**Writing Skills Notes:** Students will be working closely with me and colleagues, receiving feedback on their writing from numerous sources (myself, editors, experts in the field), and their work will be part of the final, published manuscript. We will have numerous discussions about how to write, taking into account the audience and the content.

**Quantitative/Formal Reasoning Notes:** This is a 300 level math course.

Not offered current academic year

---

**MATH 350  (F)(S)  Real Analysis  (QFR)**

Why is the product of two negative numbers positive? Why do we depict the real numbers as a line? Why is this line continuous, and what do we mean when we say that? Perhaps most fundamentally, what is a real number? Real analysis addresses such questions, delving into the structure of real numbers and functions of them. Along the way we'll discuss sequences and limits, series, completeness, compactness, derivatives and integrals, and metric spaces. Results covered will include the Cantor-Schroeder-Bernstein theorem, the monotone convergence theorem, the Bolzano-Weierstrass theorem, the Cauchy criterion, Dirichlet's and Riemann's rearrangement theorem, the Heine-Borel theorem, the intermediate value theorem, and many others. This course is excellent preparation for graduate studies in mathematics, statistics, and economics.

**Requirements/Evaluation:** Problem sets and exams.

**Prerequisites:** MATH 250 or permission of instructor.

**Enrollment Limit:** 40

**Enrollment Preferences:** Juniors and Seniors.

**Expected Class Size:** 25

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is an advanced mathematics course.

---

MATH 350  (S)  Applied Real Analysis  (QFR)

This course is designed to introduce students to the underpinnings of real analysis, primarily in the context of Fourier series. By the end of the semester people will be comfortable making epsilon and delta type arguments. These types of arguments are one of the main pillars of modern mathematics. In a similar way, Fourier series and their generalizations are one of the pillars of the modern digital world.

**Requirements/Evaluation:** homework, classwork, and exams

**Prerequisites:** MATH 150 and MATH 250 or permission of the instructor.

**Enrollment Limit:** 50

**Enrollment Preferences:** Seniors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)
MATH 355  (F)(S)  Abstract Algebra  (QFR)
Algebra gives us tools to solve equations. The integers, the rationals, and the real numbers have special properties which make algebra work according to the circumstances. In this course, we generalize algebraic processes and the sets upon which they operate in order to better understand, theoretically, when equations can and cannot be solved. We define and study abstract algebraic structures such as groups, rings, and fields, as well as the concepts of factor group, quotient ring, homomorphism, isomorphism, and various types of field extensions. This course introduces students to abstract rigorous mathematics.

Requirements/Evaluation: Problem sets and exams
Prerequisites: MATH 250 or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: Students who have officially declared a major that requires Math 355.
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: 300-level math course

MATH 361  (F) Theory of Computation  (QFR)
Cross-listings: CSCI 361
Secondary Cross-listing
This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Requirements/Evaluation: weekly problem sets and one or more exams
Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor
Enrollment Limit: 24
Enrollment Preferences: current or expected Computer Science majors
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions:  (D3)  (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
MATH 361(D3) CSCI 361(D3)
Quantitative/Formal Reasoning Notes: This course include regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.
MATH 374 (F) Topology  (QFR)

In Real Analysis you learned about metric spaces---any set of objects endowed with a way of measuring distance---and the topology of sets in such spaces (open, closed, bounded, etc). In this course we flip this on its head: we explore how to develop analysis (limits, continuity, etc) in spaces where the topology is known but the metric is not. This will lead us to a bizarre and fascinating version of geometry in which we cannot distinguish between shapes that can be continuously deformed into one another. Not only does this theory turn out to be beautiful in the abstract, it plays an important role in math, physics, and data analysis. This course is excellent preparation for graduate programs in mathematics.

Requirements/Evaluation: Problem sets, exams, an expository essay.

Prerequisites: MATH 350 or 351; not open to students who have taken MATH 323. If you didn't cover metric spaces in real analysis, that's OK!

Enrollment Limit: 30

Enrollment Preferences: Juniors and seniors

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: It's math.

Fall 2024

LEC Section: 01  TR 11:20 am - 12:35 pm  Leo  Goldmakher

MATH 382 (S) Fourier Analysis  (QFR)

Fourier analysis is the study of waves and frequencies. More precisely, the goal of Fourier analysis is to decompose a complicated function into a simple combination of pure waves, thereby gleaning insight into the behavior of the function itself. It's difficult to overstate the impact of this branch of mathematics; it is foundational throughout theoretical mathematics (e.g., to study the distribution of prime numbers), applied mathematics (e.g., to solve differential equations), physics (e.g., to study properties of light and sound), computer science (e.g., to compute with large integers and matrices), audio engineering (e.g., to pitch-correcting algorithms), medical science (e.g., throughout radiology), etc. The goal of this course is to cover the basic theory (fourier series, the fourier transform, the fast fourier transform) and explore a number of applications, including Dirichlet's theorem on primes in arithmetic progressions, the isoperimetric inequality, the heat equation, and Heisenberg's uncertainty principle.

Class Format: Every week, each student will either give a lecture (based on provided readings) or explain solutions to selected problems.

Requirements/Evaluation: Evaluation will be based on lectures and presentation of problem solutions.

Prerequisites: MATH 350 or MATH 351 or permission of instructor.

Enrollment Limit: 10

Enrollment Preferences: By lottery.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: It's math!
MATH 383  (F)  Complex Analysis  (QFR)
The calculus of complex-valued functions turns out to have unexpected simplicity and power. As an example of simplicity, every complex-differentiable function is automatically infinitely differentiable. As examples of power, the so-called "residue calculus" permits the computation of "impossible" integrals, and "conformal mapping" reduces physical problems on very general domains to problems on the round disc. The easiest proof of the Fundamental Theorem of Algebra, not to mention the first proof of the Prime Number Theorem, used complex analysis.

Requirements/Evaluation: homework, classwork, and exams
Prerequisites: MATH 350 or MATH 351 or permission of instructor
Enrollment Limit: 40
Enrollment Preferences: 40
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Unit Notes: this course is not a senior seminar, so it does not fulfill the senior seminar requirement for the Math major
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Advanced mathematics course with weekly or daily problem sets.

Not offered current academic year

MATH 389  (S)  Advanced Analysis  (WS) (QFR)
This course further develops and explores topics and concepts from real analysis, with special emphasis on introducing students to subject matter and techniques that are useful for graduate study in mathematics or an allied field. Material will be drawn, based on student interest, from many areas, including analytic number theory, Fourier series and harmonic analysis, generating functions, differential equations and special functions, integral operators, equidistribution theory and probability, random matrix theory and probabilistic methods. This will be an intense, fast paced class which will give a flavor for graduate school. In addition to standard homework problems, students will also write reviews for MathSciNet, referee papers for journals, write programs in SAGE or Mathematica to investigate and conjecture, and read classic and current research papers.

Class Format: lecture
Requirements/Evaluation: evaluation will be based primarily on homework, classwork, and exams
Prerequisites: MATH 350 or 351 and one additional 300-level MATH course, or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: students interested in graduate school in mathematics or an allied discipline
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Unit Notes: http://web.williams.edu/Mathematics/sjmiller/public_html/389/
Distributions: (D3) (WS) (QFR)
Writing Skills Notes: Students will improve and expand their writing skills by taking course material as a starting point and writing chapters for a book under contract with the American Mathematical Society. This will involve numerous iterations of the content, with feedback both from the professor and from an editor.
Quantitative/Formal Reasoning Notes: This is a post-core 300 level math class.

Spring 2025
LEC Section: 01  TR 11:20 am - 12:35 pm  Steven J. Miller

MATH 390  Undergraduate Research Topics in Algebra  (QFR)
The well-known trace map on matrices can be generalized to a map on other algebraic objects. Undergraduates, graduates students and experts in Representation Theory, Commutative Algebra and Algebraic Geometry have been driving recent developments in the theory of trace modules and finding exciting new applications in all of these these fields. This course will serve as an introduction to mathematical research with the aim of producing original research in modern trace theory. Students in this tutorial will read and synthesize research papers, discuss the formation of research questions in pure mathematics, and engage in original mathematical research.
Requirements/Evaluation: oral presentations; writing assignments (summarizing papers, reflections on mathematical research, original research); participation in the course project
Prerequisites: Math 355
Enrollment Limit: 10
Enrollment Preferences: Juniors and Seniors
Expected Class Size: 7
Grading: 
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is post-core math class; students will be required to produce mathematical proofs.
Not offered current academic year

MATH 393 (S) Research Topics in Combinatorics (WS) (QFR)
Combinatorics provides techniques and tools to enumerate, examine, and investigate the existence of discrete mathematical structures with certain properties. There are numerous areas of applications including algebra, discrete geometry, and number theory. In this project-based research course students will work in small groups to learn combinatorial techniques and tools in order to develop research questions and begin tackling unsolved problems in combinatorics.
Requirements/Evaluation: Students will be evaluated through written drafts of a manuscript and its revisions and multiple in-class presentation.
Prerequisites: Math 355
Enrollment Limit: 19
Enrollment Preferences: Post-core mathematics majors
Expected Class Size: 19
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (WS) (QFR)
Writing Skills Notes: The main goal of this course is to undertake original research in combinatorics, as such student assessment is based on developing positive collaboration skills, and improving technical written and oral skills in mathematics through manuscript draft submissions and in-class presentations. Students will provide multiple drafts of their manuscript and in right of this the course will be writing intensive.
Quantitative/Formal Reasoning Notes: The main goal of this course is to undertake original research in the math field of mathematics. See above for more details.
Not offered current academic year

MATH 394 (S) Galois Theory (QFR)
Some equations--such as $x^5-1=0$--are easy to solve. Others--such as $x^5-x-1=0$--are very hard, if not impossible (using finite combinations of standard mathematical operations). Galois discovered a deep connection between field theory and group theory that led to a criterion for checking whether or not a given polynomial can be easily solved. His discovery also led to many other breakthroughs, for example proving the impossibility of squaring the circle or trisecting a typical angle using compass and straightedge. From these not-so-humble beginnings, Galois theory has become a fundamental concept in modern mathematics, from topology to number theory. In this course we will develop the theory and explore its applications to other areas of math.
Requirements/Evaluation: problem sets and oral exams
Prerequisites: MATH 355
Enrollment Limit: 30
Enrollment Preferences: Juniors and seniors
Expected Class Size: 15
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is a math class
Not offered current academic year
MATH 397 (F) Independent Study: Mathematics
Directed 300-level independent study in Mathematics.
Prerequisites: permission of department
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)
Not offered current academic year

MATH 398 (S) Independent Study: Mathematics
Directed 300-level independent study in Mathematics.
Prerequisites: permission of department
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)
Not offered current academic year

MATH 403 (F) Measure and Ergodic Theory (QFR)
An introduction to measure theory and ergodic theory. Measure theory is a generalization of the notion of length and area, and has been used in the study of stochastic (probabilistic) systems. The course covers the construction of Lebesgue and Borel measures, measurable functions, and Lebesgue integration. Ergodic theory studies the probabilistic behavior of dynamical systems as they evolve through time, and is based on measure theory. The course will cover basic notions, such as ergodic transformations, weak mixing, mixing, Bernoulli transformations, and transformations admitting and not admitting an invariant measure. There will be an emphasis on specific examples such as group rotations, the binary odometer transformations, and rank-one constructions. The Ergodic Theorem will also be covered, and will be used to illustrate notions and theorems from measure theory.
Requirements/Evaluation: Homework and exams
Prerequisites: MATH 350 or MATH 351 or permission of instructor
Enrollment Limit: 25
Enrollment Preferences: Mathematics majors
Expected Class Size: 15-20
Grading: yes pass/fail option, yes fifth course option
Unit Notes: senior major course
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It is an advanced mathematics course.

Fall 2024
LEC Section: 01 MR 2:35 pm - 3:50 pm Cesar E. Silva

MATH 407 (F) Dance of the Primes (QFR)
Prime numbers are the building blocks for all numbers and hence for most of mathematics. Though there are an infinite number of them, how they are spread out among the integers is still quite a mystery. Even more mysterious and surprising is that the current tools for investigating prime numbers involve the study of infinite series. Function theory tells us about the primes. We will be studying one of the most amazing functions known: the Riemann Zeta Function. Finding where this function is equal to zero is the Riemann Hypothesis and is one of the great, if not greatest, open problems in mathematics. Somehow where these zeros occur is linked to the distribution of primes. We will be concerned with why anyone would care about this conjecture. More crassly, why should solving the Riemann Hypothesis be worth one million dollars? (Which is what you will get if you solve it, beyond the eternal fame and glory.)
Requirements/Evaluation: exams and weekly homework assignments
Prerequisites: MATH 350 or MATH 351, and MATH 355
Enrollment Limit: 30
Enrollment Preferences: seniors
Expected Class Size: 10
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It is a math course.

Not offered current academic year

MATH 408 (F) L-Functions and Sphere Packing (WS) (QFR)
Optimal packing problems arise in many important problems, and have been a source of excellent mathematics for centuries. The Kepler Problem (what is the most efficient way to pack balls in three-space) is a good example. The original formulation has been used in such diverse areas as stacking cannonballs on battleships to grocers preparing fruit displays, and its generalizations allow the creation of powerful error detection and correction codes. While the solution of the Kepler Problem is now known, the higher dimensional version is very much open. There has been remarkable progress in the last few years, with number theory playing a key role in these results. We will develop sufficient background material to understand many of these problems and the current state of the field. Pre-requisites are real analysis.

Requirements/Evaluation: Class participation, homework, exams and participation in writing a textbook on the material. Each student will be responsible for working on a chapter of a book based on this material. In addition to obtaining critical writing feedback from myself and my co-author (who is a world expert in the subject), depending on timing we will also be able to share comments from an editor of a major publishing house or a referee. Chapters can range from short snapshots of a subject, on the order of 5 pages, to longer technical derivations of perhaps 10-30 pages.
Prerequisites: Math 350 or 351
Enrollment Limit: 40
Enrollment Preferences: Senior math majors, students planning on graduate study in a STEM field
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (WS) (QFR)
Writing Skills Notes: Students will improve and expand their writing skills by taking course material as a starting point and writing chapters for a book under contract with the American Mathematical Society. This will involve numerous iterations of the content, with feedback both from the professor and from an editor.
Quantitative/Formal Reasoning Notes: This is a 400 level math class

Fall 2024
LEC Section: 01 MWF 11:00 am - 11:50 am Steven J. Miller

MATH 409 (F) The Little Questions (QFR)
Using math competitions such as the Putnam Exam as a springboard, in this class we follow the dictum of the Ross Program and “think deeply of simple things”. The two main goals of this course are to prepare students for competitive math competitions, and to get a sense of the mathematical landscape encompassing elementary number theory, combinatorics, graph theory, and group theory (among others). While elementary frequently is not synonymous with easy, we will see many beautiful proofs and ‘a-ha’ moments in the course of our investigations. Students will be encouraged to explore these topics at levels compatible with their backgrounds.
Requirements/Evaluation: Homework, exams, presentations.
Prerequisites: Real Analysis (either Math 350 or 351) and Abstract Algebra (Math 355), or permission of the instructor.
Enrollment Limit: 30
Enrollment Preferences: Math/stat senior majors
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is a 400 level math class.
MATH 411 (S) Commutative Algebra (QFR)
Commutative Algebra is an essential area of mathematics that provides indispensable tools to many areas, including Number Theory and Algebraic Geometry. This course will introduce you to the fundamental concepts for the study of commutative rings, with a special focus on the notion of "prime ideals," and how they generalize the well-known notion of primality in the set of integers. Commutative algebra has applications ranging from algebraic geometry to coding theory. For example, one can use commutative algebra to create error correcting codes. It is perhaps most often used, however, to study curves and surfaces in different spaces. To understand these structures, one must study polynomial rings over fields. This course will be an introduction to commutative algebra. Possible topics include polynomial rings, localizations, primary decomposition, completions, and modules.

Requirements/Evaluation: homework and exams
Prerequisites: MATH 355 or permission of instructor
Enrollment Limit: 25
Enrollment Preferences: Math majors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It is a 400-level math course

Spring 2025
LEC Section: 01 MWF 9:00 am - 9:50 am Susan R. Loepp

MATH 412 (S) Mathematical Biology (QFR)
Cross-listings: BIOL 420
Primary Cross-listing
This course will provide an introduction to the many ways in which mathematics can be used to understand, analyze, and predict biological dynamics. We will learn how to construct mathematical models that capture essential properties of biological processes while maintaining analytic tractability. Analytic techniques, such as stability and bifurcation analysis, will be introduced in the context of both continuous and discrete time models. Additionally, students will couple these analytic tools with numerical simulation to gain a more global picture of the biological dynamics. Possible biological applications may include, but are not limited to, single and multi-species population dynamics, neural and biological oscillators, tumor cell growth, and infectious disease dynamics.

Requirements/Evaluation: problem sets, quizzes/exams, participation, final project and paper
Prerequisites: MATH 250 and MATH 309, or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: preference for senior math/stats major and also based on an interest statement
Expected Class Size: 30
Grading: yes pass/fail option, no fifth course option
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
MATH 412(D3) BIOL 420(D3)
Quantitative/Formal Reasoning Notes: The course will introduce methods for developing and analyzing mathematical models.

Spring 2025
LEC Section: 01 TR 9:55 am - 11:10 am Julie C. Blackwood

MATH 413 (S) Computational Algebraic Geometry (QFR)
Algebraic geometry is the study of shapes described by polynomial equations. It has been a major part of mathematics for at least the past two
hundred years, and has influenced a tremendous amount of modern mathematics, ranging from number theory to robotics. In this course, we will develop the Ideal-Variety Correspondence that ties geometric shapes to abstract algebra, and will use computational tools to explore this theory in a very explicit way.

**Requirements/Evaluation:** Evaluation will be based on weekly problem sets, three exams, and final project. Any students who have taken Math 411 should consult with the instructor before enrolling in this course.

**Prerequisites:** Math 355

**Enrollment Limit:** 30

**Enrollment Preferences:** Preference given to senior math majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course is all quantitative and formal reasoning.

Not offered current academic year

**MATH 415 (F) Advanced Matrix Analysis (QFR)**

This course will start with a review of various attributes of matrices (determinants, rank, etc), as well as eigenvalues, eigenvectors, and their properties. Then we will move on to study special matrices and their decompositions, along with similarities, and Jordan canonical forms. In the third segment, we will define norms on vectors and matrices and study their analytic properties. Finally, we will discuss another important class of matrices - positive definite and semidefinite matrices. If time permits, we will also cover positive and negative matrices and their properties.

**Requirements/Evaluation:** Homework assignments and exams.

**Prerequisites:** Math 350/351 or permission of instructor

**Enrollment Limit:** 25

**Enrollment Preferences:** Mathematics and Statistics Majors, Seniors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is an advanced mathematics class that covers complex properties of matrices and some of their applications.

Not offered current academic year

**MATH 419 (F) Algebraic Number Theory (QFR)**

We all know that integers can be factored into prime numbers and that this factorization is essentially unique. In more general settings, it often still makes sense to factor numbers into "primes," but the factorization is not necessarily unique! This surprising fact was the downfall of Lamé’s attempted proof of Fermat’s Last Theorem in 1847. Although a valid proof was not discovered until over 150 years later, this error gave rise to a new branch of mathematics: algebraic number theory. In this course, we will study factorization and other number-theoretic notions in more abstract algebraic settings, and we will see a beautiful interplay between groups, rings, and fields.

**Requirements/Evaluation:** homework assignments and exams

**Prerequisites:** MATH 355, or permission of instructor

**Enrollment Limit:** 25

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

Not offered current academic year

**MATH 426 (F) Differential Topology (QFR)**

Differential topology marries the rubber-like deformations of topology with the computational exactness of calculus. This sub field of mathematics asks
and answers questions like "Can you take an integral on the surface of doughnut?" and includes far-reaching applications in relativity and robotics. This tutorial will provide an elementary and intuitive introduction to differential topology. We will begin with the definition of a manifold and end with a generalized understanding of Stokes Theorem.

Requirements/Evaluation: weekly homework and exams, and possibly student presentations
Prerequisites: MATH 350 (students who have not taken MATH 350 may enroll only with permission of the instructor)
Enrollment Limit: 30
Enrollment Preferences: mathematics seniors, mathematics majors
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: There will be weekly math problem sets.

Fall 2024
LEC Section: 01 MWF 9:00 am - 9:50 am Ivo Terek

MATH 427 (S) Tiling Theory (QFR)
Since people first used stones and bricks to tile the floors of their domiciles, tiling has been an area of interest. Practitioners include artists, engineers, designers, architects, crystallographers, scientists and mathematicians. This course will be an investigation into the mathematical theory of tiling. The course will focus on tilings of the plane, including topics such as the symmetry groups of tilings, types of tilings, random tilings, the classification of tilings and aperiodic tilings. We will also look at tilings of the sphere, tilings of the hyperbolic plane, and tilings in in higher dimensions, including "knotted tilings".

Requirements/Evaluation: problem assignments, exams and a presentation/paper
Prerequisites: MATH 250 Linear Algebra and MATH 355 Abstract Algebra
Enrollment Limit: 30
Enrollment Preferences: senior majors, seniors, juniors, sophomores, first-year students (this is a senior seminar, one of which is required for all senior majors, so they have first preference)
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Mathematics course
Not offered current academic year

MATH 434 (S) Applied Dynamics and Optimal Control (QFR)
We seek to understand how dynamical systems evolve, how that evolution depends on the various parameters of the system, and how we might manipulate those parameters to optimize an overall outcome. The primary focus of this course will be optimal control using Pontryagin's maximum principle and Hamilton-Jacobi-Bellman equations. These tools have broad application in ecology, economics, finance, and engineering, and we will draw on basic models from these fields to motivate our study. The course will begin with a solid review of modeling with dynamical systems, and deepening our understanding of differential and difference equations, parameter dependence, and bifurcations.

Requirements/Evaluation: exams, homework assignments, and projects
Prerequisites: MATH 309 or PHYS 210, and MATH 350 or 351, or permission of the instructor
Enrollment Limit: 25
Enrollment Preferences: Preference will be given to senior math majors.
Expected Class Size: 20
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is a 400 level math course.
MATH 442  (F)  Introduction to Descriptive Set Theory  (QFR)

Descriptive set theory (DST) combines techniques from analysis, topology, set theory, combinatorics, and other areas of mathematics to study definable (typically Borel) subsets of Polish spaces. The first part of this course will cover the topics necessary to understand the main objects of study in DST: we will develop comfort with point-set topology (enough to juggle with Polish spaces and Borel sets), and set theory (just well-orderings and cardinality). The second part of the course will feature selected topics in descriptive set theory: for example, trees, the perfect set property, Baire category, and infinite games.

Requirements/Evaluation: Evaluation based on homework, exams, and classroom participation.
Prerequisites: Math 250 - Linear Algebra, Math 350/351 Real Analysis/Applied Real Analysis

Enrollment Limit: 14
Enrollment Preferences: Senior Math Majors, then non-Senior Math Majors
Expected Class Size: 14
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)  (QFR)

Quantitative/Formal Reasoning Notes: Mathematics course in descriptive set theory.

Not offered current academic year

MATH 443    Introduction to Optimal Transport Theory  (QFR)

This course will introduce you to the fascinating world of transportation optimization, a field that has important applications in many areas of science and engineering, such as economics, image processing, and machine learning. We will start by exploring the discrete Optimal Transport (OT) problem, which involves finding the most efficient way to transport a set of objects from one location to another. While the discrete OT problem can be formulated as a linear programming problem, finding an optimal solution to this problem can be computationally expensive, especially for large-scale problems. To overcome this computational challenge, a popular approach is to use entropy regularization. We will also investigate the entropy regularized OT problem, which provides us with an approximation of optimal transport, with lower computational complexity and easy implementation.

In the second half of the course, we will delve into the continuous case, which allows us to consider transport between infinitely many locations. We will study the famous Monge-Kantorovich problem, which involves finding the optimal transportation plan that minimizes the total cost of moving a given amount of mass from one location to another, subject to various constraints. Throughout the course, we will use a combination of theoretical and practical approaches to understand and apply the concepts we cover. By the end of the course, you will have a strong foundation in OT theory, which will prepare you for further studies in this exciting and rapidly evolving field. Recommended Textbooks / Articles: Topics in Optimal Transportation - Cédric Villani Optimal Transport for Applied Mathematicians - Filippo Santambrogio Computational Optimal Transport - Gabriel Peyré, Marco Cuturi (https://arxiv.org/abs/1803.00567)

Prerequisites: Math 350/351 or permission of instructor
Enrollment Limit: 25
Enrollment Preferences: Mathematics and Statistics majors
Expected Class Size: 20
Grading: (D3)  (QFR)

Quantitative/Formal Reasoning Notes: This is a senior seminar course in mathematics and will require students to use advanced quantitative and formal reasoning skills.

Not offered current academic year

MATH 445  (S)  Topics in Numerical Analysis  (QFR)

Numerical analysis is a field of mathematics that focuses on developing algorithms and computational methods to solve problems that cannot be solved exactly. In this senior seminar course on numerical analysis we will cover advanced topics such as numerical solutions of Partial Differential Equations, Random Numbers and Monte Carlo simulation, Fast Fourier Transform and signal processing, as well as applications or the Singular Value...
Decomposition for matrices. The course will start with a review of basic concepts from calculus, linear algebra, and differential equations. Students who have taken Introduction to Numerical Analysis (Math 345) are welcome to take this course.

Requirements/Evaluation: exams and homework assignments
Prerequisites: Math 309 or Math 345 or permission of instructor
Enrollment Limit: 25
Enrollment Preferences: Mathematics Majors, Seniors
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is a senior seminar course in mathematics.

MATH 453 (S) Partial Differential Equations (QFR)
In this course, we further explore the world of differential equations. Mainly, we cover topics in partial differential equations. Partial Differential Equations (PDEs) are fundamental to the modeling of many natural phenomena, arising in many fields, including fluid mechanics, heat and mass transfer, electromagnetic theory, finance, elasticity, and more. The goals of this course are to discuss the following topics: classification of PDEs in terms of order, linearity and homogeneity; physical interpretation of canonical PDEs; solution techniques, including separation of variables, series solutions, integral transforms, and the method of characteristics.

Requirements/Evaluation: Evaluation will be based on homework, projects, and exams.
Prerequisites: MATH 150-151; MATH/PHYS 210 or MATH 309
Enrollment Limit: 20
Enrollment Preferences: Mathematics and Physics majors.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is an advanced mathematics class dedicated to the study of partial differential equations (PDEs). These equations are the most important mathematical tools for the study of complex physical phenomena such as waves and fluids (including both air and water), heat transfer, electromagnetism, and finance.

Spring 2025
LEC Section: 01    TR 11:20 am - 12:35 pm     Bhagya Athukorallage

MATH 457 (S) Partition Theory (QFR)
The partitions of a positive integer are the different ways of writing it as a sum of positive integers. For example, 5 has seven partitions, three of which are 5=1+1+1+1+1, 5=2+3, and 5=5. (Can you find the rest?) Partition theory is a rich area of combinatorics with applications to algebra and mathematical physics. In this class we will focus on enumerative and bijective methods to answer questions such as: How can we calculate the number of partitions of a number efficiently? Why is the number of partitions of N into strictly odd numbers always the same as the number of its partitions into distinct numbers? Why does a 2-dimensional partition look like a stack of cubes, and what does that have to do with tilings?

Requirements/Evaluation: Written homework; Written/Oral Exams; Project/Presentation
Prerequisites: A course in abstract algebra such as MATH 355, or permission of instructor.
Enrollment Limit: 25
Enrollment Preferences: Priority given to Junior and Seniors, and according to previous experience with subject.
Expected Class Size: 10
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is an advanced course in mathematics.
MATH 481 (S) Measure theory and Hilbert spaces (QFR)
How large is the unit square? One might measure the number of individual points in the square (uncountably infinite), the area of the square (1), or the dimension of the square (2). But what about for more complicated sets, e.g., the set of all rational points in the unit square? What's the area of this set? What's the dimension? In this course we'll come up with precise ways to measure size—length, area, volume, dimension, etc.—that apply to a broad array of sets. Along the way we'll encounter Lebesgue measure and Lebesgue integration, Hausdorff measure and fractals, space-filling curves and the Banach-Tarski paradox. We will also investigate Hilbert spaces, mathematical objects that combine the tidiness of linear algebra with the power of analysis and are fundamental to the study of differential equations, functional analysis, harmonic analysis, and ergodic theory, and also apply to fields like quantum mechanics and machine learning. This material provides excellent preparation for graduate studies in mathematics, statistics and economics.

Requirements/Evaluation: Problem sets, exams, an expository essay
Prerequisites: At least one previous course that has Math 350 or 351 as a prerequisite (eg Math 374, 383, 401, 404, 408, 420, 426, 485), or permission of instructor.
Enrollment Limit: 20
Enrollment Preferences: Juniors and seniors.
Expected Class Size: 10
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It's math.

MATH 493 (F)(S) Senior Honors Thesis: Mathematics
Mathematics senior honors thesis; this is part of a full-year thesis (493-494). Each student carries out an individual research project under the direction of a faculty member that culminates in a thesis. See description under The Degree with Honors in Mathematics.
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)

Winter Study

MATH 12 (W) The Mathematics of LEGO and Outreach Activities

This course is a modification of nine previous winter studies I have done on the Mathematics of LEGO bricks and outreach activities. Similar to those, we will use LEGO bricks as a motivator to talk about some good mathematics (combinatorics, algorithms, efficiency). We will partner with local elementary schools to engage students and teachers in mathematics, as well as possibly prepare articles for journals. Possible activities include submitting a Lego Ideas Challenge, to try and create a set that Lego will then market and sell, or do a speed build challenge (college teams vs elementary school teams perhaps).

**Requirements/Evaluation:** short paper and final project or presentation

**Prerequisites:** none

**Enrollment Limit:** 30

**Enrollment Preferences:** none

**Expected Class Size:** NA

**Grading:** pass/fail only

**Materials/Lab Fee:** $195

**Attributes:** EXPE Experiential Education Courses  SLFX Winter Study Self-Expression

*Not offered current academic year*

MATH 14 (W) Flow Yoga
This class will teach the practice of yoga based on a fusion of Ashtanga, Vinyasa and Iyengar methodologies. This course is open to all levels from those who have never done a pose to those who have practicing yoga for years. The students will learn how to connect movement to breath in a sequence of vigorous yoga poses, or asanas. The flow classes will introduce yoga sequences in an alignment-based curriculum appropriate to each student’s experience. In addition to the physical work out of practicing yoga, there will be short discussions on the assigned reading of handouts that explore various topics pertinent to yoga, such as an introduction to yogic philosophy, the historical background of yoga, and a basic of knowledge of Sanskrit. The rudiments of Meditation will begin and end every session. Attendance to every class is a requirement. We will meet 3 times per week for 2 hours each time. The students will be expected to practice yoga daily on their own after having memorized certain basic yoga sequences. Each student will keep a journal where they will note the highlight of that day’s class, whether it be a new asana or a sutra or whatever caught their attention. Students will be evaluated on their class participation, their journal and a short essay on a topic of their choice.

Requirements/Evaluation: Class participation and journal entries and final essay

Prerequisites: Those with previous yoga experience

Enrollment Limit: 25

Enrollment Preferences: 15-20

Expected Class Size: NA

Grading: pass/fail only

Materials/Lab Fee: $106

Attributes: WELL Winter Study Wellness

MATH 16 Translating Poetry for Kids

There’s a long tradition of translating English poetry—including nursery rhymes—into Russian. Our goal will be to go the other way, translating some famous Russian poems for children into English. Proficiency (but not fluency!) in Russian is required, as is an interest in poetry and translation.

Class Format: The plan is to meet 9 hours per week (3 hours each on Mondays, Wednesdays, Fridays) to read poetry aloud and collaborate on translations.

Requirements/Evaluation: We will read aloud to one another, as well work on translations collaboratively.

Prerequisites: Proficiency in Russian.

Enrollment Limit: 6

Enrollment Preferences: Russian speakers who love poetry.

Expected Class Size: 3

Grading:

Not offered current academic year

MATH 21 Up-cycling of Waste Cotton into Bioplastics

The pressing concerns of plastic pollution have spurred considerable interest in biomass-based products sourced from sustainable and renewable origins, offering attributes such as recyclability, compostability, or biodegradability. Cotton, being the purest form of cellulose found in nature, presents a promising avenue for exploration. Annually, the cotton industry generates substantial quantities of gin waste and low-quality cotton fibers, typically unsuitable for fabric production. The course will provide students with an overview of developing bioplastic materials (i.e., films and aerogels), especially from waste cotton, to effectively curtail the carbon footprint and mitigate the detrimental impacts of synthetic plastics. We will begin by addressing critical issues surrouding plastic pollution before delving into interesting topics such as bioplastics; cotton fibers (journey from field to fabric); chemical insight into cellulose; transforming waste cotton into bioplastics through dissolution; and functionalization, characterization, and applications of bioplastics. Additionally, a brief overview of water-soluble bioplastics and their benefits and applications will be provided. Students will demonstrate their understanding through class discussions and will either deliver a 10-minute class presentation and submit a 5-page report, exploring and analyzing the ideas and topics covered during the lectures.

Requirements/Evaluation: Class participation; 5-page paper and a presentation

Prerequisites: CHEM 101 or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: The instructor aims to attract a diverse group of students interested in acquiring foundational knowledge in the
development of bioplastics from sustainable natural resources

Expected Class Size: 15
Grading:

Unit Notes: Sumedha Liyanage has academic research expertise on converting plant-based polymers into bioplastics, specifically targeting various industrial applications and has a Ph.D. in Plant and Soil Science (Fiber & Biopolymers and FTIR imaging)

Not offered current academic year

MATH 22  Stoppard and Go: Interpretation and Scenework for Three of Tom Stoppard's Plays

Tom Stoppard has been cited as one of the greatest living playwrights, with numerous prestigious awards, frequent international productions of his extensive oeuvre, and a knighthood from Queen Elizabeth. "Stopppardian" has even become a term describing works that use wit and comedy while exploring philosophical concepts, succinctly expressing his interdisciplinary appeal. We will investigate three of Stoppard's most prominent plays: *Rosencrantz and Guildenstern are Dead* (1967); *Travesties* (1975); and *Arcadia* (1993). The course will give students the chance to engage with the texts through discussion, collaborative scenework, and informal performances. Each play invites us to consider the past and the present anew through humor and unexpected juxtapositions: R&G reframes Shakespeare's *Hamlet* through formerly minor characters; *Travesties* portrays the convergence in 1917 Zurich of Dada founder, Tristan Tzara, author James Joyce, and the communist revolutionary, Lenin; *Arcadia* explores the thorniness of attribution and biography in literature, scholarship and science. Intertwining themes of history, art, literature, politics, aesthetics, mathematics, and philosophy, these plays will amuse and challenge students of all academic backgrounds and will offer a rich launchpad for our discussion and workshop-focused class sessions. Brief supplementary readings will help ground students in the historic and literary setting of each play, while film viewings, in-class scene work, and informal performances will bring the language to life. No theatrical experience necessary, but workingshopping and presenting scenes with and to classmates is a required component of this course.

Requirements/Evaluation:  Presentation(s); Other: participation in class discussion and workingshopping scenes
Prerequisites:  None
Enrollment Limit:  15
Enrollment Preferences:  Preference will be given to juniors and seniors
Expected Class Size:  NA
Grading:

Unit Notes: Amanda Bell Goldmakher is an arts educator and administrator who has worked at nonprofits in NYC, MA and DC, taught in the Education Department at the Clark Art Museum, and led local theater workshops and youth productions.

Materials/Lab Fee:  $60
Attributes:  EXPE Experiential Education Courses  SLFX Winter Study Self-Expression

MATH 29  Math Enrichment in Public Schools

We will explore math education and enrichment at all levels. Class will include a combination of lecture and discussion in a traditional classroom setting at Williams. Students will also teach lessons at the Williamstown Elementary School math club and Adventures in Learning series throughout the month of January. We will likely have one event with the Mt Greylock high school math club as well. We will present and teach various math enrichment topics including primes, Fibonacci numbers, infinity, the math of voting, fair division, logic, and more. Some proof writing experience is recommended, see instructor if you're not sure you satisfy the pre-requisites.

Class Format:  Class will include lecture, and teaching/assisting at local schools. We will be primarily at the elementary school, but will likely have an event at the high school as well.

Requirements/Evaluation:  Students will be evaluated on their teaching performance and preparation, teaching journal, and final paper.
Prerequisites:  Some experience proof writing. Math 200 or 250 or permission of instructor.
Enrollment Limit:  10
Enrollment Preferences:  Preference given to those with interest in mathematics and education. Course enrollment will be determined by answers to a questionnaire if over-enrolled.
Expected Class Size:  8
Grading:
Materials/Lab Fee: $100 for books and materials
Not offered current academic year

MATH 30  (W) Senior Project: Mathematics
To be taken by candidates for honors in Mathematics other than by thesis route.
Class Format: honors project
Grading: pass/fail only
Not offered current academic year

MATH 31  (W) Senior Thesis: Mathematics
To be taken by students registered for Mathematics 493-494.
Class Format: thesis
Grading: pass/fail only
Not offered current academic year

MATH 99  (W) Independent Study: Mathematics
Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.
Class Format: independent study
Grading: pass/fail only
Not offered current academic year
MAJOR IN STATISTICS
The major in Statistics is designed to meet three goals: to introduce some of the central ideas of information and data science, to develop problem-solving ability by teaching students to combine creative thinking with rigorous reasoning, and to develop interdisciplinary skills by applying statistics to an application area of interest.

REQUIREMENTS (10 courses plus colloquium)
The major in Statistics consists of ten courses plus a colloquium requirement. The major includes courses in mathematics, computer science and statistics. Students interested in continuing their study of statistics in graduate school should strongly consider taking Math 350/351 in addition to the other requirements.

Mathematics (2 courses)
MATH 150 or 151 Multivariable Calculus or equivalent high school course

MATH 250 Linear Algebra

Except in unusual circumstances, students planning to major in statistics should complete the calculus sequence (MATH 130, 140, 150/151) before the spring of the sophomore year, at the latest. MATH 150 is a prerequisite for STAT 201 and MATH 250 is a prerequisite for STAT 346.

Computer Science (1 course)

CSCI 134 Intro to Computer Science or CSCI 135 Diving into the Deluge of Data or CSCI 136 Data Structures and Advanced Programming or some other course in the Computer Science Department with prior approval of the Math/Stat department.

Core Courses (4 courses)

STAT 201 Statistics and Data Analysis, STAT 202 Introduction to Statistical Modeling or STAT 302 Applied Statistical Modeling
STAT 346 Regression and Forecasting
STAT 341 Probability
STAT 360 Inferential Statistics

Continuation (2 courses)

Any two courses among the 300 or 400 level courses in the department with a STAT prefix.

Capstone Course (1 course)

The capstone course is a 400-level STAT course taken in the senior year. Although the specific methodological emphasis of the course may vary from year to year, an in-depth project with both a written report and an oral presentation is typically part of the capstone course.

Pass/Fail policies during the Academic Year 2020-2021

Information about the Department of Mathematics and Statistics Pass/Fail policies during the Academic Year 2020-2021 can be found here.

Colloquium Requirement

Participation in the Department Colloquium, in which each senior major presents a talk on a mathematical or statistical topic of their choice. Each major must also attend at least 20 colloquia (15 during the Academic Year 2020-2021), and up to 5 attendances may be counted in their junior year. Up to 5 colloquia in mathematics or computer science may also be counted. Students engaged in study away may petition the department in advance to count up to 5 suitable colloquium attendances from their study away program.

PLACEMENT

Students with an AP Stat score of 5 or 4 are placed in the advanced introductory course Stat 202.

NOTES

Substitutions, Study Abroad, and Transfer Credit: In some cases, and with prior permission of the Mathematics and Statistics Department, appropriate courses from other institutions may be substituted for the application and continuation requirements, but at least eight courses must be taken from the Department of Mathematics and Statistics at Williams.

These can, with prior permission, include courses taken away. Students with transfer credit should contact the department about special arrangements.

Double Counting: No course may count towards two different majors.

Early Senior Capstone Course: In exceptional circumstances, with the prior permission of the department, a student may be allowed to satisfy the Senior Capstone Course requirement in the junior year, provided that the student has completed at least three 300-level statistics courses before enrolling in the capstone course.

