expected Class Size:**  10

**Grading:**  no pass/fail option, no fifth course option

**Distributions:**  (D2)  (WS)

**Writing Skills Notes:**  Students will write two short (about 800 words) seminar papers; five 5-7 pages long papers; five 2-3 pages long comments on their tutorial partner's papers; and a final paper (also 5-7 pages long) which will be a revision of one of the previously written papers. Students will get regular feedback from their tutorial partner and from the instructor on the substance of their work as well as on their oral and writing skills, with suggestions for improvement.

PHIL 319  (F)  Topics in Philosophy of Race: Hegel and Africana Philosophy  (DPE)

Cross-listings: AFR 327  PHIL 319

Primary Cross-listing

How are individual and social subjects formed, and how do they connect to questions of race? What is the nature of consciousness and how can it be unhappy, false or double? What do we mean when we talk about racial capitalism? This course introduces philosophy students to these and related questions through a parallel reading that brings together 19th century German philosopher Hegel and a tradition of Africana philosophy running through Douglas, Du Bois, Fanon, Gilroy, Hartman and Wynter. While Hegel studies tends to occur in isolation from philosophers in the Africana tradition, many of the above explicitly refer to and take up questions in Hegel. This course argues that by reference to the historically specific modes of subjectivity and sociality that resulted from the Transatlantic Slave Trade and the Haitian Revolution, for instance, we can better understand and address long-standing questions in European Social Philosophy. Topics to be considered include the nature of freedom (both individual and social), the master/slave dialectic and subject constitution, self-consciousness and double consciousness, the stages of history, and racial capitalism

Requirements/Evaluation: Progressive writing assignments including 4 exegetical commentaries, one 5 page paper and one 10-12 page final paper.

Prerequisites: One prior 100 level philosophy course or permission of instructor.

Enrollment Limit: 15
Enrollment Preferences: Preference given to philosophy majors and Africana studies concentrators.

Expected Class Size: 10-15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 320 (F) Topics in Critical Theory: Subjection, Power, Freedom (DPE) (WS)

Any critical theory presupposes an account how both individual and social subjects come into being. Some critical theorists within the Frankfurt School tradition draw from upon ideas about the constitution of the subject developed in the early 19th century German philosophy of Hegel. According to Hegel, subjects are both historically and socially constituted; they are formed through their relations with other subjects. Hence, being with others, being dependent on others, is regarded as a key structuring feature of human existence. By the early 20th century, in the works of Freud, we encounter the idea of the intra-psychic features of subjects and the importance of understanding and regulating psychic forces both within and between subjects in order to adapt to the demands of living at any given time, born as we are both dependent upon and vulnerable to others. This raises the question whether a more complete account of the emergence of subjects must address both psychic, historical and social dimensions of subjectivity, the ways in which they are intertwined, and their importance for not only psychological well-being, but also relatively well-regulated socio-political relations. In this course we take up questions such as the following: What sorts of subjects do we find in modern Western societies? What are the forces, and the dynamics between forces (i.e., economic, technological, modes of communication, techniques of social control, biological, psychological) that make certain types of subjects possible influencing both their self-understandings and their forms of life? What role do emotional, irrational or unconscious forces play? To what extent do these myriad force relations limit, enable, or deform our participation as political citizens, and our capacity to transform and improve them? In our attempts to make headway in answering such daunting questions, we investigate recent debates in critical theory concerning subjection and resistance, intersubjective recognition and redistribution, social pathologies and the idea of a political unconscious. Readings will be drawn from recent work in the Frankfurt School and poststructuralist traditions of critical theory as well as anti-racist, anti-colonial, feminist and queer theories that draw upon them.

Class Format: We will schedule at least one seminar meeting during the semester. I will consult with students about the best time for this meeting.

Requirements/Evaluation: Evaluation will be based on written work (five 6-7 page papers, and five 2-3 page commentaries on your partner's papers) as well as the quality and level of preparation and intellectual engagement in our weekly meetings.

Prerequisites: Demonstrated background in history of modern philosophy (PHIL 202), modern political theory, or critical and social theories.

Enrollment Limit: 10

Enrollment Preferences: Preference will be given to philosophy majors and prospective majors and students with demonstrated interest and background in critical or social theories.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: Students will write five of 5-7 pages in length, one of which they will revise and submit at the end of the term. We will also meet in seminar once or twice during the semester. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own positions. Students will receive written and oral feedback on both the content and form of their papers and contributions in meetings.

Difference, Power, and Equity Notes: In this course we address power and domination, reflect on the difference between them, and treat power relations as not only an inevitable feature of any society, but as both enabling and constraining. In addition, the course will contain readings that address race, class, gender and the legacy of colonialism.

Attributes: PHIL Contemporary Value Theory Courses
**PHIL 321 (S) Introduction to Critical Theory: The Enlightenment and Its Critics** (DPE) (WS)

**Cross-listings:** PHIL 321 WGSS 322

**Primary Cross-listing**

We often associate modern faith in the prospects of universal human dignity, rational autonomy, the rights of man, individual liberty, democracy, open scientific inquiry and social and political progress with the Enlightenment. How can we reconcile this faith with the persistence of domination today? Critical theory aims not merely to understand the "struggles and wishes of the age" as Marx one described it, but with emancipation from domination. Understood in this way, critical theory is identified closely with the intellectual tradition of the Frankfurt School. In this tutorial, we will read works in critical theory from the 18th century to the present, some from the Frankfurt tradition, and some not. We will focus on particular topics, examples of which are the following: normative critique, capitalism, authoritarianism, mass culture, enlightenment and reason, progress, violence, the domination of nature, white supremacy, patriarchy and colonialism.

**Class Format:** students will work in pairs and meet for 75 minutes each week with the professor

**Requirements/Evaluation:** Each student will write and present a 5 or 6-page paper every other week and a commentary on their partner's essay on alternate weeks; evaluations are based on written work as well as level of preparation and the quality of intellectual engagement in tutorial meetings

**Prerequisites:** PHIL 202, Kant course, modern political theory, or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Philosophy majors and students with background in modern political theory, or other relevant demonstrated background.

**Expected Class Size:** 10

**PHIL 326 (S) Foucault Now** (DPE) (WS)

**Cross-listings:** WGSS 336 PHIL 326

**Primary Cross-listing**

If we think of Michel Foucault as engaged in writing histories, or genealogies, of his own present designed to undercut the sense of the obviousness of certain practices and ways of thinking, categorizing, and knowing, we can easily imagine that he might now be questioning different aspects of our contemporary "present" than the ones traditionally associated with his name, namely, panopticons and surveillance, discipline, criminalization, the biopolitics of health, the normal and the abnormal, etc. In this course we address the question: How is the present we find ourselves living today different from the one that the author Foucault wrote about in the 1960s, 70s and early 80s before his untimely death in 1984? What differentiates today from yesterday? And what present practices and ways of thinking and knowing might be questioned using Foucault's tools, genealogy in particular, for resisting unnecessary constraints on freedom and the perpetuation of unnecessary suffering? What is his legacy today? In this tutorial you will read from a selection of Foucault's texts (books, lectures, interviews) in order to acquire a firm grasp of his method of "critique" and his way of looking at the interconnections between forms of power and the knowledge associated with particular disciplines. We will also read more recent work by scholars that draw on Foucault to address problems in today's present. Among the contemporary texts assigned might be the following: Bernard Harcourt's Exposed: Desire and Disobedience in the Digital Age, Saidiya Hartman's Wayward Lives, Beautiful Experiments (2019), Verena Ehrlenbusch's Terrorism: A Genealogy, Cressida Heyes' Anaesthetics, Ladelle McWhorter's Racism and Sexism in Anglo-America: A Genealogy, and Active Intolerance: Michel Foucault, The Prisons Information Group, and the Future of Abolition, eds. Perry Zurn and Andrew Dills.
Class Format: I will meet with students in a seminar format at various points throughout the semester. I have requested a class block for this reason.

Requirements/Evaluation: evaluation will be based on written work (six 5- to 6-page papers, and six 2-3 page commentaries on their partner’s papers) as well as the quality and level of preparation and intellectual engagement in our weekly meetings.

Prerequisites: Relevant background in critical theory, social theory, political theory or philosophy.

Enrollment Limit: 10

Enrollment Preferences: I will give preference to philosophy majors and to upper class students with a demonstrated background in critical theories. Some sophomores may be eligible.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 336 (D2) PHIL 326 (D2)

Writing Skills Notes: This is a tutorial. Students will write five or six 5-6-page papers during the course of the semester and receive significant feedback on each paper. At the end of each tutorial meeting the student is asked to reflect on how they would approach the paper differently if they were to rewrite it. In this version of the course, I may ask students to select one paper to revise as a final assignment.

Difference, Power, and Equity Notes: In this course we address power and domination, reflect on the difference between them, and treat power relations as not only an inevitable feature of any society, but as both enabling and constraining. Moreover, we will read material that uses Foucauldian tools to address contemporary issues involving sexism and racism, digital surveillance, and the abolition of prisons.

PHIL 328 (S) Kant’s Ethics
Although Kant initially planned for his magnum opus to comprise theoretical and practical chapters, his metaphysics and epistemology take up all of his Critique of Pure Reason while his ethics is spread out over a series of works—Groundwork of the Metaphysics of Morals, Critique of Practical Reason, Religion within the Boundaries of Mere Reason, and The Metaphysics of Morals. These latter writings of Kant’s had a tremendous influence on the development of subsequent moral philosophy and indeed set the stage for contemporary discussions of the nature of practical reason, motivation, freedom, and morality. Our seminar will have two aims: (1) to reconstruct the single most compelling moral theory from Kant’s various ethical writings, and (2) to trace the influence of Kant’s ethics in contemporary philosophy.

Requirements/Evaluation: weekly seminar discussion questions; 8-10-page midterm paper; 12-14-page final paper

Prerequisites: two courses in PHIL (including a 100-level PHIL course; PHIL 201 or 202 recommended); or permission from the instructors

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

PHIL 329 (F) Four Challenging Moral Philosophers (DPE) (WS)
Elizabeth Anscombe, Philippa Foot, Amelie Rorty, and Cora Diamond all challenged the prevailing philosophical tenets of their times. Anscombe and Foot resurrected virtue ethics for Anglo-American philosophy and made moral psychology academically respectable. (Foot also invented the infamous trolley car thought experiment.) Rorty challenged the very concept of morality and questioned all moral theory. Diamond investigated the methodology of moral philosophy, paying special attention to the role of literature. In order to hit the ground running, students will be expected to read The Women Are Up to Something: How Elizabeth Anscombe, Philippa Foot, Mary Midgley, and Iris Murdoch Revolutionized Ethics by Benjamin J. B. Lipscomb before the first meeting, preferably over the summer.

Requirements/Evaluation: Tutorial papers and rewrites
Prerequisites: At least three PHIL courses, including at least one in moral philosophy.

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors, seniors, juniors in that order

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: Students will meet with the instructor in pairs for an hour each week; a 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and revise and re-write one of their five papers

Difference, Power, and Equity Notes: Our four challenging moral philosophers are all women in a field dominated by men. They all challenged the prevailing philosophical tenets of their times.

PHIL 330 (S) Plato (WS)

Cross-listings: PHIL 330 CLAS 330

Primary Cross-listing

Plato is one of the most important and influential thinkers in the history of the western tradition. His depiction of the trial and death of Socrates is one of the classics of western literature, and his views on ethics and politics continue to occupy a central place in our discussions 2400 years after they were written. It is, in fact, quite difficult to get through any course of study in the liberal arts without some familiarity with Plato. Nevertheless, comparatively few people realize that the views we commonly think of as "Platonic" represent only one strand in Plato's thought. For example, we commonly attribute to Plato a theory of the Forms on the basis of his claims in the so-called "middle dialogues" (mainly Republic, Phaedo, and Symposium). However, in his philosophically more sophisticated and notoriously difficult later dialogues (such as the Parmenides, Philebus, Sophist and Statesman), Plato engages in radical criticism and revision of his earlier views. In this course, we will spend the first third of the semester attempting to understand the metaphysics and epistemology in Plato's middle dialogues. We will spend the balance of the semester coming to grips with Plato's arguments in the later dialogues. We will read several complete dialogues in translation, and will also read a wide variety of secondary source material.

Class Format: lecture/discussion; this class will be a roughly equal mixture of lectures, student presentations, and seminar discussion

Requirements/Evaluation: students will be expected to prepare a seminar presentation, to write several focused short analytical pieces, and to write a 15- to 20-page term paper in multiple drafts

Prerequisites: PHIL 101, PHIL 102 or permission of instructor; a prior course in logic will be extremely helpful, but is not necessary

PHIL 335  (S)  Contemporary Metaethics

We speak as if moral judgments can be true or false, warranted or unwarranted. But how should objectivity in this domain be understood? Is moral objectivity like scientific objectivity, assuming we have a clear sense of what that involves? If not, should that concern us? What are some other models for understanding moral objectivity? While answers to such questions are implicit in historically important accounts of morality, these issues became the topic of explicit, sustained debate in the twentieth and twenty-first century. Our focus will be on recent influential work in this area. We will examine several different approaches in depth, including realism, constructivism, expressivism, and skepticism.

Class Format: seminar

Requirements/Evaluation: weekly seminar discussion questions; 8-10-page midterm paper; 12-14-page final paper

PHIL 336  (F)  Political Liberalism and its Critics  (WS)

Political liberalism has been both celebrated and lamented. The philosopher John Rawls is widely credited with reviving liberalism in the late 20th century and providing its most persuasive defense. In this tutorial, we'll read portions of Rawls' major works, *A Theory of Justice* and *Political Liberalism*, and trace how his theory evolved in response to an array of critics, including libertarians, perfectionists, communitarians, feminist philosophers, and critical race theorists. Among other things, these critics challenged Rawls' interpretation and defense of the social contract framework, the ideals of freedom and equality, the content of principles of justice, political neutrality about the good, the nature of the self, the division between public and private spheres, and the distinction between ideal and non-ideal theory. We'll examine these criticisms in depth. If time permits, we'll also look briefly at some recent post-Rawlsian debates about the nature of distributive justice (e.g., luck vs. relational egalitarianism, or global justice).
Class Format: This tutorial will meet on a fixed weekly schedule agreed to by the instructor and participants.

Requirements/Evaluation: Six tutorial papers (5-6 pages in length) and six critiques (2-3 pages in length)

Prerequisites: Two PHIL courses (including a PHIL 100-level course), or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Current and prospective philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating weeks, evenly spaced throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

PHIL 337 (F) Justice in Health Care (WS)

Justice is a notoriously complex and elusive philosophical concept, the conditions of which are even more difficult to articulate within real world institutions and contexts than in the abstract. In this course we'll explore justice as a fundamental moral principle and as a desideratum of the US health care system. The first portion of the course will be devoted to considering general theories of justice as well as alternative conceptions of justice specifically within the health care context. While social justice and distributive justice are deeply intertwined in the health care context and we will discuss both, we will focus primarily on the concept of distributive justice. This theoretically oriented work will provide the background for subsequent examination of specific topics, which may include, among others: justice in health care financing and reform; justice in health care rationing and access to health care, with particular attention to the intersections of rationing criteria with gender, sexuality, race, disability, and age; justice in the procurement and allocation of organs for transplantation; obesity and personal responsibility for illness; and justice in medical research, including "double standards" for research conducted in low resource settings.

Requirements/Evaluation: biweekly papers, oral commentaries, and tutorial discussions

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: PHIL majors, PHLH concentrators, those with curricular need for the course, those who have been dropped from the course in previous semesters due to over enrollment, and those who are unlikely to have an opportunity to take the course in a later term

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write six tutorial papers of 5-7 pages in length, one of which they will revise and submit at the end of the term. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

Not offered current academic year

PHIL 338 (S) Intermediate Logic (QFR)

Cross-listings: PHIL 338 MATH 338

Primary Cross-listing

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have take PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness,
compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

Requirements/Evaluation: problem sets and exams

Prerequisites: some class in which student has studied formal reasoning

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors; juniors and seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 338 (D2) MATH 338 (D3)

Quantitative/Formal Reasoning Notes: This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

Writing Skills Notes: Three thesis papers at five pages each (each receiving critical feedback from professor); one thesis paper revision with critical feedback from professor and peers, including one letter of revision explaining the student's revision process; one keyword glossary where students develop rigorous definitions of course key terms; one roundtable discussion based on the final paper.

Difference, Power, and Equity Notes: This course focuses on anti-colonial struggles against European powers. Research will include the concept of "internal colonies" in the US.

Not offered current academic year

PHIL 343 (S) What Philosophy Is: It's Methods, Aims and Values (WS)

Put simply, metaphilosophy is reflection on the nature of philosophy: Can it be defined? How is it different from science? What are its distinct
methods? Does philosophy yield knowledge? What role does the history of philosophy play in the discipline? Why read the history of philosophy?

Unsurprisingly, philosophers have proffered a variety of answers to these questions, prompting one philosopher to remark, half-jokingly, that "there are as many definitions of philosophy as there are philosophers." Thus, Plato described the philosopher as "the one who beholds all Time and all Being." Wilfrid Sellars regarded as uncontroversial the view that it is "an attempt to see how things, in the broadest possible sense of the term, hang together in the broadest possible sense of the term." Critical theorists regard philosophy as social and ideology critique. Some understand its aim to be to answer normative questions about the nature of truth, justice, goodness and rationality. Finally, there are those who do not think philosophy can contribute much at all to answering such questions and others who question its claims to universality given its associations with colonialism, racism, sexism, etc. In this tutorial we will read philosophical texts from a range of approaches in professional philosophy since the early 20th Century (Analytic, Pragmatist, Continental or European, and Public). Some of them explicitly engage meta-philosophical debates; others exemplify particular philosophical styles and methods. Our aim is to enrich our understanding of the discipline in order to evaluate its value and limitations.

Requirements/Evaluation: Evaluation will be based on the written work as well as the level of preparation and intellectual engagement in tutorial meetings. The professor will provide detailed comments on the first two papers, and all students have the option meeting with the professor after midterms to discuss strengths and areas they plan to work on in their final two papers.

Prerequisites: Two or three philosophy courses, or permission of instructor.

Enrollment Limit: 10

Enrollment Preferences: Preference will be given to majors and students who have had at least two, ideally three courses in philosophy.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: This is a tutorial. Students will write five 6-page papers and 2-3 page commentaries on alternate weeks. The instructor and the tutorial partner will comment extensively on each paper both orally and in writing. The aim of each tutorial meeting is enable the writer to imagine possible revisions.

PHIL 350 (S) Emotions

Philosophy is often described as thinking about thinking: variously conceived inquiries into the nature, scope and limits of human reasoning have always been at its heart. Without challenging the centrality of such projects for philosophy, this tutorial will focus on a less emphasized, but equally essential aspect of our lives: emotions. What are emotions, and how should we think about them? What is the proper ‘geography’–classification and analysis–of our emotions, and what is their relation to our somatic states, feelings, beliefs, judgments, evaluations and actions? Do we have any control over our emotions? Could we (individually and socially) educate and cultivate them? How are conscious and unconscious emotions related to a person’s action, character, and her social world? In addressing these substantive questions, we will also consider which methodological approach–if a single one can be privileged–we should adopt for examining emotions. We will try to determine what is the scope and nature of an adequate theory of emotions, what are the desiderata for such a theory, and what should count as evidence in its favor. We will examine a variety of philosophical and scientific theories of emotion, as well as some issues concerning normative aspects of emotions: the role of emotions in a good life, and the concept of emotional maturity.

Class Format: The class will meet remotely only.

Requirements/Evaluation: Class attendance, preparedness and participation; weekly meetings with the tutorial partner outside of the class; five lead papers (5-7 pages) and five short response papers (2-3 pages).

Prerequisites: two philosophy courses.

Enrollment Limit: 10

Enrollment Preferences: philosophy majors and prospective majors, then psychology majors.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

PHIL 358 (S) Reasoning and Inference: The Philosophy of Logic (WS)

This is a course in the philosophy of logic. What, you may ask, is the philosophy of logic? In a logic class, we think about how to represent ordinary language and thinking within formal systems and how to prove various things within these systems. In a philosophy of logic class, we think about what we are doing when we do logic. An example might be helpful. You are psyched to be reading this course description right now. At least, let's assume that you are for the sake of argument. A number of things follow from this happy assumption. Here are a few: (i) You are psyched. (ii) You are reading. (iii) You exist. (iv) It is possible that you are reading. (v) Either you are reading or you are a fish. In the first part of this course, we are going to focus on what this following-from business amounts to, and ask whether there is a special sense of following-from that characterizes logic? We will also try to get more precise in our understanding of some of the key concepts in logic, such as contradiction, consistency, logical consequence, syntax and semantics. In the second part of the course, we will turn to the fundamental questions concerning the status and structure of logic. Logic is sometimes called the study of reason. But, is logic the study of how people do reason, or is it the study of how people should reason? Against the first, people often don't seem to reason very well. On the other hand, if logic is about how we should reason, what makes it the case that we should reason one way rather than another? What makes a theorem of logic true? For that matter, what are logical theorems even about? Should we revise logic in light of empirical discoveries in, for example, physics or psychology? If so, what are the constraints on good revisions? Logicians and mathematicians have done a good deal of work developing extensions of and alternatives to classical logic. Some philosophers have wondered, however, whether the notion of an alternative logic is even coherent. We will end the course with a discussion of some of these alternatives. Among the authors we will read are: Aristotle, Frege, Russell, Quine, Kripke, Putnam, Field and Fine.

Class Format: There are likely to be video presentations of formal material. There may also be help sessions for problem sets.

Requirements/Evaluation: Students will write five tutorial papers and five response papers. In addition, they will revise one of these papers in light of comments from their partner and the instructor. Finally, there may be some problem sets to solidify understanding of formal material.

Prerequisites: Although not strictly necessary, a prior course in logic or discrete mathematics will be very helpful. In any case, some comfort with formal reasoning will be assumed as we will be going through an accelerated presentation of logical systems.

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors. Students with a background and interest in formal reasoning.

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write 5 tutorial papers and 5 responses. The instructor and the respondent will attend both to the content and to the writing quality of the tutorial papers. Finally students will substantially revise one of their tutorial papers in consultation with the instructor.

PHIL 360 (F) The Political Thought of Frantz Fanon (WS)

Cross-listings: PSCI 370 PHIL 360 AFR 360 LEAD 360

Secondary Cross-listing

Martinican psychiatrist, philosopher, and revolutionary Frantz Fanon was among the leading critical theorists and Africana thinkers of the twentieth century. Fanon ushered in the decolonial turn in critical theory, a move calling on those both within and outside of Europe to challenge the coloniality of the age and to forge a new vision of politics in the postcolonial period. This course is an advanced seminar devoted to a comprehensive examination of Fanon's political thought. We will begin with an analysis of primary texts by Fanon and end by considering how Fanon has been interpreted by his contemporaries as well as activists and critical theorists writing today.

Requirements/Evaluation: attendance and participation, weekly online reading response papers, a class presentation, two 7-page essays, and one 20-page final research paper

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Africana Studies concentrators, Leadership Studies concentrators, and Political Science majors

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
PHIL 364 (S)  Mental Health and Illness: Philosophical Considerations

Cross-listings: STS 364  PHIL 364

Primary Cross-listing

This course will raise and discuss a number of philosophical questions concerning our current understanding of mental health and mental illness. We will begin by examining the general concepts of health and disease, and then apply them to human psychology. Throughout the course, our focus will be on the best theoretical and practical knowledge we now have to diagnose, explain, and alleviate mental illness. Some of the questions that we will discuss are: What is psychopathology and what are its causes? Is it possible to have systematic knowledge of subjective experience? If so, is that knowledge importantly different in kind or in rigor from the knowledge we gain through physics, chemistry or geology? Are there metaphysical and ideological assumptions in contemporary psychiatry, and if so, could and should they be avoided? What is the basis on which current psychiatric diagnostic manuals are organized? Is that principle of organization justifiable or not? Do particular case histories offer good explanations of psychopathology? In framing and answering these questions, we will discuss subjective experience (or phenomenology) of mental illness; holism vs. reductionism; functional, historical and structural explanations of psychopathology; theory formation, evidence, and the role of values in psychology and psychiatry; the diversity and disunity of psychotherapeutic approaches; relationship between knowers and the known; and relationship between theoretical knowledge in psychiatry and the practices of healing.

Requirements/Evaluation:  several writing assignments, evenly spaced throughout the semester
Prerequisites:  two philosophy courses; or one philosophy and one STS course; or consent of the instructor
Enrollment Limit:  20
Enrollment Preferences:  students who took Philosophy of Science or Philosophy of Mind; Philosophy and Psychology majors

PHIL 379 (S)  American Pragmatism

Cross-listings:  PHIL 379  AMST 379

Primary Cross-listing

Along with jazz, pragmatism stands as the greatest uniquely American contribution to world culture. As the music wails in the background, we will study the classic pragmatists: William James, C. S. Peirce, and John Dewey. We will continue with the contemporary inheritors of the tradition: Cornel West, Richard Rorty, and Hilary Putnam. Although it has influenced both analytic and continental philosophy, pragmatism is a powerful third philosophical movement. Always asking what practical difference would it make, our authors investigate the central questions and disputes of philosophy, from epistemology and metaphysics to ethics and religion. Rather than seeing philosophy as an esoteric discipline, the pragmatic philosophers (with the possible exception of Peirce) see philosophy as integral to our culture and see themselves as public intellectuals.

Requirements/Evaluation:  final paper, several short assignments
Prerequisites:  at least two PHIL courses
Enrollment Limit:  25
Enrollment Preferences: Philosophy and American Studies majors, then seniors and juniors of any major

Expected Class Size: 12-15

Grading: yes pass/fail option, yes fifth course option

PHIL 390 (S) Discourse Dynamics (WS)

Cross-listings: COGS 390 PHIL 390

Secondary Cross-listing

It'd be perfectly natural to say "I might've left the stove on", then check the stove, then say "I didn't leave the stove on". But perform those exact same steps in a different order--check the stove, say "I didn't leave the stove on", then say "I might've left the stove on"--and something's gone quite wrong. Conversation is dynamic--the back and forth exchange of information is a process that grows and adapts to the surrounding context. The order in which you say things matters, and it matters for what you communicate what actions you take and what events happen around you. In this course, we will investigate dynamic communicative phenomena and discuss competing theoretical explanations about how they're interpreted. Of particular interest will be the extent to which discourse dynamics are built into the meanings of linguistic expressions vs. the extent to which they're consequences of our rational cognition. Is a sentence's relation to previously uttered sentences similar to its relation to extra-linguistic events? How much inference goes into interpreting what's said? In pursuing the answers to these questions, we will discuss both classic and contemporary theories from philosophy and linguistics.

Requirements/Evaluation: Four short papers (3-4 pages), take-home midterm paper (5-7) pages, take-home final paper (6-8 pages)

Prerequisites: At least one philosophy or cognitive science course (any level), or permission of instructor.

Enrollment Limit: 19

Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors, then to students who have taken 200-Level Intro to Formal Linguistics

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

COGS 390 (D2) PHIL 390 (D2)

Writing Skills Notes: There will be four short papers (3-4 pages each) that will receive written comments on substance, argument structure, and writing style. These will be designed to include sections that, upon revision in light of comments, can be incorporated into the longer midterm and final papers (5-7 pages and 6-8 pages respectively). Students will be required to meet with the instructor before the midterm and final papers to discuss outlines and revisions of short papers.

The instructional Physical Education Program at Williams is an integral part of the student’s total educational experience. As a part of the liberal arts concept, the program develops the mind-body relationship, which is dependent upon the proper integration of physical and intellectual capacities. The main objective of the physical education program is to develop in each student an appreciation of physical fitness and wellness, and to expose them to a variety of activities that are suitable for lifetime participation.

Four credits of Physical Education represent one of the requirements for the College degree. There are five physical education units during the year. In the fall academic semester, there are two six-week physical education quarters. Winter Study is another unit, and there are two physical education quarters in the spring academic semester. Two different activities must be completed in the fulfillment of the requirement. Students must complete two physical education credits during the first year, all four physical education credits must be completed by the end of sophomore year if the student wishes to study abroad.

A schedule listing all courses offered is issued to every student before each quarter and Winter Study. Classes may vary according to availability of instructors and interest of students. More information can be found at athletics.williams.edu/physical-education.

The following courses are offered at various times during the year:

- Aqua Fitness
- Badminton
- Basketball
- Bicycling
- Boot Camp
- Bowling
- Canoeing
- Core and Conditioning
- Dance (African, Ballet, Modern)
- Diving
- Erg Fitness
- Figure Skating
- Futsol
- Golf
- Hiking
- Ice Climbing
- Kayaking
- Lifeguarding
- Lifetime Sports
- Mountain Biking
- Muscle Fitness
- Outdoor Living Skills
- Pickle Ball
- Pilates
- Rape Aggression Defense (RAD)
- Rock Climbing
Rowing
Running
Skiing (Alpine and Cross Country)
Snowboarding
Snowshoeing
Soccer
Spinning
Squash
Street Hockey
Swim for Fitness
Swimming
Telemarking
Tennis
Trail Crew
Volleyball
Weight Training
Wellness
Wilderness Leadership
Yoga
Zumba
How long will the Sun shine? How do we discover Earth-like planets among the many exoplanets circling other stars? How did the universe begin and how has it evolved over its 13.8-billion-year history? How do we detect not only light but also gravitational waves from afar? Astronomy is the science that asks and tries to answer questions like these. We have come a long way toward understanding what makes the sky appear as it does and how the Universe behaves. The Astronomy Department offers courses for anyone who is interested in learning about the Universe, and who would like to be able to follow new astronomical discoveries as they are made. All courses in Astronomy satisfy the Division III requirement. The Astronomy major and the Astrophysics major (administered jointly with the Physics Department) are described below.

The beginning astronomy courses are offered on two levels. Astronomy 101, 102, 104, and 330-range courses are intended primarily for non-science majors and have no prerequisite. Astronomy 111 is designed for students with some exposure to physics. It has a prerequisite of one year of high school physics or permission of the instructor, and a co-requisite of Mathematics 140 or equivalent background in calculus.

Most of the astronomy courses take advantage of our observational and computational facilities including a 24-inch computer-controlled telescope with sensitive electronic detectors, and our own computer network for image processing and data analysis. The Astronomy Department site can be found at astronomy.williams.edu.

ASTRONOMY MAJOR

The Astronomy major is designed for students with an interest in learning about many aspects of modern astronomy, but who do not choose to take the most advanced physics and math courses of the astrophysics major. It is also appropriate as a second major for students concentrating in another field; in particular, combining an Astronomy major with a related major like Geoscience or Computer Science has been a fruitful path for some of our students. The Astronomy major emphasizes understanding the observed properties of the physical systems that comprise the known Universe, from the Sun and solar system, to the evolution of stars and star clusters, to the Milky Way Galaxy, to external galaxies and clusters of galaxies. Because some knowledge of physics and calculus is necessary to understand many astronomical phenomena, the Astronomy major requires the first two semesters each of the physics and calculus that are also required of Physics majors and Astrophysics majors.

There are several possible routes through the Astronomy major, depending on preparation and interest. Students considering a major in Astronomy should consult with members of the department early and often. A first-year student, if unsure about choosing between Astronomy and Astrophysics, may wish to take not only Astronomy 111 but also Physics 131, 141, or 151 and Mathematics 140 (if necessary) in the fall. Students who might place out of physics courses should read the section on placement under Physics.

Major Requirements for Astronomy

Astronomy 111 Introduction to Astrophysics OR Astronomy 101 Stars: From Suns to Black Holes and either Astronomy 102 The Solar System—Our Planetary Home OR Astronomy 104 The Milky Way Galaxy and the Universe Beyond

Two 200-level Astronomy courses (or additional 400-level Astronomy courses as substitutes)

Two 400-level Astronomy courses

Physics 131 Particles and Waves OR Physics 141 Particles and Waves—Enriched OR equivalent placement

Physics 142 Foundations of Modern Physics or Physics 151 Seminar on Modern Physics

Mathematics 140 Calculus II

Mathematics 150 Multivariable Calculus OR Mathematics 151 Multivariable Calculus OR equivalent placement

The total number of courses required for the Astronomy major is nine. A typical path through the major will begin with Physics 141, which is suitable for students with one year of high school physics and a background in calculus. However, students without high school physics may begin with Physics 131, and students entering with Advanced Placement in physics and/or math may obtain credit toward the major for the equivalent of Physics 142 and/or Mathematics 150 or 151 taken elsewhere. There are some aspects of astronomy that are closely related to chemistry or
geosciences. In recognition of this, certain advanced courses in those departments can be accepted for credit toward the Astronomy major.

**THE DEGREE WITH HONORS IN ASTRONOMY**

The honors degree in Astronomy will be awarded on the basis of a senior thesis presenting the results of an original observational, experimental, or theoretical investigation carried out by the student under the direction of a faculty member in Astronomy. There are no specific grade requirements (other than College-wide requirements for remaining in good academic standing) for entry into the thesis research program; however, a student wishing to do a thesis should have demonstrated both ability and motivation for independent work in previous courses and in any earlier research involvement. Students doing theses will normally choose a topic and an advisor early in the second semester of their junior year and usually begin their thesis work during the summer. During the senior year, those students whose proposals have been approved will elect two courses and a winter study project in addition to the minimum requirements for the major. Preparation for the thesis will occupy at least one course (Astronomy 493) and the winter study project (Astronomy 031). At the end of the winter study period, the department will decide, in consultation with each student, whether to admit that student to honors candidacy. Both a written thesis and an oral presentation to faculty and fellow students are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill the requirements with unusually high distinction.

The department will be flexible with regard to the number and timing of courses devoted to thesis research within the general guidelines of two courses and a winter study project over and above the minimum major requirements and the written and oral presentations, especially in cases of students with advanced standing and/or summer research experience. Students considering unusual requests are urged to consult with potential advisors or the department chair as early as possible.

**ASTROPHYSICS MAJOR**

The Astrophysics major is designed for students who want a rigorous introduction to the field, and includes not only those who plan graduate study in astronomy, astrophysics, or a closely related area, but also those interested in a wide variety of careers. Astrophysics alumni are not only astronomers but also computer scientists, geologists, teachers, doctors, lawyers, business school professors, and so on. In recent years, many astrophysics majors have had a second major in fields as wide ranging as mathematics, computer science, geosciences, economics, English, and art history. This major emphasizes the description of the Universe and its constituents in terms of physical processes. Potential Astrophysics majors should consult early with members of the Astronomy and Physics Departments to determine their most appropriate route through the major. An essential ingredient in such students’ undergraduate training is experience in physics and mathematics. Therefore, the major normally will begin in the first year a student is at Williams with Physics 131, 141, or 151 and Mathematics 140 or 150 or 151 in the fall. Physics 141 is recommended for students with one year of high school physics and a background in calculus. Students with very good background placing them out of Physics 142 and out of Mathematics 140 may choose to take Physics 201 and Mathematics 150 or 151 instead. Astronomy 111 will often be taken in the fall of the sophomore year; however, many students take it in the fall of their first year at Williams, along with physics and math. Students who might place out of physics courses should read the section on placement under Physics; those who place out of Physics 131 or 141 into Physics 142 or 151 should particularly consider taking Astronomy 111 in the fall of their first year.

In addition to the major courses described below, other courses in geosciences, mathematics, and computer science may also be appropriate.

**Major Requirements for Astrophysics**

- Astronomy 111 Introduction to Astrophysics OR Astronomy 101 Stars: From Suns to Black Holes and either Astronomy 102 The Solar System—Our Planetary Home OR Astronomy 104 The Milky Way Galaxy and the Universe Beyond
- Physics 131 Particles and Waves OR Physics 141 Particles and Waves—Enriched OR equivalent placement
- Physics 142 Foundations of Modern Physics OR Physics 151 Seminar on Modern Physics
- Physics 201 Electricity and Magnetism
- Physics 202 Waves and Optics
- Physics/Mathematics 210 Mathematical Methods for Scientists
- Physics 301 Introductory Quantum Physics
- Mathematics 150 Multivariable Calculus OR Mathematics 151 Multivariable Calculus
- Three 400-level astronomy courses OR two 400-level astronomy courses and one of the following:
  - Astronomy 211 Astronomical Observing and Data Analysis
  - Physics 302 Statistical Physics
  - Physics 402T Applications of Quantum Mechanics
The total number of courses required for the Astrophysics major, an interdisciplinary major, is eleven. Students entering with Advanced Placement in physics and/or mathematics may obtain credit toward the major for the equivalent of Physics 141 and/or Mathematics 140 and/or 150 or 151 taken elsewhere, but at least 8 courses in astronomy, physics, and mathematics must be taken at Williams. There are some aspects of astrophysics that are closely related to chemistry or geosciences. In recognition of this relation, certain advanced courses in those departments can be accepted for credit toward the Astrophysics major on a two-for-one basis. It is not possible to double major in Astrophysics and Physics.

THE DEGREE WITH HONORS IN ASTROPHYSICS

The honors degree in Astrophysics will be awarded on the basis of a senior thesis presenting the results of an original observational, experimental, or theoretical investigation carried out by the student under the direction of a faculty member in Astronomy or Physics. There are no specific grade requirements (other than College-wide requirements for remaining in good academic standing) for entry into the thesis research program; however, a student wishing to do a thesis should have demonstrated both ability and motivation for independent work in previous courses and in any earlier research involvement. Students doing theses will normally choose a topic and an advisor early in the second semester of their junior year and usually begin their thesis work during the summer. During the senior year, those students whose proposals have been approved will elect two courses and a winter study project in addition to the minimum requirements for the major. Preparation for the thesis will occupy at least one course (Astrophysics 493) and the winter study project (Astrophysics 031). At the end of the winter study period, the departments will decide, in consultation with each student, whether to admit that student to honors candidacy. Both a written thesis and an oral presentation to faculty and fellow students are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill the requirements with unusually high distinction.

The departments will be flexible with regard to the number and timing of courses devoted to thesis research within the general guidelines of two courses and a winter study project over and above the minimum major requirements and the written and oral presentations, especially in cases of students with advanced standing and/or summer research experience. Students considering unusual requests are urged to consult with potential advisors or the department chairs as early as possible.

STUDY ABROAD

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, and complete syllabus including readings/assignments.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

No.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. PHYS 301, a required course for the Astrophysics major, is only taught in the fall, and is difficult to replicate abroad, especially regarding the lab component.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

None to date.
ASTR 101 (F) Stars: From Suns to Black Holes

For the new era of "multimessenger astronomy" (not only light and its like but also particles from space and gravitational waves): What makes a star shine? For how long will the Sun keep shining and what will happen to it then? What are black holes and how can they form? How and what have we found out about the gravitational radiation resulting from two giant black holes merging and, with additional signals in the spectrum, from the merger of two neutron stars? What is the James Webb Space Telescope revealing about the earliest epochs of the Universe and about the atmospheres of planets around stars other than our Sun? What do we learn about our own Sun, and therefore about other stars like it, from total solar eclipses? Astronomy 101, a non-major, general introduction to the part of contemporary astronomy that includes how stars form and die, will provide answers to these questions. We pay special attention to recent exciting discoveries, including regular briefings and current emails plus bonus coverage of NASA’s Perseverance rover on Mars with the participation of Williams alumni/ae. Topics include discoveries with the Hubble Space Telescope, the new James Webb Space Telescope, missions to discover planets around other stars, the latest huge telescopes such as the one that will be part of the Vera C. Rubin Observatory in Chile, and plans for the Nancy Grace Roman Space Telescope; how astronomers interpret the light received from distant celestial objects; and the Sun as a typical star. We discuss how pulsars and black holes result from the evolution of massive stars and how supermassive black holes lurk in galaxies/quasars. We discuss the discovery of thousands of "exoplanets" around stars other than the Sun. We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of and on the same level as Astr 102 (solar system)/104 (galaxies/cosmology); students who have taken those courses are welcome. Observing sessions will include remote use of the telescopes for nighttime observations and daytime observations of the Sun, mainly remotely but with on-campus possibilities. There will be five laboratories, available both in afternoon sessions on campus or remotely.

Class Format: lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration, available both in place and remotely. Planetarium and Roof-Observatory TAs will be available for consultation, in addition to the instructors, throughout the semester. This course is also available asynchronously.

Requirements/Evaluation: two hour tests, a final exam, an observing portfolio, and lab reports

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: first enrolled

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Unit Notes: non-major course

Distributions: (D3)

ASTR 102 (S) Our Solar System and Others

What makes Earth different from all the other planets? What have NASA’s Curiosity and Perseverance on Mars (with their alumni/ae participation!) found about that planet’s past running water and suitability for life? How has knowledge about Pluto and Arrokoth beyond it been transformed by NASA’s flybys and the associated ground-based studies with which Williams College faculty and students participated? Will asteroids or comets collide with the Earth again? What is a solar eclipse like and how do we prepare for the April 8, 2024, totality? What do we learn from the rare transits of Mercury and of Venus that Williams faculty and students have studied? What may the new James Webb Space Telescope reveal about exoplanets and their atmospheres? Astronomy 102, a non-major, general introduction to the part of contemporary astronomy that comprises the study of the solar system (and the systems of planets around other stars), will provide answers to these questions and more. We will cover the historical development of humanity’s understanding of the solar system, examining contributions by Aristotle, Ptolemy, Copernicus, Galileo, Kepler, Newton, Einstein, and others. We will discuss the discovery of over 4000 exoplanets around stars other than the Sun. The course gives special attention to exciting discoveries of the past few years by space probes and by the Hubble Space Telescope and the Kepler/K2/TESS missions, as well as plans and hopes
for NASA's James Webb Space Telescope (which launched in December 2021). We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of, and on the same level as Astronomy 101 (stars and stellar evolution) and 104 (galaxies and cosmology), and students who have taken those courses are welcome.

**Class Format:** lecture (three hours per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration. A planetarium demonstration will also take place, available both in place and remotely. Planetarium and Roof-Observing TAs will be available for consultation, in addition to the instructors, throughout the semester. This course is also available asynchronously.

**Requirements/Evaluation:** two hour tests, a final exam, an observing portfolio, and lab reports

**Prerequisites:** none

**Enrollment Limit:** 48

**Enrollment Preferences:** first enrolled

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** non-major course

**Distributions:** (D3)

---

**ASTR 104 (S) The Milky Way Galaxy and the Universe Beyond**

It has been less than a century since the Sun was discovered not to be at the center of the Milky Way Galaxy, and the Milky Way Galaxy was determined to be only one of countless "island universes" in space. A host of technological advances is enabling us to understand even more clearly our place in the universe and how the universe began. For example, the recently discovered "chirp" from gravitational radiation (reported in 2016) resulting from two giant black holes merging, and the "chirp" from two neutron stars merging, also producing light, radio and x-ray radiation, has opened a whole different way of observing the Universe from the traditional use of light and other forms of electromagnetic radiation. With dozens of such events recorded by 2022, we are now therefore in the new era of multimessenger astronomy. Further, the Hubble Space Telescope and the Chandra X-ray Observatory bring exceptionally clear images over a wider range of the spectrum; their images are aiding astronomers to better understand the past and future of the Universe, and new infrared images are expected by the time of this course from NASA's James Webb Space Telescope. JWST observations starting with summer 2022, with those and other new telescopes on the ground (Vera Rubin Observatory) and in space (Nancy Grace Roman Space Telescope) help to confirm and enlarge our understanding of the Big Bang and the early epochs of the Universe. In addition, study of the early Universe (most recently from the Planck spacecraft) and large-scale mapping programs such as the Sloan Digital Sky Survey, the European Space Agency's Gaia, and the Dark Energy Survey. Astronomy 104, a non-major, general introduction to part of contemporary astronomy comprising the study of galaxies and the Universe, explores the answers to questions like: What is the Milky Way?; Why are quasars so luminous?; Is the Universe made largely of "dark matter" and "dark energy"?; What determines the ultimate fate of the Universe? How significant is the current discrepancy between the age and expansion rate of the Universe as measured from supernova observations as opposed to measurements from the cosmic background radiation? We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of, and on the same level as Astronomy 101 and 102, and students who have taken those courses are welcome.

**Class Format:** lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration, available both in place and remotely. Planetarium and Roof-Observatory TAs will be available for consultation, in addition to the instructors, throughout the semester. This course is also available asynchronously. Current astronomical discoveries will be discussed at the beginning of each class and by email throughout the semester.

**Requirements/Evaluation:** two hour tests, a final exam, lab reports, and an observing portfolio

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** first-years

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** non-major course

**Distributions:** (D3)
ASTR 107 (F) Astrobiology

Cross-listings: GEOS 107 ASTR 107

Secondary Cross-listing

Astrobiology is the study of the origin, evolution, and distribution of life in the universe. As such it is an inherently interdisciplinary field, incorporating all of the basic natural sciences: biology, chemistry, physics, astronomy, and the earth sciences, as well as aspects of philosophy, sociology, and engineering. Questions we will seek answers to in this class include: How, why, when, and where did life evolve on Earth, and what does that tell us about how it might evolve elsewhere? What are the chances that there is life on other planets and moons in our solar system, and why? Are there habitable planets elsewhere in the universe, and will we ever truly know if any of them contain life? We will approach these questions using a combination of lectures, activities, labs, homework assignments, and visits from some of the country's leading Astrobiology researchers. Examples of lab and homework activities include exploring our definition of life by making observations about living and non-living systems, examining evidence for ancient habitable environments in rocks, and modeling chemical fingerprinting tools used by Mars rovers. Assessment will be based on participation, quizzes, labs and homework assignments, and a final group project where students will present a mock NASA mission proposal. This course requires no previous experience in the sciences. This course is in the Sediments and Life group for the Geosciences major.

Class Format: Lectures will be partially flipped with student responsible for watching videos before class; class time will be split between short lectures, small group activities, and class discussions. Lab groups will meet in person every other week and have group project work on alternate weeks that may be done virtually or in person.

Requirements/Evaluation: Assessment will be based on participation, quizzes, labs and homework assignments, and a final group project where students will present a mock NASA mission proposal.

Prerequisites: none

Enrollment Limit: 46

Enrollment Preferences: first year and second year students, Geosciences majors

Expected Class Size: 46

Grading: yes pass/fail option, yes fifth course option

Unit Notes: This course counts towards the GEOS Group B Electives - Sediments and Life

Distributions: (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

GEOS 107 (D3) ASTR 107 (D3)

Attributes: GEOS Group B Electives - Sediments + Life

Not offered current academic year

ASTR 111 (F) Introduction to Astrophysics (QFR)

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies. ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes remotely to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

Class Format: The class has 6 afternoon labs. Nighttime observing sessions will occur throughout the semester.

Requirements/Evaluation: weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio
Prerequisites: a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

Enrollment Limit: 28

Enrollment Preferences: potential Astronomy majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

Fall 2022

LEC Section: 01 TR 11:20 am - 12:35 pm Marek Demianski, Kevin Flaherty
LAB Section: 02 M 1:00 pm - 4:00 pm Kevin Flaherty
LAB Section: 03 R 1:00 pm - 4:00 pm Kevin Flaherty

ASTR 211 (S) Astronomical Observing and Data Analysis (QFR)

How do astronomers make scientific measurements for objects that are light-years away from Earth? This course will introduce the basics of telescopes and observations and will give students hands-on training in the techniques astronomers use to obtain, process, and analyze scientific data. We will discuss observation planning, CCD detectors, signal statistics, image processing, and photometric and spectroscopic observations. We will begin by focusing on ground-based optical observations and will move on to non-optical observations, both electromagnetic (e.g., radio waves, X-rays) and non-electromagnetic (e.g., gravitational waves, neutrinos). Throughout the course, students will use computational techniques to work with real astronomical data, taken with our 24” telescope and from data archives.

Class Format: discussion, computer lab work, and observing

Requirements/Evaluation: weekly problem sets, lab work, and observing projects

Prerequisites: MATH 150 or 151; prior experience with Unix and computer programming is helpful, but not required

Enrollment Limit: 14

Enrollment Preferences: Astronomy or Astrophysics majors

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: The course requires regular problem sets. Labs require computer programming and statistical and graphical analyses of data.

Not offered current academic year

ASTR 217 (S) Planets and Moons

Cross-listings: ASTR 217 GEOS 217

Secondary Cross-listing

This course examines the history and geology of the solar system. No two planets are exactly alike, and as we acquire more data and higher-resolution images, our sense of wonder grows. However, we can't hike around and hammer rocks on Venus or Titan, so we have to infer composition, form, texture and process from remotely-captured images and sparse chemical and spectral data. We will consider the origin of the solar system, the formation and evolution of planetary bodies, and the role of impacts, volcanism, tectonics and geomorphology in shaping them. We will summarize basic geological concepts of stratigraphy, structure and chronology and show how they can be applied off-world. We will review solar system exploration, and will include planetary data in lab exercises. This course is in the Solid Earth group for the Geosciences major.

Requirements/Evaluation: Reading journal, lab exercises, class participation

Prerequisites: any 100-level GEOS or any 100-level ASTR course, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Geosciences majors, Astronomy/Astrophysics majors, and sophomores
Expected Class Size: 12
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)
This course is cross-listed and the prefixes carry the following divisional credit:
ASTR 217 (D3) GEOS 217 (D3)
Attributes: GEOS Group C Electives - Solid Earth
Not offered current academic year

ASTR 240  (F)  Great Astronomers and Their Original Publications  (WS)
Cross-listings: STS 240  ASTR 240  LEAD 240
Primary Cross-listing
In this course we will study some of the greatest figures in astronomy and consider their leadership in advancing progress in the field. We will consider their lives and works, especially as represented by original copies of their books and other publications. These great astronomers include: 16th century, Nicolaus Copernicus (heliocentric universe); Tycho Brahe (best pre-telescopic observations); 17th century, Galileo (discoveries with his first astronomical telescope, 1610; sunspots, 1613; Dialogo, 1632); Johannes Kepler (laws of planetary motion, 1609, 1619, Rudolphine Tables 1627); Johannes Hevelius and Elisabeth Hevelius (atlases of the Moon and of stars, 1647, and 1687); Isaac Newton (Principia Mathematica: laws of universal gravitation and of motion, 1687); 18th century, Edmond Halley (Miscellanea curiosa, eclipse maps, 1715, 1724); John Flamsteed and Margaret Flamsteed (Atlas Coelestis, 1729); and William Herschel and Caroline Herschel (1781, 1798). Also, from more recent times in which original works are often articles rather than books: 20th century, Albert Einstein (special relativity, 1905; general relativity, 1916); Marie Curie (radioactivity); Cecilia Payne-Gaposchkin (hydrogen dominating stars, 1929), Edwin Hubble (Hubble's law, 1929); George Ellery Hale (Mt. Wilson Observatory 100" telescope, 1917: Palomar Observatory 200" telescope, 1948), Vera Rubin (dark matter, 1970s); Jocelyn Bell Burnell (pulsar discovery, 1968); and 21st century: Wendy Freedman (Universe's expansion rate, 2000s). First editions will be available in Williams' Chapin Library of rare books, where we will meet in an adjacent classroom. We will also consider how such original materials are collected and preserved, and look at examples from the wider world of rarities, such as a leaf from the Gutenberg Bible (c. 1453) and a Shakespeare First Folio (1623, with a discussion of astronomical references in Shakespeare's plays). The course will be taught in collaboration between an astronomer and a rare-books librarian, with remote lectures by experts from around the world.
Class Format: Meeting on campus in the Chapin Library classroom (Sawyer 452)
Requirements/Evaluation: class participation, two 5-page intermediate papers, and a final 15-page paper; student choice of additional readings from a provided reading list
Prerequisites: none
Enrollment Limit: 12
Enrollment Preferences: if overenrolled, preference by written paragraph of explanation of why student wants to take the course
Expected Class Size: 12
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (WS)
This course is cross-listed and the prefixes carry the following divisional credit:
STS 240 (D2) ASTR 240 (D3) LEAD 240 (D2)
Writing Skills Notes: Comments on submitted papers will aid in writing skills
Attributes: LEAD Facets or Domains of Leadership

Fall 2022
SEM Section: 01  W 1:10 pm - 3:00 pm  Jay M. Pasachoff
CON Section: 02  W 3:10 pm - 4:00 pm  Jay M. Pasachoff

ASTR 317  (S)  Current topics in Planetary Geology  (WS)
Cross-listings: GEOS 317  ASTR 317
Secondary Cross-listing
We will look in detail at geological processes on rocky and icy bodies of the Solar System. Each week will have a specific theme, and students will read a series of scientific articles on that topic. The readings will form the basis for writing and discussion. Areas to be investigated may include ice ages on Mars, the origin of Earth’s moon, tectonics on Venus, chaos terrain on Europa, geysers on Enceladus, cryovolcanism on Triton, methane lakes on Titan, the viability of mining in the Asteroid Belt, and the prospects for life on other worlds. This course is in the Solid Earth group for the Geosciences major.

**Class Format:** Students meet with the professor weekly, in pairs, with one student writing each week and the other critiquing; and both engaging in detailed discussion of the readings.

**Requirements/Evaluation:** Evaluation is based on written papers, critiques, and discussion.

**Prerequisites:** GEOS/ASTR 217 (Planets and Moons); OR any two courses at 200-level or higher in Geosciences and/or Astronomy; OR permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Geosciences and Astronomy majors and prospective majors

**Expected Class Size:** 6

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

GEOS 317 (D3) ASTR 317 (D3)

**Writing Skills Notes:** This tutorial-style course focuses on writing, with 6 papers (5-7 pages) written bi-weekly throughout the semester, and partner critiques in alternate weeks.

**Attributes:** GEOS Group C Electives - Solid Earth

Not offered current academic year

**ASTR 330 (S) The Nature of the Universe**

This course is a journey through space and time from the first fractions of a second after the Big Bang to the ultimate fate of the Universe billions of years into the future. Topics include the Big Bang and its remnant cosmic background radiation, cosmic inflation, conditions during the first three minutes, creation of the elements, stellar and galactic black holes, relativity, the detection of gravitational waves, galaxies and quasars, dark matter, and the formation of the large-scale structure of the Universe. We will explore current ideas about the fate of our Universe, including the acceleration of its expansion, and its implications for the end of time. Finally, we will consider the fantastic but serious theoretical proposal that ours is but one of countless universes existing within a multiverse.

**Class Format:** lecture/discussion, three hours per week

**Requirements/Evaluation:** two midterm exams, a small observing portfolio, occasional quizzes, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 48

**Enrollment Preferences:** open only to juniors and seniors; closed to students who have taken or are taking ASTR 104, and closed to ASTR, ASPH, and PHYS majors; preference given to seniors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** non-major course; course in the 33X sequence are meant as general education courses for students in all majors

**Distributions:** (D3)

Spring 2023

LEC Section: 01 TF 1:10 pm - 2:25 pm Marek Demianski

**ASTR 402 (S) Between the Stars: The Interstellar Medium (QFR)**

The matter between the stars—the interstellar medium—tells the story of the past and future evolution of galaxies and the stars within them. Stars are accompanied by diffuse matter all through their lifetimes, from their birthplaces in dense molecular clouds, to the stellar winds they eject as they
evolve, to their final fates as they shed their outer layers, whether as planetary nebulae or dazzling supernovae. As these processes go on, they enrich the interstellar medium with the products of the stars' nuclear fusion. Interpreting the emission from this interstellar gas is one of astronomers' most powerful tools to measure the physical conditions, motions, and composition of our own galaxy and others. In this course we will study the interstellar medium in its various forms, from cold, dense, star-forming molecular clouds to X-ray-emitting bubbles formed by supernovae. We will learn about the physical mechanisms that produce the radiation we observe, including radiative ionization and recombination, collisional excitation of "forbidden" lines, collisional ionization, and synchrotron radiation. Applying our understanding of these processes, we will analyze the physical conditions and chemical compositions of a variety of nebulae. Finally, we will discuss the evolution of interstellar material in galaxies across cosmic time. This course is observing-intensive. Throughout the semester students will work in small groups to design, carry out, analyze, and critique their own observations of the interstellar medium using remote observations and archival data.