Planning Courses: Core courses are normally offered every year. Other 300 and 400 level statistics courses are offered on an irregular basis. Students should check with the department before planning far into the future.

Course Admission: Courses are normally open to all students meeting the prerequisites, subject to any course caps. Students with questions about the level at which courses are conducted are invited to consult department faculty.

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken
while on study away?

Course title and description, and complete syllabus including readings/assignments.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. They have to be approved MATH/STAT courses.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. Colloquium requirement, Senior Seminar requirement.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. The highly cumulative structure of the major.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

None to date.

THE DEGREE WITH HONORS IN STATISTICS

The degree with honors in Statistics is awarded to the student who has demonstrated outstanding intellectual achievement in a program of study which extends beyond the requirements of the major. The principal considerations for recommending a student for the degree with honors will be: Mastery of core material and skills, breadth and, particularly, depth of knowledge beyond the core material, ability to pursue independent study of statistics, originality in methods of investigation, and, where appropriate, creativity in research.

An honors program normally consists of two semesters (STAT 493 and 494) and a winter study (WSP 031) of independent research, culminating in a thesis and a presentation. During the Academic Year 2020-2021 the winter study requirement for the honors program in Statistics is waved. One of STAT 493 or STAT 494 can count as a continuation course, but not both. Neither counts as the 400-level senior capstone course.

An honors program in actuarial studies requires significant achievement on four appropriate examinations of the Society of Actuaries.

Highest honors will be reserved for the rare student who has displayed exceptional ability, achievement or originality. Such a student usually will have written a thesis or pursued actuarial honors. In all cases, the award of honors and highest honors is the decision of the Department.

STAT 101 (F)(S) Elementary Statistics and Data Analysis (QFR)

It is impossible to be an informed citizen in today’s world without an understanding of data. Whether it is opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines, etc, we need to be able to interpret and gain information from statistics. This course will introduce the common methods used to analyze and present data with an emphasis on interpretation and informed decision making.

Requirements/Evaluation: weekly homework, quizzes, exams, and a project

Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test)

Enrollment Limit: 50

Enrollment Preferences: juniors and seniors

Expected Class Size: 35

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202.

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: It is a quantitative course.

Attributes: COGS Related Courses PHLH Statistics Courses

Fall 2024
STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)
This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

Requirements/Evaluation: Weekly homework, quizzes, two midterms and a final exam (midterms include take-home components), and a data analysis project. Students will need to become familiar with the statistical software STATA.

Prerequisites: MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

Enrollment Limit: 40
Enrollment Preferences: Economics majors, sophomores
Expected Class Size: 40
Grading: yes pass/fail option, no fifth course option

Unit Notes: Students with calculus background should consider STAT 201. Students without any calculus background should consider STAT 101. Students with AP Stat 4 or 5 should consider Stat 202. Please refer to the placement chart on the Math&Stat department website for more information.

STAT 201 (F)(S) Statistics and Data Analysis (QFR)
Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science, is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, "Data, data, data! I can't make bricks without clay." In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

Requirements/Evaluation: weekly homework and projects, midterm exams, and a final exam.
Prerequisites: MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent
Enrollment Limit: 40
Enrollment Preferences: Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors
Expected Class Size: 40
Grading: yes pass/fail option, yes fifth course option
Unit Notes: Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Students will learn to choose, carry out, interpret, and communicate analyses of data.
Attributes: COGS Related Courses PHLH Statistics Courses

STAT 202 (F)(S) Introduction to Statistical Modeling (QFR)
Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

Requirements/Evaluation: Homework problems; quizzes; exams; a final project (on a topic that interests you!). Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.
Prerequisites: MATH 140 and STAT 101/161/201/AP Statistics 4/5, or permission of instructor.
Enrollment Limit: 40
Enrollment Preferences: Prospective Statistics majors and more senior students
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Unit Notes: Students with a 4 on the AP Stats exam should contact the department for proper placement. Students with STAT 201 are strongly encouraged to take STAT 346 or other 300-level statistics electives.
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

STAT 335  (S)  Introduction to Biostatistics and Epidemiology  (QFR)
Epidemiology is the study of disease and disability in human populations, while biostatistics focuses on the development and application of statistical methods to address questions that arise in medicine, public health, or biology. This course will begin with epidemiological study designs and core concepts in epidemiology, followed by key statistical methods in public health research. Topics will include multiple regression, analysis of categorical data (two sample methods, sets of 2x2 tables, RxC tables, and logistic regression), survival analysis (Cox proportional hazards model), and if time permits, a brief introduction to regression with correlated data.
Requirements/Evaluation: Evaluation will be primarily based on weekly assignments (regular homework or mini-projects), two midterm exams, and a final exam.
Prerequisites: Stat 201 or Stat 202, or permission of instructor (prior experience should include a working understanding of multiple linear regression, the basics of statistical inference, and R).
Enrollment Limit: 20
Enrollment Preferences: Statistics majors and prospective majors who have not yet taken Stat 346; public health concentrators
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Students will learn how to choose, implement, and interpret statistical analyses relevant to public health studies.
Attributes: PHLH Statistics Courses

STAT 341 (F)(S) Probability (QFR)
Cross-listings: MATH 341
Secondary Cross-listing
The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.
Requirements/Evaluation: homework, classwork, and exams
Prerequisites: MATH 150 and MATH 250 or permission of the instructor
Enrollment Limit: 50
Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
STAT 341(D3) MATH 341(D3)
Quantitative/Formal Reasoning Notes: This is a 300-level Math/Stat course.

Fall 2024
LEC Section: 01  MWF 12:00 pm - 12:50 pm  Mihai Stoiciu

Spring 2025
LEC Section: 01  TR 9:55 am - 11:10 am  Steven J. Miller

STAT 342 (S) Introduction to Stochastic Processes (QFR)
Stochastic processes are mathematical models for random phenomena evolving in time or space. Examples include the number of people in a queue at time t or the accumulated claims paid by an insurance company in an interval of time t. This course introduces the basic concepts and techniques of stochastic processes used to construct models for a variety of problems of practical interest. The theory of Markov chains will guide our discussion as we cover topics such as martingales, random walks, Poisson process, birth and death processes, and Brownian motion.
Requirements/Evaluation: weekly homework/labs, classwork, and exams
Prerequisites: STAT 341
Enrollment Limit: 30
Enrollment Preferences: senior Statistics majors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
**Distributions:**  (D3)  (QFR)

**Quantitative/Formal Reasoning Notes:** This is a statistics class with a focus on mathematical skills and translating real world phenomena into mathematical descriptions.

---

**Spring 2025**

**LEC Section: 01    TF 2.35 pm - 3:50 pm     Elizabeth M. Upton**

**STAT 344  (S)  Statistical Design of Experiments  (QFR)**

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially e-commerce, are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look at both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

**Requirements/Evaluation:**  Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).

**Prerequisites:**  STAT 161 or 201 or 202, or equivalent, and Math 140 or equivalent, or permission of instructor

**Enrollment Limit:**  20

**Enrollment Preferences:**  Statistics majors, seniors, juniors, sophomores, first years

**Expected Class Size:**  15

**Grading:**  yes pass/fail option, yes fifth course option

**Distributions:**  (D3)  (QFR)

**Quantitative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

---

**Spring 2025**

**LEC Section: 01    MWF 10:00 am - 10:50 am     Richard D. De Veaux**

**STAT 346  (F)(S)  Regression Theory and Applications  (QFR)**

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

**Requirements/Evaluation:**  Weekly homework, quizzes, theory and data analysis exams, and final course project.

**Prerequisites:**  MATH/STAT 341, MATH 250, and at least one of STAT 201 or 202. Or permission of the instructor.

**Enrollment Limit:**  30

**Enrollment Preferences:**  Statistics Majors

**Expected Class Size:**  20

**Grading:**  yes pass/fail option, no fifth course option

**Distributions:**  (D3)  (QFR)

**Quantitative/Formal Reasoning Notes:** This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.
STAT 355 (F) Multivariate Statistical Analysis (QFR)
To better understand complex processes, we study how variables are related to one another and how they work in combination. In addition, we want to make inferences about more than one variable at a time. Elementary statistical methods might not apply. In this course, we study the tools and the intuition that are necessary to analyze and describe such datasets with more than multiple variables. Topics covered will include data visualization techniques for data sets with more variables, clustering algorithms, parametric and non-parametric techniques to estimate joint distributions, techniques for combining variables, performing dimension reduction, and making inferences.

Requirements/Evaluation: Homework, projects, quizzes, and exams.
Prerequisites: MATH 250, and STAT 346 or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: Juniors/seniors
Expected Class Size: 10
Grading: yes pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It is an advanced statistics class with prerequisites that are QFR courses

Fall 2024
LEC Section: 01 TF 1:10 pm - 2:25 pm Xizhen Cai

STAT 356 (F) Time Series Analysis (QFR)
Time series -- data collected over time -- crop up in applications from economics to engineering to transit. But because the observations are generally not independent, we need special methods to investigate them. This course will include exploratory methods and modeling for time series, including descriptive methods and checking for significance, and a foray into the frequency domain. We will emphasize applications to a variety of real data, explored using R.

Requirements/Evaluation: Evaluation is primarily based on quizzes and projects (on topics that interest you!). You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While most assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to live and online discussions, and working together with classmates on practice problems.
Prerequisites: STAT 346 (may be taken concurrently) or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: Statistics majors, seniors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Not offered current academic year

STAT 360 (F) Statistical Inference (QFR)
How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.

Requirements/Evaluation: Homework, Quizzes, Exams
Prerequisites: MATH 250, STAT 201 or 202, STAT 341
Enrollment Limit: 15
Enrollment Preferences: Statistics majors
Expected Class Size: 15
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: A rigorous mathematical course laying the foundation for reasoning with data

Fall 2024
LEC Section: 01 MWF 10:00 am - 10:50 am Richard D. De Veaux

STAT 365 (S) Bayesian Statistics (QFR)
The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes' Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.
Requirements/Evaluation: weekly homework and exams
Prerequisites: MATH/STAT 341 and STAT 346, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: juniors and seniors, Statistics majors, students who have taken STAT 360
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.
Not offered current academic year

STAT 372 (S) Longitudinal Data Analysis (QFR)
This course explores modern statistical methods for drawing scientific inferences from longitudinal data, i.e., data collected repeatedly on experimental units over time. The independence assumption made for most classical statistical methods does not hold with this data structure because we have multiple measurements on each individual. Topics will include linear and generalized linear models for correlated data, including marginal and random effect models, as well as computational issues and methods for fitting these models. As time permits, we will also investigate joint modeling of longitudinal and time-to-event data. We will consider many applications in the social and biological sciences.
Requirements/Evaluation: Weekly homework, midterm exams, a final exam, and a data analysis project
Prerequisites: STAT 346 (and an appropriate introductory statistics course, typically STAT 201 or 202)
Enrollment Limit: 20
Enrollment Preferences: junior and senior Statistics majors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: The course will cover a variety of statistical analysis methods for longitudinal data.
Attributes: PHLH Statistics Courses
Not offered current academic year
STAT 397 (F) Independent Study: Statistics
Directed independent study in Statistics.

Prerequisites: permission of department
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)

Not offered current academic year

STAT 398 (S) Independent Study: Statistics
Directed independent study in Statistics.

Prerequisites: permission of department
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)

Not offered current academic year

STAT 440 (S) Categorical Data Analysis (QFR)
This course focuses on methods for analyzing categorical response data. Traditional tools of statistical data analysis for continuous response data are not designed to handle such data and pose inappropriate assumptions. We will develop methods specifically designed to address the discrete nature of the observations and consider many applications in the social and biological sciences as well as in medicine, engineering and economics. The first part of the course will discuss statistical inference for parameters of categorical distributions and arising in contingency tables. The longer second part will focus on statistical modeling via generalized linear models for binary, multinomial, ordinal and count response variables, using maximum likelihood.

Requirements/Evaluation: Class participation and performance on exams, homework, and a project.
Prerequisites: STAT 346 and STAT 360
Enrollment Limit: 15
Enrollment Preferences: seniors and statistics majors
Expected Class Size: 12
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Arguing with data.
Attributes: PHLH Statistics Courses

Not offered current academic year

STAT 442 (S) Statistical Learning and Data Mining (QFR)
In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

Class Format: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.
Requirements/Evaluation: class participation, weekly homework, exams and an end-of-term project
Prerequisites: MATH/STAT 341 and STAT 346, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
STAT 458  (F) Generalized Linear Models- Theory and Applications  (QFR)
This course will explore generalized linear models (GLMs)--the extension of linear models, discussed in Stat346, to response variables that have specific non-normal distributions, such as counts and proportions. We will consider the general structure and theory of GLMs and see their use in a range of applications. As time permits, we will also examine extensions of these models for clustered data such as mixed effects models and generalized estimating equations.

Requirements/Evaluation: Weekly homework consisting of theoretical exercises and data analyses carried out in R. Short frequent quizzes and one midterm (with an in-class and take-home component). Final project and final exam.

Prerequisites: STAT 346, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Seniors and Statistics majors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Fall 2024

LEC Section: 01    TF 2:35 pm - 3:50 pm     Elizabeth M. Upton

STAT 465  (S) Bayesian Statistics  (QFR)
Prior knowledge being constantly updated by empirical observations -- the essence of Bayesian thinking provides a natural, intuitive, and more importantly, mathematically sounded, probabilistically principled way to characterize the process of learning. With some of its key ideas formulated based on Bayes’ Theorem dating back to 18th century, Bayesian inference is one of oldest schools of statistics (more than a century earlier than the Frequentist!). Yet it was not until the recent developments in sampling algorithms and computational powers that Bayesian inference gained its revival. Bayesian, and Bayesian-based methods, with their flexibilities in modeling (generative) process of data, interpretability with posterior probability statements, and coherent principles to incorporate empirical evidence a priori, have played key roles in modern data analysis, especially for those "big data" with enhanced complexity and connectivity. This course is designed to provide students a comprehensive understanding to what is Bayesian and the how's and why's. Students will be introduced to classic Bayesian models, basic computational algorithms/methods for Bayesian inference, as well as their applications in various fields, and comparisons with classic Frequentist methods. As Bayesian inference finds its roots and merits particularly in application, this course puts great emphasis on enhancing students' skills in statistical computation (mostly with R) and data analysis.

Requirements/Evaluation: Homework, exams, and project

Prerequisites: MATH/STAT 341, STAT 346, and STAT 360, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: seniors, Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Not offered current academic year
STAT 493  (F)(S)  Senior Thesis: Statistics

Winter Study---------------------------------------------

STAT 11  (W)  Introduction to Statistical Analysis of Network Data
Networks are everywhere in our connected world, from social networks like facebook and twitter, to information networks like citation and coauthors, from biological network like neural and ecological networks, to technological networks like internet connections or power grids. In recent years, there has been an explosion of network data. How do we learn and represent information from these data? In this course, you will see examples from different types of networks. We will learn how to organize, visualize and describe network data using proper tools in R. Additionally since things are connected in networks, we will explore statistical methods to overcome this challenge with dependent data. Tentatively coursework includes 2-3 class meetings per week for lectures and hands-on computer labs. Students will finish a final project analyzing a network dataset of their interest and share their findings in written or oral form.

Requirements/Evaluation: class participation, lab assignment, final project (short paper or oral presentation)
Prerequisites: one introductory statistic course (STAT 201 or STAT 202) with R experience before, or permission of the instructor
Enrollment Limit: 10
Enrollment Preferences: Students with a statistics background and prior experience working with R
Expected Class Size: NA
Grading: pass/fail only
Not offered current academic year

STAT 12  (W)  Data for the Public Good: Uses and Abuses of Data in Society
This class, accessible to statisticians and non-statisticians alike, will explore some of the many uses (and abuses) of data, statistics, and algorithms in society. We will discuss topics such as how our view of the world both informs and is formed by the data we collect and present; how to understand data in context; how algorithms intended to reduce bias have in several situations---criminal justice, credit and insurance, employment, and more---had the opposite effect of perpetuating human biases; and ways in which we might work with data more ethically and responsibly. We will meet three times a week for two-hour sessions as a group. Students will be asked to complete readings in advance and write short reflections before each class. The class will also involve a final project in which students investigate the use of data or statistics in an area of their choice and present their findings to their classmates (orally, through a short paper, or through designing a website).

Requirements/Evaluation: readings and written reflections; class participation; final project resulting in a presentation, short paper, or student-designed website
Prerequisites: an introductory statistics course (Stat 101/161/201/202) or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: short application form/statement of interest, with priority given to having a group of students with diverse (prospective) majors and levels of experience in statistics
Expected Class Size: 15
Grading: pass/fail only
Not offered current academic year

STAT 30  (W)  Senior Project: Statistics
To be taken by candidates for honors in Statistics other than by thesis route.

Class Format: senior project
Grading: pass/fail only
Not offered current academic year

STAT 31 (W) Senior Honors Thesis
Statistics senior honors thesis.
Class Format: thesis
Grading: pass/fail only
Not offered current academic year

STAT 99 (W) Indep Study: Statistics
Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.
Class Format: independent study
Grading: pass/fail only
Not offered current academic year
MUSIC (Div I)

Chair: Ed Gollin, Professor of Music

- Kris Allen, Lyell B. Clay Artist in Residence in Jazz Activities/Lecturer in Music, Director of the Jazz Ensemble
- Corinna S. Campbell, Associate Professor of Music (on leave Spring 2025)
- Elizabeth Elmi, Assistant Professor of Music
- Matthew A. Gold, Artist in Residence in Percussion and Contemporary Music Performance
- Ed Gollin, Chair and Professor of Music
- Wang Guowei, Artist in Residence in Chinese Music Performance and Director of the Williams College Chinese Music Ensemble
- Joanna Kurkowicz, Lyell B. Clay Artist in Residence, Violin and Concertmaster, Berkshire Symphony
- Anna C. Lenti, Lyell B. Clay Artist in Residence and Director of Choral/Vocal Activities, Lecturer in Music
- Tendai Muparutsa, Artist in Residence in African Music Performance, Lecturer in Music, Director of Zambezi, Co-Director of Kusika
- Ileana Perez Velazquez, Professor of Music (on leave Spring 2025)
- Daniel E. Prindle, Lecturer in Music
- Tim Pyper, Lecturer in Music, Artist Associate in Organ, Harpsichord and Piano, College Organist
- W. Anthony Sheppard, Marylin & Arthur Levitt Professor of Music
- Doris J. Stevenson, Lyell B. Clay Artist in Residence, Piano
- Zachary Wadsworth, Associate Professor of Music
- Sonja G. Wermager, Visiting Assistant Professor of Music (2024-25)

COURSES AND COURSE-NUMBERING

100-level courses are introductory in nature. They aim to acquaint students with a variety of topics in music, ranging from the materials of music (introductory music theory and musicianship) to various musical cultures (African, American, Asian, Caribbean, and European) and styles within those cultures (classical, folk, and popular). Most 100-level courses are designed for the general student and have no prerequisites; they assume no prior musical training, and are open to all students interested in increasing their understanding and appreciation of music. Two exceptions are the specific 100-level music-theory courses that fulfill the Music Theory and Musicianship/Materials and Structures requirement for the music major (MUS 103 and 104): these courses require a working knowledge of musical notation. MUS 103 and 104 are geared to potential majors and students with strong instrumental or vocal background, and are particularly suitable for first-year students interested in taking more advanced courses in music. Students without previous theory and aural skills training are encouraged to enroll in MUS 102, which also counts toward the Materials and Structures requirement of the major for students in the class of 2028 and later.

200-level courses offer students the opportunity to explore a range of more specialized musical topics, from performance, technology, and musicianship-based classes to courses focused on specific styles, periods, composers, and examinations of meaning in music. Most regular 200-level courses have no prerequisites but do require the ability to read music, and are usually open to all students who can do so, regardless of class year. Some 200-level tutorials and writing intensive courses have no prerequisites and do not require the ability to read music, but the workload and more advanced approach to the subject matter makes these courses best suited to sophomores, juniors, and seniors. For students in class years 2025, 2026 and 2027, the two 200-level courses that complete the music theory requirements for the music major (MUS 201 and 202) have prerequisites; these courses are geared to potential majors, majors, and students with strong instrumental or vocal background.

300-level courses are designed for sophomores, juniors, and seniors with a background in instrumental or vocal performance and fluency in reading musical notation to focus on specialized topics. Some 300-level courses are experiential in nature, including performance-based coursework in conducting, composition, arranging, orchestration, and improvisation. Others are advanced courses in music theory and analysis, musicology, or ethnomusicology, taught in a seminar context that emphasizes original research and analysis.

400-level courses are intended for advanced juniors and seniors, usually music majors, wishing to pursue thesis, independent study, or small seminar coursework in composition, theory and analysis, musicology, ethnomusicology, or performance, under the guidance of an individual faculty advisor.
MAJOR (Class of 2028 and beyond)

A minimum of nine courses are required for the major, as detailed below.

MUSICAL MATERIALS AND STRUCTURES:

Four courses are required, which must include MUS 103 and MUS 104. The other two courses may be selected from any of the department’s offerings in music theory and analysis, jazz theory and arranging, composition and electronic music.

MUS 102(F, S) LEC Introduction to Music Theory
Taught by: Ed Gollin, Tim Pyper
Catalog details

MUS 103(F) LEC Music Theory and Musicianship I
Taught by: Zachary Wadsworth
Catalog details

MUS 104(S) LEC Music Theory and Musicianship I
Taught by: Zachary Wadsworth
Catalog details

MUS 110 SEM Electronic Music Genres, a Creative Approach
Taught by: Ileana Perez Velazquez
Catalog details

MUS 201(F) LEC Music Theory and Musicianship II
Taught by: Ileana Perez Velazquez
Catalog details

MUS 202(S) LEC Music Theory and Musicianship II
Taught by: Ed Gollin
Catalog details

MUS 205(F, S) SEM Composition I
Taught by: Ileana Perez Velazquez, Zachary Wadsworth
Catalog details

MUS 206(F, S) SEM Composition II
Taught by: Ileana Perez Velazquez, Zachary Wadsworth
Catalog details

MUS 250(F) SEM The Musical Language of Louis Armstrong
Taught by: Kris Allen
Catalog details

MUS 252 / AFR 242 LEC Introduction to the Music of John Coltrane
Taught by: Kris Allen
Catalog details

MUS 254 / AFR 254 SEM Bebop: The (R)evolution of Modern Jazz
Taught by: Kris Allen
Catalog details

MUS 307(F, S) SEM Composition III
Taught by: Ileana Perez Velazquez, Zachary Wadsworth
Catalog details

MUS 308(F, S) SEM Composition IV
Taught by: Ileana Perez Velazquez, Zachary Wadsworth
Catalog details

MUSIC AND CULTURE:

Four courses are required which must satisfy one of the following three options (the three historical periods referred to below are: pre-1750; 1750 to 1900; 1900 to the present):

Option 1:
Two courses in Ethnomusicology (at least one at the 200-level or higher)
Two courses in Music History (one in any two of the three historical periods and at least one at the 200-level or higher)

Option 2:
Three courses in Music History (one in each of the three historical periods and at least one at the 200-level or higher)
One course in Ethnomusicology

Option 3:
Three courses in Ethnomusicology (at least one at the 200-level or higher)
One course in Music History pre-1900:
Music History: Pre-1750:

MUS 133 / GBST 132(S) SEM Musics of the Spanish Colonial Empire, ca. 1500-1800
Taught by: Elizabeth Elmi
Catalog details

MUS 172 SEM Early Modern Music and Spectacle
Taught by: Elizabeth Elmi
Catalog details

MUS 231(F) LEC Music in History I: Music and Culture from Antiquity to 1750
Taught by: Elizabeth Elmi
Catalog details

MUS 234 LEC Soundscapes of Renaissance Europe
Taught by: Benjamin Ory
Catalog details

MUS 235 / GBST 231 TUT Music in the Global Middle Ages, ca. 500-1500
Taught by: Elizabeth Elmi
Catalog details

Music History: 1750-1900:

MUS 165 LEC Mozart
Taught by: Marjorie Hirsch
Catalog details

MUS 232(S) LEC Music in History II: Classical and Romantic Music
Taught by: Sonia Wermager
Catalog details

MUS 241 / GERM 241(F) LEC German Romantic Song
Taught by: Sonia Wermager
Catalog details

Music History: 1900-present:

AMST 366 / AAS 316 Music in Asian American History
Taught by: W. Anthony Sheppard
Catalog details

MUS 119(F) LEC Rock and Roll Revolutions, 1950-1999
Taught by: W. Anthony Sheppard
Catalog details

MUS 150 / THEA 150 LEC The Broadway Musical
Taught by: W. Anthony Sheppard
Catalog details

MUS 151(S) LEC History of Jazz
Taught by: Kris Allen
Catalog details

MUS 233(F) LEC Music in History III: Art Music Since 1900
Taught by: W. Anthony Sheppard
Catalog details

MUS 238(S) LEC Music in Modernism
Taught by: W. Anthony Sheppard
Catalog details

MUS 239 / LEAD 239 LEC Music in the Global Cold War
Taught by: W. Anthony Sheppard
Catalog details

Ethnomusicology:

ARAB 214 / MUS 214 / COMP 270 SEM Divas and Dervishes: Introduction to Modern Arab Music and Performance
Taught by: Nicholas R Mangialardi
Catalog details

DANC 201 / AFR 201 / MUS 220(F) STU African Dance and Percussion
Taught by: Sandra Burton, Tendai Muparutsa
Catalog details

DANC 202 / AFR 206 / MUS 221(S) STU African Dance and Percussion
Taught by: Sandra Burton, Tendai Muparutsa
Catalog details

MUS 111 LEC Music in Global Circulation
MUSICAL PERFORMANCE:

 Majors are required to participate in faculty-directed departmental ensembles for at least four semesters, and enroll in partial credit music lessons for at least two semesters.

 CAPSTONE:

 Any 400-level seminar, 400-level Independent Study course, or second semester of a year-long Honors Thesis course. The capstone requirement may be satisfied in either the Junior or Senior years.

 MAJOR (Class of 2025, 2026 and 2027)

 A minimum of ten courses are required for the major, as detailed below.

 Four courses in Music Theory and Musicianship to be taken in sequence:

 • Music 103
 • Music 104a (Music Theory and Musicianship I) or Music 104b (Jazz Theory and Improvisation I)
 • Music 201
 • Music 202

 Three courses in European and American Music History:

 • Music 231
 • Music 232
 • Music 233

 Majors may choose to replace a maximum of one of these three specific courses with a course in music history covering aspects of the same period. The courses that may substitute for MUS 231, 232, and 233 are listed below:

 • Music 231: 133, 164, 172, 234, 235 or 261
 • Music 232: 143, 146, 165, or 166
 • Music 233: 118, 119, 138, 150, 151, 238, 239, 244, 251, 252, 254, or 316

 One course in World Music/Ethnomusicology from the following:

 Two electives:

 One must be taken in the senior year and at the 400-level to serve as a capstone course. The second semester of a year-long honors thesis, MUS 494, will satisfy the 400-level elective requirement; for students in the class of 2024 and subsequent years, Advanced Musical Performance, MUS 491 or 492, will not satisfy the 400-level capstone elective. The other elective may be fulfilled in any semester by any Music course but must be taken in addition to courses selected to satisfy the history, theory, and world music/ethnomusicology requirements detailed above.
Performance:
Majors are required to participate in faculty-directed departmental ensembles for at least four semesters.
Majors must enroll in partial credit music lessons for at least two semesters.

THE DEGREE WITH HONORS IN MUSIC

Three routes provide the opportunity for honors or highest honors consideration in the Music major:

Composition: A Composition thesis must include one major work completed during the senior year supported by a 10- to 15-page discussion of the student’s work or analysis of a major 20th century or contemporary work. The student’s general portfolio of compositions completed during the junior and senior years will also be considered in determining honors.

Performance: A Performance thesis must include an honors recital given during the spring of the senior year supported by a 15- to 20-page discussion of one or more of the works performed. The student’s general performance career will also be considered in determining honors.

History, Theory and Analysis, or Ethnomusicology: A written Historical, Theoretical/Analytical, or Ethnomusicological thesis between 65 and 80 pages in length. A written thesis should offer new insights based on original research. A public oral thesis defense is also required.

In order for a thesis proposal to be approved, a student must have at least a 3.3 GPA in Music courses (this GPA must be maintained in order to receive honors), and must have demonstrated outstanding ability and experience through coursework and performance in the proposed thesis area. Students are encouraged to seek the advice of their potential thesis advisor early in the junior year and no later than the first month of the second semester. A 1- to 2-page proposal written in consultation with the faculty advisor must be received by the Music chair by the end of spring break.

Honors candidates must enroll in Music 493(F)-W31-494(S) during their senior year. A student who is highly qualified for honors work, but is unable to pursue a year-long project for compelling reasons, may petition the department for permission to pursue a WS/one-semester thesis. The standards for evaluating such a thesis remain the same. Completed thesis is due by April 15.

LESSONS
Courses in individual vocal or instrumental instruction are fully subsidized for all students. (See Music 281-288 and Advanced Musical Performance 391, 392, 491, 492). For further information, check the Music Department webpage or contact the Department of Music.

STUDY ABROAD
One study abroad course may satisfy the one free elective requirement for the major, if approved by the department. A second study abroad course might satisfy any one of the specific required courses if the proposed course is clearly equivalent and if the substitution is approved by the department. Majors planning to study abroad should meet with the department chair to propose specific study abroad courses that might be approved to satisfy major requirements under this policy. No more than two courses taken abroad may count toward the major. Music lesson courses and ensemble participation pursued while studying abroad may count toward the performance requirements with approval of the department.

MUS 101 (F) Listening to Music
The goals of this course are 1) to encourage active, critical, and comparative listening practices, and 2) to consider the functions of music as an embodied, social, and context-dependent phenomenon. We will encounter music from across history and the globe, engaging with examples from a wide range of musicians and musical traditions. Topics will include: political protest music, music in religious contexts, the relationship between music and text, performing gender in music, the meaning of authenticity in musical contexts, and the ethics of musical listening. Through a variety of specific case studies, we will seek to become discerning listeners while also thinking critically about music’s capacities and limitations.

Requirements/Evaluation: class participation, occasional GLOW posts, three short essays, and a final exam
Prerequisites: none; intended for non-major students with little or no formal training in music
Enrollment Limit: 20
Enrollment Preferences: first-years, sophomores and any student who expresses a strong interest in the course
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

Fall 2024
MUS 102  (F)(S)  Introduction to Music Theory
The course presents an introduction to the materials and structures of music. Through a variety of applied and theoretical exercises and projects, students will develop an understanding of the elements of music (e.g. pitch, scales, triads, rhythm, meter, and their notation) and explore their combination and interaction in the larger-scale organization of works of classical, jazz and popular music (i.e. harmony, counterpoint, form, rhetoric). Practical musicianship skills will be developed through singing, keyboard, and rhythmic exercises in lecture, and through dictation and sight-singing exercises in a weekly aural-skills lab.

Requirements/Evaluation:  regular worksheets (1-2 pages), written and applied quizzes, model composition projects, midterm and final exam, participation

Prerequisites:  none
Enrollment Limit:  16
Enrollment Preferences:  first- and second-year students
Expected Class Size:  16
Grading:  yes pass/fail option,  yes fifth course option
Distributions:  (D1)
Attributes:  MUS Materials and Structures

LAB Section: 03    MWF 12:00 pm - 12:50 pm    Daniel E. Prindle

MUS 103  (F)  Music Theory and Musicianship I
Students in MUS 103 study some materials, structures, and procedures of tonal music, with a particular emphasis on subjects like tertian harmony, voice leading, counterpoint, rhythm, and form. Baroque chorales will serve as a central resource for this study, as will musical examples from a variety of times and places. Through a combination of keyboard harmony exercises, sight singing, dictation, analysis of musical scores, written exercises, and emulation composition projects, students will develop an intellectual, aural, and embodied understanding of tonal music. MUS 103 is designed for potential music majors and for students with prior experience interacting with notated music. Students should consult the music department website for information about music theory placement.

Class Format: In addition to the two lecture meetings each week, the class requires three weekly lab meetings (for keyboard skills, music writing skills, and aural skills).

Requirements/Evaluation:  weekly written work, written and applied quizzes, and midyear and final emulation composition projects

Prerequisites:  MUS 102, music theory placement test, or satisfactory performance on an Advanced Placement Examination

Enrollment Limit:  16
Enrollment Preferences:  first-years, potential Music majors, and those with strong musicianship backgrounds

Expected Class Size:  16
Grading:  no pass/fail option,  no fifth course option
Distributions:  (D1)
Attributes:  MUS Materials and Structures

Fall 2024
MUS 104  (S)  Music Theory and Musicianship I

Music 104 continues and expands the study of tonal music begun in Music 103, focusing particularly on counterpoint, seventh and ninth chords, larger musical forms, and chromatic harmony. The study of these topics is reinforced by musical analysis, written exercises, and emulation composition projects, as well as by applied musicianship work that includes exercises in sight singing, dictation, and keyboard harmony. **MUS 104 is designed for potential music majors and for students with prior experience interacting with notated music. Students should consult the music department website for information about music theory placement.**

**Class Format:** lecture two days a week; lab meetings (for keyboard skills, music writing skills, and ear training) three days a week

**Requirements/Evaluation:** weekly written work, written and applied quizzes, and midterm and final emulation composition projects

**Prerequisites:** MUS 103 or music theory placement test

**Enrollment Limit:** 16

**Enrollment Preferences:** first-year students, potential or declared Music majors, and those with strong musicianship backgrounds

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

**Attributes:** MUS Materials and Structures

Spring 2025

LEC Section: 01  TR 11:20 am - 12:35 pm  Zachary Wadsworth

LAB Section: 02  MWF 10:00 am - 10:50 am  Zachary Wadsworth, Tim Pyper, Daniel E. Prindle

LAB Section: 03  MWF 11:00 am - 11:50 am  Tim Pyper, Daniel E. Prindle, Zachary Wadsworth

MUS 105  (S)  Jazz Theory and Improvisation I

**Cross-listings:** AFR 212

**Primary Cross-listing**

The theory and application of basic harmonic structures and rhythmic language used in jazz performance. An introductory level course to the practice of jazz improvisation. Blues forms, modal compositions, diatonic progressions, secondary and substitute dominant chords, modulations. This is a performance practice course appropriate for students with basic skill on their instrument and some theoretical knowledge including all key signatures, major/minor keys and modes, intervals, triads and basic seventh chords and their functions within keys. Vocalists and drummers will be encouraged to study the piano; all students will complete jazz-specific piano and percussion lab assignments. Pianists, guitarists and bassists should be able to sight read chords on a jazz lead sheet.

**Class Format:** alternates between lecture style exposition of theoretical topics and a master class where students will perform and be evaluated on assigned repertoire

**Requirements/Evaluation:** Weekly assignments, (e.g. performance of exercises and repertoire, analysis) a midterm, a transcription project and the end of semester concert. Jazz piano and drum labs. Assignments from aural skills labs.

**Prerequisites:** MUS 103 or permission of instructor; musical literacy required as per above description; private study on student's individual instruction strongly encouraged

**Enrollment Limit:** 12

**Enrollment Preferences:** Prospective Music majors, then Jazz Ensemble members, then Music majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** this course will share aural skills labs (but not piano labs) with MUS 104a; students considering taking this course should consult the lab times and plan their schedules accordingly.
MUS 106  (S)  Skills for Singing

Skills for Singing is a course designed for students who wish to develop their skills in vocal technique and reading music. Students will be given an introduction to vocal technique and physiology through vocalises, repertoire, analysis, and studio class sessions. They will engage in group singing and solo presentation in a collaborative, master-class setting. They will also build knowledge of western music notation through basic music theory, score-reading, and sight-singing. Upon completion of the class, interested students will have established the foundational skills necessary to sing more confidently in both solo and ensemble environments.

Requirements/Evaluation: Reading and listening assignments, daily sight-singing practice and vocal exercises, music theory written assignments, musical preparation of solos, final presentation of prepared solo as part of a class recital.

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: Interested students will be asked to submit answers to a short survey regarding their experience and goals. Preference given to underclassmen and those who have auditioned unsuccessfully for choir and/or voice lessons.

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Spring 2025

SEM Section: 01  MWF 11:00 am - 11:50 am  Anna C. Lenti

MUS 110  (S)  Electronic Music Genres, a Creative Approach

In this course, students will study the theoretical and practical fundamentals of audio technology, MIDI production, sound design, and interactive composition. Students are not required to have any background in Music Technology. We will start by covering the basics of Electronic Music but the class will move at a fast pace covering more advance subjects in a short period of time. We will go over concepts of Physics acoustic, MIDI (sequencing, etc), Sound editing, Digital Signal Processing Effects, Sound Synthesis, and Interactive electronic music composition using Ableton Live, Max4Live, as well as Max MSP for students to learn how to program their own virtual synthesizers and/ or algorithmic composition to create interactive music in real time. Electronic Music Composition is a central part of the class. Students can choose any aesthetic of their choice for the composition projects, since the the focus of the class is on teaching students the technological tools to create the music of their choice. Students will be encouraged to mix different styles of music creating fusion.

Requirements/Evaluation: Four fusion composition projects and weekly presentation of students mini-projects focused on the electronic music techniques studied in class, and based on student research of musical styles chosen for their projects.

Prerequisites: One of the following: MUS 102, MUS 103, or permission of instructor for those students that have taken music lessons in their previous school: please contact iperez@williams.edu

Enrollment Limit: 8

Enrollment Preferences: Music majors, students with previous experience in Music.

Expected Class Size: 8

Grading: no pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

MUS 111  (F)  Music in Global Circulation  (DPE)

This course introduces a variety of musical genres and practices from around the world, alongside a discussion of the processes and politics of their
global circulation. Through learning about a combination of contemporary styles and longstanding musical traditions spanning a broad geographical range, students will develop a working knowledge of musical terms, concepts, and influential musicians. Beyond engaging with music's sound and structure, we will address its capacity to express personal and group identity, and its ability to both reflect and shape broader social ideas and circumstances. In particular, we will consider music's global circulation, and how its contents and meanings reflect those processes. Genres covered in the course vary intermittently but often include: "throat singing" genres in Tuva and Sardinia, Zimbabwean mbira and Chimurenga music, Argentine Tango, Ghanaian azonto and highlife, Balinese gamelan, and North Indian classical music. No prior musical training is required.

Requirements/Evaluation: class attendance and participation, regular short assignments/study questions, three 5-7 page written assignments, and an 8-10 page final paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: current or prospective majors in Music, upperclassmen.

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: Not only are students exposed to a wide range of musical material from across the globe, they also consider how music becomes meaningful and powerful in light of local contexts and the politics of circulation. Discussions and written assignments address issues including gender identity, economic disparity, the politics of cultural preservation, and music's potential in situations of political unrest.

Attributes: MUS World Music/Ethnomusicology

Not offered current academic year

MUS 112  (S)  Musics of Asia

Cross-listings: ASIA 112

Primary Cross-listing

This course offers an introduction to the great diversity of Asian music. Our survey will span from East Asia (China, Korea, and Japan) to Southeast Asia (Thailand and Indonesia) to the Indian subcontinent, Central Asia (Tibet and Afghanistan), to the Middle East (Iran and the Arabian peninsula), and will end with the extension of Asian music across North Africa and into Eastern Europe. Within this broad survey, we will focus on selected and representative musical cultures and genres. In each section of the course, aspects of cultural context (including music's function in religious life and its relationship to the other arts), will be emphasized. While our focus will be on the traditional and classical musics of these cultures, we will also consider the current musical scene. Encounters with this music will include attendance at live performances when possible.

Class Format: lecture/discussion

Requirements/Evaluation: evaluation will be based on four tests and two papers

Prerequisites: none; no musical experience necessary

Enrollment Limit: 20

Enrollment Preferences: if overenrolled preference will be given to sophomores and juniors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:

LEC Section: 01    MR 1:10 pm - 2:25 pm    W. Anthony Sheppard

MUS 119  (F)  Rock and Roll Revolutions, 1950-1999

This course will trace the history of rock music from the 1950s to the end of the 20th century, focusing on those musicians who revolutionized the
genre in various periods. Such "revolutions" are discovered in the use of new sounds and musical forms, in the relationship between lyrics and musical setting, and in the conception of rock's role in society. Three objectives will underpin our studies: to develop listening skills with music that one often hears, but perhaps rarely listens to intently; to determine in what ways popular music can be interpreted as reflecting and shaping its cultural context, particularly in terms of race and gender; and to encounter the work of several of the more innovative musicians in the history of rock.