Class Format: Tutorial meetings will be scheduled with the professor. Meetings may be held in-person, subject to classroom availability, or remotely. Students will also complete observing projects by controlling telescopes remotely and analyzing observations in astronomical databases.

Requirements/Evaluation: weekly problem sets, 10-page final paper, and observing projects

Prerequisites: ASTR 111 and PHYS 201 or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: juniors and seniors

Expected Class Size: 6

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: In this course, students will derive quantitative physical formulas, use these equations to calculate and compare physical properties, and generate and analyze graphical representations of data. They will also make and analyze measurements of astronomical data through observing projects.

Not offered current academic year

ASTR 404 (S) Unsolved Problems in Galaxy Evolution
In this tutorial, we will learn about galaxies and their evolution by focusing on some of the key mysteries astronomers are trying to solve. Questions may include: How do galaxies turn their gas supply into stars? Is there a universal initial mass function for star formation? What is the origin of multiple stellar populations in globular clusters? Why do some galaxies cease star formation? Which galaxies reionized the universe? We will discuss the nature of each unsolved problem, debate the theories proposed to answer it, and consider how future progress might be made.

Requirements/Evaluation: student's papers, responses to the partner's papers, and problem sets

Prerequisites: ASTR 111 and PHYS 142 or 151 or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Juniors and Seniors

Expected Class Size: 6

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Not offered current academic year

ASTR 410 (S) Compact Stellar Remnants: White Dwarfs, Neutron Stars and Black Holes
A star is a very interesting, very complicated physical object. Properties of stars and their evolutionary paths depend on an intricate interplay of different physical phenomena with gravity, nuclear interactions, radiation processes and even quantum and relativistic effects playing important roles. Using basic physics we will construct simple models of stars and discuss their evolution, concentrating on the key physical processes that play the dominant role at different evolutionary stages. We will discuss late stages of stellar evolution and concentrate on the basic properties of three possible remnants: white dwarfs, neutron stars and black holes. Radio and X-ray pulsars, supernovae including Type Ia and Gamma Ray Bursts will be discussed as well as observational confirmation of existence of black holes. We will explore extreme conditions existing near neutron stars and black holes and discuss their astrophysical consequences. We will also discuss the recent exciting detection of gravitational waves by the LIGO/VIRGO laser interferometric detectors.

Class Format: discussion three hours per week

Requirements/Evaluation: classroom participation, homework assignments, a midterm exam and a final exam
Prerequisites: PHYS 201 or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: physics, astrophysics, and astronomy majors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Spring 2023

LEC Section: 01  MR 1:10 pm - 2:25 pm  Marek Demianski

ASTR 412 (F) Heliophysics

Cross-listings: ASTR 412  PHYS 412

Primary Cross-listing

We study all aspects of the Sun, our nearest star. In addition to discussing our observations of recent eclipses and what has been learned about the solar atmosphere from eclipse research, we discuss the solar interior (including the Nobel-prize-winning solar neutrino experiment and helioseismology), the photosphere, the chromosphere, the corona, and the solar wind. We discuss the Sun as an example of stars in general. We discuss both theoretical aspects and observational techniques, including work at recent total solar eclipses. We discuss results from current spacecraft, including the Solar and Heliospheric Observatory (SOHO), the Solar Dynamics Observatory, the Sun Watcher (SWAP), and Hinode (Sunrise), and the newer GOES/UVSI (Solar Ultraviolet Imager) run by an alumnus as well as additional Total Solar Irradiance measurements from spacecraft. We will discuss the role of solar observations in confirming Einstein’s General Theory of Relativity with the bending of light at the 1919, 1922, and 2017 total solar eclipses as well as gravitational redshift measurements in solar spectral lines, extending our discussion to the recent “chirp” of gravitational radiation reported from several colliding black holes and neutron stars observed with the Laser Interferometer Gravitational-wave Observatory (LIGO). We also discuss transits of Mercury across the face of the Sun, most recently on November 11, 2019. We highlight the 2004 and 2012 transits of Venus across the face of the Sun as observed from Earth, the first such transits of Venus since 1882, as well as our work in observing transits of Venus from Jupiter with the Hubble Space Telescope. We discuss plans for observing future total solar eclipses, including those of December 4, 2021, near or over Antarctica; October 23, 2023, in northwestern Australia; and April 8, 2024, over Mexico and a U.S. path from Texas to northern New England.

Requirements/Evaluation: biweekly tutorial presentations; biweekly response to colleagues’ presentations

Prerequisites: ASTR 111 or a 200-level Physics course; or permission of the instructor

Enrollment Limit: 10

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

ASTR 412 (D3)  PHYS 412 (D3)

Not offered current academic year

ASTR 493 (F) Senior Research: Astronomy

An original experimental or theoretical investigation is carried out under the direction of a faculty member in Astronomy, as discussed under the heading of the degree with honors in Astronomy above. This is part of a full-year thesis (493-494).

Prerequisites: permission of department

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Fall 2022

Fall 2022

LEC Section: 01 F 2:35 pm - 3:50 pm Daniel P. Aalberts

Spring 2023

LEC Section: 01 F 2:35 pm - 3:50 pm Daniel P. Aalberts
What is light? How does a laser work? What is a black hole? What are the fundamental building blocks of the universe? Physics majors and Astrophysics majors study these and related questions to understand the physical world around us, from the very small to the very large. A physics student practices the experimental methods used to learn about this world and explores the mathematical techniques and theories developed to explain these physical phenomena. A Physics major or Astrophysics major serves as preparation for further work in physics, astrophysics, applied physics, other sciences, engineering, medical research, science teaching and writing, and other careers involving critical thinking, problem-solving, and insight into the fundamental principles of nature.

**ASTROPHYSICS MAJOR**
The Physics Department, in cooperation with the Astronomy Department, offers a major in Astrophysics. More information about the Astrophysics major can be found on the Astronomy Department site.

**PHYSICS MAJOR**

**Introductory Courses**

Students considering a major in physics should take both physics and mathematics as first-year students. Students typically begin with Physics 141 and Mathematics 150 or 151 (multivariable calculus); students who wish to begin with Physics 131 should consult with the department.

- **Physics 131 Introduction to Mechanics.** This is designed as a first course in physics. It is suitable for students who either have not had physics before or have had some physics but are not comfortable solving “word problems” that require calculus.
- **Physics 141 Mechanics and Waves.** Students in this course should have solid backgrounds in science and calculus, either from high school or college, including at least a year of high school physics.

The Department of Mathematics will place students in the appropriate introductory calculus course. The physics major sequence courses all make use of calculus at increasingly sophisticated levels. Therefore, students considering a Physics major should continue their mathematical preparation without interruption through the introductory calculus sequence (Mathematics 130, 140, and 150 or 151). Students are encouraged to take Physics 210 as early as possible.

**ADVANCED PLACEMENT**

Students with unusually strong backgrounds in calculus and physics may place out of Physics 141 and either: 1) begin with the special seminar course Physics 151 in the fall (typically followed by Physics 210 in the spring), or 2) begin with Physics 142 in the spring (possibly along with Physics 210). Students may take either 151 or 142 but not both. On rare occasions a student with an exceptional background will be offered the option of enrolling in Physics 201.

Placement is based on AP scores, consultation with the department, and results of a placement exam administered during First Days. The exam can also be taken later in the year by arrangement with the department chair. The exam covers classical mechanics, basic wave phenomena, and includes some use of calculus techniques.
REQUIREMENTS FOR THE MAJOR

A total of ten courses, nine in physics and one in mathematics, are required to complete the Physics major.

Required Physics Sequence Courses (7)

Physics 141 Mechanics and Waves
Physics 142 Foundations of Modern Physics
or Physics 151 Seminar in Modern Physics
Physics 201 Electricity and Magnetism
Physics 202 Waves and Optics
Physics 210 Mathematical Methods for Scientists
Physics 301 Quantum Physics
Physics 302 Statistical Mechanics and Thermodynamics

Required Mathematics Course (1)

Mathematics 150 or 151 Multivariable Calculus

Students entering with Advanced Placement in mathematics may obtain credit toward the major for the equivalent Mathematics 150 or 151 taken elsewhere.

Elective Courses (2)

At least two more physics courses above the 100 level (or other approved courses as noted below) must be taken, bringing the total number of courses for the major to ten.

Students who place out of Physics 141 must substitute one additional elective course, for a total of ten courses.

Students who place out of both Physics 141 and 142 and begin their studies in Physics 201 must substitute one additional elective course, for a total of nine courses.

Options

• Mathematics 209 or 309 may substitute for Physics 210.
• Astronomy 111 may count in place of Physics 141 if a student places out of 141 (see “advanced placement” above).
• An additional Astronomy or Astrophysics course above the introductory level that is acceptable for the astrophysics major may be counted.
• Two approved Division III courses may be substituted for one Physics course. Approval is on an individual basis at the discretion of the department chair.
• Honors work is in addition to completion of the basic major so Physics 493 and 494 do not count towards the ten courses in the major.

PREPARATION FOR ADVANCED STUDY

Students who wish to do graduate work in physics, astrophysics, or engineering should elect courses in both physics and mathematics beyond the minimum major requirements. The first-year graduate school curriculum in physics usually includes courses in quantum mechanics, electromagnetic theory, and classical mechanics that presuppose intermediate level study of these subjects as an undergraduate. Therefore, students planning graduate work in physics should elect all of the following courses:

Physics 402T Applications of Quantum Mechanics
Physics 405T Electromagnetic Theory
Physics 411T Classical Mechanics

ADVISING

Both majors and non-majors are encouraged to consult with the department chair or course instructors about course selections or other matters.

THE DEGREE WITH HONORS IN PHYSICS

The degree with honors in Physics will be awarded on the basis of a senior thesis presenting the results of a substantial experimental or
theoretical investigation carried out under the direction of a faculty member in the department. There is no rigid grade point average required for admission to the program or for the awarding of the degree with honors, but it is normally expected that honors students will maintain at least a B average in physics and mathematics. Students will normally apply for admission to the program early in the spring of their junior year and during senior year these students will normally elect Physics 493, W31, and 494 in addition to the usual requirements for the major. At the end of winter study, the department will decide whether the student will be admitted to honors candidacy. Both a written thesis and a colloquium presentation of the results are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill them with unusually high distinction.

Honors candidates will also be required to attend departmental colloquium talks.

STUDY ABROAD

The physics community is international in scope and a career in physics (or a related field) can provide many opportunities for travel and contact with individuals from outside the United States. The physics major at Williams is a carefully structured four-year program designed to prepare students who are so inclined for graduate study at leading research institutions. While it is possible to complete the major requirements in three years, such a major will not usually not lead to further study in the field. With careful early planning on the part of a student, and close consultation with the department chair, it is possible to complete a strong major and still study abroad provided the foreign institution can provide courses which reasonably substitute or supplement those in the Williams major program. Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Here are answers to frequently asked questions related to study abroad:

Can your department or program typically pre-approve courses for major/concentration credit?
Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?
Course title and description.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?
No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?
No.

Are there specific major requirements that cannot be fulfilled while on study away?
No.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)
Yes. The laboratory component of Physics 301 serves as our “advanced lab course.” Students often cannot get equivalent experience abroad and must take this when they return senior year (non-credit). Unless there has been a recent change, our own Oxford Program is one place students cannot get lab experience.

OPTIONS FOR NON-MAJORS

Many students want to take a self-contained and rigorous full-year survey of physics. For such students, the most appropriate sequence will be either Physics 131 or Physics 141 followed by Physics 132, depending on the student’s background in science and mathematics (see Introductory Courses above). Either of these sequences satisfies the physics requirement for medical school.

The department also offers one-semester courses designed for non-majors, including Physics 107, Physics 108, and Physics 109.

PHYS 106  (F)  Being Human in STEM  (DPE)
Cross-listings:  PHYS 106  GEOS 106  STS 106
Primary Cross-listing

This course combines academic inquiry and community engagement to investigate the themes of diversity and social climate within STEM (science, technology, engineering and mathematics) disciplines. Students will examine how diverse identities including but not limited to gender, race, disability,
sexuality, national origin, socioeconomic status, religion, and ethnicity shape the STEM experience both at Williams and nationally. We will ground our understanding through critical reading of primary scholarly research on topics such as implicit bias, identity threat, and effects of team diversity on excellence. From there, we will execute small group projects. Students will design, execute, and evaluate interventions that relate to the course goals and that have direct relevance to Williams students, faculty, and staff. For example, a student group could implement a survey of minoritized STEM students, or create a qualitative interview-based assessment of how socioeconomic status impacts students’ abilities to participate in STEM fields.

Course work includes weekly readings, reflective/opinion writing, in class discussion, and the development and presentation of a group project.

**Class Format:** class discussions, group project work (out of class time required)

**Requirements/Evaluation:** short response papers, class discussion participation, leading class discussions, group work, and final project

**Enrollment Limit:** 15

**Enrollment Preferences:** DIV III majors; statement of interest may be requested

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** does not count towards GEOS or PHYS major credit

**Distributions:** (D3) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 106 (D3) GEOS 106 (D3) STS 106 (D2)

**Difference, Power, and Equity Notes:** This course explicitly addresses the intersection of marginalized identities and the STEM experience. Students will learn how to critically address how issues such as gender, race, ethnicity, and disability impact participation in and the experience of STEM fields. For example, students will read and critique literature documenting bias in STEM fields, and will also learn about and create interventions that can address these biases.

Not offered current academic year

**PHYS 108 (F) Energy Science and Technology** (QFR)

**Cross-listings:** ENVI 108 PHYS 108

**Primary Cross-listing**

Energy use has skyrocketed in the United States and elsewhere in the world, causing significant economic and political shifts, as well as concerns for the environment. This course will address the physics and technology of energy generation, consumption, and conservation. It will cover a wide range of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating, and building lighting. Students will learn to compare the efficiencies and environmental impacts of various energy sources and uses.

**Class Format:** twice a week, occasional lab exercises, and a field trip to the college heating plant, all during class hours

**Requirements/Evaluation:** weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative

**Prerequisites:** high school physics, high school chemistry, and mathematics at the level of MATH 130

**Enrollment Limit:** 20

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 108 (D3) PHYS 108 (D3)

**Attributes:** ENVI Natural World Electives

Not offered current academic year

**PHYS 109 (S) Sound, Light, and Perception** (QFR)

Light and sound allow us to perceive the world around us, from appreciating music and art to learning the details of atomic structure. Because of their importance in human experience, light and sound have long been the subject of scientific inquiry. How are sound and light related? How do physiology and neural processing allow us to hear and see the world around us? What are the origins of color and musical pitch? This course introduces the
science and technology of light and sound to students not majoring in physics. We will start with the origins of sound and light as wave phenomena, and go on to topics including color, the optics of vision, the meaning of musical pitch and tone, and the physical basis of hearing. We will also discuss some recent technological applications of light, such as lasers and optical communications. The class will meet for two 75-minute periods each week for a variable mixture of lecture, discussion, and hands-on, interactive experiments.

Class Format: each student will attend one lecture plus one conference section weekly

Requirements/Evaluation: class participation, problem sets, in-class exams, oral presentations, and a final exam, all with a quantitative component

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: non-science majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This class will have weekly problem sets requiring substantial quantitative reasoning

Spring 2023

LEC Section: 01 Cancelled

PHYS 131  (F) Introduction to Mechanics  (QFR)

We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.

Requirements/Evaluation: exams, labs, and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead

Enrollment Limit: 30

Enrollment Preferences: seniority

Expected Class Size: 60

Grading: yes pass/fail option, yes fifth course option

Unit Notes: PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This class will have weekly problem sets requiring substantial quantitative reasoning

Fall 2022

LEC Section: 01 MWF 11:00 am - 11:50 am John H. Lacy

LAB Section: 02 M 1:00 pm - 4:00 pm Kevin R. Forkey

LAB Section: 03 T 1:00 pm - 4:00 pm Kevin R. Forkey

LAB Section: 04 W 1:00 pm - 4:00 pm Kevin R. Forkey

PHYS 132  (S) Electromagnetism and the Physics of Matter  (QFR)

This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics,
radioactivity, and uses of radiation.

**Class Format:** lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, quizzes and exams

**Prerequisites:** PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)

**Enrollment Limit:** 22 per lab

**Enrollment Preferences:** sophomores

**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** Significant homework, exams, quizzes requiring mathematical and physical reasoning.

---

**PHYS 141 (F) Mechanics and Waves (QFR)**

This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

**Class Format:** lecture, three hours per week; laboratory, three hours approximately every other week; conference section, one hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, three or more short quizzes/tests, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** high school physics and MATH 130 or equivalent placement, or permission of the instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** first-year students and science majors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

---

**PHYS 142 (S) Foundations of Modern Physics (QFR)**

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires us rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system.
This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of physics or as the basis for future advanced study of these topics.

Class Format: lecture, three hours weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and problem-solving/discussion sessions

Requirements/Evaluation: weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151

Enrollment Limit: 14/L

Enrollment Preferences: first-year students

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

Spring 2023

LEC Section: 01    WF 11:00 am - 11:50 am     Protik K. Majumder
LAB Section: 02    M 1:00 pm - 4:00 pm     Jennifer G. Winters
LAB Section: 03    T 1:00 pm - 4:00 pm     Jennifer G. Winters

PHYS 151  (F)  Seminar in Modern Physics  (QFR)
Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity has extended physics into the realm of high speeds and high energies and requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our notions of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course covers the same core material as PHYS 142 but in a small seminar format for students with strong prior preparation in physics.

Class Format: three 50-minute lecture/discussions per week, one 3-hour lab per week

Requirements/Evaluation: class participation, weekly lab assignments, weekly problem sets, exams

Prerequisites: placement by the department (see "advanced placement" section in the description about the department). Students may take either PHYS 142 or PHYS 151 but not both

Enrollment Limit: 18

Enrollment Preferences: first-years

Expected Class Size: 18

Grading: yes pass/fail option, yes fifth course option

Unit Notes: this is a small seminar designed for first-year students who have placed out of PHYS 141

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: all assignments in the course have a substantial quantitative component

Fall 2022

LEC Section: 01    WF 11:00 am - 11:50 am     Jennifer G. Winters
LAB Section: 02    W 1:00 pm - 4:00 pm     Jennifer G. Winters
CON Section: 03    M 11:00 am - 11:50 am     Jennifer G. Winters

PHYS 201  (F)  Electricity and Magnetism  (QFR)
The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell's equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory
of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** problem sets, labs/conference section assignments, two take-home midterms, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151

**Enrollment Limit:** 10 per lab

**Enrollment Preferences:** prospective physics majors, then by seniority

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

Fall 2022

LEC Section: 01    MWF 10:00 am - 10:50 am    Catherine  Kealhofer
LAB Section: 02    T 1:00 pm - 4:00 pm    Catherine  Kealhofer
LAB Section: 03    W 1:00 pm - 4:00 pm    Catherine  Kealhofer

**PHYS 202  (S) Vibrations, Waves and Optics  (QFR)**

Waves and oscillations characterize many different physical systems, including vibrating strings, springs, water waves, sound waves, electromagnetic waves, and gravitational waves. Quantum mechanics even describes particles with wave functions. Despite these diverse settings waves exhibit several common characteristics, so that the understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. The rest of the course focuses on electromagnetic waves and in particular on optical examples of wave phenomena. In addition to well known optical effects such as interference and diffraction, we will study a number of modern applications of optics such as short pulse lasers and optical communications. Throughout the course mathematical methods useful for higher-level physics will be introduced.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** problem sets, labs, in-class tests, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 201; co-requisite: PHYS/MATH 210 or MATH 209 or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** sophomores

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course has substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LAB Section: 03    W 1:00 pm - 4:00 pm    Charlie  Doret

**PHYS 210  (S) Mathematical Methods for Scientists  (QFR)**
Cross-listings: PHYS 210 MATH 210

Primary Cross-listing

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit: 50

Enrollment Preferences: sophomores and juniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 210 (D3) MATH 210 (D3)

Quantitative/Formal Reasoning Notes: This course will have weekly problem sets using advanced calculus methods

Spring 2023

LEC Section: 01    TR 9:55 am - 11:10 am     Daniel P. Aalberts

PHYS 234 (S) Introduction to Materials Science (QFR)

Cross-listings: GEOS 234 PHYS 234

Primary Cross-listing

Materials Science is the study of how the microscopic structure of materials--whether steel, carbon fiber, glass, wood, plastic, or mayonnaise--determines their macroscopic mechanical, thermal, electric, and other properties. Topics of this course include classifying materials; material structure; thermodynamics and phase transformations; material properties and testing; how solids bend, flow, and ultimately break; and how to choose the right material for design applications. Materials Science is a highly interdisciplinary field and as a result the course prerequisites are broad but also flexible. Interested students who are unsure about their preparation are strongly encouraged to contact the instructor.

Class Format: lecture (3 hours per week) plus three to four small-group laboratory sessions throughout the semester (to be scheduled with instructor)

Requirements/Evaluation: weekly problem sets, class participation, and midterm and final exams, all of which have a substantial quantitative component

Prerequisites: high school physics and chemistry, preferably at the AP level, and MATH 140 or AP Calculus (BC), and one 200-level PHYS, CHEM, or GEOS course; or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: based on students' scientific background and seniority

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: This course does not count toward the Geosciences major.

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

GEOS 234 (D3) PHYS 234 (D3)

Attributes: MTSC Courses

Not offered current academic year
PHYS 301  (F) Quantum Physics  (QFR)
This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics. After a brief discussion of historical origins of the quantum theory, we introduce the Schrödinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309

Enrollment Limit: 20

Enrollment Preferences: physics majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Phys 301 relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

Fall 2022
LEC Section: 01 MWF 9:00 am - 9:50 am Protik K. Majumder
LAB Section: 02 T 1:00 pm - 4:00 pm John H. Lacy
LAB Section: 03 W 1:00 pm - 4:00 pm John H. Lacy
LAB Section: 04 M 1:00 pm - 4:00 pm John H. Lacy

PHYS 302  (S) Statistical Mechanics & Thermodynamics  (QFR)
Macroscopic objects are made up of huge numbers of fundamental particles interacting in simple ways--obeying the Schrödinger equation, Newton's and Coulomb's Laws--and these objects can be described by macroscopic properties like temperature, pressure, magnetization, heat capacity, conductivity, etc. In this course we will develop the tools of statistical physics, which will allow us to predict the cooperative phenomena that emerge in large ensembles of interacting particles. We will apply those tools to a wide variety of physical questions, including the behavior of gases, polymers, heat engines, biological and astrophysical systems, magnets, and electrons in solids.

Class Format: lecture/discussion three hours per week and weekly laboratory work

Requirements/Evaluation: weekly problem sets, exams, and labs, all of which have a substantial quantitative component

Prerequisites: required: PHYS 201, PHYS/MATH 210 or MATH 309; recommended: PHYS 202, PHYS 301

Enrollment Limit: 10 per lab

Enrollment Preferences: physics majors

Expected Class Size: 10 per lab

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: weekly problem sets, exams, and labs, all of which have a substantial quantitative component

Spring 2023
LEC Section: 01 MWF 10:00 am - 10:50 am Katharine E. Jensen
LAB Section: 02 T 1:00 pm - 4:00 pm Katharine E. Jensen
LAB Section: 03 W 1:00 pm - 4:00 pm Katharine E. Jensen
PHYS 312 (S) Philosophical Implications of Modern Physics (QFR)
Cross-listings: STS 312 PHYS 312 PHIL 312

Primary Cross-listing

Some of the discoveries made by physicists over the last century seem to show that our common sense views are deeply at odds with our most sophisticated and best confirmed scientific theories. The course will present the essential ideas of relativity theory and quantum theory and explore their implications for philosophy. We will ask, for example, what these theories tell us about the nature of space, time, probability and causality.

Requirements/Evaluation: attendance, participation, problem sets, exams, six 1- to 2-page papers and a 12- to 15-page term paper

Prerequisites: MATH 140, high-school physics, and either a 200-level course in PHIL or a 100-level course in PHYS

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors and Physics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
STS 312 (D2) PHYS 312 (D3) PHIL 312 (D2)

Attributes: PHIL Contemp Metaphysics + Epistemology Courses

Not offered current academic year

PHYS 314 (S) Controlling Quanta (QFR)

This course will explore modern developments in the control of individual quantum systems. Topics covered will include basic physical theories of atoms coupled to photons, underlying mathematical tools (including Lie algebras and groups), and computational methods to simulate and analyze quantum systems. Applications to quantum computing, teleportation, and experimental metaphysics (Bell's inequality) will also be discussed.

Requirements/Evaluation: tutorial preparation and participation, weekly problem sets/papers, and a final project

Prerequisites: PHYS/MATH 210 or MATH 209 or MATH 250

Enrollment Limit: 10

Enrollment Preferences: sophomores and junior Physics majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Not offered current academic year

PHYS 315 (F) Computational Biology (QFR)
Cross-listings: CSCI 315 PHYS 315

Primary Cross-listing

This course will provide an overview of Computational Biology, the application of computational, mathematical, statistical, and physical problem-solving techniques to interpret the rapidly expanding amount of biological data. Topics covered will include database searching, DNA sequence alignment, clustering, RNA structure prediction, protein structural alignment, methods of analyzing gene expression, networks, and genome assembly using techniques such as string matching, dynamic programming, hidden Markov models, and statistics.

Requirements/Evaluation: weekly Python programming assignments, code reviews, problem sets, plus a few quizzes and a final project

Prerequisites: programming experience (e.g., CSCI 136), mathematics (PHYS/MATH 210 or MATH 150), and physical science (PHYS 142 or 151, or CHEM 151 or 153 or 155), or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: based on seniority

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option
PHYS 319  (S) Integrative Bioinformatics, Genomics, and Proteomics Lab  (QFR)
Cross-listings:  MATH 319  CHEM 319  BIOL 319  PHYS 319  CSCI 319

Secondary Cross-listing

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

Class Format: The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

Requirements/Evaluation: lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

Prerequisites: BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

Enrollment Limit:  12

Enrollment Preferences: seniors, then juniors, then sophomores

Expected Class Size:  12

Grading: yes pass/fail option,  no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

Distributions:  (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

Quantative/Formal Reasoning Notes: Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

Attributes:  BIMO Interdepartmental Electives

Spring 2023
SEM Section:  01    TR 9:55 am - 11:10 am    Lois M. Banta
LAB Section:  02    TR 1:00 pm - 4:00 pm    Lois M. Banta

PHYS 321  (S) Introduction to Particle Physics  (QFR)

The Standard Model of particle physics incorporates special relativity, quantum mechanics, and almost all that we know about elementary particles and their interactions. This course introduces some of the main ideas and phenomena associated with the Standard Model. After a review of relativistic kinematics, we will learn about symmetries in particle physics, relativistic wave equations, Feynman diagrams, and selected applications of quantum electrodynamics, the weak interactions, and quantum chromodynamics. We will conclude with a discussion of spontaneous symmetry breaking and
the Higgs mechanism.

Class Format: Hybrid

Requirements/Evaluation: weekly problem sets, a midterm exam, and a final exam

Prerequisites: PHYS 301

Enrollment Limit: 15

Enrollment Preferences: By seniority

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Exams and problem sets all have a significant quantitative component.

Not offered current academic year

PHYS 402  (S)  Applications of Quantum Mechanics  (QFR)

This course will explore a number of important topics in the application of quantum mechanics to physical systems, including perturbation theory, the variational principle and the semiclassical interaction of atoms and radiation. The course will finish up with three weeks on quantum optics including an experimental project on non-classical interference phenomena. Applications and examples will be taken mostly from atomic physics with some discussion of solid state systems.

Class Format: hybrid

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 301

Enrollment Limit: 10 per sec

Enrollment Preferences: Physics and Astrophysics Majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course has weekly problem sets, all of which have a substantial quantitative component.

Spring 2023

TUT Section: T1  F 1:10 pm - 2:25 pm  David R. Tucker-Smith

PHYS 405  (F)  Electromagnetic Theory  (QFR)

This course builds on the material of Physics 201, and explores the application of Maxwell's Equations to understand a range of topics including electric fields and matter, magnetic materials, light, and radiation. As we explore diverse phenomena, we will learn useful approximation techniques and beautiful mathematical tools. In addition to weekly tutorial meetings, the class will meet once a week as a whole to introduce new material.

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, and a final exam or final project, all of which have a substantial quantitative component

Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 209 or MATH 309

Enrollment Limit: 10/section

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Not offered current academic year

PHYS 411  (F)  Classical Mechanics  (QFR)
This course will explore advanced topics in classical mechanics. Central ideas include the calculus of variations, the Lagrangian and Hamiltonian formulations of mechanics, phase space, central-force motion, non-inertial reference frames (including implications for physics on a rotating Earth), rigid-body rotations, and non-linear dynamics & chaos, with additional topics from continuum and fluid mechanics as time permits. Numerical and perturbative techniques will be developed and used extensively. We will also examine the ways in which classical mechanics informs other fields of physics. In addition to weekly tutorial meetings the class will meet weekly as a whole to introduce and discuss new material.

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, a final project, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309

Enrollment Limit: 10/section

Enrollment Preferences: majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: weekly problem sets requiring substantial quantitative reasoning using analytical and numerical methods.

Fall 2022

TUT Section: T1  F 1:10 pm - 2:25 pm  Charlie Doret, Daniel P. Aalberts

PHYS 412  (F)  Heliophysics

Cross-listings: ASTR 412  PHYS 412

Secondary Cross-listing

We study all aspects of the Sun, our nearest star. In addition to discussing our observations of recent eclipses and what has been learned about the solar atmosphere from eclipse research, we discuss the solar interior (including the Nobel-prize-winning solar neutrino experiment and helioseismology), the photosphere, the chromosphere, the corona, and the solar wind. We discuss the Sun as an example of stars in general. We discuss both theoretical aspects and observational techniques, including work at recent total solar eclipses. We discuss results from current spacecraft, including the Solar and Heliospheric Observatory (SOHO), the Solar Dynamics Observatory, the Sun Watcher (SWAP), and Hinode (Sunrise), and the newer GOES/UVSI (Solar Ultraviolet Imager) run by an alumnus as well as additional Total Solar Irradiance measurements from spacecraft. We will discuss the role of solar observations in confirming Einstein's General Theory of Relativity with the bending of light at the 1919, 1922, and 2017 total solar eclipses as well as gravitational redshift measurements in solar spectral lines, extending our discussion to the recent "chirp" of gravitational radiation reported from several colliding black holes and neutron stars observed with the Laser Interferometer Gravitational-wave Observatory (LIGO). We also discuss transits of Mercury across the face of the Sun, most recently on November 11, 2019. We highlight the 2004 and 2012 transits of Venus across the face of the Sun as observed from Earth, the first such transits of Venus since 1882, as well as our work in observing transits of Venus from Jupiter with the Hubble Space Telescope. We discuss plans for observing future total solar eclipses, including those of December 4, 2021, near or over Antarctica; October 23, 2023, in northwestern Australia; and April 8, 2024, over Mexico and a U.S. path from Texas to northern New England.

Requirements/Evaluation: biweekly tutorial presentations; biweekly response to colleagues' presentations

Prerequisites: ASTR 111 or a 200-level Physics course; or permission of the instructor

Enrollment Limit: 10

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

ASTR 412 (D3) PHYS 412 (D3)

Not offered current academic year

PHYS 418  (S)  Gravity  (QFR)

This course is an introduction Einstein's theory of general relativity. We begin with a review of special relativity, emphasizing geometrical aspects of
Minkowski spacetime. Working from the equivalence principle, we then motivate gravity as spacetime curvature, and study in detail the Schwarzschild geometry around a spherically symmetric mass. After this application, we use tensors to develop Einstein's equation, which describes how energy density curves spacetime. With this equation in hand we study the Friedmann-Robertson-Walker geometries for an expanding universe, and finally, we linearize Einstein's equation to develop the theory of gravitational waves.

**Requirements/Evaluation:** weekly problem sets, a midterm exam, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 301 or PHYS 405 or PHYS 411, or permission of instructor

**Enrollment Limit:** none

**Enrollment Preferences:** none

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** All problem sets and exams will have a substantial quantitative component.

Not offered current academic year

**PHYS 451  (F) Condensed Matter Physics  (QFR)**

Condensed matter physics is an important area of current research and serves as the basis for modern electronic technology. We plan to explore the physics of metals, insulators, semiconductors, superconductors, and photonic crystals, with particular attention to structure, thermal properties, energy bands, and electronic properties.

**Requirements/Evaluation:** weekly readings and problem sets, and exams

**Prerequisites:** PHYS 301 (may be taken simultaneously); or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Physics majors

**Expected Class Size:** 6

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** serious problem sets

**Attributes:** MTSC Courses

Not offered current academic year

Fall 2022

LEC Section: 01  F 2:35 pm - 3:50 pm  Daniel P. Aalberts

Spring 2023

LEC Section: 01  F 2:35 pm - 3:50 pm  Daniel P. Aalberts
The Political Economy major is designed to give students a grasp of the ways in which political and economic forces interact in shaping public policy. The major includes substantial study of the central analytical approaches in both Political Science and Economics and seeks to surmount the sometimes artificial barriers of specialization that may characterize either discipline taken by itself. Three of the required Political Economy courses undertake a conscious merging of the approaches in the two fields. (These courses are designed by, and usually are taught jointly by, political scientists and economists.) Political Economy 250 examines major theoretical texts in political economy and analyzes economic liberalism and critiques of economic liberalism in the context of current policy issues. Political Economy 401 examines contemporary issues in political economy in their domestic, comparative and international contexts. Political Economy 402 asks students to research and make proposals in policy areas of current importance. Background for the two senior courses is acquired through courses in international economics, public finance, and domestic and international/comparative politics and policy.

Students in Political Economy 402 visit Washington, D.C. Sunday night through Wednesday of the first week of spring vacation to conduct interviews relating to their Political Economy 402 group projects. This is a course requirement and thus a requirement for the major.

MAJOR

The Political Economy major requires students to complete eleven (11) courses: two introductory courses each in Economics and Political Science; one empirical methods course; three core courses specific to the Political Economy Program; and three electives, one from each of three categories. In order to balance students’ educations, majors must take at least one elective in Economics and one elective in Political Science; the third elective may come from either Economics or Political Science. In light of the public policy orientation of the program, all majors are also required to complete one course with a substantial experiential education component which is related to the making or effect of public policy. The purpose of the experiential education requirement is for the student to get out into the world and interact with people in cases where the stakes are real, often involving some element of community service or participation in the political process or in the making of or analysis of public policy, in order to learn something about public policy that one cannot get from a purely academic experience. This requirement must be fulfilled prior to taking POEC 402. It can be fulfilled through a regular semester-length course (which might also serve as an elective in the major), a winter study course, a study abroad academic internship, a winter study internship, or a summer internship. The chair distributes a list of approved experiential courses to majors at the beginning of each academic year. For an internship to satisfy the requirement, its focus must be the making or effect of public policy. Approval of the chair is required to use an internship to fulfill this requirement.

Two Introductory Economics Courses

1. ECON 110 Principles of Microeconomics
2. ECON 120 Principles of Macroeconomics

Two Introductory Political Science Courses

3. PSCI 201 Power, Politics, and Democracy in America
4. PSCI 202 World Politics: An Introduction to International Relations
or PSCI 203 Introduction to Political Theory

or PSCI 204 Introduction to Comparative Politics: State, Nation, and Democracy

One Empirical Methods Course

5. POEC 253 Empirical Methods in Political Economy

or ECON 255 Econometrics

Three Political Economy Program Courses

6. POEC 250/ECON 299/PSCI 238 Economic Liberalism and Its Critics

7. POEC 401 Contemporary Problems in Political Economy

8. POEC 402 Political Economy of Public Policy Issues

Three Elective Courses

Students must take at least one elective in Economics and at least one elective in Political Science; the third elective may come from either Economics or Political Science.

Please see the online catalog for up-to-date information on which courses are being offered in the current year.

One Comparative Political Economy/Public Policy Course

**ECON 204 / ENVI 234 / ECON 507(S) LEC Global Poverty and Economic Development**

Taught by: Pamela Jakiela

**ECON 213 / ENVI 213(F) LEC Introduction to Environmental and Natural Resource Economics**

Taught by: Sarah Jacobson

**ECON 214 / ENVI 212(F) TUT The Economics and Ethics of CO2 Offsets**

Taught by: Ralph Bradburd

**ECON 232(F) LEC Financial Markets, Institutions and Policies**

Taught by: Neal Rappaport

**ECON 233 LEC Behavioral Economics and Public Policy**

Taught by: Matthew Chao

**ECON 238 / ENVI 238 LEC Sustainable Economic Growth**

Taught by: Gregory Casey

**ECON 240 / ASIA 241(S) TUT Colonialism and Underdevelopment in South Asia**

Taught by: Anand Swamy

**ECON 348 / ECON 548(S) LEC Human Capital and Development**

Taught by: Owen Ozier

**ECON 360 LEC Monetary Economics**

Taught by: Kenneth Kuttner

**ECON 377 LEC Inspiration/Perspiration: The Economics of Innovation**

Taught by: Steven Natziger

**ECON 378(F) LEC Long-Run Comparative Development**

Taught by: Quamrul Ashraf

**ECON 381(S) LEC Global Health Policy Challenges**

Taught by: Susan Godlonton

**ECON 387 / ENVI 387 / ECON 522(S) LEC Economics of Climate Change**

Taught by: Matthew Gibson

**ECON 453(S) SEM Research in Labor Economics and Policy**

Taught by: Owen Thompson

**ECON 455(F) SEM Research in Economic History: Sources, Methods, and Applications**

Taught by: Steven Natziger
ECON 465 (S) SEM Pollution and Labor Markets
Taught by: Matthew Gibson

ECON 470 SEM The Indian Economy: Development and Social Justice
Taught by: Anand Swamy

ECON 476 SEM Behavioral Economics: Theory and Methods

ECON 477 / ENVI 376 (F) SEM Economics of Environmental Behavior
Taught by: Sarah Jacobson

ECON 501 (F) SEM Economic Growth and Development
Taught by: Quamrul Ashraf

ECON 504 (F) SEM Public Economics in Developing Countries
Taught by: Jon Bakija

ECON 505 (F) LEC Developing Country Macroeconomics I: Theory
Taught by: Peter Montiel

ECON 508 / ECON 308 (S) TUT Skills for a Modern Economy and How to Pay for Them
Taught by: David Evans

ECON 510 / ECON 352 (S) LEC Financial Development and Regulation
Taught by: Gerard Caprio

ECON 514 / ECON 389 (S) SEM Tax Policy in Global Perspective
Taught by: Jon Bakija

ECON 523 / ECON 379 (S) SEM Program Evaluation for International Development
Taught by: Pamela Jakiela

ECON 532 / ECON 375 (S) TUT Inclusive Growth and Crisis Response: The Role of Social Protection Systems
Taught by: Michael Samson

ECON 534 TUT Long Term Fiscal Challenges
Taught by: Peter Heller

MAST 351 / PSCI 319 / ENVI 351 (F, S) SEM Marine Policy
Taught by: Catherine Robinson Hall

PSCI 224 (F) SEM Neo-liberalism: What Is It and Why Does It Matter?
Taught by: Michael MacDonald

PSCI 241 / SOC 241 SEM Meritocracy
Taught by: Darel Paul

PSCI 246 (F) SEM Introduction to Capitalism
Taught by: Sidney Rothstein

PSCI 247 / ASIA 249 (S) LEC Political Power in Contemporary China
Taught by: George Crane

PSCI 253 (S) LEC The Tragedy of Venezuela
Taught by: James Mahon

PSCI 280 (S) TUT Silicon Valley: Digital Transformation and Democracy
Taught by: Sidney Rothstein

PSCI 284 SEM The Politics of Economic Crises
Taught by: Michael MacDonald

PSCI 289 SEM The welfare state in comparative perspective
Taught by: Sidney Rothstein
One International Political Economy Course

**ECON 215 / GBST 315(S) LEC Globalization**
Taught by: Will Olney

**ECON 218 / GBST 218(S) SEM Capital and Coercion**
Taught by: Ashok Rai

**ECON 514 / ECON 389(S) SEM Tax Policy in Global Perspective**
Taught by: Jon Bakija

**ECON 515 / ECON 359(S) SEM Developing Country Macroeconomics II: Institutions and Policy Regimes**
Taught by: Kenneth Kuttner

**ECON 516 / ECON 366(S) SEM International Trade and Development**
Taught by: Will Olney

**PSCI 226 / GBST 226 / LEAD 226(S) LEC Aid, Arms, and Armies: The Politics of Intervention in Africa**
Taught by: Elizabeth Iams Wellman

**PSCI 228 LEC International Organization**
Taught by: Cheryl Shanks

**PSCI 229(S) LEC Global Political Economy**
Taught by: Darel Paul

**PSCI 266 LEC The United States and Latin America**
Taught by: James Mahon

CREDIT FOR COURSEWORK DONE ELSEWHERE

The three Political Economy Program courses (POEC 250, 401, and 402) must be completed at Williams without exception. Students are strongly encouraged to complete the empirical methods course (POEC 253 or ECON 255) and PSCI 201 at Williams, as versions of these courses offered elsewhere are usually highly imperfect substitutes that will not provide adequate preparation for the senior seminars; students may in rare cases be able to complete either of these requirements during study at another college or university (e.g. during study abroad), but only with prior permission.
from the chair. The three electives and other introductory courses in Political Science may be completed during study at another college or university (e.g., during study abroad) with permission of the chair. The general policy of the Program is to grant credit for one course per semester abroad and in extraordinary circumstances, credit for three courses for an entire year abroad. Students who score a 5 on the AP exam in Microeconomics, Macroeconomics, or Comparative Government and Politics may receive credit towards the major for the cognate introductory economics or political science course(s). Credit for A levels and IB exams in Economics and for introductory microeconomics and macroeconomics classes taken at other colleges and universities (subject to approval by the Economics department study away coordinator) is given consistent with the current policy of the Economics Department. Students whose economics department placement exam scores allow them to place out of ECON 110 and/or ECON 120 may receive credit towards the major for the corresponding class. No substitute higher-level coursework is required for majors receiving credit in this way, although it is certainly encouraged. Students cannot substitute AP credit for PSCI 201.

RECOMMENDED PROGRESSION THROUGH THE REQUIRED MAJOR COURSES

ECON 110 and 120 are prerequisites for many higher level POEC and ECON classes. Therefore it is best to take these during your freshman year if you are thinking about majoring in Political Economy. You should also take any of PSCI 201, 202, 203, or 204 in your first year if possible, as you need at least one of those as a prerequisite or co-requisite for POEC 250. As all POEC majors must take PSCI 201 and enrollment preference always goes to underclass students, definitely take that in your first or second year. You should also ensure that your math coursework is sufficient in your first year. MATH 130 (Calculus I) or the equivalent is a prerequisite for the POEC methodology requirement (POEC 253 or ECON 255). You might also consider taking STAT 161 or STAT 201 early on, as that would give you the option of taking ECON 255.

Students should plan to take POEC 250 and POEC 253 (or ECON 255) during the sophomore and junior years, keeping in mind that both POEC 250 and POEC 253 are offered only in the fall, and that ECON 255 requires STAT 161, STAT 201, or STAT 202 as a prerequisite. POEC 401, taken fall of senior year, requires POEC 253 or ECON 255 as a prerequisite, so that prerequisite must be completed before the start of senior year. Students should also get started on their electives during sophomore and junior year.

THE DEGREE WITH HONORS IN POLITICAL ECONOMY

Due to the special demands of this interdisciplinary major, the only route to honors in Political Economy is the thesis. Seniors may pursue the honors thesis course (Political Economy 493-W31) during the fall semester and winter study period. The third course contributing to such an honors program would normally be an elective in Political Science or Economics taken during the junior year. This course, which may be one of the required electives, must be closely related, indeed must prepare the ground for the honors thesis.

Juniors in the Political Economy major with at least a 3.5 GPA in the program may apply for the honors thesis program by means of a written proposal submitted to the chair by mid-April. Written guidelines for such proposals are available on the program website. The proposal should have been discussed with at least two faculty members, and at least one faculty advisor from each discipline must be solicited by the student prior to submission of the proposal.

Final decisions about admission to the honors program will be made in late May after spring grades become available.

To achieve the degree with honors in Political Economy, the thesis must be completed by the end of winter study period and be judged of honors quality by a committee consisting of the two advisors and a third reader. A thesis judged to be of particular distinction will qualify its author for the degree with highest honors.

STUDY ABROAD

Despite the fact that Political Economy requires more courses than the typical major, many Political Economy majors go abroad. The easiest major credits to obtain abroad are the electives in Political Science and Economics. Since POEC 250 and POEC 253 are only offered in the fall, students considering spending only one semester abroad typically find spring to be the better choice. Nonetheless, many students study away for the fall or the whole year. If you expect to be away during the fall of your junior year, it is critical that you either: (a) take POEC 253 in the fall of your sophomore year; or (b) complete MATH 130 as well as STAT 161 or 201 early enough that you can take ECON 255 (which is offered every semester) before the end of your junior year. In addition, if you expect to be away fall of junior year, you should be sure to take POEC 250 in the fall of your sophomore year.

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the program.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description.
Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No, although because so many of the classes in the program are Williams-specific, there is an effective limit of 2-3.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. Only Economics or Political Science courses can be awarded credit, and they must satisfy one of the elective categories (or in rarer cases one of the ECON or PSCI intro requirements).

Are there specific major requirements that cannot be fulfilled while on study away?

Yes.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. The POEC major requires 3 specific POEC courses (250, 401, and 402), and one empirical methods course (POEC 253 or ECON 255). The POEC courses are only offered in a single semester (fall for 250, 253, and 401 and spring for 402), and 401 and 402 must be taken in the senior year. 253 can be replaced with ECON 255, which is offered in fall or spring, but ECON 255 has an additional prerequisite of STAT 161, STAT 201, or STAT 202. Studying abroad in POEC requires careful planning.

POEC 250 (F) Economic Liberalism and Its Critics

Cross-listings: ECON 299  PSCI 238  POEC 250

Primary Cross-listing

Economic liberalism holds that society is better off if people enjoy economic freedom. Its critics point to what they believe this position ignores or what it wrongly assumes, and hence, how it would make bad policy. This course explores the relationship between politics and economics by surveying influential works of political economy. Its first part examines major thinkers in relation to the historical development of capitalism in Western Europe and the United States: the classical liberalism of Adam Smith, Karl Marx’s revolutionary socialism, and the reformist ideas of John Maynard Keynes. The second part considers mid-20th-century writers who revise and critique economic liberalism from a variety of perspectives, including Friedrich Hayek, Milton Friedman, Ronald Coase, Arthur Okun, and Albert O. Hirschman. The third part surveys significant recent contributions relevant to the themes of the course, with applications to current public policy issues, including topics such as: power relations and autonomy in the workplace; asymmetric information and social insurance; economic inequality and distributive justice; equality of opportunity; the economics of health care; positional goods and the moral foundations of capitalism; economic nationalism and new trade theory; behavioral economics; climate change and intergenerational equity; finance and financial crises; and rent-seeking. The combination of the historical focus of the early part of the course with discussion of modern policy issues and debates in the latter part of the course permits you to appreciate the ongoing dialogue between classical and contemporary views of political economy.

Class Format: This class uses a flipped classroom approach, where before each class meeting, students watch a lecture video, and sometimes write an essay or solve some problems on relating to the assigned reading and video, and then in-person class is devoted primarily to discussion.

Requirements/Evaluation: six short essays, several short homework assignments, and a final exam

Prerequisites: ECON 110 and 120 or equivalent; PSCI 201, 202, 203, or 204 (may be taken concurrently with POEC 250); open to non-majors

Enrollment Limit: 30

Enrollment Preferences: Political Economy majors and sophomores intending a Political Economy major

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 299 (D2) PSCI 238 (D2) POEC 250 (D2)

Attributes: AMST Critical and Cultural Theory Electives POEC Required Courses

Fall 2022

SEM Section: 01  MR 2:35 pm - 3:50 pm  William M. Gentry, James E. Mahon
This course introduces students to common empirical tools used in policy analysis and implementation. The broad aim is to train students to be discriminating consumers of public policy-relevant research. The emphasis in the course is on intuitive understanding of the central concepts. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; random variables and distributions; statistical estimation, inference and hypothesis testing; and modeling using multiple regression, with a particular focus on understanding whether and how relationships between variables can be determined to be causal—an essential requirement for effective policy formation. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

Requirements/Evaluation: Problem sets, group project, midterm exam, final exam
Prerequisites: MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255
Enrollment Limit: 20
Enrollment Preferences: Political Economy majors, Environmental Policy majors and sophomores
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Unit Notes: does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major
Distributions: (D2) (QFR)
Quantitative/Formal Reasoning Notes: The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.
Attributes: PHLH Statistics Courses  POEC Required Courses

POEC 401  (F)  Contemporary Problems in Political Economy
This course examines contemporary problems in political economy at and across diverse spatial scales. Using both Economics and Political Science methods of analysis, students will study the way societies respond to the myriad risks facing its citizens. The goal of this course is both to build upon theoretical debates encountered in POEC 250 as well as to prepare students for the public policy analysis they will do in POEC 402.
POEC 402 (S) Political Economy of Public Policy Issues

In this course, students form groups that conduct a political and economic analysis of a public policy issue of their choosing. They do extensive reading, conduct interviews, write a major report on their findings and recommendations, and present and defend their findings in a public talk.

Class Format: student presentations

Requirements/Evaluation: group policy projects including an 80- to 100-page paper and 2-hour presentation

Prerequisites: POEC 253 or ECON 255, POEC 250, POEC 401; open only to Political Economy majors

Enrollment Limit: 19

Enrollment Preferences: open only to Political Economy majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Unit Notes: required for the Political Economy major

Attributes: GBST Economic Development Studies Electives  POEC Required Courses

Attributes: EXPE Experiential Education Courses  POEC Required Courses

Fall 2022
Politics is most fundamentally about forging and maintaining community, about how we manage to craft a common destiny guided by shared values. Communities need a way to reconcile conflicts of interest among their members and to determine their group interest; they need to allocate power and to determine its just uses. Power may be used wisely or foolishly, rightly or cruelly, but it is always there; it cannot be wished away. Political science attends to the ways that social power is grasped, maintained, challenged, or justified. The contests over power and the values that it should be used to further give politics its drama and pathos. The effort to understand politics aims not only to describe and explain, but also to improve political life.

The Political Science major is structured to allow students either to participate in the established ways of studying politics or to develop their own focus. To this end, the department offers two routes to completing the major, each requiring nine courses. We invite students either to organize their major through the subfields that structure the discipline of political science (American politics, international relations, political theory, and comparative politics), or to develop individual concentrations reflecting their particular interests, regardless of subfields.

**MAJOR**

**Subfield Concentration Route:** Upon declaring a major, students choose one subfield: American politics, international relations, political theory, or comparative politics. The subfield concentration draws at least four (4) of the nine courses from one subfield including the appropriate core course from 201-204, two electives of the student’s choice at the 200 or 300 level and the senior seminar (or an individual project) in the student’s subfield. Students selecting political theory as their subfield concentration must take Political Science 231 or Political Science 232 as one of their four subfield courses, in addition to taking Political Science 203 and prior to taking Political Science 430. With permission of the department chair, students may take a senior seminar in a different subfield, providing they take a third elective in the subfield of concentration. In addition, students must take courses in two subfields outside the subfield of concentration to satisfy the breadth requirement (all methods courses also count toward the breadth requirement). The faculty advisor must approve the student plan. All students must take at least one 300-level course and one research course to complete the major. (Most senior seminars are also research courses but, especially in political theory, not all are.) In addition, no more than two
100-level courses can count toward the major.

**Individual Concentration Route:** Alternatively, students may devise a concentration of their own. In this event, the student prepares a curricular plan in consultation with a faculty advisor, explaining the nature of the concentration and the courses the student will take. The individual concentration also requires nine (9) courses, with at least five (5) thematically linked courses constituting the concentration. Of these five courses, four are electives at the 200 or 300 level, including one from 201-204, and one is a senior seminar or individual project. In addition, students pursuing an individual concentration must take at least two other courses that illustrate breadth in political science. To complete the requirement, the student has their choice of any two other courses within the Political Science Department. The faculty advisor and the department chair must approve the student plan. All students must take at least one 300-level course and one research course to complete the major. (Most senior seminars are also research courses but, especially in political theory, not all are.) In addition, no more than two 100-level courses can count toward the major.

**ADVISEMENT**

When a student chooses to major in Political Science (usually at the end of the sophomore year), they may register with any Political Science faculty member. The registering faculty member will ask for preferences for a permanent faculty advisor and will assist undecided students in finding an advisor. In all cases, students will be paired by the beginning of junior year with an advisor who will continue with them through graduation.

**COURSE NUMBERING**

The course numbering used by the Political Science Department reflects the format and specialization of a course. The 100-level courses are designed to address political topics from multiple subfield perspectives; many are seminars designed for first-year students. The 200-level courses are divided between our core courses and our electives. The core courses, numbered from 201-204, serve as introductions both to the substance of politics and the subfields organizing the study of politics. The introductory subfield course must be completed before the senior year. The 200-level elective courses delve into political processes, problems and philosophies. 100-level and 200-level courses have no prerequisites. 300-level courses are more specialized and have prerequisites. 400-level courses are senior seminars offered for students in the major; senior seminars also are open to juniors and to non-majors if space permits. In general, the main subfield of non-core courses can be read from the middle digit of the course number: 0, 1 or 5 for American politics; 2 or 6 for international relations; 3 or 7 for political theory; 4 or 8 for comparative politics. Because the relevant course number is not available, and as some courses may not fit the subfields, please check the “attributes” entry to confirm how the course is categorized by the department.

**WINTER STUDY PROJECT**

The department welcomes relevant WSP 99 proposals that can make important contributions to the student’s understanding of public affairs and politics. Majors, seniors, and students without previous WSP 99 experience have preference.

**THE JUNIOR YEAR ABROAD**

A major in Political Science can be readily and usefully combined with study off-campus. Generally, only one course taken per semester abroad in a program approved by the College may be counted toward the requirements for a degree in Political Science.

**FAQ**

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

**Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in many cases, though students should be sure to contact the department.

**What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Course title and description, though sometimes a syllabus may be needed. How much we need may depend on our familiarity with the institution or program.

**Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

Yes. Typically we allow not more than one course per semester, or two per year, to count for major credit. In special circumstances, the chair may consider granting an exemption and allow an additional course.

**Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

No, although this depends on the course. If, after considering description and institution we feel it is not rigorous enough, we will not count it.

**Are there specific major requirements that cannot be fulfilled while on study away?**

Yes. We do not allow the senior seminar requirement to be fulfilled by study abroad.

**Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)**
No. One such required course (either Ancient or Modern Political Thought for those specializing in political theory within the major) can be fulfilled by an appropriate study abroad course.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

When issues arise that’s almost always because the student did not keep department adequately informed of evolving plans.