Requirements/Evaluation: evaluation will be based on two tests, two papers, and a final exam
Prerequisites: no musical background assumed
Enrollment Limit: 80
Enrollment Preferences: random selection
Expected Class Size: 80
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

LEC Section: 01 TR 9:55 am - 11:10 am W. Anthony Sheppard

MUS 120 (F) Musics of Africa
Cross-listings: AFR 113
Primary Cross-listing
This course introduces musical traditions spanning the geographical breadth of continental Africa. We will prioritize hands-on experience and musical practice, critical listening, and deep social and political contextualization as strategies of musical engagement. Following an introductory exploration of overarching aesthetic and social trends in African musical practice, the course will then focus on 3-4 geographically rooted case studies, allowing us to discuss how different musical practices and subcultures (featuring traditional, contemporary, and popular forms) interrelate in a musical soundscape. The geographical focus of the case studies may vary but previous case studies have included: Ghana, Zimbabwe, Ethiopia, Egypt, Mali and the Democratic Republic of Congo.

Class Format: discussion
Requirements/Evaluation: grade based on attendance and participation, one synthesizing assignment at the end of each unit (for instance a 5-7 pg. paper, a podcast or performance-oriented assignment, an album review or curated listening list) and an 8-10pg final paper.
Prerequisites: no prerequisites: prior musical background is not essential for this class
Enrollment Limit: 20
Enrollment Preferences: current or prospective majors in Music and Africana Studies, seniors.
Expected Class Size: 12
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

Attributes: GBST African Studies MUS World Music/Ethnomusicology
Not offered current academic year

MUS 125 (F) Music and Social Dance in Latin America (DPE)
Cross-listings: DANC 125
Primary Cross-listing
This course offers a full-spectrum introduction to a number of Latin American social dance forms, including samba, salsa, tango, and the Suriname Maroon genre, awasa. Through critical listening and viewing assignments, performance workshops, and readings from disciplines spanning ethnomusicology, anthropology, dance studies, Latin American studies and history, students will combine a technical understanding of the musical and choreographic features of these genres with a consideration of their broader contexts and social impact. Among the questions that will drive class
discussions are: How do sound and movement interrelate? What aspects of gender, sexuality, class, race and ethnicity arise in the performance and consumption of Latin American genres of social dance? How do high political, economic, and personal stakes emerge through activities more commonly associated with play and leisure? This class is driven by academic inquiry into these various social dance practices; it does not prioritize gaining performance skills in the genres discussed. While there will be experiential components included throughout the course (for instance music or dance workshops), the majority of the class will be conducted in a discussion/seminar format. While the ability to read musical notation is helpful, it is not required.

**Class Format:** seminar/studio

**Requirements/Evaluation:** Regular short assignments, three 5-7 page papers, final project or paper (10-12pgs)

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** upperclassmen, majors in music, dance, Latino/a studies.

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

MUS 125(D1) DANC 125(D1)

**Difference, Power, and Equity Notes:** Together, the music and dance genres discussed here indicate the diversity of social dance practices within Latin America, broadly conceived. Each unit of the course delves into aspects of political, historical, and cultural context and their resonance within the realm of music and dance. Specific attention is paid to racial and intercultural aspects each genre's formulation, practice, and circulation, as well as the politics of representation in embodied expression.

**MUS 133 (S) Musics of the Spanish Colonial Empire, ca. 1500-1800 (DPE)**

**Cross-listings:** GBST 132

**Primary Cross-listing**

With territories around the globe from the Americas to the Philippines to portions of Western Europe, the Spanish colonial empire was, at its height, one of the largest and most expansive in history. This course explores the myriad ways in which Spanish colonial powers influenced, interacted with, and reacted to the musical cultures of the colonized and how indigenous and/or colonized peoples persisted in asserting their musical voices over the course of several centuries—from the time of the Spanish arrival in the Americas (as well as southern Italy and the East Indies) during the fifteenth and sixteenth centuries to the empire's eventual decline in the nineteenth century. We will begin by defining the concepts of "colonialism" and "imperialism" in order to understand how such political and socio-economic power structures developed and attempted to exert control and influence over subjugated populations—and consequently over their music. From there, we will investigate some of the musical developments and repertories that resulted from these efforts through a series of modules on various territories colonized by Spain, including the Spanish territories of Naples/southern Italy, New Spain, and the Philippines. Coursework will include discussion-based and written responses to weekly readings and listening assignments and small group presentations on a Spanish colonized space not covered in one of the central course modules. The ability to read musical notation is not required.

**Class Format:** Lecture-discussion

**Requirements/Evaluation:** Attendance/participation; weekly discussion-leading and informal written forum responses to assigned materials; two close reading/listening papers; and a final collaborative presentation project to be conducted in small groups

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference given to first years and sophomores

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option
This course is cross-listed and the prefixes carry the following divisional credit:
GBST 132(D2) MUS 133(D1)

MUS 141  (F)  Opera
Cross-listings: THEA 141

Primary Cross-listing
An introduction to the history of opera, from the genre's birth c. 1600 to the present. At various points in its 400-year development, opera has been considered the highest synthesis of the arts, a vehicle for the social elite, or a form of popular entertainment. Opera's position in European cultural history will be a primary focus of our inquiry. We will also study the intriguing relationship between text and music, aspects of performance and production, and the artistic and social conventions of the operatic world. The multidimensional nature of opera invites a variety of analytical and critical perspectives, including those of music analysis, literary studies, feminist interpretations, and political and sociological approaches. Works to be considered include operas by Monteverdi, Lully, Charpentier, Handel, Gluck, Mozart, Rossini, Donizetti, Verdi, Wagner, Bizet, Puccini, Strauss, Berg, Britten, Glass, and Adams.

Class Format: discussion
Requirements/Evaluation: a midterm, a brief paper, an 8-page paper, and a final exam
Prerequisites: none
Enrollment Limit: 20
Enrollment Preferences: Students with experience in music and/or theater studies.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

This course is cross-listed and the prefixes carry the following divisional credit:

Not offered current academic year

MUS 143  (F)  The Symphony
This course traces the European symphonic tradition from the late eighteenth century through the mid-twentieth century, focusing on works by Mozart, Haydn, Beethoven, Berlioz, Liszt, Mendelssohn, Schumann, Brahms, Dvorak, Mahler, Strauss, and Shostakovich. We will examine developments in musical form and harmony, social contexts for listening, and contemporary aesthetic debates about the nature of genius, the idea of musical tradition, and the narrative capacity of instrumental music.

Class Format: lecture/discussion
Requirements/Evaluation: students will be evaluated on three 3- to 5-page essays, two exams, and short weekly assignments, ability to read music not required
Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: first-years and sophomores
Expected Class Size: 10
MUS 149 (F) The Language of Film Music

Filmmakers have relied on music from the earliest days of silent movies (often accompanied by live musical performance) to our present age of slickly-produced online video. Along the way, trends have arisen (and have been artfully thwarted) in countless film scores, whether constructed from preexisting works or specially crafted by composers like Max Steiner, Duke Ellington, Bernard Herrmann, John Williams, James Horner, Mica Levi, or Björk. In this class, we will look at and listen to films from different times and places, observing which techniques evolved, which have changed very little, and considering when an idea is borrowed and when it might actually be new. We will also discuss the impact this language has on the experience of the viewer, and how film music functions in the wider culture. Assignments will consist of listening/viewing, responding in writing, and re-interpreting film clips with music you will compose or borrow.

Requirements/Evaluation: Evaluations include: several short writing and creative assignments, two quizzes, a midterm essay, and a final creative project.

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Juniors and seniors, or students with experience studying film

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Attributes: FMST Core Courses

MUS 150 (S) The Broadway Musical (DPE)

Cross-listings: THEA 150

Primary Cross-listing

Named for a specific road but enjoying a global impact, the Broadway musical has intersected with multiple styles and societal concerns over the past century. In this course, we explore the American musical theater's roots and relationship to opera, operetta, vaudeville, minstrelsy, and Tin Pan Alley. Traveling through the genre's history, we will encounter a wide range of musical styles, including ragtime, jazz, rock, and hip hop, and will explore several genre transformations, such as movies made into musicals and musicals into movies. We will develop a range of analytical skills as we investigate connections between choreography, lyrics, music, staging, and production. Throughout the semester, we will consider the genre's representations and reflections of ethnicity, race, sexuality, and class. The syllabus includes representative works by Gilbert and Sullivan, Cohan, Gershwin, Kern, Weill, Rodgers and Hammerstein, Lerner and Loewe, Bernstein, Lloyd Webber, Tesori, and Miranda, with particular focus on such works as Showboat, Oklahoma!, Guys and Dolls, West Side Story, Hair, Rent, and Hamilton.

Class Format: Discussion

Requirements/Evaluation: a midterm, a brief paper, an 8-page paper, and a final exam

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: Seniors and juniors and music majors.

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

THEA 150(D1) MUS 150(D1)
Difference, Power, and Equity Notes: We will develop skills aimed at analyzing and interpreting how perceptions of race, gender, and class shaped, and were shaped by, Broadway. We will consider the extent to which, for example, blackface minstrelsy and ethnic-based humor persisted and how specific musicals aimed to engage with critical social and political issues throughout the genre's history. Musicals have played a major role in the contested and ongoing endeavor to define "America."

Not offered current academic year

MUS 151  (S)  History of Jazz

"There are only three things that America will be remembered for 200 years from now when they study the civilization: The Constitution, Jazz Music and Baseball. These are the three most beautiful things this culture's ever created."--(Gerald Early) Jazz is the most common name for a great African American Art form that still defies definition. Over the past century this elastic tradition has laid down firm roots for numerous other American and World musics, while itself in the throes of a seemingly permanent identity crisis. Jazz is perennially declared dead or dying yet consistently summoned by advertisers to lend vitality and sex appeal to liquor or automobiles. By any name and regardless of its health status, jazz has a rich history of conservative innovators, at once restless and reverent, who made fascinating leaps of creativity out of inspiration or necessity. This "listening intensive" class will look at the past century of jazz music through ideas, "what-if" questions and movements that changed the way the music was created, presented and perceived. Both musical concepts (such as syncopation and cross instrumental-influence) and cultural connections (racial, technological and economic) will be examined, giving us freedom to link similar kinds of musical thought across disparate settings and decades. Our inquiry will include (but not be limited to) the lives and music of Louis Armstrong, Fletcher Henderson, Mary Lou Williams, Duke Ellington, Charlie Parker, Thelonious Monk, Dizzy Gillespie, Art Blakey, John Lewis, Miles Davis, John Coltrane, and Wayne Shorter.

Requirements/Evaluation:  Regular reading and listening assignments; 4 quizzes, midterm, final, one 5-6 page paper

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: Music Majors

MUS 165  (F)  Mozart

This course will examine the extraordinary life and musical genius of Wolfgang Amadeus Mozart. Through lectures, discussion, readings, and guided listening, students will gain appreciation of Mozart's classical compositional style and familiarity with many of his greatest works. Among the topics we will explore are Mozart's pivotal position as a musician in Viennese society; his childlike nature and exquisite artistry; his relationship with his domineering father Leopold; his ties to Haydn and Beethoven; and the myths about Mozart, including that he was murdered by Salieri, that arose in the over two centuries since his death.

Class Format: discussion

Requirements/Evaluation:  class participation, two 5-6 page papers, a midterm exam, and a final exam

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: students with demonstrated interest in music

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

MUS 172  (F)  Early Modern Music and Spectacle
Nuns, shepherds, demi-gods, tyrants, warriors, angels, and saints. No matter what story you tell, spectacle is never just spectacle. Whether in an opera, a pageant, or a comic play, the costumes, stage machinery, and visual effects are deeply encoded with political, religious, and cultural meanings. In this course, we will explore how music and spectacle worked together to create complex layers of meaning in various cultural contexts throughout the late medieval and early modern world (ca. 1400-1750). In doing so, we will consider how the magnificent representations of aristocratic, imperial, and colonial power central to such dramatic performances reveal wider cultural issues of gender, race, and religion. The course structure will follow a series of thematic modules, each addressing several case studies, on topics such as colonial power, women and madness, religious fervor, political propaganda, and patronage. Each week, students will take an active role in analyzing, discussing, and presenting on these topics and their related case studies both in and outside of class. For the final project, students will work in groups to develop fictional podcast interviews between historical spectators of an early modern musical-dramatic performance of their choosing. The ability to read musical notation is not required.

Class Format: lecture-discussion

Requirements/Evaluation: Attendance/participation; weekly discussion-leading and written informal forum responses to assigned materials; two close reading/listening papers; and a semester-long group podcasting project

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: preference given to first years and sophomores

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

MUS 173  (S) Music, Medicine, and Madness  (WS)

This class will explore intersections between medicine and music in Europe and the United States between 1750 and 1900, with particular attention to constructions of "madness" as a condition that could be triggered, treated, or expressed by music. Through focused readings, analysis of musical examples, and discussion, we will examine historical discourses concerning music's ability to influence the mind and body—and through this examination gain perspective on current discussions of both mental and physical health. Topics will include the "mad scene" trope in 19th-century opera, the idea of the suffering genius composer, the history of music as medical treatment, and how factors like race, gender, and ability shaped understandings of musical achievement and medical diagnosis.

Class Format: lecture/discussion

Requirements/Evaluation: class participation, one-time discussion leading, musical analysis essay, article analysis essay, final research project proposal and presentation

Prerequisites: ability to read music helpful but not necessary

Enrollment Limit: 15

Enrollment Preferences: Music majors, those planning to major, or those with strong interest in music, medicine and its history, disability studies, or gender studies. If overenrolled, the instructor may ask students to answer a questionnaire to determine enrollment.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (WS)

Writing Skills Notes: Three papers and engaged class participation. Outlines and drafts of two of the papers will be required. Students will receive detailed comments on each paper, allowing them to build upon those comments in subsequent writing assignments.

Spring 2025

LEC Section: 01    TF 1:10 pm - 2:25 pm    Sonja G. Wermager

MUS 176  (F) Protest Song

What's in a song? And how might it connect to our disparate cultures, politics, and identities? Throughout history, the genre of song has been a compelling mode of self-expression. It encodes specific elements of identity, emotion, history, and culture by combining the power of lyric poetry with that of the human voice. It is no wonder, then, that it has also functioned as a primary vehicle for expressions of political resistance, protest, and
dissent within a range of socio-cultural movements around the world. In this course, we will consider the fundamental question of what makes a song a protest song. We will begin by defining key ideas of resistance and protest within music more broadly. We will then go on to consider what kinds of socio-political meaning can be encoded within a song through its lyrics, musical composition, and performance style. To that end, the class will spend the semester investigating a series of case studies from around the world in historical context, including examples from southern Italy, Mexico, South Korea, Egypt, Ireland, South Africa, and the United States. Examples will include songs by well-known figures such as Big Mama Thornton, Janis Joplin, Kendrick Lamar, Bob Dylan, Umm Kulthum, and Roberto Murolo, as well as anonymous examples from traditions like the Mexican son jarocho, African American spiritual, Irish rebel song, classic Neapolitan song, and South Korean protest song. In addition to weekly reading and listening assignments, students will spend the semester creating curated playlists of songs associated with socio-cultural movements of political protest, resistance, and/or dissent to be presented and discussed during the final week of class.

Class Format: lecture-discussion

Requirements/Evaluation: Attendance/participation; weekly discussion-leading and informal written forum responses to assigned materials; two close reading/listening papers; and a curated playlist of songs with accompanying liner notes to be presented and discussed during the final week of class.

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Preference given to first years and sophomores

LEC Section: 01 TR 9:55 am - 11:10 am Elizabeth G. Elmi

MUS 177 (S) Gender and Sexuality in Music (DPE)

Cross-listings: WGSS 177

Primary Cross-listing

This course explores key themes in the expression of gender and sexuality through music. It draws from primarily 21st century examples, across cultures and genres, ranging from pop boy bands to Indian bhangra dance to the musical avant-garde. Themes will include: communicating gendered ideals, dance and embodiment, transgressive performances, biography and subjectivity, intersectionality, music and sexual violence, and marketing. We will explore the ways that ideas and identities related to sex and gender are formulated and mobilized in music's performance and consumption. Inevitably, issues of sound and stagecraft intersect with factors such as race, age, and class, further informing these experiences. Students will consider their own processes of identifying and interpreting expressions of gender and sexuality in sound and movement, and contemplate the role of culture and society in informing those interpretations.

Requirements/Evaluation: attendance/participation, intermittent GLOW posts and short assignments (2 pgs or less), midterm project, and either a 12-page final paper or a project with supplementary paper (length to be determined in consultation with the instructor).

Prerequisites: open to all students; familiarity with musical terminology is helpful but not required

Enrollment Limit: 20

Enrollment Preferences: WGSS and MUSC majors/prospective majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

MUS 177(D1) WGSS 177(D2)

Difference, Power, and Equity Notes: This course critically examines the ways in which music constructs and reflects gendered and sexual identities in intersectional space. We discuss how normative viewpoints come to be accepted and interpreted as ‘natural,’ and how musicians and audiences have maneuvered within and against those socio-political expectations. Music and readings span a wide range of sources—elite, popular, counter-cultural; from Euro-American sources to genres hailing from Brazil, Korea, and India.
MUS 179 (S) James Baldwin's Song

Cross-listings: AFR 128 / COMP 129

Secondary Cross-listing

"It is only in his music [. . .] that the Negro in America has been able to tell his story. It is a story which otherwise has yet to be told and which no American is prepared to hear," wrote James Baldwin in *Notes of a Native Son* in 1955. In this course, we strive to listen more closely to racialized experience through James Baldwin's musical literature. Through analysis and creation of music, we hope to better understand cultural difference and collective humanity. In this course, we closely analyze James Baldwin's use of song names, creation of musician characters, and replication of musical elements in his writing. Baldwin's musical word play crosses historical and genre boundaries. So we will explore texts from his early to late career, such as the gospel music of his youth in the semi-autobiographical novel *Go Tell It on the Mountain*, the metaphor of the blues in the play written during the civil-rights movement *Blues for Mr. Charlie*, the jazz musician protagonist in "Sonny's Blues" written after World War II in Paris, and his only musical recording in *A Lover's Question* set down near the end of his life. In addition to closely analyzing James Baldwin's attention to music throughout his literature, students will learn basic music writing and production skills. The tutorial will draw on a range of musical resources, including playlists, music workshops, guest lectures and performances. All of these resources will guide students to a more attuned hearing not only of music but also of the African American experience it reflects. By the end of the course, students will have written several short 1-2 page close analysis essays and song lyrics. For their final project, students will produce an original song based on key insights from the course. No musical experience is required, though an openness to learn and practice songwriting is expected.

Requirements/Evaluation: Several short 1-2 page close analysis essays of Baldwin's work, oral peer feedback presentations, song lyrics, and an original song composition for the final project

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: This course is specifically for first-year students and they will receive preference in this class; a statement of interest will be solicited from pre-registrants.

MUS 183 (F) Stage Direction for Opera and Musical Theatre

Cross-listings: THEA 183

Primary Cross-listing

The course provides an overview of the fundamentals of stage direction for opera and musical theatre. Students will develop an understanding of the basic principles of design and the process necessary for developing an approach to directing a production. They will explore the work of stage directors whose output has been particularly influential and learn about a variety of approaches to process and rehearsal technique. Repertoire studied will include a range of opera and musical theatre from the beginning of the form to its current trends and a broad variety of directorial approaches from traditional to concept productions. Students will complete the process of developing a concept/approach for a production with a title of their choosing.

Class Format: Hybrid lecture/studio format

Requirements/Evaluation: Students will complete the process of developing a concept/approach for a production with a title of their choosing.

Prerequisites: none

MUS 211 (F)  Music, Nationalism, and Popular Culture  (DPE)
Cross-listings: ANTH 211
Primary Cross-listing
This course surveys the manner, function, and contexts through which sound and ideas of national belonging are linked. We will consider influential
and iconic musicians (e.g. Umm Kalthoum, Amalia Rodriguez, Bob Marley, Carlos Gardel), international forums for the expression of national sentiment (the Olympics, World Cup, and Eurovision competitions), and a wide range of instruments, genres, and anthems that are strong conduits for national sentiment. Drawing on the work of critical theorists including Benedict Anderson, Michael Herzfeld, and Homi K. Bhabha, we will pursue a number of analytical questions: What parallels exist between musical and political structure? How do nations adjust as their policies and demographics change? How are cultural forms implicated in postcolonial nation building projects? What marginal populations or expressive forms are included, excluded, or appropriated in the formation of national identity? Finally, what differences emerge as we change our focus from a national to an international perspective, or from officially endorsed representations of national culture to unofficial popular forms of entertainment?

Requirements/Evaluation: Class participation, regular short (1 page) written responses, two 5- to 6-page papers, a Final Paper/Project

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Upperclass students and music majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

MUS 211(D1) ANTH 211(D2)

Difference, Power, and Equity Notes: Owing to its global focus and attention to power and privilege in political and musical structures, this course meets the DPE requirement. Topics include the use of music for social control and subversion in Mobutu's Zaire, its affective power in U.S. campaign ads, and the ways in which constructions of ‘folk music’ impact power differentials in a national political structure. Assignments help students develop an awareness of the specific strategies whereby music mobilizes national ideologies.

MUS 214  (S) Divas and Dervishes: Introduction to Modern Arab Music and Performance    (DPE) (WS)

Cross-listings: COMP 270 / ARAB 214

Secondary Cross-listing

From Sufi rituals to revolutionary uprisings, music has long played a central role in the social, political, and religious life of the Arab world. This is especially audible in the modern era, when new technologies and institutions began to record, amplify, and broadcast the region's sounds, preserving centuries-old traditions while also producing new forms of popular music. This course introduces students to Arab musical genres and practices as they developed from the late nineteenth century. We will cover a broad geographical range, exploring the classical Andalusian repertoires of Algeria, ecstatic dervish chants in Egypt, patriotic pop tunes from Lebanon, and other topics. To highlight connections between musical traditions as well as their unique local features, we will ask questions such as: What can music tell us about interactions between sacred and secular life? How is music used to define social groups and negotiate identity, gender, and class? Which musical characteristics are associated with Arab "heritage" and "modernity," and how are these performed? In what ways does music shape everyday life in the Arab world? Class sessions and discussion will be based on academic readings and at-home listening assignments. No previous knowledge of Arabic or Arab music are required.

Requirements/Evaluation: In-class participation, short essays (1 page) every two weeks, midterm presentation, and a final paper (12-14 pages).

Prerequisites: None

Enrollment Limit: 19

Enrollment Preferences: Arabic Studies and Music majors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

COMP 270(D1) MUS 214(D1) ARAB 214(D1)

Writing Skills Notes: Students will develop their writing skills by submitting one-page unit responses every two weeks and a final paper of 12-14
pages on a topic of their choice. Students will receive feedback on each writing assignment and have opportunities for multiple drafts and peer review during the semester.

**Difference, Power, and Equity Notes:** Through the lens of music, this course critically examines modern Arab society and power dynamics related to politics, gender, race, and class.

**Not offered current academic year**

**MUS 217 (S) Hip Hop Culture (DPE) (WS)**

**Cross-listings:** AMST 222 / ENGL 221 / AFR 222

**Secondary Cross-listing**

The course examines how young people of color created hip hop culture in the postindustrial ruins of New York City, a movement that would eventually grow into a global cultural industry. Hip hop music producers have long practiced "diggin' in the crates"--a phrase that denotes searching through record collections to find material to sample. In this course, we will examine the material and technological history of hip hop culture, with particular attention to hip hop's tendency to sample, remix, mash-up, and repurpose existing media artifacts to create new works or art. We will use a media archaeological approach to examine the precise material conditions that first gave rise to graffiti art, deejaying, rapping, and breakdancing, and to analyze hip hop songs, videos, and films. Media archaeology is a critical and artistic practice that seeks to interpret the layers of significance embedded in cultural artifacts. How does hip hop archaeology remix the past, the present, and the future? How do the historical, political, and cultural coding of hip hop artifacts change as they increasingly become part of institutional collections, from newly established hip hop archives at Cornell and Harvard to the Smithsonian National Museum of African American History and Culture?

**Requirements/Evaluation:** Four papers, project with presentation, and a final exam.

**Prerequisites:** None

**Enrollment Limit:** 19

**Enrollment Preferences:** AMST majors or prospective majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

AMST 222(D2) ENGL 221(D1) AFR 222(D2) MUS 217(D1)

**Writing Skills Notes:** Students in this course develop a capacity to write generative arguments in an interdisciplinary scholarly context. Students will receive feedback not only on structure, substance, and style, but also on how to best build a line of inquiry, how to gather high-quality evidence, and how to make one's thinking productively intersect with more than one scholarly or creative field.

**Difference, Power, and Equity Notes:** This course requires students to use an effective descriptive and critical vocabulary to discuss and analyze artifacts of hip hop culture, with attention to race, gender, class, sexuality, and other categories of social difference. They must understand the material, technological, historical, and cultural contexts that gave rise to hip hop culture, and proficiently synthesize scholarly perspectives related to the formation and transformations of hip hop from the early 70s to the early 21st cent.

**MUS 220 (F) African Dance and Percussion**

**Cross-listings:** DANC 201 / AFR 201

**Secondary Cross-listing**

We will examine two forms that embody continuity of tradition or the impact of societal, political or economic change. Lamban was created by the Djeli, popularly called Griots served many roles in the kingdoms of Ghana and Old Mali from the 12th century to current times. This dance and music form continues as folklore in modern day Guinea, Senegal, Mali and The Gambia where it is practiced by the Mandinka people. Bira is an ancient and contemporary spiritual practice of Zimbabwe's Shona people. While these forms are enduring cultural practices, Kpanlogo from the modern West
African state of Ghana represents the post-colonial identity of this nation's youth and their aspirations for independence at the end of the 1950s. We will also consider the introduction of these forms outside of their origin. This course can be taken for academic and/or PE credit.

**Class Format:** Class hours will be used to learn and use the dance and music of at least two forms including historical context, and individual or group performance project. When possible, our process will include guest artists and field trips to see live performances. As well as use of the archives at Jacob's Pillow Dance Festival, Sawyer Library and the art collection at Williams College Museum of Art.

**Requirements/Evaluation:** Discussion of assignments, semester long group performance project rooted in the materials taught. Students enrolled for PE credit are responsible only for the performance-based projects

**Prerequisites:** none

**Enrollment Limit:** 16

**Enrollment Preferences:** Students who have taken a 100 level dance course or DANC 202; have experience in a campus-based performance ensemble; or have permission of the instructors

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Cross-listings:** DANC 202 / AFR 206

**Secondary Cross-listing**

Before the 20th century, the African continent was the source of dance and music that influenced new forms rooted on and off the continent. These forms are shaped by the impact of religion, colonialism, national political movements, travel, immigration, and the continuing emergence of technology. In South Africa, the labor conditions of miners instigated the creation of Isicathulo, Gum boots, and in Brazil the history of colonialism is a factor that anchors Samba as a sustaining cultural and socioeconomic force. The birth of Hip Hop in the 20th century finds populations across the globe using its music, dance, lyrics, and swagger as a vehicle for individual and group voice. Hip Hop thrives as a cultural presence in most countries of the African continent and in the Americas. We will examine the factors that moved this form from the Bronx, New York, to Johannesburg, South Africa, and Rio, Brazil. We will examine at least two of these forms learning dance and music technique and composition material that will inform their practice. Each of these genres generated physical practices, new and enduring communities while continuing to embody specific histories that have moved beyond their place of origin. What is their status in this century?

**Class Format:** Class hours will be used to learn and use the dance and music of at least two forms including historical context, and individual or group performance project. When possible, our process will include guest artists and field trips to see live performances. As well as use of the archives at Jacob's Pillow Dance Festival, Sawyer Library and the art collection at Williams College Museum of Art.

**Requirements/Evaluation:** Discussion of assignments, semester long group performance project rooted in the materials taught. Students enrolled for PE credit are responsible only for the performance-based projects

**Prerequisites:** none

**Enrollment Limit:** 16

**Enrollment Preferences:** students who have taken DANC 107, 108 or DANC 201; have experience in a campus based performance ensemble; or have permission of the instructors

DANC 202(D1) AFR 206(D2) MUS 221(D1)
MUS 231 (F) Music in History I: Music and Culture from Antiquity to 1750

This course explores over 1500 years of music-making in (and around) Europe and the Americas from antiquity to 1750 through an investigation of significant musical styles, forms, and theories in cultural and historical context. Our primary inquiry will be to consider how and why these musical styles and forms were created and circulated—through both oral performance and the written medium—by considering the major historical, cultural, technological, and aesthetic issues surrounding them. We will further contextualize these developments within a deeper consideration of the political, religious, racial, and gender-based interactions and divisions throughout history. In doing so, the course introduces the modern study of music history, sampling a broad range of recent scholarship reflecting an array of critical approaches to the study of early music in our own day. Weekly coursework will include readings on music historical topics, as well as listening and score analysis of key repertory in modern transcription. Assessments will take place throughout the semester through listening/score quizzes, exams, primary source presentations, and a research-based essay project focused on repertories and practices outside of the traditional musical canon.

Class Format: lecture-discussion

Requirements/Evaluation: Attendance/participation; 3-4 short quizzes; midterm and final exams; and a research-based essay project

Prerequisites: ability to read music; open to qualified non-majors with the permission of instructor

Enrollment Limit: 15

Enrollment Preferences: music majors, those planning to major in music, and any student with a strong background and interest in music.

Expected Class Size: 8

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Required course for Music majors. Music majors may not take MUS 231 as pass/fail if they are using it to fulfill the Medieval/Renaissance/Baroque music history requirement for the music major.

MUS 232 (S) Music in History II: Classical and Romantic Music

MUS 232 traces the development of Western art music from 1750 to 1900. Through listening, reading, and score analysis, we will study a broad range of composers and genres, Classical and Romantic aesthetics, and connections between music and political, philosophical, social, and cultural developments of the period. Composers include Haydn, Mozart, Beethoven, Schubert, Robert Schumann, Clara Schumann, Fanny Mendelssohn Hensel, Berlioz, Chopin, Liszt, Verdi, Wagner, Brahms, Tchaikovsky, Mahler, and others. Some of the topics we will discuss include the changing role of composers in society, music's relationship to the other arts, challenges faced by female composers, controversies surrounding music and meaning, the interaction of music and drama in opera, and musical nationalism.

Class Format: lecture-discussion; the class will meet on Mondays and Wednesdays

Requirements/Evaluation: class participation, two 5-6 page papers, GLOW posts, midterm and final exams

Prerequisites: ability to read music

Enrollment Limit: 15

Enrollment Preferences: Music majors, those planning to major, and any student with a strong interest in music

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Attributes: MUS Music History: 1750-1900
MUS 233 (F) Music in History III: Art Music Since 1900

A historical survey of European and American art music from the early twentieth century to the present. Encounters with this music often challenge our ears and musical minds and require us to reconsider fundamental conceptions of music itself. Throughout the course, we will pursue a contextual approach and will investigate this music in relation to contemporary developments in the other arts, to popular musical styles, and to global intersections. We will carefully consider the ways in which evolving conceptions of race, ethnicity, and gender shaped this music history. Topics and styles will include: modernism (atonal expressionism, twelve-tone techniques, neoclassicism); new technologies (electronic, multimedia, digital); the impact of jazz at home and abroad; American experimentalism; postmodernism (minimalism, neoromanticism); nationalism (Eastern European, Latin American, East Asian); and the impact of geopolitics on musical composition (totalitarianism; World War II; Cold War).

Class Format: discussion

Requirements/Evaluation: class participation, two papers, a midterm, and a final exam

Prerequisites: ability to read music

Enrollment Limit: 15

Enrollment Preferences: Music majors or students with some musical background.

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: required course for Music majors

MUS 234 (F) Soundscape of Renaissance Europe

What was the sonic experience of living in late-medieval and early-modern Europe? This course will explore the sights and sounds of daily life for cultural elites as well as the average urban resident. Although it is often vocal polyphony that first comes to mind when thinking about Renaissance music, acoustic environments were complex, noisy, and diverse. This course aims to reflect that heterogeneity: topics include bells, processions, music and architecture, instrumental music, plainchant, visual depictions of music-making, and uses of music to project power, as well as sacred and secular vocal polyphony. Students will zoom in on cities, courts, and churches, especially the musical centers of Bruges, Florence, Ferrara, the Imperial Court of Holy Roman Emperor Charles V, and Bavaria. The course will examine music by some of the most important composers of the era, including Guillaume Du Fay, Josquin des Prez, Philippe Verdelot, Nicolas Gombert, and Orlando di Lasso.

Class Format: Meeting twice per week. Class discussion will be central to this course.

Requirements/Evaluation: in-class preparation and participation, short mid-term paper, final presentation, and final paper

Prerequisites: ability to read musical notation

Enrollment Limit: 20

Enrollment Preferences: music majors, those planning to major in music, or any student with a strong interest in music or Renaissance Europe

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

MUS 235 (S) Music in the Global Middle Ages, ca. 500-1500 (WS)
Cross-listings: GBST 231

Primary Cross-listing

Spanning 1000 years, the period encompassing the Middle Ages (ca. 500-1500) was a time of experimentation, exploration, and growing interconnection around the world. From economic expansions to developing trade routes and from violent religious crusades to flourishing universities, cities, and courts, opportunities for cultural investment and exchange among regions in Western Europe, North Africa, and Central and East Asia were plentiful, if not always peaceful. In this seminar, we will consider how a global historical perspective shifts our understanding of music in the Middle Ages from one based on hegemonic European progress in isolation to one that reveals a multitude of influences, interactions, and interconnections among people of various cultures, races, and religions both within and outside of the European continent. In this tutorial, we will investigate a series of case studies in order to address how and where these global interconnections took place and what musical practices flourished as a result. We will give special consideration to the following topics: orality and literacy, race and difference, the politics of religion, economic power, and manuscript culture. In grappling with these topics, students will engage in weekly readings on musical and broader historical topics, listening and score analysis of key repertory in modern transcription, and study of original notation through manuscript facsimiles.

Requirements/Evaluation: Students will write and present a 5- to 6-page paper every other week and a 1-2 page response to their partner's paper in the alternate weeks. Evaluation will be based on five papers/presentations, and five responses.

Prerequisites: Ability to read music, or permission of instructor

Enrollment Limit: 10

Expected Class Size: 6

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

MUS 235(D1) GBST 231(D2)

Writing Skills Notes: In this tutorial course, students will write and present a 5- to 6-page paper every other week (five papers total) and a 1- to 2-page response to their partner's paper in the alternate weeks (five responses total). Through discussion in the tutorial sessions and comments on the papers, the course will place strong emphasis on developing students' critical thinking and writing skills.

MUS 238 (S) Music in Modernism (WS)

The synthesis of the arts was a primary pursuit of modernist composers, artists, choreographers, and writers. Seeking either to realize Wagner's "total work of art" in the theater, or to uncover the more general correspondences celebrated by Baudelaire, modernists consistently looked beyond their own media. Collaborations on works of "total theater" were common: Satie, Cocteau, Massine, Picasso; Brecht, Hindemith, Weill; Stravinsky, Nijinsky, Bakst; Claudel, Honegger, Rubinstein. Modernists explored new connections between music and color (Scriabin, Kandinsky), music and literature (Joyce, Mann), and music and dance (Duncan, Graham). Occasionally, modernists attempted to unite the arts on their own: Schoenberg painted, Pound composed, and Kokoschka wrote. Our focus will be on those works of music, art, dance, and literature that explored new relationships between the arts. One goal will be to investigate whether specific equivalents exist between techniques of modernist painting, poetics, choreography, and composition. Aware of the risks and rewards of interdisciplinary study, we will attempt our own theories of artistic synthesis. This course is designed to bring multiple perspectives to the study of music in modernism.

Class Format: discussion

Requirements/Evaluation: Three papers (6, 8, and 12 pages in length) and engaged class participation. Outlines and drafts of two of the papers will be required. Students will receive detailed comments on each paper, allowing them to build upon those comments in subsequent writing assignments.

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: If overenrolled, preference will be given to sophomores and juniors.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

MUS 239 (S) Music in the Global Cold War (WS)

Cross-listings: LEAD 239

Primary Cross-listing

Throughout the Cold War (1947-1991), music was deployed as a weapon, as a source of nationalist and ideological inspiration, as a form of political protest and resistance, and as propaganda. Music both echoed and helped shape political views and, therefore, prompted various forms of regulation and censorship (McCarthyism in the U.S.; the Union of Soviet Composers). To counter Soviet claims of American cultural inferiority and racism, the U.S. sponsored numerous musical diplomacy efforts showcasing both jazz (Armstrong; Ellington; Brubeck) and classical musicians and composers (Bernstein; American orchestras). Cold War politics and the threat of nuclear war influenced musical styles (Copland; Soviet Socialist Realism; the popular American folk music revival; serialism; rock behind the Iron Curtain), specific musical events (Tokyo East West Music Encounter; concerts celebrating the fall of the Berlin Wall), and individual careers (Shostakovich; Robeson; Van Cliburn). To investigate music's political roles and capacity for expressing communist and democratic capitalist ideologies, we will adopt a case study approach. The Cold War was a global political and, frequently, militaristic struggle. Though our focus will be on music in the U.S.S.R. and U.S.A., we will also consider musical developments impacted by the Cold War throughout Western and Eastern Europe, in Latin America, and in East Asia.

Class Format: Class discussion will be central to this course.

Requirements/Evaluation: 20% = Participation; 20% = Paper #1, 5-6 pages; 25% = Paper #2, 8 pages; 35% = Paper #3, 12 pages, due during exam period

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Students with relevant experience in Political Science, History, or Music studies.

MUS 241 (F) German Romantic Song

Cross-listings: GERM 241

Primary Cross-listing

An emblem of Romanticism. A mainstay of recitals. A public performance of interior feeling. Why is it that the Lied, a short song for piano and solo voice, remains such an enduring musical genre? This course explores this question by focusing on the key repertoire and the history of German Romantic Lieder. We will begin by studying some of the most influential composers of German Lieder during the nineteenth century (including Franz Schubert, Clara and Robert Schumann, Johannes Brahms, Hugo Wolf, and Gustav Mahler), analyzing how these composers experimented with the interplay of music and text. We will also examine the social contexts in which Lieder were composed and performed, with particular attention to factors like gender and class. Finally, we will explore varied approaches to Lieder in contemporary performance culture in order to consider what the genre means for performers and audiences today.

Class Format: lecture/discussion

Requirements/Evaluation: class participation, occasional GLOW posts, two short essays, final exam and final recital program proposal project
Prerequisites: ability to read music

Enrollment Limit: 20

Enrollment Preferences: Music majors, those planning to major, and any student with a strong interest in music, German language, history, or culture. If overenrolled, the instructor will ask students to answer an e-mail questionnaire to determine enrollment.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

MUS 250  (F)  The Musical Language of Louis Armstrong

"You know you can’t play anything on a horn that Louis hasn’t played" - Miles Davis 1958 The study of jazz language inevitably involves back-scrolling through generations of progenitorial influence, and most of these paths lead back to Louis Daniel Armstrong 1901-1971. Arguably the most historically important musician in American and modern world history, Armstrong is widely credited as being responsible for popularizing the concept of the jazz "solo," as well as marrying the materials and performance traditions of the Blues and American popular song, and forever changing the aesthetic of vocal performance across a wide swath of Black American genres. By virtue of being so studied and imitated, his personal musical vocabulary as a trumpeter and vocalist can be seen to have informed all jazz music that followed in his wake, from stride piano and early big band arrangements to Parker, Davis, Coltrane etc. More than any other individual, his rhythmic language exemplifies the popular but definition-resistant language of "Swing."

This listening and performance intensive seminar will be an opportunity for committed students of jazz music to absorb this language in a focused way. Seminar meetings are anchored by weekly transcription projects sung and played individually and collectively, informed by occasional lectures and readings from biographical, but also and especially Armstrong’s own voluminous autobiographical writings. We will focus in particular on the “Rosetta Stone” of jazz recordings, the Hot Fives and Hot Sevens sessions of 1925-29, and in so doing also study the work of selected Armstrong collaborators of the period including Earl Hines, Johnny Dodds, Lil Hardin Armstrong and Kid Ory. We will also cover earlier periods of his career, with ensembles led by King Oliver and Fletcher Henderson, and study the work of other significant early jazz soloists who performed with and mutually evidenced influence on/by Armstrong including Sidney Bechet, Bessie Smith, Fats Waller, and Coleman Hawkins.

Requirements/Evaluation: Weekly Performance of transcription projects, final exam

Prerequisites: Permission of Instructor

Enrollment Limit: 10

Enrollment Preferences: Music Majors, Jazz Ensemble Members

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

MUS 252  (F)  Introduction to the Music of John Coltrane

Cross-listings: AFR 242

Primary Cross-listing

This course offers the serious music student an opportunity to study the unique body of work produced by saxophonist and composer John Coltrane (1926-1967). The course traces the evolution of Coltrane’s compositional and performance styles in the context of the musical and cultural environment in which they developed. Emphasis placed on Coltrane's musical style, representing a unique synthesis of influences, including jazz,
MUS 254  (S)  Bebop: The (R)evolution of Modern Jazz

**Cross-listings:**  AFR 254

**Primary Cross-listing**

In the 1940s, Jazz turned a corner, transitioning from the functional and popular music of the swing era to the increasingly complex art music known as bebop. The practitioners of this new sub-genre were seen not as showmen or entertainers, but (in the words of poet Ralph Ellison) as “frozen faced introverts, dedicated to chaos.” This music was simultaneously old and new, a musical evolution interpreted through the lens of cultural revolution. This class will survey the lives, music and continuing impact of bebop’s most pivotal figures: Charlie Parker, Thelonious Monk, Dizzy Gillespie, Bud Powell and Kenny Clarke among many others. Through score study, guided listening and performance, the class will examine the melodic, harmonic and rhythmic innovations associated with this pivotal era in jazz history. We will evaluate, compare and contrast examples of contemporary theoretical scholarship concerning this musical vocabulary and it’s evolution. Intersections between the music and parallel artistic, social and political movements will also be addressed.

**Requirements/Evaluation:**  weekly reading, listening, musical memorization and performance. Short written responses to discussion prompts and participation in class discussion; quizzes on assigned readings and listening, and final exam

**Prerequisites:**  MUS 104b or permission of instructor, instrumental or vocal proficiency.

**Enrollment Limit:**  12

**Enrollment Preferences:**  Music majors, Jazz Ensemble members, Africana Studies concentrators

**Expected Class Size:**  10

**Grading:**  yes pass/fail option,  yes fifth course option

MUS 291  (F)(S)  Chamber Music Workshop

Classical and Jazz Chamber Music and other small departmental ensembles (including Chamber Choir, Percussion Ensemble, Chinese Ensemble, and Brass Ensemble) coached by faculty on a weekly basis culminating in a performance. Offered as a partial credit fifth course that can only be taken on a pass/fail basis. Students in ad hoc groups organized each semester by the director of the chamber music or jazz programs are required to prepare for 10 one-hour coaching sessions during the semester. It is recommended that each group rehearse a minimum of 2 hours each week in preparation of the coaching. Each ensemble is responsible for keeping a weekly log of rehearsal times and attendance. The logs are to be handed in to the coaches at the end of the semester. In addition, students are expected to practice the assigned music individually and are required to perform on the Classical or Jazz Chamber Music concert at the end of the semester. The ensembles will be organized based on skill levels and the instruments represented. To register for the course, a student must contact the Chamber Music Performance Coordinator. If you are accepted into a chamber group the instructor will send you a link to an online form to complete registration. The Music Department will submit the registration to the Registrar’s Office. It is not possible for the student to register directly through PeopleSoft. Students will be assigned to course numbers 291-298 based on the number of semesters of instruction already taken in one particular section.

Class Format: partial credit fifth course

Requirements/Evaluation: preparation for weekly coachings

Prerequisites: Permission of the Chamber Music Staff; enrollment limits will depend upon instructor availability. Enrollment in more than one chamber group must be approved by the chair.

Enrollment Limit: 12

Enrollment Preferences: Preference given to more advanced students, to be determined by audition as necessary.

Expected Class Size: 12

Grading: pass/fail option only

Unit Notes: The deadlines for registration follow: Fall (291) -- Registration Deadline: By the end of Add/Drop period and Spring (291) -- Registration Deadline: By the end of Add/Drop period. Registration for Chamber Music must be completed during the drop/add period of each semester. It is recommended that students wishing to take Chamber Music instruction in the fall semester attend the Music Department open house. Open to first year students.

Distributions: No divisional credit

MUS 316 (F) Music in Asian American History (DPE) (WS)
Cross-listings: AAS 316

Primary Cross-listing

Is "Asian American music" all music made by Asian Americans, music by Asian Americans specifically drawing on Asian heritage, or music engaging
with Asian American issues? This course embraces all three definitions and the full diversity of Asian American musical experience. We will study the historical soundscapes of immigrant communities (Chinese opera in North America; Southeast Asian war refugees) and how specific traumatic political events shaped musical life (Japanese American internment camps). We will encounter works by major classical composers (Chou Wen-Chung; Chen Yi; Tan Dun; Bright Sheng) and will investigate the careers and reception of prominent classical musicians (Midori; Seiji Ozawa; Yo-Yo Ma). Afro-Asian fusions, inspired by civil rights protest movements, manifested in jazz (Jon Jang; Fred Ho; Anthony Brown; Hiroshima; Vijay Iyer) and hip hop (MC Jin; Awkwafina; Desi rappers). Asian Americans have been active in popular music at home and abroad (Don Ho; Yoko Ono; Wang Leehom; Mitski).

Finally, we will investigate communal forms of Asian American music making that have crossed racialized and gendered boundaries (taiko drumming; Indonesian gamelan; belly dance; Suzuki method). This seminar is designed to develop research skills, as we pursue original fieldwork, archival research, and oral history interviews.

Requirements/Evaluation: Active class participation; two short papers (5-6 pp.) and a research term paper (12-15 pp.).

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: Students with curricular experience in Asian American history or music studies.

Expected Class Size: 10

Grading: no pass/fail option, yes fifth course option

Distributions: (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

MUS 316(D1) AAS 316(D1)

Writing Skills Notes: Students will write three papers during the semester: two 5-6 page papers and a 12-15 page research paper, written in stages. Students will receive detailed comments on each paper and at each stage of the research paper process, allowing them to build upon those comments in subsequent writing assignments.

Difference, Power, and Equity Notes: Political and cultural forces of exclusion not only determined Asian American musical participation in American music history but have shaped Asian American styles of music. We will study the history of Asian American political struggles as they have intersected with music and how Asian Americans have at certain points sought allegiance through music with other marginalized groups. We will explore as well popular media representations of Asian American musicians revealing race-based assumptions.

Not offered current academic year

MUS 323  (S)  Arts Organizing in Africa and the Diaspora  (DPE)

Cross-listings: DANC 323 / THEA 321

Primary Cross-listing

At the heart of this class is the question, how do artists and organizations use the performing arts to effect social change in their communities? Drawing from a number of case studies from throughout Africa and the African Diaspora, we will first endeavor to understand and contextualize issues related to education, social uplift, the environment, and the economy as they relate to specific communities. We will then examine how a series of organizations (from grassroots campaigns to multinational initiatives) utilize the performing arts in response to those issues. Among the issues we will discuss at length are: -How do performers and organizations navigate the interplay between showcasing the performance talents of individuals and groups and foregrounding an issue or cause? More broadly, what dilemmas emerge as social and aesthetic imperatives intermingle? -What are the dynamics between people acting on a local level within their communities and their various international partnerships and audiences? -How can government or NGO sponsorship help and/or hinder systemic change? By the end of the semester, students will be equipped with conceptual frameworks and critical vocabularies that can help them ascertain the functions of performance within larger organizations and in service to complex societal issues. Throughout the course, we will watch and listen to a variety of performances from traditional genres to hip-hop, however this class is less about learning to perform or analyze any particular genre than it is about thinking through how performance is used as a vehicle for social change. Case studies will include youth outreach and uplift in Tanzania through the United African Alliance, campaigns to promote girls' education in Benin and Zimbabwe, community-wide decolonizing initiatives through the Yole!Africa Center in the Democratic Republic of Congo, and the cultural reclamation of a mining town in Suriname through the arts organization, Stichting Kibii.

Requirements/Evaluation: Four case study profiles, midterm essay (5-7pages), and a final project. Regular participation in class discussion.

Prerequisites: None

Enrollment Limit: 15

Enrollment Preferences: If the course exceeds the maximum enrollment, selection will be made based on students explanations for why they want to take the class.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
DANC 323(D1) THEA 321(D1) MUS 323(D1)

Difference, Power, and Equity Notes: This course interrogates on a fundamental level issues of power and equity. Using the performing arts as a critical lens, we discuss a series of social and environmental challenges that communities of African descent face. These are in direct dialogue with global systems of power and economic factors. Issues include: environment, education, local communities' interactions with multinational corporations, and representational politics in performance.

Attributes: MUS World Music/Ethnomusicology
Not offered current academic year

MUS 381 (S) Choral Conducting

The purpose of this course is to become fully acquainted with the fundamentals of conducting gesture, score study, and rehearsal technique as it relates to the choral rehearsal. Using the class as the primary practice choir, students will learn to express specific musical ideas and concepts through conducting patterns and body language, and will develop fluency and ease in these mediums through the study of varied repertoire and techniques. Regular videotaping of conducting sessions will provide opportunities for students to study themselves. Repertoire will include a broad survey of works from the early Renaissance to early 21st century, accompanied and a cappella, and issues of conducting ensembles at various skill levels will be addressed.

Class Format: coaching sessions
Requirements/Evaluation: regular conducting assignments and final projects
Prerequisites: MUS 103 and 104
Enrollment Limit: 8
Enrollment Preferences: upperclass students
Expected Class Size: 4
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

MUS 475  (S)  Hearing Through Seeing: Music and Visuality  (WS)

We hear music, but seldom is the experience purely aural -- the visual also plays a crucial role. Sound and sight converge when we observe musicians performing in concert venues, patterns of notes and rhythms on the musical score, pictures and text on album and sheet music covers, moving images on screens in films, music videos, and video games. A programmatic work conjures specific images, even whole narratives, in our "mind's eye," or imagination. A work of absolute music, such as a fugue or symphony, can do so as well, although what we envision here may be largely abstract. With hybrid genres, such as opera, musical theater, and dance, the musical and the visual jointly command our attention, often in a spectacular display.

This seminar explores myriad ways that "seeing" mediates our experience of hearing, making, and understanding music. We will examine a broad
range of topics, including synesthesia; visuality in performance and interpretation; visual metaphors such as line, color, and space in music analysis and criticism; music and representation; intersections between music and painting, sculpture, and architecture; operatic staging; illuminated music manuscripts; eye music and graphic notation; and sound and image in digital media.

**Class Format:** Students will give presentations on the subjects of their papers.

**Requirements/Evaluation:** evaluation will be based on three 5-6 page papers, three presentations, and class participation

**Prerequisites:** ability to read music

**Enrollment Limit:** 8

**Enrollment Preferences:** junior and senior music majors, and any student with a demonstrated interest in music

**Expected Class Size:** 8

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** satisfies the 400-level course requirement for the music major

**Distributions:** (D1) (WS)

**Writing Skills Notes:** Students will write three 5-6 page papers and will receive detailed feedback on their writing.

*Not offered current academic year*

---

**MUS 476 (S) Orality and Literacy in Historical Musical Practice** (WS)

Music is an inherently oral/aural, ephemeral art form. Music history is reliant upon, and tends to privilege, its symbolic rendering in fixed notation. Yet, notated music—described by musicologist Nino Pirrotta as "the visible tip of an iceberg... seven-eighths of which remain submerged"—tells only a fraction of the story we seek to understand when studying musics of the past. In this seminar, we will address the unique challenges of studying the relationship between orality and literacy in historical musical practice. We will begin by considering the creative role of memory and embodied ritual in oral musical performance and transmission, as well as the ways in which various cultures have attempted to preserve such practices and the inherently transformative process they undergo when fixed in notation. We will then explore the range of theories and methodologies that scholars and performers have taken in approaching oral musical practices of the past in relation to varying levels of textual and musical literacy. Topics may include studies of epic poetry, jazz improvisation, medieval plainchant, troubadour song, improvised counterpoint, son mexicano, Neapolitan lyric song and dance, Ethiopian Christian chant, medieval and early modern instrumental music practices, Arab-Andalusian music, music in the commedia dell'arte, and various examples of contrafacture. Over the course of the semester, students will develop and present their own independent research aimed at producing a collaborative mock conference/performance as a final project for the class.

**Requirements/Evaluation:** evaluation will be based on three 5-6 page papers, three presentations, a final collaborative conference/performance, and class participation

**Prerequisites:** ability to read music

**Enrollment Limit:** 8

**Enrollment Preferences:** junior and senior music majors, and any student with a demonstrated interest in music

**Expected Class Size:** 8

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** satisfies the 400-level course requirement for the music major

**Distributions:** (D1) (WS)

**Writing Skills Notes:** Students will write three 5-6 page papers and will receive detailed feedback on their writing.

---

**MUS 491 (F)(S) Advanced Musical Performance**

Individual instruction in instrumental and vocal lessons offered at the advanced level as a regular full credit course. Intended primarily for music majors, full credit lessons must be approved by the entire music faculty. Students are expected to have demonstrated a high level of accomplishment on their instrument/voice, through at least 4 semesters of partial-credit study with their instructor. MUS 391, 392, 491, 492 must be taken as a graded course and it is strongly recommended that it be taken only as part of a four-course load; the numbers 391, 392, 491, 492 should be used for four sequence courses in the same instrument; if a different instrument is elected, the numbering sequence should start again at 391; numbers are
selected without regard to semester taken or class year of student. To register for the course, a student and their instructor must submit an application to the assistant to the department chair by the Tuesday before the first Friday of the semester. Forms for full credit lessons can be obtained from a student's instructor, or from the assistant to the chair. Information on the registration process is available on the music Department website https://music.williams.edu/courses under "Advanced Musical Performance."

Class Format: individual instruction

Requirements/Evaluation: Lesson preparation, public performance, and progress throughout the semester.

Prerequisites: Intended primarily for music majors. Students should have at least 4 semesters of partial-credit study with their instructor. Completed application, registration and instructor recommendation due by the Tuesday before the first Friday of the semester.

Enrollment Limit: none

Enrollment Preferences: Permission of the instructor and music faculty. Students are expected to have demonstrated a high level of accomplishment on their instrument/voice, through at least 4 semesters of partial-credit study with their instructor.

Expected Class Size: NA

Grading: no pass/fail option, yes fifth course option

Unit Notes: Music majors may register for a total of four semesters, non-majors may register for two semesters. A student must submit an application and registration/billing form for each semester. MUS 391, 392, 491, 492 must be taken as a graded course and it is strongly recommended that it be taken only as part of a four-course load.

**MUS 11 (W) I/O Festival of New Music**

I/O Fest 2025 is a month-long immersion in adventurous music making. Centered around the Williams College Department of Music's annual festival of contemporary music, the course is an opportunity for musicians to learn and perform new music and to explore new performance practices. Open to instrumentalists, singers, conductors, composers, and sound artists, the first stage of the course involves daily rehearsal leading to four days of concerts at the '62 Center, the Clark, and WCMA. The post-festival phase of the course is focused on group creative projects, discussions, and hands-on workshops related to the social, musical, and cultural ideas explored during the festival. Throughout, there will be opportunities to create, compose, experiment, engage with the community through participatory musical programs, and collaborate with visiting guest composers and performers.

Class Format: The first two weeks of the class primarily involves daily rehearsal and performance. The second stage is focused on group creative projects and discussion.
Requirements/Evaluation: Presentation(s); Performance(s); Creative project(s)
Prerequisites: Students should have a background in musical performance or creation.
Enrollment Limit: NA
Enrollment Preferences: Preference will be given to students with demonstrated interest or musical experience.
Expected Class Size: NA
Grading: pass/fail only

Unit Notes: Matthew Gold is an Artist in Residence in Percussion and Contemporary Music Performance at Williams College and member of the NYC-based Talea Ensemble and Talujon Percussion Group. He is an ensemble director committed to presenting adventurous programs and new
MUS 12 (W) The World and Wes Anderson

Among commercially successful filmmakers of the new millennium, Wes Anderson has cultivated one of the most strongly recognizable (and widely imitated) styles. Focusing on Anderson's films, this course will build an intimate knowledge of Anderson's personal style while also exploring broader topics like filmmaking techniques and narrative structures. It will also use these films as a jumping-off point for discussions about the broad network of influences and outside references found therein, including ancient and contemporary art, interior design, film history, music history, political history, celebrity, philosophy, typography, and the environment. Importantly, the course will also ask questions about representation and identity in Anderson's work. Three weekly class meetings will consist of lecture, discussion, group viewing sessions, and student presentations. Outside of the classroom, students will be expected to read articles, watch videos, and complete a creative project and a final essay or creative project.

Requirements/Evaluation: In-class presentation, participation, a creative project, and a final essay or creative project.

Prerequisites: None. Students do not need to have experience studying film or music.

Enrollment Limit: 20

Enrollment Preferences: Preference will go to students who have taken courses relevant to the course material (in film, art, literature, music, etc.).

Expected Class Size: 20

Grading: pass/fail only

Attributes: SLFX Winter Study Self-Expression STUX Winter Study Student Exploration

Not offered current academic year

MUS 16 (W) Zimbabwean Music Experience

This course focuses on teaching Zimbabwean music performance. Besides introducing a selection of basic songs on mbira, marimba, and voice, the course explores the orchestration of such music on other instruments. To utilize some participants' previous experience' the course will incorporate brass, woodwinds, strings, and additional percussion. The course content will trace both continuity and change in music from traditional song styles into African popular music. Besides the instrumental practice of the class, we will watch on YouTube and other videos the collaborative nature of this music. The class will end with an end-of-winter Study performance by the participants.

Requirements/Evaluation: final project or presentation

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: The first students to enroll will be selected

Expected Class Size: NA

Grading: pass/fail only

Attributes: SLFX Winter Study Self-Expression

Not offered current academic year

MUS 19 (W) Williams Opera Workshop

The Williams Opera Workshop winter study course will prepare and present two fully staged performances of an Opera (to be decided based on the gifts of the particular singers auditioning each year) with reduced orchestra. The goal of the course is to simulate the workings of an opera house at all levels, from artistic to administrative, and to provide students with the full experience of what goes into putting a show up in a professional environment. Admission to the course will be open to students interested in performance (singers, dancers, and instrumentalists), rehearsal accompanying, conducting, choreography, stage management, set construction/scenic art, costume design, dramaturgy, stage crew, and lighting design. No previous experience necessary for registration, though acceptance into the course and designated responsibilities will be assigned based on the needs of the production and the skills of the individual. Roles will be cast prior to January 2025 by audition (date and time tba) and orchestra will be selected and contacted separately at the discretion of the conductor. An informal interview will also be scheduled for those interested in the production side to determine areas of interest and experience. Enrollment in the course is not required for participation in the production, though if your
role in the project is substantial we recommend enrollment to make the best use of your time. Evaluation for the course will be determined based upon regular attendance, effort, timely preparation of each student's assigned responsibilities throughout the term, and will culminate in the final performances in which each student involved will be expected to attend.

Requirements/Evaluation: Performance(s)

Prerequisites: None

Enrollment Limit: 75

Enrollment Preferences: Auditions

Expected Class Size: NA

Grading: pass/fail only

Unit Notes: Paul La Rosa is an Artist Associate in Voice and Co-Director of the Williams Opera Workshop. He is a graduate of Williams College, The Juilliard School, and the Patrick G and Shirley W Ryan Opera Center at the Lyric Opera of Chicago.

MUS 23  Gaming Renaissance Europe: Music and Culture in the Illustrated World of Pentiment

This course features an experiential approach to life in 16th-century Europe through the virtual world of Obsidian’s historically focused video game Pentiment. Pentiment centers on the fictional character of master artist Andreas Maler, who works as an illustrator and scribe at the Kiersau Abbey in early-16th-century Bavaria and becomes caught up in a series of scandalous intrigues in the Bavarian Alps. The game features an original, historically informed soundtrack by the medieval and Renaissance music group Alkemie, as well as a wide range of vivid illustrations based on illuminated manuscripts and early printed books and incunables from the late medieval and Renaissance periods. Over the four weeks of winter study, students will play through the game both in and outside of class in order to explore topics in European music, art, book-making, theology, medicine, and the occult at the turn of the 16th century. Students will also listen, respond to, and research the game’s soundtrack, both as an original musical work and as the product of a historically informed approach to performance and composition. Additional hands-on workshops will be held on manuscripts, calligraphy, and visual arts at Special Collections and WCMA to bring key elements of Pentiment’s virtual world to life.

Requirements/Evaluation: Participation/attendance, weekly journal entries, and a short paper/presentation on a topic drawn from the experience of playing the game.

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: Students with a strong interest in medieval and Renaissance music and/or video game music.

Expected Class Size: 10

Grading: Not offered current academic year

MUS 24  How to Grow a Band: Collaborative Writing and Performance with Darlingside

As a band, we love to use writing exercises to generate material and to get past our pesky inner critics. These collaborative exercises will serve as the foundation for the class. As instructors, participate in group writing exercises with students. We will also discuss strategies and references we use when writing. Once we generate some material to work on together, we will move on to the secondary focus of the class: performance and arrangement for small ensembles. The class will culminate with a public performance of some of the music written over the course of the class.

Depending on time and interest, we will also discuss the basics of touring, booking, management, and navigating today's music industry. Attendance at classes and the final performance will be mandatory for all participating students.

Requirements/Evaluation: Presentation(s); Performance(s); Creative project(s)

Prerequisites: None

Enrollment Limit: 13

Enrollment Preferences: Students are encouraged to send a paragraph or two about their musical background to the instructors, to be used as a deciding factor in case the class is overenrolled.

Expected Class Size: NA
Grading:

Unit Notes: Don Mitchell '06, Auyon Mukharji '07, and Harris Paseltiner '09 have been writing, recording, and touring as the band Darlingside since 2009. They first met at Williams, and can't wait to get back to campus for Winter Study.

Materials/Lab Fee: $60

MUS 27 (W) Introduction to Middle Eastern Hand Drumming

Since ancient times, percussion instruments have been at the heart of Middle Eastern musical and ritual life, providing intricate rhythmic patterns as foundation. Today, many of these drums accompany musical traditions across a wide Mediterranean region, from the Arab world to Greece, Turkey, Armenia, and beyond. This class offers students the opportunity to engage, in a hands-on ways, with the vibrant tradition of Middle Eastern drumming and its heritage of cross-cultural flows. In this course, we will study the fundamentals of Middle Eastern drumming on traditional percussion instruments. We will focus on exploring the doumbek (i.e. Arab tabla), riqq, and frame drum. Students who have drums are welcome to bring their own, but the instructor will provide a variety of instruments for students to use in class and at home. Each class session will highlight technique, rhythm theory, and accompaniment. We will also dedicate time to learning a composition for this drum section. Some short readings and audio and video samples will supplement our in-class drumming. Evaluation will be based on a self-recorded demonstration of core rhythmic patterns as well as a final performance.

Requirements/Evaluation: Performance(s)

Prerequisites: None

Enrollment Limit: 25

Enrollment Preferences: Interest, MEME members, related majors

Expected Class Size: NA

Grading: pass/fail only

Unit Notes: Rami El-Aasser plays darbuka and sings worldwide with groups including Alsarah & the Nubatones and Zikrayat. He can be heard on many recordings, and co-directs the Middle Eastern Music Ensemble at Williams.

Materials/Lab Fee: $20

Attributes: EXPE Experiential Education Courses  SLFX Winter Study Self-Expression

MUS 31 (W) Senior Thesis: Music

To be taken by students registered for Music 493-494.

Class Format: thesis

Grading: pass/fail only

Not offered current academic year

MUS 50 (W) Musicianship and Wellness

Physical and mental health are both equally important to success in music performance and other rigorous disciplines such as athletics and dance. In this course, we will examine strategies to promote general wellness, maintaining both physical and mental wellbeing, while studying and performing in the field of music at all levels. In terms of the physical challenges of musical performance, we will look at ways of coping with the stress of repetitive movements and, more importantly, we will encounter important resources such as physical therapy, deep tissue massage, yoga, and conventional medicine. In considering elements of mental health in musical practice, we will consider topics related to performance anxiety, perfectionism, and the impact of social media, both positive and negative. The course will also bring in guest speakers that have experienced performance injuries, such as tendonitis or focal dystonia, as well as toxic work cultures and other problematic work and study spaces that contribute to poor mental health. The goal of this course is to help students achieve a more centered approach to music physically, mentally, and emotionally. The class will meet twice a week for three hours. Students will be required to complete a daily journal, a music performance review, and a creative project designing a wellness program either for themselves or for a potential student.

Requirements/Evaluation: Creative project(s); Other: Journal of goals and self evaluations done daily and a performance review.
**Prerequisites:** No prerequisites are required.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students who are interested in studying and/or teaching music, as well as those involved with the department of music will be given preference. Please email me to share your interest in the course and how it connects to your current/future goals.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Dorian Jackman has performed as a double bassist with the Indianapolis, Charlotte, and Charleston Symphonies and also The Who, Weird Al, and Andrew bird. He holds a Doctor of Music from the Jacobs School of Music at Indiana University.

**Attributes:** SLFX Winter Study Self-Expression WELL Winter Study Wellness

Not offered current academic year

**MUS 99 (W) Independent Study: Music**

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

**Class Format:** independent study

**Grading:** pass/fail only

**Distributions:** (D1)

Not offered current academic year
Neuroscience is a rapidly growing interdisciplinary field concerned with understanding the relationship between brain, mind, and behavior. The interdisciplinary nature of the field is apparent when surveying those who call themselves neuroscientists. Among these are anatomists, physiologists, chemists, psychologists, philosophers, molecular biologists, computer scientists, linguists, and ethologists. The areas that neuroscience addresses are equally diverse and range from physiological and molecular studies of single neurons, to investigations of how systems of neurons produce phenomena such as vision and movement, to the study of the neural basis of complex cognitive phenomena such as memory, language, and consciousness. Applications of neuroscience research are rapidly growing and include the development of drugs to treat neurodegenerative disorders such as Alzheimer’s disease and Parkinson’s disease, the use of noninvasive techniques for imaging the human brain such as fMRI and near infrared optical imaging, and the development of methods for repair of the damaged human brain such as the use of brain explants and implants. Combining this wide range of approaches and research methods to study a single remarkably complex organ—the brain—and the behavioral outcomes of its activity requires a unique interdisciplinary approach. The Neuroscience Program is designed to provide students with the opportunity to explore this approach.

THE PROGRAM

The program in neuroscience consists of seven courses: The Cell (Biology 101); Introductory Psychology (Psychology 101); Neuroscience (Neuroscience 201); Topics in Neuroscience (Neuroscience 401); and three electives. Either Biology 101 or Psychology 101 must be taken prior to enrolling in the core course, Neuroscience (Neuroscience 201), which is the foundational neuroscience course and provides the background for upper-level electives in the concentration. Ideally, Neuroscience is taken the fall of the sophomore year. Electives are designed to provide in-depth coverage of specific areas within the field and many electives include laboratory experiences. At least one elective course is required from those designated as Group A (Neuroscience courses cross-listed with Biology). At least one elective course is required from those designated as Group B (Neuroscience courses cross-listed with Psychology). A third required elective may come from Group A or Group B offerings or it may come from Group C which consists of courses that are not cross-listed with neuroscience but include significant neuroscience content. Students may also petition the advisory committee to consider courses that are not listed among these groups including neuroscience-related courses that may be taken while studying abroad. Topics in Neuroscience (Neuroscience 401) is designed to provide an integrative culminating experience and is taken by all senior concentrators during the senior year.

Required Courses

**BIOL 101(F) LEC The Cell**

Taught by: Pei-Wen Chen, Caitlyn Bowman-Cornelius
Catalog details

**NSCI 201 / BIOL 212 / PSYC 212(F) LEC Neuroscience**

Taught by: Shivon Robinson, Charlotte Barkan
Catalog details

**NSCI 401(F) SEM Topics in Neuroscience**

Taught by: Matt Carter
Catalog details

**PSYC 101(F, S) LEC Introductory Psychology**

Taught by: Noah Sandstrom, Marlene Sandstrom, Nate Kornell, Madison Sewell, Jeremy Cone, jdc2 Sandstrom, nsandstr Smith
Students can ask the Neuroscience Program Chair whether courses not listed here might count as electives.

**Elective Courses**

Three elective courses are required. At least one elective must be from Group A and at least one elective must be from Group B. The third elective may come from Group A, Group B, or Group C. Students may also consult the Chair to consider courses that are not listed among these groups including neuroscience-related courses that may be taken while studying abroad.

**Group A**

- **Biol 209 / NSCI 209(F) TUT Animal Communication**  
  Taught by: Heather Williams
- **Biol 312 / NSCI 312 LEC Sensory Biology**  
  Taught by: Heather Williams
- **Biol 314 / NSCI 324(S) LEC Neuroethology**  
  Taught by: Charlotte Barkan
- **Biol 407 / NSCI 347 SEM Neurobiology of Emotion**  
  Taught by: Tim Lebestky
- **Biol 437(F) SEM Neural Flexibility: plasticity, modulation and evolution**  
  Taught by: Charlotte Barkan

**Group B**

- **Psyc 312 / NSCI 322(S) SEM From Order to Disorder(s): The Role of Genes & the Environment in Psychopathology**  
  Taught by: Victor Cazares
- **Psyc 313 / NSCI 313(F) SEM Opioids and the Opioid Crisis: The Neuroscience Behind an Epidemic**  
  Taught by: Shivon Robinson
- **Psyc 314 / NSCI 314 SEM Learning and Memory in Health and Disease**  
  Taught by: Shannon Moore
- **Psyc 316 / NSCI 316 SEM Neuroscience of Decision-Making**  
  Taught by: Yunshu Fan
- **Psyc 319 / NSCI 319 / STS 319(S) TUT Neuroethics**  
  Taught by: Noah Sandstrom

**Group C**

- **Biol 204(S) LEC Animal Behavior**  
  Taught by: Manuel Morales
- **Biol 421 TUT Thermoregulation: From Molecules to Organisms**  
  Taught by: Steven Swoap
- **Psyc 335(F) SEM Early Experience and the Developing Infant**  
  Taught by: Amie Hane
- **Psyc 351 SEM Clinical Neuropsychology**  
  Taught by: Anna Miley Akerstedt

**THE DEGREE WITH HONORS IN NEUROSCIENCE**

The degree with honors in Neuroscience provides students with the opportunity to undertake an original research project under the supervision of one or more of the Neuroscience faculty. In addition to completing the requirements of the Neuroscience Program, candidates for an honors degree
must enroll in Neuroscience 493-W31-494 and write a thesis based on an original research project. Presentation of a thesis, however, should not be interpreted as a guarantee of a degree with honors. Students interested in pursuing a degree with honors should contact the Neuroscience Advisory Committee by winter study of their junior year.

STUDY ABROAD

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions). Securing syllabi is often difficult, so a discussion with the program Chair is certainly necessary. Under no circumstances should a student assume that a course taken at another institution will count toward the concentration.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

The program Chair and advisory committee will consider the course title, course description, and complete syllabus, including readings/assignments. Exams or other written work will also be considered. Written work may be requested if the course description suggests that it is only tangentially related to the field of neuroscience. Written work would, therefore, need to demonstrate that there was sufficient emphasis on neuroscience material.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

Yes. Generally there is a maximum of 2 credits that can be completed through a study abroad program.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. NSCI 201 and NSCI 401 can not generally be completed abroad. NSCI should be taken during the sophomore year if possible and includes a laboratory component that is rarely comparable in study abroad courses.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

NSCI 201 is only taught during the fall semester. As such, students planning to study away should plan to take it during the sophomore year.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

Some students (rarely) have failed to discuss the course in advance of their study abroad experiences. They may also have assumed that approval of a course by another department (e.g., Biology or Psychology) would necessarily mean that they would receive Neuroscience credit for the course. This is not necessarily the case.

NSCI 201  (F)  Neuroscience

Cross-listings:  BIOL 212 / PSYC 212

Primary Cross-listing

This course is designed to give an overview of the field of neuroscience progressing from a molecular level onwards to individual neurons, neural circuits, and ultimately regulated output behaviors of the nervous system. Topics include a survey of the structure and function of the nervous system, basic neurophysiology and neurochemistry, development, learning and memory, sensory and motor systems, and clinical disorders. Throughout the course, many examples from current research in neuroscience are used to illustrate the concepts being considered. The lab portion of the course will emphasize a) practical hands-on exercises that amplify the material presented in class; b) interpreting and analyzing data; c) presenting the results in written form and placing them in the context of published work; and d) reading and critiquing scientific papers.

Requirements/Evaluation: Evaluation will be based on participation in discussion groups, exercises, problem sets and quizzes performed in small groups, lab reports, midterm exams, and a final exam.

Prerequisites:  PSYC 101 or BIOL 101; open to first-year students only with permission of instructor
Enrollment Limit: 72

Enrollment Preferences: Sophomores and Biology and Psychology majors

NSCI 209 (F) Animal Communication (WS)

Cross-listings: BIOL 209

Secondary Cross-listing

Animal communication systems come in as many varieties as the species that use them. What they have in common are a sender that encodes information into a physical signal and a receiver that senses the signal, extracts the information, and adjusts its subsequent behavior accordingly. This tutorial will consider all aspects of communication, using different animal systems to explore different aspects of the biology of signaling. Topics will include the use of syntax to carry meaning in chickadee calls, synchronous signaling by fireflies, gestural communication by primates, long-distance chemical attractants that allow male moths to find the object of their desire, and cultural evolution within learned signaling systems.

Requirements/Evaluation: evaluation will be based on five 5-page papers, five short response papers, and the student's effectiveness in tutorial discussions.

Prerequisites: BIOL 101 and 102; open to sophomores, juniors, and seniors

Enrollment Limit: 10

Enrollment Preferences: Biology majors and Neuroscience concentrators who need a Biology elective to complete the concentration; then sophomores.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

NSCI 209(D3) BIOL 209(D3)

Writing Skills Notes: This course is a tutorial, and each student will write five position papers and five response papers. Extensive feedback will be provided; students will be required to rewrite one position paper, and may rewrite any of them.

Fall 2024

TUT Section: T1 TBA Heather Williams

NSCI 312 (F) Sensory Biology

Cross-listings: BIOL 312

Secondary Cross-listing

How do animals sense properties of the physical world? How do they convert physical or chemical energy to a signal within a cell that carries...
information? How is that information represented? What are the limits on what can be sensed? We will look for answers to these questions by investigating the molecular and cellular mechanisms of sensory transduction and how these mechanisms constrain the types of information that the nervous system encodes and processes. We will also ask how natural selection shapes the type of sensory information that animals extract from the world, and what adaptations allow some species to have "special" senses. Some of the examples we will consider are: bat echolocation (hair cells in the ear), detecting visual motion (amacrine cells in the mammalian retina), the constant reshaping of the olfactory system (chemical mapping of odors), what makes a touch stimulus noxious, and enhanced color vision (in birds, bees, and shrimp). Laboratory exercises will focus on the nematode C. elegans, an important model system, to explore and extend how we understand touch, temperature sensation, chemosensation, and light sensation.

**Requirements/Evaluation:**  Four take-home exams, an independent group research project (proposal, followed by results/discussion), presentation about a non-standard sensory system, many short online quizzes, and lab + class participation.

**Prerequisites:**  BIOL 101 and either BIOL 212/NSCI 201 or BIOL 205

**Enrollment Limit:** 24

**Enrollment Preferences:**  Preference to senior Biology majors who need a 300-level course; then to senior Neuroscience concentrators who need a Group A elective; then to Biology majors. Not open to students who have taken Biology 213.

**Expected Class Size:** 20

**Grading:**  no pass/fail option, no fifth course option

**NSC 313 (F) Opioids and the Opioid Crisis: The Neuroscience Behind an Epidemic**

**Cross-listings:**  PSYC 313

**Secondary Cross-listing**
Opioid misuse, including addiction, has emerged as a major health epidemic in the United States. This course will explore the science of opioids as well as the historical and societal context surrounding their use. We will examine the neurobiological mechanisms through which opioids interact with pain pathways and reward circuits within the brain and we will explore how changes in these systems contribute to opioid tolerance, dependence, and addiction. We will consider how genetic, environmental and behavioral factors can powerfully influence these processes. Finally, we will consider alternative approaches to pain management as well as interventions for the treatment of opioid use disorder. Critical evaluation of peer-reviewed primary literature from animal and human studies will serve as a foundation for class discussions. Evaluation will be based on class presentations, participation in discussions and written assignments.

**Requirements/Evaluation:**  class presentations, participation in discussions, three position papers (approximately 2 pages double-spaced), an APA style literature review (approximately 5-7 pages double-spaced), a research proposal (approximately 5-7 pages double spaced) and an oral presentation of the project proposal.

**Prerequisites:**  PSYC 212 (same as BIOL 212 or NSCI 201)

**Enrollment Limit:** 19

**Enrollment Preferences:**  Psychology majors and Neuroscience concentrators

**Expected Class Size:** 19

**Grading:**  no pass/fail option, no fifth course option

NSCI 314  (S)  Learning and Memory in Health and Disease

Cross-listings: PSYC 314

Secondary Cross-listing
This class will examine the neuroscientific basis of different types of learning and memory (such as declarative memory, motor memory, and associative memory), including the brain circuits, cellular mechanisms, and signaling pathways that mediate these different processes. In addition, we will explore how these processes can be disrupted in different diseases and disorders (such as Alzheimer's disease or post-traumatic stress disorder) and we will discuss the strategies and targets for therapeutic intervention. Class meetings will include a mix of lectures, discussions, and student presentations. Critical evaluation of peer-reviewed studies involving both human and animal models will serve as a foundation for class discussions. Working in small teams, students will also design and conduct an empirical project related to the course material.

Requirements/Evaluation: In-class presentations and participation in discussions, completion of an empirical research project which will include a project proposal (3-5 pages), data collection and analysis, and a final report (10-20 pages) along with a poster presentation.

Prerequisites: PSYC 212/NSCI 201/BIOL 212

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Neuroscience concentrators

NSCI 316  (S)  Neuroscience of Decision-Making

Cross-listings: PSYC 316

Secondary Cross-listing
Humans are constantly making decisions: big and small, conscious and unconscious. This seminar will explore different aspects of the decision-making process, including (1) the algorithms for decision-making, (2) the neurological basis of decision-making and (3) the psychological, social, and physiological factors that influence our decision-making. We will examine how scientific approaches can help us understand complex social issues related to decision making. For example: how can stereotypes be understood as a failure in belief updating; how does confirmation bias lead to partisanship; and how to think of xenophobia from the "explore-exploit trade-off" perspective? In this course, we will explore how the brain and its neural networks contribute to these phenomena. The laboratory component of the course will introduce the research tools for studying different aspects of decision-making, including experimental paradigms, computational models and methods of analysis. Students will apply these tools to collaboratively design and conduct behavioral experiments and will analyze neural recording data to understand the relationship between neural activity and decision-making behaviors. Over the course of the semester, students will have the opportunity to develop skills in computer programming to better understand computational models and data analysis.

Requirements/Evaluation: Class presentations, participation in discussions, keeping a decision journal, short response papers and laboratory assignments, participation and presentation of empirical laboratory studies.

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201) or permission of instructor.

Enrollment Limit: 16

Enrollment Preferences: Psychology majors, Neuroscience concentrators, and Cognitive Science concentrators

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

NSCI 319 (S) Neuroethics (WS)
Cross-listings: PSYC 319 / STS 319

Secondary Cross-listing

Neuroscience studies the brain and mind, and thereby some of the most profound aspects of human existence. In the last decade, advances in our understanding of brain function and in our ability to manipulate brain function have raised significant ethical challenges. This tutorial will explore a variety of important neuroethical questions. Potential topics will include pharmacological manipulation of "abnormal" personality; the use of "cosmetic pharmacology" to enhance cognition; the use of brain imaging to detect deception or to understand the ability, personality or vulnerability of an individual; the relationship between brain activity and consciousness; manipulation of memories; the neuroscience of morality and decision making. In addition to exploring these and other ethical issues, we will explore the basic science underlying them.