PREPARATION FOR GRADUATE STUDY

The Department recommends that students contemplating graduate school, especially if they plan to study fields outside political theory, take a course in research and quantitative methods, such as PSCI 300 or, if it is not taught, ECON/POEC 253.

THE DEGREE WITH HONORS IN POLITICAL SCIENCE

To become a candidate for honors the student must (1) apply in the second semester of the junior year, (2) submit a research proposal acceptable to the department’s honors committee and for which an appropriate advisor is available, (3) have a record of academic excellence in Political Science. The last includes not only the student’s cumulative GPA in Political Science, generally 3.5 or above, but also demonstrated research and writing skills, evidenced by one or two examples of graded work submitted along with the thesis proposal. Along with the successful completion of a high-quality thesis, the degree with honors in Political Science requires enrollment in the year-long senior thesis seminar, in addition to the other nine (9) courses of the regular major requirements.

ADVANCED STUDY IN AMERICAN POLITICS

The Department of Political Science provides the opportunity for an unusually gifted student to engage in an entire year’s advanced research in American politics under singularly favorable conditions. Supported by income derived from an endowment fund, the student, designated the Sentinels of the Republic Scholar (after the name of the fund), receives a substantial research stipend to cover costs associated with the proposed project.

This unique research course (Political Science 481-W33-482) is designed to encourage the pursuit of excellence among the most talented Williams students of Political Science. Admission to it is awarded to the most distinguished candidate on the basis of demonstrated capacity for outstanding work and of the project’s promise for creative contributions to the understanding of American politics, political institutions and thought.

PSCI 118  (F)  Power to the People?

Popular unrest. The resurgence of authoritarian styles and practices in politics. Democratic collapse. Political tumult around the globe in recent decades has put elites, and others, on edge as young democracies have collapsed and longer standing ones appear to be stumbling. In the United States, basic stability and democratic expansion have been accompanied by increasing citizen distrust of institutions, growing social divisions, contestation over basic citizenship rights, and political violence. The pandemic, related economic distress, social protests and insurrection have only sharpened the precarious state of U.S. democracy. Acute observers have long seen the U.S. as a harbinger of the promise and peril of modern democracies. What is the fate of democracy in the U.S.? What does that portend, if anything, for other democracies, or for the general principle of popular sovereignty--the idea that the people govern themselves? We investigate these and related questions, primarily through active, project-based group research activities, guided by political theory and empirical research in the social sciences. Our investigation will include substantial class-time collaboration with a similarly structured undergraduate course taught by a sociologist at Johns Hopkins University and may include an optional weekend research trip.

Requirements/Evaluation: active class participation, three 4-page essays, multiple group assignments, and class presentations

Prerequisites: first-year students

Enrollment Limit: 14

Enrollment Preferences: first-year students

Expected Class Size: 14

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: EXPE Experiential Education Courses  PSCI American Politics Courses
This course will help students understand the US role in the world. US wealth and military power force its leaders to make choices that no other leaders in the world confront. Students will learn to evaluate the decisions that US leaders have made on a wide range of difficult foreign policy issues, including: rising Chinese power; Russian moves in Ukraine; nuclear proliferation to Iran; terrorist threats; humanitarian disasters in Syria and Libya; and long-term challenges like climate change. We will not only describe American involvement in various international issues but also seek to understand the reasons why the US perhaps should or should not be involved, and we will see why such careful reasoning only sometimes gains traction in actual US foreign policy debates. Finally, we will assess whether US foreign policy decisions are coherent - that is, whether the US can be said to follow a “grand strategy.” By the end of the course, students will develop their ability to think about foreign policy issues, improving their ability to participate in public life as engaged citizens.

Class Format: discussion
Requirements/Evaluation: short papers, class participation, and final exercise
Prerequisites: none
Enrollment Limit: 12
Enrollment Preferences: first-years and sophomores
Expected Class Size: 12

Attributes: PSCI International Relations Courses
Not offered current academic year

This course introduces students to the major issues in the study of leadership, a central concept in the study of politics. The first part of the course will examine key theoretical problems that have occupied political thinkers from Plato and Confucius to Machiavelli and the American framers: What makes a leader successful? What kinds of regimes best serve to encourage good leaders and to constrain bad ones? What is the relationship between leadership and morality—can the ends justify the means? What functions does leadership fill, and what challenges do leaders face, in modern democratic states? The second half of the course will look at leaders in action, charting the efforts of politicians, intellectuals, and grassroots activists to shape the worlds in which they live. Case studies will include antislavery politics and the American Civil War; the global crises of the 1930s and 1940s; and the social movements of the 1960s and 1970s. In addition to active class participation, students will be expected to write a 5-page proposal for a research paper on a leader of their choice, a 10-page research paper, an in-class midterm exam, and a cumulative, in-class final exam.

Requirements/Evaluation: active class participation, 5-page research proposal, 10-page research paper, in-class midterm exam, and a cumulative in-class final exam
Prerequisites: none
Enrollment Limit: 25

Attributes: LEAD American Domestic Leadership
In spite of predictions that religion would wither away in the face of modernization, even casual observation indicates that it remains a powerful force in contemporary political life. Our goal is to obtain an enhanced understanding and appreciation of the salience of religion in public life. The course will be divided into three parts. The first part focuses on different theoretical approaches to making sense of the relation between religion, politics, and society, discussing especially the concept of the 'secular' in Western thought and decolonial critique thereof. The second part will take a global perspective on the relation between religion and politics. We will discuss cases of Buddhism, Christianity (Catholicism and Protestantism), Confucianism, Hinduism, Islam (Sunni and Shi'a), and Judaism. The third part focuses on religion in the USA. Here, we will discuss the role of religion in American political culture, the relation of religion to the state, the relevance of religious interests and their political mobilization, religious minorities in the United States, and many other aspects of religion in the US society. Although the study of religion and politics raises a host of deep philosophical questions, the principal aim of the course is to understand how religion affects politics (and vice versa), rather than to explore the normative dimensions of questions raised by the interaction of these two forces.

Requirements/Evaluation: Class participation and three papers, in these proportions: 10% attendance; 20% participation; 20% first paper (7 pages); 30% second paper (8-10 pages); and 20% third paper (7 pages). No final exam.

Prerequisites: none

Cross-listings: AMST 132 PSCI 132 AFR 132

Secondary Cross-listing
This introductory seminar investigates the relationship between three major schools of thought in contemporary Africana social and political philosophy: the African, Afro-North American, and Afro-Caribbean intellectual traditions. We will discuss a range of thinkers including Dionne Brand, Aimé Césaire, Angela Davis, Édouard Glissant, Kwame Gyekye, Paget Henry, bell hooks, Katherine McKittrick, Charles Mills, Nkiru Nzegwu, Oyèrónke Oyewumi, Ngugi wa Thiong'o, Cornel West, and Sylvia Wynter. A primary goal of the course is to provide students with the intellectual resources to decipher problems central to philosophical discourse and to allow students an opportunity to apply what they learn to critical issues in current geopolitics.

Requirements/Evaluation: attendance and participation, two 5- to 7-page essays, and one 10-page final paper
Prerequisites: none; open to all
Enrollment Limit: 15
Enrollment Preferences: first- and second-year students
Expected Class Size: 12
Grading: no pass/fail option, no fifth course option

This course is cross-listed and the prefixes carry the following divisional credit:

PSCI 135 (F) Politics after the Apocalypse

Cross-listings: STS 135 PSCI 135

Primary Cross-listing
What shape will politics take after the apocalypse? Even before the coronavirus pandemic gave us reason to wonder if we are, in fact, living through an apocalypse, speculation about the end of the world and its aftermath pervaded recent television, movies, literature, philosophy, and critical theory.
In this class we draw these works into conversation with political theories of the "state of nature" and "state of exception" to better understand what political possibilities are opened and foreclosed in times of crisis. What aspects of politics will endure the ravages of fire or pestilence? What new political realities might emerge on ground cleared by disaster? What does it say about pre-pandemic politics that we were so eager to consume stories of states falling and bands of survivors scraping together a nasty, brutish and short existence? And how will the unfolding pandemic change how we respond to these stories? Class will be driven primarily by discussion, typically introduced by a brief lecture.

Class Format: Class meetings will be conducted remotely using zoom.
Requirements/Evaluation: two 3-5 page papers, one short story (7-15 pages and including an explanatory cover letter), contributions to a class project documenting and analyzing the pandemic, and class participation
Prerequisites: first- or second-year students, or permission of instructor
PSCI 160  (F)  Refugees in International Politics  (DPE) (WS)

Globally, refugees seem to create, and be caught up in, chronic crisis. This course evaluates how this can be--how a crisis can be chronic, and for whom this chronic crisis is a solution. We investigate who refugees are, in international law and popular understanding; read refugee stories; examine international and national laws distinguishing refugees from other categories of migrants; evaluate international organizations' roles in managing population displacement; look at the way that images convey stereotypes and direct a type of aid; consider refugee camps in theory and example; and reflect on what exclusion, integration, and assimilation mean to newcomers and host populations. In whose interest is the prevailing system? Who might change it, and how?

Requirements/Evaluation: Ten essays: five lead, five response. The first two weeks' essay grades will be unrecorded.

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: first-year students, to be selected randomly from list of those enrolled.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: In addition to writing every week, students will have a chance work on specific skills cumulatively.

Difference, Power, and Equity Notes: This course examines the way in which home states categorize people and oppress some, producing refugees; the way that host states categorize people and oppress some, using immigration to shore up the prevailing ethnic hierarchy; and why we worry about some of these categories of oppression more than others.

PSCI 201  (F)(S)  Power, Politics, and Democracy in America

Begun as an experiment over 200 years ago, the United States has grown into a polity that is simultaneously praised and condemned, critiqued and mythologized, modeled by others and remodeled itself. This course introduces students to the dynamics and tensions that have animated the American political order and that have nurtured these conflicting assessments. Topics include the founding of the American system and the primary documents (the Declaration of Independence, the Constitution, and the Federalist Papers), the primary institutions of national government then and now (Congress, the presidency, and the Supreme Court), and the politics of policy-making in the United States. We study structures, processes, key events, and primary actors that have shaped American political development. In investigating these topics, we explore questions such as these: How is power allocated? What produces political change? Is there a trade-off between democratic accountability and effective governance? How are tensions between liberty and equality resolved? Do the institutions produce good policies, and how do we define what is good?

Requirements/Evaluation: depending on the section, some combination of response papers, short-to-medium papers, projects, exams, and class participation

Prerequisites: this is an introductory course, open to first-year students and sophomores; juniors and seniors may enroll only with the permission of instructor and under special circumstances

Enrollment Limit: 30

PSCI 202  (F)(S)  World Politics: An Introduction to International Relations

World politics is often taken to be an arena of human interaction unto itself, where the concepts that serve us well in understanding domestic politics and our everyday public lives—democracy, law, institutions, morality, authority—are displaced by their opposites—rule by the strong, use of force, raison d'état, anarchy. In particular, the discipline of International Relations claims special responsibility for analyzing and explaining this arena. But how different is world politics? We live in a world in which resolutions of the United Nations Security Council carry the aura of law and authority; human rights are held up as universal moral standards; international treaties regularly restrain supposedly sovereign states in regulating their domestic economies; culture, wealth and information surge transnationally, and the vast majority of wars are now 'civil' ones. This course is about politics at the world scale and the myriad ways in which scholars and practitioners interpret and explain it. We start by covering international relations theories, and then turn to the international politics of war and peace, trade and globalization, human rights and climate change.

Requirements/Evaluation: 2 papers, 6-8 pages in length; final exam; class participation

PSCI 203  (F)(S)  Introduction to Political Theory

Is politics war by other means? Is it merely a practical way to meet our needs? Or is it, rather, the activity through which citizens pursue justice and the good life? And what is justice? How can it be established and secured? Where does it apply? To whom? What are the powers and obligations of citizenship? Who decides? On what basis? Political theory addresses questions such as these as it investigates the fundamental problems of how people can, do, and ought to live together. The questions have sparked controversy since the origins of political thinking; the answers remain controversial now. This course addresses the controversies, drawing examples from struggles over such matters as racism, colonialism, revolution, political founding, economic order, and the politics of sex and gender, while focusing on major works of ancient, modern, and contemporary theory by such authors as Plato, Aristotle, Machiavelli, Hobbes, Rousseau, Mill, Marx, Nietzsche, Beauvoir, Arendt, Fanon, Rawls, Foucault, and Young. Themes may include power, authority, freedom, justice, equality, democracy, neoliberalism, feminism, and violence, though the emphases will vary from semester to semester.

Requirements/Evaluation: Three papers, class participation, and occasional informal writing/Glow posts.
PSCI 204 (F)(S) Introduction to Comparative Politics
The comparative study of politics looks mainly at what goes on inside countries, the domestic dynamics of power and institutions and identities. The purpose is to deepen our understanding of politics. In this class we will consider a number of analytic concepts central to the study of politics generally--the state, legitimacy, democracy, authoritarianism, nationalism--to comprehend political processes and transformations in various parts of the world. We will focus particularly on three themes: what is democracy and how might it fail? Why do certain authoritarian regimes persist while others do not? What is political contention and how is it manifest in various contexts?

Requirements/Evaluation: 2-3 short papers, a midterm and/or final exam
Prerequisites: none
Enrollment Limit: 30
Enrollment Preferences: first-years and sophomores

PSCI 208 (F) Wealth in America (WS)
The pursuit of wealth is an important feature of American political identity, captured by the ideas of the American dream and the Protestant work ethic. The accumulation of wealth has been lauded as both a worthy individual activity and a vital component of the nation's public interest. Yet inequality in wealth may conflict with the political equality necessary for democratic governance and public trust, leading to concerns that we are sacrificing community, fairness, and opportunity for the benefit of a small portion of the population. This course focuses on questions about the public value of wealth and its accumulation, which have become more pressing now that the richest one percent of Americans own about 40 percent of privately held wealth. Some readings will be historical, particularly those focusing on American political thought and the politics of the Gilded Age. Most readings will focus on contemporary political debates about the accumulation, concentration, and redistribution of wealth.

Requirements/Evaluation: four 5-page papers and a final 10-page paper that is a revision and extension of a short paper
Prerequisites: none; not suitable for first-year students
Enrollment Limit: 19
Enrollment Preferences: Political Science majors with concentration in American politics and Political Economy majors
Expected Class Size: 19
Grading: no pass/fail option, no fifth course option
Unit Notes: American concentration
Distributions: (D2) (WS)
Writing Skills Notes: Four 5-page papers, peer review, and a revision of extension of one of these papers into a 10-page paper at the end of the semester. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

PSCI 212  (S) From Tocqueville to Trump: Leadership and the Making of American Democracy  (DPE)
Cross-listings:  LEAD 205  PSCI 212
Secondary Cross-listing
America’s founders didn’t mean to create a democracy. But since the Revolution, leaders have been fighting to make real for all Americans the promise of government of, by, and for the people. In this course, we will look at how leaders have marshaled ideas, social movements, and technological changes to expand the scope of American democracy--and the reasons they have sometimes failed. We will examine how founders such as Benjamin Franklin and James Madison envisioned the relation between the people and the government; how workers, African Americans, and women fought to participate in American politics; and how globalization, polarization, and inequality are straining American democracy and political leadership in the 21st century. We will examine leadership to better understand American democracy--and vice versa. We will ask: What explains why some leaders have succeeded where others have failed? Have some periods of American democratic politics been more amenable to particular kinds of leadership than others? What makes American political leadership distinctive in international comparison? Who, exactly, has been permitted to participate in American politics, and on what terms? How has the relation between the governors and the governed changed over time, and what factors and events have shaped those relations? How has America’s democratic experiment compared with (and interacted with) democracy elsewhere in the world? Is America really a democracy at all?
**Requirements/Evaluation:** bi-weekly short writing assignments, term paper, midterm and final in-class exams

**PSCI 214 (S) Racial and Ethnic Politics in America**

Arguably, the dominant discourse in the presidency of Donald Trump and the battle to succeed him is about race. Race is connected to salient issues like immigration and police conduct; to politicians across the political spectrum; and (some argue) to virtually everything in American politics, including fundamental concepts that have no manifest racial content, like partisanship and the size and scope of government. We will evaluate the role of race as it relates to public opinion, political behavior, campaigns, political institutions, and public policy debates, with special attention devoted to the nature of racial attitudes. Most of the course will focus on the historical and contemporary relations between whites and African Americans, but we will also explore topics involving other pan-ethnic communities, particularly Latinos and Asian Americans.

**Requirements/Evaluation:** class participation, one to two short papers (5-7 pages), one medium paper (8-12 pages), an oral presentation, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** poli sci majors first, seniors second, juniors third, sophomores fourth

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**PSCI 215 (S) Race and Inequality in the American City**

Cross-listings: LEAD 215  PSCI 215

**Primary Cross-listing**

In the past half-century, American cities have gotten both much richer and much poorer. The making of "luxury cities" has gone hand-in-hand with persistent, concentrated poverty, extreme racial segregation, mass incarceration, and failing public services-social problems borne primarily by people of color. This course will examine the political underpinnings of inequality in American cities, with particular attention to the racialization of inequality. Among the topics we will cover are: the structures of urban political power; housing and employment discrimination; the War on Crime and the War on Drugs (and their consequence, mass incarceration); education; and gentrification. We will ask: How have city leaders and social movements engaged with urban problems? How have they tried to make cities more decent, just, and sustainable? Under what circumstances has positive leadership produced beneficial outcomes, and in what circumstances has it produced perverse outcomes? We will engage primarily with political science, but also with scholarship in other disciplines, including sociology, history, geography, and legal studies, all of which share an interest in the questions we will be exploring. Students will leave this course with a deeper understanding of contemporary urban problems, a knowledge of the political structures within
which those problems are embedded, and a better sense of the challenges and opportunities leaders face in contemporary urban America.

PSCI 216 (F) American Constitutionalism I: Structures of Power

Cross-listings: PSCI 216 LEAD 216

Primary Cross-listing

How has the American Constitution been debated and understood over time? What is the relationship between constitutional and political change? This course examines the historical development of American constitutional law and politics from the Founding to the present. Our focus is on structures of power -- the limits on congressional lawmaking, growth of presidential authority, establishment of judicial review, conflicts among the three branches of the federal government, and boundaries between the federal and state and local governments. The specific disputes under these rubrics range from secession to impeachment, gun control to child labor, waging war to spurring commerce; the historical periods to be covered include the Marshall and Taney Court years, the Civil War and Reconstruction, the Progressive Era, the New Deal, the Warren Court, and the contemporary conservative ascendancy. Readings are drawn from Supreme Court opinions, presidential addresses, congressional debates and statutes, political party platforms, key tracts of American political thought, and secondary scholarship on constitutional development. Throughout the semester, our goal will be less to remember elaborate doctrinal rules and multi-part constitutional "tests" than to understand the changing nature of, and changing relationship between, constitutional power and constitutional meaning in American history.

Class Format: discussion

PSCI 218 (S) The American Presidency

Cross-listings: PSCI 218 LEAD 218

Primary Cross-listing

Many argue that the presidency has been fundamentally changed by the tenure of Donald Trump. Is this right? To study the presidency is to study human nature and individual personality, constitution and institution, rules and norms, strategy and contingency. This course will examine the problems and paradoxes that attend the exercise of the most powerful political office in the world’s oldest democracy: Can an executive office be constructed with sufficient energy to govern and also be democratically accountable? What are the limits on presidential power? How much do we attribute the shaping of politics to the agency of the individual in the office and to what extent are politics the result of structural, cultural, and institutional factors? Are the politics of the presidency different in foreign and domestic policy? How are national security concerns balanced with the protection of civil rights and liberties? How is the office and purpose of the presidency affected by an economic order predicated on private capital? By the character of the occupant? Exploration of these and other questions will lead us to examine topics such as presidential selection, the bases of presidential power, character and leadership issues, congressional-executive interactions, social movement and interest group relations, and the media. Attention will focus largely on the modern presidency, though older historical examples will also be used to help us gain perspective on these problems.

Class Format: This course will be taught as a hybrid class, with a mixture of in-person and remote sessions for all students. The course will feature both seminar discussion and several small group research projects.

Requirements/Evaluation: three 5 to 7 page papers, small group projects, and class participation involving weekly writing

PSCI 220 (F) The U.S. and Afghanistan: A Post-Mortem (DPE)

Cross-listings: ASIA 208 GBST 208 ANTH 208 PSCI 220

Secondary Cross-listing

The United States attacked and defeated the Afghan Taliban regime over in the course of a few short weeks in 2001. Within a few years, the finality of that victory was brought into question as the Taliban regrouped and eventually reasserted itself as a formidable guerilla army that the U.S. military could not easily defeat. At the same time that it was facing a more difficult military challenge than anticipated, the United States got bogged down in the process of nation-building, as well as efforts at social reform. This course examines the history of American involvement in Afghanistan, beginning with the Cold War when the U.S. used Afghanistan as a test case for new models of political modernization and economic development. We will go on to discuss the U.S. support for Islamist political parties during the Soviet occupation of Afghanistan in the 1980s and the consequent rise of the Taliban, and the role of Afghanistan in the September 11th attacks and the "War on Terror" that followed. The course will conclude with a consideration of the impact and legacy of the two decades of nation-building and social reform carried out by the United States since 9/11.

Requirements/Evaluation: grading will be determined by class participation, two short (500 word) essays, and a 15-page research paper

Prerequisites: none

Difference, Power, and Equity Notes: This tutorial examines the Cold War between the US and the USSR and attempts to use intellectuals to shape and promote the objectives of powerful state entities. The power struggle between the two "superpowers" impacted cultural production and authors. Some of those authors influenced or enlisted into the Cold War sought equity and equality for their communities and eventually fought against the very political powers that employed them.

Fall 2022

TUT Section: T1    TBA    Joy A. James

PSCI 222  (S) International Relations in the Cyber Age

This is a class about international politics in the age of cyberweapons. At a general level, it focuses on a set of core conceptual questions: How has the advent of cyberweapons changed how international politics works? Are cyberweapons that target critical infrastructure similar to nuclear weapons, or is that comparison fundamentally flawed? Do concerns about information security alter states’ most basic political calculations? How can we expect cyberweapons to shape the future of warfare, intelligence, and security competition? How effective are strategies like cross-domain deterrence? Should the world try to regulate the use of these technologies and, if so, how exactly? The course begins with several sessions that provide a technical overview of key information security concepts and an examination of some prominent hacks. In addition, the beginning of the course will include several classes on the theoretical implications of the advent of the cyber age, as well as a brief historical overview of information security in the post-World War II period. From there, the course will cover a number of important topics and case studies, such as Stuxnet, NotPetya, cyber espionage, intellectual property theft, threats to critical infrastructure, misinformation, propaganda, election interference, the potential implications of quantum computing, and the prospects for the establishment of an international cyber arms control regime. In general, the course will focus on competition between some of the world’s premier cyber powers, such as China, Iran, Israel, North Korea, Russia, and the United States.
PSCI 223  (F)  International Law

International law embodies the rules that govern the society of states. It spells out who can be a sovereign state and how to become one, what states can do, what they cannot do, and who can punish transgressions. It also creates status for other actors, such as international organizations, soldiers, national liberation movements, refugees, terrorists, transnational air and sea shipping companies, and multinational corporations. International law is similar to domestic law, with one very crucial difference: it is not enforced by a centralized, sovereign state. There is no world government. In most other respects, it is the same: it protects the status quo, including the unequal distribution of power among its members; it spells out legitimate and illegitimate ways of resolving conflicts of interest; it is biased toward the powerful and legitimates their interests; it tells its members how to act to coordinate their interests and minimize direct conflict; some of it is purely aspirational, some of it necessary for survival. Like domestic law, it is enforced only some of the time, and then against the weak more than the strong. Yet, law is still where we look for justice and, perhaps, for power to be tamed by the pressure to be legitimate.

Requirements/Evaluation: quizzes, Glow posts, two papers on assigned topics, two projects (video, audio, or paper)
Prerequisites: None, although those who have not taken PSCI 202 at Williams will be required to review one lecture ppt, then pass a basic quiz based on it by the end of the first week.
Enrollment Limit: 25
Enrollment Preferences: Political Science majors, JLST concentrators

PSCI 224  (F)  Neo-liberalism: What Is It and Why Does It Matter?

We live in the era of neo-liberalism. But what does this mean? This course will focus on neo-liberalism in comparative perspective, looking mainly at the US and Europe. It will consider how neo-liberalism is defined, the role of states in making and maintaining neo-liberalism, the centrality of markets to neo-liberal conceptions, and the kinds of politics that produced and are produced by neo-liberalism. Economically, the course will look at the institutional configuration of neo-liberalism, changes in economies, growing inequality, the financial crises, and prevalence of debt. Politically, the course will address changes in the role of government, what governments do and do not do, the growing influence of financial interests, the role of identities in mobilizing support for and legitimating governments, and the impact of these developments on the status of citizenship and democracy.

Requirements/Evaluation: three papers: one 3-page, one 5-page, and one 10-page paper
Prerequisites: none
Enrollment Limit: 19
Enrollment Preferences: Political Science majors
Expected Class Size: 19
Grading: no pass/fail option, no fifth course option

PSCI 225 (S) International Security
Cross-listings: PSCI 225 LEAD 225
Primary Cross-listing
This is a course about war and peace. It deals with some of the most foundational questions that concern scholars of security studies: What accounts for great power conflict and cooperation? Is intense security competition between major states inevitable, or can they get along, provided their main interests are protected? Does the structure of the international system necessarily cause conflict? Do particularly aggressive states? Can wars occur "by accident”? When and why do states choose to use military force? What role does statecraft play in matters of war and peace? How do nuclear weapons affect great power politics? The course will consider these questions from an interdisciplinary perspective that combines political science concepts with an historical approach to the evidence. The bulk of the course deals with the major events in the history of great power politics, such as the causes and conduct of World War I and World War II; the origins and course of the Cold War; the nuclear revolution; and the post-Cold War period. The course concludes with an examination of a number of major contemporary policy debates in security studies.

PSCI 226 (S) Aid, Arms, and Armies: The Politics of Intervention in Africa (DPE)
Cross-listings: PSCI 226 LEAD 226 GBST 226
Primary Cross-listing
Comprised of nearly 50 countries and home to over 1 billion people, sub-Saharan Africa is remarkable in its diversity, particularly in regards to a number of outcomes central to the study of political science. It has also been a central site of numerous and profoundly impactful interventions for centuries, from the slave trade and colonialism to proxy wars and structural adjustment programs. This class investigates the many types of intervention—including military, humanitarian, and resource extraction—as well as identifying the diverse actors conducting these interventions, from missionaries to mercenaries, the World Bank to the world's leading states (e.g. United States, China, France). We interrogate how these interventions have shaped a number of key political, economic, and social outcomes for African countries, highlighting both case studies as well as common themes. We will also keep an eye out for lessons learned and the future of international interventions—the politics of foreign investment, humanitarian assistance, and multilateral partnerships.

Requirements/Evaluation: Participation, Midterm, Final, 3 Short Response Papers
Prerequisites: None
Enrollment Limit: 25

**PSCI 227 (S) International Relations of the Middle East**

**Cross-listings:** LEAD 227 PSCI 227

**Primary Cross-listing**
This is a course about the Middle East in international politics. The structure of the course combines political science concepts with a detailed survey of the region's diplomatic history. Classes will be taught remotely. The basic format of the course will be to combine brief lectures—either posted on the class website beforehand or given at the start of each class—with an in-depth discussion of each class session's topic. The goal of these discussions is to generate debates over the conceptual, historical, and policy significance of the subjects that we cover. Specifically, the first section of the course will cover the emergence of the Persian Gulf as an area of strategic importance in international politics; U.S. policy toward Saudi Arabia and Iran after World War II; the origins of the Arab-Israeli dispute; the June 1967 and October 1973 Middle East conflicts; Egyptian-Israeli peace; the Iranian Revolution and the Iran-Iraq War; the 1991 Persian Gulf War and its consequences; and the rise of Al Qaeda, Hezbollah, and Hamas. The second part of the course focuses on the Iraq War and its consequences; the rise of ISIS; the Arab Spring; Turkey's changing foreign relations; and the war in Syria. The last section of the course covers contemporary policy challenges confronting the Middle East.

**Class Format:** This course will be taught remotely. There will be brief lectures, which will be either put on the work website prior to class or given at the start of each class. But the class will mainly consist of in-depth, synchronous classroom discussions.

**Requirements/Evaluation:** class participation, two 6- to 8-page papers, final

**PSCI 228 (S) International Organization**

Tens of thousands of international organizations populate our world. IGOs, whose members are sovereign states, range from the Nordic Association for Reindeer Research to NATO and the UN; INGOs, whose members are private groups and individuals, include the International Seaweed Association as well as Doctors Without Borders. We will investigate theories about where they come from, what they do, and to whom they matter, and explore controversies surrounding their agency, legitimacy, efficiency, and accountability. We cover the history, structures and functions of
international organizations using case studies.

Requirements/Evaluation: two short papers, a presentation, one longer paper, one group project.

Prerequisites: none, but the introduction to international politics (202) is strongly recommended. If you have not taken that, you will need to go through a four-hour tutorial before you begin the class. Open to first-year students

PSCI 231 (F) Ancient Political Thought

Cross-listings: PHIL 231  PSCI 231

Primary Cross-listing

The core activity of this seminar is the careful reading and sustained discussion of selected works by Plato and Aristotle, but we will also engage such other thinkers as Epictetus and Augustine, and, from a political and theoretical point of view, selections from the Hebrew Bible and New Testament. Among the questions that we will address: What is justice? How can it be known and pursued? How is political power generated and exercised? What are the social and ethical prerequisites—and consequences—of democracy? Must the freedom or fulfillment of some people require the subordination of others? Does freedom require leading (or avoiding) a political life? What distinguishes that kind of life from others? What does it mean to be "philosophical" or to think "theoretically" about politics? Although we will attempt to engage the readings on their own terms, we will also ask how the vast differences between the ancient world and our own undercut or enhance the texts' ability to illuminate the dilemmas of political life for us.

Class Format: discussion

Requirements/Evaluation: three 7- to 8-page papers

Primary Cross-listing
This course is a chronological survey of major works of political theory from the 16th to the 20th century. In discussions and writing, we will explore the diverse visions of modernity and of politics offered by such thinkers as Machiavelli, Hobbes, Locke, Rousseau, Marx, Mill, and Freud. They help us ask: What is freedom? Who is equal? Who should rule? With what limits and justifications? What form of government best serves the people? Who are the people, anyway? And on what grounds can we justify confidence in our provisional answers to such questions? Class will be primarily driven by discussion, often preceded by brief lectures. Attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

Class Format: Class meetings will be conducted remotely using zoom.
Requirements/Evaluation: three papers of 4-6 pages; class participation; brief informal writing tasks inside and outside of class meetings
Prerequisites: none; open to all
Enrollment Limit: 12
Enrollment Preferences: Political Theory concentrators, then Political Science majors

PSCI 234 (S) Freedom

We all want to be free--at least most of us say we do. The desire for political freedom is as old as the ancient world and as new as today's movements and liberation struggles. But what do we mean when we claim to want freedom? What institutions and social conditions make political freedom possible? For instance, do the claims of individual freedom conflict with those of community? With equality? With authority? Does freedom make us happy? Is it what we really want? And if it is, will we find it by engaging or turning away from politics? This course confronts these questions through readings drawn from a variety of classic and contemporary sources, including works of fiction, autobiography, journalism, law, philosophy and political theory, and social science. Our discussions will address such topics as activism and stoicism; equality and economic freedom; sexual freedom and gender politics; freedom of speech and religion; citizenship, migration, and cosmopolitanism; racism and colonialism; mass incarceration; and the uses and limits of state power. This course is part of a joint program between Williams' Center for Learning in Action and the Berkshire County Jail in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates and will be held at the jail. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Transportation will be provided by the college. *Please note the atypical class hours, Th. 4:45-8:30 pm*

Requirements/Evaluation:  Class attendance and active participation, short essays, and a final paper.

Prerequisites:  Not open to first-year students.

Enrollment Limit:  9

Enrollment Preferences:  Final selection will be made on the basis of statements of interest solicited after pre-registration, and interviews with the instructor.

PSCI 235 (S) Survival and Resistance: Environmental Political Theory

Cross-listings:  ENVI 235  PSCI 235

Primary Cross-listing

Contemporary struggles to reverse environmental destruction and establish sustainable communities have prompted some political theorists to rethink longstanding assumptions about politics and its relationship to nature. Does the environment have "rights"? What, if anything, is the difference between an ecosystem and a political community? Is democracy dangerous to the planet's health? Are environmental protections compatible with political freedom? How is the domination or conquest of nature connected with domination and conquest within human societies? What does justice demand in an age of climate change? In this class, we will consider the promise and limits of political theory to illuminate present day environmental crises and foster movements to overcome them. We will engage classic texts that helped to establish political theory's traditional view of nature as a resource, as well as contemporary texts that offer alternative, ecological understandings of nature and its entwinements with politics. Class will be driven primarily by discussion. Students will have significant responsibility for setting the agenda for discussions through informal writing submitted prior to class. As a writing intensive course, attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

Requirements/Evaluation:  formal and informal writing assignments and class participation

PSCI 238 (F) Economic Liberalism and Its Critics
Cross-listings: ECON 299 PSCI 238 POEC 250

Secondary Cross-listing
Economic liberalism holds that society is better off if people enjoy economic freedom. Its critics point to what they believe this position ignores or what it wrongly assumes, and hence, how it would make bad policy. This course explores the relationship between politics and economics by surveying influential works of political economy. Its first part examines major thinkers in relation to the historical development of capitalism in Western Europe and the United States: the classical liberalism of Adam Smith, Karl Marx’s revolutionary socialism, and the reformist ideas of John Maynard Keynes. The second part considers mid-20th-century writers who revise and critique economic liberalism from a variety of perspectives, including Friedrich Hayek, Milton Friedman, Ronald Coase, Arthur Okun, and Albert O. Hirschman. The third part surveys significant recent contributions relevant to the themes of the course, with applications to current public policy issues, including topics such as: power relations and autonomy in the workplace; asymmetric information and social insurance; economic inequality and distributive justice; equality of opportunity; the economics of health care; positional goods and the moral foundations of capitalism; economic nationalism and new trade theory; behavioral economics; climate change and intergenerational equity; finance and financial crises; and rent-seeking. The combination of the historical focus of the early part of the course with discussion of modern policy issues and debates in the latter part of the course permits you to appreciate the ongoing dialogue between classical and contemporary views of political economy.

Class Format: This class uses a flipped classroom approach, where before each class meeting, students watch a lecture video, and sometimes write an essay or solve some problems on relating to the assigned reading and video, and then in-person class is devoted primarily to discussion.
Requirements/Evaluation: six short essays, several short homework assignments, and a final exam
Prerequisites: ECON 110 and 120 or equivalent; PSCI 201, 202, 203, or 204 (may be taken concurrently with POEC 250); open to non-majors
Enrollment Limit: 30

PSCI 240 (S) Theories of Comparative Politics
This course deals with the concepts that organize much of the contemporary study of comparative politics. The course discusses the purposes of states, the origins of capitalism, the relationship of states to capitalism, the connection between identities, cultures, and states, and the definition and nature of power. The readings include Alexis de Tocqueville, Karl Marx, Max Weber, Karl Polanyi, Barrington Moore, Michel Foucault, and Edward Said.
Although fewer than 1% of Americans have a degree from the country's top 30 colleges and universities, 39% of Fortune 500 CEOs, 41% of federal judges, 44% of the writing and editorial staff at the New York Times, 64% of Davos attendees, and 100% of Supreme Court justices do. Is this a positive sign that the United States is governed by its most talented and capable members who have risen through hard work and equal opportunity? Or a negative one pointing to the power of a corrupt and self-selecting elite? This course explores the theme of meritocracy—rule by the intelligent—in comparative perspective. We will look at both old and new arguments regarding the proper role and definition of merit in political society as well as take the measure of meritocracy in present-day Singapore, France, and the United States. The course concludes with a focus on the current debate over American meritocracy and inequality.
Requirements/Evaluation:  Active class participation, two response papers, and a comprehensive, open-book and open-note final exam.

Prerequisites:  none

Enrollment Limit:  25

Enrollment Preferences:  Global Studies concentrators and Religion majors

PSCI 246  (F)  Introduction to Capitalism

Must we choose between "socialism or barbarism?" A century after Rosa Luxemburg's challenge, it is clear that socialism did not win. Does this mean that we have descended to barbarism? Tracing the path of capitalist development in the rich democracies suggests a range of responses. Some states have developed robust institutions that provide for citizens' basic needs and check the power of business; others leave the poor threatened by starvation and workers exposed to exploitation. How and why has capitalism evolved in different forms in different countries? This course introduces students to capitalism by examining the struggles between social groups that lead to variation in distributional outcomes and economic performance.

Students will develop a conceptual toolkit to study the politics of capitalism based in the economic history of the rich democracies (Europe, United States) in the twentieth century. The second half of the course challenges students to apply this toolkit to the twenty-first century, focusing on attempts to transition from industrial manufacturing to services. We engage pressing questions around technological innovation, populism, financialization, and globalization.

Requirements/Evaluation:  Class participation, two presentations, three essays.

Prerequisites:  None.

PSCI 247  (S)  Political Power in Contemporary China

Cross-listings: PSCI 247  ASIA 249

Primary Cross-listing

The People's Republic of China has experienced rapid and extensive economic, social and cultural transformation over the past forty years. Its political system, however, is little changed. The Communist Party still monopolizes power and works hard to suppress organized opposition. Political dissent has taken various forms since 1979 but the regime has found ways to repress and divert it. Yet, in spite of the state’s efforts, opposition and dissent continue to bubble to the surface. The course will review the political development of the PRC since 1949 and, then, focus on the dynamics of political contention and regime persistence since the Tiananmen Crisis of 1989.

Requirements/Evaluation: 2-3 short papers and a final exam

Prerequisites: none

PSCI 248  (F)  The USA in Comparative Perspective  (WS)

Politics in the USA is often considered unique and incomparable, and US political science separates the study of American politics from comparative politics. This course overcomes this divide, considering politics and society in the United States comparatively, from a variety of viewpoints and by authors foreign and American, historical and contemporary. Important topics include: the colonial experience and independence; race relations and the African diaspora; national identity and authoritarian populist nationalism; war and state-building; American exceptionalism, religion, and foreign policy; the role of political and economic institutions; and the origins and shape of the welfare state. (As the list suggests, the most common comparisons are with Latin America and Western Europe, but several of our authors look beyond these regions.)

Class Format: a lecture in the first week; then ten weeks of tutorial; then a discussion class in the final week

Requirements/Evaluation: five 5- to 6-page papers, five 1- to 2-page responses, and one 1-page essay for the final class

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: sophomores and students who have been denied enrollment in the course previously

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)  (WS)
Writing Skills Notes: Assignments are graded and returned weekly. After each student has written one long paper and one response, professor meets with them individually to discuss the composition and presentation of each genre. For the final class, students bring a one-page response written in “E-prime,” English without the verb “to be.”

Attributes: AMST Comp Studies in Race, Ethnicity, Diaspora  PSCI American Politics Courses  PSCI Comparative Politics Courses

Not offered current academic year

PSCI 250  (F)  Political Psychology

This course will examine the role of psychology in politics. The goal is to develop a rich understanding of the foundations of public opinion and political behavior. We will examine the role of social identities, partisan affiliation, concrete interests, values, issues, and ideology in shaping opinion and behavior, as well as the role of external forces such as campaigns, the media, and political elites. Along the way, we will consider a number of longstanding questions in the study of politics, such as: is the public rational? What are the root causes of racism? How does racism influence political choices? Why do people identify with political parties? Why do people vote or engage in other types of political action? How does the mass media and campaigns influence public opinion?

Requirements/Evaluation:  class participation, 1-2 short papers (5-7 pages), 1 medium paper (8-12 pages), an oral presentation, and a final exam

Prerequisites:  none

Enrollment Limit:  25

Enrollment Preferences:  If the course over-enrolls, please give first enrollment preference to political science majors, followed by political economy majors.

Expected Class Size:  20

Grading:  no pass/fail option,  no fifth course option

Distributions:  (D2)

Attributes:  PSCI American Politics Courses

Not offered current academic year

PSCI 252  (F)  Campaigns and Elections

The 2022 midterm elections are happening in November. Though midterm elections historically generate less involvement than presidential elections, much is at stake in the upcoming midterms, as control of Congress and statehouses will likely determine what, if anything, President Biden achieves in the remainder of his term. This course will examine how we conduct the most fundamental of democratic processes in the United States: the people's choice of their representatives. We will examine factors that shape election outcomes such as the state of the economy, issues, partisanship, ideology, social identities with a special focus on race, interest groups, media, and the candidates themselves. A central question we will consider throughout the course if how “democratic” the conduct of campaigns actually is. For instance, does the citizenry have the motivation and capacity to hold public officials accountable? How do resource gaps tied to inequality in society (such as race and class) influence who votes and for whom? Do the mass media and political elites inform or manipulate the public? How closely do candidates resemble the constituencies they represent, and does it matter? We will apply our learning on many of these topics to the ongoing 2022 midterm elections.

Requirements/Evaluation:  class participation, 1-2 short papers (5-7 pages), 1 medium paper (8-12 pages), an oral presentation, and a final exam

Prerequisites:  none

Fall 2022

LEC Section: 01  MR 2:35 pm - 3:50 pm  Matthew Tokeshi
PSCI 253  (S)  The Tragedy of Venezuela

The recent history of Venezuela offers a window into many of the most important political and economic issues faced by people in developing countries. Why does an abundance of oil seem to solve some problems while often leading to perverse economic and political outcomes? How can democracy be made to work better for ordinary people? What does it mean for a government to be truly sovereign? How does corruption grow and what can we do about it? When should we leave important decisions to technocratic experts? What does it mean today to be progressive? The course first briefly reviews Venezuelan post-Independence history, with an emphasis on the post-1958 democratic settlement. It then explores more deeply the reasons for the breakdown of this settlement, the rise of Hugo Chavez, and the decay of the "21st Century Socialist" regime under Chavez and Maduro. Materials include biographies, documentary films, short videos, economic data, and news reports.

Class Format: discussion

Requirements/Evaluation: a map quiz and four short papers

Prerequisites: a course in comparative politics and a course in economics, or permission of the instructor

Enrollment Limit: 35

Enrollment Preferences: sophomores and PSCI majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

PSCI 257  (F)  The Revolutionary Generation: Galaxy of Leaders

Cross-listings: PSCI 257  LEAD 285  HIST 354

Secondary Cross-listing

The American Revolution produced a galaxy of brilliant and creative statesmen and intellectuals: Washington, Hamilton, Jefferson, Madison, Adams. In this seminar, we will study their astounding accomplishments--a successful war of independence, a Constitution and Bill of Rights, enduring democratic political institutions, and a nascent party system. But mostly we will focus on their ideas, for they were thinking revolutionaries. We will examine in depth and in detail their superb writings, their letters and speeches as well as Madison and Hamilton's Federalist essays. We will also read recent interpretations of the founding generation by Gordon Wood, Joseph Ellis, Bernard Bailyn, and others.

Requirements/Evaluation: three papers, weekly class presentations, and active participation in all discussions

Prerequisites: none; courses in Leadership Studies or Political Theory or early American History are very helpful for admission to this seminar

Enrollment Limit: 10

Enrollment Preferences: students with a background in Leadership Studies, American History or American Political Science

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

Fall 2022

SEM Section: 01     Cancelled

PSCI 258  (F)  The Media and American Democracy

Cross-listings:  LEAD 258  PSCI 258
Secondary Cross-listing

The course examines the relationship between the press and government, its watchdog function, how social media and the Internet are changing its role, the emergence of independent investigative bodies such as Pro Publica, and the myriad ways in which the press has helped shape American history, for better or worse. The course goes behind the headlines to examine the delicate interplay between government and press, peels back the familiar classics of American journalism, but also incorporates the current conflicts and tensions between the press and government. In the new age, how does the press define or redefine balance, neutrality, the quest for objectivity, and restraint. Who is a journalist, a once relatively easy question, but one now fraught with complexity? There has been a tectonic shift in the fundamental standards and practices of the press in recent years. What are those changes and how does it augur for the future of the press and democratic institutions?

Requirements/Evaluation: Several short papers, 10-15 page research paper.

Prerequisites: None

Enrollment Limit: 14

Enrollment Preferences: Preference to Leadership Studies concentrators and Political Science majors.

Expected Class Size: 14

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

Not offered current academic year

PSCI 260 (F) Power, Feminist-Style (DPE) (WS)

Cross-listings: WGSS 260 PSCI 260

Secondary Cross-listing

This course examines one of the most important concepts in the analysis of sex and gender and efforts to envision sexual and gender justice, the concept of power, from multiple feminist perspectives. At the core of feminism lies the critique of inequitable power relations. Some feminists claim that power itself is the root of all evil and that a feminist world is one without power. Others portray the feminist agenda as one of taking power, or of reconstructing society by exercising a specifically feminist mode of power. In this course, we will look at feminist critiques of power, how feminists have employed notions of power developed outside of the arena of feminist thought, and efforts to develop specifically feminist ideas of power. Along the way, we will ask: Are some concepts of power more useful to feminism? Can certain forms of power be considered more feminist than others? How can feminist power be realized? Thinkers we will engage include Judith Butler, Audre Lorde, Catherine MacKinnon, Hannah Arendt, and Patricia Hill Collins.

Requirements/Evaluation: eight short writing assignments (ranging from 250 words to 750 words), drafting and revision of a 10 pg final essay

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Women's, Gender, and Sexuality Studies majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 260 (D2) PSCI 260 (D2)

Writing Skills Notes: This course aims to carefully unpack the writing process by focusing on particular elements of writing (summary, critical analysis) while also introducing students to tools they can use to improve their writing (freewriting). Short writing assignments like the proposal, outline, and abstract build on one another and culminate in a final essay that goes through the process of drafting and, after peer and teacher review, revision.

Difference, Power, and Equity Notes: This course requires students to focus on what power does and should look like from the perspective of difference, exploring the relationship between power and equity in the process. Students will reflect on and discuss the working of power in their own lives, why certain forms of power are more or less visible to particular groups, and how different ideas about power promote different interests in
society at large.

Attributes: WGSS Theory Courses

Not offered current academic year

PSCI 261  (F)  The Arab-Israeli Conflict  (WS)

This tutorial will cover the Arab-Israeli dispute—from both historical and political science perspectives—from the rise of the Zionist movement in the late nineteenth century to the present day. It will examine the various explanations that scholars have offered for why the conflict has persisted for so long, how it has evolved over time, the role that outside powers have played in shaping it, and how its perpetuation (or settlement) is likely to impact Middle East politics in the future. More specifically, the class will examine the origins of the Zionist movement; the role that the First World War played in shaping the dispute; the period of the British mandate; the rise of Palestinian nationalism; the Second World War and the creation of the state of Israel; the 1948, 1956, 1967, and 1973 Arab-Israeli wars; Israel's 1982 invasion of Lebanon and its consequences; the promise and ultimate collapse of the Oslo peace process during the 1990s and early 2000s; the rise of groups such as Hamas, Hezbollah, and Palestinian Islamic Jihad; the rightward shift in Israeli politics since 2000; the intensification of Israeli-Iranian antagonism and its implications; the shift in Israel's relations with the Sunni Arab world that has occurred in recent years; and the future of the conflict.

Requirements/Evaluation: Biweekly response papers; Biweekly critiques of partner's response papers; Class participation; Final analytical essay

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: Political Science Majors

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D2)  (WS)

Writing Skills Notes: This class will require students either to write a paper or critique their partner's paper on a weekly basis. Students will also be required to redraft their papers--based on feedback from both their partner and the instructor--with the goal of improving their ability to make compelling arguments in writing.

PSCI 262  (S)  America and the Cold War

Cross-listings: HIST 261  PSCI 262  LEAD 262

Primary Cross-listing

This course examines the rise and fall of the Cold War, focusing on four central issues. First, why did America and the Soviet Union become bitter rivals shortly after the defeat of Nazi Germany? Second, was one side primarily responsible for the length and intensity of the Cold War in Europe? Third, how did the Cold War in Europe lead to events in other areas of the world, such as Cuba and Vietnam? Finally, could the Cold War have been ended long before the collapse of the Soviet Union in 1989? Political scientists and historians continue to argue vigorously about the answers to all these questions. We examine both traditional and revisionist explanations of the Cold War, as well as the new findings that have emerged from the partial opening of Soviet and Eastern European archives. The final section of the course examines how scholarly interpretations of the Cold War continue to influence how policymakers approach contemporary issues in American foreign policy.

Class Format: lecture/discussion

Requirements/Evaluation: one medium length paper, an in-class midterm and final exam, and a series of short assignments

Prerequisites: none; PSCI 202 is recommended but not required

Enrollment Limit: 19

Enrollment Preferences: Political Science majors and Leadership Studies concentrators

PSCI 265  (S)  The International Politics of East Asia
This course examines the political, economic, and cultural determinants of conflict and cooperation in East Asia. Throughout the semester, we will examine three distinct but inter-related aspects of international relations in East Asia: Security, economy, and culture by using some core concepts and theoretical arguments widely accepted in the study of international relations. We will engage some of the central questions and issues in the current debate on East Asia. Do East Asian countries seek security and prosperity in a way fundamentally different from the Western system? Is there a single best way to maintain regional order and cooperation across regions? Will a strong China inevitably claim its traditional place under the sun? Will Japan continue to live as a nation with enormous economic power but limited military means? What is the choice for South Korea between security alliance with the United States and national reconciliation with the North? What should be done to dissuade the authoritarian regime in North Korea from acquiring nuclear capabilities and lead it to different paths toward national survival? By the end of the semester, you will gain both a general perspective and substantive knowledge on East Asian international politics.

Class Format: discussion
Requirements/Evaluation: midterm exam, team debate, take-home final exam, class participation and other assignments
Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: Political Science and Asian Studies majors

Not offered current academic year

PSCI 266  (S)  The United States and Latin America  (DPE)
This course examines the most important political and diplomatic divide in the Western Hemisphere. The first half is a historical survey of U.S.-Latin American foreign relations from the early Spanish American independence movements through the end of the Cold War and recent developments. We consider how this history confirms or undermines influential views about U.S. foreign relations and about international relations generally. We also compare historical U.S. foreign policy toward the hemisphere to U.S. policy toward the entire world after the Cold War. The second half covers the most important current issues in hemispheric relations: the rise of leftist governments in Latin America; the war on drugs; immigration and border security; and competition with China for influence. At the end we briefly reconsider current U.S. policies in historical perspective.

Class Format: more lecture in the first half, more discussion and several in-class debates in the second
Requirements/Evaluation: a map quiz, a 2-page paper, two 3-page papers, and either another 3-page paper and a regular final exam, or a 12-page research paper and a short final exam
Prerequisites: none
Enrollment Limit: 35
Enrollment Preferences: Political Science majors
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: In the paper that considers the first part of the course, the students weigh to what extent U.S. policy toward Latin America was affected by the largely derogatory attitudes of U.S. diplomats toward Latin Americans. A unit in the second part of the course critically analyzes current U.S. immigration policy in this context.

PSCI 268 (S) Israeli Politics

This is an introductory course on Israeli politics. Approaching questions historically, it centers on but is not restricted to the conflict between Zionism and Palestinians. It begins by addressing the arrival of Zionists, the pursuit of statehood and the in-gathering of Jews, and the responses of neighboring Arab states and local Palestinians. The course also will examine the arrival of Arab Jews in the 1950-60, the conflicts between them and European Jews, and the effects of their conflicts on Israeli politics. The course then will turn to Israeli settlement policies on the West Bank, the controversies surrounding the Oslo Agreement, and the contemporary situations in the West Bank and Gaza. Finally, the course will address contemporary controversies about what it means to be a Jew in Israel, about the feasibility of a "two-state" solution to the Palestinian issue, about the prospects and implications of a "one-state" solution, and about the implications for Israel of not resolving the Palestinian issue to the mutual satisfaction of Israelis and Palestinians.

Requirements/Evaluation: two papers totaling 20 pages

PSCI 270 (S) The Politics of Waste

Cross-listings: ENVI 241  PSCI 242  PSCI 270

Primary Cross-listing
Waste is not just a fact of life, it is a political practice. To create and maintain political order requires devising collective means to pile up, bury, burn, or otherwise dispose of stuff deemed dirty or disorderly; waste management is regime management. In turn, our feelings of disgust for anything deemed waste shape political deliberation and action on environmental policy, immigration, food production, economic distribution, and much more. The very effort to define "waste" raises thorny political questions: What (or who) is disposable? Why do we find the visible presence of certain kinds of things or persons to be unbearably noxious? How should we respond to the fact that these unbearable beings persist in existing, despite our best efforts to eliminate them? What is our individual and collective responsibility for creating and disposing of waste? Serious inquiry into waste is rare in political theory and political science—perhaps understandably, given that the study of politics is shaped by the same taboos that shape politics. In this seminar we will openly discuss unmentionable topics and get our hands dirty (sometimes literally) examining the politics of waste. We will take notice of the erasure of waste in traditional political theory and work together to fill these gaps. To do so, we will draw on work in anthropology, critical theory, history, urban studies, and waste management science; representations of waste in popular culture; and experiences with waste in our lives. This course is part of a joint program between Williams' Center for Learning in Action and the Berkshire County Jail in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates and will be held at the jail. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Transportation will be provided by the college. *Please note the atypical class hours, Wed 4:45-8:30 pm*

Requirements/Evaluation: class attendance and participation, short essays, and a final paper
Prerequisites: not open to first-year students
Enrollment Limit: 9
Enrollment Preferences: final selection will be made on the basis of statements of interest solicited after pre-registration and interviews with the instructor
Expected Class Size: 9
Grading:  no pass/fail option, no fifth course option
PSCI 273 (F) Politics without Humans?

Cross-listings: ENVI 273 STS 273 PSCI 273

Primary Cross-listing

Are human beings the only beings who belong in politics? And is political involvement a unique or defining aspect of what it means to be human? Such questions are increasingly complex as the boundaries of "the human" become blurred by the rise of artificial intelligence, robotics, and brain implants: shifting attitudes towards both animal and human bodies; and the automation of economic and military decisions (buy! sell! attack! retreat!) that used to be the prerogative of human actors. How do visions of politics without humans and humans without politics impact our thinking about longstanding questions of freedom, power, and right? Can and should the link between humans and politics survive in an age in which "posthuman" or "transhuman" entities become central characters in the drama of politics? This class will consider these questions through readings, films and artifacts that bring political theory into conversation with science fiction, popular literature on the so-called "singularity" (the merger of humans with computers), science and technology studies, evolutionary anthropology, "new materialist" philosophy, and feminist theory.

Requirements/Evaluation: three 5- to 7-page papers, regular Glow posts, class participation

Prerequisites: please note that this is an introductory-level course with no prerequisites; first-year students and those with no background in political theory are welcome, as are more experienced students

PSCI 280 (S) Silicon Valley: Digital Transformation and Democracy (WS)

Nearly every country in the world seeks to drive economic growth by promoting digital technologies. The universal model is Silicon Valley. In this tutorial, students will examine the origins of the Silicon Valley model and other countries’ attempts to emulate it. Departing from "just so" stories of technological determinism, we take up the lens of comparative political economy to investigate the politics that allowed US tech firms to shape economic policy to meet their interests. It is no accident that tech became a symbol for economic growth in the 1970s, precisely when it also began to build powerful alliances in Washington. After investigating the origins of the Silicon Valley model, we trace attempts to adopt it in Europe and Asia, which highlight the model's political contingencies and some of the more salient conflicts over the tech sector. We focus on the ways in which the Silicon Valley model can threaten social welfare through economic inequality and precarious employment, and engage a variety of perspectives, including workplace ethnography, to examine these threats, as well as potential regulatory responses. The course concludes by considering what policies could be appropriate for supporting, while also regulating, the tech sector in the twenty-first century.

Requirements/Evaluation: Five 5-page papers; five 2-page responses; participation

Prerequisites: One introductory course in political science and/or permission of the instructor.

Enrollment Limit: 10

Enrollment Preferences: Preference will be given to sophomores and juniors majoring in PSCI and POEC.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)
Writing Skills Notes: Students will write essays each week. In addition, students will read each others' work and engage in structured critique.

PSCI 281 (S) Contemporary African Politics (DPE)

Cross-listings: GBST 281 PSCI 281

Primary Cross-listing

This course is an introduction to the contemporary politics of Africa, with the aim of sparking a life-long interest in the affairs of the region. Comprised of nearly 50 countries and home to over 1 billion people, sub-Saharan Africa is remarkable in its diversity, particularly in regards to a number of outcomes central to the study of political science: how do institutions of the past shape current dynamics of political competition and economic growth? Why are some countries stable democracies while others struggle with military coups or authoritarian rule? What sparks political violence and how can countries emerge from conflict? Our focus is both contemporary and comparative, organized thematically around common political experiences and attributes across the region. We begin with the legacies of colonialism, the slave trade, and the politics of liberation. We then interrogate dynamics central to political life in Africa over the 60 years since independence: the role of ethnic diversity in shaping competition, the prominence of patronage politics, and the evolution of elections. We next assess major dimensions that have historically shaped the study of African politics, including conflict and violence, economic development, and foreign aid. The final section takes a comparative approach to some of the most pressing issues in Africa today: health crises, migration and mobility, technological revolution, climate change, and the emerging power of women and youth.

Class Format: A typical class session will be about 60% lecture and 40% discussion

Requirements/Evaluation: Class Participation, Map Quiz, 3 short papers (5 pages)

Prerequisites: None.

Enrollment Limit: 25

Enrollment Preferences: all first-years and sophomores; those juniors and seniors majoring in political science or concentrating in Global Studies.

Expected Class Size: 25

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

GBST 281 (D2) PSCI 281 (D2)

Difference, Power, and Equity Notes: This course takes the racial, ethnic, linguistic, and religious diversity of sub-Saharan Africa as a starting point for understanding the contemporary politics of the region. The course addresses the legacies of systemic inequality as well as strategies of resistance to oppression. We also examine how ethnic and religious diversity shape political institutions, competition, and conflict, comparing different countries and over time.

PSCI 282 (F) Africanist Project to Black Consciousness

Cross-listings: PSCI 282 GBST 282

Primary Cross-listing

In 1957, when it was clear the African Nation Congress was unwilling to change its multiracialist and nonracialist language in favor of Africanist pronouncements, Robert Mangaliso Sobukwe left the party and became the editor of The Africanist newspaper. Two years later he formed the Pan-Africanist Congress. Similarly frustrated that the National Union of South African Students was dominated by white liberals, in 1968 Bantu Steve Biko helped form the black-only South Africa Students' Organization and, four years later, was the key figure in founding of the Black People's Convention, created to promote black consciousness ideas within the broader South African population. This course focuses on Sobukwe's Africanist project and Biko's Black Consciousness Movement, the strategies against apartheid they promoted, and the visions of a free South Africa they imagined.

Requirements/Evaluation: class participation; 3 two-page response papers; and a 10-12 final paper.
PSCI 284  (F)  The Politics of Economic Crises

The dominant world economies -- the USA, China, and the European Union -- are responding to the economic risks that might arise from the coronavirus with what have become the standard responses to economic crises. They are using debt to create liquidity, demand, and uphold credit markets. As a background to understanding the reasons for and histories of these policies, this course will read several important books that deal with the Great Depression, the financial crisis a decade ago, and the risks of debt.

Class Format: Taught Remotely
Requirements/Evaluation: Two papers of 8-10 pages are required, along with careful reading of the books.
Prerequisites: None
Enrollment Limit: 15
Enrollment Preferences: Political Science majors.
Expected Class Size: 10

PSCI 286  (F)  Conservative Political Thought

Conservative thinkers claim to be leading an intellectual transformation away from the tired nostrums of liberalism. They see themselves as original, dynamic, serious. This course will read leading conservative political thinkers with a view to identifying their central tenets, both negative and positive. What is it that they oppose and support? What, if anything, defines contemporary conservative thinking? Is it a coherent body of thought, a doctrine, or a collection of disparate and conflicting thinkers? What is the relationship of thinkers who emphasize the market, order, and traditional values? And what are their views on diversity, citizenship, and race, and how do heterodox leftists fit with conservative critiques of managerial liberalism?

Requirements/Evaluation: Two 8-10 page papers and final exam
Prerequisites: Political Science Majors
Enrollment Limit: 15
Enrollment Preferences: Juniors/Seniors
Expected Class Size: 15
Grading: no pass/fail option, no fifth course option
Distributions: (D2)
Not offered current academic year

PSCI 288  (F)  Transnational Political Movements

This course focuses on the international dimensions of when people demand political change. We explore transnational dynamics of contentious politics, including how international actors shape domestic campaigns for democracy, peace, and justice, as well as how global advocacy movements (e.g. climate change) are organized and mobilized. Building from an international relations framework, the course brings together a variety of texts,
including documentaries, social media, and guest speakers working on the front lines of global advocacy (refugee rights, anti-colonial liberation struggles, and contemporary pro-democracy movements). We critically analyze how external actors and resources inform politics on the ground, both around the world and over time, as well as evaluate the normative implications of "foreign intervention."

**PSCI 289 (S) The welfare state in comparative perspective**

**Cross-listings:** PSCI 289 POEC 289

**Primary Cross-listing**

Modern life has, in some ways, become less risky. You are unlikely to be trampled by a mammoth. But social risk has not disappeared—you could lose your job, get into an accident, or find yourself plunged somehow into poverty. Most countries around the world have built elaborate institutions to ensure citizens’ welfare by protecting some people from some risks, but not all people and not all risks. Moreover, these institutions vary considerably both over time and between countries. This course examines those institutions. Our goal is to explain how and why welfare states vary and why there is so much inequality in the distribution of risk. We will do so by investigating the different kinds of institutions that mediate risks throughout the lifecycle, from parental leave to old age pensions, and by comparing these institutions between different countries. While focusing primarily on the welfare states of Western Europe, we will also examine how the politics of social risk unfold around the world, extending our investigation to Africa, Asia, and Latin America. We will conclude by reflecting on what lessons the welfare state offers for managing this century's biggest social risk: climate change.

**Requirements/Evaluation:** 3 essays; 2 presentations; participation

**PSCI 291 (S) American Political Events (WS)**

Scandals. Wars and assassinations. Contested elections, Supreme Court decisions, and constitutional amendments. As large as they loom in our daily experience and our historical memory, these sorts of events--concrete, discrete things that happen in and around the political world--are often underestimated as catalysts of political change. Indeed, in the study of American political development, we often look to complex processes and underlying causes as explanations for how and why ideas, institutions, and policies both emerge and evolve. Yet for all our focus on long-term and subtle causal mechanisms, events often serve as political turning points in ways that vary over time, last for extended periods of time, and are not always entirely predictable at the time. Beginning from the presumption that change often has proximate as well as latent causes, this tutorial focuses on events as critical junctures in American politics. Our concern with these events is not with why they happened as or when they did but, rather, with how they altered the American political order once they did—with how they caused shifts in political alignments, created demands for political action, or resulted in a reordering of political values. Over the course of the semester, we will look at ten different types of events, ranging from those that seem
bigger than government and politics (economic collapse) to those that are the daily grist of government and politics (speeches), in each instance juxtaposing two different occurrences of a particular category of event. In so doing, we will seek to use controversial and consequential moments in American politics as a window into deeper questions about political change and the narratives we tell about it.

Requirements/Evaluation: five 5-to 7-page essays, five 2- to 3-page critiques, and a recorded oral final reflection

Prerequisites: none

PSCI 306 (S) What is Power?

Cross-listings: REL 308 STS 308 PSCI 306 SOC 308

Secondary Cross-listing

What is power? Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures? What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or agency? Or ideology? This course begins with the observation that power is often described as a causal relation--an individual’s power is supposed to equal their capacity to produce a change in someone else’s behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: critical theory about power and philosophy of science about cause and effect.

We will touch on classic philosophical accounts of power and causation, but focus our attention on more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt, Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, and Max Weber.

Requirements/Evaluation: critical annotations for every class, midterm review essay (4-6 pages), final essay (10-12 pages)

Prerequisites: None.

Enrollment Limit: 15

Enrollment Preferences: STS concentrators, then Religion, Sociology, and Political Science majors.

Expected Class Size: 14

Spring 2023

SEM Section: 01 W 1:10 pm - 3:50 pm Jason Josephson Storm
When Donald Trump campaigned in 2016 to "drain the swamp," he built on the idea held by Republicans since Ronald Reagan's 1981 pronouncement that "government is not a solution to our problem, government is the problem." Skepticism of government has deep roots and strong resonance throughout American political history. Despite this, national government has grown in scope and size for much of this history, including under both Democratic and Republican administrations. This tension over what government is doing and what it should be doing is only heightened in times of crisis, such as the moment the country is in now. This course explores the relationship between citizens and their government by examining the growth of the American state in various arenas over time, as well as the assaults on government legitimacy in recent years. We will assess traditional theories about the weakness of the American state in light of arguments about the state as: regulator of family and "private" life, adjudicator of relations between racial and ethnic groups, manager of economic inequalities, insurer of security, and arbiter of the acceptable uses of violence and surveillance.

Class Format: This course will be taught remotely, in a quasi-tutorial style with students meeting with the instructor weekly in small discussion groups.

Requirements/Evaluation: Students will be responsible for writing three 5-page papers and three 2-page papers, and will also be asked to take responsibility for managing discussion and presenting work at different points in the semester.

Prerequisites: at least one class in American politics

Enrollment Limit: 12

Enrollment Preferences: Political Science majors

This course examines New York City's political history from the 1970s to the present—a period during which the city underwent staggering economic and social changes. In the mid-1970s, New York was a poster child of urban crisis, plagued by arson and housing abandonment, crime, the loss of residents and jobs, and failing public services. By the early 21st century, the city had largely met these challenges and was once again one of the most diverse and economically vital places on earth—but also one marked by profound inequality. This course will examine how New Yorkers have contested core issues of capitalism and democracy—how those contests have played out as the city itself has changed and how they have shaped contemporary New York. Broad themes will include the city’s role as a showcase for neoliberalism, neoconservatism, technocratic centrism, and progressivism; the politics of race, immigration, and belonging; the relation of city, state, and national governments; and the sources of contemporary forms of inequality. Specific topics will include policing, school reform, and gentrification. As the primary assignment in the course, students will design, research, and write a 20-page paper on a topic of their choice.

Requirements/Evaluation: active class participation, 2-page preliminary proposal, 10-page research proposal, 2-page peer feedback, 18- to 20-page research paper

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: Political Science majors and Leadership Studies concentrators

Expected Class Size: 14

Grading: no pass/fail option, no fifth course option

Writing Skills Notes: Students will develop their research papers over the course of the semester, receiving from the instructor at each stage of the process timely comments on their writing skills, with suggestions for improvement. Feedback will take the form of written comments, class workshops, and one-on-one meetings with the professor.
PSCI 311 (F) Congress

Cross-listings: PSCI 311 LEAD 311

Primary Cross-listing

Even before the pandemic, scholars, pundits, and the public thought Congress was in a state of crisis. Riven by polarized partisanship and gridlock, the most powerful assembly in the world seemed incapable of representing citizens and addressing problems. This seminar focuses on how Congress organizes itself to act as a collective body. In an organization comprised of equals, how and why do some senators and representatives acquire more power and authority than others? How does Congress act as an institution and not just a platform for 535 individuals? Why does Congress not act, especially when the U.S. confronts so many pressing problems, and how do legislators justify inaction? In what ways does this institution promote or hinder the legitimacy, responsiveness, and responsibility expected of a democratic governing institution?

Requirements/Evaluation: class participation, two short papers, and a final research paper

Prerequisites: PSCI 201 or permission of instructor

Enrollment Limit: 14

Enrollment Preferences: Political Science majors with American Politics concentration and Leadership Studies concentrators

PSCI 312 (S) American Political Thought (WS)

Cross-listings: PSCI 312 LEAD 312

Primary Cross-listing

From democracy to liberty, equality to community, foundational ideas -- about what makes for good government, about what constitutes the good society, about what is necessary to lead a good life -- define the American political tradition and consume the American political imagination. Designed not only to uncover these (sometimes melodic, sometimes cacophonous) values but also to place current ideological debates about them in a broader developmental context, this tutorial will offer a topical tour of American political thinking from the birth of nationalism in the colonial period to the remaking of conservatism and liberalism in the early twenty-first century. Utilizing primary source material ranging from presidential speeches to party platforms, newspaper editorials to novels, we will seek to interrogate -- reconciling where possible, distinguishing where necessary, interpreting in all instances -- the disparate visions and assessments of the American political experience offered by politicians, artists, intellectuals, activists, and ordinary citizens over the course of more than two centuries. Our focus, then, is nothing less than the story of America -- as told by those who lived it.

Class Format: For spring 2021, this course will be taught remotely, with a few synchronous seminar classes at the start and end of the course bookending weekly synchronous tutorial sessions.

Requirements/Evaluation: five 5- to 7-page essays, five 2- to 3-page critiques, and a revised and extended 10- to 12-page final essay

PSCI 314 (F) How Change Happens in American Politics

Cross-listings: PSCI 314 LEAD 314

Primary Cross-listing

An unprecedented assault on the U.S. Capitol, the rise of white nationalism, a pandemic, a volatile economy, racial reckoning, and rapidly evolving environmental crises have all rocked American politics in the last year. What might we expect to come next? From the Founding to the present, the American political order has undergone cataclysmic and thoroughgoing transformations, yet it has also proven to be remarkably enduring. How can this be? Where do we find continuities and where upheavals? What accounts for the continuities, and what for the changes? What sorts of transformations have been possible, and who or what has made them possible? Finally, what are the costs of change (and of continuity)--and who pays them? The goal of this course is to assess American political change, or lack of, and to gain a sense of the role that political leaders have played in driving change. We will examine when and how individuals and leadership have mattered vis-à-vis broader historical and contextual factors, including economic developments, demographic change, war, and constitutional and institutional parameters. After examining general models of change and of leadership, we will consider specific case studies, such as civil rights for African-Americans, gender equality, labor advances, social conservatism, and populism. We will consider some of the complicated legacies of change. Finally, we will look at arguments that America has been "exceptional"--or, unlike other countries--as well as critiques of these arguments, to help us gain an understanding of future prospects for political transformation.

Requirements/Evaluation: participation in weekly meetings as well as weekly essays or critiques

Prerequisites: previous course in American politics or American history

Enrollment Limit: 10

Enrollment Preferences: Political Science majors and Leadership Studies concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option
Is the American party system bankrupt? It has been said that parties are essential to democracy, and in the U.S., political parties have played a central role in extending democracy and organizing power. But their worth is a continuing subject of debate. Parties have been celebrated for linking citizens to their government and providing the coherency and unity needed to govern in a political system of separated powers. Yet they have also been disparaged for inflaming divisions among people and grid-locking the government. Other critics take aim at the two-party system itself, claiming that the major parties fail to offer meaningful choices to citizens. This course will investigate this debate over parties by examining their nature and role in American political life, both past and present. Throughout the course, we will explore such questions as: What constitutes a party? For whom do they function? How and why have they changed over time? Why a two-party system, and what role do third parties play? Is partisanship good or bad for democracy? For governance? What is the relationship between parties and presidents? How does partisanship become tribalism or hyper-partisanship, and can this be prevented? This semester, we will explore answers to these questions in a tutorial-style seminar format.

Class Format: This course will be taught remotely in a quasi-tutorial style format with students meeting with the instructor weekly in small discussion groups.

Requirements/Evaluation: Students will be responsible for writing three 5-page papers and three 2-page critiques. Students will also be asked to take responsibility for managing discussion and presenting work at different points in the semester.

PSCI 316 (S) Policy Making Process

Politics as usual. It's a phenomenon we all love to hate. But what does it mean? When government policy is decided by politics, does that mean the policy is necessarily bad? Can we get rid of politics in policy making or improve on it somehow? What would "politics as unusual" look like anyway? This class examines the policy making process with particular emphasis on the United States: How do issues get defined as problems worthy of government attention? What kinds of alternatives are considered as solutions to these problems? Why do we end up with some policies but not others? Do certain kinds of processes yield better policies than others? How should we decide what constitutes a good policy?

Class Format: In spring 2021, this course will be taught remotely.

Requirements/Evaluation: several short papers, research paper, class participation

**PSCI 317 (F) Environmental Law**

**Cross-listings:** PSCI 317  ENVI 307

**Secondary Cross-listing**

We rely on environmental laws to make human communities healthier and protect the natural world, while allowing for sustainable economic growth. Yet, despite 40 years of increasingly varied and complex legislation, balancing human needs and environmental quality has never been harder than it is today. Environmental Studies 307 analyzes the transformation of environmental law from fringe enterprise to fundamental feature of modern political, economic and social life. ENVI 307 also addresses the role of community activism in environmental law, from local battles over proposed industrial facilities to national campaigns for improved corporate citizenship. By the completion of the semester, students will understand both the successes and failures of modern environmental law and how these laws are being reinvented, through innovations like pollution credit trading and "green product" certification, to confront globalization, climate change and other emerging threats.

**Requirements/Evaluation:** several short writing assignments, a term research project, and active participation in class

**Cross-listings:** MAST 351  ENVI 351  PSCI 319

**Secondary Cross-listing**

Coastal communities are home to nearly 40% of the U.S. population, but occupy only a small percentage of our country's total land area. Intense population density, critical transportation infrastructure, significant economic productivity, and rich cultural and historic value mark our coastal regions as nationally significant. But, coastal and ocean-based climate-induced impacts such as sea level rise, ocean warming and acidification pose extraordinary challenges to our coastal communities, and are not borne equally by all communities. This seminar considers our relationship with our ocean and coastal environments and the foundational role our oceans and coasts play in our Nation's environmental and economic sustainability as well as ocean and coastal climate resiliency. Through the lens of coastal and ocean governance and policy-making, we critically examine conflict of use issues relative to climate change, climate justice, coastal zone management, fisheries, ocean and coastal pollution and marine biodiversity.

**Class Format:** This class is taught only at Williams-Mystic in Mystic, Connecticut and includes coastal and near-shore interdisciplinary field seminars, and 10 days offshore.

**Requirements/Evaluation:** Weekly Readings; Class Participation; Small and large group strategy exercises (written and oral); Written Research Project: issues paper and draft research paper; Final Research Project: multiple formats available

**Prerequisites:** none

**Enrollment Limit:** 23

**Enrollment Preferences:** must be enrolled at Williams-Mystic in Mystic, Connecticut
Expected Class Size: 22

Grading: no pass/fail option, no fifth course option

Unit Notes: must be enrolled at Williams-Mystic in Mystic, Connecticut

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

MAST 351 (D2) ENVI 351 (D2) PSCI 319 (D2)

Writing Skills Notes: Each student will write one 3-5 page research issues paper and one 8-10 page draft research paper as well as a final project with written components equaling 5-8 pages. Each submission receives written feedback from the professor, including research guidance, input on grammar, structure, language, analysis. Students also receive verbal feedback in individual conferences to discuss research paper organization, analysis, structure and grammar as well as final project input.

Difference, Power, and Equity Notes: Coastal and ocean policy issues relating to climate change, coastal zone management, fisheries, ocean pollution and marine biodiversity impact environmental and climate justice. Students examine coastal governance while considering the disproportionate burdens on underrepresented populations in U.S. coastal communities caused by climate change and coastal policies. Students analyze multi-disciplinary evidence and work to strengthen their integrative, analytical, writing, and advocacy skills.

PSCI 320  (F)  Heroes and Villains: Iconic Leadership and the Politics of Memory  (WS)

Cross-listings:  PSCI 320 LEAD 320

Secondary Cross-listing

Americans have been arguing intensely in recent years about how we should remember the leaders from our nation's past. Does Thomas Jefferson's statue belong on a university campus? Should college dorms be named for John C. Calhoun and Woodrow Wilson? Should Harriet Tubman's portrait replace Andrew Jackson's on the $20 bill? In this course we will look at how people in the United States and elsewhere have used their leaders' images to hash out larger political issues of national identity, purpose, and membership. Why has historical commemoration gotten so contentious--or has it always been contentious? What's really at stake when we depict our leaders? How (if at all) should we reconcile contemporary morality with historical context in assessing the leaders from our past? To address these questions, we will study portrayals of some of the most famous leaders in American history--including Alexander Hamilton, Abraham Lincoln, and Martin Luther King, Jr. Our sources will include political speeches, literature, film, and journalism as well as monuments and museum exhibits; though our examples will be drawn mostly from the United States, our conceptual framework will be transnational. As a final assignment, students will write an 18-20 page research paper on a topic of their choice related to the core themes of the course.

Requirements/Evaluation: Seminar participation, research proposal, peer workshop, research paper, in-class research presentation

Prerequisites: previous course in Leadership Studies, or Political Science, or permission of instructor

Attributes: LEAD American Domestic Leadership LEAD Facets or Domains of Leadership PSCI Research Courses
PSCI 321  (F) Immigration Politics in the U.S.

The U.S. Census Bureau estimates that non-Hispanic whites will no longer be the majority racial group in the U.S. by 2044. This demographic change is fueled by past and current immigration, and the politics surrounding American immigration policy have intensified as a result. Donald Trump's rise to the presidency was fueled in part by his pledge to build a wall between the U.S. and Mexico. Meanwhile, efforts to reform the nation's immigration laws have been stuck in gridlock for years. How did we get to this point and what does the future hold? Why is immigration policy so contentious? What is at stake, and what do different groups believe to be at stake? To answer these questions, we will examine immigration from a multidisciplinary lens, but with special attention to immigration politics and policy. We will examine the history of immigration to the U.S. and the policies that have shaped it; recent developments in electoral and protest politics; the policy initiatives of recent presidential administrations, Congress, and state and local governments; and the incorporation of immigrants into U.S. society and politics, past and present.

PSCI 322  (F) Migration Governance: A Global Perspective  (DPE)

Cross-listings: GBST 321  PSCI 322  LEAD 324

Primary Cross-listing

This class is interested in thinking critically and empirically about one of the most polarizing and relevant issues of our time: how countries regulate cross-border mobility. Currently over 281 million international migrants live in a country different from where they were born, about 1 out of every 30 humans in the world and a population that has roughly doubled since 1990. How are international organizations and domestic governments regulating this level of unprecedented global mobility in destination countries as well as countries of origin? Throughout the semester we interrogate three themes central to migration politics (and political science): rights, access, and agency. The course is organized with a focus on legal status: which "categories" of people (i.e. illegal migrants, refugees) have differential access to rights, services, and representation depending on how they are classified where they live (and where they are from). We will critically analyze how those categories are constructed at the international and domestic levels, as well as how those categorizations are also racialized, politicized, and gendered. While we address current debates over migration governance in the United States, we situate US migration policy within the contemporary global context. The course places the US in conversation not only with European countries, but also (and especially) considerations of migration governance in destination countries in Latin America, the Middle East, Asia and Africa. We also attend to the emigration governance of diaspora citizens particularly from the Global South. Students will have the opportunity to apply course readings to real-world contexts through guest speakers from global organizations at the frontlines of migration policy (UNHCR, Doctors without Borders), and filmmakers documenting border crossing around the world.

Requirements/Evaluation: Participation, 3 Short Response Papers, Research Paper (15 pages)

Prerequisites: PSCI 202 or PSCI 204 or permission of the instructor

Enrollment Limit: 15

Enrollment Preferences: Political Science majors and Leadership Studies Concentrators

PSCI 328 (F) Human Rights Claims in International Politics (WS)
For decades, people and countries have used “human rights” to advance their position, delegitimize their opposition, and lodge their interests in an unassailable political category. This research seminar investigates who uses this category, to what ends, and with what success. How people ground this concept—what they think its origin is—does matter, but evaluating those foundations is not our focus. Politics is our focus. Who gains and loses from the idea that people have human rights? Does the concept fit well with, and reinforce, some institutions and configurations of power, and make others difficult to sustain (or even to conceive)? Why not simply claim that something is an interest rather than also a right? How has “human rights” been deployed in international politics, and by whom? The class is divided into four sections. The first concentrates on common readings on these questions, and prioritizes discussion, explication, and hypothesis brainstorming. The second introduces social science methodology, covering hypotheses, literature reviews, and evidence while continuing half time with materials about human rights. The third emphasizes research design, allowing students to finalize their own project while bringing in primary sources such as original documents, debates, and data. The last quarter of class focuses on student projects, on integrating and revising research to produce a set of findings and an evaluation of their meaning. The course is designed to teach political science majors the nuts, and maybe also the bolts, of social science research.

Requirements/Evaluation: Class discussion, short writing, worksheets, peer reviews, drafts of various sections, final paper, final presentation
Prerequisites: Two classes in political science, at least one of which must be in international politics.
Enrollment Limit: 12
Enrollment Preferences: Political science majors
Expected Class Size: 12
Grading: no pass/fail option, yes fifth course option
Distributions: (D2) (WS)
Writing Skills Notes: Students write frequent short pieces, and revise/rewrite an increasingly long draft in sections over the course of the semester.

PSCI 330  (S)  American Political Thought in Hemispheric Context

Cross-listings:  PSCI 330  GBST 330

Primary Cross-listing

Actors living during the Age of Revolutions witnessed an astounding number of social, political, and cultural changes. In the short period between 1775 and 1830 more than thirty popular insurgency movements took control of the American hemisphere, most of them by organizing around the principles of republican politics. In this course, we study the peoples, demands, and visions that comprised the popular movements of the Age of Revolutions to reconstruct the canon American Political Thought in hemispheric context. This course emphasizes the comparative features of post-colonial movements in the Americas and centers the contributions of indigenous, raced, gendered, and ethnicized communities. The course schedule is divided into two sections. The first half of the class situates the political and theoretical problems of American Political Thought by engaging with scholarship on post-colonial movements, decolonial thought, democratic theory, and theories of popular rule. The second half of the course contextualizes these frameworks by putting them in conversation with studies of revolutionary change, popular imagination, and case studies on revolutionary movements throughout the Americas. Students are expected to engage in archival research, as well as work with both primary and secondary sources on the Age of Revolutions. The class will meet remotely and hold synchronous discussions.

Class Format: The class will meet remotely for synchronous lecture and discussions. Recorded class sessions will be uploaded for any students who cannot meet synchronously.

Requirements/Evaluation:  Regular attendance, consistent class participation, three Glow posts, three two-page reflection papers, and a final research paper of 10-12 pages

Prerequisites: At least one prior course in political theory, social theory, history of the Americas (either the United States or Latin America), or permission of instructor.

PSCI 331  (F)  The Politics of Algorithms

Cross-listings:  STS 349  AMST 349  PSCI 331

Primary Cross-listing

Every day, you interact with or through computer algorithms. In ways often obscure to users, they structure communication or conduct in social media, education, healthcare, shopping, entertainment, dating, urban planning, policing, criminal sentencing, political campaigns, government regulation, and war. Moving from the emergence of cybernetics during World War II through such contemporary examples as facial recognition software, this seminar approaches algorithms as complex technological artifacts that have social histories and political effects. Asking how algorithms are political and what that tells us about politics today (particularly in the U.S.), we will consider how their design expresses forms of power and their deployment shapes ways of living. What behaviors do different algorithms solicit, reward, discourage, or stigmatize? What kinds of selfhood and relationships do they promote or thwart? How do various algorithms influence political partisanship and beliefs and intersect with existing hierarchies of race, class, gender, and sexuality? When inequities are built into a design, can that be addressed by rooting out "bias," or do such efforts miss something more inherent in the kinds of artifacts algorithms are or what they can be in a capitalist economy? Might developments in artificial intelligence transform our sense of the human or even threaten the species? Many of the seminar’s themes, including democracy, power, inequality, judgment, deliberation, publicity,
subjectivity, and agency, are central to political theory, but readings and course materials will also be drawn from such fields as media theory, surveillance studies, sociology, American studies, critical data science, film, and contemporary art. The course neither requires nor teaches any computer science skills.

**Requirements/Evaluation:** Class attendance and participation, regular short posts or exercises, and either three eight-page essays or one 8-page essay and one longer final paper.

**Prerequisites:** At least one course in political, cultural, or social theory or the critical study of science and technology, or permission of the instructor. Not open to first-year students.

**Enrollment Limit:** 15

**Enrollment Preferences:** Political Science and American Studies majors and STS concentrators; then qualified students from all other majors welcome, space permitting.

**Expected Class Size:** 15

**PSCI 332 (S) The Body as Property (DPE)**

From an ethical standpoint, human bodies are fundamentally different from objects that can be owned, acquired, and exchanged. Yet history furnishes us with countless examples of laws, administrative rules, and social conventions that treat the human body as a form of property. The institution of slavery is a particularly egregious example. But there are other examples of treating the body as property that seem more ambiguous, or even benign: the employment contract in which bodily services are offered in exchange for payment; the feminist slogan "my body, my choice"; or even the every-day transfer of bodily properties into creative projects that then become part of the things people own --- chairs, tables, houses, music, art, and intellectual property. If it is not itself a form of property, how can we explain the use of the human body to acquire possessions, create wealth, and mediate the exchange of other kinds of property? These and other tensions between the concept of property and that of humanity will be the focus of this course. How is property defined, and how far should law go to erode or reinforce distinctions between property and humanity? Course readings focus on Locke, Hegel, Marx, and critical perspectives from feminist theory, critical theory, and critical legal studies (Cheryl Harris, Alexander Kluge, Oskar Negt, Carole Pateman, Rosalind Petchesky, and Dorothy Roberts, among others).

**Class Format:** Hybrid: Tutorial pairs with both students on campus will meet in person for the majority of our sessions (some weeks may be online). Pairs with one or both students learning remotely will meet exclusively online.

**Requirements/Evaluation:** five 5- to 7-page essays, five 2- to 3-page critiques, and a revised and extended 10- to 12-page final essay

**Prerequisites:** prior coursework in political theory, cultural theory, philosophy, or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Political Science majors (priority given to those concentrating in Political Theory ); Justice & Law Studies concentrators (priority given to those with extensive JLST coursework).

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** The course fulfills the Difference, Power, and Equity (DPE) requirement by examining how, in the context of legally-sanctioned power relations, bodily differences are constructed, monetized, and used to generate wealth. Race, class, and gender inequalities are central to the analysis.

**PSCI 333 (F) Asian/African American Cultural and Political Theory**

**Cross-listings:** PSCI 333  AFR 344  AMST 325
Contrasted as "model minorities" or "incorrigible minorities" Asian Americans and African Americans have been pitted against one another in social standing and political objectives. However, throughout the twentieth century, African/Asian solidarity and alliances existed in political movements and literary and cultural productions. From Ho Chi Minh's anti-lynching writing, the founding conference of the WIDF (Women's International Democratic Federation) in China in 1945, through the Bandung Conference, coalitions against U.S. wars in Southeast Asia, and alignments with Chinese anti-imperialist endeavors, black and Asian peoples have joined in international political formations. Contributions to theory include the writings and activism of Langston Hughes, W.E.B. Du Bois, Richard Wright, Robert Williams, Yuri Kochiyama, Grace Lee and Jimmy Boggs, Ishmael Reed, and Amiri Baraka; films of Bruce Lee; music of Fred Ho; revolutionary praxis of Mao Tse Tung's Little Red Book and his writings on art and society; the Marxism of the Black Panther Party; the Afro-futurism of Sun Ra and Samuel Delany; and contemporary "Afro-pessimism." Such cultural works depict futurities and possibilities for Black and Asian diasporas. This seminar examines theory, politics, literature, film, and music produced from and linked to twentieth-century movements against capitalism, racism, colonialism, and imperial wars to think through how Black and Yellow Power have shaped solidarity to challenge white supremacy and racial capitalism.

PSCI 334 (S) Theorizing Global Justice

While economic exchanges, cultural convergence, and technological innovations have brought people in different parts of the world closer together than ever before, globalization has also amplified differences in material wealth and social inequalities. Ill health, inadequate sanitation, and lack of access to safe drinking water are increasingly common. Yet, more than ever before, the means exist in affluent regions of the world to alleviate the worst forms of suffering and enhance the well-being of the poorest people. How are we to understand this contradiction as a matter of justice? What is the relationship between justice and equality, and what do we owe one another in a deeply divided world? Course readings will engage your thinking on the central debates in moral philosophy, normative approaches to international political economy, and grassroots efforts to secure justice for women and other severely disadvantaged groups. Key theorists include Amartya Sen, Martha Nussbaum, John Rawls, Thomas Pogge, Nancy Fraser, Paul Farmer, Vandana Shiva, Majid Rahnema, and Enrique Dussel.

Class Format: discussion

Requirements/Evaluation: oral presentation, weekly blog posts, and three papers (3 pages, 7 pages and 8-10 pages)

PSCI 337 (S) Visual Politics

Cross-listings: PSCI 337 ARTH 337

Primary Cross-listing

Even casual observers know that appearances matter politically and that the saturation of politics by visual technologies, media, and images has reached unprecedented levels. Yet the visual dimensions of political life are at best peripheral topics in contemporary political science and political theory. This seminar explores how our understanding of politics and political theory might change if visuality were made central to our inquiries. Treating the visual as a site of power and struggle, order and change, we will examine not only how political institutions and conflicts shape what images people see and how they make sense of them but also how the political field itself is visually constructed. Through these explorations, which will consider a wide variety of visual artifacts and practices (from 17th century paintings to the optical systems of military drones and contemporary forms of surveillance), we will also take up fundamental theoretical questions about the place of the senses in political life. Readings may include excerpts from ancient and modern theorists, but our primary focus will be contemporary and will bring political theory into conversation with other fields, particularly art history and visual studies but also film and media studies, psychoanalysis, neuroscience, and STS. Possible authors include Arendt, Baj, Belting, Benjamin, Browne, Buck-Morss, Butler, Campt, Clark, Crary, Debord, Deleuze, Fanon, Foucault, Freedberg, Hobbes, Kittler, Mercer, Mitchell, Mulvey, Plato, Rancière, Scott, Sexton, Starr, Virilio, Warburg, and Zeki.

Requirements/Evaluation: regular, engaged class participation, several Glow posts, and *either* three 7- to 8-page papers *or* on short and one much longer paper.

Prerequisites: at least one prior course in political theory, cultural theory, visual studies, or art history; or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Political Science and Art History majors (including students in the grad program); then qualified students from all disciplines welcome, space permitting

PSCI 339 (S) Politics in Dark Times: Hannah Arendt (WS)

Cross-listings: PSCI 339 JWST 339

Primary Cross-listing

Hannah Arendt (1906-75) bore witness to some of the darkest moments in the history of politics. Born a Jew in Germany, Arendt lived through--and reflected deeply on--two world wars, the rise of totalitarianism, and the detonation of the first atomic bomb. She narrowly escaped imprisonment by the Gestapo and internment in a refugee camp in Vichy France before fleeing to New York. Yet, in the face of these horrors, Arendt never lost her faith in political action as a way to express and renew what she called "love of the world." She wrote luminously about the darkness that comes when terror extinguishes politics and the shining, almost miraculous events of freedom through which politics is sometimes renewed. In this tutorial, we will investigate what Arendt's vision of politics stands to offer to those struggling to comprehend and transform the darkest aspects of the contemporary political world. Our time and Arendt's are similarly darkened by the shadows of racism, xenophobia, inequality, terror, the mass displacement of refugees, and the mass dissemination of lies. It may be tempting to conclude from these similarities--as some recent commentators have--that we are witnessing the return of "totalitarianism" as Arendt understood it. She would be the first to refuse to use inherited concepts as if they were keys to unlock the present. Her words and her example should impel us to reject shortcuts to authentic understanding, the "unending activity by which...we come to terms with and reconcile ourselves to reality." We will turn to Arendt as an interlocutor, not a guide, as we seek to reconcile ourselves to the contingency and specificity of past and present political realities. And we will search her works and our world for embers of hope that even seemingly inexorable political tragedies may yet be interrupted by assertions of freedom in political action.

Requirements/Evaluation: five 5-page papers; five 2-page responses; participation

**PSCI 340 (S) Why States Fail**

This course considers the origins of political violence and state failure at the end of the 20th century. It seeks to address why there was a resurgence of political violence at the dawn of the 21st century. Toward that end, we begin by considering competing explanations of political violence (ethnicity, democratization, natural-resource endowments, and predatory elites). We then move on to the empirical section of the course in which we cover case studies of state failure in parts of Eastern Europe, Africa and the Middle East.

**Class Format:** discussion

**Requirements/Evaluation:** seminar participation, two oral presentations and a research paper proposal

**PSCI 342 (S) Beyond the welfare state**

"Not me. Us" became a rallying cry of Bernie Sanders' presidential campaign in late 2019. Sanders' slogan reflects a vision of a robust welfare state, defined by a widespread commitment to solidarity, where citizens share social risks as well as economic rewards. But what role can the welfare state play in the twenty-first century? How have its constitutive institutions, from pensions to unemployment insurance, evolved since the post-war "Golden Age"? Is solidarity possible only in utopia, or can we realize it in the world as well? This course identifies the political conditions under which welfare states developed in the twentieth century, and examines how they have responded to globalization, immigration, digital transformation, and other contemporary challenges. If the welfare state has a future, it will look different from the past, but how? Taking up a handful of alternative paradigms, from social investment to mutual aid, we will assess different trajectories of solidarity in the twenty-first century.

**Class Format:** Course will be fully remote, composed of three elements: (1) Asynchronous lectures, (2) Student discussion groups, (3) Synchronous class meetings

PSCI 343  (F) Democratic Erosion  
**Cross-listings:** GBST 342  PSCI 343  
**Primary Cross-listing**  
A central tenet of political science is that once a country reaches a certain level of political and economic development, democracy will endure indefinitely. The contemporary moment calls on us to revisit this assumption. This course explores the causes and consequences of democratic erosion through the lens of comparative politics. We ask three central questions to inform our investigation: 1) What is democracy and its alternatives? 2) How do we identify democratic breakdown? and 3) What are strategies to counteract backsliding when it occurs? Importantly, this course is not intended as a partisan critique of any particular American politician or political party. Rather, it is designed to provide an opportunity to engage, critically and carefully, with claims about the state of democracy in the US and elsewhere; to evaluate whether those claims are valid; and, if they are, to consider strategies for mitigating the risk of democratic erosion here and abroad. Readings draw from academic scholarship, media commentary, and current events as they unfold. We will address both empirical and normative dimensions of the issues, as well as learn about examples of democratic erosion around the world from early 20th century until today. As a collaborative class taught at dozens of other colleges, the course enables you to engage in debates about democratic erosion with students throughout the US and around the world.  
**Class Format:** As a hybrid course, the class will feature both in-person and online components. I will post 1-2 short lectures on GLOW to accompany assigned readings/media for the week. Our scheduled course time will be a mix of discussions, interactive learning exercises, and presentations. At least one class per week will be held in-person; whether the other class will be online or in-person will depend on a number of factors, including the distribution of students taking the course on campus or remotely.  
**Requirements/Evaluation:** Active Class Participation, 3 Short Response Papers, Country Case Study (15-20 pages, written incrementally throughout semester) and Presentation.  
**Prerequisites:** Prior coursework in political science or permission of instructor.  
**Enrollment Limit:** 12  
**Enrollment Preferences:** Political Science Majors, Global Studies Concentrators  
**Expected Class Size:** 12

PSCI 344  (S) Palestinian Nationalism  
Palestinian Nationalism: This tutorial will cover the history, bases of support, objectives, and accomplishments and failures of Palestinian nationalism over the past century. It will address how the Palestinian nation has been defined, who has defined it, what factions and classes have controlled its organizations, and the reasons why it has failed to achieve its goals. The tutorial will address the evolution of Palestinian nationalism historically and thematically, employing both primary and secondary sources. The readings will consist mostly of Palestinian authors, with an emphasis on documents, histories, and political analyses. Two questions will anchor the tutorial: how is the nation defined and what, if any, class interests are folded into various definitions?  
**Requirements/Evaluation:** Read the assigned materials, write a 5-page paper every other week, and comment on the student's partner's paper in the other weeks.  
**Prerequisites:** Political Science Majors and students with background in Middle East  
**Enrollment Limit:** 10  
**Enrollment Preferences:** Political Nationalism

PSCI 345 (S) The Meaning of Life and Politics in Ancient Chinese Thought

Cross-listings: ASIA 345 PSCI 345 ASST 345

Primary Cross-listing

How can we live a good life? What standards should we use to judge how political power is constituted and used? This class will involve students in close reading of, and exegetical writing about, core texts of ancient Chinese philosophy in English translation. The purpose is to gain an understanding of a number of different perspectives on life and politics, especially Confucianism, Legalism and Daoism. While the primary focus will be on the meaning of the texts in the context of their own times, contemporary applications of core concepts will also be considered. The class will begin with background readings, since no prior work in Chinese philosophy or history is assumed. Then the class will read significant portions of the following canonical works: Yijing, Analects, Mencius, Daodejing, Zhuangzi, and Han Feizi.

Class Format: The class will be hybrid with both online and in-person sessions.

Requirements/Evaluation: two 5-page papers and one 15-page paper

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: preference to seniors but all are welcome.

PSCI 349 (S) Cuba and the United States (WS)

With the passing of the Castro brothers' regime on the horizon, we examine the long and deeply felt history of dependence and conflict between Cuba and its colossal neighbor to the north. It begins with the political economy of the colony, then covers the Cuba-US relationship from José Martí and 1898 through the Cold War to the present, emphasizing the revolutionary period. Tutorial topics include: sovereignty and the Platt Amendment; culture and politics; race and national identity; policies on gender and sexual orientation; social programs; political institutions; the post-Soviet "Special Period"; the evolution of the Cuban exile community in the US; and the fraught agenda of reform and generational transition. Materials include journalism, official publications, biographies, travel accounts, polemics, policy statements of the US government, and a wide range of academic works.

Class Format: a lecture in the first week; then ten weeks of tutorial; then a discussion class in the final week

Requirements/Evaluation: five 5- to 6-page papers, five 1- to 2-page responses, and one 1-page essay for the final class

Prerequisites: any course on Latin America or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Political Science majors

PSCI 351  (S)  The New Left and Neoliberalism in Latin America  (DPE)

Cross-listings:  PSCI 351  GBST 351

Primary Cross-listing

Recent years have seen a resurgence of the political left in Latin America. This course seeks to understand the origins of this new left, the ideas and character of its protagonists, the neoliberal philosophy it opposes, and the arena of democratic politics it inhabits today. We first read polemics from both sides, before stepping back to consider Latin American political economy, including the twentieth-century left, from a more historical and analytical perspective. With this preparation, we then look more closely at major contemporary figures and movements in Venezuela, Bolivia, Mexico, Brazil, and other countries. After considering explanations of the rise of the left and assessments of its performance in power, we end our common readings by asking what it might mean today to be on the left in Latin America—or anywhere—both in policy and political terms.

Class Format: discussion then seminar

Requirements/Evaluation: three 3-page essays, a 1-page reflection paper, and a 12-page research proposal

Prerequisites: a course on Latin America and a course in Economics or permission of the instructor

Enrollment Limit:  15

PSCI 352  (F)  Politics in Mexico  (DPE)

Cross-listings:  GBST 352  PSCI 352

Primary Cross-listing

Geography has decreed that the futures of Mexico and the United States will be tightly bound. Yet Mexico enters this future with a very different past, a distinctive political system, important cultural differences, and mixed feelings about its neighbor to the north. This course has four parts differing in content and format. The first is historical and mostly lecture. It considers several themes, including the slow emergence of a stable national state and the interplay between politics and economic change. In the second section, following a modified tutorial format, we consider politics and cultural policies around Mexican national identity in the twentieth century, looking at films, journalism, popular music, and cultural criticism. Topics include the politics of race; rapid urbanization, especially in the valley of Mexico; and the cultural impact of the turn toward the north, after 1990, in economic policy. Then, after a few discussion classes on migration, organized crime, political corruption, the COVID-19 pandemic, and other issues facing the current government of Andrés Manuel López Obrador, we turn to a seminar-style discussion of student research projects.

Class Format: lectures will be recorded for viewing before class sessions; four weeks of modified tutorials in pairs or small groups online; discussion classes to include in-person and online, in distinct sections if appropriate; online seminar

Requirements/Evaluation:  map quiz; one three-page and three two-page essays; two one-page commentaries; and a seven- to eight-page research proposal, an early version to be presented to the class in online seminar

Prerequisites:  some knowledge of Mexican history

Enrollment Limit:  15

Enrollment Preferences:  Political Science majors and seniors

Expected Class Size:  14
PSCI 353  (F)  What is Democracy?
This is a research course that will investigate the meaning of democracy through readings and a research paper. The readings will begin with claims that democracy consists of government by elites, that the democratic component consists of elections that amount to choosing between rival slates of elites, and that agreements among elites set the boundaries for permissible democratic decision making. To examine this claim, the readings will address two fundamental issues. First, it will consider the the terms of American foreign policy after the Cold War, how it sets these, and continuities and discontinuities between the Clinton and Bush administrations. Where did Democratic and Republican foreign policy elites agree and disagree and what happened to proposals that were outside the elite consensus? Second, the course will consider the prelude and official responses to the 2008-11 financial crisis. What policies paved the way for and resolved the crisis, how were they reached, and who participated in formulating them? In other words, to what extent and in what respects were these fundamental turning points made "democratically"? Having done preliminary reading on these two issues, students will conduct in-depth research into aspects of one of these questions and write a research paper.

Requirements/Evaluation:  One 5 page paper, 25 page research paper, presentation of paper to class, and class participation.
Prerequisites:  Political Science majors or prospective majors, sophomores, juniors, and seniors, and permission of instructor.

PSCI 357  (S) Leadership and the Anxieties of Democracy

Cross-listings: PSCI 357 LEAD 425

Secondary Cross-listing

This capstone course examines the challenges and opportunities facing political leaders in contemporary liberal democracies. We will begin by surveying institutional constraints confronting contemporary political leaders: globalization, sclerotic institutions, polarization, endemic racism, and a changing media environment, among others. Then, we will look at some important factors that shape how followers approach would-be leaders: inequality and economic pecularity; identity and group consciousness; notions of membership, community, and hierarchy; and declining local institutions. While the course will focus primarily on the United States, our conceptual framework will be global; though our main interest will be contemporary, we will also examine previous eras in which democratic leadership has come under great pressure. Our primary questions will be these: Why does transformative leadership seem so difficult today? How does political leadership in the 21st century differ from leadership in earlier eras? What conditions are necessary to sustain effective leadership in the contemporary world? As a final assignment, students will craft an 18-20-page research paper on a topic of their choice related to the themes of the course.

Requirements/Evaluation:  Seminar participation, research proposal, peer workshop, research paper, in-class research presentation

Prerequisites:  LEAD 125 or permission of the instructor

Enrollment Limit:  15

PSCI 358  (F) Media, Politics, and Power

Concerns about 'misinformation,' 'fakenews,' and 'propaganda' abound in discussions of politics in social media, news, entertainment and movies, and in daily conversations. Conflicting groups regularly accuse each other of being 'duped' by 'biased' sources of information on crucial issues like war, elections, sexuality, racism, and history. But is anyone immune to media influence? What is it and how might it work? And who are the groups who shape how media portray the world to us? This seminar explores such questions by investigating the political use of media in the organization of power. Readings and discussions provide a view on the past and ongoing use of media in the shaping of popular knowledge, collective actions, and public policies. We interrogate the terms 'media,' 'politics,' and 'power.' We study techniques to politically use media as well as research techniques to uncover political practices and relations. The course is divided into three parts. The first module engages students in readings on the economic and political situation of dominant types of media (AI, social media, news, etc.) and dominant media companies (Google, FaceBook, CNN, FOX, etc.). The second engages students with theory and methods for understanding and analyzing media contents (the stories, images, etc. that media convey). The final module introduces students to theory and methods for analyzing media relations (how a given media connects particular groups in particular ways). In the second and third modules, students develop research questions that they pair with research methods to politically analyze a chosen
The course is designed to introduce students to fundamental components of social science research and critical thinking on media as a political tool.

Requirements/Evaluation: Participation in class discussions and activities, written reflections on readings, data gathering and analysis, two 8-10 page papers, peer review, 2 in-class presentations.

Prerequisites: None

Enrollment Limit: 16

PSCI 360 (S) Right-Wing Populism

After the fall of the Berlin Wall in 1989, the political scientist Francis Fukuyama famously declared "the end of history". From now on only liberal democracy, free market capitalism, and global integration had a future. Everything else—including political ideology, nationalism, conservative religion, and sovereignty—was consigned to the ash heap. Thirty years later the future looks seriously derailed. A right-wing populism marked by Brexit, Trump, Le Pen, and a host of 'far-right' political movements in the very heartland of democratic globalizing capitalism has shaken liberal certainties. This course is an investigation into contemporary right-wing populism in Europe and North America in its social, economic, and political context. We will discuss theories of right-wing populism's appeal from both Left and Right perspectives. We will also investigate cases of right-wing populism including France's National Rally and the Eric Zemmour phenomenon, Sweden's Sweden Democrats, Hungary's Fidesz, Poland's Law and Justice Party, and Trumpism, the alt-right and QAnon. Finally we will entertain right-wing populism as both a cause and a symptom of a crisis in liberal democracy.

Requirements/Evaluation: two short papers; one long term paper; discussion questions; class participation

Prerequisites: one course in comparative politics or social theory; or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Political Science majors

PSCI 361 (F) The CIA and American Foreign Policy

Cross-listings: PSCI 361 LEAD 361 HIST 355

Primary Cross-listing

Despite an American aversion to espionage captured by Secretary of State Henry Stimson's oft-cited (yet unsubstantiated) remark, "Gentlemen don't read each other's mail," intelligence history in the United States dates back to the Revolutionary War. Still, it took the shock of Pearl Harbor for the United States to establish a permanent peacetime civilian intelligence service independent of another federal department— the Central Intelligence Agency. Since then, the agency and others which comprise the loose entity called the Intelligence Community (IC) have played a pivotal albeit intensely controversial role in US foreign and national security policies. Yet their roles and missions remain largely misunderstood and divisive, as attested to by recent debates surrounding the multiple investigations of the 9/11 tragedy, the flawed pre-war estimates of Iraq's Weapons of Mass Destruction (WMD) capabilities, the reporting on Benghazi, the Snowden revelations, and much more. This course seeks to provide greater understanding of the relationship between intelligence and US foreign and national security policy by examining the CIA's and IC's roles and responsibilities, illuminating their history alongside the history of America and the World, assessing their successes and failures, evaluating their reforms, and correlating their behavior and capabilities with US values and institutions.

Requirements/Evaluation: Midterm, several short papers, and a research paper.
PSCI 364  (F)  Noam Chomsky and the Radical Critique of American Foreign Policy

Noam Chomsky emerged as one of the most influential figures in the development of modern linguistics during the 1950's. However, since the Vietnam War, Chomsky has also established himself as perhaps the most influential critic of American foreign policy and the Washington national security establishment. This tutorial will examine his wide-ranging critique of American foreign policy over the last half century, focusing on his analysis of the role that he believes the media and academics have played in legitimizing imperialism and human rights abuses around the world. We will also explore the controversies and criticisms of his work from both the right and the left because of his political stance on issues ranging from the Arab-Israeli conflict to humanitarian intervention to free speech. Finally, we will also examine how Chomsky’s views, largely considered to be radical for much of his life, have become far more mainstream over time.

Requirements/Evaluation:  Students will write five 6-7 page papers over the course of the semester. On weeks that students are not writing the lead paper, they will write a 1-2 page critique of the essay submitted by their tutorial partner.

Prerequisites:  One of the following courses is strongly recommended : PSCI 120, 127, 202.

Enrollment Limit:  10

Enrollment Preferences:  Students with some previous coursework in American foreign policy or world politics.

PSCI 367  (S)  Decolonizing International Relations  (DPE)

Cross-listings:  GBST 367  PSCI 367

Primary Cross-listing

The Oxford English Dictionary defines Decolonization as "the withdrawal from its colonies of a colonial power; the acquisition of political or economic independence by such colonies." The emergence of an international system of sovereign states--the core foundation of international relations--presumes the process of dismantling systems of domination, extraction, and exclusion ended long ago. However, there is increasing recognition that International Relations in all forms, including theory, research, and policy, continue to be structured by traditional paradigms of power (e.g. white, male, elite). This course begins with the premise that knowledge is embedded within, and often reproduces, power hierarchies. Thus, this class is organized as a collaborative investigation with the aims of: 1) examining how whiteness and other historically dominant perspectives shape International Relations theory and research areas; 2) expanding and improving our understanding of International Relations through different lenses (e.g. race, class, gender, disability, indigenous, queer, subaltern); and 3) exploring the implications of a more inclusive approach to International Relations, both within the classroom as well as contemporary decolonization movements in the US and around the world.

Requirements/Evaluation:  Participation, 3 response/reflection papers, annotated bibliography

Prerequisites:  One prior course in International Relations or permission of the instructor

Enrollment Limit:  15

Enrollment Preferences:  Juniors and Seniors
Expected Class Size: 15
Grading: no pass/fail option, no fifth course option
Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
GBST 367 (D2) PSCI 367 (D2)

Difference, Power, and Equity Notes: This class encourages students to recognize the power dynamics inherent within, and reproduced by, the study of International Relations as structured by traditionally dominant paradigms. This class provides students with the tools to critically identify, decenter, and deconstruct dominant lenses as well as the opportunity to engage with, and apply, an inclusive approach centering a more expansive range of theoretical perspectives and knowledge production.

Not offered current academic year

PSCI 370 (F) The Political Thought of Frantz Fanon (WS)
Cross-listings: PSCI 370 PHIL 360 AFR 360 LEAD 360
Secondary Cross-listing
Martinican psychiatrist, philosopher, and revolutionary Frantz Fanon was among the leading critical theorists and Africana thinkers of the twentieth century. Fanon ushered in the decolonial turn in critical theory, a move calling on those both within and outside of Europe to challenge the coloniality of the age and to forge a new vision of politics in the postcolonial period. This course is an advanced seminar devoted to a comprehensive examination of Fanon's political thought. We will begin with an analysis of primary texts by Fanon and end by considering how Fanon has been interpreted by his contemporaries as well as activists and critical theorists writing today.