Requirements/Evaluation: six 5-page position papers and five 2-page response papers as well as participation in discussions
Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201); or permission of instructor
Enrollment Limit: 10
Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

TUT Section: T1 TBA Noah J. Sandstrom

NSCI 322 (S) From Order to Disorder(s): The Role of Genes & the Environment in Psychopathology
Cross-listings: PSYC 312

Secondary Cross-listing

This course examines how experimental methods in neuroscience can be used to understand the role of nature (genes) and nurture (the environment) in shaping the brain and behavior. In particular, we will explore how neuroscience informs our understanding of psychiatric disorders such as anxiety, depression, and schizophrenia. We will investigate the biological underpinning of these disorders as well as their treatments. Readings will include human studies as well as work based on animal models. Topics will include: the ways in which environmental and genetic factors shape risk and resiliency in the context of psychiatric disease, the neural circuits and peripheral systems that contribute to psychopathology, and the mechanisms through which interventions may act. In the laboratory component of the course, students will gain hands-on experience in using animal models to study complex behavior and their associated neural mechanisms.

Requirements/Evaluation: class presentations, participation in discussions, project proposal (5 pages), empirical project paper (5-7 pages), poster and poster presentation, participation in all phases of the empirical project research experience (experiment design, data collection, data graphing, data analysis) including oral and written presentation of key findings.
Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201)
Enrollment Limit: 16
Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 16
Grading: no pass/fail option, no fifth course option
Distributions: (D3)
**NSCI 324 (S) Neuroethology**

**Cross-listings:** BIOL 314

**Secondary Cross-listing**

How does an animal experience its environment? What mechanisms allow an animal to select and generate behaviors? In this course we will use a comparative approach to examine how nervous systems have evolved to solve problems inherent to an animal’s natural environment. We will discuss how animals sense physical and chemical properties of their surroundings and convert this information to a signal encoded in their brain. We will explore how nervous systems of diverse species are adapted to extract sensory information that is relevant to their survival—such as sound, light, and smell. We will also examine how neural circuits control muscles to generate motor behaviors such as locomotion and vocalization and how sensory information is integrated to influence behavior. To highlight the discovery process, we will read and discuss primary research articles that complement course content. During labs we will use a variety of approaches such as electrophysiology, optogenetics, behavior, and data analysis to understand sensory and motor systems in several different organisms.

**Requirements/Evaluation:** Participation in class and lab, several take-home exams, independent group research project and presentation, and short written class and lab assignments.

**Prerequisites:** BIOL 212 or BIOL 205

**Enrollment Limit:** 24

**Enrollment Preferences:** Senior, then junior, Biology majors and NSCI concentrators who need a 300-level course or a NSCI elective

**Cross-listings:** BIOL 407

**Secondary Cross-listing**

Emotion is influenced and governed by a number of neural circuits and substrates, and emotional states can be influenced by memory, cognition, and many external stimuli. We will read and discuss articles about mammalian neuroanatomy associated with emotion as defined by classic lesion studies, pharmacology, electrophysiology, fMRI imaging, knockout and optogenetic mouse studies, for investigating neural circuit function in order to gain an understanding of the central circuits and neurotransmitter systems that are implicated in emotional processing. We will focus initially on the neural circuits involved in fear, as a model for how human and animal emotion and physiology is studied, with special sessions on emotional responses to music and art, as well as discussions about burgeoning neurobiological research into the emotion of disgust. The larger goal of the course is to give students opportunities and experience in critical evaluation and discussion of primary scientific literature, and to develop and refine strategies on how
to use scientific evidence in building arguments in essays.

Requirements/Evaluation: class participation and several short papers

Prerequisites: BIOL212/NSCI201; open to juniors and seniors. Sophomores must get instructor's consent prior to enrolling.

Enrollment Limit: 12

Enrollment Preferences: senior Biology majors who have not taken a 400-level Biology course; then to eligible NSCI concentrators

NSCI 401 (F) Topics in Neuroscience

Neuroscientists explore issues inherent in the study of brain and behavior. The overall objective of this seminar is to create a culminating senior experience in which previous course work in specific areas in the Neuroscience Program can be brought to bear in a synthetic, interdisciplinary approach to understanding complex problems. The specific goals for students in this seminar are to evaluate original research and critically examine the experimental evidence for theoretical issues in the discipline. Topics and instructional formats will vary somewhat from year to year, but in all cases the course will emphasize an integrative approach in which students will be asked to consider topics from a range of perspectives including molecular,
cellular, systems, behavioral and clinical neuroscience. Previous topics have included autism, depression, stress, neurogenesis, novel neuromodulators, language, retrograde messengers, synaptic plasticity, and learning and memory.

**Requirements/Evaluation:** Participation in class discussion, presentation of research articles, several short papers

**Prerequisites:** Open only to seniors in the Neuroscience program

**Enrollment Limit:** 20

**Enrollment Preferences:** Senior Neuroscience concentrators

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

NSCI 10 (W) Neuroscience of Learning

Course Description: An interactive and collaborative exploration of what neuroscience research reveals about how the brain learns and what factors can be influenced to facilitate successful learning. Topics include the neuroscience of attention, emotion, understanding, memory, and executive functions. Emphasis will be on the neuroscience applications to strategies correlated to the research. There will be opportunities for students to gain insight into their own learning processes Background will be provided by interactive lecture. Students will participate in small group and full class discussions based on their reading of assigned articles. They will engage in guided research projects in areas of their own interest and share their insights in presentations. In these, they will demonstrate their understanding of the medical model to evaluate primary neuroscience research studies for validity, value, and expand this understanding into implications and strategy applications to facilitate more successful and meaningful learning for themselves and to teach others.

To engage in philosophy is to ask a variety of questions about the world and our place in it—questions that we confront in our everyday lives or that underlie our ordinary practices. What is a good, meaningful, or happy human life (ethics and politics)? What do we owe non-human species and future generations (applied ethics/practical philosophy)? Does god exist? (metaphysics)? What can we know, and what makes a belief or statement true (epistemology)? Are there objective standards for judging works of art? Thus, philosophers also address questions relevant to many disciplines.

The program in philosophy is designed to aid students in thinking about such questions, by acquainting them with influential work in the field, past and present, and by giving them tools to grapple with these issues themselves. The program emphasizes training in clear, critical thinking and in effective writing. Most of our courses are offered as small seminars or tutorials in which students have multiple opportunities to develop skills in reasoning and writing interpretive and critical essays.

MAJOR

The Philosophy major consists of nine semester courses: three required courses and six electives. The required courses are: any 100-level philosophy course, Philosophy 201 (History of Ancient Greek Philosophy) or Philosophy 202 (History of Modern Philosophy), and Philosophy 401 (Senior Seminar). The six electives are structured by a distribution requirement. Students must take at least one course in each of three areas: Contemporary Metaphysics and Epistemology [M&E], Contemporary Value Theory [V], and History [H]. These requirements apply to majors in the Class of 2018 and after.

Courses taught in other departments at Williams or at other institutions will not count toward the distribution requirement (Williams-Exeter tutorials may count, however, with the approval of the Department Chair). Up to two cross-listed courses taught in other departments may count as electives toward the major. No more than one 100-level course may count toward the major (and one 100-level course is required for the major—no exceptions).

We recommend the following trajectory through the major:

- By the end of the first year, take a 100-level philosophy course (this is typically the first step in the major) and one other philosophy course.
- By the end of the second year, complete a 100-level philosophy course, Phil 201 or Phil 202, and at least one other philosophy course. (If you will be away for the whole of your junior year, you should complete at least five courses by the end of the second year, preferably six.)
- By the end of the junior year, complete a 100-level philosophy course, Phil 201 or Phil 202, and at least four other philosophy courses.
- Other recommendations: take at least one tutorial; distribute your six electives evenly across the three distribution baskets; take a logic course; and take both PHIL 201 and PHIL 202.

The Degree with Honors in Philosophy

The degree with honors in Philosophy is awarded to students who have demonstrated outstanding achievement in a program of study that extends beyond the requirements of the major. This additional required work can take the form either of a senior essay written over one semester plus winter study (maximum 40 pages) or a year-long thesis (maximum 75 pages). Students planning to pursue a degree with honors must first write a brief proposal after having consulted with an advisor, then submit the proposal to the Department in mid-March (before spring break) of the junior year. To be eligible for honors candidates must have GPAs of 3.6 or higher in their courses in philosophy at the end of the junior and senior years. A
recommendation for graduation with honors will be made on the basis of the thoroughness, independence, and originality of the student's written work as well as their performance in a defense that will be organized by their advisor in consultation with the Chair.

STUDY AWAY

The Williams-Exeter Programme at Oxford (WEPO): the first full Oxford philosophy tutorial will count as the equivalent of two full-semester philosophy courses at Williams; the second full Oxford philosophy tutorial will count as the equivalent of one full-semester philosophy course at Williams, for a total of three Williams philosophy courses. Courses must be pre-approved by the Chair of the Philosophy Department, who will also determine which, if any, courses will count toward the philosophy major distribution requirements.

Courses taken in other Study Away programs: Students may petition the Philosophy Department for credit for philosophy courses taken at their Study Away institution. They should consult with the department Chair before they commit to a program. Final determinations will be made on the basis of the course syllabus and the quality of the student's written work for the course. Typically, courses taken while studying away will not fulfill distribution requirements for the philosophy major at Williams.

PHILOSOPHY RELATED COURSES

The following courses offered in other departments, while not cross-listed with Philosophy, may be of interest to philosophy students:

PHIL 109 (F) Skepticism and Relativism (WS)

Intellectually, we are ready skeptics and relativists. We doubt, we point out that no one can be certain in what she believes, and we are suspicious of declarations of transcendent reason or truth (unless they are our own). Emboldened by our confidence in skeptical arguments, we claim that knowledge is inevitably limited, that it depends on one's perspective, and that everything one believes is relative to context or culture. No domain of inquiry is immune to this destructive skepticism and confident relativism. Science is only "true" for some people, agnosticism is the only alternative to foolish superstition, and moral relativism and, consequently, nihilism are obvious. But is the best conclusion we can come to with respect to our intellectual endeavors that skepticism always carries the day and that nothing at all is true? In this tutorial, we will investigate the nature of skepticism and the varieties of relativism it encourages. Our readings will come primarily from philosophy, but will be supplemented with material from anthropology, physics, psychology, and linguistics. We will look at relativism with respect to reason and truth in general as well as with respect to science, religion, and morality. Along the way, we will need to come to grips with the following surprising fact. With few exceptions, thoroughgoing skepticism and relativism have not been the prevailing views of the greatest minds in the history of philosophy. Were they simply too unsophisticated and confused to understand what is for us the irresistible power of skepticism and relativism? Or might it be that our skepticism and relativism are the result of our own laziness and failure? Of course, this question cannot really be answered, nor is there any value in trying to answer it, and any "answer" will only be "true" for you. Right?

Requirements/Evaluation: participants will present substantial written work in the tutorial every other week, and will be responsible for commenting on their tutorial partner's work.

Prerequisites: none; this tutorial is an appropriate first course in PHIL.

Enrollment Limit: 8

Enrollment Preferences: This tutorial is specifically designed for first-year students, and they will be given absolute preference. Do not write to the instructor indicating a special interest, this will make no difference. If oversubscribed, students will be selected randomly.

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option
PHIL 110  (F) History of Modern Moral and Political Philosophy  (WS)
This course is a survey of 17th-, 18th-, and 19-century moral and political philosophy. We will consider what, if anything, justifies the rules of morality and law, and we will consider the nature, value, and limits of freedom. We will ask whether our individual actions and our social and political structures are based in our self-interested desires, our natural instincts, or our rationality. Authors will include: Hobbes, Locke, Rousseau, Hume, Kant, Smith, Marx, and Mill.

Requirements/Evaluation: Students will write a number of short essays.
Prerequisites: none
Enrollment Limit: 19

PHIL 115  (S) Personal Identity  (WS)
Through lectures, discussions, close readings and assigned writings, we will consider a variety of philosophical questions about the nature of persons, and personal identity through time. Persons are subjects of experiences, have thoughts and feelings, motivation and agency; a person is thought of as continuous over time, and as related to, recognized and respected by other persons. Thus, the concept of person plays a significant role in most branches of philosophy, e.g. metaphysics, epistemology, moral and political philosophy, philosophy of mind. Conceptions of person are equally important in science (especially in psychology), law, and the arts. Questions about persons are of central importance for a myriad of our theories and practices, and for the ways in which we live our lives. The aim of this course is to explore and evaluate a number of rival conceptions of persons and personal identity over time. Some of the questions which we will discuss are: What is a person? How do I know that I am one? What constitutes my knowledge of myself as a person, and does that knowledge differ in any significant respect from my knowledge of physical objects and of other people? Our starting and central question will be: What makes me the particular person that I am, and how is my identity as this individual person preserved over time? The course will place special emphasis on developing students' intellectual skills in close, analytical reading; reconstructing and evaluating claims and reasons that support them; producing original ideas and arguments, orally and in writing; responding to the claims and arguments presented in texts and in class; and writing clear, polished, well-argued papers.

Requirements/Evaluation: Class attendance, preparedness and participation; additional small group weekly meetings, and reports from these meetings (group members rotate in writing the report); 12 short writing assignments. No final paper and no exam.
Prerequisites: none; open to first year students
Enrollment Limit: 19

Enrollment Preferences: freshmen, sophomores, and philosophy majors who need a 100 level course to satisfy requirement for the major

Expected Class Size: 19

Grading: no pass/fail option, yes fifth course option

Unit Notes: meets 100-level PHIL major requirement
Distributions: (D2) (WS)

Writing Skills Notes: Students will write weekly short assignments (at most 1000 words long), six of which will be letter-graded (but only five best assignments will count for the final grade). All assignments will receive detailed comments on substance as well as on writing skills and strategies.

Spring 2025

SEM Section: 01    MW 7:00 pm - 8:15 pm     Bojana Mladenovic

PHIL 116  (S)  Mind, Knowledge, and Reality  (WS)
This course is an introduction to philosophy through three major themes: The nature of the universe, the existence of gods, and the mind/body problem. Throughout, we will appeal to reason and evidence in forming our best beliefs. Our discussions will range over historical and contemporary works in the Western tradition.

Requirements/Evaluation: active participation; four (5-6 page) essays
Prerequisites: none
Enrollment Limit: 19
Enrollment Preferences: Strong preference given to first-years and sophomores; do not contact the instructor to plead for special enrollment consideration.
Expected Class Size: 19
Grading: no pass/fail option, no fifth course option
Unit Notes: meets 100-level PHIL major requirement
Distributions: (D2) (WS)

Writing Skills Notes: Students will craft 4 six page essays, and each will receive extensive comments on structure and composition with an eye toward developing skills in philosophical writing.

Spring 2025

SEM Section: 01    MW 7:00 pm - 8:15 pm     Joseph L. Cruz

PHIL 117  (S)  Arguing about God  (WS)
"Faith is a fine invention," according to Emily Dickinson's poem, "when gentlemen can see; but microscopes are prudent in an emergency." This introduction to philosophy will see how far the microscopes of reason and logic can carry us in traditional arguments about the existence and nature of God. We will closely analyze classical arguments by Augustine, Avicenna, Aquinas, Anselm, Maimonides, Descartes, and others. Pascal's wager is a different approach: it argues that even though proof of the existence of God is unavailable, you will maximize your expected utility by believing. We will examine the wager in its original home of Pascal's Pensees, and look at William James' related article, "The Will to Believe." The millennia old problem of whether human suffering is compatible with God's perfection is called "the problem of evil." We will examine this issue in Hume's Dialogues Concerning Natural Religion, classic sources and contemporary articles. Students should be aware that, in the classic tradition, this class resembles a logic course.

Class Format: seminar
Requirements/Evaluation: 5 short papers
Prerequisites: none
Enrollment Limit: 19
Enrollment Preferences: first-years and sophomores
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option
Unit Notes: meets 100-level PHIL major requirement
Distributions: (D2) (WS)

Writing Skills Notes: Five 4 or 5 page papers, evenly spaced throughout the semester. Students will receive timely comments on their writing skills, with suggestions for improvement.
PHIL 118  (F)  Meaning, Communication and Society  (DPE)

The primary way we interact with others is through the use of language. We use language to communicate meanings in order to accomplish a variety of goals: to convey information, make requests, establish rules, utilize power, issue protests, and much more. We coordinate our lives through sounds from mouths, signs from hands, and squiggles on paper because somehow sounds, signs, and squiggles have meanings. This course is an investigation into how language is used to express meaning, and how such expression can have real interpersonal and societal impact. Using resources from philosophy and linguistics, we will study various ways in which literal and non-literal uses of language influence our social lives. Of particular interest will be how language can be used to establish, reinforce, and resist power relationships involving race and gender.

Class Format: This class will have both lecture and seminar elements.

Requirements/Evaluation: 5-6 papers over the course of the semester.

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Preference given to first year students and philosophy majors.

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)  (DPE)

Difference, Power, and Equity Notes: This course has a focus on the role of language in relationships involving power, oppression, and group inclusion between individuals belonging to various socio-political identities.

Attributes: Linguistics

Fall 2024
SEM Section: 01    MR 2:35 pm - 3:50 pm    Christian  De Leon

PHIL 119  (F)(S)  Why Obey the Law?  (WS)

What social and political arrangements are most conducive to fostering human well-being and the common good? What makes governmental authority legitimate? A foundation in reason and morality? Popular sovereignty? Does might make right? We turn first to two of Plato's most famous dialogues, *The Apology* and *The Republic* in which we encounter Socrates' trial for impiety and corrupting the youth, and, Socrates effort to defeat an argument that might makes right, that only the weak agree to obey the law, by envisioning an ideal (non-democratic) city-state ruled by benevolent philosopher-kings. The rest of the course is devoted to figures in the history of modern political philosophy, both defenders and critics of democratic liberalism (egs., Hobbes, Locke, Rousseau, Marx, J.S. Mill, Nietzsche, W.E.B Dubois, etc.). We conclude with contemporary reflections on the fate of democracy today.

Class Format: Class participation will involve individual and group activities meant to give you practice in thinking quickly, working with others, and building arguments.

Requirements/Evaluation: Six pass/fail short response essays of approximately 500 words each in which students write about a particular part of the assigned text (such as explaining what a passage means, drawing connections between different parts of the text, identifying an argument, responding to an argument, etc); two 5-page papers based on prompts; participation.

Prerequisites: None. Open to any student interested in the sources of our current understandings of government, the basis of its authority, and strengths and weaknesses of democracy.

Enrollment Limit: 19

Enrollment Preferences: Majors, first years, and sophomores will normally receive preference if the course over enrolls.

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Unit Notes: meets 100-level Phil major requirement

Distributions: (D2)  (WS)

Writing Skills Notes: The professor and the teaching assistant will provide detailed comments on short and longer essays and provide occasional peer review opportunities, handouts and discussions of frequent types of errors, different approaches to writing and drafting, and the importance of
editing and seeking the help of writing tutors. I encourage, but do not require, that students make appointments to discuss ideas and drafts with the TA or me.

Fall 2024
SEM Section: 01 TR 11:20 am - 12:35 pm Jana Sawicki

Spring 2025
SEM Section: 01 TR 11:20 am - 12:35 pm Jana Sawicki

PHIL 122 (F) Philosophical Approaches to Contemporary Moral Issues (WS)
In this tutorial we will examine a number of prominent and controversial social issues, using our study of them both as an opportunity to better understand the moral dimensions of those issues in and of themselves, and to consider the ways in which selected classical and contemporary moral theories characterize and address those moral dimensions. Topics will depend to some extent on student interest, but are likely to include concerns that fall under such headings as euthanasia, conscientious eating, abortion, the ethics of protest, and Covid-19. The course will use a case-based approach to examine these issues, and so in most weeks we will (1) read philosophical articles focused on a key concept or set of arguments central to the issue, and (2) consider in detail one morally complex case in which the concept or arguments have special application or relevance. In addition, we will devote several class meetings interspersed throughout the semester to reading foundational sources in ethical theory.

Class Format: Groups of three students (rather than the more conventional two students) will meet weekly with the professor.

Requirements/Evaluation: three tri-weekly tutorial papers and two short papers, oral commentaries, and tutorial discussion

Prerequisites: none; this course is suitable for first-year students

Enrollment Limit: 15

Enrollment Preferences: first-year students, sophomores, Philosophy majors, and those who have previously been dropped from the course for over-enrollment

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write three tutorial papers of 5-7 pages in length, one of which they will revise and resubmit, as well as two 2-3 page papers. In each, students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

Attributes: JLST Interdepartmental Electives

Not offered current academic year

PHIL 123 (F) Objectivity in Ethics (WS)
Are moral beliefs simply expressions of opinion, or can we construct good arguments on their behalf? In this course we'll examine several influential attempts to provide a rational foundation for morality, along with Nietzsche's wholesale rejection of these efforts. Readings will include work by Plato, Hobbes, Kant, Mill, Nietzsche, and contemporary authors.

Requirements/Evaluation: Participation in discussion; short response papers; four 5-page papers, evenly spaced throughout the semester

Prerequisites: None

Enrollment Limit: 19

Enrollment Preferences: First-years and sophomores, and students who need to fulfill their 100-level requirement for the philosophy major

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Unit Notes: Meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Four 5-page papers, evenly spaced throughout the semester. Students will receive timely comments on their writing skills, with
PHIL 126 (S) Paradoxes (WS)
There are three grains of sand on my desk. This is unfortunate, but at least there isn’t a heap of sand on my desk. That would be really worrisome. On the other hand, there is a heap of sand in my backyard. I don’t know how exactly how many grains of sand are in this heap, but let’s say 100,000. My daughter removes one grain of sand. I don’t know why, she just does. It seems like there is still a heap of sand in my backyard. In fact, it seems like you can’t change a heap of sand into something that isn’t a heap of sand by removing one grain of sand. Right? But now we have a problem. By repeated application of the same reasoning, it seems that even after she removes 99,997 grains of sand—I don’t know what she wants with all this sand, but I’m starting to worry about that girl—there is still a heap of sand in my backyard. But three grains isn’t enough for a heap. So there is not a heap in my backyard. Now I’m confused. Where did my reasoning go wrong? What we have here is an example of the sorites paradox. It is a paradox, because I started with seemingly true statements and used valid reasoning to arrive at contradictory conclusions. We can learn a lot about logic, language, epistemology and metaphysics by thinking through and attempting to resolve paradoxes. In this class, we’ll work together to think through some ancient and contemporary paradoxes. We’ll also work on writing lucid prose that displays precisely the logical structure of arguments, engages in focused critique of these arguments, and forcefully presents arguments of our own. Other topics could include: Zeno's paradoxes of motion and plurality, the liar's paradox, the surprise-exam paradox, paradoxes of material constitution, Newcomb’s Problem, and the Prisoner's Dilemma.

Requirements/Evaluation: (i) short response papers; (ii) midterm paper (~5-6 pages) (iii) Final term-paper (~10 pages) in multiple drafts; (iv) Active and informed participation in class discussions.

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: First and second year students. Prospective philosophy majors.

Expected Class Size: 15-19

Grading: no pass/fail option, yes fifth course option

Unit Notes: Meets 100-level PHIL major requirement

Distributions: (D2) (WS)

Writing Skills Notes: Students will write a number of short papers. Both the content and the writing will be evaluated. These papers will focus on clear and precise presentation and evaluation of arguments. There will be a midterm paper revising an earlier short paper. There will be a final term-paper written in multiple drafts.

Spring 2025

SEM Section: 01    TF 2:35 pm - 3:50 pm    Keith E. McPartland

PHIL 127 (F)(S) Meaning and Value (WS)
What gives an individual life meaning? Pleasure? Success in fulfilling desires? Flourishing in ways distinctive to a rational agent or a human being (including, for example, developing rational capacities and self-mastery, succeeding in worthwhile projects, cultivating relationships, living morally, developing spiritually)? Can we be mistaken about how well our lives are going, or about what has value? What are the main sources of uncertainty here? Does the fact that our lives will end threaten their meaning? How can science contribute to our understanding of these issues? We’ll examine these and related questions through historical and contemporary readings. This course aims to teach skills required for good philosophical thinking, including those involved in reading texts closely, reconstructing and evaluating arguments, articulating ideas clearly in discussion, and crafting well-structured and carefully-reasoned papers.

Class Format: Students will meet in trios for this tutorial. We will meet on a fixed weekly schedule agreed to by the instructor and participants.

Requirements/Evaluation: Four lead tutorial papers (5-6 pages in length), seven critiques (2 pages in length), and one rewrite.

Prerequisites: First-years and sophomores only.

Enrollment Limit: 12

Enrollment Preferences: First-years and sophomores, and students who need to fulfill their 100-level requirement for the philosophy major. This tutorial is an appropriate first course in PHIL.

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option
This tutorial meets the 100-level PHIL major requirement.

Writing Skills Notes: Each student will write a lead tutorial paper (5-6 pages in length) or a peer critique (2 pages) in alternating weeks. The instructor will provide timely comments on writing skills, with suggestions for improvement.

PHIL 129  (S)  Language and the Mind
Cross-listings:  COGS 129

Primary Cross-listing

Many animals communicate, but only humans can use language. What is language? Is the ability to learn it specialized, or just a matter of having enough cognitive processing power? Do successes of large language models and AI chat bots confirm or challenge traditional linguistic theory? Does language in any way determine, shape, or enable thought? How sophisticated could a mind without language be? Does knowledge of language require consciousness? In this course we will investigate (a) what makes language stand out from other kinds of communication system and (b) what makes human minds uniquely capable of acquiring language. Drawing on debates about the evolution of language, Chomskyan universal grammar, the computational theory of mind, and more, we will explore the philosophical consequences of our existence as linguistic creatures.

Requirements/Evaluation:  Short reading responses (approx. 2 pages) every other week, two exams

Prerequisites:  None

Enrollment Limit:  20

Enrollment Preferences:  Priority given to first and second years

Expected Class Size:  15

Grading:  yes pass/fail option,  yes fifth course option

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 129(D2)  COGS 129(D2)

Attributes:  Linguistics

Not offered current academic year

PHIL 201  (F)  History of Ancient Greek Philosophy

Cross-listings:  CLAS 203

Primary Cross-listing

Very few people believe that everything is water, that we knew everything before birth, that philosophers ought to rule the state, or that the earth is at the center of the cosmos. Why then should we spend our time studying people who in addition to having these surprising beliefs have been dead for 2500 years? First of all, Greek thinkers, especially Plato and Aristotle, radically shaped the trajectory of Western thought in every area of philosophy. No one can have an adequate understanding of Western intellectual history without some familiarity with the Greeks, and we might think that an understanding of our intellectual history can deepen our understanding of our own situation. More importantly, many of the thinkers that we will read in this class are simply excellent philosophers, and it is worthwhile for anyone interested in philosophical problems to read treatments of these problems by excellent philosophers. We will begin the course by looking briefly at some of the Presocratic philosophers active in the Mediterranean world of the seventh through fifth centuries BCE, and some of the sophists active in the fifth century. We will then turn to several of Plato's dialogues, examining Plato's portrayal of Socrates and his development of a new and profoundly powerful philosophical conception. Finally, we will examine some of Aristotle's works on metaphysics, epistemology and ethics, considering some of the ways Aristotle's thought responds to that of predecessors.

Requirements/Evaluation:  There will be a midterm and final exam. There will also be short writing assignments.

Prerequisites:  none
PHIL 203 (S) Introductory Logic (QFR)

Logic is the study of reasoning and argument. More particularly, it concerns itself with the differences between good and bad reasoning, between strong and weak arguments. This course is an introduction to the precise characterization of good logical reasoning. We will learn a to a formal language, Monadic First-Order Logic, designed to cleanly represent good inference patterns. Learning this language will primarily involve learning two skills: (i) translation between sentences of English and formulas of the logical language, and (ii) proving the validity of logical arguments using a system of natural deduction. No prior mathematical/logical/formal experience is assumed for this course.

Requirements/Evaluation: A midterm, a final, frequent problem sets.

Prerequisites: none

Enrollment Limit: 40

Enrollment Preferences: Preference given to philosophy majors.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: This course teaches two formal languages of logic: sentential logic and predicate logic.
PHIL 206  (S)  Philosophy and Tragedy  (WS)

Tragedy and philosophy were two of the finest achievements of classical Athenian civilization, and each attempts to reveal to the reader something fundamental about our shared human condition. The worldview that underlies classical tragedy, however, seems markedly different from the one that we find in classical philosophy. While Plato and Aristotle differ on many points, they share the belief that the cosmos and the human place within it can be understood by rational means. Furthermore, they share the conviction that the most important components of a successful life are within the control of the individual human being. The picture that we find in the works of the tragedians, Aeschylus, Sophocles and Euripides is markedly different. The tragedians emphasize the ways in which the cosmos and our role in it resists any attempt to be understood, and emphasize the ways in which the success or failure of our lives often turns on things completely beyond our control. The view of the tragedians can lead to a thoroughgoing nihilism according to which --the best thing of all [for a human being] is never to have been born--but the next best thing is to die soon (Aristotle's Eudemus as quoted in Nietzsche's Birth of Tragedy; see also Sophocles' Oedipus at Colonus).” Despite these rather grim pronouncements, tragic drama has continued to fascinate and educate generations. Furthermore, philosophers have continued to revisit the existential questions vividly raised by Greek tragedy. In this course, we will examine a number of Greek tragedies and philosophical writing on tragedy and the tragic. We will read the Oresteia and Prometheus Bound by Aeschylus, Sophocles' Theban Cycle, and the Hippolytus, Bacchae and Philoctetes by Euripides. As we read through these plays, we will also examine a number of philosophical works about tragedy. We will begin with Aristotle’s Poetics and will continue with Hume’s Of Tragedy, Hegel’s various writings on tragedy, and Nietzsche’s The Birth of Tragedy. If possible, we will arrange to see a live performance of a Greek tragedy.

Requirements/Evaluation: five papers, five responses and a final paper in multiple drafts; each week one student will write a paper responding to the week’s readings and the other student will write a response to that paper

Prerequisites: none;

Enrollment Limit: 10

Enrollment Preferences: Philosophy and Classics Majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Unit Notes: Satisfies the philosophy department history (H) requirement.

Distributions: (D2) (WS)

Writing Skills Notes: This is a tutorial in which each student will write 5 papers and 5 paper responses. We will spend a good bit of time discussing writing mechanics and skills as we discuss the papers.

Not offered current academic year

PHIL 207  (S)  Contemporary Philosophy of Mind

The philosophy of mind has been one of the most active areas of philosophical inquiry over the last century. Whether the mind can be fully understood within a scientific framework has taken on an exciting urgency. In this course we will investigate the the broad topics of consciousness and thought by surveying the many approaches to mind that yield the contemporary debates.

Requirements/Evaluation: weekly two page papers on focused topics and two 8- to 10-page papers

Prerequisites: at least one prior 100- or 200-level PHIL or COGS course

Enrollment Limit: 19

Enrollment Preferences: prospective Philosophy majors and Cognitive Science concentrators

Expected Class Size: 14

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

Attributes: COGS Interdepartmental Electives  PHIL Contemp Metaphysics + Epistemology Courses

Not offered current academic year
PHIL 211 (S) Ethics of Public Health (WS)
From questions about contact tracing apps to racial and age disparities in health risk and outcomes, the COVID-19 pandemic has foregrounded the importance of ethics as a key concern in public health policies and activities. Moreover, the ethical issues that are implicated in responses to the pandemic reflect the range of those manifested across the field of public health as a whole. In this course, we will survey the ethics of public health through the lens of the COVID-19 pandemic, investigating concepts and arguments that are central to the ethics of public health research and practice. For example, we will examine the ethics of disease surveillance, treatment and vaccine research, resource allocation and rationing, compulsion and voluntariness in public health measures, and social determinants of health outcomes, among other topics. To do this, we will need to become familiar with key ethical theories; think deeply about such concepts as privacy, paternalism and autonomy, exploitation, cost-benefit analysis and justice; and compare the function of these concepts in the context of the COVID-19 pandemic with the way they work in responses to other public health concerns.

Requirements/Evaluation: Biweekly 5-7 page papers, oral commentaries, and tutorial discussions.
Prerequisites: none
Enrollment Limit: 10
Enrollment Preferences: declared and prospective Philosophy majors and Public Health concentrators, students with a specific curricular need for the course, and students with a high level of interest who are unlikely to have an opportunity to take the course in a future term
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Unit Notes: Public Health concentrators may use either PHIL 211T Ethics of Public Health or PHIL 213T Biomedical Ethics to fulfill their 3-elective requirement, but they may not use both courses to do so.
Distributions: (D2) (WS)
Writing Skills Notes: Students will write five biweekly papers of 5-7 pages in length, one of which they will revise and resubmit. In each of the tutorial papers students will describe and evaluate arguments in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.
Attributes: PHIL Contemporary Value Theory Courses PHLH Bioethics + Interpretations of Health
Not offered current academic year

PHIL 212 (F) Ethics and Reproductive Technologies (WS)
Cross-listings: WGSS 212 / STS 212
Primary Cross-listing
In her groundbreaking book, The Tentative Pregnancy, Barbara Katz Rothman writes that "[t]he technological revolution in reproduction is forcing us to confront the very meaning of motherhood, to examine the nature and origins of the mother-child bond, and to replace--or to let us think we can replace--chance with choice." Taking this as our starting point, in this course we will examine a number of conceptual and ethical issues in the use and development of technologies related to human reproduction, drawing out their implications for such core concepts as "motherhood" and "parenthood," family and genetic relatedness, exploitation and commodification, and reproductive rights and society's interests in reproductive activities. Topics will range from consideration of "mundane" technologies such as contraception, abortion, in vitro fertilization (IVF), prenatal genetic screening and testing, and surrogacy, to the more extraordinary, possibly including pre-implantation genetic diagnosis (PGD), post-menopausal reproduction, uterine transplants, and "artificial wombs." Background readings include sources rooted in traditional modes of bioethical analysis as well as those incorporating feminist approaches.
Class Format: discussion
Requirements/Evaluation: active participation in class discussions, three or four short reflection papers, and two longer papers (5-7 and 7-10 pages)
Prerequisites: none, but introductory-level course in PHIL and/or WGSS recommended
Enrollment Limit: 19
Enrollment Preferences: WGSS and PHIL majors (declared or prospective), PHLH and STS concentrators (declared or prospective)
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option
PHIL 213  (S) Biomedical Ethics  (WS)

Much like the construction of medical knowledge itself, it is from specific cases that general principles of biomedical ethics arise and are systematized into a theoretical framework, and it is to cases they must return, if they are to be both useful and comprehensible to those making decisions within the biomedical context. In this tutorial we will exploit this characteristic of biomedical ethics by using a case-based approach to examining core concepts of the field. The first portion of the course will be devoted to developing and understanding four moral principles which have come to be accepted as canonical: respect for autonomy, beneficence, nonmaleficence, and justice. The remainder of the course will consider key concepts at the core of medical ethics and central issues for the field, such as privacy and confidentiality, the distinction between killing and “letting die,” and therapy vs. research. To this end, each week we will (1) read philosophical material focused on one principle or concept, and (2) consider in detail one bioethics case in which the principle or concept has special application or relevance. In some weeks, students will be asked to choose from a small set which case they would like to address; in others the case will be assigned.

Requirements/Evaluation: bi-weekly papers, oral commentaries, and tutorial discussions

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: PHIL majors, PHLH concentrators, those who have a curricular need for the course, those who have been dropped from the course in previous semesters due to over enrollment

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Writing Skills Notes: Students will write five tutorial papers of 5-7 pages in length, one of which they will revise and resubmit. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

Attributes: PHIL Contemporary Value Theory Courses  PHLH Bioethics + Interpretations of Health
students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

Requirements/Evaluation: Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

Prerequisites: No prerequisites

Enrollment Limit: 20

Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Fall 2024

LEC Section: 01 TR 11:20 am - 12:35 pm Joseph L. Cruz
PHIL 224 (S)  Nietzsche, Marx and Freud  (WS)
Nietzsche, Marx and Freud have had a profound influence on literature, philosophy, and critical theories of the 20th and 21st centuries. In this tutorial we will treat them as diagnosticians of modernity who engaged in unveiling illusions and opening up possible alternative human futures. Each questioned the emancipatory effects of dominant understandings of reason and freedom as well as idealist and humanist accounts of moral progress in history; each aimed to liberate human beings from unnecessary suffering. We will focus on questions concerning their distinctive diagnostic and critical methods, the problems they identified, and their respective understandings of religion and and modern science.

Class Format: We may also meet in a seminar format once or twice during the semester.

Requirements/Evaluation: Bi-weekly papers, 2-3 page commentaries, and tutorial discussions.

Prerequisites: One of the following: 100-level Philosophy course or permission of instructor. Exposure to history of modern European philosophy and/or intellectual history will be very helpful.

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors or prospective majors and students with background and interest in modern philosophy and critical theories more generally.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)  (WS)

Writing Skills Notes: Students write five or six 5-6 page tutorial papers. Each will receive regular feedback to improve their ability to present clear, well-supported and engaging written arguments and interpretations.

Attributes: PHIL History Courses

Spring 2025

TUT Section: T1  TBA  Jana Sawicki

PHIL 225 (S)  Existentialism

We will study the philosophical and literary works of Kierkegaard, Nietzsche, Dostoevsky, Tolstoy, Kafka, Sartre, de Beauvoir, and Camus. One of our guiding questions will be: What makes a thinker an "Existentialist"? The answer is not merely that they ask the question, "What gives meaning to a human life?" And, it's not merely that their answer invokes our freedom to determine our own identities. More than this, Existentialists emphasize the subjective relation we bear to our belief systems, moral codes, and personal identities. Existentialists investigate deeply irrational phenomena of human life, including anxiety, boredom, tragedy, melancholy, despair, death, faith, sexuality, love, alienation, hate, sadism, masochism, and authenticity. And, Existentialists express their thought in philosophical treatises as often as in literary works. In this course we will seek to comprehend the dimensions in which Existentialism is a distinctive intellectual tradition.

Class Format: Students will meet in pairs or trios with the instructor for 60 minutes each week.

Requirements/Evaluation: Students will take turns as the lead writer one week, and the respondent the next. The week's lead writer will write a 5- to 6-page essay on the assigned reading, due 36 hours before the meeting. The week's respondent will write a 2-page essay on the leader's essay due at the time of the meeting. At the meetings, both students will present their essays and hold a discussion. Students will be evaluated cumulatively on their essays and contributions to discussion.

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: preference to Philosophy majors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Not offered current academic year

PHIL 228 (F)  Feminist Bioethics  (WS)

Cross-listings: WGSS 228 / STS 228
In this course we will explore the ways in which feminist approaches to moral thinking have influenced both the methodology and the content of contemporary bioethics. The first portion of the course will address the emergence of the "Ethics of Care," critically assessing its origins in feminist theory, its development within the context of the caring professions, and its potential as a general approach to bioethical reasoning. The second portion of the course will use feminist philosophy to inform our understanding of the ways in which gender structures interactions with and within the health care system. To do this we will explore topics that might traditionally be considered "women's issues" in healthcare, such as medicine and body image (e.g., cosmetic surgery, eating disorders), reproductive and genetic technologies, and research on women and their health care needs. In addition we'll also look at feminist analyses of topics that traditionally have not been regarded as "gendered," such as resource allocation and end of life issues.

**Class Format:** discussion

**Requirements/Evaluation:** active participation in class discussions; periodic short papers (2-3 pages); midterm and final paper (5-7 and 7-10 pages, respectively); and one oral presentation

**Prerequisites:** none, although previous coursework in WGSS is desirable

**Enrollment Limit:** 19

**Enrollment Preferences:** prospective and declared majors or concentrators in PHIL, WGSS, STS, and PHLH, especially those who need the course to satisfy major or concentration requirements

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** meets Contemporary Value Theory requirement only if registration is under PHIL

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

WGSS 228(D2) PHIL 228(D2) STS 228(D2)

**Writing Skills Notes:** Students will write periodic short papers (2-3 pages each), a midterm paper (5-7 pages) and a final paper (7-10 pages). Short papers focus on concepts, arguments, and writing skills needed in the midterm and final papers, in which students are expected to describe and evaluate arguments from assigned readings, and to present clear and effective arguments in support of their own ethical positions. Students receive feedback on all papers and have the opportunity to revise midterm and final papers.