Requirements/Evaluation: attendance and participation, weekly online reading response papers, a class presentation, two 7-page essays, and one 20-page final research paper
Prerequisites: none
Enrollment Limit: 19
Enrollment Preferences: Africana Studies concentrators, Leadership Studies concentrators, and Political Science majors
Expected Class Size: 10
Grading: no pass/fail option, yes fifth course option

PSCI 372 (S) CAPSTONE: Sylvia Wynter, Black Lives, and Struggle for the Human
Cross-listings: PSCI 372 AFR 450
Secondary Cross-listing
How do we judge the value of life? What is the significance of death and arbitrary threats to our existence? Why probe modern notions of black and blackness? What defines optimism, pessimism, enslavement, freedom, creativity, and being human? Do black lives matter? This capstone seminar will explore these and related questions through an examination of the life and work of Jamaican novelist, playwright, cultural critic, and philosopher Sylvia Wynter. Methodologically interdisciplinary, the course shall examine written and audiovisual texts that explore Wynter's inquiries into the central seminar queries. We will study figures and movements for black lives whose geopolitics frame the milieu of Wynter's work. Our examination of intellectuals and activists, with their explicit and implicit engagements with Wynter, shall facilitate assessing the possibilities, challenges, and visions of black living. We will also explore the current implications of Wynter's thought for Africana political theory, Afro-futurism, social justice, human rights, and critiques of liberal humanism. In the latter half of the course, students will have the opportunity to design, conduct, and present their own final
research projects.

Class Format: Remote format. This class will be taught synchronously primarily.

Requirements/Evaluation: attendance and participation; a 7-page midterm essay; class presentation; and a final research project

Prerequisites: none

Difference, Power, and Equity Notes: This course focuses on anti-colonial struggles against European powers. Research will include the concept of "internal colonies" in the US.

Not offered current academic year

PSCI 375 (S) Modern Jewish Political Theory

Cross-listings: PSCI 375 JWST 492 REL 330

Secondary Cross-listing

By the late 19th century, Jews across Europe were faced with an urgent political problem. Amidst burgeoning national self-consciousness throughout the continent, despite the liberatory promises of the Enlightenment, Jews remained a vulnerable, segregated, and stigmatized minority population. Jews had to decide where to pin their hopes. Should they ally themselves with the liberals or the communists? Should they embrace nationalism or cosmopolitanism? Should they, perhaps, abandon Europe altogether and re-constitute themselves elsewhere? If so, should they focus their efforts on relocation to the historical land of Israel? Or could they go anywhere? Wherever they might go, should they aspire to build a modern Jewish nation-state, a semi-autonomous Jewish community, or some other arrangement? Should this coincide with the cultivation of a distinctively Jewish
modern language? If so, should it be Hebrew or Yiddish? In this course we will assess various answers to these questions proffered by Jewish political thinkers in the modern period. We will pay particular attention to the construction of "Jews" and "Judaism" in these arguments. And we will ask persistently: what constitutes a "Jewish justification" for a political claim in modern Jewish political theory? Coverage will include: Jewish liberalism, political Zionism, Yiddishist autonomism, messianic quietism, and other views. We will read mostly primary sources, including texts by: Hermann Cohen, Theodore Herzl, Chaim Zhitlowsky, Franz Rosenzweig, Leo Strauss, Hannah Arendt, and many others.

Requirements/Evaluation: six short (1-2 pages) response papers; two 6- to 8-page papers, each analyzing a different view in depth; a final 18- to 20-page paper that incorporates the two previously submitted 6-8 page papers, but also compares the two views and adjudicates between them

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Religion majors, Jewish Studies concentrators, and Political Science students on the "Theory" track

PSCI 378  (F)  Origins of the State
When and how did the state come into existence as a form of political organization? This course explores theories of the origins of the state, asking how myths and other speculative accounts in the Western tradition draw boundaries between past and present, as well as between self and other. Paying attention to common oppositions such as nature/civilization, primitive/advanced, anarchy/social order, feminine/masculine, ruler/ruled and stasis/progress, we will investigate how these antagonisms work together to create the conception of the state that still dominates politics today. Course readings touch briefly on social contract theories (Locke, Hobbes, Rousseau, Kant) before turning to the core material for our exploration: alternative accounts of the origins of the state based on ancient Greek and Roman mythology and the ethnological writings of nineteenth-century socialists (Marx, Engels, Bebel, and others). More recent perspectives and critical interpretations will be drawn from feminist theory (Spivak, Pateman, MacKinnon, Folbre) and critical anthropology (Cassirer, Fabian, Graeber & Wengrow). Among our questions: Is it really possible to pinpoint a moment in time when the state came into existence? And if the aim is not to provide a historically accurate account, what exactly is at stake in constructing or demythologizing theories of the origins of the state?

Requirements/Evaluation: oral presentation and three papers (3 pages, 5 pages and 12-15 pages)
Prerequisites: Not open to first-year students.

Difference, Power, and Equity Notes: This course addresses international, anti-colonial solidarity between Blacks in the US, Cuba, Africa. It tracks the evolution of "racial capitalism," noting intersections between enslavers in the US and Cuba, and accumulation of wealth through the Atlantic slave trade. Students will analyze the powers of the enslaved, tracing history, political economies, culture, violence, and dispossession, to emphasize resistance to human bondage and successful and compromised revolutions in Cuba and the US.
Something has happened to America over the past fifteen years. Large minorities of young adults, especially young men, are now celibate. Cohabitation has skyrocketed but marriage is disappearing, and the country's birth rate is at an all-time low. Not surprisingly, loneliness has become epidemic. A similar story can be told for most other developed countries. The implications for political polarization, economic growth, social insurance programs, public health, military defense, even national survival are grim. What is the cause of this loss of faith in the future? Can public policy reverse these trends? This course is an investigation into relations between the sexes in the developed world, the fate of children and the family, and government attempts to shape them. The course investigates family models in historical and comparative context; the family and the welfare state; the economics of sex, gender, marriage, and class inequality; the dramatic value and behavioral changes of Gen Z around sex, cohabitation, and parenthood; and state policies to encourage partnership/marriage and childbearing in both left-wing (Scandinavia) and right-wing (Central Europe) variants.

Requirements/Evaluation: Two 4-5 page papers, 12-15 page research paper, discussion questions, class participation

**PSCI 386 (F) Identity Politics: Conflicts in Bosnia, Israel-Palestine, Northern Ireland, & South Africa**

Identities have been either the stakes, or the guise taken by other kinds of conflicts, in Bosnia, Israel-Palestine, Northern Ireland, and South Africa for centuries. They have led to, or expressed, political divisions, clashing loyalties, and persistent and sometimes consuming violence. They also have produced attempts by both internal and external actors to resolve the issues. This research seminar will engage the origins of the conflicts and the role of identities in them, the role of disputes about sovereign power in creating and intensifying them, the strategies for reconciling them that are adopted domestically and internationally, the deals that have been struck or have not been struck to bring peace in these societies, and the outcomes of the various efforts in their contemporary politics. The course will begin by reading about both the general theoretical issues raised by conflicts in these "divided societies" and various responses to them. After familiarizing ourselves with what academic and policy literatures have to say about them, we then will read about the histories and contemporary politics in each society. With that as background, students will choose an aspect or aspects of these conflicts as a subject for their individual research.

**Requirements/Evaluation:** 2 10-12-page papers

**Prerequisites:** Political Science majors

**PSCI 387 (S) The Firm**

The rise of gigantic tech firms--Google, Apple, Facebook, Amazon--has sparked widespread worries about the role of business power in capitalist democracy. Are these firms monopolies? How can they be better regulated? Should they be? This course studies the politics of business by centering analysis on the firm. From the perspective of the workplace, we investigate the firm as an arena of power, where workers and managers meet each other in continuous contests for control. From the perspective of the public sphere, we investigate the firm as an actor whose power maps uneasily onto the channels of democratic representation. Approaching the firm as both arena and actor in a number of capitalist democracies, we will compare the politics of business across different sectors, but will focus especially on tech and finance.

**Requirements/Evaluation:** Class participation; two 5- to 7-page essays; one presentation; one final essay.

**Prerequisites:** One introductory course in political science or economics, and/or permission of the instructor.

**Enrollment Limit:** 15

**Enrollment Preferences:** Preference will be given to sophomores and juniors majoring in PSCI and POEC.

**Expected Class Size:** 15

PSCI 412 (F) Senior Seminar: Interpretations of American Politics

American politics are in upheaval, and most Americans believe the country to be headed down "the wrong track." Yet assessments of what is at the heart of the country's problems vary. Many worry that the United States is threatened by anti-democratic actors intent on consolidating white nationalist power and corporate rule. Yet at the same time, others worry that the U.S. has abandoned the Anglo-Protestant traditions that made it strong and has entered a period of moral decay and decline. What are we to make of these different assessments? What do left and right see when they survey the nation, and why is what they see so different? Any diagnosis of contemporary maladies is premised on a vision of what a healthy functioning republic looks like. Our task in the seminar is to uncover and interrogate those visions. We will do this by exploring different interpretations of the American political order, each with its own story of narrative tensions and possible resolutions. We will then use our investigation of how different authors, and different traditions, understand the nation to help us assess contemporary politics and come to our own conclusions about what animates conflicts.

Requirements/Evaluation: brief weekly writing assignments; three short essays; and oral examination

Prerequisites: at least one course in American politics

PSCI 413 (S) Senior Seminar in American Politics: Polarized America

With red states and blue states, partisan divisions in Congress, and even disputes about wearing masks to protect against the coronavirus, few question the fact of a polarized America. But what is the polarization about and what caused it? Is it manufactured by a political elite using the rules of the game to maintain power while ignoring the concerns of the people? Is it a capitalist strategy to divide the public in order to advance the interests of the wealthy corporate elite? Does it reflect a polity divided by racial and ethnic tensions with different visions of the nation's past and future? Does it reflect increased inequality in a fast-changing global economy? How can a government of separated institutions operate and come to collective decisions given this discord? Can the framers' vision of deliberative, representative government meet the challenges of a polarized polity?

PSCI 420 (F) Senior Seminar: The Nuclear Revolution

Cross-listings: LEAD 420 LEAD 330 PSCI 420

Primary Cross-listing

This is a course about international politics in the nuclear age. In broad terms, it focuses on a very basic question: Does international politics still work essentially the same way as it did in the prenuclear era, or has it undergone a "revolution," in the most fundamental sense of the word? The structure of the course combines political science concepts and historical case studies, with the goal of generating in-depth classroom debates over key conceptual, historical, and policy questions. Classes will be taught remotely. The basic format of the course will be to combine very brief lectures with
detailed class discussions of each session's topic. The course will begin--by focusing on the Manhattan Project--with a brief technical overview of nuclear physics, nuclear technologies, and the design and effects of nuclear weapons. The course will then examine the following subjects: the dropping of the atomic bombs on Japan; theories of the nuclear revolution; the early Cold War period; the development and implications of thermonuclear weapons; the Berlin and Cuban missile crises; nuclear accidents; nuclear terrorism and illicit nuclear networks; the future of nuclear energy; regional nuclear programs; preventive strikes on nuclear facilities; nuclear proliferation; and contemporary policy debates.

**Class Format:** This course will be taught remotely. All class discussions will be synchronous.

**Requirements/Evaluation:** class participation, three 8- to 10-page papers

**Prerequisites:** PSCI 202

**PSCI 423 (F) Humanitarianism as Ideology and Strategy**

Since the mid-1980s, humanitarianism has been one dominant attitude that powerful countries, organizations and people have adopted with regard to poverty or disaster elsewhere. Humanitarianism aims at rescue, striving to keep people alive until some solution can be found. It aims not to address crises' causes nor to assist with solutions--which it considers political--just to keep human bodies alive. Critics contend that humanitarianism produces harm, provides structural incentives for people to do more or less than they need to, and deepens inequality between actors and targets. They contend that it legitimizes the status quo, in which such things are bound to happen. This course confronts humanitarianism as an ideology through reading its defenders and critics, and as a political strategy assessing its usefulness.

**Class Format:** three students start class discussion every day; one reads a short (4-page) essay and two read shorter (two-page) essays

**Requirements/Evaluation:** three longer essays, six shorter essays, constructive participation

**Prerequisites:** PSCI 202 and at least one elective in international relations
Enrollment Limit: 12

Enrollment Preferences: Political science seniors then juniors; other seniors, then juniors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: PSCI International Relations Courses

Not offered current academic year

PSCI 431  Senior Seminar in Political Theory: Rethinking the Political

What is politics? The question, an important part of political theory at least since Socrates, has taken on renewed significance in recent years, as theorists have sought to rethink the political in response to twentieth century dictatorships and world wars; feminist, queer, anti-racist, post- and decolonial struggles; the transformations wrought by neoliberal globalization; the emergence of "algorithmic governance"; the recent resurgence of populist nationalism; and deepening recognition of climate crises. This seminar engages some of the major attempts at rethinking produced in the 20th and 21st centuries, particularly at those that, characterizing liberalism as masking structures of subordination and elements of conflict in political life, undervaluing the importance of citizen action and public space, or being ill-suited to altered technological and ecological conditions, seek to rework or move beyond it. In addition to those who argue for an expanded and emancipatory conception of politics, we will consider arguments against politics as primary path to improvement or locus of commitment. Authors read may include Schmitt, Strauss, Rawls, Arendt, Wolin, Rancière, Brown, Connolly, Hartman, Sharpe, Moten, Wynter, Sexton, Edelman, Muñoz, Couthard, Simpson, Lazzarato, Haraway, Latour.

Requirements/Evaluation: Regular, engaged class participation; short Glow posts; one 6-8 page paper; one 10-12 page paper

Prerequisites: Junior or senior standing and two or more theory courses or consent of instructor. Non-majors with theory interests and backgrounds are welcome

Enrollment Limit: 12

Enrollment Preferences: Political science seniors then juniors; other seniors, then juniors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: PSCI International Relations Courses

Not offered current academic year

PSCI 432  (S)  Senior Seminar: Critical Theory

This course takes a critical look at the nexus of money and political power in the United States and world politics, using the concept of "racket society" to guide our inquiry. The theory of "rackets" was first put forward by Frankfurt School theorists in the 1940s as a way of analyzing linkages among organized crime, cartels, monopolies, corporate interests, and political institutions. Their project, which we will recreate in this course, was to trace the effects of the adaptation of the legal system (and other state institutions) to the conglomeration of capital and the concentration of wealth in a few hands. The flow of money offers insights into these deeper trends. Course readings begin with the work of Max Horkheimer, Theodor Adorno, Franz Neumann, Friedrich Pollock, and Herbert Marcuse, paying special attention to their discussion of the anti-democratic effects of money on political institutions. We will also look carefully at their critique of legal frameworks that protect the wealthy while criminalizing the poor. Although these concerns were not exclusive to the Frankfurt School, the approach they took had some unique features. Having fled Nazi Germany and re-established their research institute in exile the United States, Horkheimer and his colleagues brought an outsider-insider perspective to the problem. Among our questions are the following: How did the intellectual heritage of the Frankfurt School and their experiences in Germany shape their analysis of racket society in 1940s America? Does the theory of rackets still have analytical power today? Given the massive expansion of the U.S. economy and the role of transnational capital in driving economic globalization in recent decades, what insights might the early Frankfurt School offer critics of anti-democratic tendencies in world politics today?

Requirements/Evaluation: regular class participation, short (1 pg) response papers, and drafts leading up to a 15-page final essay

Prerequisites: junior or senior standing required; in addition, prior coursework in political theory, cultural theory, philosophy, or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: Senior Political Science majors with concentration in Political Theory, then other Political Science majors
Expected Class Size: 12
Grading: no pass/fail option, no fifth course option
Distributions: (D2)
Attributes: PSCI Political Theory Courses

Spring 2023
SEM Section: 01  TF 2:35 pm - 3:50 pm  Nimu Njoya

PSCI 440  (F) Challenges to Neoliberalism in the United States and Europe since the Financial Crisis
After emerging from the Cold War as the unrivaled model for capitalist societies, neoliberal capitalism has been subject to a series of challenges in the aftermath of the financial crisis of 2008-10. This seminar, after discussing briefly the institutions and logic of neoliberalism, will address recent challenges to it from both the left and the right in the United States and Europe. Specifically, the seminar will address the election of Donald Trump as president, the furor around Brexit in the United Kingdom and the authority of the European Union in Europe, and challenges to the hegemony of global finance and controversies around immigration in both the United States and Europe.

Requirements/Evaluation: in addition to participating in discussions about the readings, students are required to present to the class their written proposals for a research
Prerequisites: must be a senior Political Science major
Enrollment Limit: 15
Enrollment Preferences: Political Science majors specializing in the Comparative Politics subfield
Expected Class Size: 15
Grading: no pass/fail option, no fifth course option
Distributions: (D2)
Attributes: PSCI Comparative Politics Courses

Not offered current academic year

PSCI 442  (S) Senior Seminar: Lineages of the Authoritarian State
Authoritarian states are plentiful in the world today. Some appear durable and resilient; they are not simply transient political failures awaiting a breakthrough to democracy. This course will consider the history and contemporary experience of authoritarian states, beginning with political philosophical analyses of Aristotle, Montesquieu, Anderson, Moore, and Arendt. Attention then turns to how post-World War II authoritarianism has been understood from a variety of perspectives, including: the "transitions to democracy" approach; the "competitive authoritarian" view; and the "authoritarian reliance" analysis, among others.

Requirements/Evaluation: 2-4 papers of 5-7 pages, several short oral presentations, daily discussion questions, 12-15 page final paper, class participation.
Prerequisites: Political science major or permission of instructor
Enrollment Limit: 16
Enrollment Preferences: Senior comparative politics concentrators; other political science senior majors; other political science majors; permission of instructor.
Expected Class Size: 12
Grading: yes pass/fail option, no fifth course option
Distributions: (D2)
Attributes: PSCI Comparative Politics Courses

PSCI 493  (F) Senior Thesis: Political Science
The senior major, having applied for and been accepted into the honors program during the second semester of the junior year, will devote the senior year to designing, researching, and writing a substantial and original work of scholarship, under the supervision of a faculty mentor to be assigned by the department. The final work will be submitted to and evaluated by a committee chosen by the department. In the fall semester, thesis writers will participate in a seminar supervised by a faculty member in political science. The seminar (which is one component of the 493-W31-494 designation) will focus on a variety of readings and assignments designed to help students develop their proposed project while honing the skills needed to frame and execute a successful thesis. Students will regularly circulate work for peer review and critique. By the end of the seminar, each student will submit a substantial research proposal, including annotated bibliography, for thesis work to be carried out in Winter Study and the spring semester. Those whose proposals are accepted will continue on as thesis students for the remainder of the academic year; if a proposal is not accepted, the student will finish their project as an independent study in W31.

Requirements/Evaluation: Completion of a variety of week-by-week assignments, culminating in a substantial thesis proposal.

Prerequisites: Department approval to pursue an honors thesis in political science

Enrollment Limit: 12

Enrollment Preferences: Permission of instructor

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

Fall 2022

PSCI 494  (S) Senior Thesis: Political Science

The senior major, having applied for and been accepted into the honors program during the second semester of the junior year, will devote the senior year to researching and writing a substantial and original work of scholarship, under the supervision of a faculty mentor to be assigned by the department. The final work will be submitted for evaluation by a committee made up of the faculty supervisor and two additional readers to be chosen by the department, in consultation with the supervisor. Thesis writers will not only work with their advisors but will participate in a weekly honors seminar supervised by a faculty member in political science. The seminar (which is one component of the 493-W31-494 designation and not a separate course) will provide a focused forum for the exchange of ideas among the honors students, who will regularly circulate sections of their theses-in-progress for peer review and critique. The faculty seminar leader's primary role is one of coordination and guidance.

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

Not offered current academic year

PSCI 495  (F) Individual Project: Political Science

With the permission of the department, open to those senior Political Science majors who are not candidates for honors, yet who wish to complete their degree requirements by doing research--rather than taking the Senior Seminar-in their subfield of specialization. The course extends over one semester and the winter study period. The research results must be presented to the faculty supervisor for evaluation in the form of an extended essay.

Requirements/Evaluation: Completion of a substantial independent project, which shall form the basis of evaluation.

Prerequisites: two elective courses in the major's subfield specialization

Enrollment Limit: 1

Enrollment Preferences: Senior majors.

Expected Class Size: 1

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

- Noah J. Sandstrom, Chair and Professor of Psychology; affiliated with: Neuroscience Program
- Kenneth K. Savitsky, Professor of Psychology
- Catherine B. Stroud, Associate Professor of Psychology
- Safa R. Zaki, Dean of the Faculty, John B. McCoy and John T. McCoy Professor of Psychology; affiliated with: Psychology Department

MAJOR

For the degree in Psychology, students must complete a minimum of nine courses as outlined below:

PSYC 101 Introductory Psychology
PSYC 201 Experimentation and Statistics

Three 200-level courses from the list below:

- COGS/PHIL/PSYC 222 Minds, Brains, and Intelligent Behavior: An Introduction to Cognitive Science
- NSCI 201/BIOL 212/PSYC 212 Neuroscience
- PSYC 221 Cognitive Psychology
- PSYC 232 Developmental Psychology
- PSYC 242 Social Psychology
- PSYC 252 Psychological Disorders
- PSYC 272 Psychology of Education

Either PSYC 221 or 222, but not both, can count towards the three required 200-level courses.

Three 300-level courses from at least two of the areas listed below:
Area 1: Behavioral Neuroscience (courses with middle digit 1)

Area 2: Cognitive Psychology (courses with middle digit 2)

Area 3: Developmental Psychology (courses with middle digit 3)

Area 4: Social Psychology (courses with middle digit 4)

Area 5: Clinical Psychology (courses with middle digit 5)

Area 6: Other/Interdisciplinary Psychology (courses with middle digit 6)

Area 7: Educational Psychology (courses with middle digit 7)

At least one of these courses must be from among those carrying the format designation Empirical Lab Course.

One 400-level Psychology course.

Students who place out of Psychology 101 are still required to take nine courses to complete the major.

The department recommends that students take Psychology 201 in their sophomore year. The department requires that 201 be completed by the end of the junior year.

COURSE NUMBERING RATIONALE

As is the case in all departments, the first digit of a Psychology course number indicates the relative level of the course. Where appropriate, the second digit corresponds to the Areas listed above.

THE DEGREE WITH HONORS IN PSYCHOLOGY

Students who are candidates for honors need to take only two 300-level courses from two different areas, but they must enroll in Psychology 493-W31-494 and write a thesis based on original empirical work. Presentation of a thesis, however, should not be interpreted as a guarantee of a degree with honors. Guidelines for pursuing the degree with honors are available from the department.

STUDY ABROAD

With some advance planning, studying abroad (especially for one semester) can easily be worked into the psychology major. To facilitate this, we recommend that students:

- Meet with the Study Abroad advisor as soon as they decide that they are interested in studying abroad.
- Take PSYC 201 (Experimentation and Statistics) in the sophomore year.

Think ahead to the 300-level courses they are interested in taking so that they can fulfill the 200-level prerequisites before they go away or, if possible, while they are away. In our experience, study abroad programs in the following places are most likely to offer psychology courses: England, Ireland, Scotland, Spain, Australia, New Zealand, Hawaii, and Scandinavia. Students should procure the descriptions of the psychology courses they are considering taking and bring them to their meeting with the advisor.

There are some costs to studying away, particularly for the year. This limits students' opportunity to choose the particular 300-level courses they would like to take and they must sometimes settle for those that are open, those which happen to be offered, or those for which they have the prerequisites, once they return in their senior year. Many students who are keen on psychology begin doing research with professors during their junior year, and for some this leads to an honors thesis in the senior year, summer research, etc. If you are going away for the entire year and do not make such connections with a professor ahead of time (i.e., before you go), you may lose out on some of these opportunities to deepen your involvement in the major on campus. On the other hand, studying abroad can be an invaluable learning experience, so you need to think carefully, in consultation with your advisor and/or the Study Abroad advisor, about the costs and benefits of it. Very occasionally, a student who just begins taking psychology courses late in the sophomore year and wishes to go abroad for the year finds that they are not able to do both, or is restricted in the choice of study-abroad programs.

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, complete syllabus, including readings/assignments, and exams or other written work. In addition, the course content cannot overlap substantially with material already taken at Williams.
Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. Students are required to take at least one empirical project course (which includes a lab component and data collection). This must be completed at Williams.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. The empirical project course must be completed here (see answer to previous question above). Other major requirements that must be completed here are the Senior Seminar and our Statistics and Experimentation course (PSYC 201). On very rare occasions students have been given credit for PSYC 201 taken elsewhere, but this is extremely unlikely. Most institutions break the material up into two different courses, or don’t include all of the components that we feel are an important foundation for the major.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. Students should be sure that have taken PSYC 201 PRIOR to their senior year at the latest. It is best to take it during sophomore year whenever possible.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

There have been instances.

**PSYC 101** (F)(S) Introductory Psychology

An introduction to the major subfields of psychology: behavioral neuroscience, cognitive, developmental, social, and psychological disorders and treatment. The course aims to acquaint students with the major methods, theoretical points of view, and findings of each subfield. Important concepts are exemplified by a study of selected topics and issues within each of these areas.

Class Format: Lectures will be presented during the scheduled time. To complement the lectures, students will participate in two short discussions/laboratory experiences that will be offered at a variety of times outside the lecture period.

Requirements/Evaluation: five unit quizzes, a final exam, and two brief lab reports (or related brief reports, depending on the availability of labs)

Prerequisites: none

Enrollment Limit: 180

Enrollment Preferences: First-year students and sophomores

Expected Class Size: 180

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Attributes: NSCI Required Courses  TEAC Teaching Sequence Courses

Fall 2022

LEC Section: 01  MWF 10:00 am - 10:50 am  Kris N. Kirby, Clarence J. Gillig

**PSYC 127** (F) The Psychology of Success  (WS)

This course will examine the psychology of success from a scientific perspective. After considering what success means, we will examine two broad influences on success: personality (e.g., intelligence, grit, and mental illness) and environment (e.g., schooling, parenting, and practice). We will talk about barriers to success, the search for success, and the cost of searching for success. Each week we will read a book or a set of articles (or possibly documentaries or podcasts). One partner will write a paper and the other will write a response. This course is not meant to make you more successful;
the goal is to think critically about important issues, use evidence to make arguments, be skeptical, and practice writing and speaking in a convincing and engaging way.

Requirements/Evaluation: written work and discussion of that work; a five-page paper will be due every other week and a one-page response will be required other weeks

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: highest priority will be given to incoming first-years followed by rising sophomores

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will submit a paper every other week (minimum 5 pages), and in alternate weeks they will write a response to their partner's paper. The instructor will provide detailed feedback on the papers.

Not offered current academic year

PSYC 158  (S)  Freud: A Tutorial  (WS)

Cross-listings: PSYC 158  HIST 485

Secondary Cross-listing

This tutorial is devoted to the systematic reading of the principal works of Sigmund Freud, one of the deepest, subtlest, and most influential thinkers of the last one-hundred years. Students will read Freud's work more or less chronologically, beginning with his writings on hysteria and concluding with his deeply pessimistic essay, Civilization and Its Discontents. In tutorial, we will consider the development of Freud's thought over the course of his professional life: his general psychological writings on the nature and functioning of the human psyche, his clinical writings on psychoanalysis as a form of treatment, and his cultural writings on art and artists, on the origin of human society, on religion, and on the relation of the individual to society and civilization. We will not be considering the relevance of Freud's ideas for purposes that transcend his own psychological agenda in the tutorial. Nor will we be much concerned with assessing whether Freud was "right" or "wrong" or whether his thought has clinical relevance today. Instead, we will seek to understand Freud as much as possible on his terms and not on ours, as a historical figure of originality, complexity and contradiction, whose thought deserves close reading and deep understanding within the context of Freud's thought itself.

Class Format: students will write and present orally six essays of 6-7 pages on assigned reading every other week; students not presenting an essay in a given week will be responsible for critiquing the presented essay

Requirements/Evaluation: student grades will be assigned only at the end of the semester based on their papers, their critiques, and their performance in tutorial discussion

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: juniors and seniors and History majors needing a 400-level seminar or tutorial to fulfill the requirements for a degree in History

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Unit Notes: fulfills History's 400-level graduation requirement

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 158 (D2) HIST 485 (D2)

Writing Skills Notes: As a tutorial, this course is by definition writing skills, both in terms of the number of papers that students will produce (six) and in terms of the focus on writing during every tutorial session. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Attributes: HIST Group C Electives - Europe and Russia

**PSYC 212  (F)  Neuroscience**

**Cross-listings:**  BIOL 212  NSCI 201  PSYC 212

**Secondary Cross-listing**

This course is designed to give an overview of the field of neuroscience progressing from a molecular level onwards to individual neurons, neural circuits, and ultimately regulated output behaviors of the nervous system. Topics include a survey of the structure and function of the nervous system, basic neurophysiology and neurochemistry, development, learning and memory, sensory and motor systems, and clinical disorders. Throughout the course, many examples from current research in neuroscience are used to illustrate the concepts being considered. The lab portion of the course will emphasize a) practical hands-on exercises that amplify the material presented in class; b) interpreting and analyzing data; c) presenting the results in written form and placing them in the context of published work; and d) reading and critiquing scientific papers.

**Requirements/Evaluation:** Evaluation will be based on participation in discussion groups, exercises, problem sets and quizzes performed in small groups, lab reports, midterm exams, and a final exam.

**Prerequisites:** PSYC 101 or BIOL 101; open to first-year students only with permission of instructor

**Enrollment Limit:** 72

**Enrollment Preferences:** Sophomores and Biology and Psychology majors

**Expected Class Size:** 72

**Grading:** yes pass/fail option, no fifth course option

PSYC 242 (F)(S) Social Psychology
A survey of theory and research in social psychology. Topics include conformity, group dynamics, stereotyping and prejudice, aggression, altruism, attraction and love, the self, social perception, attitudes and attitude change, and cultural psychology. Applications in areas such as advertising, law, economics and business, and politics will also be discussed.

Requirements/Evaluation: two in-class exams, one paper 5 - 10 pages), and a final exam

Prerequisites: none

Enrollment Limit: 180

Enrollment Preferences: Psychology majors; then sophomores and first-years.

Expected Class Size: 90

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Attributes: PSYC 200-level Courses, TEAC Teaching Sequence Courses

Fall 2022
LEC Section: 01 MWF 11:00 am - 12:15 pm Kenneth K. Savitsky

Spring 2023
LEC Section: 01 TF 1:10 pm - 2:25 pm Kenneth K. Savitsky

PSYC 252 (F)(S) Psychological Disorders
A study of the phenomenology, etiology, and treatment of the major forms of psychological disorders: depression, bipolar disorder, the schizophrenias, anxiety disorders, personality disorders, eating disorders, substance use disorders, and others. The course emphasizes an integrative approach which
analyzes theories and research from psychological, biological, interpersonal, and sociocultural perspectives.

Requirements/Evaluation: short papers, 2 in-class exams, and participation

Prerequisites: PSYC 101; open to first-year students

Enrollment Limit: 50

Enrollment Preferences: Psychology majors, then sophomores, then by seniority

Expected Class Size: 50

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Attributes: PSYC 200-level Courses

PSYC 272  (S)  Psychology of Education

This course introduces students to a broad range of theories and research on education. What can developmental research tell us about how children learn? What models of teaching work best, and for what purposes? How do we measure the success of various education practices? What is the best way to describe the psychological processes by which children gain information and expertise? What accounts for individual differences in learning, and how do teachers (and schools) address these individual needs? How do social and economic factors shape teaching practices and the educational experiences of individual students? The course will draw from a wide range of literature (research, theory, and first-hand accounts) to consider key questions in the psychology of education. Upon completion of the course, students should be familiar with central issues in pre-college education and know how educational research and the practice of teaching affect one another.

Class Format: discussion

Requirements/Evaluation: two exams and a final project

Prerequisites: PSYC 101

Enrollment Limit: 50

Enrollment Preferences: Psychology majors and those who plan to become teachers

Expected Class Size: 50

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Attributes: PSYC 200-level Courses  TEAC Teaching Sequence Courses

PSYC 312  (F)  From Order to Disorder(s): The Role of Genes & the Environment in Psychopathology

Cross-listings: NSCI 322  PSYC 312

Primary Cross-listing

This course examines how experimental methods in neuroscience can be used to understand the role of nature (genes) and nurture (the environment) in shaping the brain and behavior. In particular, we will explore how neuroscience informs our understanding of psychiatric disorders such as anxiety, depression, and schizophrenia. We will investigate the biological underpinning of these disorders as well as their treatments. Readings will include human studies as well as work based on animal models. Topics will include: the ways in which environmental and genetic factors shape risk and resiliency in the context of psychiatric disease, the neural circuits and peripheral systems that contribute to psychopathology, and the mechanisms through which interventions may act. In the laboratory component of the course, students will gain hands-on experience in using animal models to study complex behavior and their associated neural mechanisms.
Requirements/Evaluation: class presentations, participation in discussions, two article previews (1-2 pages each), literature review (5 pages), research project proposal (5 pages), oral presentation of project proposal.

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201)

Enrollment Limit: 19

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

PSYC 313  (F)  Opioids and the Opioid Crisis: The Neuroscience Behind an Epidemic

Cross-listings: NSCI 313  PSYC 313

Primary Cross-listing

Opioid misuse, including addiction, has emerged as a major health epidemic in the United States. This course will explore the science of opioids as well as the historical and societal context surrounding their use and abuse. We will examine the neurobiological mechanisms through which opioids interact with pain pathways and reward circuits within the brain and we will explore how changes in these systems contribute to opioid tolerance, dependence, and addiction. We will consider how genetic, environmental and behavioral factors can powerfully influence these processes. Finally, we will consider alternative approaches to pain management as well as interventions for the treatment of opioid abuse. Students will be expected to design and conduct an empirical project related to the course material. Critical evaluation of peer-reviewed primary literature from animal and human studies will serve as a foundation for class discussions. Evaluation will be based on class presentations, participation in discussions and empirical projects, written assignments, and a poster presentation of the empirical project.

Requirements/Evaluation: class presentations, participation in discussions and empirical projects, five short position papers (approximately 2 pages double-spaced), an APA style empirical paper (approximately 20 pages double-spaced) and poster presentation of the empirical project.

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201)

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

PSYC 314  (S)  Learning and Memory in Health and Disease

Cross-listings: PSYC 314  NSCI 314

Primary Cross-listing

This class will examine the neuroscientific basis of different types of learning and memory (such as declarative memory, motor memory, and associative memory), including the brain circuits, cellular mechanisms, and signaling pathways that mediate these different processes. In addition, we will explore how these processes can be disrupted in different diseases and disorders (such as Alzheimer's disease or post-traumatic stress disorder).
and we will discuss the strategies and targets for therapeutic intervention. Class meetings will include a mix of lectures, discussions, and student presentations. Critical evaluation of peer-reviewed studies involving both human and animal models will serve as a foundation for class discussions. Working in small teams, students will also design and conduct an empirical project related to the course material.

Requirements/Evaluation: In-class presentations and participation in discussions, completion of an empirical research project which will include a project proposal (3-5 pages), data collection and analysis, and a final report (10-20 pages) along with a poster presentation.

Prerequisites: PSYC 212/NSCI 201/BIOL 212

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

PSYC 319 (F) Neuroethics (WS)

Cross-listings: PSYC 319 NSCI 319 STS 319

Primary Cross-listing

Neuroscience studies the brain and mind, and thereby some of the most profound aspects of human existence. In the last decade, advances in our understanding of brain function and in our ability to manipulate brain function have raised significant ethical challenges. This tutorial will explore a variety of important neuroethical questions. Potential topics will include pharmacological manipulation of "abnormal" personality; the use of "cosmetic pharmacology" to enhance cognition; the use of brain imaging to detect deception or to understand the ability, personality or vulnerability of an individual; the relationship between brain activity and consciousness; manipulation of memories; the neuroscience of morality and decision making. In addition to exploring these and other ethical issues, we will explore the basic science underlying them.

Requirements/Evaluation: six 5-page position papers and five 2-page response papers as well as participation in discussions

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201); or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 319 (D3) NSCI 319 (D3) STS 319 (D2)

Writing Skills Notes: In alternating weeks, each student in a tutorial pair will write a 5-page essay based on the assigned readings. Essays will be discussed during tutorial meetings and written feedback from the professor will be provided for each essay. At the end of the semester, students will choose one of their prior essays to revise as their final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Fall 2022

TUT Section: T1 TBA Noah J. Sandstrom
PSYC 322 (S)  Concepts: Mind, Brain, and Culture
Every time we see something as a kind of thing, every time that we decide that an object is a cup rather than a glass, when we recognize a picture of a familiar face as a picture of ourselves, or even when we understand speech, we are employing categories. Most categorization decisions are automatic and unconscious, and therefore have the illusion of simplicity. The complexity of these decisions, however, becomes apparent when we attempt to build machines to do what humans perform so effortlessly. What are the systems in place that allow us this extraordinary ability to segment the world? Are they universal? How does conceptual knowledge differ across cultural groups? How do concepts affect our perception? How do the categories of experts differ from the categories of novices? Do children have the same kind of conceptual knowledge as adults? How are categories represented in the brain? In this course, we explore various empirical findings from cognitive psychology, cognitive neuroscience, and anthropology that address these questions.

Class Format: empirical lab course
Requirements/Evaluation: short papers, class presentation, and research paper
Prerequisites: PSYC 221 or 222 or permission of instructor
Enrollment Limit: 16
Enrollment Preferences: Psychology majors and Cognitive Science concentrators
Expected Class Size: 16
Grading: yes pass/fail option, yes fifth course option

PSYC 323 (F)  Visual Consciousness  (WS)
Cross-listings: PSYC 323  COGS 323
Secondary Cross-listing
Consciousness is considered as the 'last great mystery of science.' In this course we are going to delve into one of the most well-studied areas of this mystery, that is visual consciousness. Do you really perceive everything you look at? Are you aware of everything you see? Is our visual experience a grand illusion? We will start our investigation of such questions by reading about various approaches in understanding human consciousness. Then, we are going to apply these approaches to perception, and discuss theoretical and empirical controversies in visual consciousness. Finally, we are going to focus on evaluating empirical studies that attempt to resolve such controversies. The goal of this course is to build a bridge between theory and experimentation by learning how to interpret the results of scientific studies to shed light on theoretical and philosophical debates in the literature.

Requirements/Evaluation: 5 - 7 page essays every other week, and 2-page response papers to their partner's essays in alternate weeks
Prerequisites: COGS 222 (same as PHIL 222 or PSYC 222); or permission of instructor
Enrollment Limit: 10
Enrollment Preferences: Cognitive Science concentrators and Psychology majors

PSYC 328 (S) Cognitive Approaches to Visual Perception
Cross-listings: PSYC 328 COGS 328
Secondary Cross-listing
When you open your eyes, you immediately perceive your environment in great detail. Seeing is so quick and effortless that people mistakenly think that vision works like a camera. However, the reason it feels effortless is due to the tremendous amount of complex processes and computations that take place in your brain whenever you open your eyes. In this course, we will explore such processes from a computational perspective and examine the concept of "visual illusion". We will focus on research methodologies used in vision science and look into how we can use such methodologies to explain visual illusions. We will learn about how our visual system processes certain visual features in our environment, such as motion, color, depth and shape. Learning about these processes will make us appreciate how everything we see around us can be a visual illusion.

Requirements/Evaluation: Class participation, weekly take-home quizzes, weekly short commentaries on readings, class presentation, individual 10-page final paper
Prerequisites: PSYC 221, COGS/PHIL/PSYC 222, or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Cognitive Science concentrators

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

SEM Section: 01 Cancelled

PSYC 332 (F) Children's Mathematical Thinking and Learning

Are babies statistical experts? Will I ever be good at calculus? What are we born with and what do we learn? Before children are ever taught formal mathematics in a classroom, they are confronted with situations where they must use their informal understanding of geometry, space, and number to successfully navigate their environments. In this course we read and discuss both foundational and cutting-edge articles from neuroscience, cognitive science, education, and psychology to understand how humans bridge this gap between the informal and formal mathematical worlds. We will also tackle questions such as: How do culture and language affect numerical understanding? What are the sources of children's mathematical misconceptions? What are the effects of early environmental input or input deprivation on mathematical development? What do we know about gender differences in math achievement? How do stereotypes, prejudice, and math anxiety affect math performance? For your laboratory component, you will work with a small group of other students to develop an original research project that tests a specific hypothesis about children's mathematical thinking and learning. Data will be collected either online or in community schools, with the permission of parents, teachers, and children. Your results will be written-up in for your final paper, which will be in the style of an empirical journal article.

Class Format: community-based data collection in local schools

Requirements/Evaluation: class participation, discussion leader, weekly open-notes reading quizzes, individual 12- to 15-page final paper based on empirical group research project

Prerequisites: PSYC 201 and PSYC 232 or permission of the instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors, upperclassmen, students with a demonstrated interest in the course material

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Attributes: PSYC Area 3 - Developmental Psychology PSYC Empirical Lab Course TEAC Teaching Sequence Courses

Not offered current academic year

PSYC 333 (S) Children's Minds (WS)

Humans stand out in the animal world for their capacity to develop ideas and consider those of other people. Where does this capacity come from, and how does it develop? Why do some people seem more inclined to consider ideas than others? What can schools do to foster the pursuit of ideas? Young children ask questions, tell stories, speculate, invent, and predict. By middle childhood, they are capable of constructing ideas about any number of complex topics: death, justice, infinity, and the nature of time, to name four. Yet by adolescence only some people are disposed to pursue ideas. We will examine data on children who collect objects (such as bugs or rocks) and information (about things like dinosaurs, contagion, and death), and examine the role such collections play in the capacity to construct ideas. We will consider research on how and when children puzzle over philosophical problems (for example, identity and fairness), how they learn to plan, their ability to learn from thought experiments, their emerging conception of what an idea is, and what they know about knowledge and its role in shaping beliefs and making decisions. We will also spend time looking at individual and cultural variation, as well as the influence of adults. We will read work in developmental, educational and cognitive psychology, as well as anthropology.
Requirements/Evaluation: Each week one member of the tutorial pair will write a 5-7 page essay answering a specific question, and the other member of the pair will write a response. The goal is for each student to write 5-6 papers, and 5-6 responses during the term.

Prerequisites: PSYC 232 or PSYC 272

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and those involved in the Program in Teaching

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS)

Writing Skills Notes: Students will receive extensive feedback on their writing each week, both from the professor and their partner. Further, students will have the opportunity to rewrite two of their papers in light of the feedback that they receive during the semester.

PSYC 334  (F)  Defining and Disrupting the School-to-Prison Pipeline

Cross-listings: PSYC 334  AFR 318

Secondary Cross-listing

The school-to-prison pipeline describes a system of processes that pushes children out of school into jails and prisons. This course will explore the pipeline and the relationships between school, prison, and society. We will begin with the history and creation of the modern-day school-to-prison pipeline, focusing on the educational and public policies that encourage the criminalization of "others", with particular emphasis on folks of color and under-resourced communities. We will also look to firsthand accounts from those pushed into the pipeline to humanize the topic and engage in thoughtful and compassionate discussion. Together, we will define "school" and "prison", identifying how these definitions are aligned with the most current iteration of the pipeline, and how they can help us as we work to dismantle it.

Requirements/Evaluation: Assignments for the course include ongoing journal assignments, two 3-5 page papers, and a final project.

Prerequisites: None

Enrollment Limit: 20

Enrollment Preferences: Africana Studies concentrators and Psychology Majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

PSYC 335  (S)  Early Experience and the Developing Infant

The period from conception to age three is marked by impressive rapidity in development and the plasticity of the developing brain affords both fetus and infant an exquisite sensitivity to context. This course delves into the literature that highlights the dynamic interactions between the developing fetus/infant and the environment. The course readings span a range of disciplines and cover a diversity of hot topics in the study of prenatal and infant development, including empirical research drawn from the developmental, neuroscience, psychopathology, and pediatric literatures.

Requirements/Evaluation: active class participation, weekly three-page papers, two oral presentations (20 minutes each and using PowerPoint), and one final 12-15 page final lab report

Prerequisites: PSYC 201, PSYC 212, and PSYC 232 or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 16

Grading: yes pass/fail option, yes fifth course option
PSYC 337 (S) Critical Perspectives in Special Education

**Cross-listings:** AFR 324 PSYC 337

**Secondary Cross-listing**

What makes special education "special"? This course will explore the role, purpose, and function of special education in the United States. Given special education's assumption of dis/ability (Baglieri, 2012), we will also create collective and individual frameworks for discussing and deconstructing dis/ability. This course will examine history, policy, and pedagogy related to special education; we will also discuss how law and school practices have systemically and systematically excluded students of color from general education classrooms, leading to the overrepresentation of Black, Indigenous, and Latinx children in special education. We will listen to narratives shared by people with dis/abilities and our educational histories to understand how personal connections to special education influence our current beliefs and future practice.

**Requirements/Evaluation:** Assignments for the course include ongoing journal assignments, two 3-5 page papers, and a final project.

**Prerequisites:** None

**Enrollment Limit:** 20

**Enrollment Preferences:** Africana Studies concentrators and Psychology Majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

**Not offered current academic year**

---

PSYC 338 (S) Inquiry, Invention and Ideas

Children tinker, explore and create, but some more than others, and under some conditions more than others. What leads children to investigate, invent and build their own ideas? We will examine the development of curiosity, invention, and the ability to have or construct an idea. We will also look at what accounts for individual differences between children, including the role of intelligence, creativity, social cues, and opportunity. We will look at how these processes unfold at home and in school, and discuss the educational implications of the research we read, and the research we conduct.

**Requirements/Evaluation:** three 3- to 5-page essays, two child observations and a 7- to 10-page final paper

**Prerequisites:** PSYC 101, and PSYC 232 or PSYC 272, or permission of instructor

**Enrollment Limit:** 16

**Enrollment Preferences:** preference given to Psychology majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

---

PSYC 341 (S) Stereotypes, Prejudice, and Discrimination
Primary Cross-listing

This course will examine social psychological theories and research that are relevant to the understanding of stereotypes, prejudice, and discrimination. We will take a variety of social psychological perspectives, emphasizing sociocultural, cognitive, personality, or motivational explanations. We will examine the impact that stereotypes and prejudice have on people’s perceptions of and behaviors toward particular groups or group members and will explore a variety of factors that tend to exacerbate or weaken this impact. We also will consider some of the sources of stereotypes, prejudice, and discrimination and some of the processes through which they are maintained, strengthened, or revised. In addition, we will examine some of the effects that stereotypes, prejudice, and discrimination can have on members of stereotyped groups, as well as some implications of the social psychological research findings for issues such as education and business and government policies. A major component of this course will be the examination of classic and ongoing empirical research.

Class Format: empirical lab course

Requirements/Evaluation: weekly brief papers, oral reports, two longer papers

Prerequisites: PSYC 201 and 242

Enrollment Limit: 16

Enrollment Preferences: senior, then junior Psychology majors

PSYC 342 (F) Social Judgment

This course focuses on how people make judgments and decisions in their social lives and why they are sometimes biased and irrational in their choices. We will place a strong emphasis on exploring how ideas from the judgment and decision-making literature can aid in our understanding of social psychological phenomena, including planning for the future, understanding other people, and resolving interpersonal conflicts. We will also place an emphasis on people’s judgments and decisions as they pertain to their happiness and well-being, exploring how concepts in the judgment and decision-making literature can help us to understand why certain types of outcomes are more satisfying than others and why people sometimes choose in ways that fail to maximize their well-being. As we explore these questions, we will survey a variety of methods and perspectives, ranging from classic social psychological experiments to techniques imported from behavioral economics and cognitive psychology.

Requirements/Evaluation: a series of short papers; two essay exams; written and oral report of a research proposal

Prerequisites: PSYC 242 and PSYC 201, or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

PSYC 344 (S) Contemporary Social Psychology
This is a course about current research in social psychology--research that builds on the old classics, and research that opens up entirely new areas of study. We'll consider topics of current interest, such as implicit bias, gender identity, political polarization, moral judgment, emotion, social media, cultural influences on cognition, and more. Throughout the course, we'll think about how new studies verify, refute, or qualify older studies, and how psychological science progresses. This course is meant as a follow-up to PSYC 242 and assumes knowledge of social psychology.

Requirements/Evaluation: a series of papers, two essay exams, written and oral reports of research

Prerequisites: PSYC 242

Enrollment Limit: 19

Enrollment Preferences: Psychology majors

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

Attributes: PSYC Area 4 - Social Psychology

---

PSYC 346 (F) Environmental Psychology

Cross-listings: PSYC 346 ENVI 346

Primary Cross-listing

This is a course on contemporary social psychology as it pertains to the natural environment. Our two primary questions in this course are: (1) how can research and theory in social psychology help us understand the ways in which people engage with threats to the natural environment?, and (2) how can social psychology help us encourage environmentally responsible behavior and sustainable practices? Because human choice and behavior play such an important role in environmental problems, a consideration of human psychology may therefore be an important part of environmental solutions.

Requirements/Evaluation: a series of papers, two essay exams, written and oral reports of research

Prerequisites: PSYC 242 recommended, PSYC 201, or a comparable course in statistics and research methodology, is also recommended.

Enrollment Limit: 19

Enrollment Preferences: Psychology majors, Environmental Studies majors, and Environmental Studies concentrators

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

---

PSYC 349 (S) Psychology and Law (DPE)

This course focuses on applications of psychology to the administration of justice. Drawing from the areas of social, personality, cognitive, and developmental psychology, we will look critically at the processes of criminal justice. We will compare the law's informal theories of human behavior with what psychologists know on the basis of empirical studies. We will cover a number of contemporary topics including police-civilian interactions, custodial interrogations, false confessions and guilty pleas, forensic evidence, deception detection, eyewitness identifications, alibi generation and corroboration, repressed and recovered memories, and jury selection and decision-making. We will also discuss methodological issues associated with conducting research in psychology and law. In the laboratory component of the course, students will design and conduct their own empirical research projects based on course readings and topics. These semester-long projects will be conducted collaboratively in pairs or teams.
Class Format: empirical lab course

Requirements/Evaluation: attendance and active class participation, several brief (1-2 page) reading response papers, (2-3) class presentations, written/oral project proposal (4-5 pages), participation empirical project (experiment design, data collection, data visualization, data analysis, interpretation), final APA-style research paper (15-20 pages), oral presentation of the research project

Prerequisites: PSYC 201 and either PSYC 242 or PSYC 221

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

Expected Class Size: 16

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (DPE)

Difference, Power, and Equity Notes: We will explore the differing dynamics of power between legal actors and consider the psychological and structural factors that contribute to vulnerability, coercion, and inequality in the justice system. Through discussions of race, age, body, gender, disability, and stigmatized identities, this course will encourage students to challenge assumptions of objectivity and fairness in our legal system.

PSYC 354  (S) Health Psychology

In this course, students will contrast the traditional biomedical model of health with the biopsychosocial model with a goal of understanding how biological, psychological, and sociocultural factors influence health and well-being. We will explore psychological theory and research that targets health promotion, disease prevention, and management of chronic illness. Course readings will include empirical articles, excerpts from popular science books, and news/media articles on public health issues. Discussions will center on using the biopsychosocial model to better understand health processes (e.g., stress, tobacco use, physical inactivity) and outcomes (e.g., insomnia, diabetes, heart disease), with a special focus on health disparities among marginalized groups in the United States. Students also will learn about cognitive, behavioral, and mindfulness-based treatments ("behavioral medicine") that promote healthy behavior and the management of chronic illness/disease (e.g., obesity, pain, HIV/AIDS). All students will design and conduct an empirical research project based on the course material.

Requirements/Evaluation: class participation, weekly 1-page (double-spaced) reading response papers, empirical project paper (10-20 pages), and poster/oral presentation of the research project

Prerequisites: PSYC 201 and PSYC 252, or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

LAB Section: 02  W 1:00 pm - 4:00 pm  Rebecca J. Crochiere

PSYC 356  (F) Asylum: Understanding the Psychological Effects of Persecution, Trauma, and the Migration Experience

Asylum is a specific form of humanitarian relief granted to an individual who can legally establish a history of previous persecution, or fear of future persecution, on account of their race, religion, nationality, political opinion, or membership in a particular social group. What are the psychological effects of being physically and emotionally persecuted because of who you are, what you believe, and/or your identity? Using the framework of
asylum, we will study the effects of persecution, loss, and displacement on mental health and well-being, and the psychological impacts of traumatic stress and of seeking asylum in the United States. Through close reading of empirical studies, case studies, narratives, and legal writing, we will consider the psychological outcomes most frequently reported by asylum seekers, as well as the effects of traumatic stress on attachment and interpersonal relationships, family functioning and the capacity for recovery and post-traumatic growth. We will explore various types of persecution (e.g., gender-based violence, gang-violence, political persecution, and family separation) and their global health context. Finally, we will examine the social determinants, legal frameworks, and social justice implications of therapeutic interventions and resettlement. Students will also explore the clinical literature on psychological outcomes and how this research is informing both psychotherapy and social service interventions in the US and humanitarian settings across the globe. Guest speakers will punctuate our time over the semester, so that students can understand the role of lawyers, clinicians (medical and psychological) and global mental health researchers in addressing issues of forced displacement.

Requirements/Evaluation: Attendance and active participation, weekly reaction exercises (brief papers and presentations), and a final paper on an asylum-related topic of particular interest to the student.

Prerequisites: PSYC 252 is encouraged but not required. Students who have not taken PSYC 252 are encouraged to contact the instructor.

Enrollment Limit: 19

Enrollment Preferences: Psychology majors will have priority, but non-majors with interests in issues of asylum are encouraged to register.

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: PHLH Social Determinants of Health  PSYC Area 5 - Clinical Psychology

Fall 2022

PSYC 357  (F)  Depression
This course will provide students with a comprehensive understanding of depression. Topics will include assessment, models of etiology and course, effective approaches to prevention and intervention, and depression in specific populations. Readings will expose students to seminal works in the field as well as current methods and research findings. Throughout the course, students will evaluate current research based on theory, methodological rigor, and potential impact on prevention and intervention efforts.

Requirements/Evaluation: class participation, five 2-page (double spaced) response papers, 2 class presentations, final paper (study proposal)

Prerequisites: PSYC 201; PSYC 252 recommended

Enrollment Limit: 19

Enrollment Preferences: Psychology majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Attributes: PSYC Area 5 - Clinical Psychology

Not offered current academic year

PSYC 358  (S)  Developmental Psychopathology: Trajectories of Risk and Resilience
Why do some youth develop psychopathology in the face of adversity whereas others do not? How do we define psychological disorders in youth? Is resilience a static trait, or can it be promoted? How do we prevent youth from developing psychopathology? In this course, students will address these and other questions using a risk and resilience framework that examines the interactions among multiple risk and protective factors in the pathway to psychopathology. Specifically, students will examine the interactions between individual characteristics (e.g., neurobiological, interpersonal, cognitive, and emotional factors) and environmental contexts (e.g., family, school, peer, early adversity, poverty) in the development of risk and resiliency. Application of etiological models and empirical findings to prevention and intervention approaches will be explored. Throughout the course, students will evaluate current research based upon theory, methodological rigor, and clinical impact.

Requirements/Evaluation: Evaluation will be based on oral participation, daily assignments, 1 presentation, and four 5-page position papers.

Prerequisites: PSYC 252; PSYC 201 recommended
PSYC 359 (S) Anxiety: Responses to Danger, Both Real and Imagined

This is an advanced course on anxiety that takes an in depth look at the theory and research on the normative psychological processes that influence responses to danger, both real and imagined. Specifically, it examines the empirical research on psychological responses to traumatic experiences, such as combat, sexual assault, and natural and community disasters. Responses to perceived or imagined threats are also discussed as the underpinnings of such anxiety disorders as Panic Disorder, Generalized Anxiety Disorder, Social Phobia, Specific Phobia and OCD. Discussions focus on commonalities and differences in empirically supported treatments for anxiety disorders as well as controversies in the field.