**PHIL 231 (F) Ancient Political Thought**

**Cross-listings:** PSCI 231

**Secondary Cross-listing**

The core activity of this seminar is the careful reading and sustained discussion of selected works by Plato and Aristotle, but we will also engage such other thinkers as Epictetus and Augustine, and, from a political and theoretical point of view, selections from the Hebrew Bible and New Testament. Among the questions that we will address: What is justice? How can it be known and pursued? How is political power generated and exercised? What are the social and ethical prerequisites--and consequences--of democracy? Must the freedom or fulfillment of some people require the subordination of others? Does freedom require leading (or avoiding) a political life? What distinguishes that kind of life from others? What does it mean to be "philosophical" or to think "theoretically" about politics? Although we will attempt to engage the readings on their own terms, we will also ask how the vast differences between the ancient world and our own undercut or enhance the texts’ ability to illuminate the dilemmas of political life for us.

**Class Format:** discussion

**Requirements/Evaluation:** three 7- to 8-page papers

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 18

**Grading:** yes pass/fail option, yes fifth course option

PHIL 232 (S) Modern Political Thought
Cross-listings: PSCI 232
Secondary Cross-listing
This course is a chronological survey of major works of political theory from the 16th to the 20th century. In discussions and writing, we will explore the diverse visions of modernity and of politics offered by such thinkers as Machiavelli, Hobbes, Locke, Rousseau, Marx, Mill, and Freud. They help us ask: What is freedom? Who is equal? Who should rule? With what limits and justifications? What form of government best serves the people? Who are the people, anyway? And on what grounds can we justify confidence in our provisional answers to such questions? Class will be primarily driven by discussion, often preceded by brief lectures. Attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

Requirements/Evaluation: three papers of 4-6 pages; class participation; brief informal writing tasks inside and outside of class meetings
Prerequisites: none; open to all
Enrollment Limit: 25
Enrollment Preferences: Political Theory concentrators, then Political Science majors
Expected Class Size: 25
Grading: yes pass/fail option, no fifth course option
Distributions: (D2)
This course is cross-listed and the prefixes carry the following divisional credit:

Attributes: PSCI Political Theory Courses
Not offered current academic year

PHIL 236 (S) Contemporary Ethical Theory
This course will examine central questions in normative ethics, including the following: Which features of actions are morally important and why (e.g., their motive, intrinsic nature, or consequences)? Which characteristics of persons give them moral status? How should moral equality be understood, and what is its foundation? When should we give morality priority over personal commitments and relationships, and why? Are we capable of disinterested altruism, or are we motivated solely by self-interest? By which methods should we pursue answers to these questions? We will examine these and related issues by looking in depth at contemporary defenses of consequentialist, deontological, and contractualist theories.

Requirements/Evaluation: Weekly seminar discussion questions; midterm paper (8-10 pages); final paper (10-12 pages)
Prerequisites: At least one previous PHIL course or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: Current and prospective philosophy majors
Expected Class Size: 10-15
Grading: no pass/fail option, no fifth course option
Distributions: (D2)

PHIL 239 (S) The Ethics of Artificial Intelligence
Cross-listings: STS 239

Primary Cross-listing

Human beings will someday live alongside artificially intelligent beings who equal or exceed us. The rise of AI will be a tectonic shift for culture, technology, and our fundamental sense of ourselves. When AI is fully realized, it is likely to be amongst the most important things to happen to our species. Some challenges we face are broad and about the future. How can we ensure that AI's will act morally? Is a world with AI's overall better or worse for us? How do we create legal and policy frameworks that cover a new kind of thinking being? If they are conscious, will AI's have dignity and rights? Other questions are pressing and immediate: Artificial intelligence techniques are used today to help decide whether someone gets a bank loan, is eligible to be released on bail, or in need of particular medical treatment. And right now there are autonomous vehicles deciding how to behave in traffic, and autonomous weapons capable of delivering lethal force. Is it moral for us to pass along these sorts of decisions to AI's? What if they are biased, unbeknownst to us? What if they are more fair? How should we understand intellectual and creative work in an era of generative models that take on some aspects of thought? In this course we will engage ethical questions surrounding the seeming inevitability of AI.

Class Format: mixture of lectures and discussion
Requirements/Evaluation: four short (3- to 4-page) writing assignments and a final essay (8-10 pages)
Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: CSCI or PHIL majors or STS or COGS concentrators

PHIL 241 (S) Contemporary Metaphysics

Our focus in this class is going to be on the nature of causation. We make causal judgments constantly in our everyday lives and in scientific contexts. It turns out, however, to be surprisingly difficult to say what causation is. We will begin the course by looking at Hume's and Kant's discussion of causation. We will then turn to a variety of more recent attempts to give a clear characterization of causation. In addition to examining general accounts of causation, we will examine particular problems that come up in thinking about mental causation and causation in indeterministic contexts.

Requirements/Evaluation: one 10 page midterm paper and one 15 page final paper which will involve draft and revision, possible short response papers, and active participation in seminar
Prerequisites: one PHIL course; familiarity with formal logic helpful but not required; or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: Philosophy Majors
Expected Class Size: 10-15
Grading: yes pass/fail option, yes fifth course option

**PHIL 244 (S) Environmental Ethics (WS)**

**Cross-listings:** ENVI 244

**Secondary Cross-listing**

What ethical standards should guide our individual and societal choices when those choices affect current and future environmental conditions? This course will introduce students to fundamental concepts, methods, and issues in environmental ethics. Initial tutorial meetings will focus on theoretical materials that will background later discussions and will include classic readings from the environmental ethics literature, among others. Most sessions will pair readings about key concepts with specific cases that raise complex ethical issues, including the concept of moral standing and, e.g., people who do not yet exist, non-human individuals, species, and complex living systems; the concept of moral responsibility and complicity in environmentally damaging practices; the legitimacy of cost-benefit analysis as an environmental policy tool; and the valuation of human lives.

**Requirements/Evaluation:** five essays (5-7 pages each) and five prepared oral responses to partners’ essays; evaluation will be based on essays, oral responses, and quality of discussion

**Prerequisites:** ENVI 101 or one course in PHIL

**Enrollment Limit:** 10

**Enrollment Preferences:** declared and prospective Environmental Studies majors and concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** meets Value Theory requirement only if registration is under PHIL

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ENVI 244(D2) PHIL 244(D2)

**Writing Skills Notes:** Students will write five tutorial papers of 5-7 pages in length, one of which they will revise and submit at the end of the term. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, centered particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

PHIL 245  (S) Mind and Persons in Indian Thought

Cross-listings:  ASIA 244 / REL 244

Secondary Cross-listing

In this course, we follow the Indian philosophical conversation concerning the self and the nature of consciousness, particularly as they are found in its various Yogic traditions. We start with some of the Hindu views about the self and the mind and consider their ethical implications. We then consider a range of Buddhist critiques of these views, focusing more particularly on the Madhyamaka, which radicalizes the critique of the self into a global anti-realist and skeptical stance. We also examine the Yogacara school, which offers a process view of reality focusing on the analysis of experience. We conclude by considering some of the later Hindu holistic views of the self as responses to the Buddhist critique. In this way we come to realize that far from being the irrational foil of "the West," Indian tradition is a rich resource for thinking through some of the central questions that have challenged philosophers in both traditions.

Class Format: discussion

Requirements/Evaluation:  full attendance and participation, three short essays (6 pages each)

Prerequisites:  none

PHIL 251  (S) Offensive Art

Twenty-four centuries ago Plato argued for censorship of art. In the last century New York City mayor Rudy Giuliani attempted to shut down the Brooklyn Museum "Sensations" exhibit because he claimed it offended Christians, and the Cincinnati Contemporary Arts Center was prosecuted for exhibiting allegedly obscene photographs by Robert Mapplethorpe. Just today (15 February 2022) The New York Times removed some solutions from their recently purchased game Wordle, saying that words such as "pussy", "slave", and "wench" are "offensive or insensitive". At Williams College a mural was removed from The Log and Herman Rosse's painting "Carnival of Life" was removed from the '62 Center. What should be done about offensive art? What is offensive art? Does it matter who is offended? Does offensive art harm? Is there a difference between being offended and being harmed? Is there a difference between cultural appropriation and cultural appreciation? What are the responsibilities of museum curators and theater producers when presenting art that might offend? Who gets to decide the answer to these questions; indeed, who gets to decide what questions to ask? We will attempt answers by studying classical works (such as Plato's Republic and John Stuart Mill's On Liberty), contemporary articles, and works of art in various media. Trigger Warning: all the works of art studied in this class will be chosen partly because they have offended a significant number of people. You are very likely to be offended by some of the art we discuss. This will be the only trigger warning for the class; if you don't want to be offended then this course is not for you.

Requirements/Evaluation:  several short responses (including op-eds on current controversies) and longer final projects (a 12- to 15-page paper or equivalent work in other media)

Prerequisites:  none

Enrollment Limit:  25

Enrollment Preferences:  seniors, juniors, then sophomores in that order

Expected Class Size:  25

Grading:  yes pass/fail option,  yes fifth course option
PHIL 272 (S) Free Will and Responsibility (WS)

Cross-listings: JLST 272

Primary Cross-listing

Our practice of holding people responsible seems justified as long as their choices are free. But when does a choice qualify as free? We're all deeply influenced by factors ranging from the general laws of nature to specific features of our genetic endowment and social environment (including religion, political ideology, and advertising). These affect not only our particular choices but also, more fundamentally, who we are and what we value. The key question, then, is whether, and how, agency is possible amidst all of these influences. We'll attempt to answer this question by examining recent philosophical work on the nature of free will and responsibility.

Requirements/Evaluation: Six tutorial papers (5-6 pages in length) and five critiques (2-3 pages in length)

Prerequisites: one PHIL course (or permission of instructor; please email with any questions)

Enrollment Limit: 10

Enrollment Preferences: current and prospective Philosophy majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 272(D2) JLST 272(D2)

Writing Skills Notes: Students will write a tutorial paper (5-6 pages in length) every other week, and a peer critique (2-3 pages in length) in alternating weeks, evenly spaced throughout the semester. The instructor will provide timely comments on writing skills, with suggestions for improvement.

PHIL 274 (F) Messing with People: The Ethics of Human Experimentation (WS)

The Tuskegee Syphilis Study and Stanley Milgram's Obedience experiments are infamous. Yet, other lesser known experiments are equally important landmarks in research ethics that continue to shape the design, conduct, and regulation of research involving human participants. In this tutorial we'll closely examine a series of contemporary and historical cases of human experimentation (roughly, one case per week) with an eye toward elucidating the moral norms that ought to govern such research. A number of conceptual themes will emerge throughout the course of the term, including notions of exploitation and coercion, privacy and confidentiality, and the balance between public interests and individual rights. The cases will be drawn from different domains of research, including clinical medicine, public health, social and behavioral sciences, and education. Specific issues are likely to include the ethics of placebo research; deception in research; studies of illicit/illegal behavior; genetic research; research involving social media; experimentation with children, pregnant people and fetuses; research involving persons with mental illness, justice and research with marginalized populations, among other topics.

Requirements/Evaluation: evaluations will be based on written work, on biweekly papers, oral commentaries, and tutorial discussions

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: Philosophy majors (declared and prospective); Public Health concentrators (declared and prospective)

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)
Writing Skills Notes: Students will write six tutorial papers of 5-7 pages in length, one of which they will revise and resubmit. In each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

PHIL 288 (F) Embodiment and Consciousness: A Cross-Cultural Exploration

Cross-listings: REL 288

Secondary Cross-listing

This course examines some of the central questions raised by the study of the consciousness: the place of intentionality, the role of emotions, the relation with the body, the nature of subjectivity, the scope of reflexivity, the nature of perceptual presence, etc. In confronting these difficult questions, we do not proceed purely theoretically but consider the contributions of various observation-based traditions, from Buddhist psychology and meditative practices to phenomenology and neurosciences. We begin by examining some of the central concepts of Buddhist psychology, its treatment of the mind as a selfless stream of consciousness, its examination of the variety of mental factors and its accounts of the relation between cognition and affects. We also introduce the practice of meditation as a way to observe the mind and raise questions concerning the place of its study in the mind-sciences. We pursue this reflection by examining the views of James, Husserl, Sartre and Merleau-Ponty, particularly as they concern the methods for the study of the mind and the relation between consciousness, reflexivity and the body. In this way, we develop a rich array of analytical tools and observational practices to further our understanding of the mind. But we also question the value of these tools based on first person approaches by relating them to the third person studies of the mind. In this way, we come to appreciate the importance of considering the biology on which mental processes are based and the light that this approach throws on the nature of consciousness. We conclude by considering the relation between first and third person studies of the mind, focusing on the concept of the embodied mind as a fruitful bridge between these different traditions.

Requirements/Evaluation: regular practice of meditation, a class presentation, a short essay (6-pages); a long final research paper (15 pages)

Prerequisites: any introduction to philosophy and at least two upper level courses in PHIL, at least one of which meets the Contemporary Metaphysics or Epistemology distribution requirement for the major, no exceptions;

Enrollment Limit: 18

PHIL 306 (S) The Good Life in Greek and Roman Ethics

Cross-listings: CLAS 306

Primary Cross-listing

Most thoughtful human beings spend a good deal of time musing about how we ought to live and about what counts as a good life for a human being. The philosophers of ancient Greece and Rome were among the first thinkers to develop rigorous arguments in response to such musings. Much of the moral philosophy produced in Greece and Rome remains as relevant today as when it was written. In this course, we will examine some central texts in ancient Greek and Roman moral philosophy. We will begin by reading some of Plato’s early dialogues and his Republic. We will then turn to Aristotle’s Nicomachean Ethics. We will then examine writings in the Stoic and Epicurean traditions, as well as Cicero’s On the Ends of Good and Evil. As we proceed through the course, we will look at the way in which each thinker characterizes happiness, virtue and the relation between the two. We will also pay close attention to the way in which each of these thinkers takes the practice of philosophy to play a key role in our realization of the good
Some of the discoveries made by physicists over the last century seem to show that our common sense views are deeply at odds with our most sophisticated and best confirmed scientific theories. The course will present the essential ideas of relativity theory and quantum theory and explore their implications for philosophy. We will ask, for example, what these theories tell us about the nature of space, time, probability and causality.

Requirements/Evaluation: attendance, participation, problem sets, exams, six 1- to 2-page papers and a 12- to 15-page term paper
Prerequisites: MATH 140, high-school physics, and either a 200-level course in PHIL or a 100-level course in PHYS
Enrollment Limit: 20
Enrollment Preferences: Philosophy majors and Physics majors
Expected Class Size: 20

"The 100th US President will be shorter than Aristotle was" is a sentence that is either true or false, we don't know which. Either way, it's true/false thanks to a special relationship it has to somebody in the far future and to somebody in the distant past. What is the nature of that relation? How does it work? What makes it possible? In this course we will investigate reference, a central topic in the philosophy of language. We will discuss competing theories about how different representational types refer, including names (like "Aristotle"), definite descriptions (like "the 100th US President"), indexicals (like "you"), and even non-verbal deixis (like pointing gestures). Of particular interest will be the relation between reference and linguistic meaning. Is reference all there is to meaning, or is there more to what some (or all) referring expressions mean? We'll explore this topic with an eye toward making connections with philosophical questions about the mind--do thoughts refer in the same way that words do? Must a speaker's linguistic reference always match their mental reference?

Requirements/Evaluation: 4-5 papers across the semester.
Prerequisites: At least one philosophy course
Enrollment Limit: 13
Enrollment Preferences: Priority given to philosophy majors and seniors
Expected Class Size: 10
Grading: yes pass/fail option, yes fifth course option
PHIL 315 (S) Kant’s Critique of Pure Reason
Kant’s *Critique of Pure Reason* is perhaps the most significant text in the history of philosophy. It puts an end to the Early Modern traditions of Rationalism and Empiricism, and it stands at the beginning of both the Analytic and Continental traditions in contemporary philosophy. Love it or hate it, you cannot ignore it. In this course, we will study the most important and influential chapters of the *Critique* with the help of some secondary literature.

Requirements/Evaluation: Student will be required to write three 8-10 page papers.
Prerequisites: PHIL 202
Enrollment Limit: 10
Enrollment Preferences: Philosophy majors
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D2)

Not offered current academic year

PHIL 319 (F) Topics in Philosophy of Race: Hegel and Africana Philosophy (DPE)
Cross-listings: AFR 327

Primary Cross-listing
How are individual and social subjects formed, and how do they connect to questions of race? What is the nature of consciousness and how can it be unhappy, false or double? What do we mean when we talk about racial capitalism? This course introduces philosophy students to these and related questions through a parallel reading that brings together 19th century German philosopher Hegel and a tradition of Africana philosophy running through Douglas, Du Bois, Fanon, Gilroy, Hartman and Wynter. While Hegel studies tends to occur in isolation from philosophers in the Africana tradition, many of the above explicitly refer to and take up questions in Hegel. This course argues that by reference to the historically specific modes of subjectivity and sociality that resulted from the Transatlantic Slave Trade and the Haitian Revolution, for instance, we can better understand and address long-standing questions in European Social Philosophy. Topics to be considered include the nature of freedom (both individual and social), the master/slave dialectic and subject constitution, self-consciousness and double consciousness, the stages of history, and racial capitalism

Requirements/Evaluation: Progressive writing assignments including 4 exegetical commentaries, one 5 page paper and one 10-12 page final paper.
Prerequisites: One prior 100 level philosophy course or permission of instructor.
Enrollment Limit: 15
Enrollment Preferences: Preference given to philosophy majors and Africana studies concentrators.
Expected Class Size: 10-15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
PHIL 319(D2) AFR 327(D2)

Difference, Power, and Equity Notes: Course material involves self-conscious and critical engagement with the history of racial subject formation as well as Africana philosophy, and thinking about how power’s distribution connects to questions of race.
Attributes: PHIL History Courses

Not offered current academic year
In this course, we focus on the aims of critique and on how we might use critical theory to further our social and political agendas today. You will become familiar with immanent critique, ideology critique, genealogical critique, and negative critique. Key questions include: What are the foundations and aims of critique? Does critique require postulating alternatives? How is power exercised? Should we abandon the idea of moral progress in history? Readings may include texts by Adorno, Horkheimer, Foucault, Deleuze, Judith Butler, Amy Allen, Raymond Geuss, Wendy Brown and Nancy Fraser.

**Class Format:** We may schedule at least one seminar meeting during the semester.

**Requirements/Evaluation:** Evaluation is based on written work (six 5-6 page papers, and six 2-3 page commentaries on a partner's papers) as well as the quality and level of preparation and intellectual engagement in our weekly meetings.

**Prerequisites:** Demonstrated background in the history of modern philosophy (PHIL 202), modern political theory, or critical and social theories.

**Enrollment Limit:** 10

**Enrollment Preferences:** Preference will be given to philosophy majors and prospective majors and students with background in critical or social theories.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**Writing Skills Notes:** Students will write six 5-6 page papers, and six 2-3 page commentaries on their partner's papers in alternative weeks. Papers and commentaries will receive significant oral feedback in our weekly 75 minute tutorial sessions.

**Difference, Power, and Equity Notes:** In this course, we raise questions at the center of debates in critical theory, a form of theory oriented toward emancipation or, at the very least, toward resisting unnecessary constraints on freedom that result in intolerable conditions and suffering.

**Attributes:** PHIL Contemporary Value Theory Courses

---

**PHIL 321 (S) Introduction to Critical Theory: The Enlightenment and Its Critics** (DPE) (WS)

**Cross-listings:** WGSS 322

**Primary Cross-listing**

We often associate modern faith in the prospects of universal human dignity, rational autonomy, the rights of man, individual liberty, democracy, open scientific inquiry and social and political progress with the Enlightenment. How can we reconcile this faith with the persistence of domination today? Critical theory aims not merely to understand the "struggles and wishes of the age" as Marx once described it, but with emancipation from domination. Understood in this way, critical theory is identified closely with the intellectual tradition of the Frankfurt School. In this tutorial, will read works in critical theory from the 18th century to the present, some from the Frankfurt tradition, and some not. We will focus on particular topics, examples of which are the following: normative critique, capitalism, authoritarianism, mass culture, enlightenment and reason, progress, violence, the domination of nature, white supremacy, patriarchy and colonialism.

**Class Format:** students will work in pairs and meet for 75 minutes each week with the professor

**Requirements/Evaluation:** Each student will write and present a 5 or 6-page paper every other week and a commentary on their partner's essay on alternate weeks; evaluations are based on written work as well as level of preparation and the quality of intellectual engagement in tutorial meetings.

**Prerequisites:** PHIL 202, Kant course, modern political theory, or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Philosophy majors and students with background in modern political theory, or other relevant demonstrated background.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**
PHIL 321(D2) WGSS 322(D2)

Writing Skills Notes: The tutorial format requires significant writing (six 2500-3000 word papers, and six 1000-1250 word commentaries), weekly commentary on writing, and instructor comments on papers.

Difference, Power, and Equity Notes: In this course power, difference, domination and the prospects of and obstacles to liberatory political struggle are central topics.

Attributes: PHIL History Courses WGSS Theory Courses

Not offered current academic year

PHIL 326 (S) Foucault Now (DPE) (WS)

Cross-listings: WGSS 336

Primary Cross-listing

If we think of Michel Foucault as engaged in writing histories, or genealogies, of his own present designed to undercut the sense of the obviousness of certain practices and ways of thinking, categorizing, and knowing, we can easily imagine that he might now be questioning different aspects of our contemporary “present” than the ones standardly associated with his name, namely, panopticons and surveillance, discipline, criminalization, the biopolitics of health, the normal and the abnormal, etc. In this course we address the question: How is the present we find ourselves living today different from the one that the author Foucault wrote about in the 1960s, 70s and early 80s before his untimely death in 1984? What differentiates today from yesterday? And what present practices and ways of thinking and knowing might be questioned using Foucault’s tools, genealogy in particular, for resisting unnecessary constraints on freedom and the perpetuation of unnecessary suffering? What is his legacy today? In this tutorial you will read from a selection of Foucault’s texts (books, lectures, interviews) in order to acquire a firm grasp of his method of “critique” and his way of looking at the interconnections between forms of power and the knowledge associated with particular disciplines. We will also read more recent work by Foucault inspired scholars on topics such as the biopolitics of gender, the genealogy of terrorism, the informational person (how we become our data), and neoliberal subjects.

Class Format: I may use a seminar format at least twice during the semester.

Requirements/Evaluation: evaluation will be based on written work (six 5- to 6-page papers, and six 2-3 page commentaries on their partner’s papers) as well as the quality and level of preparation and intellectual engagement in our weekly meetings.

Prerequisites: Relevant background in critical theory, social theory, political theory or philosophy.

Enrollment Limit: 10

Enrollment Preferences: I will give preference to philosophy majors and to upper class students with a demonstrated background in critical theories. Some sophomores may be eligible.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 336(D2) PHIL 326(D2)

Writing Skills Notes: This is a tutorial. Students will write five or six 5-6-page papers during the course of the semester and receive significant feedback on each paper. At the end of each tutorial meeting the student is asked to reflect on how they would approach the paper differently if they were to rewrite it.

Difference, Power, and Equity Notes: In this course we address power and domination, reflect on the difference between them, and treat power relations as not only an inevitable feature of any society, but as both enabling and constraining. Moreover, we will read material that uses Foucauldian tools to address contemporary issues involving sexism and racism, digital surveillance, and the abolition of prisons.

Attributes: PHIL History Courses

Not offered current academic year

PHIL 328 (F) Kant’s Ethics

Although Kant initially planned for his magnum opus to comprise theoretical and practical chapters, his metaphysics and epistemology take up all of his Critique of Pure Reason while his ethics is spread out over a series of works—Groundwork of the Metaphysics of Morals, Critique of Practical Reason, Religion within the Boundaries of Mere Reason, and The Metaphysics of Morals. These latter writings of Kant’s had a tremendous influence on the development of subsequent moral philosophy and indeed set the stage for contemporary discussions of the nature of practical reason,
motivation, freedom, and morality. Our seminar will have two aims: (1) to reconstruct the single most compelling moral theory from Kant's various ethical writings, and (2) to trace the influence of Kant's ethics in contemporary philosophy.

**Requirements/Evaluation:** weekly seminar discussion questions; 8-10-page midterm paper; 12-14-page final paper

**Prerequisites:** two courses in PHIL (including a 100-level PHIL course; PHIL 201 or 202 recommended); or permission from the instructors

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PHIL History Courses

Fall 2024

**SEM Section:** 01   TF 1:10 pm - 2:25 pm   Melissa J. Barry, Justin B. Shaddock

**PHIL 329 (F) Four Challenging Moral Philosophers** (DPE) (WS)

Elizabeth Anscombe, Philippa Foot, Amelie Rorty, and Cora Diamond all challenged the prevailing philosophical tenets of their times. Anscombe and Foot resurrected virtue ethics for Anglo-American philosophy and made moral psychology academically respectable. (Foot also invented the infamous trolley car thought experiment.) Rorty challenged the very concept of morality and questioned all moral theory. Diamond investigated the methodology of moral philosophy, paying special attention to the role of literature. In order to hit the ground running, students will be expected to read *The Women Are Up to Something: How Elizabeth Anscombe, Philippa Foot, Mary Midgley, and Iris Murdoch Revolutionized Ethics* by Benjamin J. B. Lipscomb before the first meeting, preferably over the summer.

**Requirements/Evaluation:** Tutorial papers and rewrites

**Prerequisites:** At least three PHIL courses, including at least one in moral philosophy.

**Enrollment Limit:** 10

**Enrollment Preferences:** Philosophy majors, seniors, juniors in that order

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**Writing Skills Notes:** Students will meet with the instructor in pairs for an hour each week; a 5- to 7-page paper every other week (6 in all), prepare and present a written critique of their partners' papers in alternate weeks, and revise and re-write one of their five papers

**Difference, Power, and Equity Notes:** Our four challenging moral philosophers are all women in a field dominated by men. They all challenged the prevailing philosophical tenets of their times.

**Attributes:** PHIL Contemporary Value Theory Courses

Not offered current academic year

**PHIL 330 (S) Plato** (WS)

**Cross-listings:** CLAS 330

**Primary Cross-listing**

Plato is one of the most important and influential thinkers in the history of the western tradition. His depiction of the trial and death of Socrates is one of the classics of western literature, and his views on ethics and politics continue to occupy a central place in our discussions 2400 years after they were written. It is, in fact, quite difficult to get through any course of study in the liberal arts without some familiarity with Plato. Nevertheless, comparatively few people realize that the views we commonly think of as "Platonic" represent only one strand in Plato's thought. For example, we commonly attribute to Plato a theory of the Forms on the basis of his claims in the so-called "middle dialogues" (mainly Republic, Phaedo, and Symposium). However, in his philosophically more sophisticated and notoriously difficult later dialogues (such as the Parmenides, Philebus, Sophist and Statesman), Plato engages in radical criticism and revision of his earlier views. In this course, we will spend the first third of the semester attempting to understand the metaphysics and epistemology in Plato's middle dialogues. We will spend the balance of the semester coming to grips with Plato's arguments in the later dialogues. We will read several complete dialogues in translation, and will also read a wide variety of secondary source material.
**PHIL 333 (F) Kant on Beauty, Life, and History**

In this course, we will study Kant's theories of aesthetic and teleological judgments. Aesthetic judgments are puzzling, since we call things "beautiful" because they cause us to feel pleasure, and yet we expect others to find the same things beautiful as we do (e.g., the sunset over the Taconic Ridge), while we do not generally expect others to find the same things pleasurable as we do (e.g., your favorite ice cream flavor at Lickety). Teleological judgments are likewise puzzling, since we often explain living things as designed for certain purposes (e.g., the hummingbird's long bill is for accessing nectar deep inside flowers) or as striving for certain goals (e.g., the sunflower turns toward the sun to take in energy), and yet we are committed to a scientific world-view, where nature is governed by mechanistic causal laws. Indeed, we sometimes describe human history as progressive (aiming toward greater rationality, morality, equality, or freedom, e.g.), even though we regard individual humans as free to choose whether to act well or poorly. Our course will consider Kant's attempts to account for these sorts of paradoxical judgments.

**Requirements/Evaluation:** A midterm and a final essay.

**Prerequisites:** PHIL 202 is recommended

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy majors, prospective Philosophy majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2)

**Attributes:** PHIL History Courses

**Not offered current academic year**

**PHIL 335 (S) Contemporary Metaethics**

We speak as if moral judgments can be true or false, warranted or unwarranted. But how should objectivity in this domain be understood? Is moral objectivity like scientific objectivity, assuming that we have a clear sense of what that involves? If not, should this concern us? What are other models for understanding moral objectivity? While answers to such questions are implicit in historically important accounts of morality, these issues became the topic of explicit, sustained debate in the twentieth and twenty-first century. Our focus will be on recent influential work in this area. We will examine several different approaches in depth, including realism, constructivism, expressivism, and skepticism.

**Class Format:** seminar

**Requirements/Evaluation:** weekly seminar discussion questions; 8-10-page midterm paper; 12-14-page final paper

**Prerequisites:** two courses in PHIL (including a 100-level PHIL course; PHIL 201 or 202 recommended); or permission from the instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** current and prospective Philosophy majors
PHIL 336  (F)  Political Liberalism and its Critics  (WS)
Political liberalism has been both celebrated and lamented. The philosopher John Rawls is widely credited with reviving liberalism in the late 20th century and providing its most persuasive defense. In this tutorial, we'll read portions of Rawls' major works, A Theory of Justice and Political Liberalism, and trace how his theory evolved in response to an array of critics, including libertarians, perfectionists, communitarians, feminist philosophers, and critical race theorists. Among other things, these critics challenged Rawls' interpretation and defense of the social contract framework, the ideals of freedom and equality, the content of principles of justice, political neutrality about the good, the nature of the self, the division between public and private spheres, and the distinction between ideal and non-ideal theory. We'll examine these criticisms in depth. If time permits, we'll also look briefly at some recent post-Rawlsian debates about the nature of distributive justice (e.g., luck vs. relational egalitarianism, or global justice).

Class Format: This tutorial will meet on a fixed weekly schedule agreed to by the instructor and participants.
Requirements/Evaluation: Six tutorial papers (5-6 pages in length) and six critiques (2-3 pages in length)
Prerequisites: Two previous PHIL courses (including a PHIL 100-level course), or permission of instructor
Enrollment Limit: 10
Enrollment Preferences: Current and prospective philosophy majors

PHIL 337  (S)  Justice in Health Care  (WS)
Justice is a notoriously complex and elusive philosophical concept, the conditions of which are even more difficult to articulate within real world institutions and contexts than in the abstract. In this course we'll explore justice as a fundamental moral principle and as a desideratum of the US health care system. The first portion of the course will be devoted to considering general theories of justice as well as alternative conceptions of justice specifically within the health care context. While social justice and distributive justice are deeply intertwined in the health care context and we will discuss both, we will focus primarily on the concept of distributive justice. This theoretically oriented work will provide the background for subsequent examination of specific topics, which may include, among others: justice in health care financing and reform; justice in health care rationing and access to health care, with particular attention to the intersections of rationing criteria with gender, sexuality, race, disability, and age; justice in the procurement and allocation of organs for transplantation; obesity and personal responsibility for illness; and justice in medical research, including "double standards" for research conducted in low resource settings.
Requirements/Evaluation: biweekly papers, oral commentaries, and tutorial discussions
Prerequisites: none
Enrollment Limit: 10
Enrollment Preferences: PHIL majors, PHLH concentrators, those with curricular need for the course, those who have been dropped from the course in previous semesters due to over enrollment, and those who are unlikely to have an opportunity to take the course in a later term
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D2) (WS)
Writing Skills Notes: Students will write six tutorial papers of 5-7 pages in length, one of which they will revise and submit at the end of the term.
each of the tutorial papers students will describe and evaluate arguments that appear in the assigned readings, and will develop arguments in support of their own ethical positions. Students will receive written and oral feedback, concentrated particularly in the first half of the semester, to improve their ability to present clear and effective written arguments.

PHIL 338  (F)  Intermediate Logic  (QFR)

Cross-listings:  MATH 338

Primary Cross-listing

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have take PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

Requirements/Evaluation:  problem sets and exams
Prerequisites:  some class in which student has studied formal reasoning
Enrollment Limit:  20
Enrollment Preferences:  Philosophy majors; juniors and seniors
Expected Class Size:  15
Grading:  yes pass/fail option,  yes fifth course option
Distributions:  (D2)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
PHIL 338(D2)  MATH 338(D3)

Quantitative/Formal Reasoning Notes:  This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

PHIL 345  (S)  Alienation

What does it mean to feel or to be alienated? Wanting things just because other people do? Not being able to identify with our social and political institutions? Or does it mean the narrowing of our activities, becoming workers who carry out tiny parts of broader processes that we can't see and that we can't control? How do ideas of alienation and meaninglessness have to do with ways that social life is organized -- with the capitalist economy, for one, but also with institutions like race and gender? This course traces different views of alienation and its critique that runs through Lukacs, Marx, Fanon, Kierkegaard, Rousseau, de Beauvoir and others. We'll also look at less conventional forms of alienation critique as part of our inquiry: Afrofuturist fiction by Octavia Butler, work on ornamentals by Anne Anlin Cheng, and films like A Woman Under the Influence.

Requirements/Evaluation:  Progressive writing assignments including: One argument reconstruction, One 6-8 page paper, commentaries on fellow student work, and one final 10-12 page paper.
Prerequisites:  At least one prior philosophy course
Enrollment Limit:  19
Enrollment Preferences:  Philosophy majors
PHIL 355 (S) Other Minds

We will discuss, in this course, several different kinds of problems concerning other minds. Our starting point will be the traditional philosophical problem of solipsism - the skeptical challenge to our belief in the existence of other minds. Since I cannot have direct access to anyone else’s experiences, how do I know that I am not the only being in the world that has experiences? What gives me the idea that there are others like me? What justifies my application of the same psychological concepts (such as sad, curious, intends, fears) to myself and to others? How do I check whether the application is correct? Is self-knowledge a different kind of knowledge than knowledge of other minds? After considering these philosophical questions and various answers that have been given to them, we will turn our attention to natural, everyday questions about others. How do we manage to understand each other? Do we directly observe each other’s psychological lives? Or do we make inferences, or form theories? To what extent can we really know one another, and can we refine and deepen our understanding? Is knowledge of other minds crucial for our ethical practices? Are there people who lack the capacity for such knowledge? If so, are they exempt from at least some of our ethical expectations? Finally, how far can our understanding of others go? For example, how do we understand ‘inner lives’ of infants, of people with dementia, of people with schizophrenia, or of people without any empathy whatsoever? How do we understand mental lives of non-human animals? For that matter, how do non-human animals understand us? Is it true that other minds will always remain unknown and inscrutable to a considerable degree? The literature on other minds is vast and heterogeneous. In addition to a number of philosophical texts, we will be reading in a wide area of contemporary scientific research: on ‘mindreading’, social cognition, empathy, and on so-called psychopathology. Time permitting, we will also consider the role of narrative fiction (in literature and film) in expanding and deepening our knowledge of other minds.

Requirements/Evaluation: Class attendance, preparedness and participation; Additional small group meetings, and rotating reports from these meetings; Weekly short assignments, oral or written. Some of these will be tutorial-style presentations, followed by comments by another student. A midterm paper, 5-6 pages long; A final paper, 7-8 pages long

Prerequisites: Declared Philosophy major or 4 Philosophy courses (one of which should be a Writing Skills course) or (exceptionally) consent of the instructor

Enrollment Limit: 12

Enrollment Preferences: Philosophy majors

PHIL 379 (S) American Pragmatism

Cross-listings: AMST 379

Primary Cross-listing

Along with jazz, pragmatism stands as the greatest uniquely American contribution to world culture. As the music wails in the background, we will study the classic pragmatists: William James, C. S. Peirce, and John Dewey. We will continue with the contemporary inheritors of the tradition: Cornel West, Richard Rorty, and Hilary Putnam. Although it has influenced both analytic and continental philosophy, pragmatism is a powerful third philosophical movement. Always asking what practical difference would it make, our authors investigate the central questions and disputes of philosophy, from epistemology and metaphysics to ethics and religion. Rather than seeing philosophy as an esoteric discipline, the pragmatic philosophers (with the possible exception of Peirce) see philosophy as integral to our culture and see themselves as public intellectuals.

Requirements/Evaluation: final paper, several short assignments

Prerequisites: at least three PHIL courses
Enrollment Limit: 25

Enrollment Preferences: Philosophy and American Studies majors, then seniors and juniors of any major

Expected Class Size: 12-15

Grading: yes pass/fail option, yes fifth course option

PHIL 390  (S) Discourse Dynamics  (WS)

Cross-listings: COGS 390

Secondary Cross-listing

It'd be perfectly natural to say "I might've left the stove on", then check the stove, then say "I didn't leave the stove on". But perform those exact same steps in a different order--check the stove, say "I didn't leave the stove on", then say "I might've left the stove on"--and something's gone quite wrong. Conversation is dynamic--the back and forth exchange of information is a process that grows and adapts to the surrounding context. The order in which you say things matters, and it matters for what you communicate what actions you take and what events happen around you. In this course, we will investigate dynamic communicative phenomena and discuss competing theoretical explanations about how they're interpreted. Of particular interest will be the extent to which discourse dynamics are built into the meanings of linguistic expressions vs. the extent to which they're consequences of our rational cognition. Is a sentence's relation to previously uttered sentences similar to its relation to extra-linguistic events? How much inference goes into interpreting what's said? In pursuing the answers to these questions, we will discuss both classic and contemporary theories from philosophy and linguistics.

Requirements/Evaluation: Four short papers (3-4 pages), take-home midterm paper (5-7) pages, take-home final paper (6-8 pages)

Prerequisites: At least one philosophy or cognitive science course (any level), or permission of instructor.

Enrollment Limit: 19

Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors, then to students who have taken 200-Level Intro to Formal Linguistics

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

COGS 390(D2) PHIL 390(D2)

Writing Skills Notes: There will be four short papers (3-4 pages each) that will receive written comments on substance, argument structure, and writing style. These will be designed to include sections that, upon revision in light of comments, can be incorporated into the longer midterm and final papers (5-7 pages and 6-8 pages respectively). Students will be required to meet with the instructor before the midterm and final papers to discuss outlines and revisions of short papers.

Winter Study

PHIL 12 (W) Yoga: Meditation in Action

Students will be introduced to the 8 limbs of yoga according to the Yoga Sutras of Patanjali, including ethics, physical poses, and breathing meditation. Class time will be spent in fun, experiential exploration of yoga poses and the physical, emotional, and mental benefits they bring. By the end of Winter Study, students should have a foundation to continue their own practice of yoga as an embodied philosophy of life. We will read excerpts from the Yoga Sutras of Patanjali to complement the class. Open and accessible to students of all abilities, including those with mobility restrictions.

Requirements/Evaluation: Paper(s) or report(s); Performance(s); Other: Students will be evaluated on class attendance and a one-page written self-assessment of their learning.

Prerequisites: None

Enrollment Limit: 14

Enrollment Preferences: Email or in-person interview to assess student motivation and to determine if the course is a good fit.

Expected Class Size: NA

Grading: pass/fail only

Unit Notes: Anne O'Connor is a Certified Iyengar Yoga Teacher and long-time student of yoga. Raised in Williamstown, she attended Williams College and spent many years living in France and Germany before returning to the Berkshires in 2013.

PHIL 15 Automata to AI: Ancient Ethical Assumptions Implicit in Our Current Attitudes toward genAI

Why do we automatically refer to generative AI as a tool? Why does it feel natural to discuss its social impacts from a perspective of labor? Why do stories of sentient tech prompt certain visceral reactions? While LLMs are new, our moral imaginations have had millennia of history developing robust theories about artificial beings' place in human relations. We will interrogate original texts from antiquity (as well as contemporary scholarship) which explore ethical concerns relevant to artificial entities: agency, control, sentience, language, creativity, soul, and more. Through critical reading, discussion and weekly writing, as well as guided encounters with generative AI, students will situate our current cultural conversations within the long philosophical traditions which tacitly shape them.
Requirements/Evaluation: Paper(s) or report(s)
Prerequisites: None
Enrollment Limit: 20
Enrollment Preferences: None
Expected Class Size: NA
Grading:

Unit Notes: Gerol Petruzella holds a Ph.D. in Philosophy and an M.A. in Classics, and works in OIT at Williams College. In 2018 he served on the IEEE working group for Ethically Aligned Design v2, a standards guide for ethical development of AI.

The instructional Physical Education Program at Williams is an integral part of the student’s total educational experience. As a part of the liberal arts concept, the program develops the mind-body relationship, which is dependent upon the proper integration of physical and intellectual capacities. The main objective of the physical education program is to develop in each student an appreciation of physical fitness and wellness, and to expose them to a variety of activities that are suitable for lifetime participation.

Four credits of Physical Education represent one of the requirements for the College degree. There are five physical education units during the year. In the fall academic semester, there are two six-week physical education quarters. Winter Study is another unit, and there are two physical education quarters in the spring academic semester. Two different activities must be completed in the fulfillment of the requirement. Students must complete two physical education credits during the first year, all four physical education credits must be completed by the end of sophomore year if the student wishes to study abroad.

A schedule listing all courses offered is issued to every student before each quarter and Winter Study. Classes may vary according to availability of instructors and interest of students. More information can be found at athletics.williams.edu/physical-education.

The following courses are offered at various times during the year:

- Aerobic and Core Conditioning
- Aqua Fitness
- Badminton
- Basketball
- Boot Camp
- Bouldering
- Circuit Training
- Dance (African, Ballet, Modern)
- Futsal/Indoor Soccer
- Golf
- Hiking
- Ice Skating
- Kayaking
- Kettlebells
- Lifeguarding
- Mindfullness
- Mountain Biking
- Muscle Fitness
- Pickle Ball
- Platform Tennis
- Playground Games
- Rape Aggression Defense (RAD)
- Running
- Skiing (Alpine and Cross Country)
- Snowboarding
- Snowshoeing

Paula E. Thoms, Assistant Professor of Physical Education and Head Coach of Women's Crew
Tommy Verdell, Assistant Professor of Physical Education, Associate Athletic Director for Inclusion and Compliance
Soccer
Spikeball
Spinning
Squash
Swim for Fitness
Swimming
Trip Leader training
Telemarking
Tennis
Volleyball
Walk for Fitness
Weight Training
Wellness
Yoga
How long will the Sun shine? How do we discover Earth-like planets among the many exoplanets circling other stars? How did the universe begin and how has it evolved over its 13.8-billion-year history? How do we detect not only light but also gravitational waves from afar? Astronomy is the science that asks and tries to answer questions like these. We have come a long way toward understanding what makes the sky appear as it does and how the Universe behaves. Williams Astronomy courses are for anyone who is interested in learning about the Universe, and who would like to be able to follow new astronomical discoveries as they are made. All courses in Astronomy satisfy the Division III requirement. The Astronomy major and the Astrophysics major, both administered by the Department of Physics and Astronomy, are described below.

The beginning astronomy courses are offered on two levels. Astronomy 101, 102, 104, and 330-range courses are intended primarily for non-science majors and have no prerequisite. Astronomy 111 is designed for students with some exposure to physics. It has a prerequisite of one year of high school physics or permission of the instructor, and a co-requisite of Mathematics 140 or equivalent background in calculus.

Most of the astronomy courses take advantage of our observational and computational facilities including a 24-inch computer-controlled telescope with sensitive electronic detectors, and our own computer network for image processing and data analysis. The Williams Astronomy site can be found at astronomy.williams.edu.

ASTRONOMY MAJOR

The Astronomy major is designed for students with an interest in learning about many aspects of modern astronomy, but who do not choose to take the most advanced physics and math courses of the astrophysics major. It is also appropriate as a second major for students concentrating in another field; in particular, combining an Astronomy major with a related major like Geoscience or Computer Science has been a fruitful path for some of our students. The Astronomy major emphasizes understanding the observed properties of the physical systems that comprise the known Universe, from the Sun and solar system, to the evolution of stars and star clusters, to the Milky Way Galaxy, to external galaxies and clusters of galaxies. Because some knowledge of physics and calculus is necessary to understand many astronomical phenomena, the Astronomy major requires the first two semesters each of the physics and calculus that are also required of Physics majors and Astrophysics majors.

There are several possible routes through the Astronomy major, depending on preparation and interest. Students considering a major in Astronomy should consult with members of the department early and often. A first-year student, if unsure about choosing between Astronomy and Astrophysics, may wish to take not only Astronomy 111 but also Physics 131, 141, or 151 and Mathematics 140 (if necessary) in the fall. Students who might place out of physics courses should read the section on placement under Physics.

Major Requirements for Astronomy

Astronomy 111 Introduction to Astrophysics OR Astronomy 101 Stars: From Suns to Black Holes and either Astronomy 102 The Solar System—Our Planetary Home OR Astronomy 104 The Milky Way Galaxy and the Universe Beyond

Two 200-level Astronomy courses (or additional 400-level Astronomy courses as substitutes)

Two 400-level Astronomy courses

Physics 131 Particles and Waves OR Physics 141 Particles and Waves—Enriched OR equivalent placement

Physics 142 Foundations of Modern Physics or Physics 151 Seminar on Modern Physics

Mathematics 140 Calculus II

Mathematics 150 Multivariable Calculus OR Mathematics 151 Multivariable Calculus OR equivalent placement

The total number of courses required for the Astronomy major is nine. A typical path through the major will begin with Physics 141, which is suitable for students with one year of high school physics and a background in calculus. However, students without high school physics may begin with Physics 131, and students entering with Advanced Placement in physics and/or math may obtain credit toward the major for the equivalent of
Physics 142 and/or Mathematics 150 or 151 taken elsewhere. There are some aspects of astronomy that are closely related to chemistry or geosciences. In recognition of this, certain advanced courses in those departments can be accepted for credit toward the Astronomy major.

THE DEGREE WITH HONORS IN ASTRONOMY

The honors degree in Astronomy will be awarded on the basis of a senior thesis presenting the results of an original observational, experimental, or theoretical investigation carried out by the student under the direction of a faculty member in Astronomy. There are no specific grade requirements (other than College-wide requirements for remaining in good academic standing) for entry into the thesis research program; however, a student wishing to do a thesis should have demonstrated both ability and motivation for independent work in previous courses and in any earlier research involvement. Students doing theses will normally choose a topic and an advisor early in the second semester of their junior year and usually begin their thesis work during the summer. During the senior year, those students whose proposals have been approved will elect two courses and a winter study project in addition to the minimum requirements for the major. Preparation for the thesis will occupy at least one course (Astronomy 493) and the winter study project (Astronomy 031). At the end of the winter study period, the department will decide, in consultation with each student, whether to admit that student to honors candidacy. Both a written thesis and an oral presentation to faculty and fellow students are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill the requirements with unusually high distinction.

The department will be flexible with regard to the number and timing of courses devoted to thesis research within the general guidelines of two courses and a winter study project over and above the minimum major requirements and the written and oral presentations, especially in cases of students with advanced standing and/or summer research experience. Students considering unusual requests are urged to consult with potential advisors or the department chair as early as possible.

ASTROPHYSICS MAJOR

The Astrophysics major is designed for students who want a rigorous introduction to the field, and includes not only those who plan graduate study in astronomy, astrophysics, or a closely related area, but also those interested in a wide variety of careers. Astrophysics alumni are not only astronomers but also computer scientists, geologists, teachers, doctors, lawyers, business school professors, and so on. In recent years, many astrophysics majors have had a second major in fields as wide ranging as mathematics, computer science, geosciences, economics, English, and art history. This major emphasizes the description of the Universe and its constituents in terms of physical processes. Potential Astrophysics majors should consult early with members of the Department of Physics and Astronomy to determine their most appropriate route through the major. An essential ingredient in such students’ undergraduate training is experience in physics and mathematics. Therefore, the major normally will begin in the first year a student is at Williams with Physics 131, 141, or 151 and Mathematics 140 or 150 or 151 in the fall. Physics 141 is recommended for students with one year of high school physics and a background in calculus. Students with very good background placing them out of Physics 142 and out of Mathematics 140 may choose to take Physics 201 and Mathematics 150 or 151 instead. Astronomy 111 will often be taken in the fall of the sophomore year; however, many students take it in the fall of their first year at Williams, along with physics and math. Students who might place out of physics courses should read the section on placement under Physics; those who place out of Physics 131 or 141 into Physics 142 or 151 should particularly consider taking Astronomy 111 in the fall of their first year.

In addition to the major courses described below, other courses in geosciences, mathematics, and computer science may also be appropriate.

Major Requirements for Astrophysics

- Astronomy 111 Introduction to Astrophysics OR Astronomy 101 Stars: From Suns to Black Holes and either Astronomy 102 The Solar System—Our Planetary Home OR Astronomy 104 The Milky Way Galaxy and the Universe Beyond
- Physics 131 Particles and Waves OR Physics 141 Particles and Waves—Enriched OR equivalent placement
- Physics 142 Foundations of Modern Physics OR Physics 151 Seminar on Modern Physics
- Physics 201 Electricity and Magnetism
- Physics 202 Waves and Optics
- Physics/Mathematics 210 Mathematical Methods for Scientists
- Physics 301 Introductory Quantum Physics
- Mathematics 150 Multivariable Calculus OR Mathematics 151 Multivariable Calculus

Three 400-level astronomy courses OR two 400-level astronomy courses and one of the following:

- Astronomy 211 Astronomical Observing and Data Analysis
- Physics 302 Statistical Physics
- Physics 402T Applications of Quantum Mechanics
Physics 405T Electromagnetic Theory
Physics 411T Classical Mechanics;
Physics 418 Gravity

The total number of courses required for the Astrophysics major, an interdisciplinary major, is eleven. Students entering with Advanced Placement in physics and/or mathematics may obtain credit toward the major for the equivalent of Physics 141 and/or Mathematics 140 and/or 150 or 151 taken elsewhere, but at least 8 courses in astronomy, physics, and mathematics must be taken at Williams. There are some aspects of astrophysics that are closely related to chemistry or geosciences. In recognition of this relation, certain advanced courses in those departments can be accepted for credit toward the Astrophysics major on a two-for-one basis. It is not possible to double major in Astrophysics and Physics.

THE DEGREE WITH HONORS IN ASTROPHYSICS

The honors degree in Astrophysics will be awarded on the basis of a senior thesis presenting the results of an original observational, experimental, or theoretical investigation carried out by the student under the direction of a faculty member in Astronomy or Physics. There are no specific grade requirements (other than College-wide requirements for remaining in good academic standing) for entry into the thesis research program; however, a student wishing to do a thesis should have demonstrated both ability and motivation for independent work in previous courses and in any earlier research involvement. Students doing theses will normally choose a topic and an advisor early in the second semester of their junior year and usually begin their thesis work during the summer. During the senior year, those students whose proposals have been approved will elect two courses and a winter study project in addition to the minimum requirements for the major. Preparation for the thesis will occupy at least one course (Astrophysics 493) and the winter study project (Astrophysics 031). At the end of the winter study period, the department will decide, in consultation with each student, whether to admit that student to honors candidacy. Both a written thesis and an oral presentation to faculty and fellow students are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill the requirements with unusually high distinction.

Honors candidates will also be required to attend departmental colloquium talks.

The department will be flexible with regard to the number and timing of courses devoted to thesis research within the general guidelines of two courses and a winter study project over and above the minimum major requirements and the written and oral presentations, especially in cases of students with advanced standing and/or summer research experience. Students considering unusual requests are urged to consult with potential advisors or the department chair as early as possible.

STUDY ABROAD

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, and complete syllabus including readings/assignments.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

No.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. PHYS 301, a required course for the Astrophysics major, is only taught in the fall, and is difficult to replicate abroad, especially regarding the lab component.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then
ASTR 101  (F)  Stars: From Suns to Black Holes

Have you ever wondered what makes the Sun and stars shine and what they are made of? Do they evolve, and if so, how do they change? What are black holes, and how can they form? How do we find planets around other stars? Astronomy 101, a non-major, general introduction to the part of contemporary astronomy that includes how stars form and die, will provide answers to these questions. We will pay special attention to exciting discoveries made in the past decade. Thousands of exoplanets have been discovered, with their atmospheres being studied in detail by the James Webb Space telescope. For the first time, gravitational waves from merging black holes have been detected. In this course we will discuss the basic methods and instruments used in these and other astronomical observations and what they can teach us about the life cycle of stars. We will discuss what happens at the centers of stars, how stars evolve, and why some stars explode and form neutron stars and black holes. This course is independent of and on the same level as ASTR 102 (solar system) and 104 (galaxies/cosmology); students who have taken these courses are welcome.

Class Format: lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration. Planetarium and Roof-Observatory TAs will be available for consultation, in addition to the instructors, throughout the semester.

Requirements/Evaluation: two hour tests, a final exam, an observing portfolio, and lab reports

Prerequisites: none

Enrollment Limit: 48;12/lab

Enrollment Preferences: first and second-year students

Expected Class Size: 30/lec

Grading: yes pass/fail option, no fifth course option

Unit Notes: non-major course

Distributions: (D3)

ASTR 102  (S)  Our Solar System and Others

What makes Earth different from all the other planets? What have NASA's Curiosity and Perseverance on Mars found about that planet's past running water and suitability for life? How has knowledge about Pluto and the outer solar system been transformed by NASA's flybys? Will asteroids or comets collide with the Earth again? What is the new James Webb Space Telescope revealing about exoplanets and their atmospheres? Astronomy 102, a non-major, general introduction to the part of contemporary astronomy that comprises the study of the solar system (and the systems of planets around other stars), will provide answers to these questions and more. We will cover the historical development of humanity's understanding of planetary systems, examining contributions by Copernicus, Galileo, Newton, Einstein, and others and the more recent discoveries of over 4000 exoplanets around stars other than the Sun. The course gives special attention to exciting discoveries of the past few years by space probes and space telescopes such as the Hubble, James Webb, and Kepler/K2/TESS missions. We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of, and on the same level as Astronomy 101 (stars and stellar evolution) and 104 (galaxies and cosmology), and students who have taken those courses are welcome.

Class Format: lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration. Planetarium and Roof-Observing TAs will be available for consultation, in addition to the instructors, throughout the semester.
**ASTR 104 (S) The Milky Way Galaxy and the Universe Beyond**

How was the Universe created, and how has it evolved to its presently observed structure? This course will start at the Big Bang, the beginning of everything, and move forward from there. About five centuries ago Galileo Galilei used his own primitive telescope to make many astronomical discoveries: observing the moons of the Jupiter, craters on the Moon, and Sun spots to name a few. Galileo also noticed that stars are not spread on the celestial sphere at random but form a disk like structure, which we now call the Milky Way Galaxy -- our cosmic home. Almost a hundred years ago Edwin Hubble discovered that the Universe contains many galaxies and that they are moving away from each other. Hubble discovered that the Universe -- the largest physical object -- expands, so it had a beginning. In this course we will explore the tools and techniques that astronomers use to study stars and galaxies. From the discovery of the Milky Way to the expanding Universe, we will cover the key concepts and discoveries that have shaped our understanding of the cosmos. During recent decades astronomers have made exciting -- and unsettling -- new discoveries: it turns out that most of matter in the Universe does not emit light and most probably is composed of particles of unknown origin, and that the expansion of the Universe is now accelerating, pushed by a mysterious dark energy. At this point, astronomers have evidence to show that at early epochs the Universe was very dense and very hot. This early epoch is called the Big Bang. How the Big Bang happened is not known yet but there are several interesting hypotheses that our Universe could be one of many. This course will introduce important highlights in the observation and interpretation of remarkable astronomical phenomena and explore these many mysteries.

**Class Format:** lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration. Planetarium and Roof-Observatory TAs will be available for consultation, in addition to the instructors, throughout the semester. Current astronomical discoveries will be discussed at the beginning of each class and by email throughout the semester.

**Requirements/Evaluation:** two hour tests, a final exam, an observing portfolio, and lab reports

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** first-years

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** non-major course

**Distributions:** (D3)

Not offered current academic year
other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

Class Format: The class has weekly afternoon laboratory sessions, which will alternate between 'hands-on' activities and problem-solving/discussion sessions. Nighttime observing sessions will occur throughout the semester.

Requirements/Evaluation: weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

Prerequisites: a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

Enrollment Limit: 28; 14/lab

Enrollment Preferences: potential Astronomy majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

---

ASTR 206 (S) Astrobiology (QFR)

This course will focus on the development of complex life and its observational signatures, both on Earth and on other worlds. We will first investigate the conditions that have led to the development of complex life on Earth. We will view Earth over time from an outsider's perspective and challenge preconceptions about the basic requirements for life. We will also explore the 'hot spots' in the search for life beyond Earth in our Solar System. Observations in the next decade may reveal biosignatures in the atmospheres of exoplanets. We will learn about these future observations, while also interacting with current research-grade data for other planets and learning about the methods used to constrain the physical conditions on other worlds. Using quantitative models, we will test the stability of Earth-like planets to the variable and potentially hostile conditions of evolving solar systems.

Requirements/Evaluation: weekly problem sets, one paper, two mid-term exams, and a final exam

Prerequisites: Math 130 and at least one prior physical science course (either Astronomy, Physics, Geosciences, or Chemistry), or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Science majors, with preference given to students majoring in Astronomy, Astrophysics, or Geosciences

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: In this course students will make quantitative comparisons between environmental conditions on Earth, other planetary bodies, and models. The students will also examine observations regarding the detection and characterization of planetary bodies, including contemporary data.

---

Spring 2025

LEC Section: 01  MR 2:35 pm - 3:50 pm  Jason E. Young

ASTR 211 (S) Astronomical Observing and Data Analysis (QFR)

How do astronomers make scientific measurements for objects that are light-years away from Earth? This course will introduce the basics of telescopes and observations and will give students hands-on training in the techniques astronomers use to obtain, process, and analyze scientific
data. We will discuss observation planning, CCD detectors, signal statistics, image processing, and photometric and spectroscopic observations. We will begin by focusing on ground-based optical observations and will move on to non-optical observations, both electromagnetic (e.g., radio waves, X-rays) and non-electromagnetic (e.g., gravitational waves, neutrinos). Throughout the course, students will use computational techniques to work with real astronomical data, taken with our 24" telescope and from data archives.

Class Format: discussion, computer lab work, and observing

Requirements/Evaluation: weekly problem sets, lab work, and observing projects

Prerequisites: MATH 150 or 151; prior experience with Unix and computer programming is helpful, but not required

Enrollment Limit: 14

Enrollment Preferences: Astronomy or Astrophysics majors

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: The course requires regular problem sets. Labs require computer programming and statistical and graphical analyses of data.

Not offered current academic year

ASTR 220 (S) New Discoveries with the James Webb Space Telescope

Launched in December 2021, the James Webb Space Telescope (JWST) has delivered new views of the universe and is reshaping our understanding of our solar system, planets around other stars, star formation, and galaxies in the early universe. The beautifully detailed images have also generated intense public interest and are often the subject of science articles in the news. Through JWST’s new observations, this course will explore both cutting-edge astronomical science and science communication. We will focus on open questions in each of JWST’s four themes: Other Worlds, Star Lifecycle, Galaxies Over Time, and Early Universe. We will discuss the science behind these questions, recent discoveries, and how astronomers are using JWST to learn more. We will also learn about astronomical observations, how JWST works, and how astronomers collect and evaluate scientific evidence. Students will discuss how discoveries are communicated to the public, analyze stories in popular media, and create their own versions of public astronomy communications.

Requirements/Evaluation: weekly homework questions and short writing assignments, class participation, mid-term written article, and final project

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Astronomy/Astrophysics majors and prospective majors, sophomores

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Unit Notes: non-major course

Distributions: (D3)

Spring 2025

LEC Section: 01 MR 1:10 pm - 2:25 pm Anne Jaskot

ASTR 240 (F) Great Astronomers and Their Original Publications (WS)

Cross-listings: STS 240 / LEAD 240

Primary Cross-listing

In this course we will study some of the greatest figures in astronomy and consider their leadership in advancing progress in the field. We will consider their lives and works, especially as represented by original copies of their books and other publications. These great astronomers include: 16th century, Nicolaus Copernicus (heliocentric universe); Tycho Brahe (best pre-telescopic observations); 17th century, Galileo (discoveries with his first astronomical telescope, 1610; sunspots, 1613; Dialogo, 1632); Johannes Kepler (laws of planetary motion, 1609, 1619, Rudolphine Tables 1627); Johannes Hevelius and Elisabeth Hevelius (atlases of the Moon and of stars, 1647, and 1687); Isaac Newton (Principia Mathematica: laws of universal gravitation and of motion, 1687); 18th century, Edmond Halley (Miscellanea curiosa, eclipse maps, 1715, 1724); John Flamsteed and Margaret Flamsteed (Atlas Coelestis, 1729); and William Herschel and Caroline Herschel (1781, 1798). Also, from more recent times in which original works are
often articles rather than books: 20th century, Albert Einstein (special relativity, 1905; general relativity, 1916); Marie Curie (radioactivity); Cecilia Payne-Gaposchkin (hydrogen dominating stars, 1929), Edwin Hubble (Hubble’s law, 1929); George Ellery Hale (Mt. Wilson Observatory 100” telescope, 1917; Palomar Observatory 200” telescope, 1948), Vera Rubin (dark matter, 1970s); Jocelyn Bell Burnell (pulsar discovery, 1968); and 21st century: Wendy Freedman (Universe's expansion rate, 2000s). First editions will be available in Williams’ Chapin Library of rare books, where we will meet in an adjacent classroom. We will also consider how such original materials are collected and preserved, and look at examples from the wider world of rarities, such as a leaf from the Gutenberg Bible (c. 1453) and a Shakespeare First Folio (1623, with a discussion of astronomical references in Shakespeare's plays). The course will be taught in collaboration between an astronomer and a rare-books librarian, with remote lectures by experts from around the world.

**Class Format:** Meeting on campus in the Chapin Library classroom (Sawyer 452)

**Requirements/Evaluation:** class participation, two 5-page intermediate papers, and a final 15-page paper; student choice of additional readings from a provided reading list

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** if overenrolled, preference by written paragraph of explanation of why student wants to take the course

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

ASTR 240(D3) STS 240(D2) LEAD 240(D2)

**Writing Skills Notes:** Comments on submitted papers will aid in writing skills

**Attributes:** LEAD Facets or Domains of Leadership

Not offered current academic year

**ASTR 330 (S) The Nature of the Universe**

This course is a journey through space and time from the first fractions of a second after the Big Bang to the ultimate fate of the Universe billions of years into the future. Topics include the Big Bang and its remnant cosmic background radiation, cosmic inflation, conditions during the first three minutes, creation of the elements, stellar and galactic black holes, relativity, the detection of gravitational waves, galaxies and quasars, dark matter, and the formation of the large-scale structure of the Universe. We will explore current ideas about the fate of our Universe, including the acceleration of its expansion, and its implications for the end of time. Finally, we will consider the fantastic but serious theoretical proposal that ours is but one of countless universes existing within a multiverse.

**Class Format:** lecture/discussion, three hours per week

**Requirements/Evaluation:** two midterm exams, a small observing portfolio, occasional quizzes, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 48

**Enrollment Preferences:** open only to juniors and seniors; closed to students who have taken or are taking ASTR 104, and closed to ASTR, ASPH, and PHYS majors; preference given to seniors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** non-major course; course in the 33X sequence are meant as general education courses for students in all majors

**Distributions:** (D3)

Not offered current academic year

**ASTR 402 (S) Between the Stars: The Interstellar Medium** (QFR)

The matter between the stars—the interstellar medium—tells the story of the evolution of galaxies and the stars within them. Stars are accompanied by diffuse matter all through their lifetimes, from their birthplaces in dense molecular clouds, to the stellar winds they eject as they evolve, and to their final fates as they shed their outer layers, whether as planetary nebulae or dazzling supernovae. As these processes go on, they enrich the interstellar medium with the products of the stars' nuclear fusion. Interpreting the emission from this interstellar gas is one of astronomers’ most powerful tools to
measure the physical conditions, motions, and composition of our own galaxy and others. In this course we will study the interstellar medium in its various forms, from cold, dense, star-forming molecular clouds to X-ray-emitting bubbles formed by supernovae. We will learn about the physical mechanisms that produce the radiation we observe, including radiative ionization and recombination, collisional excitation of "forbidden" lines, collisional ionization, and synchrotron radiation. Applying our understanding of these processes, we will analyze the physical conditions and chemical compositions of a variety of nebulae. Finally, we will discuss the evolution of interstellar material in galaxies across cosmic time. This course is observing-intensive. Throughout the semester, students will work in small groups to design, carry out, analyze, and critique their own observations of the interstellar medium taken using the rooftop telescope.

**Class Format:** Tutorial meetings will be scheduled with the professor. Students will also complete observing projects using the rooftop telescope.

**Requirements/Evaluation:**
weekly problem sets, 10-page final paper, and observing projects

**Prerequisites:** ASTR 111 and PHYS 201 or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** juniors and seniors

**Expected Class Size:** 6

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** In this course, students will derive quantitative physical formulas, use these equations to calculate and compare physical properties, and generate and analyze graphical representations of data. They will also make and analyze measurements of astronomical data through observing projects.

Spring 2025

TUT Section: T1  TBA  Anne Jaskot

**ASTR 404 (S) Unsolved Problems in Galaxy Evolution**

In this tutorial, we will learn about galaxies and their evolution by focusing on some of the key mysteries astronomers are trying to solve. Questions may include: How do galaxies turn their gas supply into stars? Is there a universal initial mass function for star formation? What is the origin of multiple stellar populations in globular clusters? Why do some galaxies cease star formation? Which galaxies reionized the universe? We will discuss the nature of each unsolved problem, debate the theories proposed to answer it, and consider how future progress might be made.

**Requirements/Evaluation:** student's papers, responses to the partner's papers, and problem sets

**Prerequisites:** ASTR 111 and PHYS 142 or 151 or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Juniors and Seniors

**Expected Class Size:** 6

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Not offered current academic year

**ASTR 410 (S) Compact Stellar Remnants: White Dwarfs, Neutron Stars and Black Holes**

A star is a very interesting, very complicated physical object. Properties of stars and their evolutionary paths depend on an intricate interplay of different physical phenomena with gravity, nuclear interactions, radiation processes and even quantum and relativistic effects playing important roles. Using basic physics we will construct simple models of stars and discuss their evolution, concentrating on the key physical processes that play the dominant role at different evolutionary stages. We will discuss late stages of stellar evolution and concentrate on the basic properties of three possible remnants: white dwarfs, neutron stars and black holes. Radio and X-ray pulsars, supernovae including Type Ia and Gamma Ray Bursts will be discussed as well as observational confirmation of existence of black holes. We will explore extreme conditions existing near neutron stars and black holes and discuss their astrophysical consequences. We will also discuss the recent exciting detection of gravitational waves by the LIGO/VIRGO laser interferometric detectors.

**Class Format:** discussion three hours per week

**Requirements/Evaluation:** classroom participation, homework assignments, a midterm exam and a final exam
Prerequisites: PHYS 201 or permission of instructor
Enrollment Limit: 19
Enrollment Preferences: physics, astrophysics, and astronomy majors
Expected Class Size: 12
Grading: no pass/fail option, no fifth course option
Distributions: (D3)

Not offered current academic year

ASTR 413  (F)  Building Stars: A Physical Model of Stellar Structure  (QFR)
How does the Sun shine? How does the Sun evolve with time? What physical processes determine the power output of the Sun? In this course we will
explore our modern understanding of how stars work, and why they have a range of sizes, temperatures, and luminosities. As we go, we will discuss
the laws of physics at work in our Sun and other stars. Over the course of the semester, we will build a working computer model of the Sun using the
basic laws of nuclear fusion, radiative transfer, thermal mechanics, and hydrostatic equilibrium.

Class Format: Lectures will include time for computer programming work
Requirements/Evaluation: weekly problem sets, weekly coding homework assignments, two mid-term exams, and a final project
Prerequisites: PHYS 142 or 151, any prior class that makes use of programming, or permission of instructor
Enrollment Limit: 10
Enrollment Preferences: Astronomy, Astrophysics, or Physics majors, with first preference to Astronomy or Astrophysics majors
Expected Class Size: 6
Grading: no pass/fail option, no fifth course option
Distributions: (D3)  (QFR)

Quantitative/Formal Reasoning Notes: In this course, students will use differential equations and numerical coding techniques to test and explore
the relationships between physical laws using the Sun and other stars as examples. They will make quantitative comparisons between their
calculations and observed stellar properties.

Winter Study

ASTR 16 (W) An infinity of worlds: planets and the search for life in the universe
Less than a generation ago, we wondered, as we had for millions of years before, whether there were any other planets at all. Now, we are privileged to be in the first generation of humans to know that many of the points of light dusting our night sky are host to orbiting worlds, some of which may be like our Earth. In this course, we will explore the techniques that are being used to discover these new worlds. We will make our own contributions to this great age of discovery, by using NASA spacecraft data to search for new planets. This course, aimed at non-majors, will deal with the science of planet hunting, the astounding diversity of planets known to exist, the emerging science of astrobiology, and the enduring question of “are we alone?” through works of science fiction and cutting-edge research. Coursework will consist of readings from popular science books aimed at a general audience, science-fiction short stories, and excerpts from science-fiction novels, in addition to 1-2 relevant feature films. The primary mode of instruction will be 6 hours per week of in-person class meetings including lectures, small-group activities, and optional evening observing sessions at the rooftop telescope (weather permitting). Evaluation will be based on a final 10-page paper, the topic and format of which is extremely broad.
Requirements/Evaluation: Paper(s) or report(s)
Prerequisites: None
Enrollment Limit: 24
Enrollment Preferences: If overenrolled, preference will be given to first years and sophomores. I am willing to open a second section if enrolment
Expected Class Size: NA
Grading: pass/fail only

Unit Notes: Rob Wittenmyer '98 is Professor of astrophysics at the University of Southern Queensland in Australia. He is a veteran planet hunter with more than 100 published planet discoveries.

Materials/Lab Fee: $75
Attributes: STUX Winter Study Student Exploration

Not offered current academic year

ASTR 31 (W) Senior Research: Astronomy
To be taken by students registered for Astronomy 493, 494.
Grading: pass/fail only

Not offered current academic year

ASTR 32 (W) Senior Research: Astrophysics
Cross-listings: PHYS 32
Primary Cross-listing
To be taken by students registered for Astrophysics 495, 496.
Class Format: independent study
Grading: pass/fail only

This course is cross-listed and the prefixes carry the following divisional credit:
PHYS 32 ASTR 32

Not offered current academic year

ASTR 99 (W) Independent Study: Astronomy or Astrophysics
Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.
Grading: pass/fail only

Not offered current academic year
How long will the Sun shine? How do we discover Earth-like planets among the many exoplanets circling other stars? How did the universe begin and how has it evolved over its 13.8-billion-year history? How do we detect not only light but also gravitational waves from afar? Astronomy is the science that asks and tries to answer questions like these. We have come a long way toward understanding what makes the sky appear as it does and how the Universe behaves. Williams Astronomy courses are for anyone who is interested in learning about the Universe, and who would like to be able to follow new astronomical discoveries as they are made. All courses in Astronomy satisfy the Division III requirement. The Astronomy major and the Astrophysics major, both administered by the Department of Physics and Astronomy, are described below.

The beginning astronomy courses are offered on two levels. Astronomy 101, 102, 104, and 330-range courses are intended primarily for non-science majors and have no prerequisite. Astronomy 111 is designed for students with some exposure to physics. It has a prerequisite of one year of high school physics or permission of the instructor, and a co-requisite of Mathematics 140 or equivalent background in calculus.

Most of the astronomy courses take advantage of our observational and computational facilities including a 24-inch computer-controlled telescope with sensitive electronic detectors, and our own computer network for image processing and data analysis. The Williams Astronomy site can be found at astronomy.williams.edu.

ASTRONOMY MAJOR

The Astronomy major is designed for students with an interest in learning about many aspects of modern astronomy, but who do not choose to take the most advanced physics and math courses of the astrophysics major. It is also appropriate as a second major for students concentrating in another field; in particular, combining an Astronomy major with a related major like Geoscience or Computer Science has been a fruitful path for some of our students. The Astronomy major emphasizes understanding the observed properties of the physical systems that comprise the known Universe, from the Sun and solar system, to the evolution of stars and star clusters, to the Milky Way Galaxy, to external galaxies and clusters of galaxies. Because some knowledge of physics and calculus is necessary to understand many astronomical phenomena, the Astronomy major requires the first two semesters each of the physics and calculus that are also required of Physics majors and Astrophysics majors.

There are several possible routes through the Astronomy major, depending on preparation and interest. Students considering a major in Astronomy should consult with members of the department early and often. A first-year student, if unsure about choosing between Astronomy and Astrophysics, may wish to take not only Astronomy 111 but also Physics 131, 141, or 151 and Mathematics 140 (if necessary) in the fall. Students who might place out of physics courses should read the section on placement under Physics.

Major Requirements for Astronomy

Astronomy 111 Introduction to Astrophysics OR Astronomy 101 Stars: From Suns to Black Holes and either Astronomy 102 The Solar System—Our Planetary Home OR Astronomy 104 The Milky Way Galaxy and the Universe Beyond

Two 200-level Astronomy courses (or additional 400-level Astronomy courses as substitutes)

Two 400-level Astronomy courses

Physics 131 Particles and Waves OR Physics 141 Particles and Waves—Enriched OR equivalent placement

Physics 142 Foundations of Modern Physics or Physics 151 Seminar on Modern Physics

Mathematics 140 Calculus II

Mathematics 150 Multivariable Calculus OR Mathematics 151 Multivariable Calculus OR equivalent placement

The total number of courses required for the Astronomy major is nine. A typical path through the major will begin with Physics 141, which is suitable for students with one year of high school physics and a background in calculus. However, students without high school physics may begin with Physics 131, and students entering with Advanced Placement in physics and/or math may obtain credit toward the major for the equivalent of
Physics 142 and/or Mathematics 150 or 151 taken elsewhere. There are some aspects of astronomy that are closely related to chemistry or geosciences. In recognition of this, certain advanced courses in those departments can be accepted for credit toward the Astronomy major.

THE DEGREE WITH HONORS IN ASTRONOMY

The honors degree in Astronomy will be awarded on the basis of a senior thesis presenting the results of an original observational, experimental, or theoretical investigation carried out by the student under the direction of a faculty member in Astronomy. There are no specific grade requirements (other than College-wide requirements for remaining in good academic standing) for entry into the thesis research program; however, a student wishing to do a thesis should have demonstrated both ability and motivation for independent work in previous courses and in any earlier research involvement. Students doing theses will normally choose a topic and an advisor early in the second semester of their junior year and usually begin their thesis work during the summer. During the senior year, those students whose proposals have been approved will elect two courses and a winter study project in addition to the minimum requirements for the major. Preparation for the thesis will occupy at least one course (Astronomy 493) and the winter study project (Astronomy 031). At the end of the winter study period, the department will decide, in consultation with each student, whether to admit that student to honors candidacy. Both a written thesis and an oral presentation to faculty and fellow students are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill the requirements with unusually high distinction.

The department will be flexible with regard to the number and timing of courses devoted to thesis research within the general guidelines of two courses and a winter study project over and above the minimum major requirements and the written and oral presentations, especially in cases of students with advanced standing and/or summer research experience. Students considering unusual requests are urged to consult with potential advisors or the department chair as early as possible.

ASTROPHYSICS MAJOR

The Astrophysics major is designed for students who want a rigorous introduction to the field, and includes not only those who plan graduate study in astronomy, astrophysics, or a closely related area, but also those interested in a wide variety of careers. Astrophysics alumni are not only astronomers but also computer scientists, geologists, teachers, doctors, lawyers, business school professors, and so on. In recent years, many astrophysics majors have had a second major in fields as wide ranging as mathematics, computer science, geosciences, economics, English, and art history. This major emphasizes the description of the Universe and its constituents in terms of physical processes. Potential Astrophysics majors should consult early with members of the Department of Physics and Astronomy to determine their most appropriate route through the major. An essential ingredient in such students’ undergraduate training is experience in physics and mathematics. Therefore, the major normally will begin in the first year a student is at Williams with Physics 131, 141, or 151 and Mathematics 140 or 150 or 151 in the fall. Physics 141 is recommended for students with one year of high school physics and a background in calculus. Students with very good background placing them out of Physics 142 and out of Mathematics 140 may choose to take Physics 201 and Mathematics 150 or 151 instead. Astronomy 111 will often be taken in the fall of the sophomore year; however, many students take it in the fall of their first year at Williams, along with physics and math. Students who might place out of physics courses should read the section on placement under Physics; those who place out of Physics 131 or 141 into Physics 142 or 151 should particularly consider taking Astronomy 111 in the fall of their first year.

In addition to the major courses described below, other courses in geosciences, mathematics, and computer science may also be appropriate.

Major Requirements for Astrophysics

- Astronomy 111 Introduction to Astrophysics OR Astronomy 101 Stars: From Suns to Black Holes and either Astronomy 102 The Solar System—Our Planetary Home OR Astronomy 104 The Milky Way Galaxy and the Universe Beyond
- Physics 131 Particles and Waves OR Physics 141 Particles and Waves—Enriched OR equivalent placement
- Physics 142 Foundations of Modern Physics OR Physics 151 Seminar on Modern Physics
- Physics 201 Electricity and Magnetism
- Physics 202 Waves and Optics
- Physics/Mathematics 210 Mathematical Methods for Scientists
- Physics 301 Introductory Quantum Physics
- Mathematics 150 Multivariable Calculus OR Mathematics 151 Multivariable Calculus
- Three 400-level astronomy courses OR two 400-level astronomy courses and one of the following: Astronomy 211 Astronomical Observing and Data Analysis
- Physics 302 Statistical Physics
- Physics 402T Applications of Quantum Mechanics
Physics 405T Electromagnetic Theory
Physics 411T Classical Mechanics;
Physics 418 Gravity

The total number of courses required for the Astrophysics major, an interdisciplinary major, is eleven. Students entering with Advanced Placement in physics and/or mathematics may obtain credit toward the major for the equivalent of Physics 141 and/or Mathematics 140 and/or 150 or 151 taken elsewhere, but at least 8 courses in astronomy, physics, and mathematics must be taken at Williams. There are some aspects of astrophysics that are closely related to chemistry or geosciences. In recognition of this relation, certain advanced courses in those departments can be accepted for credit toward the Astrophysics major on a two-for-one basis. It is not possible to double major in Astrophysics and Physics.

THE DEGREE WITH HONORS IN ASTROPHYSICS

The honors degree in Astrophysics will be awarded on the basis of a senior thesis presenting the results of an original observational, experimental, or theoretical investigation carried out by the student under the direction of a faculty member in Astronomy or Physics. There are no specific grade requirements (other than College-wide requirements for remaining in good academic standing) for entry into the thesis research program; however, a student wishing to do a thesis should have demonstrated both ability and motivation for independent work in previous courses and in any earlier research involvement. Students doing theses will normally choose a topic and an advisor early in the second semester of their junior year and usually begin their thesis work during the summer. During the senior year, those students whose proposals have been approved will elect two courses and a winter study project in addition to the minimum requirements for the major. Preparation for the thesis will occupy at least one course (Astrophysics 493) and the winter study project (Astrophysics 031). At the end of the winter study period, the department will decide, in consultation with each student, whether to admit that student to honors candidacy. Both a written thesis and an oral presentation to faculty and fellow students are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill the requirements with unusually high distinction.

Honors candidates will also be required to attend departmental colloquium talks.

The department will be flexible with regard to the number and timing of courses devoted to thesis research within the general guidelines of two courses and a winter study project over and above the minimum major requirements and the written and oral presentations, especially in cases of students with advanced standing and/or summer research experience. Students considering unusual requests are urged to consult with potential advisors or the department chair as early as possible.

STUDY ABROAD

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, and complete syllabus including readings/assignments.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

No.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. PHYS 301, a required course for the Astrophysics major, is only taught in the fall, and is difficult to replicate abroad, especially regarding the lab component.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then
None to date.

ASTR 101  (F)  Stars: From Suns to Black Holes

Have you ever wondered what makes the Sun and stars shine and what they are made of? Do they evolve, and if so, how do they change? What are black holes, and how can they form? How do we find planets around other stars? Astronomy 101, a non-major, general introduction to the part of contemporary astronomy that includes how stars form and die, will provide answers to these questions. We will pay special attention to exciting discoveries made in the past decade. Thousands of exoplanets have been discovered, with their atmospheres being studied in detail by the James Webb Space telescope. For the first time, gravitational waves from merging black holes have been detected. In this course we will discuss the basic methods and instruments used in these and other astronomical observations and what they can teach us about the life cycle of stars. We will discuss what happens at the centers of stars, how stars evolve, and why some stars explode and form neutron stars and black holes. This course is independent of and on the same level as ASTR 102 (solar system) and 104 (galaxies/cosmology); students who have taken these courses are welcome.