Class Format: As many of our meetings will be held in-person as reasonably feasible. Students who are on-campus will be encouraged to attend the seminar in person. Those who are unable to attend in person will join remotely. Students will be required to meet with me in small groups prior to their presentation to review their presentation/discussion plan. These meetings will occur in person or remotely, depending on scheduling availability.

Requirements/Evaluation: Regular attendance and active class participation (whether in person or remote) - students will be randomly quizzed and/or asked to summarize or discuss material from the assigned readings and graded for their preparedness; midterm examination; one final 8-10 page literature review paper based on course content; one group presentation with discussion.

Prerequisites: PSYC 252

PSYC 362 (S) Cultural Psychology

What is culture? How does culture influence the way we think and behave? How is culture represented, impacted, and transformed in the digital age? This course will introduce you to the field of cultural psychology, and explore the role of cultural meanings, practices, and institutions on human psychology. We will discuss how culture emerges in human development and examine how the same psychological processes that give rise to rich cultural practices also bear negative consequences on our society, such as stereotype and prejudice. We will also examine how human culture is transformed through digital devices and represented on social media. Through the course, you will learn to critically examine human behaviors in the contexts of diverse cultural beliefs, to reflect on your own upbringings through a cultural lens, and to gain an appreciation for cultures other than your own.

Requirements/Evaluation: Students are expected to participate in and periodically lead class discussions. As part of this, students must complete assigned readings prior to class meetings. Finally, students will participate in an individual or small-group project culminating in a written and oral presentation.

Prerequisites: PSYC 201 and at least one other 200-level psychology course
PSYC 363  (S)  Media, Race, and U.S. Black Families

Cross-listings: AFR 384  PSYC 363

Secondary Cross-listing
In this course, we will work to synthesize what we know about some of the key socializing forces for U.S. Black youth today. We will focus on how families, entertainment media, and the news can socialize Black children. Drawing on a range of theories and data we will examine how family members communicate about issues of identity and how media can come into play. What do we know about how U.S. Black families communicate about identity? What gaps remain in our knowledge, and how can we find the answers? What can we learn about today's media content when we apply research-informed lenses? What predictions can we make about its potential uses and effects among Black families? We will identify central research areas that warrant further attention and consider which methodologies would best work to fill those gaps. We will prioritize approaches that highlight the agency and strength of U.S. Black families and of youth themselves.

Requirements/Evaluation: 1 in-class presentation, two 2-5 page papers, and one 7-10 page final research proposal (that builds on the two shorter papers)
Prerequisites: None
Enrollment Limit: 18
Enrollment Preferences: Africana Studies Concentrators and Psychology Majors
Expected Class Size: 18
Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)
This course is cross-listed and the prefixes carry the following divisional credit:
AFR 384 (D2) PSYC 363 (D2)
Attributes: AFR Core Electives  PSYC Area 6 - Other/Interdisciplinary Psychology  TEAC Teaching Sequence Courses

PSYC 372  (F)  Advanced Seminar in Teaching and Learning

This advanced seminar will give students an opportunity to connect theory to practice. Each student will have a teaching placement in a local school, and participate in both peer and individual supervision. In addition, we will read a range of texts that examine different approaches to teaching, as well as theory and research on the process of education. What is the best way to teach? How do various theories of child development and teaching translate into everyday practices with students? Students will be encouraged to reflect on and modify their own teaching practices as a result of what we read as well as their supervision. Questions we will discuss include: What is the relationship between educational goals and curriculum development? What is the relation between substance (knowledge, skills, content) and the interpersonal dynamic inherent in a classroom setting? How do we assess teaching practices and the students' learning? What does it take to be an educated person?

Requirements/Evaluation: this course involves a field placement, weekly readings, as well as seminar discussion, supervision, and a graded journal
Prerequisites: PSYC 232 or PSYC 272 or permission of instructor
Enrollment Limit: 12
Enrollment Preferences: Psychology majors and those who plan to become teachers
Expected Class Size: 12
Grading: no pass/fail option, no fifth course option
Distributions: (D3)
PSYC 373  (F)  Critical Issues in Learning and Teaching

In this seminar we will take a deep dive into several key topics in education. We will examine psychological research as well as a range of other materials (essays, film, recordings of children and personal experiences) to help answer a series of questions, including: Does the kind or quality of schooling have a measurable impact on children? How do you create curriculum? How does one conduct high quality classroom observations? What do good teachers have in common? What is the best way to help teachers get better at what they do? Can remote learning work well in K-12 settings?

Class Format: The course will be taught in a hybrid form (remotely for some and in person for others). Students will meet in small groups with the professor. Each group will meet for a tutorial-like session once a week. We will use students’ papers as a jumping off point for our discussions.

Requirements/Evaluation: Regular class attendance and full participation (whether remote or in-person), five 5-page papers, and regular written responses to other students’ papers. We will also do a variety of in-class activities that may require some independent preparation (gathering materials, or doing brief interviews) and some coordination with one another outside of class time.

Prerequisites: PSYC 232 or PSYC 272 or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: Psychology majors and those involved in the Program in Teaching

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: PSYC Area 7 - Educational Psychology  TEAC Teaching Sequence Courses

Not offered current academic year

PSYC 377  (F)  Mapping Anti-Bias Education

Cross-listings: PSYC 377  AFR 358

Secondary Cross-listing

In this course, we will use theories and data to define anti-bias education in childhood contexts and examine its application across U.S. schools and childcare centers, families, and the media environment. We will ask ourselves: What do we know about the need for anti-bias education among non-marginalized and marginalized children, including those who are minoritized for their ethnic-racial, gender, and/or sexual identities? How are various biases and identities shaped in childhood? Which media-based and interpersonal interventions can be effective with anti-bias education and why? What are some of the contemporary hesitations and challenges around implementing anti-bias education for educators, families, and children? What are some of the practices that marginalized families are already implementing? As we explore approaches and possibilities for anti-bias education across children's ecosystems, we will propose innovative recommendations for research and practice that have the potential to yield positive outcomes for today's children.

Requirements/Evaluation: Weekly 1-page reflection papers (graded on a pass/fail basis), one 3-5 page mid-term paper, one final 7-10 page paper or approved project

Prerequisites: None

Enrollment Limit: 18

Enrollment Preferences: Africana Studies Concentrators and Psychology Majors

Expected Class Size: 18

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 377 (D2) AFR 358 (D2)
PSYC 397 (F) Independent Study: Psychology
Open to upperclass students with permission of the instructor and department. Students interested in doing an independent study should make prior arrangements with the appropriate professor. The student and professor then complete the independent study proposal form available at the Registrar’s Office and should submit it to the department chair for approval prior to the beginning of the drop/add period.

Requirements/Evaluation: Determined by individual instructors
Prerequisites: Permission of instructor
Enrollment Limit: none
Enrollment Preferences: Upperclass students
Expected Class Size: NA
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)

PSYC 398 (S) Independent Study: Psychology
Open to upperclass students with permission of the instructor and department. Students interested in doing an independent study should make prior arrangements with the appropriate professor. The student and professor then complete the independent study proposal form available at the Registrar’s Office and should submit it to the department chair for approval prior to the beginning of the drop/add period.

Requirements/Evaluation: Determined by individual instructors
Prerequisites: Permission of instructor
Enrollment Limit: none
Enrollment Preferences: Upperclass students
Expected Class Size: NA
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)

PSYC 401 (F) Psychology in Popular Discourse: A Critical Examination
This course considers several important contemporary topics from diverse psychological perspectives. These topics—which may include issues such as personal and external influences on success; technology and relationships; addiction—will be introduced via popular books, films, or podcasts, and we will analyze them more deeply with original research articles from across multiple approaches and sub-disciplines of psychology. A central goal in this course is for students to develop and apply the skills necessary to critically evaluate psychological ideas as they exist in the broader popular culture. The course will primarily be discussion based, and the students will lead these discussions.

Class Format: student-facilitated discussions
Requirements/Evaluation: participation in class discussions, choosing relevant research articles, and three position papers
Prerequisites: senior Psychology majors, or permission of instructor in rare cases
Enrollment Limit: 36(12/sec)
Enrollment Preferences: senior Psychology majors
Expected Class Size: 36
Grading: no pass/fail option, yes fifth course option
Distributions: (D3)
Not offered current academic year

PSYC 402 (F) Blessings and Blunders of Human Memory

Nietzsche wrote that the forgetful are "blessed" because "they get the better even of their blunders." In what ways does forgetfulness serve us well? Is it possible, or even desirable, to have perfect memory? Can traumatic memories be repressed? Can false memories of committing a crime be implanted? Are "collective" memories subject to the same processes as individual memories? How do museums, monuments and sites (re)construct and tell a version of the past based on changing cultural identities? In this student-led seminar, we will attempt to answer these questions and more in the context of a broad exploration of the foundational concepts of human memory. We will examine the theories and methods researchers use to study individual and collective memories across varied domains, including clinical practice, romantic relationships, the justice system, and education. In this course, you will gain an evidence-based understanding of the nature of human memory through critical examinations of popular press literature, films, books, podcasts, and cutting-edge scientific studies.

Requirements/Evaluation: participate in and lead class discussions, three papers (approximately 5-7 pages double-spaced; including at least one publication-ready science communication piece)
Prerequisites: none
Enrollment Limit: 14
Enrollment Preferences: senior Psychology majors
Expected Class Size: 14
Grading: no pass/fail option, no fifth course option
Distributions: (D3)

Fall 2022
SEM Section: 01 TF 1:10 pm - 2:25 pm Stephanie A. Cardenas

PSYC 403 (F) The Psychology of Love

This seminar will examine psychological approaches to the study of attraction, affiliative bonds, attachment, and relationship health across the lifespan. These topics will be introduced via review articles, books, and films. Students will analyze these topics more deeply with presentations and student-led discussions of original research articles from across multiple perspectives and subdisciplines of psychology.

Class Format: Class will meet remotely in live, synchronous settings. Student discussion leaders will also meet with Professor over Zoom in advance of co-leading live, online discussions. Each class will begin with analysis of student-selected music that is used to generate a class playlist on Spotify. Movie nights will be held together as watch parties.

Requirements/Evaluation: participation in class discussion, selection and presentation of relevant empirical papers, three position papers
Prerequisites: none
Enrollment Limit: 12
Enrollment Preferences: senior Psychology majors
Expected Class Size: 12
Grading: no pass/fail option, yes fifth course option
Distributions: (D3)
Not offered current academic year

PSYC 404 (F) Bias and Discrimination: Sources and Consequences

We often assume that our experiences reflect an objective reality, that the way we see the world is the way it really is. Yet research contradicts this notion, showing that our perceptual experiences are malleable and subjective. They are shaped by higher-order, top-down influences such as our
cognitions, social groups, surroundings, motivations, emotions, and prior experiences. In this class, we will explore how subjective experiences and idiosyncratic categorizations of people into social groups directly influence social justice outcomes across varied domains. For example, how do these differences in our subjective experience influence the ways in which people relate to one another? What are the implications for fair treatment across multiple factions of society, including education, employment, health care, and criminal justice? Are there effective interventions and policies for reducing gender, racial, and ethnic bias? For promoting inclusivity? If so, why are they effective? To develop an evidence-based understanding of bias and discrimination, we will critically analyze source materials from popular press literature, films, books, and podcasts, as well as empirical research from across multiple approaches and sub-disciplines of psychology. The class format will be primarily discussion based and student-led.

Class Format: student-led discussions
Requirements/Evaluation: weekly brief thought questions, lead two class discussions, select and present relevant empirical papers, three papers (5-7 pages)
Prerequisites: none
Enrollment Limit: 14
Enrollment Preferences: senior Psychology majors
Expected Class Size: 12
Grading: no pass/fail option, no fifth course option
Distributions: (D3)

Fall 2022
SEM Section: 01 Cancelled

PSYC 405 (F) Why We Believe What We Believe
As scientists, we aspire to hold beliefs that are based in evidence. As humans, however, we are likely to embrace beliefs influenced by a variety of social, historical, cultural, political, racial and religious factors. In this class, we will explore the question of why we cling to certain beliefs, even in the face of significant contradictory evidence. For example, what assumptions do we make about strangers and why are we so convinced these assumptions are correct? How does our culture affect our parenting choices and why do we hold on to them so fiercely? What assumptions do we make about the nature of memory, emotions and cognitions and are these assumptions valid? Are there “defensive moves” that we make when we are challenged racially, even when we are committedly antiracist? And, if so, why? In class, we will explore source material from popular culture: books, films, podcasts and popular press articles, and we will examine claims made about different belief systems. We will then critically evaluate these claims by exploring the available empirical psychological evidence. The format of this class is student-led discussions.

Requirements/Evaluation: Students will be required to develop and lead rigorous generative discussions with their classmates several times during the semester. In addition, students will be expected to actively participate in discussions and to write three 5-7 page position papers.
Prerequisites: none
Enrollment Limit: 14
Enrollment Preferences: senior Psychology majors
Expected Class Size: 12
Grading: no pass/fail option, no fifth course option
Distributions: (D3)

Not offered current academic year

PSYC 407 (F) Success and Failure
The theme of this psychology senior seminar will be success. We will discuss the path to personal success, including the relative importance of hard work, genetic talent, and luck; barriers to success like poverty and discrimination; the importance of parents, family, teachers, and friends; and what we really mean by success. For each topic we cover, we will read a book or watch a film, then delve deeper by reading and discussing scientific journal articles. Class meetings will be student-led discussions. You will write three or four 5-7 page papers. The larger goal will be to practice useful life skills such as how to lead and participate in a meeting (i.e., a class discussion), how to write engagingly and convincingly, and how to assess an argument skeptically and discuss it using evidence.

Class Format: student-led discussions
PSYC 408 (F) The Psychology of College

What happens to people while they're in college? Does it have an impact on people's core identity, the way they think, form relationships, or participate in society? Most people's ideas about the impact of college come from personal experience, and the strongly held views of journalists, filmmakers, college spokespeople, relatives and public figures. Those beliefs are often misguided. Yet research can help us develop an accurate picture of just what it is that college does and doesn't do. Drawing on films, popular books and articles, as well as research from across the subdisciplines within psychology, we will examine some of the most common beliefs, and then delve into the psychological evidence that supports or refutes them. Our goal will be to develop a scientifically-based understanding of the psychological impact of college, and redesign various features of college to reflect our conclusions. Empirical work on this topic presents unique methodological challenges, so we will also spend some time designing studies that overcome those challenges.

Requirements/Evaluation: weekly readings, leading two class discussions, and writing three 5-7 page papers

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: senior Psychology majors

Expected Class Size: 14

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Not offered current academic year

PSYC 412 (F) Feelings & Emotions: Shaping the Brain and Society

This course will explore what emotions are, the evolutionary origins of emotions, and the tools and techniques researchers use to study emotions both in humans and in animal models. We will examine how brain state(s) may underlie different emotions and challenge widely held notions about how an individual's emotion can influence behavior and social factors. Questions we will explore include: Is it better to be emotional or rational? What are 'gut feelings'? Are there gender differences in emotionality and, if so, what are their origins? Popular press literature and scientific studies will fuel student-led discussions as we seek to develop an evidence-based understanding of emotions and how they shape the world around us.

Requirements/Evaluation: Course requirements include weekly readings, leading at least two class discussions, and writing three papers: one literature review (5-7 pages), one claim- and empirically-driven paper (5-7 pages), and one op-ed (3 pages).

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: Senior psychology majors

Expected Class Size: 14

Grading: no pass/fail option, yes fifth course option

Distributions: (D3)
PSYC 413 (F) The Resilient Mind

In this seminar, we will explore the psychological, environmental, and biological variables that shape an individual's response to stress and/or adversity. We will discuss how factors such as personality, coping style, social network/community, gender, brain mechanisms, and genes can influence one's ability to adapt and recover from a crisis. Students will critically examine depictions of resilience in popular literature and film, and employ empirical scientific articles from across multiple approaches and sub-disciplines of psychology to delve deeper into their analyses. Class meetings will be primarily discussion based and student-led, with the central goal of developing skills in forming and communicating evidence-based arguments.

Class Format: Class meetings will take place synchronously within the scheduled class period. Students will be able to attend class in-person or remotely via an online format.

Requirements/Evaluation: participating in and leading discussions, selection and presentation of relevant topics and readings, and three position papers (approximately 5-7 pages double-spaced)

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: senior Psychology majors

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

Not offered current academic year

PSYC 414 (F) Minding the Mind: Evaluating the Theory and Practice of Mindfulness

While mindfulness, both in idea and practice, has been around for centuries, its popularity has dramatically increased in recent years. But what is "mindfulness" and how effective is it in addressing psychiatric and/or physical conditions such as anxiety, depression, post-traumatic stress disorder, or chronic pain? In this course, we will examine mindfulness through both its popular depictions as well as through the critical evaluation of the scientific literature. We will investigate how mindfulness practices affect biological, behavioral, and cognitive processes. We will consider the myriad ways that mindfulness has been applied in "real world" settings including mental health, education, and interpersonal relationships.

Requirements/Evaluation: Students are expected to participate in and periodically lead class discussions. Students will write three 5-7 page papers

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: senior Psychology majors

Expected Class Size: 14

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Fall 2022

SEM Section: 01  TR 11:20 am - 12:35 pm  Shannon Moore

PSYC 416 (F) Psychology of Nonviolence

In this course we will explore the theory and practice of nonviolence in the context of empirical research in Positive Psychology. Nonviolence refers to choosing not to threaten or injure others, and its practice requires cultivating personal qualities that enable such a choice. Positive Psychology refers to the scientific study of those personal qualities that enable people to live happy and fulfilling lives. We will begin by studying the history and moral theories of nonviolence. Using research from across the subdisciplines of psychology, we will then evaluate the empirical claims of those theories regarding psychological benefits of nonviolence to the practitioner, attitude change in the adversary, and effects on the larger community. An important focus of the course will be to critically assess the research methods and data analyses used in these studies. Topics will include self-control, empathy, forgiveness, tolerance, courage, aggression, resisting violent assault, and civil disobedience.

Class Format: class meetings will be primarily discussion-based and student-led

Requirements/Evaluation: Class attendance and participation, discussion leadership, literature searches for relevant empirical research papers,
short papers in the form of research summaries, and a final paper in the form of an empirical research proposal.

**Prerequisites:** PSYC 201

**PSYC 418  (F)  Suckers and Scammers**

Virtually all of us are familiar with at least one account of a truly impressive scam - an event, device, or scheme that attracts attention, trust, and money, and then turns out to be a fake, sometimes with devastating consequences for everyone. What are the psychological processes and mechanisms employed by the scammers, as well as those who fall for such schemes? In this course we will consider several books and films that depict well-publicized recent examples (for instance, Bad Blood, The Rachel Divide, and The Talented Mr. Madoff). We'll use research from scientific journals to understand the psychology of both the scammer and those who fell for their schemes. We'll consider, among other things, the developmental origins of deception, what motivates people to pull one over on others, the role of identity maintenance, how we decide who to trust, and what it takes to convince oneself of something implausible. We'll use psychological research from all of the subdisciplines of psychology to find out what these cases might have in common, and also look at studies that illuminate unique features of each situation. Most class meetings will be student-led discussions. You will write three or four 5-7-page papers. The larger goals include: learning how to use scientific data to answer a wide range of questions about everyday life; how to engage in fruitful evidence-based argument; and how to write to think, and to persuade.

**Requirements/Evaluation:** weekly readings, leading two class discussions, and writing three 5-7 page papers

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** senior Psychology majors

**Expected Class Size:** 14

**Grading:** no pass/fail option, no fifth course option

Fall 2022
PSYC 494  (S)  Senior Thesis: Psychology

Independent study and research for two semesters and a winter study period under the guidance of one or more members of the department. This is part of a full-year thesis (493-494). After exploring the literature of a relatively specialized field of psychology, the student will design and execute an original empirical research project, the results of which will be reported in a thesis. Detailed guidelines for pursuing a thesis are available from the department and on our website.

Requirements/Evaluation: Final written thesis and oral presentation.

Prerequisites: permission of the thesis advisor

Enrollment Limit: none

Enrollment Preferences: Senior Psychology majors

Expected Class Size: NA

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Spring 2023
Public health seeks to understand, and also to protect and improve, health at the level of a community or population. Communities make decisions and allocate resources that, intentionally or not, fundamentally shape human life. For example, great reductions in sickness and early death have come from social interventions with relatively low financial cost, such as physically separating drinking water from sewage, or distributing aspirin, condoms, mosquito nets, vaccines or soap, or sharing new ideas about life’s possibilities. The way a society is organized affects the way that social and scientific knowledge is distributed within it; access to that knowledge shapes health at the individual level. At its heart, the study of public health focuses on questions about relationships between science and society, and between reality and possibility: what effective public health policy is and how we can measure its effectiveness; what the relationship is, and ought to be, between research and policy; how we reconcile important moral and economic claims, or balance other values that compete with maximizing health; what counts as disease, over time and among cultures; how we think about cause and responsibility; what constitutes a healthy environment; how our fundamental beliefs determine our approaches to health decisions; and how such decisions ought to be made.

Requirements
Application to the concentration must be completed in the Spring of sophomore year. Applications are due during pre-registration. Application materials can be obtained on the public health website public-health.williams.edu by early April or by e-mailing the chair of the program. Due to excess demand for the concentration, applicants are not guaranteed admittance to the program. Depending on availability, a few students may be admitted in the Spring of Junior year with a mid-April deadline.

All students wishing to pursue the Area of Concentration should take this course early in their careers, preferably sophomore year. Students may petition the advisory committee to substitute a course taken in a study-abroad program focused on global health, providing that the course is equivalent in scope. However, students who plan to take advantage of this option should have taken at least two other courses from among the electives by the end of their sophomore year, and should recognize that those who lack a foundation in the core issues of the field may find it more challenging to prepare their proposal for admission to the concentration.

Statistics
Statistical analysis is at the heart of the quantitative tools necessary to study the health of populations. One course in statistics from the list below is required of all concentrators.

Elective Courses
Concentrators must take at least three electives, with at least two different prefixes, from the list below. Elective courses are grouped by category, but these clusters are not meant to constrain students to a single “track” within the program. Instead, each student is free to determine, with the guidance of an advisory committee member(s), a set of electives that provides an intellectually coherent exploration of their particular areas of interest within the field of public health. In choosing electives, students should consider the balance of breadth versus depth that will allow them to gain theoretical and methodological sophistication in one or more areas. Students may not substitute an independent study for any of these electives. Winter Study courses may not be counted towards the electives.

Experiential Component
Because many public health challenges cannot be fully appreciated until one has hands-on experience with real communities and actual populations, each concentrator must have at least one relevant field-based educational experience with a research component. This requirement may be met through participation in an approved study abroad program (see below), one of the Winter study courses marked with an asterisk, a WS99 project, or a not-for-credit summer or academic-year internship. In every case, the advisory committee must approve the project in advance. Please note that experiential component should address both the “public” and “health” in public health. Projects that center on clinical or lab or that do not have a meaningful health component will generally not satisfy the PH experiential requirement.

PHLH 402 (S) Senior Seminar in Public Health
The capstone seminar provides concentrators with the opportunity to reflect upon and synthesize their experiential learning in the context of understanding gained from a cohesive set of elective courses, and through the lens of a variety of intellectual and disciplinary frameworks. A second goal is to give concentrators experience working in a multi-disciplinary team to address a real-world, and in many cases very daunting, public health problem. Students will read, discuss, and compose written reflections on primary source empirical papers addressing a range of issues and disciplines in the field of public health. For example, topics may include the social determinants of health, environmental health risks, and access to health care. Students will also be divided into three or four research teams to investigate a contemporary real-life issue in public health by designing a study; collecting and analyzing data; and disseminating findings by written report and formal oral presentation to the public health advisory committee faculty. The capstone course is required of all concentrators, but may be opened to other students with relevant experience at the discretion of the instructor and the advisory committee, if space permits.

Written Proposal

To be considered for admission to the Area of Concentration in Public Health, students must submit a written statement describing the portfolio of courses, study abroad, and experiential learning component(s) they intend to pursue. In this proposal, candidates for the concentration should describe their intellectual goals, and if relevant, how these relate to their professional goals. A fundamental purpose of the proposal requirement is to encourage the student to consider concretely how s/he will engage with socio-cultural, behavioral, policy, and/or biomedical aspects of population health. To this end, students should address whether a methodological or disciplinary emphasis ties their chosen courses together, and how the intended experiential component will relate to this set of questions. This proposal is due by the end of course registration period in the spring of the sophomore year, and should be prepared in consultation with a member of the advisory committee. Concentrators are required to revisit and update their proposal prior to registration in the spring of the junior year, and to provide documentation of their internship experience both prospectively and retrospectively. Please note electives will not be offered every year. Students should check the course catalog as they considering possible electives.

PHLH 201 (S) Dimensions of Public Health  (DPE)
Public health is concerned with protecting and improving health at the level of a community or population. Although individual behavior is an essential element of public health, collective, rather than individual, outcomes are the focus of public health study. In this course we will survey the field of public health, introducing students to core concepts and methods that highlight the interrelationship of individual choice and social institutions with environmental and biological factors in producing health outcomes at the population level. We will develop these concepts and methods within the context of signal cases and public health crises.

Requirements/Evaluation: two papers on a selected population or country and health issue, peer reviews and active contribution to class discussion

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: sophomores, potential Public Health concentrators

Expected Class Size: 14

Grading: no pass/fail option, yes fifth course option

Distributions: No divisional credit  (DPE)

Difference, Power, and Equity Notes: This course fulfills the DPE requirement because of its central focus on the ways that difference and power shape health outcomes in the U.S. and internationally. It uses an interdisciplinary approach to explore issues including the historical relations between communities of color, healthcare providers, and public health practitioners; contestation over the role of markets and government in public health; and differing explanations for the patterns of race, class, etc., in health outcomes.

Attributes: PHLH Core Courses
PHLH 220  (F)  International Nutrition  (DPE) (WS)

Global malnutrition continues to represent one of the most challenging issues of international development. Problems of both under- and overnutrition beginning as early as in utero can detrimentally influence the health, development and survival of resource-limited populations. This course introduces students to the most prevalent nutritional issues through a food policy perspective and exposes them to a wide variety of interventions, policies and current debates in the field of international nutrition. In addition to exploring the multi-level programmatic approaches for the prevention and treatment of the related nutritional problems, students will gain exposure and experience in program design and program proposal writing. Readings will involve both real-world programmatic documents/evaluations as well as peer-reviewed journal articles. Examples will be drawn from Africa, Asia and Latin America.

Class Format: This class will be remote. Each week students will typically be asked to (1) watch a series of short lectures- think 10-15' clips, (2) read peer reviewed articles and post on discussion boards (3) attend synchronous meetings - both in small groups of and as a whole class during assigned class time. Instructor will also be available for one-on-one online meetings/check-ins.

Requirements/Evaluation: six 1-page essays, one final term paper (10-15 pages), one oral presentation, and active class participation

Prerequisites: PHLH 201 or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: Public Health concentrators

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: As a writing skills course, students will write six 1-page essays (each with an optional rewrite) which will help build the specific writing skills necessary for the final 10- to 15 page paper. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: This course exposes the issues of difference, power and inequity by exploring the unequal distribution of resources and power at the global, national and intra-national level within the international nutrition context. We will also critically engage with issues of power, cultural difference and related ethics in the context of international development and nutrition programming.

Attributes: PHLH Nutrition, Food Security+Environmental Health

Not offered current academic year

PHLH 310  (F)  Equity in Health

Equity in health has been defined as inequalities in health outcomes based on irrelevant social characteristics. The Sustainable Development Goals and Agenda 2030 highlight equity in health as a main focus and key to achieving social sustainability. This course will introduce students to the concept of equity in health, and discuss the theoretical underpinnings of the pathways to unequal health outcomes. The social determinants of health and how they translate to uneven outcomes will be explored and discussed. There will also be a special focus on gender and gender-based violence as a driver of ill health. How to reduce inequity in health will be discussed and debated. Readings will involve some of the classic texts on health equity as well as recent explorations of the area.

Requirements/Evaluation: weekly short reflection papers and one final paper (10-12 pages)

Prerequisites: PHLH 201 Dimensions of Public Health or Permission of Instructor

Enrollment Limit: 16

Enrollment Preferences: Public Health Concentrators

Expected Class Size: 16

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

Attributes: PHLH Reproductive, Maternal and Child Health  PHLH Social Determinants of Health

Not offered current academic year
In the face of a global pandemic and increased police brutality, states and counties across the nation have declared racism a public health crisis. This push to identify systemic racism as a high priority in public health action and policy is an important symbolic and political move. It names the faults of histories, systems and institutions but also brings to the spotlight the individual and community responsibility to dismantle racism in the US. In this tutorial, we will examine racism in public health policy, practice and research through an investigation of several mediums of evidence and information, ranging from peer reviewed literature to news editorials, podcasts and documentaries. We will explore specific pathways by which racism functions in the disciplines of biostatistics, epidemiology, social & behavioral sciences, health policy & management and environmental health sciences while also examining the dynamics of power and history in research and community practice. We will also gain skills in speaking across differences and articulation of how our own perceptions and lived experiences of race and racism impact our study of public health. This tutorial will most likely elicit uncomfortable and hard conversations about race and requires an openness to self-reflection and the practice of listening and articulation.

**Requirements/Evaluation:** bi-weekly tutorial papers, weekly journaling, oral commentaries and tutorial discussion

**Prerequisites:** PHLH 201

**Enrollment Limit:** 10

**Enrollment Preferences:** Public Health concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** In this course students will examine and critically examine the inequities and race based social and health injustices, and the ways racism infiltrates public health action and policy, both historically and currently. They will also refine their self reflection skills in understanding how their own positions of privilege and power, or lack thereof, inform their understanding of public health.

SEM Section: 02  TR 11:20 am - 12:35 pm  Kiaran Honderich
The Quantitative/Formal Reasoning (QFR) requirement is intended to help students become adept at reasoning mathematically and abstractly. The ability to apply a formal method to reach conclusions, use numbers comfortably, and employ the research tools necessary to analyze data lessens barriers to carrying out professional and economic roles. The hallmarks of a QFR course are the representation of facts in a language of mathematical symbols and the use of formal rules to obtain a determinate answer. Primary evaluation in these courses is based on multistep mathematical, statistical, or logical inference (as opposed to descriptive answers).

Prior to senior year, all students must satisfactorily complete ONE QFR course. Students requiring extra assistance (as assessed during First Days) are normally placed into Mathematics 100/101/102, which is to be taken before fulfilling the QFR requirement.

**AMST 363 (F)(S) Mathematical and Computational Approaches to Social Justice (DPE) (QFR)**

**Cross-listings:** STS 363 WGSS 363 AMST 363 MATH 308  

**Secondary Cross-listing**

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial group will carry out a substantial project in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science.

**Class Format:** This is a research-based tutorial.

**Requirements/Evaluation:** To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows an "ungrading" methodology.

**Prerequisites:** Across each 3 - 5 person tutorial group: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students will be admitted in groups of 3 - 5 based on a proposal submitted prior to registration. The instructor is happy to facilitate formation of groups and to give feedback on draft proposals. Contact the instructor early, prior to preregistration.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

- STS 363 (D2)  
- WGSS 363 (D2)  
- AMST 363 (D2)  
- MATH 308 (D3)

**Difference, Power, and Equity Notes:** Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

**Quantitative/Formal Reasoning Notes:** Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

Fall 2022  
TUT Section: T1 TBA Chad M. Topaz

Spring 2023  
TUT Section: T1 TBA Chad M. Topaz

**ASIA 241 (S) Colonialism and Underdevelopment in South Asia (DPE) (QFR)**

**Cross-listings:** ECON 240 ASIA 241

**Secondary Cross-listing**

British colonial rule in South Asia shaped economy and society in fundamental ways. As resistance to colonial rule emerged in the late nineteenth
century, "nationalist" writers developed a critique of its economic impact via taxation, fiscal policy, trade, and many other policies. In their turn, supporters of British rule, "apologists," argued that British rule had laid the foundations of economic growth by securing property rights, enforcing contracts, and developing infrastructure. The debate between "nationalists" and "apologists" has never quite ended, but after the recent growth of the Indian economy it has lost some of its emotional charge. We will use this opportunity to revisit the controversy.

Requirements/Evaluation: essays (one every other week) and responses to partner's essays will be evaluated

Prerequisites: one course in ECON

Enrollment Limit: 10

Enrollment Preferences: Economics major, prior course on South Asia

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
ECON 240 (D2) ASIA 241 (D2)

Difference, Power, and Equity Notes: Issues of difference, power, and equity are at the heart of any analysis of colonialism, hence the DPE designation.

Quantitative/Formal Reasoning Notes: Students will write six essays, in which they will employ economic models and engage with quantitative evidence, so the course satisfies the QFR requirement.

ASTR 111 (F) Introduction to Astrophysics (QFR)

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies. ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes remotely to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

Class Format: The class has 6 afternoon labs. Nighttime observing sessions will occur throughout the semester.

Requirements/Evaluation: weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

Prerequisites: a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

Enrollment Limit: 28

Enrollment Preferences: potential Astronomy majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

BIMO 321 (F) Biochemistry I: Structure and Function of Biological Molecules (QFR)

Cross-listings: BIMO 321 BIOL 321 CHEM 321

Primary Cross-listing
This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

Prerequisites: BIOL 101 and CHEM 251/255 and CHEM 155/256

Enrollment Limit: 16/lab

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 48

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
BIMO 321 (D3) BIOL 321 (D3) CHEM 321 (D3)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular problem sets in which quantitative/formal reasoning skills are practiced.

Cross-listings:  BIOL 322  BIMO 322  CHEM 322 

Primary Cross-listing

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

Class Format: Lecture three hours per week and laboratory two hours per week.

Requirements/Evaluation: several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

Prerequisites: BIOL 101 and CHEM 251/255 or permission of instructor

Enrollment Limit:  60

Enrollment Preferences:  junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size:  60

Grading:  no pass/fail option,     no fifth course option

Unit Notes:  cannot be counted towards the Biology major in addition to BIOL 222

Distributions:  (D3)  (QFR)

BIOL 202 (F) Genetics  (QFR)

Genetics, classically defined as the study of heredity, is today a multidisciplinary field whose principles provide critical insight and tools to most areas of biology and medicine. This course covers the experimental basis for our current understanding of the inheritance, structures, and functions of genes. It introduces approaches used by contemporary geneticists and molecular biologists to explore questions in areas of biology ranging from evolution to medicine. A primary focus of the course is on students developing familiarity with problem solving, the logic and quantitative reasoning required to understand how genetic mechanisms lead to biological patterns. The laboratory part of the course provides an experimental introduction to modern genetic analysis as well as introductions to interpreting genetic reasoning in the primary research literature. Laboratory experiments include investigating chromosome structure using microscopy, integrating multiple streams of evidence to map a mutation to the genome, determining the structure of a DNA plasmid using molecular tools.

Class Format: Lecture: three hours per week, Lab: three hours per week.

Requirements/Evaluation:  bi-weekly problem sets; weekly laboratory exercises and laboratory reports; three exams

Prerequisites:  BIOL 101 and 102

Enrollment Limit:  120

Enrollment Preferences:  students interested in the Biology major

Expected Class Size:  60

Grading:  no pass/fail option,     no fifth course option
**Unit Notes:** does not satisfy the distribution requirement for the Biology major

**Distributions:**  (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course develops quantitative skills through solving problems. Students learn to apply basic calculations and logic to predict the outcomes of biological systems, for example, describing the likelihood that an individual will be affected by an inherited disease. Application of quantitative and logical analysis contributes to a large component of the in-class work and the graded material for the class, in the form of problem sets, exams, and data analysis for lab reports.

**BIOL 203 (F) Ecology**  (QFR)

**Cross-listings:**  BIOL 203  ENVI 203

**Primary Cross-listing**

This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

**Class Format:** Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

**Requirements/Evaluation:** pre-class quizzes, lab reports, two mid-term exams, and a final exam

**Prerequisites:** BIOL 102, or ENVI 102, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** students planning to pursue Biology and/or ENVI

**Expected Class Size:** 30

**Grading:**  no pass/fail option,  no fifth course option

**Unit Notes:** satisfies the distribution requirement for the Biology major

**Distributions:**  (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

BIOL 203 (D3)  ENVI 203 (D3)

**Quantitative/Formal Reasoning Notes:** Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

BIOL 305  (S)  Evolution  (QFR)
This course offers a critical analysis of contemporary concepts in biological evolution. We focus on the relation of evolutionary mechanisms (e.g., selection, drift, and migration) to long term evolutionary patterns (e.g., evolutionary innovations, origin of major groups, and adaptation). Topics include micro-evolutionary models, natural and sexual selection, speciation, the inference of evolutionary history, evolutionary medicine among others.

Requirements/Evaluation: independent research project, problem sets, participation in discussions and exams

Prerequisites:  BIOL 202

Enrollment Limit:  22

Enrollment Preferences:  Seniors and biology majors

Expected Class Size:  22

Grading:  yes pass/fail option,   yes fifth course option

Unit Notes:  satisfies the distribution requirement for the Biology major

Distributions:  (D3)  (QFR)

Quantative/Formal Reasoning Notes:  We will use mathematical models to study population genetics.

BIOL 319  (S)  Integrative Bioinformatics, Genomics, and Proteomics Lab  (QFR)

Cross-listings:  MATH 319  CHEM 319  BIOL 319  PHYS 319  CSCI 319

Primary Cross-listing
What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

Class Format:  The lab for this course will meet for two afternoons per week.  Some lab sessions will be shorter than 3 hours.

Requirements/Evaluation:  lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

Prerequisites:  BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

Enrollment Limit:  12

Enrollment Preferences:  seniors, then juniors, then sophomores

Expected Class Size:  12

Grading:  yes pass/fail option,   no fifth course option

Unit Notes:  does not satisfy the distribution requirement for the Biology major

Distributions:  (D3)  (QFR)
This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from these structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

Prerequisites: BIOL 101 and CHEM 251/255 and CHEM 155/256

Enrollment Limit: 16/lab

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 48

Grading: no pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

BIOL 337 (F) Evolutionary Ecology (QFR)

Evolutionary ecology is an interdisciplinary field that integrates concepts in genetics, adaptation, and ecology to understand how evolution operates in the context of ecological communities. This course provides an overview of the discipline including foundational concepts in evolutionary demography, phenotypic plasticity, and population genetics. It also explores how breakthroughs in these topics provide a framework for advances in our understanding of the evolution of reproductive timing and ageing, interspecific interactions (e.g. competition, predation), cooperation, and altruism. The course combines lectures, readings, in-class discussion, and a lab section that includes a mixture of field, computer, and lab projects. Laboratories will give students practical, hands-on experience in how to develop, plan, and carry out evolutionary ecology research from start to finish.

Class Format: lecture, 3 hours per week; laboratory and discussion, 3 hours per week

Requirements/Evaluation: Evaluation will be based on lab assignments, two exams, discussion participation, and a written paper.

Prerequisites: BIOL 102, plus either BIOL 202 or BIOL 203 or equivalent

Enrollment Limit: 24

Enrollment Preferences: preference given to biology majors, seniors, and juniors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Unit Notes: Satisfies the distribution requirement for the Biology major

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Evolutionary ecology uses concepts in genetics and ecology to understand how the frequency of alleles in a population changes over time. These changes are formalized in equations that describe these processes. Students will gain experience in utilizing these equations to describe, analyze, and predict the evolutionary outcome of ecological interactions for both theoretical and experimental purposes. Thus, the students will gain experience in solving systems of equations using algebra and in stat
CHEM 151 (F) Introductory Chemistry (QFR)
This course provides an introduction to chemistry for those students with little or no high school chemistry. Students will be introduced to concepts fundamental to studying matter at the molecular level. Principal topics include introductions to the nature of atoms and molecules, stoichiometry, solubility rules and equilibria, gas laws, chemical equilibrium, acid-base reactions, periodic relationships, chemical bonding, molecular structure, intermolecular forces, oxidation-reduction reactions, and related applications. Laboratory work comprises a system of qualitative analysis and quantitative techniques. The course provides preparation for further study of organic chemistry, biochemistry, physical and inorganic chemistry and is intended for students who are anticipating professional study in chemistry, in related sciences, or in one of the health professions, as well as for those students who are interested in exploring the fundamental ideas of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

Class Format: lecture, three times per week and laboratory, four hours per week
Requirements/Evaluation: electronic and written weekly problem set assignments, laboratory work and analysis, quizzes, two tests, and a final exam
Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement).
Enrollment Limit: 16/lab
Enrollment Preferences: first-year students; students who have studied chemistry for one or more years are directed to CHEM 153 or 155
Expected Class Size: 32
Grading: yes pass/fail option, no fifth course option
Unit Notes: CHEM 151 may be taken concurrently with MATH 102--see under Mathematics; CHEM 151 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.
Attributes: BIMO Required Courses

CHEM 153 (F) Concepts of Chemistry (QFR)
This course broadens and deepens the foundation in chemistry of students who have had typically one year of chemistry at the high school level. Most students begin study of chemistry at Williams with this course. Familiarity with stoichiometry, basic concepts of equilibria, and the model of an atom is expected. Principal topics for this course include kinetic theory of gases, modern atomic theory, molecular structure and bonding, states of matter, chemical equilibrium (acid-base and solubility), and an introduction to atomic and molecular spectroscopies. Laboratory periods will largely focus on experiment design, data analysis, literature, scientific writing, ethics, and other skills critical to students' development as scientists. The course is of interest to students who anticipate professional study in chemistry, related sciences, or one of the health professions, as well as to those who want to explore the fundamentals of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

Class Format: lecture, three times per week and laboratory, four hours per week
Requirements/Evaluation: problem sets and/or quizzes, laboratory work, and exams
Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course
CHEM 155 (F) Principles of Modern Chemistry  (QFR)
This course is designed for students with a strong preparation in chemistry (including laboratory experience) in secondary school, such as provided by an Advanced Placement chemistry course (or equivalent) with a corresponding AP Chemistry Exam score of 5 (or a 6 or 7 on the IB Exam, or equivalent). Topics include chemical thermodynamics, kinetics, structure and bonding, coordination chemistry, electrochemistry and spectroscopy and their application to fields such as materials science, catalysis, environmental, biological, and medicinal chemistry. Laboratory periods will focus on hands-on skills, data representation and analysis, scientific writing, exploration of the scientific literature, and other skills critical to students' development as scientists. This course is designed for students who are anticipating further study in chemistry, related sciences, or one of the health professions, as well as for students who want to explore the fundamental ideas of chemistry as part of their general education.
Class Format: lecture, three times per week and laboratory, four hours per week
Requirements/Evaluation: frequent short assignments in preparation for class, quantitative weekly problem sets, laboratory work and reports, an hour test, and a final exam
Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement).
Enrollment Limit: 16/lab
Enrollment Preferences: first-year students and sophomores
Expected Class Size: 32
Grading: no pass/fail option, no fifth course option
Unit Notes: CHEM 155 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.
Attributes: BIMO Required Courses
CHEM 156  (S)  Organic Chemistry: Introductory Level  (QFR)
This course provides the necessary background in organic chemistry for students who are planning advanced study or a career in chemistry, the biological sciences, or the health professions. It initiates the systematic study of the common classes of organic compounds with emphasis on theories of structure and reactivity. The fundamentals of molecular modeling as applied to organic molecules are presented. Specific topics include basic organic structure and bonding, isomerism, stereochemistry, molecular energetics, the theory and interpretation of infrared and nuclear magnetic spectroscopy, substitution, elimination and addition reactions. The coordinated laboratory work includes purification and separation techniques, structure-reactivity studies, organic synthesis, IR and NMR spectroscopy, and the identification of unknown compounds.

Class Format: lecture, three times per week and laboratory, four hours per week
Requirements/Evaluation: quantitative problem solving, laboratory performance, three midterm exams, and a final exam
Prerequisites: CHEM 151 or 153 or 155 or permission of instructor
Enrollment Limit: 45/lecture
Enrollment Preferences: Seniors, juniors, sophomores, first-year students
Expected Class Size: 90
Grading: no pass/fail option, no fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem solving in which quantitative/formal reasoning skills are practiced and evaluated.

CHEM 368 (S) Computational Chemistry and Molecular Spectroscopy (QFR)

This tutorial provides an introduction to the principles of computational quantum mechanics and their application to problems of chemical interest such as chemical bonding, chemical reactivity, and molecular spectroscopy. Emphasis is placed upon modern electronic structure calculations, their fundamentals, practical considerations, interpretation, and applications to current research questions. Under guidance in sessions and through independent work, students will use computational methods to explore assigned weekly research problems. The research results will be presented to and discussed with the tutorial partner at the end of each week.

Requirements/Evaluation: tutorial participation, presentations, and submitted papers
Prerequisites: CHEM 361 or equivalent background in Physics
Enrollment Limit: 10
Enrollment Preferences: Chemistry majors
Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFC requirement with problem sets for assignments in which quantitative/formal reasoning skills are practiced.

COGS 224 (F) Introduction to Formal Linguistics (QFR)

Cross-listings: COGS 224 PHIL 221

Primary Cross-listing

The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip and oatmeal raisin. There are two ways to understand "Many students took every class". According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

Requirements/Evaluation: Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

Prerequisites: No prerequisites

Enrollment Limit: 20

Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

COGS 224 (D2) PHIL 221 (D2)

Quantitative/Formal Reasoning Notes: This course teaches the fundamentals of the formal analysis of language. Students will learn to provide translation schemes from English to a logical language (typed lambda calculus).

SEM Section: 01 TF 1:10 pm - 2:25 pm Christian De Leon

CSCI 103 (S) Electronic Textiles (QFR)

Digital data is being infused throughout the entire physical world, escaping the computer monitor and spreading to other devices and appliances, including the human body. Electronic textiles, or eTextiles, is one of the next steps toward making everything interactive and this course aims to introduce learners to the first steps of developing their own wearable interactive technology devices. After completing a series of introductory eTextiles projects to gain practice in necessary sewing, circuitry, and programming skills, students will propose and design their own eTextiles projects, eventually implementing them with sewable Arduino components, and other found electronic components as needed. The scope of the project will depend on the individual's prior background, but can include everything from a sweatshirt with light-up turn signals for bicycling, to a wall banner that
displays the current air quality of the room, to a stuffed animal that plays a tune when the lights go on, to whatever project you can conceivably accomplish with sewable Arduino inputs, outputs, and development board in a semester context. This class will introduce students to introductory computer programming, circuitry, and sewing with the goal of creating novel wearable artifacts that interact with the world.

**Class Format:** interspersed with hands-on activities in a computer lab

**Requirements/Evaluation:** weekly homework assignments and a final project

**Prerequisites:** none

**Enrollment Limit:** 18

**Enrollment Preferences:** students who have not previously taken a CSCI course

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/

**Materials/Lab Fee:** a fee of $85 will be added to term bill to cover Lilypad Arduino components (Protosnap Plus Kit, battery holders switched and not-switched, sets of LEDs, temperature sensor, vibe board, tri-color LED), alligator test leads, and fabric scissors

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** The course will teach students the basics of computer programming through projects in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LEC Section: 01    TR 9:55 am - 11:10 am     Iris Howley

**CSCI 104 (F) Understanding Data Through Computation (QFR)**

Many of the world's greatest discoveries and most consequential decisions are enabled or informed by the analysis of data from a myriad of sources. Indeed, the ability to organize, visualize, and draw conclusions from data is now a critical tool in the sciences, business, medicine, politics, other academic disciplines, and society as a whole. This course lays the foundations for reasoning about data by exploring complementary computational, statistical, and visualization concepts. These concepts will be reinforced by lab experiences designed to teach programming and statistics skills while analyzing real-world data sets. This course will also examine the broader context and social issues surrounding data analysis, including privacy and ethics.

**Requirements/Evaluation:** Weekly problem sets involving programming, a project, and examinations.

**Prerequisites:** None; previous programming experience or statistics is not required.

**Enrollment Limit:** 24;12/lab

**Enrollment Preferences:** Not open to those who have completed or are currently enrolled in a Computer Science course numbered 136 or higher or a Statistics course. Preference given to first-year students and sophomores who have not previously taken a computer science course.

**Expected Class Size:** 24

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2022

LEC Section: 01    MWF 10:00 am - 10:50 am     Katie A. Keith

LEC Section: 02    MWF 11:00 am - 11:50 am     Stephen N. Freund

LAB Section: 03    M 1:00 pm - 2:30 pm     Stephen N. Freund, Katie A. Keith

LAB Section: 04    M 2:30 pm - 4:00 pm     Stephen N. Freund, Katie A. Keith
CSCI 134 (F)(S) Introduction to Computer Science (QFR)
This course introduces students to the science of computation by exploring the representation and manipulation of data and algorithms. We organize and transform information in order to solve problems using algorithms written in a modern object-oriented language. Topics include organization of data using objects and classes, and the description of processes using conditional control, iteration, methods and classes. We also begin the study of abstraction, self-reference, reuse, and performance analysis. While the choice of programming language and application area will vary in different offerings, the skills students develop will transfer equally well to more advanced study in many areas. In particular, this course is designed to provide the programming skills needed for further study in computer science and is expected to satisfy introductory programming requirements in other departments.

Requirements/Evaluation: weekly programming projects, weekly written homeworks, and two examinations.
Prerequisites: none, except for the standard prerequisites for a (QFR) course; previous programming experience is not required
Enrollment Limit: 30;15/lab
Enrollment Preferences: if the course is over-enrolled, enrollment will be determined by lottery.
Expected Class Size: 30/lec
Grading: yes pass/fail option, yes fifth course option
Unit Notes: Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/. Students with prior experience with object-oriented programming should discuss appropriate course placement with members of the department.
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.
Attributes: COGS Interdepartmental Electives

CSCI 136  (F)(S)  Data Structures and Advanced Programming  (QFR)
This course builds on the programming skills acquired in Computer Science 134. It couples work on program design, analysis, and verification with an introduction to the study of data structures. Data structures capture common ways in which to store and manipulate data, and they are important in the construction of sophisticated computer programs. Students are introduced to some of the most important and frequently used data structures: lists, stacks, queues, trees, hash tables, graphs, and files. Students will be expected to write several programs, ranging from very short programs to more elaborate systems. Emphasis will be placed on the development of clear, modular programs that are easy to read, debug, verify, analyze, and modify.

Requirements/Evaluation: programming and written assignments, quizzes, examinations
Prerequisites:  CSCI 134 or equivalent; fulfilling the Discrete Mathematics Proficiency requirement is recommended, but not required
Enrollment Limit:  30/15/lab
Enrollment Preferences:  if the course is over-enrolled, enrollment will be determined by lottery.
Expected Class Size:  30/lec
Grading:   yes pass/fail option,   no fifth course option
Unit Notes:  Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/
Quantitative/Formal Reasoning Notes:  This course include regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.
Attributes:  BIGP Courses

LAB Section: 06  R 2:30 pm - 4:00 pm      Daniel W. Barowy

CSCI 237  (F)(S)  Computer Organization  (QFR)
This course studies the basic instruction set architecture and organization of a modern computer. It provides a programmer's view of how computer systems execute programs, store information, and communicate. Over the semester the student learns the fundamentals of translating higher level languages into assembly language, and the interpretation of machine languages by hardware. At the same time, a model of computer hardware organization is developed from the gate level upward.

Requirements/Evaluation:  weekly programming assignments and/or problem sets, quizzes, midterm and final exams
Prerequisites:  CSCI 136
Enrollment Limit:  24/12/lab
Enrollment Preferences:  current or expected Computer Science majors
Expected Class Size:  24
Grading:   no pass/fail option,   no fifth course option
Distributions:  (D3)  (QFR)

Quantitative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 256  (F)(S)  Algorithm Design and Analysis  (QFR)

This course investigates methods for designing efficient and reliable algorithms. By carefully analyzing the structure of a problem within a mathematical framework, it is often possible to dramatically decrease the computational resources needed to find a solution. In addition, analysis provides a method for verifying the correctness of an algorithm and accurately estimating its running time and space requirements. We will study several algorithm design strategies that build on data structures and programming techniques introduced in Computer Science 136. These include greedy, divide-and-conquer, dynamic programming, and network flow algorithms. Additional topics of study include algorithms on graphs and strategies for handling potentially intractable problems.

Requirements/Evaluation: Problem sets, midterm and final examinations
Prerequisites: CSCI 136 and fulfillment of the Discrete Mathematics Proficiency requirement
Enrollment Limit: 24
Enrollment Preferences: Preference will be given to students who need the class in order to complete the major. Ties will be broken by seniority (seniors first, then juniors, etc.).
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions:  (D3)  (QFR)
Quantative/Formal Reasoning Notes: This course will have weekly problem sets in which students will formally prove statements about the behavior and performance of algorithms. In short, the course is about applying abstract and mathematical reasoning to the study of algorithms and computation.

Fall 2022
LEC Section: 01    MWF 10:00 am - 10:50 am     Bill K. Jannen

Spring 2023
LEC Section: 01    MWF 9:00 am - 9:50 am     Bill K. Jannen

CSCI 319  (S) Integrative Bioinformatics, Genomics, and Proteomics Lab  (QFR)

Cross-listings: MATH 319  CHEM 319  BIOL 319  PHYS 319  CSCI 319

Secondary Cross-listing
What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database
searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

**Class Format:** The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

**Requirements/Evaluation:** lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

**Prerequisites:** BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

**Enrollment Limit:** 12

**Enrollment Preferences:** seniors, then juniors, then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** does not satisfy the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

**Quantative/Formal Reasoning Notes:** Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

**Attributes:** BIGP Courses BIMO Interdepartmental Electives

**CSCI 334  (F)(S)  Principles of Programming Languages  (QFR)**

This course examines the concepts and structures governing the design and implementation of programming languages. It presents an introduction to the concepts behind compilers and run-time representations of programming languages; features of programming languages supporting abstraction and polymorphism; and the procedural, functional, object-oriented, and concurrent programming paradigms. Programs will be required in languages illustrating each of these paradigms.

**Requirements/Evaluation:** weekly problem sets and programming assignments, a midterm examination, and a final examination

**Prerequisites:** CSCI 136

**Enrollment Limit:** 30

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

CSCI 339  (S)  Distributed Systems  (QFR)
This course studies the key design principles of distributed systems, which are collections of independent networked computers that function as single coherent systems. Covered topics include communication protocols, processes and threads, naming, synchronization, consistency and replication, fault tolerance, and security. Students also examine some specific real-world distributed systems case studies, including Google and Amazon. Class discussion is based on readings from the textbook and research papers. The goals of this course are to understand how large-scale computational systems are built, and to provide students with the tools necessary to evaluate new technologies after the course ends.

Requirements/Evaluation: weekly homework assignments, midterm exam, 3 major programming projects, and a final project

Prerequisites: CSCI 237

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3)  (QFR)

Quantative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 361  (F)  Theory of Computation  (QFR)

Cross-listings: MATH 361  CSCI 361

Primary Cross-listing
This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Class Format: Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

Requirements/Evaluation: online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination

Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor

Enrollment Limit: 48(12/con)

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 48

Grading: no pass/fail option, no fifth course option

Distributions: (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

CSCI 371 (F)(S) Computer Graphics (QFR)
This course covers the fundamental mathematics and techniques behind computer graphics, and will teach students how to represent and draw 2D and 3D geometry for real-time and photorealistic applications. Students will write challenging implementations from the ground up in C/C++, OpenGL, and GLSL. Topics include transformations, rasterization, ray tracing, immediate mode GUI, forward and inverse kinematics, and physically-based animation. Examples are drawn from video games, movies, and robotics.

Requirements/Evaluation: evaluation based on assignments, projects, and exams.
Prerequisites: CSCI 136 and CSCI 237 or permission of instructor
Enrollment Limit: 24;12/lab
Enrollment Preferences: current or expected Computer Science majors
Expected Class Size: 24

CSCI 373 (F)(S) Artificial Intelligence (QFR)
Artificial Intelligence (AI) has become part of everyday life, but what is it, and how does it work? This course introduces theories and computational techniques that serve as a foundation for the study of artificial intelligence. Potential topics include the following: Problem solving by search, Logic, Planning, Constraint satisfaction problems, Reasoning under uncertainty, Probabilistic graphical models, and Automated Learning.

Requirements/Evaluation: Evaluation based on assignments, projects, and exams.
Prerequisites: CSCI 136 and (CSCI 256 or permission of instructor)
Enrollment Limit: 24
Enrollment Preferences: current or expected Computer Science majors
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.
Attributes: COGS Interdepartmental Electives

Fall 2022
LEC Section: 01  MWF 9:00 am - 9:50 am  Mark Hopkins
CSCI 374  (F)  Machine Learning  (QFR)

Machine learning is a field that derives from artificial intelligence and statistics, and is concerned with the design and analysis of computer algorithms that "learn" automatically through the use of data. Computer algorithms are capable of discerning subtle patterns and structure in the data that would be practically impossible for a human to find. As a result, real-world decisions, such as treatment options and loan approvals, are being increasingly automated based on predictions or factual knowledge derived from such algorithms. This course explores topics in supervised learning (e.g., random forests and neural networks), unsupervised learning (e.g., k-means clustering and expectation maximization), and possibly reinforcement learning (e.g., Q-learning and temporal difference learning.) It will also introduce methods for the evaluation of learning algorithms (with an emphasis on analysis of generalizability and robustness of the algorithms to distribution/environmental shift), as well as topics in computational learning theory and ethics.

Requirements/Evaluation:  Presentations, problem sets, programming exercises, empirical analyses of algorithms, critical analysis of current literature; the final two weeks are focused on a project of the student's design.

Prerequisites:  CSCI 136 and CSCI 256 or permission of instructor

Enrollment Limit:  24

Enrollment Preferences:  Current or expected Computer Science majors.

Expected Class Size:  24

Grading:  no pass/fail option,  no fifth course option

Distributions:  (D3)  (QFR)

Quantative/Formal Reasoning Notes:  This course heavily relies on discrete mathematics, calculus, and elementary statistics. Students will be proving theorems, among many other mathematically oriented assignments. Additionally, they will be programming, which involves analytical and logical thinking.

Attributes:  COGS Interdepartmental Electives

CSCI 375  (S)  Natural Language Processing  (QFR)

Natural language processing (NLP) is a set of methods for making human language accessible to computers. NLP underlies many technologies we use on a daily basis including automatic machine translation, search engines, email spam detection, and automated personalized assistants. These methods draw from a combination of algorithms, linguistics and statistics. This course will provide a foundation in building NLP models to classify, generate, and learn from text data.

Requirements/Evaluation:  Evaluation based on assignments, projects, and exams.

Prerequisites:  CSCI 136, and either CSCI 256 or STAT 201/202.

Enrollment Limit:  24

Enrollment Preferences:  current or expected Computer Science majors.

Expected Class Size:  24

Grading:  no pass/fail option,  no fifth course option

Distributions:  (D3)  (QFR)

Quantative/Formal Reasoning Notes:  The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.
ECON 110  (F)(S)  Principles of Microeconomics  (QFR)
This course is an introduction to the study of the forces of supply and demand that determine prices and the allocation of resources in markets for goods and services, markets for labor, and markets for natural resources. The focus is on how and why markets work, why they may fail to work, and the policy implications of both their successes and failures. The course focuses on developing the basic tools of microeconomic analysis and then applying those tools to topics of popular or policy interest such as minimum wage legislation, pollution control, competition policy, international trade policy, discrimination, tax policy, and the role of government in a market economy.

Requirements/Evaluation:  problem sets, quizzes, short essays, two midterms, final exam
Prerequisites:  none
Enrollment Limit:  40
Enrollment Preferences:  This course is required of Economics and Political Economy majors and highly recommended for those non-majors interested in Environmental Studies and Women's, Gender and Sexuality Studies.
Expected Class Size:  40
Grading:  yes pass/fail option,  no fifth course option
Unit Notes:  The department recommends students follow this course with ECON 120 or with a lower-level elective that has ECON 110 as its prerequisite; students may alternatively proceed directly to ECON 251 after taking this introductory course.
Distributions:  (D2)  (QFR)
Quantitative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.
Attributes:  POEC Required Courses

ECON 120  (F)(S)  Principles of Macroeconomics  (QFR)
This course provides an introduction to the study of the aggregate national economy. It develops the basic theories of macroeconomics and applies them to topics of current interest. Issues to be explored include: the causes of inflation, unemployment, recessions, and depressions; the role of government fiscal and monetary policy in stabilizing the economy; the determinants of long-run economic growth; the long- and short-run effects of taxes, budget deficits, and other government policies on the national economy; the role of financial frictions in amplifying recessions; and the workings of exchange rates and international finance.

Requirements/Evaluation:  Depending on instructor, may include: problem sets, short essays, quizzes, reading assignments, either one or two midterms, and a final exam.
Prerequisites:  ECON 110
Enrollment Limit:  40
Enrollment Preferences:  First-year students and sophomores.
Expected Class Size:  40
Grading:  yes pass/fail option,  yes fifth course option
Distributions:  (D2)  (QFR)
Quantitative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and
describing those results in words.

ECON 213 (F) Introduction to Environmental and Natural Resource Economics (QFR)

Cross-listings: ECON 213 ENVI 213

Primary Cross-listing

We'll use economics to learn why we harm the environment and overuse natural resources, and what we can do about it. We'll talk about whether and how we can put a dollar value on nature and ecosystem services. We'll study cost benefit analysis, pollution in general, climate change, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth and trade. Consideration of justice and equity will be woven through the whole semester.

Requirements/Evaluation: problem sets, short essays, final paper; intermediate assignments may include poster, presentation, brief writing assignment

Prerequisites: ECON 110 or equivalent

Enrollment Limit: 30

Enrollment Preferences: first-year and sophomore students

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: this course will count toward both the Environmental Studies major and concentration

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 213 (D2) ENVI 213 (D2)

Quantative/Formal Reasoning Notes: We will use formal theory expressed in math and graphs, perform calculations, and consume statistical data.

Attributes: ENVI Environmental Policy EVST Social Science/Policy MAST Interdepartmental Electives POEC Comparative POEC/Public Policy Courses

Fall 2022
LEC Section: 01  MR 2:35 pm - 3:50 pm  Sarah A. Jacobson

ECON 232 (F) Financial Markets, Institutions and Policies (QFR)

The focus of the course will be on how firms, financial markets, and central banks interact in the economy. Key questions addressed in the course include: How do firms allocate their resources to enhance their value? How are firms evaluated by the financial markets? How are asset prices determined, and how are these prices related to interest rates? Are financial markets efficient, and what are the implications of their efficiency or lack thereof? How does the financial system help with the management of risks faced by society? We will also study the role of the central bank (the Federal Reserve in the US), monetary policy, and government regulation and their impacts on financial decision making. Key questions include: How do central banks set monetary policy and how do those policies affect the economy and the financial decision-making process? How does monetary
policy change when interest rates are (virtually) zero?

**Class Format:** There will be a mix of lecture and discussion.

**Requirements/Evaluation:** 5-7 Problem Sets, Quantitative Exercises, Group Paper, and Final Exam

**Prerequisites:** ECON 110 and ECON 120

**Enrollment Limit:** 25

**Enrollment Preferences:** Sophomore and Junior Economics majors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**Quantitative/Formal Reasoning Notes:** We will use mathematical models, graphs, and data analysis to understand financial decisions at the firm and economy-wide levels.

**Attributes:** POEC Comparative POEC/Public Policy Courses

---

**ECON 240 (S) Colonialism and Underdevelopment in South Asia** (DPE) (QFR)

**Cross-listings:** ECON 240 ASIA 241

**Primary Cross-listing**

British colonial rule in South Asia shaped economy and society in fundamental ways. As resistance to colonial rule emerged in the late nineteenth century, “nationalist” writers developed a critique of its economic impact via taxation, fiscal policy, trade, and many other policies. In their turn, supporters of British rule, “apologists,” argued that British rule had laid the foundations of economic growth by securing property rights, enforcing contracts, and developing infrastructure. The debate between “nationalists” and “apologists” has never quite ended, but after the recent growth of the Indian economy it has lost some of its emotional charge. We will use this opportunity to revisit the controversy.

**Requirements/Evaluation:** essays (one every other week) and responses to partner's essays will be evaluated

**Prerequisites:** one course in ECON

**Enrollment Limit:** 10

**Enrollment Preferences:** Economics major, prior course on South Asia

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 240 (D2) ASIA 241 (D2)

**Difference, Power, and Equity Notes:** Issues of difference, power, and equity are at the heart of any analysis of colonialism, hence the DPE designation.

**Quantitative/Formal Reasoning Notes:** Students will write six essays, in which they will employ economic models and engage with quantitative evidence, so the course satisfies the QFR requirement.

**Attributes:** GBST South + Southeast Asia Studies Electives POEC Comparative POEC/Public Policy Courses

---

Spring 2023

**TUT Section:** T1 TBA Anand V. Swamy

**ECON 251 (F)(S) Price and Allocation Theory** (QFR)

A study of the determination of relative prices and their importance in shaping the allocation of resources and the distribution of income. Subjects include: behavior of households in a variety of settings, such as buying goods and services, saving, and labor supply; behavior of firms in various kinds of markets; results of competitive and noncompetitive markets in goods, labor, land, and capital; market failure; government policies as sources of and
responses to market failure; welfare criteria; limitations of mainstream analysis.

**Requirements/Evaluation:** Requirements vary by professor, but typically include frequent problem sets and multiple exams, including a final exam. They may also include one or more quizzes, short essays, collaborative projects, or presentations.

**Prerequisites:** ECON 110 and MATH 130 or its equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** Current or prospective Economics majors.

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantitative/Formal Reasoning Notes:** Course involves developing and analyzing mathematical models of real-world phenomena, grounded in tools like calculus and game theory. Students are assumed to be comfortable with topics from introductory calculus, including differentiation and integration.

---

**ECON 252 (F)(S) Macroeconomics (QFR)**

A study of aggregate economic activity: output, employment, inflation, and interest rates. The class will develop a theoretical framework for analyzing economic growth and business cycles. The theory will be used to evaluate policies designed to promote growth and stability, and to understand economic developments in the U.S. and abroad. Instructors may use elementary calculus in assigned readings, exams and lectures.

**Requirements/Evaluation:** Requirements vary by professor, but typically include frequent problem sets and/or written assignments, midterm(s), and a final exam.

**Prerequisites:** ECON 110 and 120 and MATH 130 or its equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** Current or prospective Economics majors.

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**Quantitative/Formal Reasoning Notes:** Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

**ECON 255 (F)(S) Econometrics (QFR)**

An introduction to the theory and practice of applied quantitative economic analysis. This course familiarizes students with the strengths and
weaknesses of the basic empirical methods used by economists to evaluate economic theory against economic data. Emphasizes both the statistical foundations of regression techniques and the practical application of those techniques in empirical research, with a focus on understanding when a causal interpretation is warranted. Computer exercises will provide experience in using the empirical methods, but no previous computer experience is expected. Highly recommended for students considering graduate training in economics or public policy.

**Requirements/Evaluation:** Requirements vary by professor, but typically include frequent problem sets, multiple exams, a group project, and possible additional assignments or quizzes.

**Prerequisites:** MATH 130, plus STAT 161, 201 or 202 (or equivalent, including a score of 5 on the AP Statistics Exam), plus one course in ECON; STAT 101 will also serve as a prerequisite, but only if taken prior to the fall of 2018.

**Enrollment Limit:** 30

**Enrollment Preferences:** Current or prospective Economics and Political Economy majors.

**Expected Class Size:** 30

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** Students may substitute the combination of STAT 201 and 346 for ECON 255

**Distributions:** (D2) (QFR)

**Quantitative/Formal Reasoning Notes:** Course teaches research tools necessary to analyze data.

**Attributes:** PHLH Statistics Courses, POEC Required Courses

**ECON 345 (S) Growth Diagnostics (QFR)**

**Cross-listings:** ECON 545  ECON 345

**Primary Cross-listing**

Evidence from across the developing world suggests that the “binding constraints” to economic growth can be remarkably heterogeneous—i.e., the growth potential of stagnating or underperforming economies may be unlocked in a large variety of ways. For instance, pre-reform China had been constrained by poor supply incentives in agriculture, whereas Brazil has been held back by an inadequate supply of credit, South Africa by poor employment incentives in manufacturing, El Salvador by insufficient production incentives in tradables, Zimbabwe by bad governance, and so forth.

How can developing-country policymakers determine country-specific constraints like these, thus enabling them to pragmatically pursue a selected set of growth-promoting policies rather than attempting to implement a “laundry list” of reforms that are naively based on “best practice” rules-of-thumb? This course will serve as a primer on “growth diagnostics,” an empirically-driven analytical framework for identifying the most binding constraints to economic growth in a given country at a point in time, thereby allowing policymakers to develop well-targeted reforms for relaxing these constraints while being cognizant of the nation’s prevailing economic, political, and social context. The course will first build on the basic theories and empirics of economic growth to elucidate the diagnostic framework and will then employ a wide range of country-specific case studies to demonstrate how the framework can be operationalized for policy making. Throughout the semester, students will be required to work in groups, each representing a given developing or emerging-market economy, in order to build a growth diagnostic for their group’s assigned country by the end of the course.

**Requirements/Evaluation:** extensive class participation, two short (5-page) papers, two 15-page team papers comprising a country growth diagnostic, and a team presentation on the diagnostic

**Prerequisites:** for undergraduates ECON 251, ECON 252, and either ECON 255 or STAT 346

**Enrollment Limit:** 19

**Enrollment Preferences:** CDE fellows and senior Economics majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option
**ECON 371 (F) Time Series Econometrics and Empirical Methods for Macro (QFR)**

Econometric methods in many fields including macro and monetary economics, finance and international growth and development, as well as numerous fields beyond economics, have evolved a distinct set of techniques which are designed to meet the practical challenges posed by the typical empirical questions and available time series data of these fields. The course will begin with an introductory review of concepts of estimation and inference for large data samples in the context of the challenges of multivariate endogeneous systems, and will then focus on associated methods for analysis of short dynamics such as vector autoregressive techniques and methods for analysis of long run dynamics such as cointegration techniques. Students will be introduced to concepts and techniques analytically, but also by intuition, learning by doing, and by computer simulation and illustration. The course is particularly well suited for economics majors wishing to explore advanced empirical methods, or for statistics, mathematics or computer science majors wishing to learn more about the ways in which the subject of their majors interacts with the fields of economics. The method of evaluation will include a term paper. ECON 252 and either STATS 346 or ECON 255 are formal prerequisites, although for students with exceptionally strong math/stats backgrounds these can be waived subject to instructor permission. Credit may not be earned for both ECON 371 and ECON 356.

**Requirements/Evaluation:** term paper and regular homework assignments

**Prerequisites:** ECON 252 and either ECON 255 or STATS 346

**Enrollment Limit:** 19

**Enrollment Preferences:** students wishing to write an honors thesis, and students with strong MATH/STAT/CSCI backgrounds

**Expected Class Size:** 19

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantative/Formal Reasoning Notes:** Uses quantitative/formal reasoning intensively in the form of mathematical and statistical arguments, as well as computer programming.

---

**ECON 378 (F) Long-Run Comparative Development (QFR)**

The world today is marred by vast disparities in the standard of living, with about a 30-fold difference in real GDP per capita between the poorest and most affluent of nations. What are the causes of such differences in prosperity across countries? Are the origins of global inequality to be found in underlying differences among societies over the past few decades, the past few centuries, or the past few millennia? If contemporary differences in living standards have such “deep” historical roots, what scope exists for policies to reduce global inequality today? Can we expect inequality to be reduced through some natural process of macroeconomic development, or is it likely to persist unless acted upon by policy? This course will present a unified theory of economic growth for thinking about these and related questions. Examples of issues to be covered include: the Neoclassical growth model and its inefficacy for answering questions about development over long time horizons; Malthusian stagnation across societies during the pre-industrial stage of economic development; the importance of the so-called demographic transition and of human capital formation in the course of industrialization; the persistent influence of colonialism, slavery, and ethnic fragmentation in shaping the quality of contemporary politico-economic institutions; and the enduring effects of geography on comparative development, through its impact on the emergence of agriculture in early human societies and its influence in shaping the composition of traits in populations across the globe.

**Class Format:** discussion
Requirements/Evaluation: problem sets, at least one exam, a research paper, and a class presentation
Prerequisites: ECON 251, ECON 252, and either ECON 255 or STAT 346
Enrollment Limit: 25
Enrollment Preferences: junior and senior Economics majors
Expected Class Size: 25
Grading: no pass/fail option, no fifth course option
Distributions: (D2) (QFR)
Quantitative/Formal Reasoning Notes: The course material will draw heavily on mathematical and statistical models of economic growth and macroeconomic development. Students will be required to routinely develop and solve sophisticated mathematical models of economic growth, involving the rigorous application of solution concepts from constrained optimization and from optimal control theory. Students will also be required to perform some econometric analyses in their assignments.
Attributes: GBST Economic Development Studies Electives POEC Comparative POEC/Public Policy Courses

Fall 2022
LEC Section: 01 TR 11:20 am - 12:35 pm Quamrul H. Ashraf

ECON 384 (S) Corporate Finance (QFR)
This course analyzes the major financial decisions facing firms. While the course takes the perspective of a manager making decisions about both what investments to undertake and how to finance these projects, it will emphasize the underlying economic models that are relevant for these decisions. Topics include capital budgeting, links between real and financial investments, capital structure choices, dividend policy, and firm valuation. Additional topics may include issues in corporate risk management, corporate governance and corporate restructuring, such as mergers and acquisitions.
Class Format: Lecture / discussion
Requirements/Evaluation: class participation, problem sets, short quizzes, short projects such as case write ups, a midterm exam, a final exam and a research paper (possibly written with a partner)
Prerequisites: ECON 251, 252, and some familiarity with statistics (e.g., ECON 255)
Enrollment Limit: 28
Enrollment Preferences: Economics majors; seniority
Expected Class Size: 28
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (QFR)
Quantitative/Formal Reasoning Notes: The course uses quantitative models to evaluate decisions.

Spring 2023
LEC Section: 01 MR 2:35 pm - 3:50 pm William M. Gentry

ECON 387 (S) Economics of Climate Change (QFR)
Cross-listings: ECON 522 ENVI 387 ECON 387
Primary Cross-listing
This course introduces the economic view of climate change, including both theory and empirical evidence. Given the substantial changes implied by the current stock of greenhouse gases (GHGs) in the atmosphere, we will begin by looking at impacts on agriculture, health, income, and migration. We will consider the distribution of climate damages across poor and wealthy people, both within and across countries. Next we will study adaptation, including capital investments and behavioral changes. We will examine the sources of climate change, especially electricity generation and transportation, and think about optimal policies. Throughout the course we will discuss the limits of the economic approach, pointing out normative questions on which economic theory provides little guidance.
Requirements/Evaluation: problem sets, midterm, group presentation, final exam
**Prerequisites:** ECON 251, familiarity with statistics

**Enrollment Limit:** 25

**Enrollment Preferences:** Junior/Senior Economics majors and CDE fellows

**Expected Class Size:** 25

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 522 (D2) ENVI 387 (D2) ECON 387 (D2)

**ECON 389 (S) Tax Policy in Global Perspective** (QFR)

**Cross-listings:** ECON 514 ECON 389

**Secondary Cross-listing**

Government policy is important for economic development. To finance their policies, governments must build the fiscal capacity to implement a tax system. In turn, fiscal capacity—the ability for the government to raise revenue—depends on economic development. This endogeneity between fiscal capacity and economic development creates challenges for tax policy in developing countries. Given these challenges, what types of taxes should countries use to raise revenues? How can governments build the fiscal capacity to generate revenue to finance critical services? This class explores tax policy from a global and comparative perspective. Because most students will be CDE fellows, we will emphasize tax policy issues, examples, and evidence that are pertinent to developing countries. However, tax policy lessons are universal so we will learn about tax policies in developed countries, especially issues relevant for transnational transactions. Topics addressed include: how economic principles can be applied to the efficiency and equity consequences of tax policies; how personal income taxes, corporate income taxes, and value-added taxes are designed and administered and how they influence the economy; ideas for fundamental tax reforms; the debate over progressive taxes versus "flat" taxes; how taxes affect incentives to save and invest; how market failures and administrative problems may influence the optimality of tax policy; the implications of global capital flows and corporate tax avoidance for tax policy; tax holidays and other special tax incentives for investment; empirical evidence on the influence of taxes on foreign direct investment, labor supply, and tax evasion; tax policy towards natural resources such as minerals and oil; case studies of efforts to reform tax administration and reduce tax evasion and corruption; taxes on land and property; taxes on imports and exports; presumptive taxation; and the informal economy and its implications for tax policy.

**Requirements/Evaluation:** midterm exam, several problem sets, two 10-page essays

**Prerequisites:** one public economics course or microeconomics course (ECON 504 or ECON 110), and one empirical methods course (POEC 253 or ECON 255, 502, or 503); students who have previously taken ECON 351 will not be enrolled

**Enrollment Limit:** 19

**Enrollment Preferences:** CDE students, but undergraduates with the prerequisites are welcome

**Expected Class Size:** 15-19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

Spring 2023

SEM Section: 01     MR 2:35 pm - 3:50 pm     Jon M. Bakija
ECON 471 (S) Topics in Advanced Econometrics (QFR)
The course uses both a practical and conceptual/theory based approach, with emphasis on methods of structural identification of dynamics in VARs and cointegration analysis, both in conventional time series and panel time series which contain spatial dimensions. The course will also investigate methods of computer simulation related to these techniques. The course is well suited for students considering empirically oriented honors theses in fields that employ these techniques, such as macro, finance, growth, trade and development, as well as fields outside of economics that use time series data. It is also well suited for students majoring in economics, statistics, computer sciences or mathematics who wish to expand their econometrics training and understanding to a more advanced level.

Requirements/Evaluation: periodic homework assignments, term paper
Prerequisites: ECON 371
Enrollment Limit: 10
Enrollment Preferences: students with strong quantitative backgrounds, and to students intending to write an honors thesis
Expected Class Size: 10
Grading: yes pass/fail option, no fifth course option
Distributions: (D2) (QFR)

ENVI 203 (F) Ecology (QFR)

Cross-listings: BIOL 203 ENVI 203

Secondary Cross-listing

This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and
ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

**Class Format:** Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

**Requirements/Evaluation:** pre-class quizzes, lab reports, two mid-term exams, and a final exam

**Prerequisites:** BIOL 102, or ENVI 102, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** students planning to pursue Biology and/or ENVI

**Expected Class Size:** 30

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** satisfies the distribution requirement for the Biology major

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIOL 203 (D3) ENVI 203 (D3)

**Quantitative/Formal Reasoning Notes:** Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

**Attributes:** ENVI Natural World Electives EVST Environmental Science

---

**ENVI 213 (F) Introduction to Environmental and Natural Resource Economics (QFR)**

**Cross-listings:** ECON 213 ENVI 213

**Secondary Cross-listing**

We'll use economics to learn why we harm the environment and overuse natural resources, and what we can do about it. We'll talk about whether and how we can put a dollar value on nature and ecosystem services. We'll study cost benefit analysis, pollution in general, climate change, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth and trade. Consideration of justice and equity will be woven through the whole semester.

**Requirements/Evaluation:** problem sets, short essays, final paper; intermediate assignments may include poster, presentation, brief writing assignment

**Prerequisites:** ECON 110 or equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** first-year and sophomore students

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** this course will count toward both the Environmental Studies major and concentration

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ECON 213 (D2) ENVI 213 (D2)

**Quantitative/Formal Reasoning Notes:** We will use formal theory expressed in math and graphs, perform calculations, and consume statistical data.

**ENVI 215 (S) Climate Changes (QFR)**

**Cross-listings:** ENVI 215 GEOS 215

**Secondary Cross-listing**

Paleoclimatology is the reconstruction of past climate variability and the forces that drove the climate changes. The Earth's climate system is experiencing unprecedented and catastrophic change because of anthropogenic emission of greenhouse gases and land use change. Paleoclimatology allows humans to put modern climate changes into the context of the history of this planet, and shows how and why it is unprecedented and catastrophic. Each climate event we study from Earth's past teaches us lessons on why the climate system responds to anthropogenic perturbations, what climate changes we're committed to in the future, how long-lasting they will be, and what climate consequences we can avoid if we take action and reduce greenhouse gas emissions sooner. In this course, we will discuss the major mechanisms that cause natural climate variability, how climate of the past is reconstructed, and how climate models are used to test mechanisms that drive climate variation. With these tools, you will analyze and interpret data and model simulations from climate events from Earth's history, and apply these findings to anthropogenic climate changes happening now and that are projected to happen in the future. Laboratories and homework will emphasize developing problem solving skills as well as sampling and interpreting geological archives of climate change. This course is in the Oceans and Climate group for the Geosciences major.

**Class Format:** This class has three scheduled lectures per week, and one lab meeting per week which will consist of field excursions, lab exercises, problem solving and discussion

**Requirements/Evaluation:** lab exercises and homework (25%), three quizzes (50%), and a final project (25%)

**Prerequisites:** 100-level course in GEOS, CHEM, or PHYS or ENVI 102 or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Geosciences majors and Environmental Studies majors and concentrators and Maritime Studies concentrators

**Expected Class Size:** 16

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 215 (D3) GEOS 215 (D3)

**Quantative/Formal Reasoning Notes:** Labs and homework include quantitative problem solving, visualization and analysis of quantitative data, and scientific computing with Matlab. No previous programming experience is assumed.

**ENVI 339 (F) Conservation Biology (QFR)**

**Cross-listings:** ENVI 339 BIOL 329

**Secondary Cross-listing**

Conservation Biology focuses on protection of the Earth's biodiversity. This course starts with an overview of biodiversity including patterns of species richness, causes of species loss (extinction), and the critical contributions of biodiversity to ecosystem function and human welfare. Then we analyze ways to conserve biodiversity at the genetic, population, species and community/ecosystem levels. Labs are field oriented, and they focus on local New England communities and ecosystems. Labs emphasize knowing the dominant species in each system; they also stress how to collect and analyze the field data on ecological community structure and function that are critical to test hypotheses that relate to different conservation goals.
Class Format: lectures, discussions, and a weekly lab.

Requirements/Evaluation: Evaluation will be based on lab assignments, discussion participation, two exams and an independent project.

Prerequisites: BIOL 203/ENVI 203 or permission of instructor

Enrollment Limit: 24

Enrollment Preferences: Biology majors, Environmental Studies majors, seniors, and juniors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 376  (F)  Economics of Environmental Behavior  (QFR)

Cross-listings: ECON 477  ENVI 376

Secondary Cross-listing
A community maintains a fishery; a firm decides whether to get a green certification; you choose to fly home or stay here for spring break: behaviors of people and firms determine our impact on the environment. We'll use economics to model environmental behavior and to consider how policies can help or hurt the environment. Topics we'll study include: voluntary conservation, social norms and nudges, firm responses to mandatory and voluntary rules, and boycotts and divestment.

Class Format: Class sessions will largely consist of presentations and discussions of academic research papers, as well as lab sessions to work on empirical exercises; we may break the class into groups for some discussions

Requirements/Evaluation: regular reading responses, empirical exercises, class participation, 2 oral presentations, and a final original research paper using an experiment, existing data, or theory

Prerequisites: ECON 251 and (ECON 255 or STAT 346)

Enrollment Limit: 19

Enrollment Preferences: senior Economics majors

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
ECON 477 (D2) ENVI 376 (D2)

Quantative/Formal Reasoning Notes: The research students will consume and produce in the class will be based on math-based theory and/or econometric-based empirical analysis.

ENVI 387  (S)  Economics of Climate Change  (QFR)

Cross-listings: ECON 522  ENVI 387  ECON 387
Secondary Cross-listing

This course introduces the economic view of climate change, including both theory and empirical evidence. Given the substantial changes implied by the current stock of greenhouse gases (GHGs) in the atmosphere, we will begin by looking at impacts on agriculture, health, income, and migration. We will consider the distribution of climate damages across poor and wealthy people, both within and across countries. Next we will study adaptation, including capital investments and behavioral changes. We will examine the sources of climate change, especially electricity generation and transportation, and think about optimal policies. Throughout the course we will discuss the limits of the economic approach, pointing out normative questions on which economic theory provides little guidance.

Requirements/Evaluation: problem sets, midterm, group presentation, final exam

Prerequisites: ECON 251, familiarity with statistics

Enrollment Limit: 25

Enrollment Preferences: Junior/Senior Economics majors and CDE fellows

Expected Class Size: 25

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 522 (D2) ENVI 387 (D2) ECON 387 (D2)

Quantative/Formal Reasoning Notes: The course involves simple calculus-based theory and applied statistics.

ENVI 404  (F)  Coastal Processes and Geomorphology  (QFR)

Cross-listings:  MAST 404  ENVI 404  GEOS 404

Secondary Cross-listing

Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces--wind, waves, storms, and people--that shape the coastal zone, as well as the geologic formations--sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs--that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

Class Format: lecture two times a week with a lab one time per week

Requirements/Evaluation: lab reports, quizzes, and an independent research project

Prerequisites: Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.

Enrollment Limit: 12

Enrollment Preferences: senior Geosciences majors, then juniors

Expected Class Size: 10
Unit Notes: As a 400-level seminar, this capstone course is intended to build on and extend knowledge and skills students have developed during previous courses in the major. This course counts toward the GEOS Group B Electives - Sediments + Life.

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

LEC Section: 01 MWF 8:30 am - 9:45 am Alex A. Apotsos
will collect samples and data on the field trip and bring them back to Williams. The second 6 weeks of the course will be spent processing and analyzing the samples and data collected during the field trip, culminating in final projects to be done in small groups. Students will help determine what data we will collect in the field and what projects emerge. Examples might be interpreting carbon isotopic analyses to reconstruct ancient oceanographic conditions, biostratigraphic correlation using fossils to reconstruct basin dynamics, determining paleoenvironment based on analyses of thin sections, or digging into trilobite fossil preservation and evolutionary trends. Students will draw on previous experiences and course content in the Geosciences and bring small group research projects to completion by the end of the semester, which will be presented in poster form. This course fulfills the Geosciences Group B Elective: Sediments and Life.

Class Format: weekly lectures, paper discussions, and hands-on labs. Required week-long spring break field course.

Requirements/Evaluation: Short papers and lab assignments, spring break field course participation (REQUIRED), and a final group project presented in poster form.

Prerequisites: GEOS majors who have taken at least one of the following courses: GEOS 212, GEOS 203, GEOS 201, GEOS 301, GEOS 302, GEOS 312T, or permission of instructor.

Enrollment Limit: 12

Enrollment Preferences: Senior, and then Junior, Geosciences majors

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Unit Notes: As a 400-level seminar, this capstone course is intended to build on and extend knowledge and skills students have developed during previous courses in the major

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course will rely on the programming language R. Students will learn how to code in R, and will use R to analyze large data sets of geological data. The majority of labs, as well as the final project, will rely on R, statistical analyses, and wrangling data.

Fall 2022
LEC Section: 01  MWF 8:30 am - 9:45 am  Alex A. Apotsos

MATH 130  (F)(S)  Calculus I  (QFR)

Calculus permits the computation of velocities and other instantaneous rates of change by a limiting process called differentiation. The same process also solves "max-min" problems: how to maximize profit or minimize pollution. A second limiting process, called integration, permits the computation of areas and accumulations of income or medicines. The Fundamental Theorem of Calculus provides a useful and surprising link between the two processes. Subtopics include trigonometry, exponential growth, and logarithms.

Requirements/Evaluation:  Weekly homework and quizzes, 2 exams during the semester, and one final

Prerequisites:  MATH 102 (or demonstrated proficiency on a diagnostic test); this is an introductory course for students who have not seen calculus before

Enrollment Limit:  50

Enrollment Preferences:  first-year students

Expected Class Size:  20

Grading:  yes pass/fail option,    yes fifth course option

Unit Notes:  students who have previously taken a calculus course may not enroll in MATH 130 without the permission of instructor

Distributions:  (D3)  (QFR)

Quantative/Formal Reasoning Notes:  This a calculus course.

Fall 2022

LEC Section: 01  MWF 10:00 am - 10:50 am  Lori A. Pedersen

MATH 140  (F)(S)  Calculus II  (QFR)

Calculus answers two basic questions: how fast is something changing (the derivative) and how much is there (the integral). This course is about integration, and the miracle that unites the derivative and the integral (the Fundamental Theorem of Calculus.) Understanding calculus requires in part the understanding of methods of integration. This course will also solve equations involving derivatives ("differential equations") for population growth or pollution levels. Exponential and logarithmic functions and trigonometric and inverse functions will also play an important role. This course is the right starting point for students who have seen derivatives, but not necessarily integrals, before.

Requirements/Evaluation:  homework, quizzes, and/or exams
Prerequisites: MATH 130 or equivalent; students who have received the equivalent of advanced placement of AB 4, BC 3 or higher may not enroll in MATH 140 without the permission of instructor

Enrollment Limit: 50

Enrollment Preferences: based on who needs calculus the soonest

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students who have higher advanced placement must enroll in MATH 150 or above

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is a math class

Fall 2022

Spring 2023
LEC Section: 01 MWF 11:00 am - 11:50 am Lori A. Pedersen

MATH 150 (F)(S) Multivariable Calculus (QFR)
Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives, multiple integrals. There is also a unit on infinite series, sometimes with applications to differential equations.

Requirements/Evaluation: Problem sets and exams

Prerequisites: MATH 140 or equivalent, such as satisfactory performance on an Advanced Placement Examination

Enrollment Limit: 50

Enrollment Preferences: Preference will be given to prospective math and stats majors, or students who need this as a course to serve as a prerequisite for other courses.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students with the equivalent of advanced placement of AB 4 or above should enroll in MATH 150, students with a BC 3 or higher should enroll in Math 151 when it is being offered, and Math 150 otherwise.

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: mathematics

MATH 151 (F) Multivariable Calculus (QFR)
Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives and multiple integrals. The goal of the course is Stokes Theorem, a deep and profound generalization of the Fundamental Theorem of Calculus. The difference between this course and MATH 150 is that MATH 150 covers infinite series instead of Stokes Theorem. Students with the equivalent of BC 3 or higher should enroll in MATH 151, as well as students who have taken the equivalent of an integral calculus and who have already been exposed to infinite series. For further clarification as to whether MATH 150 or MATH 151 is appropriate, please consult a member of the math/stat department.
Requirements/Evaluation: problem sets and exams
Prerequisites: AP BC 3 or higher or integral calculus with infinite series
Enrollment Limit: 50
Enrollment Preferences: First-years, sophomores, and juniors
Expected Class Size: 40
Grading: yes pass/fail option, yes fifth course option
Unit Notes: MATH 151 satisfies any MATH 150 prerequisite; credit will not be given for both MATH 150 and MATH 151
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course builds quantitative skills

Fall 2022
LEC Section: 01 MWF 8:00 am - 8:50 am Susan R. Loepp
LEC Section: 02 MWF 9:00 am - 9:50 am Susan R. Loepp
LEC Section: 03 MWF 10:00 am - 10:50 am Susan R. Loepp

MATH 200 (F)(S) Discrete Mathematics (QFR)
In contrast to calculus, which is the study of continuous processes, this course examines the structure and properties of finite sets. Topics to be covered include mathematical logic, elementary number theory, mathematical induction, set theory, functions, relations, elementary combinatorics and probability, and graphs. Emphasis will be given on the methods and styles of mathematical proofs, in order to prepare the students for more advanced math courses.
Requirements/Evaluation: Fall: Homework, proof portfolio, group work, presentations, quizzes/exams, reflections. Spring: The grade will be based on homework and 4 exams.
Prerequisites: Calculus at the level of an AP course or Williams College Math 130 or 140. Students who have taken a 300-level or 400-level math course should obtain permission of the instructor before enrolling.
Enrollment Limit: 40
Enrollment Preferences: Preference given to first and second year students intending to major in mathematics or computer science.
Expected Class Size: 40
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course involves developing the formal mathematical language of logic and set theory. It also involves using quantitative tools to solve problems relating to combinatorics, probability, and other fields of discrete mathematics.

MATH 210 (S) Mathematical Methods for Scientists (QFR)
Cross-listings: PHYS 210 MATH 210
Secondary Cross-listing
This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We
study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

**Class Format:** three hours per week

**Requirements/Evaluation:** several exams and weekly problem sets, all of which have a substantial quantitative component

**Prerequisites:** MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

**Enrollment Limit:** 50

**Enrollment Preferences:** sophomores and juniors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHYS 210 (D3) MATH 210 (D3)

**Quantitative/Formal Reasoning Notes:** This course will have weekly problem sets using advanced calculus methods

Spring 2023

LEC Section: 01    TR 9:55 am - 11:10 am     Daniel P. Aalberts

**MATH 250 (F)(S) Linear Algebra** (QFR)

Many social, political, economic, biological, and physical phenomena can be described, at least approximately, by linear relations. In the study of systems of linear equations one may ask: When does a solution exist? When is it unique? How does one find it? How can one interpret it geometrically? This course develops the theoretical structure underlying answers to these and other questions and includes the study of matrices, vector spaces, linear independence and bases, linear transformations, determinants and inner products. Course work is balanced between theoretical and computational, with attention to improving mathematical style and sophistication.

**Requirements/Evaluation:** homework and exams

**Prerequisites:** MATH 150/151 or MATH 200

**Enrollment Limit:** 60

**Enrollment Preferences:** Students who have officially declared a major that requires Math 250.

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** In this course, students will engage in both quantitative and formal reasoning.

**Attributes:** COGS Related Courses

Fall 2022

LEC Section: 01    TR 8:30 am - 9:45 am     Thomas A. Garrity

Spring 2023

LEC Section: 01    MWF 10:00 am - 10:50 am     Jenna  Zomback

LEC Section: 02    MWF 11:00 am - 11:50 am     Jenna  Zomback

**MATH 307 (F)(S) Computational Linear Algebra** (QFR)

Linear algebra is of central importance in the quantitative sciences, including application areas such as image and signal processing, data mining, computational finance, structural biology, and much more. When the problems must be solved computationally, approximation, round-off errors, convergence, and efficiency matter, and traditional linear algebra techniques may fail to succeed. We will adopt linear algebra techniques on a large scale, implement them computationally, and apply them to core problems in scientific computing. Topics may include: systems of linear and nonlinear equations; approximation and statistical function estimation; optimization; interpolation; data scraping; singular value decomposition; and more. This
course could also be considered a course in numerical analysis or computational science.

**Class Format:** This course is taught in a flipped classroom format. Students read and watch lecture videos prior to each class session. The instructor uses class time for discussion and collaborative learning activities. This course will be a good fit for students with a strong interest in applied mathematics and a willingness to devote significant effort to learning/doing computer programming.

**Requirements/Evaluation:** Students will complete checkpoint quizzes, regularly assigned homework problems and projects, and reflective writing assignments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows the policy of "ungrading." Over the course of the semester, students will develop a rubric to assess their own learning and will evaluate themselves according to this rubric.

**Prerequisites:** MATH 250; COMP 134 or equivalent prior experience with computer programming (in any language)

**Enrollment Limit:** 24

**Enrollment Preferences:** Preference given to majors and prospective majors.

**Expected Class Size:** 24

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course involves developing the formal mathematical language of linear algebra. It also involves using quantitative tools to solve problems relating to a wide range of applications in the physical and social sciences.

Spring 2023
LEC Section: 01 TR 8:30 am - 9:45 am Chad M. Topaz

**MATH 308  (F)(S) Mathematical and Computational Approaches to Social Justice  (DPE) (QFR)**

**Cross-listings:** STS 363  WGSS 363  AMST 363  MATH 308

**Primary Cross-listing**

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial group will carry out a substantial project in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science.

**Class Format:** This is a research-based tutorial.

**Requirements/Evaluation:** To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows an "ungrading" methodology.

**Prerequisites:** Across each 3 - 5 person tutorial group: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students will be admitted in groups of 3 - 5 based on a proposal submitted prior to registration. The instructor is happy to facilitate formation of groups and to give feedback on draft proposals. Contact the instructor early, prior to preregistration.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 363 (D2)  WGSS 363 (D2)  AMST 363 (D2)  MATH 308 (D3)

**Difference, Power, and Equity Notes:** Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

**Quantitative/Formal Reasoning Notes:** Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.
MATH 309 (F)(S) Differential Equations (QFR)

Ordinary differential equations (ODEs) frequently arise as models of phenomena in the natural and social sciences. This course presents core ideas of ODEs from an applied standpoint. Topics covered early in the course may include numerical solutions, separation of variables, integrating factors, and constant coefficient linear equations. Later, we will focus on nonlinear ODEs, for which it is usually impossible to find analytical solutions. Tools from dynamical systems will be introduced to allow us to obtain information about the behavior of the ODEs without explicitly knowing the solution.

Requirements/Evaluation: quizzes/exams, problem sets, participation
Prerequisites: MATH 150/151 and MATH 250
Enrollment Limit: 40
Enrollment Preferences: discretion of the instructor
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: 300-level mathematics course

MATH 311 (F) Advanced topics in applied mathematics (QFR)

Applied mathematics is an expansive field that uses mathematical methods to explore problems that arise in biology, physics, engineering, and many other disciplines. In this course, we will explore a diversity of methods that may include stochastic processes, optimization, signal processing, and numerical analysis. We will also explore how these methods can be utilized to understand questions in other disciplines.

Requirements/Evaluation: This course will have some combination of problem sets, presentations, exams, and a final project
Prerequisites: Differential equations (Math 309) or permission of the instructor
Enrollment Limit: 10
Enrollment Preferences: If over-enrolled, the instructor will request a statement of interest
Expected Class Size: 10
Grading: yes pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: Mathematics course

MATH 313 (S) Introduction to Number Theory (QFR)

The study of numbers dates back thousands of years, and is fundamental in mathematics. In this course, we will investigate both classical and modern questions about numbers. In particular, we will explore the integers, and examine issues involving primes, divisibility, and congruences. We will also look at the ideas of numbers and primes in more general settings, and consider fascinating questions that are simple to understand, but can be quite difficult to answer.
MATH 317  (F)  Introduction to Operations Research  (QFR)

In the first N math classes of your career, you can be misled as to what the world is truly like. How? You're given exact problems and told to find exact solutions. The real world is sadly far more complicated. Frequently we cannot exactly solve problems; moreover, the problems we try to solve are themselves merely approximations to the world! We are forced to develop techniques to approximate not just solutions, but even the statement of the problem. Additionally, we often need the solutions quickly. Operations Research, which was born as a discipline during the tumultuous events of World War II, deals with efficiently finding optimal solutions. In this course we build analytic and programming techniques to efficiently tackle many problems. We will review many algorithms from earlier in your mathematical or CS career, with special attention now given to analyzing their run-time and seeing how they can be improved. The culmination of the course is a development of linear programming and an exploration of what it can do and what are its limitations. For those wishing to take this as a Stats course, the final project must have a substantial stats component approved by the instructor.

Prerequisites: Linear Algebra (MATH 250) and one other 200-level or higher CSCI, MATH or STATS course, or permission of the instructor.

Requirements/Evaluation:  homework, exams, projects

MATH 319  (S)  Integrative Bioinformatics, Genomics, and Proteomics Lab  (QFR)

Cross-listings:  MATH 319  CHEM 319  BIOL 319  PHYS 319  CSCI 319

Secondary Cross-listing

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory
mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

Class Format: The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

Requirements/Evaluation: lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

Prerequisites: BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

Enrollment Limit: 12

Enrollment Preferences: seniors, then juniors, then sophomores

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

Quantative/Formal Reasoning Notes: Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

LAB Section: 02 TR 1:00 pm - 4:00 pm Lois M. Banta

MATH 334 (F) Graph Theory (QFR)

A graph is a collection of vertices, joined together by edges. In this course, we will study the sorts of structures that can be encoded in graphs, along with the properties of those graphs. We'll learn about such classes of graphs as multi-partite, planar, and perfect graphs, and will see applications to such optimization problems as minimum colorings of graphs, maximum matchings in graphs, and network flows.

Requirements/Evaluation: problem sets, exams, and a short final project

Prerequisites: MATH 200 or MATH 250

Enrollment Limit: 30

Enrollment Preferences: Math majors

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course involves the writing of mathematical proofs.

Fall 2022

LEC Section: 01 MWF 11:00 am - 11:50 am Ralph E. Morrison

MATH 338 (S) Intermediate Logic (QFR)

Cross-listings: PHIL 338 MATH 338

Secondary Cross-listing

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the
course is significantly different from that of Logic and Language (PHIL 203). Students who have take PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

Requirements/Evaluation: problem sets and exams

Prerequisites: some class in which student has studied formal reasoning

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors; juniors and seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 338 (D2) MATH 338 (D3)

Quantitative/Formal Reasoning Notes: This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

SEM Section: 01 Cancelled

MATH 341 (F)(S) Probability (QFR)

Cross-listings: STAT 341 MATH 341

Primary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 150 and MATH 250 or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STAT 341 (D3) MATH 341 (D3)

Spring 2023

LEC Section: 01 TF 2:35 pm - 3:50 pm Mihai Stoiciu
MATH 342 (F) Logic (QFR)

This course will introduce the main ideas and basic results of mathematical logic, and explain their applications to other areas of mathematics and computer science. We will begin with a study of first-order logic, covering structures and definability, theories, models and categoricity, as well as formal proofs. We will prove Gödel's completeness and compactness theorems and the Lowenheim-Skolem theorems. The course will briefly dive into computability theory, enough to prove Gödel's Incompleteness theorems and basic undecidability results.

Requirements/Evaluation: Evaluation based on homework, exams, and class participation.
Prerequisites: Math 250 - Linear Algebra

Enrollment Limit: 20
Enrollment Preferences: Junior and Senior Math Majors
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: Mathematics course in logic and applications.

MATH 344 (S) The Mathematics of Sports (QFR)

The purpose of this class is to use sports as a springboard to study applications of mathematics, especially in gathering data to build and test models and develop predictive statistics. Examples will be drawn from baseball, basketball, cross country, football, hockey, soccer, track, as well as class choices. Pre-requisites are linear algebra (Math 250) and either a 200 level statistics class or a 100 level programming class, or permission of the instructor.

Requirements/Evaluation: Homework, exams, projects
Prerequisites: Math 250: Linear Algebra

Enrollment Limit: 40
Enrollment Preferences: None. If the course is over-enrolled preference will be given to math and stats majors, and then if needed by performance on a small assignment.
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: This is a 300 level mathematics course.

Spring 2023
LEC Section: 01 MWF 10:00 am - 10:50 am Steven J. Miller

MATH 345 (S) Introduction to Numerical Analysis (QFR)

Numerical analysis is the study of algorithms that use numerical approximation to solve problems which arise in scientific applications. This course provides an introduction to the theory, development, and analysis of algorithms for obtaining numerical solutions. Topics discussed in the course include: Error Analysis and Convergence Rates of Algorithms; Root Finding for Nonlinear Equations; Approximating Functions using Lagrange Interpolation and Cubic Spline Approximation; Numerical Differentiation and Integration; Numerical Solution of Ordinary Differential Equations; Iterative Methods for Solving Linear Systems

Requirements/Evaluation: Evaluation will be based on homework, projects, and exams.
Prerequisites: Math 250
Enrollment Limit: 30
Enrollment Preferences: Mathematics and Statistics majors.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is an advanced mathematics class that will cover the fundamental ideas of Numerical Analysis. The students will study in depths various algorithms that provide numerical solutions to various questions in science.

Spring 2023
LEC Section: 01 TR 8:30 am - 9:45 am Bhagya Athukorallage

MATH 350 (F)(S) Real Analysis (QFR)
Why is the product of two negative numbers positive? Why do we depict the real numbers as a line? Why is this line continuous, and what do we mean when we say that? Perhaps most fundamentally, what is a real number? Real analysis addresses such questions, delving into the structure of real numbers and functions of them. Along the way we'll discuss sequences and limits, series, completeness, compactness, derivatives and integrals, and metric spaces. Results covered will include the Cantor-Schroeder-Bernstein theorem, the monotone convergence theorem, the Bolzano-Weierstrass theorem, the Cauchy criterion, Dirichlet's and Riemann's rearrangement theorem, the Heine-Borel theorem, the intermediate value theorem, and many others. This course is excellent preparation for graduate studies in mathematics, statistics, and economics.

Requirements/Evaluation: Problem sets, exams, and an expository essay.
Prerequisites: MATH 250 or permission of instructor.
Enrollment Limit: 40
Enrollment Preferences: Juniors and Seniors.
Expected Class Size: 25
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It's math.

MATH 361  (F)  Theory of Computation  (QFR)
Cross-listings:  MATH 361  CSCI 361  
Secondary Cross-listing  
This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory—-the examination of what problems can be solved and what problems cannot be solved—-and the study of complexity theory—-the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Class Format:  Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.  
Requirements/Evaluation:  online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination  
Prerequisites:  CSCI 256 or both a 300-level MATH course and permission of instructor  
Enrollment Limit:  48(12/con)  
Enrollment Preferences:  current or expected Computer Science majors  
Expected Class Size:  48  
Grading:  no pass/fail option,  no fifth course option  
Distributions:  (D3)  (QFR)  
This course is cross-listed and the prefixes carry the following divisional credit:

Attributes:  COGS Interdepartmental Electives  

Fall 2022  
LEC Section: 01  ASYN  Aaron M. Williams  

In Real Analysis you learned about metric spaces---any set of objects endowed with a way of measuring distance---and the topology of sets in such spaces (open, closed, bounded, etc). In this course we flip this on its head: we explore how to develop analysis (limits, continuity, etc) in spaces where the topology is known but the metric is not. This will lead us to a bizarre and fascinating version of geometry in which we cannot distinguish between shapes that can be continuously deformed into one another. Not only does this theory turn out to be beautiful in the abstract, it plays an important role in math, physics, and data analysis. This course is excellent preparation for graduate programs in mathematics.

**Requirements/Evaluation:** Problem sets, exams, an expository essay.

**Prerequisites:** MATH 350 or 351; not open to students who have taken MATH 323. If you didn't cover metric spaces in real analysis, that's OK!

**Enrollment Limit:** 30

**Enrollment Preferences:** Juniors and seniors

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** It's math.

---

**Fall 2022**

LEC Section: 01  TR 9:55 am - 11:10 am  Leo Goldmakher

**MATH 393 (S) Research Topics in Combinatorics** (WS) (QFR)

Combinatorics provides techniques and tools to enumerate, examine, and investigate the existence of discrete mathematical structures with certain properties. There are numerous areas of applications including algebra, discrete geometry, and number theory. In this project-based research course students will work in small groups to learn combinatorial techniques and tools in order to develop research questions and begin tackling unsolved problems in combinatorics.

**Requirements/Evaluation:** Students will be evaluated through written drafts of a manuscript and its revisions and multiple in-class presentation.

**Prerequisites:** Math 355

**Enrollment Limit:** 19

**Enrollment Preferences:** Post-core mathematics majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (WS) (QFR)

**Writing Skills Notes:** The main goal of this course is to undertake original research in combinatorics, as such student assessment is based on developing positive collaboration skills, and improving technical written and oral skills in mathematics through manuscript draft submissions and in-class presentations. Students will provide multiple drafts of their manuscript and in right of this the course will be writing intensive.

**Quantitative/Formal Reasoning Notes:** The main goal of this course is to undertake original research in the math field of mathematics. See above for more details.

---

**Spring 2023**

SEM Section: 01  Cancelled

**MATH 409 (F) The Little Questions** (QFR)

Using math competitions such as the Putnam Exam as a springboard, in this class we follow the dictum of the Ross Program and "think deeply of
simple things''. The two main goals of this course are to prepare students for competitive math competitions, and to get a sense of the mathematical landscape encompassing elementary number theory, combinatorics, graph theory, and group theory (among others). While elementary frequently is not synonymous with easy, we will see many beautiful proofs and 'a-ha' moments in the course of our investigations. Students will be encouraged to explore these topics at levels compatible with their backgrounds.

**Requirements/Evaluation:** Homework, exams, presentations.

**Prerequisites:** Real Analysis (either Math 350 or 351) and Abstract Algebra (Math 355), or permission of the instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** Math/stat senior majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is a 400 level math class.

---

**Math 412 (S) Mathematical Biology** (QFR)

This course will provide an introduction to the many ways in which mathematics can be used to understand, analyze, and predict biological dynamics. We will learn how to construct mathematical models that capture essential properties of biological processes while maintaining analytic tractability. Analytic techniques, such as stability and bifurcation analysis, will be introduced in the context of both continuous and discrete time models. Additionally, students will couple these analytic tools with numerical simulation to gain a more global picture of the biological dynamics. Possible biological applications include, but are not limited to, single and multi-species population dynamics, neural and biological oscillators, tumor cell growth, and infectious disease dynamics.

**Requirements/Evaluation:** problem sets, quizzes/exams, participation, final project and paper

**Prerequisites:** MATH 250 and MATH 309, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** if over-enrolled, will have students submit reasons for taking class; preference to those with interest in both subjects

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** The course will introduce methods for developing and analyzing mathematical models.

**Attributes:** PHLH Methods in Public Health

---

**Math 427 (S) Tiling Theory** (QFR)

Since people first used stones and bricks to tile the floors of their domiciles, tiling has been an area of interest. Practitioners include artists, engineers, designers, architects, crystallographers, scientists and mathematicians. This course will be an investigation into the mathematical theory of tiling. The course will focus on tilings of the plane, including topics such as the symmetry groups of tilings, types of tilings, random tilings, the classification of tilings and aperiodic tilings. We will also look at tilings of the sphere, tilings of the hyperbolic plane, and tilings in in higher dimensions, including “knotted tilings”.

**Requirements/Evaluation:** problem assignments, exams and a presentation/paper

**Prerequisites:** MATH 250 Linear Algebra and MATH 355 Abstract Algebra

**Enrollment Limit:** 30

**Enrollment Preferences:** senior majors, seniors, juniors, sophomores, first-year students (this is a senior seminar, one of which is required for all
MATH 442 (F) Introduction to Descriptive Set Theory (QFR)
Descriptive set theory (DST) combines techniques from analysis, topology, set theory, combinatorics, and other areas of mathematics to study definable (typically Borel) subsets of Polish spaces. The first part of this course will cover the topics necessary to understand the main objects of study in DST: we will develop comfort with point-set topology (enough to juggle with Polish spaces and Borel sets), and set theory (just well-orderings and cardinality). The second part of the course will feature selected topics in descriptive set theory: for example, trees, the perfect set property, Baire category, and infinite games.

Requirements/Evaluation: Evaluation based on homework, exams, and classroom participation.

Prerequisites: Math 250 - Linear Algebra, Math 350/351 Real Analysis/Applied Real Analysis

Enrollment Limit: 14

Enrollment Preferences: Senior Math Majors, then non-Senior Math Majors

Expected Class Size: 14

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Mathematics course in descriptive set theory.

Fall 2022
LEC Section: 01    MWF 11:00 am - 11:50 am    Jenna Zomback

MATH 453 (S) Partial Differential Equations (QFR)
In this course, we further explore the world of differential equations. Mainly, we cover topics in partial differential equations. Partial Differential Equations (PDEs) are fundamental to the modeling of many natural phenomena, arising in many fields, including fluid mechanics, heat and mass transfer, electromagnetic theory, finance, elasticity, and more. The goals of this course are to discuss the following topics: classification of PDEs in terms of order, linearity and homogeneity; physical interpretation of canonical PDEs; solution techniques, including separation of variables, series solutions, integral transforms, and the method of characteristics.

Requirements/Evaluation: Evaluation will be based on homework, projects, and exams.

Prerequisites: MATH 150-151; MATH/PHYS 210 or MATH 309

Enrollment Limit: 20

Enrollment Preferences: Mathematics and Physics majors.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This is an advanced mathematics class dedicated to the study of partial differential equations (PDEs). These equations are the most important mathematical tools for the study of complex physical phenomena such as waves and fluids (including both air and water), heat transfer, electromagnetism, and finance.

Spring 2023
LEC Section: 01    TR 11:20 am - 12:35 pm    Bhagya Athukorallage
MATH 481 (S) Measure theory and Hilbert spaces (QFR)

How large is the unit square? One might measure the number of individual points in the square (uncountably infinite), the area of the square (1), or the dimension of the square (2). But what about for more complicated sets, e.g., the set of all rational points in the unit square? What's the area of this set? What's the dimension? In this course we'll come up with precise ways to measure size—length, area, volume, dimension, etc.—that apply to a broad array of sets. Along the way we'll encounter Lebesgue measure and Lebesgue integration, Hausdorff measure and fractals, space-filling curves and the Banach-Tarski paradox. We will also investigate Hilbert spaces, mathematical objects that combine the tidiness of linear algebra with the power of analysis and are fundamental to the study of differential equations, functional analysis, harmonic analysis, and ergodic theory, and also apply to fields like quantum mechanics and machine learning. This material provides excellent preparation for graduate studies in mathematics, statistics and economics.

Requirements/Evaluation: Problem sets, exams, an expository essay

Prerequisites: At least one previous course that has Math 350 or 351 as a prerequisite (eg Math 374, 383, 401, 404, 408, 420, 426, 485), or permission of instructor.

Enrollment Limit: 20

Enrollment Preferences: Juniors and seniors.

Expected Class Size: 10

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: It's math.

Spring 2023

LEC Section: 01 TF 2:35 pm - 3:50 pm Leo Goldmakher

PHIL 221 (F) Introduction to Formal Linguistics (QFR)

Cross-listings: COGS 224 PHIL 221

Secondary Cross-listing

The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip and oatmeal raisin. There two ways to understand "Many students took every class". According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

Requirements/Evaluation: Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

Prerequisites: No prerequisites

Enrollment Limit: 20

Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

COGS 224 (D2) PHIL 221 (D2)
Quantitative/Formal Reasoning Notes: This course teaches the fundamentals of the formal analysis of language. Students will learn to provide translation schemes from English to a logical language (typed lambda calculus).

Fall 2022
SEM Section: 01 TF 1:10 pm - 2:25 pm Christian De Leon

PHIL 338 (S) Intermediate Logic (QFR)

Cross-listings: PHIL 338 MATH 338

Primary Cross-listing

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have take PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

Requirements/Evaluation: problem sets and exams

Prerequisites: some class in which student has studied formal reasoning

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors; juniors and seniors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
PHIL 338 (D2) MATH 338 (D3)

Quantitative/Formal Reasoning Notes: This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

Attributes: PHIL Contemp Metaphysics + Epistemology Courses

Spring 2023
SEM Section: 01 Cancelled

PHYS 109 (S) Sound, Light, and Perception (QFR)

Light and sound allow us to perceive the world around us, from appreciating music and art to learning the details of atomic structure. Because of their importance in human experience, light and sound have long been the subject of scientific inquiry. How are sound and light related? How do physiology and neural processing allow us to hear and see the world around us? What are the origins of color and musical pitch? This course introduces the science and technology of light and sound to students not majoring in physics. We will start with the origins of sound and light as wave phenomena, and go on to topics including color, the optics of vision, the meaning of musical pitch and tone, and the physical basis of hearing. We will also discuss some recent technological applications of light, such as lasers and optical communications. The class will meet for two 75-minute periods each week for a variable mixture of lecture, discussion, and hands-on, interactive experiments.

Class Format: each student will attend one lecture plus one conference section weekly

Requirements/Evaluation: class participation, problem sets, in-class exams, oral presentations, and a final exam, all with a quantitative component

Prerequisites: none
Enrollment Limit: 20
Enrollment Preferences: non-science majors
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This class will have weekly problem sets requiring substantial quantitative reasoning

Spring 2023
LEC Section: 01 Cancelled

PHYS 131 (F) Introduction to Mechanics (QFR)
We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.
Requirements/Evaluation: exams, labs, and weekly problem sets, all of which have a substantial quantitative component
Prerequisites: MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead
Enrollment Limit: 30
Enrollment Preferences: seniority
Expected Class Size: 60
Grading: yes pass/fail option, yes fifth course option
Unit Notes: PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This class will have weekly problem sets requiring substantial quantitative reasoning

Fall 2022
LEC Section: 01 MWF 11:00 am - 11:50 am John H. Lacy
LAB Section: 02 M 1:00 pm - 4:00 pm Kevin R. Forkey
LAB Section: 03 T 1:00 pm - 4:00 pm Kevin R. Forkey
LAB Section: 04 W 1:00 pm - 4:00 pm Kevin R. Forkey

PHYS 132 (S) Electromagnetism and the Physics of Matter (QFR)
This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics, radioactivity, and uses of radiation.
Class Format: lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately every other week
Requirements/Evaluation: weekly problem sets, labs, quizzes and exams
Prerequisites: PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)
Enrollment Limit: 22 per lab
Enrollment Preferences: sophomores
**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** Significant homework, exams, quizzes requiring mathematical and physical reasoning.

**PHYS 141 (F) Mechanics and Waves** (QFR)

This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

**Class Format:** lecture, three hours per week; laboratory, three hours approximately every other week; conference section, one hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, three or more short quizzes/tests, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** high school physics and MATH 130 or equivalent placement, or permission of the instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** first-year students and science majors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

**Distributions:** (D3) (QFR)

**Quantative/Formal Reasoning Notes:** This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

**PHYS 142 (S) Foundations of Modern Physics** (QFR)

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires we rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system.

This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of physics or as the basis for future advanced study of these topics.

**Class Format:** lecture, three hours weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and problem-solving/discussion sessions

**Requirements/Evaluation:** weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151
Enrollment Limit: 14/L
Enrollment Preferences: first-year students
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

PHYS 151  (F) Seminar in Modern Physics  (QFR)
Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity has extended physics into the realm of high speeds and high energies and requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our notions of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course covers the same core material as PHYS 142 but in a small seminar format for students with strong prior preparation in physics.
Class Format: three 50-minute lecture/discussions per week, one 3-hour lab per week
Requirements/Evaluation: class participation, weekly lab assignments, weekly problem sets, exams
Prerequisites: placement by the department (see "advanced placement" section in the description about the department). Students may take either PHYS 142 or PHYS 151 but not both
Enrollment Limit: 18
Enrollment Preferences: first-years
Expected Class Size: 18
Grading: yes pass/fail option, yes fifth course option
Unit Notes: this is a small seminar designed for first-year students who have placed out of PHYS 141
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: all assignments in the course have a substantial quantitative component

Fall 2022
LEC Section: 01  WF 11:00 am - 11:50 am  Jennifer G. Winters
LAB Section: 02  W 1:00 pm - 4:00 pm  Jennifer G. Winters
CON Section: 03  M 11:00 am - 11:50 am  Jennifer G. Winters

PHYS 201  (F) Electricity and Magnetism  (QFR)
The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell's equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.
Class Format: lecture, three hours per week; laboratory, three hours per week
Requirements/Evaluation: problem sets, labs/conference section assignments, two take-home midterms, and a final exam, all of which have a substantial quantitative component
Prerequisites: PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151
Enrollment Limit: 10 per lab
Enrollment Preferences: prospective physics majors, then by seniority
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

Fall 2022
LEC Section: 01 MWF 10:00 am - 10:50 am Catherine Kealhofer
LAB Section: 02 T 1:00 pm - 4:00 pm Catherine Kealhofer
LAB Section: 03 W 1:00 pm - 4:00 pm Catherine Kealhofer

PHYS 202 (S) Vibrations, Waves and Optics (QFR)
Waves and oscillations characterize many different physical systems, including vibrating strings, springs, water waves, sound waves, electromagnetic waves, and gravitational waves. Quantum mechanics even describes particles with wave functions. Despite these diverse settings waves exhibit several common characteristics, so that the understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. The rest of the course focuses on electromagnetic waves and in particular on optical examples of wave phenomena. In addition to well known optical effects such as interference and diffraction, we will study a number of modern applications of optics such as short pulse lasers and optical communications. Throughout the course mathematical methods useful for higher-level physics will be introduced.

Class Format: lecture, three hours per week; laboratory, three hours per week
Requirements/Evaluation: problem sets, labs, in-class tests, and a final exam, all of which have a substantial quantitative component
Prerequisites: PHYS 201; co-requisite: PHYS/MATH 210 or MATH 209 or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: sophomores
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course has substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023

LAB Section: 03 W 1:00 pm - 4:00 pm Charlie Doret

PHYS 210 (S) Mathematical Methods for Scientists (QFR)
Cross-listings: PHYS 210 MATH 210
Primary Cross-listing
This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.
Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit: 50

Enrollment Preferences: sophomores and juniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 210 (D3) MATH 210 (D3)

Spring 2023

LEC Section: 01    TR 9:55 am - 11:10 am     Daniel P. Aalberts

PHYS 301  (F) Quantum Physics  (QFR)

This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics. After a brief discussion of historical origins of the quantum theory, we introduce the Schrödinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309

Enrollment Limit: 20

Enrollment Preferences: physics majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: Phys 301 relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

PHYS 319 (S) Integrative Bioinformatics, Genomics, and Proteomics Lab (QFR)

Cross-listings: MATH 319 CHEM 319 BIOL 319 PHYS 319 CSCI 319

Secondary Cross-listing

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

Class Format: The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

Requirements/Evaluation: lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

Prerequisites: BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

Enrollment Limit: 12

Enrollment Preferences: seniors, then juniors, then sophomores

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

Quantitative/Formal Reasoning Notes: Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

Attributes: BIGP Courses BIMO Interdepartmental Electives
PHYS 402 (S) Applications of Quantum Mechanics (QFR)
This course will explore a number of important topics in the application of quantum mechanics to physical systems, including perturbation theory, the variational principle and the semiclassical interaction of atoms and radiation. The course will finish up with three weeks on quantum optics including an experimental project on non-classical interference phenomena. Applications and examples will be taken mostly from atomic physics with some discussion of solid state systems.

Class Format: hybrid

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 301

Enrollment Limit: 10 per sec

Enrollment Preferences: Physics and Astrophysics Majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course has weekly problem sets, all of which have a substantial quantitative component.

Spring 2023
TUT Section: T1  F 1:10 pm - 2:25 pm    David R. Tucker-Smith

PHYS 411 (F) Classical Mechanics (QFR)
This course will explore advanced topics in classical mechanics. Central ideas include the calculus of variations, the Lagrangian and Hamiltonian formulations of mechanics, phase space, central-force motion, non-inertial reference frames (including implications for physics on a rotating Earth), rigid-body rotations, and non-linear dynamics & chaos, with additional topics from continuum and fluid mechanics as time permits. Numerical and perturbative techniques will be developed and used extensively. We will also examine the ways in which classical mechanics informs other fields of physics. In addition to weekly tutorial meetings the class will meet weekly as a whole to introduce and discuss new material.

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, a final project, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309

Enrollment Limit: 10/section

Enrollment Preferences: majors

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: weekly problem sets requiring substantial quantitative reasoning using analytical and numerical methods.

Fall 2022
TUT Section: T1  F 1:10 pm - 2:25 pm    Charlie Doret, Daniel P. Aalberts

POEC 253 (F) Empirical Methods in Political Economy (QFR)
This course introduces students to common empirical tools used in policy analysis and implementation. The broad aim is to train students to be discriminating consumers of public policy-relevant research. The emphasis in the course is on intuitive understanding of the central concepts. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ
the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; random variables and distributions; statistical estimation, inference and hypothesis testing; and modeling using multiple regression, with a particular focus on understanding whether and how relationships between variables can be determined to be causal—an essential requirement for effective policy formation. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

Requirements/Evaluation: Problem sets, group project, midterm exam, final exam

Prerequisites: MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255

Enrollment Limit: 20

Enrollment Preferences: Political Economy majors, Environmental Policy majors and sophomores

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Unit Notes: does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major

Distributions: (D2) (QFR)

Quantative/Formal Reasoning Notes: The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.

Attributes: PHLH Statistics Courses POEC Required Courses

Fall 2022
LEC Section: 01 TF 2:35 pm - 3:50 pm Anand V. Swamy

PSYC 201  (F)(S)  Experimentation and Statistics  (QFR)
An introduction to the basic principles of research in psychology. We focus on how to design and execute experiments, analyze and interpret results, and write research reports. Students conduct a series of research studies in different areas of psychology that illustrate basic designs and methods of analysis. You must register for lab and lecture with the same instructor.

Requirements/Evaluation: research reports, exams, and problem sets

Prerequisites: PSYC 101; not open to first-year students except with permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

Expected Class Size: 16

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course has problem sets focused on experimental design and quantitative data analysis. Students will help design and conduct experiments, analyze the data, and report their findings.

STAT 101 (F)(S)  Elementary Statistics and Data Analysis  (QFR)

It is impossible to be an informed citizen in today's world without an understanding of data. Whether it is opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines, etc, we need to be able to interpret and gain information from statistics. This course will introduce the common methods used to analyze and present data with an emphasis on interpretation and informed decision making.

Requirements/Evaluation:  weekly homework, quizzes, exams, and a project
Prerequisites:  MATH 102 (or demonstrated proficiency on a diagnostic test)

Enrollment Limit:  50
Enrollment Preferences:  juniors and seniors
Expected Class Size:  35
Grading:  yes pass/fail option,  yes fifth course option

Unit Notes:  students with MATH130 but no statistics should enroll in STAT161; students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202.

Distributions:  (D3)  (QFR)
Quantative/Formal Reasoning Notes:  It is a quantitative course.

STAT 161 (F)(S)  Introductory Statistics for Social Science  (QFR)

This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

Requirements/Evaluation:  Weekly homework, quizzes, two midterms and a final exam (midterms include take-home components), and a data analysis project. Students will need to become familiar with the statistical software STATA.
Prerequisites:  MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

Enrollment Limit:  40
Enrollment Preferences:  Economics majors, sophomores
Expected Class Size:  40
Grading:  yes pass/fail option,  no fifth course option

Unit Notes:  Students with calculus background should consider STAT 201. Students without any calculus background should consider STAT 101. Students with AP Stat 4 or 5 should consider Stat 202. Please refer to the placement chart on the Math&Stat department website for more information.

Distributions:  (D3)  (QFR)
Quantative/Formal Reasoning Notes:  Reasoning with data

Spring 2023
STAT 201  (F)(S)  Statistics and Data Analysis  (QFR)

Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, “Data, data, data! I can’t make bricks without clay.” In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

Requirements/Evaluation: weekly homework and projects, midterm exams, and a final exam.

Prerequisites: MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent

Enrollment Limit: 30

Enrollment Preferences: Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.

Distributions: (D3)  (QFR)

Quantative/Formal Reasoning Notes: Students will learn to interpret, choose, carry out, and communicate analyses of data.

Attributes: COGS Related Courses  PHLH Statistics Courses

STAT 202  (F)(S)  Introduction to Statistical Modeling  (QFR)

Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course we’ll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We’ll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We’ll emphasize applications over theory and analyze real data sets throughout the course.

Requirements/Evaluation: Homework problems; quizzes; exams; a final project (on a topic that interests you!). Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you’ll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.

Prerequisites: MATH 140 and STAT 101/161/201/AP Statistics 4/5, or permission of instructor.

Enrollment Limit: 40

Enrollment Preferences: Prospective Statistics majors and more senior students

Expected Class Size: 25

Grading: yes pass/fail option, no fifth course option

Unit Notes: Students with a 4 on the AP Stats exam should contact the department for proper placement. Students with STAT 201 are strongly encouraged to take STAT 346 or other 300-level statistics electives.

Distributions: (D3)  (QFR)

Quantative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We’ll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.
STAT 341 (F)(S) Probability (QFR)

Secondary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 150 and MATH 250 or permission of the instructor

Enrollment Limit: 30

Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STAT 341 (D3) MATH 341 (D3)

Quantitative/Formal Reasoning Notes: This is a 300-level Math/Stat course.

STAT 344 (F) Statistical Design of Experiments (QFR)

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially e-commerce, are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We’ll explore the techniques used to plan experiments that are both efficient and statistically sound. We’ll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We’ll look at both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we’ll make extensive use of both R and JMP software to work with real-world data.

Requirements/Evaluation: Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).

Prerequisites: STAT 161 or 201 or 202, or equivalent, and Math 140 or equivalent, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Statistics majors, seniors, juniors, sophomores, first years

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option
Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2022
LEC Section: 01  MWF 10:00 am - 10:50 am  Richard D. De Veaux

STAT 346  (F)(S)  Regression Theory and Applications  (QFR)
This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

Requirements/Evaluation: Weekly homework, theory and data analysis exams, final course project.
Prerequisites: MATH 250, and at least one of STAT 201 or 202. Or permission of the instructor.
Enrollment Limit: 30
Enrollment Preferences: Statistics Majors
Expected Class Size: 20
Grading: yes pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

Fall 2022
LEC Section: 01  TR 9:55 am - 11:10 am  Xizhen Cai
Spring 2023
LEC Section: 01  TR 9:55 am - 11:10 am  Elizabeth M. Upton

STAT 356  (F)  Time Series Analysis  (QFR)
Time series -- data collected over time -- crop up in applications from economics to engineering to transit. But because the observations are generally not independent, we need special methods to investigate them. This course will include exploratory methods and modeling for time series, including descriptive methods and checking for significance, and a foray into the frequency domain. We will emphasize applications to a variety of real data, explored using R.

Class Format: Introductory lectures will be available asynchronously as text and video; synchronous sessions will discuss questions from lecture, dive further into the material, and work on examples. You'll use chat and discussion boards to build community, study with classmates, and ask questions outside of class time. There will also be optional synchronous office hours/review sessions.

Requirements/Evaluation: Evaluation is primarily based on quizzes and projects (on topics that interest you!). You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While most assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to live and online discussions, and working together with classmates on practice problems.
Prerequisites: STAT 346 (may be taken concurrently) or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: Statistics majors, seniors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Fall 2022
LEC Section: 01 Cancelled

STAT 360 (S) Statistical Inference (QFR)

How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.

Class Format: For the Spring 2021 semester, synchronous zoom lectures are planned, where the instructor uses Google’s jamboard to interact with students

Requirements/Evaluation: Homework, Quizzes, Exams
Prerequisites: MATH 250, STAT 201 or 202, STAT 341
Enrollment Limit: 15
Enrollment Preferences: Statistics majors
Expected Class Size: 15
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: A rigorous mathematical course laying the foundation for reasoning with data

Spring 2023
LEC Section: 01 TR 11:20 am - 12:35 pm Daniel B. Turek

STAT 365 (F) Bayesian Statistics (QFR)

The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes’ Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700’s, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.

Requirements/Evaluation: homework and exams
Prerequisites: STAT 201 and MATH 150 and 250, or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: juniors and seniors, Statistics majors
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Fall 2022
LEC Section: 01 TR 11:20 am - 12:35 pm Daniel B. Turek
STAT 372 (S) Longitudinal Data Analysis (QFR)

This course explores modern statistical methods for drawing scientific inferences from longitudinal data, i.e., data collected repeatedly on experimental units over time. The independence assumption made for most classical statistical methods does not hold with this data structure because we have multiple measurements on each individual. Topics will include linear and generalized linear models for correlated data, including marginal and random effect models, as well as computational issues and methods for fitting these models. As time permits, we will also investigate joint modeling of longitudinal and time-to-event data. We will consider many applications in the social and biological sciences.

Requirements/Evaluation: performance on exams, weekly homework, and a project
Prerequisites: STAT 201 and STAT 346
Enrollment Limit: 15
Enrollment Preferences: junior and senior Statistics majors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: The course will cover a variety of statistical analysis methods for longitudinal data.
Attributes: PHLH Statistics Courses

Spring 2023
LEC Section: 01    MWF 11:00 am - 11:50 am     Anna M. Plantinga

STAT 442 (S) Statistical Learning and Data Mining (QFR)

In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

Class Format: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.
Requirements/Evaluation: weekly homework, exams and an end-of-term project
Prerequisites: MATH/STAT 341 and STAT 346, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.
Expected Class Size: 15
Grading: yes pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantative/Formal Reasoning Notes: This is an advanced statistics class involving theory and application of statistical methods to data.

Spring 2023
LEC Section: 01    TR 9:55 am - 11:10 am     Xizhen Cai

STAT 458 (F) Generalized Linear Models- Theory and Applications (QFR)

This course will explore generalized linear models (GLMs)--the extension of linear models, discussed in Stat346, to response variables that have specific non-normal distributions, such as counts and proportions. We will consider the general structure and theory of GLMs and see their use in a range of applications. As time permits, we will also examine extensions of these models for clustered data such as mixed effects models and generalized estimating equations.

Requirements/Evaluation: Weekly homework consisting of theoretical exercises and data analyses carried out in R. Short frequent quizzes and one midterm (with an in-class and take-home component). Final project and final exam.
Prerequisites: STAT 346, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Seniors and Statistics majors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Fall 2022

LEC Section: 01 TF 2:35 pm - 3:50 pm Elizabeth M. Upton

STS 363 (F)(S) Mathematical and Computational Approaches to Social Justice (DPE) (QFR)

Cross-listings: STS 363 WGSS 363 AMST 363 MATH 308

Secondary Cross-listing

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this research-based tutorial, students will bring the vanguard of quantitative approaches to bear on issues of social justice. Each tutorial group will carry out a substantial project in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. All students should expect to invest substantial effort in reading social justice literature and in acquiring new skills in data science.

Class Format: This is a research-based tutorial.

Requirements/Evaluation: To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor follows an "ungrading" methodology.

Prerequisites: Across each 3 - 5 person tutorial group: multivariable calculus (e.g., Math 150/151), linear algebra (e.g., Math 250), statistics (e.g., Stat 161/201), computer programming (e.g., Comp 134), some working knowledge of or interest in social justice issues.

Enrollment Limit: 20

Enrollment Preferences: Students will be admitted in groups of 3 - 5 based on a proposal submitted prior to registration. The instructor is happy to facilitate formation of groups and to give feedback on draft proposals. Contact the instructor early, prior to preregistration.

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 363 (D2) WGSS 363 (D2) AMST 363 (D2) MATH 308 (D3)

Difference, Power, and Equity Notes: Students study issues of equity, diversity, and inclusion in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

Quantitative/Formal Reasoning Notes: Students use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

ASIA 241 (S) Colonialism and Underdevelopment in South Asia  (DPE) (QFR)

Cross-listings: ECON 240 ASIA 241

Secondary Cross-listing

British colonial rule in South Asia shaped economy and society in fundamental ways. As resistance to colonial rule emerged in the late nineteenth century, "nationalist" writers developed a critique of its economic impact via taxation, fiscal policy, trade, and many other policies. In their turn, supporters of British rule, "apologists," argued that British rule had laid the foundations of economic growth by securing property rights, enforcing contracts, and developing infrastructure. The debate between "nationalists" and "apologists" has never quite ended, but after the recent growth of the Indian economy it has lost some of its emotional charge. We will use this opportunity to revisit the controversy.

Requirements/Evaluation: essays (one every other week) and responses to partner's essays will be evaluated

Prerequisites: one course in ECON

Enrollment Limit: 10

Enrollment Preferences: Economics major, prior course on South Asia

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)  (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

**ASTR 111 (F) Introduction to Astrophysics (QFR)**

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies. ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes remotely to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

**Class Format:** The class has 6 afternoon labs. Nighttime observing sessions will occur throughout the semester.

**Requirements/Evaluation:** weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

**Prerequisites:** a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

**Enrollment Limit:** 28

**Enrollment Preferences:** potential Astronomy majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

**Enrollment Preferences:** research topic

**Expected Class Size:** 5

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** Substantial quantitative and formal reasoning are involved

Spring 2023
**BIMO 321 (F) Biochemistry I: Structure and Function of Biological Molecules** (QFR)

**Cross-listings:** BIMO 321 BIOL 321 CHEM 321

**Primary Cross-listing**

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

**Prerequisites:** BIOL 101 and CHEM 251/255 and CHEM 155/256

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** does not satisfy the distribution requirement for the Biology major; cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

BIMO 321 (D3) BIOL 321 (D3) CHEM 321 (D3)

**Quantitative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular problem sets in which quantitative/formal reasoning skills are practiced.

**Attributes:** BIGP Courses BIMO Required Courses

---

**BIMO 322 (S) Biochemistry II: Metabolism** (QFR)

**Cross-listings:** BIOL 322 BIMO 322 CHEM 322

**Primary Cross-listing**

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

**Class Format:** Lecture three hours per week and laboratory two hours per week.

**Requirements/Evaluation:** several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

**Prerequisites:** BIOL 101 and CHEM 251/255 or permission of instructor
Enrollment Limit: 60
Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators
Expected Class Size: 60
Grading: no pass/fail option, no fifth course option
Unit Notes: cannot be counted towards the Biology major in addition to BIOL 222
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
BIOL 322 (D3) BIMO 322 (D3) CHEM 322 (D3)
Quantitative/Formal Reasoning Notes: The laboratory program is quantitative covering data analyses, numerical transformations, graphical displays.

BIOL 202 (F) Genetics (QFR)
Genetics, classically defined as the study of heredity, is today a multidisciplinary field whose principles provide critical insight and tools to most areas of biology and medicine. This course covers the experimental basis for our current understanding of the inheritance, structures, and functions of genes. It introduces approaches used by contemporary geneticists and molecular biologists to explore questions in areas of biology ranging from evolution to medicine. A primary focus of the course is on students developing familiarity with problem solving, the logic and quantitative reasoning required to understand how genetic mechanisms lead to biological patterns. The laboratory part of the course provides an experimental introduction to modern genetic analysis as well as introductions to interpreting genetic reasoning in the primary research literature. Laboratory experiments include investigating chromosome structure using microscopy, integrating multiple streams of evidence to map a mutation to the genome, determining the structure of a DNA plasmid using molecular tools.
Class Format: Lecture: three hours per week, Lab: three hours per week.
Requirements/Evaluation: bi-weekly problem sets; weekly laboratory exercises and laboratory reports; three exams
Prerequisites: BIOL 101 and 102
Enrollment Limit: 120
Enrollment Preferences: students interested in the Biology major
Expected Class Size: 60
Grading: no pass/fail option, no fifth course option
Unit Notes: does not satisfy the distribution requirement for the Biology major
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course develops quantitative skills through solving problems. Students learn to apply basic calculations and logic to predict the outcomes of biological systems, for example, describing the likelihood that an individual will be affected by an inherited disease. Application of quantitative and logical analysis contributes to a large component of the in-class work and the graded material for the class, in the form of problem sets, exams, and data analysis for lab reports.

BIOL 203 (F) Ecology (QFR)

Cross-listings: BIOL 203 ENVI 203

Primary Cross-listing

This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

Class Format: Six hours per week. Students will view pre-class lecture videos; class meetings will focus on discussion, synthesis, and application of course content.

Requirements/Evaluation: pre-class quizzes, lab reports, two mid-term exams, and a final exam

Prerequisites: BIOL 102, or ENVI 102, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: students planning to pursue Biology and/or ENVI

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Unit Notes: satisfies the distribution requirement for the Biology major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

BIOL 203 (D3) ENVI 203 (D3)

Quantative/Formal Reasoning Notes: Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to t-tests, chi-square analysis, and regression.

BIOL 305 (S) Evolution (QFR)

This course offers a critical analysis of contemporary concepts in biological evolution. We focus on the relation of evolutionary mechanisms (e.g., selection, drift, and migration) to long term evolutionary patterns (e.g., evolutionary innovations, origin of major groups, and adaptation). Topics include micro-evolutionary models, natural and sexual selection, speciation, the inference of evolutionary history, evolutionary medicine among others.

Requirements/Evaluation: independent research project, problem sets, participation in discussions and exams

Prerequisites: BIOL 202

Enrollment Limit: 22

Enrollment Preferences: Seniors and biology majors

Expected Class Size: 22

Grading: yes pass/fail option, yes fifth course option

Unit Notes: satisfies the distribution requirement for the Biology major
What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

Class Format: The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

Requirements/Evaluation: lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

Prerequisites: BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

Enrollment Limit: 12

Enrollment Preferences: seniors, then juniors, then sophomores

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

BIOL 337  (F)  Evolutionary Ecology  (QFR)

Evolutionary ecology is an interdisciplinary field that integrates concepts in genetics, adaptation, and ecology to understand how evolution operates in the context of ecological communities. This course provides an overview of the discipline including foundational concepts in evolutionary demography, phenotypic plasticity, and population genetics. It also explores how breakthroughs in these topics provide a framework for advances in our understanding of the evolution of reproductive timing and ageing, interspecific interactions (e.g. competition, predation), cooperation, and altruism. The course combines lectures, readings, in-class discussion, and a lab section that includes a mixture of field, computer, and lab projects. Laboratories will give students practical, hands-on experience in how to develop, plan, and carry out evolutionary ecology research from start to finish.

Class Format: lecture, 3 hours per week; laboratory and discussion, 3 hours per week

Requirements/Evaluation: Evaluation will be based on lab assignments, two exams, discussion participation, and a written paper.

Prerequisites: BIOL 102, plus either BIOL 202 or BIOL 203 or equivalent

Enrollment Limit:  24

Enrollment Preferences: preference given to biology majors, seniors, and juniors

Expected Class Size:  24

Grading: no pass/fail option, no fifth course option

Unit Notes: Satisfies the distribution requirement for the Biology major

Distributions:  (D3)  (QFR)

Quantative/Formal Reasoning Notes: Evolutionary ecology uses concepts in genetics and ecology to understand how the frequency of alleles in a population changes over time. These changes are formalized in equations that describe these processes. Students will gain experience in utilizing these equations to describe, analyze, and predict the evolutionary outcome of ecological interactions for both theoretical and experimental purposes. Thus, the students will gain experience in solving systems of equations using algebra and in stat

LAB Section: 03  Cancelled

CHEM 151  (F)  Introductory Chemistry  (QFR)

This course provides an introduction to chemistry for those students with little or no high school chemistry. Students will be introduced to concepts fundamental to studying matter at the molecular level. Principal topics include introductions to the nature of atoms and molecules, stoichiometry, solubility rules and equilibria, gas laws, chemical equilibrium, acid-base reactions, periodic relationships, chemical bonding, molecular structure, intermolecular forces, oxidation-reduction reactions, and related applications. Laboratory work comprises a system of qualitative analysis and quantitative techniques. The course provides preparation for further study of organic chemistry, biochemistry, physical and inorganic chemistry and is intended for students who are anticipating professional study in chemistry, in related sciences, or in one of the health professions, as well as for those
students who are interested in exploring the fundamental ideas of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: electronic and written weekly problem set assignments, laboratory work and analysis, quizzes, two tests, and a final exam

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement).

Enrollment Limit: 16/lab

Enrollment Preferences: first-year students; students who have studied chemistry for one or more years are directed to CHEM 153 or 155

Expected Class Size: 32

Grading: yes pass/fail option, no fifth course option

Unit Notes: CHEM 151 may be taken concurrently with MATH 102–see under Mathematics; CHEM 151 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Attributes: BIMO Required Courses

---

**CHEM 153 (F) Concepts of Chemistry** (QFR)

This course broadens and deepens the foundation in chemistry of students who have had typically one year of chemistry at the high school level. Most students begin study of chemistry at Williams with this course. Familiarity with stoichiometry, basic concepts of equilibria, and the model of an atom is expected. Principal topics for this course include kinetic theory of gases, modern atomic theory, molecular structure and bonding, states of matter, chemical equilibrium (acid-base and solubility), and an introduction to atomic and molecular spectroscopies. Laboratory periods will largely focus on experiment design, data analysis, literature, scientific writing, ethics, and other skills critical to students' development as scientists. The course is of interest to students who anticipate professional study in chemistry, related sciences, or one of the health professions, as well as to those who want to explore the fundamentals of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: problem sets and/or quizzes, laboratory work, and exams

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement).

Enrollment Limit: 45/lecture

Enrollment Preferences: first-year students

Expected Class Size: 90

Grading: yes pass/fail option, no fifth course option

Unit Notes: CHEM 153 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Attributes: BIMO Required Courses
### CHEM 155  (F) Principles of Modern Chemistry  (QFR)

This course is designed for students with a strong preparation in chemistry (including laboratory experience) in secondary school, such as provided by an Advanced Placement chemistry course (or equivalent) with a corresponding AP Chemistry Exam score of 5 (or a 6 or 7 on the IB Exam, or equivalent). Topics include chemical thermodynamics, kinetics, structure and bonding, coordination chemistry, electrochemistry and spectroscopy and their application to fields such as materials science, catalysis, environmental, biological, and medicinal chemistry. Laboratory periods will focus on hands-on skills, data representation and analysis, scientific writing, exploration of the scientific literature, and other skills critical to students’ development as scientists. This course is designed for students who are anticipating further study in chemistry, related sciences, or one of the health professions, as well as for students who want to explore the fundamental ideas of chemistry as part of their general education.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** frequent short assignments in preparation for class, quantitative weekly problem sets, laboratory work and reports, an hour test, and a final exam

**Prerequisites:** Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement).

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** first-year students and sophomores

**Expected Class Size:** 32

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** CHEM 155 or its equivalent is a prerequisite to CHEM 156; one of CHEM 151 or 153 or 155 required for the BIMO concentration

### CHEM 156  (S) Organic Chemistry: Introductory Level  (QFR)

This course provides the necessary background in organic chemistry for students who are planning advanced study or a career in chemistry, the biological sciences, or the health professions. It initiates the systematic study of the common classes of organic compounds with emphasis on theories of structure and reactivity. The fundamentals of molecular modeling as applied to organic molecules are presented. Specific topics include basic organic structure and bonding, isomerism, stereochemistry, molecular energetics, the theory and interpretation of infrared and nuclear magnetic spectroscopy, substitution, elimination and addition reactions. The coordinated laboratory work includes purification and separation techniques, structure-reactivity studies, organic synthesis, IR and NMR spectroscopy, and the identification of unknown compounds.

**Class Format:** lecture, three times per week and laboratory, four hours per week
**Requirements/Evaluation:** quantitative problem solving, laboratory performance, three midterm exams, and a final exam

**Prerequisites:** CHEM 151 or 153 or 155 or permission of instructor

**Enrollment Limit:** 45/lecture

**Enrollment Preferences:** Seniors, juniors, sophomores, first-year students

**Expected Class Size:** 90

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular and substantial problem solving in which quantitative/formal reasoning skills are practiced and evaluated.

CHEM 368 (S) Computational Chemistry and Molecular Spectroscopy (QFR)

This tutorial provides an introduction to the principles of computational quantum mechanics and their application to problems of chemical interest such as chemical bonding, chemical reactivity, and molecular spectroscopy. Emphasis is placed upon modern electronic structure calculations, their fundamentals, practical considerations, interpretation, and applications to current research questions. Under guidance in sessions and through independent work, students will use computational methods to explore assigned weekly research problems. The research results will be presented to and discussed with the tutorial partner at the end of each week.

Requirements/Evaluation: tutorial participation, presentations, and submitted papers

Prerequisites: CHEM 361 or equivalent background in Physics

Enrollment Limit: 10

Enrollment Preferences: Chemistry majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course fulfills the QFC requirement with problem sets for assignments in which quantitative/formal reasoning skills are practiced.

Spring 2023

TUT Section: T1  TBA  Enrique Peacock-López
The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip and oatmeal raisin. There are two ways to understand "Many students took every class". According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

Requirements/Evaluation: Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

Prerequisites: No prerequisites

Enrollment Limit: 20

Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

COGS 224 (D2) PHIL 221 (D2)

Quantitative/Formal Reasoning Notes: This course teaches the fundamentals of the formal analysis of language. Students will learn to provide translation schemes from English to a logical language (typed lambda calculus).

SEM Section: 01  TF 1:10 pm - 2:25 pm  Christian De Leon

CSCI 103  (S)  Electronic Textiles  (QFR)

Digital data is being infused throughout the entire physical world, escaping the computer monitor and spreading to other devices and appliances, including the human body. Electronic textiles, or eTextiles, is one of the next steps toward making everything interactive and this course aims to introduce learners to the first steps of developing their own wearable interactive technology devices. After completing a series of introductory eTextiles projects to gain practice in necessary sewing, circuitry, and programming skills, students will propose and design their own eTextiles projects, eventually implementing them with sewable Arduino components, and other found electronic components as needed. The scope of the project will depend on the individual's prior background, but can include everything from a sweatshirt with light-up turn signals for bicycling, to a wall banner that displays the current air quality of the room, to a stuffed animal that plays a tune when the lights go on, to whatever project you can conceivably accomplish with sewable Arduino inputs, outputs, and development board in a semester context. This class will introduce students to introductory computer programming, circuitry, and sewing with the goal of creating novel wearable artifacts that interact with the world.

Class Format: interspersed with hands-on activities in a computer lab

Requirements/Evaluation: weekly homework assignments and a final project

Prerequisites: none

Enrollment Limit: 18

Enrollment Preferences: students who have not previously taken a CSCI course

Expected Class Size: 18
Grading: yes pass/fail option, yes fifth course option

Unit Notes: Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/

Materials/Lab Fee: a fee of $85 will be added to term bill to cover Lilypad Arduino components (Protosnap Plus Kit, battery holders switched and not-switched, sets of LEDs, temperature sensor, vibe board, tri-color LED), alligator test leads, and fabric scissors

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will teach students the basics of computer programming through projects in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2023
LEC Section: 01    TR 9:55 am - 11:10 am     Iris Howley

CSCI 104  (F)  Understanding Data Through Computation  (QFR)
Many of the world's greatest discoveries and most consequential decisions are enabled or informed by the analysis of data from a myriad of sources. Indeed, the ability to organize, visualize, and draw conclusions from data is now a critical tool in the sciences, business, medicine, politics, other academic disciplines, and society as a whole. This course lays the foundations for reasoning about data by exploring complementary computational, statistical, and visualization concepts. These concepts will be reinforced by lab experiences designed to teach programming and statistics skills while analyzing real-world data sets. This course will also examine the broader context and social issues surrounding data analysis, including privacy and ethics.

Requirements/Evaluation: Weekly problem sets involving programming, a project, and examinations.

Prerequisites: None; previous programming experience or statistics is not required.

Enrollment Limit: 24;12/lab

Enrollment Preferences: Not open to those who have completed or are currently enrolled in a Computer Science course numbered 136 or higher or a Statistics course. Preference given to first-year students and sophomores who have not previously taken a computer science course.

Expected Class Size: 24

Grading: yes pass/fail option, no fifth course option

Unit Notes: Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 134  (F)(S)  Introduction to Computer Science  (QFR)
This course introduces students to the science of computation by exploring the representation and manipulation of data and algorithms. We organize and transform information in order to solve problems using algorithms written in a modern object-oriented language. Topics include organization of data using objects and classes, and the description of processes using conditional control, iteration, methods and classes. We also begin the study of abstraction, self-reference, reuse, and performance analysis. While the choice of programming language and application area will vary in different offerings, the skills students develop will transfer equally well to more advanced study in many areas. In particular, this course is designed to provide the programming skills needed for further study in computer science and is expected to satisfy introductory programming requirements in other
CSCI 136  (F)(S)  Data Structures and Advanced Programming  (QFR)

This course builds on the programming skills acquired in Computer Science 134. It couples work on program design, analysis, and verification with an introduction to the study of data structures. Data structures capture common ways in which to store and manipulate data, and they are important in the construction of sophisticated computer programs. Students are introduced to some of the most important and frequently used data structures: lists, stacks, queues, trees, hash tables, graphs, and files. Students will be expected to write several programs, ranging from very short programs to more elaborate systems. Emphasis will be placed on the development of clear, modular programs that are easy to read, debug, verify, analyze, and modify.

Requirements/Evaluation:  programming and written assignments, quizzes, examinations

Prerequisites:  CSCI 134 or equivalent; fulfilling the Discrete Mathematics Proficiency requirement is recommended, but not required
Enrollment Limit: 30;15/lab

Enrollment Preferences: if the course is over-enrolled, enrollment will be determined by lottery.

Expected Class Size: 30/lec

Grading: yes pass/fail option, no fifth course option

Unit Notes: Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: This course include regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 237 (F)(S) Computer Organization (QFR)

This course studies the basic instruction set architecture and organization of a modern computer. It provides a programmer’s view of how computer systems execute programs, store information, and communicate. Over the semester the student learns the fundamentals of translating higher level languages into assembly language, and the interpretation of machine languages by hardware. At the same time, a model of computer hardware organization is developed from the gate level upward.

Requirements/Evaluation: weekly programming assignments and/or problem sets, quizzes, midterm and final exams

Prerequisites: CSCI 136

Enrollment Limit: 24;12/lab

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2022

CSCI 256  (F)(S)  Algorithm Design and Analysis  (QFR)
This course investigates methods for designing efficient and reliable algorithms. By carefully analyzing the structure of a problem within a mathematical framework, it is often possible to dramatically decrease the computational resources needed to find a solution. In addition, analysis provides a method for verifying the correctness of an algorithm and accurately estimating its running time and space requirements. We will study several algorithm design strategies that build on data structures and programming techniques introduced in Computer Science 136. These include greedy, divide-and-conquer, dynamic programming, and network flow algorithms. Additional topics of study include algorithms on graphs and strategies for handling potentially intractable problems.

Requirements/Evaluation: Problem sets, midterm and final examinations
Prerequisites: CSCI 136 and fulfillment of the Discrete Mathematics Proficiency requirement
Enrollment Limit: 24
Enrollment Preferences: Preference will be given to students who need the class in order to complete the major. Ties will be broken by seniority (seniors first, then juniors, etc.).
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: This course will have weekly problem sets in which students will formally prove statements about the behavior and performance of algorithms. In short, the course is about applying abstract and mathematical reasoning to the study of algorithms and computation.

CSCI 319  (S) Integrative Bioinformatics, Genomics, and Proteomics Lab  (QFR)
Cross-listings: MATH 319  CHEM 319  BIOL 319  PHYS 319  CSCI 319
Secondary Cross-listing
What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

Class Format: The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.
Requirements/Evaluation: lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal
Prerequisites: BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

Enrollment Limit: 12

Enrollment Preferences: seniors, then juniors, then sophomores

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Unit Notes: does not satisfy the distribution requirement for the Biology major

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
MATH 319 (D3) CHEM 319 (D3) BIOL 319 (D3) PHYS 319 (D3) CSCI 319 (D3)

Quantitative/Formal Reasoning Notes: Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

CSCI 334  (F)(S) Principles of Programming Languages (QFR)

This course examines the concepts and structures governing the design and implementation of programming languages. It presents an introduction to the concepts behind compilers and run-time representations of programming languages; features of programming languages supporting abstraction and polymorphism; and the procedural, functional, object-oriented, and concurrent programming paradigms. Programs will be required in languages illustrating each of these paradigms.

Requirements/Evaluation: weekly problem sets and programming assignments, a midterm examination, and a final examination

Prerequisites: CSCI 136

Enrollment Limit: 30

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 30

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course include regular and substantial problem sets and labs in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 339  (S) Distributed Systems (QFR)

This course studies the key design principles of distributed systems, which are collections of independent networked computers that function as single coherent systems. Covered topics include communication protocols, processes and threads, naming, synchronization, consistency and replication, fault tolerance, and security. Students also examine some specific real-world distributed systems case studies, including Google and Amazon. Class discussion is based on readings from the textbook and research papers. The goals of this course are to understand how large-scale computational systems are built, and to provide students with the tools necessary to evaluate new technologies after the course ends.

Requirements/Evaluation: weekly homework assignments, midterm exam, 3 major programming projects, and a final project

Prerequisites: CSCI 237
Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 361 (F) Theory of Computation (QFR)

Cross-listings: MATH 361  CSCI 361

Primary Cross-listing

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory—the examination of what problems can be solved and what problems cannot be solved—and the study of complexity theory—the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Class Format: Lecture content will be delivered through asynchronously viewed video modules. Conference sections meeting twice per week will be used for synchronous discussions. Students should sign up for lecture and one conference section.

Requirements/Evaluation: online multiple choice and short answer questions, weekly problem sets in groups, a research project, and a final examination

Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor

Enrollment Limit: 48(12/con)

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 48

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

CSCI 371 (F)(S) Computer Graphics (QFR)

This course covers the fundamental mathematics and techniques behind computer graphics, and will teach students how to represent and draw 2D and 3D geometry for real-time and photorealistic applications. Students will write challenging implementations from the ground up in C/C++, OpenGL, and GLSL. Topics include transformations, rasterization, ray tracing, immediate mode GUI, forward and inverse kinematics, and physically-based animation. Examples are drawn from video games, movies, and robotics.
CSCI 373  (F)(S)  Artificial Intelligence  (QFR)
Artificial Intelligence (AI) has become part of everyday life, but what is it, and how does it work? This course introduces theories and computational techniques that serve as a foundation for the study of artificial intelligence. Potential topics include the following: Problem solving by search, Logic, Planning, Constraint satisfaction problems, Reasoning under uncertainty, Probabilistic graphical models, and Automated Learning.

Requirements/Evaluation:  Evaluation based on assignments, projects, and exams.
Prerequisites:  CSCI 136 and (CSCI 256 or permission of instructor)
Enrollment Limit:  24
Enrollment Preferences:  current or expected Computer Science majors
Expected Class Size:  24
Grading:  no pass/fail option,  no fifth course option
Distributions:  (D3)  (QFR)
Quantative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Attributes:  COGS Interdepartmental Electives

CSCI 374  (F)  Machine Learning  (QFR)
Machine learning is a field that derives from artificial intelligence and statistics, and is concerned with the design and analysis of computer algorithms that "learn" automatically through the use of data. Computer algorithms are capable of discerning subtle patterns and structure in the data that would be practically impossible for a human to find. As a result, real-world decisions, such as treatment options and loan approvals, are being increasingly automated based on predictions or factual knowledge derived from such algorithms. This course explores topics in supervised learning (e.g., random forests and neural networks), unsupervised learning (e.g., k-means clustering and expectation maximization), and possibly reinforcement learning
(e.g., Q-learning and temporal difference learning.) It will also introduce methods for the evaluation of learning algorithms (with an emphasis on analysis of generalizability and robustness of the algorithms to distribution/environmental shift), as well as topics in computational learning theory and ethics.

Requirements/Evaluation: Presentations, problem sets, programming exercises, empirical analyses of algorithms, critical analysis of current literature; the final two weeks are focused on a project of the student's design.

Prerequisites: CSCI 136 and CSCI 256 or permission of instructor

Enrollment Limit: 24

Enrollment Preferences: Current or expected Computer Science majors.

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course heavily relies on discrete mathematics, calculus, and elementary statistics. Students will be proving theorems, among many other mathematically oriented assignments. Additionally, they will be programming, which involves analytical and logical thinking.

Attributes: COGS Interdepartmental Electives

Fall 2022

LEC Section: 01  MR 2:35 pm - 3:50 pm  Rohit Bhattacharya

CSCI 375  (S)  Natural Language Processing  (QFR)

Natural language processing (NLP) is a set of methods for making human language accessible to computers. NLP underlies many technologies we use on a daily basis including automatic machine translation, search engines, email spam detection, and automated personalized assistants. These methods draw from a combination of algorithms, linguistics and statistics. This course will provide a foundation in building NLP models to classify, generate, and learn from text data.

Requirements/Evaluation: Evaluation based on assignments, projects, and exams.

Prerequisites: CSCI 136, and either CSCI 256 or STAT 201/202.

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors.

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

LEC Section: 01  MWF 10:00 am - 10:50 am  Katie A. Keith

ECON 110  (F)(S)  Principles of Microeconomics  (QFR)

This course is an introduction to the study of the forces of supply and demand that determine prices and the allocation of resources in markets for goods and services, markets for labor, and markets for natural resources. The focus is on how and why markets work, why they may fail to work, and the policy implications of both their successes and failures. The course focuses on developing the basic tools of microeconomic analysis and then applying those tools to topics of popular or policy interest such as minimum wage legislation, pollution control, competition policy, international trade policy, discrimination, tax policy, and the role of government in a market economy.

Requirements/Evaluation: problem sets, quizzes, short essays, two midterms, final exam

Prerequisites: none
Enrollment Limit: 40

Enrollment Preferences: This course is required of Economics and Political Economy majors and highly recommended for those non-majors interested in Environmental Studies and Women's, Gender and Sexuality Studies.

Expected Class Size: 40

Grading: yes pass/fail option, no fifth course option

Unit Notes: The department recommends students follow this course with ECON 120 or with a lower-level elective that has ECON 110 as its prerequisite; students may alternatively proceed directly to ECON 251 after taking this introductory course.

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

ECON 120  (F)(S) Principles of Macroeconomics  (QFR)

This course provides an introduction to the study of the aggregate national economy. It develops the basic theories of macroeconomics and applies them to topics of current interest. Issues to be explored include: the causes of inflation, unemployment, recessions, and depressions; the role of government fiscal and monetary policy in stabilizing the economy; the determinants of long-run economic growth; the long- and short-run effects of taxes, budget deficits, and other government policies on the national economy; the role of financial frictions in amplifying recessions; and the workings of exchange rates and international finance.

Requirements/Evaluation: Depending on instructor, may include: problem sets, short essays, quizzes, reading assignments, either one or two midterms, and a final exam.

Prerequisites: ECON 110

Enrollment Limit: 40

Enrollment Preferences: First-year students and sophomores.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

ECON 213 (F) Introduction to Environmental and Natural Resource Economics  (QFR)

Cross-listings: ECON 213  ENVI 213

Primary Cross-listing

We'll use economics to learn why we harm the environment and overuse natural resources, and what we can do about it. We'll talk about whether and how we can put a dollar value on nature and ecosystem services. We'll study cost benefit analysis, pollution in general, climate change, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth and trade. Consideration of justice and equity will be woven through the whole semester.

Requirements/Evaluation: problem sets, short essays, final paper; intermediate assignments may include poster, presentation, brief writing assignment

Prerequisites: ECON 110 or equivalent

Enrollment Limit:  30

Enrollment Preferences: first-year and sophomore students

Expected Class Size:  30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: this course will count toward both the Environmental Studies major and concentration

Distributions: (D2) (QFR)

Fall 2022

LEC Section: 01  MR 2:35 pm - 3:50 pm  Sarah A. Jacobson

ECON 232 (F) Financial Markets, Institutions and Policies  (QFR)

The focus of the course will be on how firms, financial markets, and central banks interact in the economy. Key questions addressed in the course include: How do firms allocate their resources to enhance their value? How are firms evaluated by the financial markets? How are asset prices determined, and how are these prices related to interest rates? Are financial markets efficient, and what are the implications of their efficiency or lack thereof? How does the financial system help with the management of risks faced by society? We will also study the role of the central bank (the Federal Reserve in the US), monetary policy, and government regulation and their impacts on financial decision making. Key questions include: How do central banks set monetary policy and how do those policies affect the economy and the financial decision-making process? How does monetary policy change when interest rates are (virtually) zero?

Class Format: There will be a mix of lecture and discussion.

Requirements/Evaluation: 5-7 Problem Sets, Quantitative Exercises, Group Paper, and Final Exam

Prerequisites: ECON 110 and ECON 120

Enrollment Limit:  25

Enrollment Preferences: Sophomore and Junior Economics majors

Expected Class Size:  25
Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: We will use mathematical models, graphs, and data analysis to understand financial decisions at the firm and economy-wide levels.

Attributes: POEC Comparative POEC/Public Policy Courses

Fall 2022

LEC Section: 01 TR 9:55 am - 11:10 am Neal J. Rappaport

ECON 240 (S) Colonialism and Underdevelopment in South Asia (DPE) (QFR)

Cross-listings: ECON 240 ASIA 241

Primary Cross-listing

British colonial rule in South Asia shaped economy and society in fundamental ways. As resistance to colonial rule emerged in the late nineteenth century, "nationalist" writers developed a critique of its economic impact via taxation, fiscal policy, trade, and many other policies. In their turn, supporters of British rule, "apologists," argued that British rule had laid the foundations of economic growth by securing property rights, enforcing contracts, and developing infrastructure. The debate between "nationalists" and "apologists" has never quite ended, but after the recent growth of the Indian economy it has lost some of its emotional charge. We will use this opportunity to revisit the controversy.

Requirements/Evaluation: essays (one every other week) and responses to partner's essays will be evaluated

Prerequisites: one course in ECON

Enrollment Limit: 10

Enrollment Preferences: Economics major, prior course on South Asia

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 240 (D2) ASIA 241 (D2)

Difference, Power, and Equity Notes: Issues of difference, power, and equity are at the heart of any analysis of colonialism, hence the DPE designation.

Quantitative/Formal Reasoning Notes: Students will write six essays, in which they will employ economic models and engage with quantitative evidence, so the course satisfies the QFR requirement.

Attributes: GBST South + Southeast Asia Studies Electives POEC Comparative POEC/Public Policy Courses

Spring 2023

TUT Section: T1 TBA Anand V. Swamy

ECON 251 (F)(S) Price and Allocation Theory (QFR)

A study of the determination of relative prices and their importance in shaping the allocation of resources and the distribution of income. Subjects include: behavior of households in a variety of settings, such as buying goods and services, saving, and labor supply; behavior of firms in various kinds of markets; results of competitive and noncompetitive markets in goods, labor, land, and capital; market failure; government policies as sources of and responses to market failure; welfare criteria; limitations of mainstream analysis.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets and multiple exams, including a final exam. They may also include one or more quizzes, short essays, collaborative projects, or presentations.

Prerequisites: ECON 110 and MATH 130 or its equivalent

Enrollment Limit: 30

Enrollment Preferences: Current or prospective Economics majors.

Expected Class Size: 30
ECON 252  (F)(S)  Macroeconomics  (QFR)
A study of aggregate economic activity: output, employment, inflation, and interest rates. The class will develop a theoretical framework for analyzing economic growth and business cycles. The theory will be used to evaluate policies designed to promote growth and stability, and to understand economic developments in the U.S. and abroad. Instructors may use elementary calculus in assigned readings, exams and lectures.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets and/or written assignments, midterm(s), and a final exam.

Prerequisites: ECON 110 and 120 and MATH 130 or its equivalent

Enrollment Limit: 30

Enrollment Preferences: Current or prospective Economics majors.

Expected Class Size: 30

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)  (QFR)

Quantitative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

Fall 2022
LEC Section: 02    TR 11:20 am - 12:35 pm     Andrew T. Hessler