Class Format: lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration. Planetarium and Roof-Observatory TAs will be available for consultation, in addition to the instructors, throughout the semester.

Requirements/Evaluation: two hour tests, a final exam, an observing portfolio, and lab reports

Prerequisites: none

Enrollment Limit: 48;12/lab

Enrollment Preferences: first and second-year students

Expected Class Size: 30/lec

Grading: yes pass/fail option, no fifth course option

Unit Notes: non-major course

Distributions: (D3)

ASTR 102  (S)  Our Solar System and Others

What makes Earth different from all the other planets? What have NASA's Curiosity and Perseverance on Mars found about that planet's past running water and suitability for life? How has knowledge about Pluto and the outer solar system been transformed by NASA's flybys? Will asteroids or comets collide with the Earth again? What is the new James Webb Space Telescope revealing about exoplanets and their atmospheres? Astronomy 102, a non-major, general introduction to the part of contemporary astronomy that comprises the study of the solar system (and the systems of planets around other stars), will provide answers to these questions and more. We will cover the historical development of humanity's understanding of planetary systems, examining contributions by Copernicus, Galileo, Newton, Einstein, and others and the more recent discoveries of over 4000 exoplanets around stars other than the Sun. The course gives special attention to exciting discoveries of the past few years by space probes and space telescopes such as the Hubble, James Webb, and Kepler/K2/TESS missions. We regularly discuss the latest news briefs and developments in astronomy and relate them to the topics covered in the course. This course is independent of, and on the same level as Astronomy 101 (stars and stellar evolution) and 104 (galaxies and cosmology), and students who have taken those courses are welcome.

Class Format: lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration. Planetarium and Roof-Observing TAs will be available for consultation, in addition to the instructors, throughout the semester.
ASTR 104  (S)  The Milky Way Galaxy and the Universe Beyond

How was the Universe created, and how has it evolved to its presently observed structure? This course will start at the Big Bang, the beginning of everything, and move forward from there. About five centuries ago Galileo Galilei used his own primitive telescope to make many astronomical discoveries: observing the moons of the Jupiter, craters on the Moon, and Sun spots to name a few. Galileo also noticed that stars are not spread on the celestial sphere at random but form a disk like structure, which we now call the Milky Way Galaxy -- our cosmic home. Almost a hundred years ago Edwin Hubble discovered that the Universe contains many galaxies and that they are moving away from each other. Hubble discovered that the Universe -- the largest physical object -- expands, so it had a beginning. In this course we will explore the tools and techniques that astronomers use to study stars and galaxies. From the discovery of the Milky Way to the expanding Universe, we will cover the key concepts and discoveries that have shaped our understanding of the cosmos. During recent decades astronomers have made exciting -- and unsettling -- new discoveries: it turns out that most of matter in the Universe does not emit light and most probably is composed of particles of unknown origin, and that the expansion of the Universe is now accelerating, pushed by a mysterious dark energy. At this point, astronomers have evidence to show that at early epochs the Universe was very dense and very hot. This early epoch is called the Big Bang. How the Big Bang happened is not known yet but there are several interesting hypotheses that our Universe could be one of many. This course will introduce important highlights in the observation and interpretation of remarkable astronomical phenomena and explore these many mysteries.

Class Format: lecture (two sessions per week), observing sessions (scattered throughout the semester), afternoon labs (five times per semester), and a planetarium demonstration. Planetarium and Roof-Observatory TAs will be available for consultation, in addition to the instructors, throughout the semester. Current astronomical discoveries will be discussed at the beginning of each class and by email throughout the semester.

Requirements/Evaluation:  two hour exams, a final exam, lab reports, and an observing portfolio

Prerequisites:  none

Enrollment Limit:  48;12/lab

Enrollment Preferences:  first and second-year students

Expected Class Size:  30/lec

Grading:  yes pass/fail option, no fifth course option

Unit Notes:  non-major course

Distributions:  (D3)
other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

**Class Format:** The class has weekly afternoon laboratory sessions, which will alternate between ‘hands-on’ activities and problem-solving/discussion sessions. Nighttime observing sessions will occur throughout the semester.

**Requirements/Evaluation:** weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

**Prerequisites:** a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

**Enrollment Limit:** 28; 14/lab

**Enrollment Preferences:** potential Astronomy majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)  (QFR)

**Quantitative/Formal Reasoning Notes:** The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

---

**ASTR 206 (S) Astrobiology (QFR)**

This course will focus on the development of complex life and its observational signatures, both on Earth and on other worlds. We will first investigate the conditions that have led to the development of complex life on Earth. We will view Earth over time from an outsider's perspective and challenge preconceptions about the basic requirements for life. We will also explore the ‘hot spots’ in the search for life beyond Earth in our Solar System. Observations in the next decade may reveal biosignatures in the atmospheres of exoplanets. We will learn about these future observations, while also interacting with current research-grade data for other planets and learning about the methods used to constrain the physical conditions on other worlds. Using quantitative models, we will test the stability of Earth-like planets to the variable and potentially hostile conditions of evolving solar systems.

**Requirements/Evaluation:** weekly problem sets, one paper, two mid-term exams, and a final exam

**Prerequisites:** Math 130 and at least one prior physical science course (either Astronomy, Physics, Geosciences, or Chemistry), or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Science majors, with preference given to students majoring in Astronomy, Astrophysics, or Geosciences

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3)  (QFR)

**Quantitative/Formal Reasoning Notes:** In this course students will make quantitative comparisons between environmental conditions on Earth, other planetary bodies, and models. The students will also examine observations regarding the detection and characterization of planetary bodies, including contemporary data.

---

**Spring 2025**

**LEC Section:** 01  MR 2:35 pm - 3:50 pm  Jason E. Young

---

**ASTR 211 (S) Astronomical Observing and Data Analysis  (QFR)**

How do astronomers make scientific measurements for objects that are light-years away from Earth? This course will introduce the basics of telescopes and observations and will give students hands-on training in the techniques astronomers use to obtain, process, and analyze scientific
data. We will discuss observation planning, CCD detectors, signal statistics, image processing, and photometric and spectroscopic observations. We will begin by focusing on ground-based optical observations and will move on to non-optical observations, both electromagnetic (e.g., radio waves, X-rays) and non-electromagnetic (e.g., gravitational waves, neutrinos). Throughout the course, students will use computational techniques to work with real astronomical data, taken with our 24" telescope and from data archives.

**Class Format:** discussion, computer lab work, and observing

**Requirements/Evaluation:** weekly problem sets, lab work, and observing projects

**Prerequisites:** MATH 150 or 151; prior experience with Unix and computer programming is helpful, but not required

**Enrollment Limit:** 14

**Enrollment Preferences:** Astronomy or Astrophysics majors

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** The course requires regular problem sets. Labs require computer programming and statistical and graphical analyses of data.

*Not offered current academic year*

**ASTR 220 (S) New Discoveries with the James Webb Space Telescope**

Launched in December 2021, the James Webb Space Telescope (JWST) has delivered new views of the universe and is reshaping our understanding of our solar system, planets around other stars, star formation, and galaxies in the early universe. The beautifully detailed images have also generated intense public interest and are often the subject of science articles in the news. Through JWST’s new observations, this course will explore both cutting-edge astronomical science and science communication. We will focus on open questions in each of JWST’s four themes: Other Worlds, Star Lifecycle, Galaxies Over Time, and Early Universe. We will discuss the science behind these questions, recent discoveries, and how astronomers are using JWST to learn more. We will also learn about astronomical observations, how JWST works, and how astronomers collect and evaluate scientific evidence. Students will discuss how discoveries are communicated to the public, analyze stories in popular media, and create their own versions of public astronomy communications.

**Requirements/Evaluation:** weekly homework questions and short writing assignments, class participation, mid-term written article, and final project

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** Astronomy/Astrophysics majors and prospective majors, sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** non-major course

**Distributions:** (D3)

Spring 2025

LEC Section: 01 MR 1:10 pm - 2:25 pm Anne Jaskot

**ASTR 240 (F) Great Astronomers and Their Original Publications (WS)**

**Cross-listings:** STS 240 / LEAD 240

**Primary Cross-listing**

In this course we will study some of the greatest figures in astronomy and consider their leadership in advancing progress in the field. We will consider their lives and works, especially as represented by original copies of their books and other publications. These great astronomers include: 16th century, Nicolaus Copernicus (heliocentric universe); Tycho Brahe (best pre-telescopic observations); 17th century, Galileo (discoveries with his first astronomical telescope, 1610; sunspots, 1613; *Dialogo*, 1632); Johannes Kepler (laws of planetary motion, 1609, 1619, Rudolphine Tables 1627); Johannes Hevelius and Elisabeth Hevelius (atlases of the Moon and of stars, 1647, and 1687); Isaac Newton (*Principia Mathematica*: laws of universal gravitation and of motion, 1687); 18th century, Edmond Halley (*Miscellanea curiosa*, eclipse maps, 1715, 1724); John Flamsteed and Margaret Flamsteed (*Atlas Coelestis*, 1729); and William Herschel and Caroline Herschel (1781, 1798). Also, from more recent times in which original works are
often articles rather than books: 20th century, Albert Einstein (special relativity, 1905; general relativity, 1916); Marie Curie (radioactivity); Cecilia Payne-Gaposchkin (hydrogen dominating stars, 1929), Edwin Hubble (Hubble’s law, 1929); George Ellery Hale (Mt. Wilson Observatory 100” telescope, 1917; Palomar Observatory 200” telescope, 1948), Vera Rubin (dark matter, 1970s); Jocelyn Bell Burnell (pulsar discovery, 1968); and 21st century: Wendy Freedman (Universe’s expansion rate, 2000s). First editions will be available in Williams’ Chapin Library of rare books, where we will meet in an adjacent classroom. We will also consider how such original materials are collected and preserved, and look at examples from the wider world of rarities, such as a leaf from the Gutenberg Bible (c. 1453) and a Shakespeare First Folio (1623, with a discussion of astronomical references in Shakespeare’s plays). The course will be taught in collaboration between an astronomer and a rare-books librarian, with remote lectures by experts from around the world.

**Class Format:** Meeting on campus in the Chapin Library classroom (Sawyer 452)

**Requirements/Evaluation:** class participation, two 5-page intermediate papers, and a final 15-page paper; student choice of additional readings from a provided reading list

**Prerequisites:** none

**Enrollment Limit:** 12

**Enrollment Preferences:** if overenrolled, preference by written paragraph of explanation of why student wants to take the course

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

ASTR 240(D3) STS 240(D2) LEAD 240(D2)

**Writing Skills Notes:** Comments on submitted papers will aid in writing skills

**Attributes:** LEAD Facets or Domains of Leadership

**Not offered current academic year**

**ASTR 330 (S) The Nature of the Universe**

This course is a journey through space and time from the first fractions of a second after the Big Bang to the ultimate fate of the Universe billions of years into the future. Topics include the Big Bang and its remnant cosmic background radiation, cosmic inflation, conditions during the first three minutes, creation of the elements, stellar and galactic black holes, relativity, the detection of gravitational waves, galaxies and quasars, dark matter, and the formation of the large-scale structure of the Universe. We will explore current ideas about the fate of our Universe, including the acceleration of its expansion, and its implications for the end of time. Finally, we will consider the fantastic but serious theoretical proposal that ours is but one of countless universes existing within a *multiverse*.

**Class Format:** lecture/discussion, three hours per week

**Requirements/Evaluation:** two midterm exams, a small observing portfolio, occasional quizzes, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 48

**Enrollment Preferences:** open only to juniors and seniors; closed to students who have taken or are taking ASTR 104, and closed to ASTR, ASPH, and PHYS majors; preference given to seniors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** non-major course; course in the 33X sequence are meant as general education courses for students in all majors

**Distributions:** (D3)

**Not offered current academic year**

**ASTR 402 (S) Between the Stars: The Interstellar Medium**

The matter between the stars—the interstellar medium—tells the story of the evolution of galaxies and the stars within them. Stars are accompanied by diffuse matter all through their lifetimes, from their birthplaces in dense molecular clouds, to the stellar winds they eject as they evolve, and to their final fates as they shed their outer layers, whether as planetary nebulae or dazzling supernovae. As these processes go on, they enrich the interstellar medium with the products of the stars' nuclear fusion. Interpreting the emission from this interstellar gas is one of astronomers' most powerful tools to
measure the physical conditions, motions, and composition of our own galaxy and others. In this course we will study the interstellar medium in its various forms, from cold, dense, star-forming molecular clouds to X-ray-emitting bubbles formed by supernovae. We will learn about the physical mechanisms that produce the radiation we observe, including radiative ionization and recombination, collisional excitation of “forbidden” lines, collisional ionization, and synchrotron radiation. Applying our understanding of these processes, we will analyze the physical conditions and chemical compositions of a variety of nebulae. Finally, we will discuss the evolution of interstellar material in galaxies across cosmic time. This course is observing-intensive. Throughout the semester, students will work in small groups to design, carry out, analyze, and critique their own observations of the interstellar medium taken using the rooftop telescope.

Class Format: Tutorial meetings will be scheduled with the professor. Students will also complete observing projects using the rooftop telescope.

Requirements/Evaluation: weekly problem sets, 10-page final paper, and observing projects

Prerequisites: ASTR 111 and PHYS 201 or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Juniors and Seniors

Expected Class Size: 6

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: In this course, students will derive quantitative physical formulas, use these equations to calculate and compare physical properties, and generate and analyze graphical representations of data. They will also make and analyze measurements of astronomical data through observing projects.

Spring 2025

TUT Section: T1 TBA Anne Jaskot

ASTR 404 (S) Unsolved Problems in Galaxy Evolution

In this tutorial, we will learn about galaxies and their evolution by focusing on some of the key mysteries astronomers are trying to solve. Questions may include: How do galaxies turn their gas supply into stars? Is there a universal initial mass function for star formation? What is the origin of multiple stellar populations in globular clusters? Why do some galaxies cease star formation? Which galaxies reionized the universe? We will discuss the nature of each unsolved problem, debate the theories proposed to answer it, and consider how future progress might be made.

Requirements/Evaluation: student's papers, responses to the partner's papers, and problem sets

Prerequisites: ASTR 111 and PHYS 142 or 151 or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Juniors and Seniors

Expected Class Size: 6

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Not offered current academic year

ASTR 410 (S) Compact Stellar Remnants: White Dwarfs, Neutron Stars and Black Holes

A star is a very interesting, very complicated physical object. Properties of stars and their evolutionary paths depend on an intricate interplay of different physical phenomena with gravity, nuclear interactions, radiation processes and even quantum and relativistic effects playing important roles. Using basic physics we will construct simple models of stars and discuss their evolution, concentrating on the key physical processes that play the dominant role at different evolutionary stages. We will discuss late stages of stellar evolution and concentrate on the basic properties of three possible remnants: white dwarfs, neutron stars and black holes. Radio and X-ray pulsars, supernovae including Type Ia and Gamma Ray Bursts will be discussed as well as observational confirmation of existence of black holes. We will explore extreme conditions existing near neutron stars and black holes and discuss their astrophysical consequences. We will also discuss the recent exciting detection of gravitational waves by the LIGO/VIRGO laser interferometric detectors.

Class Format: discussion three hours per week

Requirements/Evaluation: classroom participation, homework assignments, a midterm exam and a final exam
**Prerequisites:** PHYS 201 or permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** physics, astrophysics, and astronomy majors

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Not offered current academic year

---

**ASTR 413 (F) Building Stars: A Physical Model of Stellar Structure** (QFR)

How does the Sun shine? How does the Sun evolve with time? What physical processes determine the power output of the Sun? In this course we will explore our modern understanding of how stars work, and why they have a range of sizes, temperatures, and luminosities. As we go, we will discuss the laws of physics at work in our Sun and other stars. Over the course of the semester, we will build a working computer model of the Sun using the basic laws of nuclear fusion, radiative transfer, thermal mechanics, and hydrostatic equilibrium.

**Class Format:** Lectures will include time for computer programming work

**Requirements/Evaluation:** weekly problem sets, weekly coding homework assignments, two mid-term exams, and a final project

**Prerequisites:** PHYS 142 or 151, any prior class that makes use of programming, or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Astronomy, Astrophysics, or Physics majors, with first preference to Astronomy or Astrophysics majors

**Expected Class Size:** 6

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** In this course, students will use differential equations and numerical coding techniques to test and explore the relationships between physical laws using the Sun and other stars as examples. They will make quantitative comparisons between their calculations and observed stellar properties.

Winter Study

ASTR 16 (W) An infinity of worlds: planets and the search for life in the universe

Less than a generation ago, we wondered, as we had for millions of years before, whether there were any other planets at all. Now, we are privileged to be in the first generation of humans to know that many of the points of light dusting our night sky are host to orbiting worlds, some of which may be like our Earth. In this course, we will explore the techniques that are being used to discover these new worlds. We will make our own contributions to this great age of discovery, by using NASA spacecraft data to search for new planets. This course, aimed at non-majors, will deal with the science of planet hunting, the astounding diversity of planets known to exist, the emerging science of astrobiology, and the enduring question of "are we alone?" through works of science fiction and cutting-edge research. Coursework will consist of readings from popular science books aimed at a general audience, science-fiction short stories, and excerpts from science-fiction novels, in addition to 1-2 relevant feature films. The primary mode of instruction will be 6 hours per week of in-person class meetings including lectures, small-group activities, and optional evening observing sessions at the rooftop telescope (weather permitting). Evaluation will be based on a final 10-page paper, the topic and format of which is extremely broad.

Requirements/Evaluation: Paper(s) or report(s)
Prerequisites: None
Enrollment Limit: 24
Enrollment Preferences: If overenrolled, preference will be given to first years and sophomores. I am willing to open a second section if enrollment...
Expected Class Size:  NA
Grading:  pass/fail only

Unit Notes:  Rob Wittenmyer ’98 is Professor of astrophysics at the University of Southern Queensland in Australia. He is a veteran planet hunter with more than 100 published planet discoveries.

What is light? How does a laser work? What is a black hole? What are the fundamental building blocks of the universe? Physics majors and Astrophysics majors study these and related questions to understand the physical world around us, from the very small to the very large. A physics student practices the experimental methods used to learn about this world and explores the mathematical techniques and theories developed to explain these physical phenomena. A Physics major or Astrophysics major serves as preparation for further work in physics, astrophysics, applied physics, other sciences, engineering, medical research, science teaching and writing, and other careers involving critical thinking, problem-solving, and insight into the fundamental principles of nature.

ASTRONOMY AND ASTROPHYSICS MAJORS
The Department of Physics and Astronomy offers three distinct majors, in Physics, Astrophysics, and Astronomy. More information about the Astrophysics and Astronomy majors can be found on the Astronomy site.

PHYSICS MAJOR

Introductory Courses
Students considering a major in physics should take both physics and mathematics as first-year students. Students typically begin with Physics 141 and Mathematics 150 or 151 (multivariable calculus); students who wish to begin with Physics 131 should consult with the department.

Physics 131 Introduction to Mechanics. This is designed as a first course in physics. It is suitable for students who either have not had physics before or have had some physics but are not comfortable solving “word problems” that require calculus.

Physics 141 Mechanics and Waves. Students in this course should have solid backgrounds in science and calculus, either from high school or college, including at least a year of high school physics.

The Department of Mathematics will place students in the appropriate introductory calculus course. The physics major sequence courses all make use of calculus at increasingly sophisticated levels. Therefore, students considering a Physics major should continue their mathematical preparation without interruption through the introductory calculus sequence (Mathematics 130, 140, and 150 or 151). Students are encouraged to take Physics 210 as early as possible.

ADVANCED PLACEMENT
Students with unusually strong backgrounds in calculus and physics may place out of Physics 141 and either: 1) begin with the special seminar course Physics 151 in the fall (typically followed by Physics 210 in the spring), or 2) begin with Physics 142 in the spring (possibly along with Physics 210). Students may take either 151 or 142 but not both. On rare occasions a student with an exceptional background will be offered the option of enrolling in Physics 201.

Placement is based on AP scores, consultation with the department, and results of a placement exam administered during First Days. The exam can also be taken later in the year by arrangement with the department chair. The exam covers classical mechanics, basic wave phenomena, and includes some use of calculus techniques.

REQUIREMENTS FOR THE MAJOR
A total of ten courses, nine in physics and one in mathematics, are required to complete the Physics major.
Required Physics Sequence Courses (7)

Physics 141 Mechanics and Waves
Physics 142 Foundations of Modern Physics
or Physics 151 Seminar in Modern Physics
Physics 201 Electricity and Magnetism
Physics 202 Waves and Optics
Physics 210 Mathematical Methods for Scientists
Physics 301 Quantum Physics
Physics 302 Statistical Mechanics and Thermodynamics

Required Mathematics Course (1)

Mathematics 150 or 151 Multivariable Calculus

Students entering with Advanced Placement in mathematics may obtain credit toward the major for the equivalent Mathematics 150 or 151 taken elsewhere.

Elective Courses (2)

At least two more physics courses above the 100 level (or other approved courses as noted below) must be taken, bringing the total number of courses for the major to ten.

Students who place out of Physics 141 must substitute one additional elective course, for a total of ten courses.

Students who place out of both Physics 141 and 142 and begin their studies in Physics 201 must substitute one additional elective course, for a total of nine courses.

Options

- Mathematics 209 or 309 may substitute for Physics 210.
- Astronomy 111 may count in place of Physics 141 if a student places out of 141 (see “advanced placement” above).
- An additional Astronomy or Astrophysics course above the introductory level that is acceptable for the astrophysics major may be counted.
- Two approved Division III courses may be substituted for one Physics course. Approval is on an individual basis at the discretion of the department chair.
- Honors work is in addition to completion of the basic major so Physics 493 and 494 do not count towards the ten courses in the major.

PREPARATION FOR ADVANCED STUDY

Students who wish to do graduate work in physics, astrophysics, or engineering should elect courses in both physics and mathematics beyond the minimum major requirements. The first-year graduate school curriculum in physics usually includes courses in quantum mechanics, electromagnetic theory, and classical mechanics that presuppose intermediate level study of these subjects as an undergraduate. Therefore, students planning graduate work in physics should elect all of the following courses:

- Physics 402T Applications of Quantum Mechanics
- Physics 405T Electromagnetic Theory
- Physics 411T Classical Mechanics

ADVISING

Both majors and non-majors are encouraged to consult with the department chair or course instructors about course selections or other matters.

THE DEGREE WITH HONORS IN PHYSICS

The degree with honors in Physics will be awarded on the basis of a senior thesis presenting the results of a substantial experimental or theoretical investigation carried out under the direction of a faculty member in the department. There is no rigid grade point average required for admission to the program or for the awarding of the degree with honors, but it is normally expected that honors students will maintain at least a B average in physics and mathematics. Students will normally apply for admission to the program early in the spring of their junior year and during senior
year these students will normally elect Physics 493, W31, and 494 in addition to the usual requirements for the major. At the end of winter study, the department will decide whether the student will be admitted to honors candidacy. Both a written thesis and a colloquium presentation of the results are required. The degree with honors will be awarded to those who meet these requirements with distinction. The degree with highest honors will be awarded to those who fulfill them with unusually high distinction.

Honors candidates will also be required to attend departmental colloquium talks.

STUDY ABROAD

The physics community is international in scope and a career in physics (or a related field) can provide many opportunities for travel and contact with individuals from outside the United States. The physics major at Williams is a carefully structured four-year program designed to prepare students who are so inclined for graduate study at leading research institutions. While it is possible to complete the major requirements in three years, such a major will not usually not lead to further study in the field. With careful early planning on the part of a student, and close consultation with the department chair, it is possible to complete a strong major and still study abroad provided the foreign institution can provide courses which reasonably substitute or supplement those in the Williams major program. Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Here are answers to frequently asked questions related to study abroad:

Can your department or program typically pre-approve courses for major/concentration credit?
Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?
Course title and description.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?
No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?
No.

Are there specific major requirements that cannot be fulfilled while on study away?
No.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)
Yes. The laboratory component of Physics 301 serves as our “advanced lab course.” Students often cannot get equivalent experience abroad and must take this when they return senior year (non-credit). Unless there has been a recent change, our own Oxford Program is one place students cannot get lab experience.

OPTIONS FOR NON-MAJORS

Many students want to take a self-contained and rigorous full-year survey of physics. For such students, the most appropriate sequence will be either Physics 131 or Physics 141 followed by Physics 132, depending on the student’s background in science and mathematics (see Introductory Courses above). Either of these sequences satisfies the physics requirement for medical school.

The department also offers one-semester courses designed for non-majors, including Physics 107, Physics 108, and Physics 109.

PHYS 108  (S)  Energy Science and Technology  (QFR)

Cross-listings:  ENVI 108

Primary Cross-listing

Energy use has skyrocketed in the United States and elsewhere in the world, causing significant economic and political shifts, as well as concerns for the environment. This course will address the physics and technology of energy generation, consumption, and conservation. It will cover a wide range of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating and lighting, and energy storage. Students will learn to compare the efficiencies and environmental impacts of various energy sources and uses.
**Class Format:** Two meetings per week. Some weeks that means two lectures. Other weeks, that means one lecture plus one lab, with the class divided between two lab sections.

**Requirements/Evaluation:** weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative

**Prerequisites:** high school physics, high school chemistry, and mathematics at the level of MATH 130

**Enrollment Limit:** 10 per lab

**Enrollment Preferences:** non-physics majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** problems sets, exams, and projects will all have a quantitative aspects.

**Attributes:** ENVI Natural World Electives

Spring 2025

LEC Section: 01  MR 1:10 pm - 2:25 pm  Protik K. Majumder
LAB Section: 02  R 1:10 pm - 2:25 pm  Protik K. Majumder
LAB Section: 03  R 2:25 pm - 3:50 pm  Protik K. Majumder

**PHYS 109  (S) Sound, Light, and Perception** (QFR)

Light and sound allow us to perceive the world around us, from appreciating music and art to learning the details of atomic structure. Because of their importance in human experience, light and sound have long been the subject of scientific inquiry. How are sound and light related? How do physiology and neural processing allow us to hear and see the world around us? What are the origins of color and musical pitch? This course introduces the science and technology of light and sound to students not majoring in physics. We will start with the origins of sound and light as wave phenomena, and go on to topics including color, the optics of vision, the meaning of musical pitch and tone, and the physical basis of hearing. We will also discuss some recent technological applications of light, such as lasers and optical communications. The class will meet for two 75-minute periods each week for a variable mixture of lecture, discussion, and hands-on, interactive experiments.

**Class Format:** The two weekly class sections will be located in a space suitable for both lecture and hands-on laboratory-style work

**Requirements/Evaluation:** class participation, problem sets, in-class midterm, oral presentations, and a final exam, all with a quantitative component

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** non-science majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This class will have frequent problem sets requiring substantial quantitative reasoning

Not offered current academic year

**PHYS 131  (F) Introduction to Mechanics** (QFR)

We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.

**Requirements/Evaluation:** exams, labs, and weekly problem sets, all of which have a substantial quantitative component
**Prerequisites:** MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead

**Enrollment Limit:** 24 per lab

**Enrollment Preferences:** seniority

**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This class will have weekly problem sets requiring substantial quantitative reasoning

---

**Fall 2024**

**LEC Section:** 01  MWF 11:00 am - 11:50 am  Graham K. Giovanetti

**LAB Section:** 02  M 1:00 pm - 4:00 pm  Graham K. Giovanetti

**LAB Section:** 03  T 1:00 pm - 4:00 pm  Graham K. Giovanetti

**PHYS 132 (S) Electromagnetism and the Physics of Matter (QFR)**

This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics, radioactivity, and uses of radiation.

**Class Format:** lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, quizzes and exams

**Prerequisites:** PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)

**Enrollment Limit:** 22 per lab

**Enrollment Preferences:** sophomores

**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** Significant homework, exams, quizzes requiring mathematical and physical reasoning.

**Spring 2025**

**LEC Section:** 01  MWF 11:00 am - 11:50 am  Catherine Kealhofer

**LAB Section:** 02  M 1:00 pm - 4:00 pm  Catherine Kealhofer

**LAB Section:** 03  T 1:00 pm - 4:00 pm  Catherine Kealhofer

**PHYS 141 (F) Mechanics and Waves (QFR)**

This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

**Class Format:** lecture, three hours per week; laboratory, three hours approximately every other week; conference section, 1.5 hours approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, two 1-hour exams, and a final exam, all of which have a substantial quantitative component
Prerequisites: High school physics (strongly recommended) and MATH 130 or equivalent placement, or permission of the instructor. High school physics at the AP, IB, or equivalent level is neither required nor expected.

Enrollment Limit: 24 per lab

Enrollment Preferences: first-year students and science majors

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Unit Notes: PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

Fall 2024
LEC Section: 01 MWF 11:00 am - 11:50 am Betül Pamuk
LAB Section: 02 M 1:00 pm - 4:00 pm Betül Pamuk
LAB Section: 03 T 1:00 pm - 4:00 pm Betül Pamuk

PHYS 142 (S) Foundations of Modern Physics (QFR)

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system.

This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of physics or as the basis for future advanced study of these topics.

Class Format: lecture, three hours weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and problem-solving/discussion sessions

Requirements/Evaluation: weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151

Enrollment Limit: 14/L

Enrollment Preferences: first-year students

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

Spring 2025
LEC Section: 01 MWF 11:00 am - 11:50 am Graham K. Giovanetti
LAB Section: 02 M 1:00 pm - 4:00 pm Graham K. Giovanetti
LAB Section: 03 T 1:00 pm - 4:00 pm Graham K. Giovanetti

PHYS 151 (F) Seminar in Modern Physics (QFR)

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity has extended physics into the realm of high speeds and high energies and requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our
Notions of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course covers the same core material as PHYS 142 but in a small seminar format for students with strong prior preparation in physics.

**Class Format:** lecture/discussions plus one 3-hour lab per week

**Requirements/Evaluation:** class participation, weekly lab assignments, weekly problem sets, exams

**Prerequisites:** placement by the department (see "advanced placement" section in the description about the department). Students may take either PHYS 142 or PHYS 151 but not both

**Enrollment Limit:** 18

**Enrollment Preferences:** first-years

**Expected Class Size:** 16

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** this is a small seminar designed for first-year students who have placed out of PHYS 141

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** all assignments in the course have a substantial quantitative component

---

**PHYS 201 (F) Electricity and Magnetism** (QFR)

The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell's equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** problem sets, labs/conference section assignments, two midterms, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151

**Enrollment Limit:** 10 per lab

**Enrollment Preferences:** prospective physics majors, then by seniority

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

---

**PHYS 202 (S) Vibrations, Waves and Optics** (QFR)

Waves and oscillations characterize many different physical systems, including vibrating strings and springs, waves at the beach, or those that we hear as sound or see as light. Quantum mechanics describes particles with wave functions, and gravitational waves distort the very fabric of the universe. Despite these diverse settings, waves exhibit several common characteristics, so understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then
move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. We conclude with a focus on electromagnetic waves and in particular on optical examples of wave phenomena such as interference, diffraction, and lasers. Throughout the course we will introduce and develop mathematical tools which will continue to see use in higher-level physics.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: problem sets, labs, midterm examinations, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 201; co-requisite: PHYS/MATH 210 or MATH 309 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: sophomores

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Weekly problem sets and laboratories which develop and use quantitative skills.

Spring 2025

LEC Section: 01 MWF 10:00 am - 10:50 am Katharine E. Jensen
LAB Section: 02 W 1:00 pm - 4:00 pm Frederick W. Strauch
LAB Section: 03 R 1:00 pm - 4:00 pm Frederick W. Strauch

PHYS 210 (S) Mathematical Methods for Scientists (QFR)

Cross-listings: MATH 210

Primary Cross-listing

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit: 50

Enrollment Preferences: sophomores and juniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 210(D3) MATH 210(D3)

Quantitative/Formal Reasoning Notes: This course will have weekly problem sets using advanced calculus methods

Spring 2025

LEC Section: 01 TR 9:55 am - 11:10 am Frederick W. Strauch

PHYS 234 (S) Introduction to Materials Science (QFR)

Cross-listings: GEOS 234

Primary Cross-listing

Materials Science is the study of how the microscopic structure of materials—whether steel, carbon fiber, glass, wood, plastic, or
mayonnaise—determines their macroscopic mechanical, thermal, electric, and other properties. Topics of this course include classifying materials; material structure; thermodynamics and phase transformations; material properties and testing; how solids bend, flow, and ultimately break; and how to choose the right material for design applications. Materials Science is a highly interdisciplinary field and as a result the course prerequisites are broad but also flexible. Interested students who are unsure about their preparation are strongly encouraged to contact the instructor.

**Class Format:** lecture (3 hours per week) plus three to four small-group laboratory sessions throughout the semester (to be scheduled with instructor)

**Requirements/Evaluation:** weekly problem sets, class participation, and midterm and final exams, all of which have a substantial quantitative component

**Prerequisites:** high school physics and chemistry, preferably at the AP level, and MATH 140 or AP Calculus (BC), and one 200-level PHYS, CHEM, or GEOS course; or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** based on students’ scientific background and seniority

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** This course does not count toward the Geosciences major.

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** Weekly problem sets and exams all have a substantial quantitative component.

**Attributes:** MTSC Courses

---

**PHYS 301 (F) Quantum Physics (QFR)**

This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics, beginning with a discussion of the Schrodinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.

**Class Format:** lecture, three hours per week; laboratory, three hours per week

**Requirements/Evaluation:** weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial quantitative component

**Prerequisites:** PHYS 202 and PHYS/MATH 210 or MATH 309

**Enrollment Limit:** 8 per lab

**Enrollment Preferences:** physics majors

**Expected Class Size:** 24

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** Phys 301 relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.
PHYS 302 (S) Statistical Mechanics & Thermodynamics (QFR)
Macroscopic objects are made up of huge numbers of fundamental particles interacting in simple ways—obeying the Schrödinger equation, Newton's and Coulomb's Laws—and these objects can be described by macroscopic properties like temperature, pressure, magnetization, heat capacity, conductivity, etc. In this course we will develop the tools of statistical physics, which will allow us to predict the cooperative phenomena that emerge in large ensembles of interacting particles. We will apply those tools to a wide variety of physical questions, including the behavior of gases, polymers, heat engines, biological and astrophysical systems, magnets, and electrons in solids.

Class Format: lecture/discussion three hours per week and weekly laboratory work

Requirements/Evaluation: weekly problem sets and labs, plus exams, all of which have a substantial quantitative component

Prerequisites: required: PHYS 201, PHYS/MATH 210 or MATH 309; recommended: PHYS 202, PHYS 301

Enrollment Limit: 14 per lab

Enrollment Preferences: physics majors

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: weekly problem sets, exams, and labs, all of which have a substantial quantitative component

PHYS 312 (F) Philosophical Implications of Modern Physics (QFR)

Cross-listings: PHIL 312 / STS 312

Primary Cross-listing

Some of the discoveries made by physicists over the last century seem to show that our common sense views are deeply at odds with our most sophisticated and best confirmed scientific theories. The course will present the essential ideas of relativity theory and quantum theory and explore their implications for philosophy. We will ask, for example, what these theories tell us about the nature of space, time, probability and causality.

Requirements/Evaluation: attendance, participation, problem sets, exams, six 1- to 2-page papers and a 12- to 15-page term paper

Prerequisites: MATH 140, high-school physics, and either a 200-level course in PHIL or a 100-level course in PHYS

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors and Physics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

Attributes: PHIL Contemp Metaphysics + Epistemology Courses
Not offered current academic year

PHYS 314 (S) Controlling Quanta (QFR)

This course will explore modern developments in the control of individual quantum systems. Topics covered will include basic physical theories of atoms coupled to photons, underlying mathematical tools (including Lie algebras and groups), and computational methods to simulate and analyze
quantum systems. Applications to quantum computing, teleportation, and experimental metaphysics (Bell's inequality) will also be discussed.

Requirements/Evaluation: tutorial preparation and participation, weekly problem sets/papers, and a final project

Prerequisites: PHYS/MATH 210 or MATH 209 or MATH 250

Enrollment Limit: 10

Enrollment Preferences: sophomores and junior Physics majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course involves weekly problems sets involving linear algebra, calculus, and other mathematical methods.

Not offered current academic year

PHYS 315  (F) Computational Biology  (QFR)

Cross-listings: CSCI 315

Primary Cross-listing

This course will provide an overview of Computational Biology, the application of computational, mathematical, statistical, and physical problem-solving techniques to interpret the rapidly expanding amount of biological data. Topics covered will include database searching, DNA sequence alignment, clustering, RNA structure prediction, protein structural alignment, methods of analyzing gene expression, networks, and genome assembly using techniques such as string matching, dynamic programming, hidden Markov models, and statistics.

Requirements/Evaluation: weekly Python programming assignments, code reviews, problem sets, plus a few quizzes and a final project

Prerequisites: programming experience (e.g., CSCI 136) and mathematics (PHYS/MATH 210 or MATH 150) and physical science (PHYS 142/151, or CHEM 101/15X), or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: if over-enrolled, a questionnaire will be circulated

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 319  (S) Integrative Bioinformatics, Genomics, and Proteomics Lab  (QFR)

Cross-listings: BIOL 319 / CHEM 319 / CSCI 319 / MATH 319

Secondary Cross-listing

What can computational biology teach us about cancer? In this lab-intensive experience for the Genomics, Proteomics, and Bioinformatics program, computational analysis and wet-lab investigations will inform each other, as students majoring in biology, chemistry, computer science, mathematics/statistics, and physics contribute their own expertise to explore how ever-growing gene and protein data-sets can provide key insights into human disease. In this course, we will take advantage of one well-studied system, the highly conserved Ras-related family of proteins, which play a central role in numerous fundamental processes within the cell. The course will integrate bioinformatics and molecular biology, using database searching, alignments and pattern matching, and phylogenetics to reconstruct the evolution of gene families by focusing on the gene duplication events and gene rearrangements that have occurred over the course of eukaryotic speciation. By utilizing high through-put approaches to investigate genes involved in the inflammatory and MAPK signal transduction pathways in human colon cancer cell lines, students will uncover regulatory
mechanisms that are aberrantly altered by siRNA knockdown of putative regulatory components. This functional genomic strategy will be coupled with independent projects using phosphorylation-state specific antisera to test our hypotheses. Proteomic analysis will introduce the students to de novo structural prediction and threading algorithms, as well as data-mining approaches and Bayesian modeling of protein network dynamics in single cells. Flow cytometry and mass spectrometry may also be used to study networks of interacting proteins in colon tumor cells.

Class Format: The lab for this course will meet for two afternoons per week. Some lab sessions will be shorter than 3 hours.

Requirements/Evaluation: lab participation, several short homework assignments, one lab report, a programming project, and a grant proposal

Prerequisites: BIOL 202; students who have not taken BIOL 202 but have taken BIOL 101 and a CSCI course, or CSCI/PHYS 315, may enroll with permission of instructor. No prior computer programming experience is required.

Enrollment Limit: 12

Enrollment Preferences: seniors, then juniors, then sophomores

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

BIOL 319(D3) CHEM 319(D3) CSCI 319(D3) PHYS 319(D3) MATH 319(D3)

Quantitative/Formal Reasoning Notes: Through lab work, homework sets and a major project, students will learn or further develop their skills in programming in Python, and about the basis of Bayesian approaches to phylogenetic tree estimation.

Attributes: BIGP Courses BIMO Interdepartmental Electives

Not offered current academic year

PHYS 321 (S) Introduction to Particle Physics (QFR)

The Standard Model of particle physics incorporates special relativity, quantum mechanics, and almost all that we know about elementary particles and their interactions. This course introduces some of the main ideas and phenomena associated with the Standard Model. After a review of relativistic kinematics, we will learn about symmetries in particle physics, relativistic wave equations, elements of quantum field theory, Feynman diagrams, and selected applications of quantum electrodynamics, the weak interactions, and quantum chromodynamics. We will conclude with a discussion of spontaneous symmetry breaking and the Higgs mechanism.

Requirements/Evaluation: weekly problem sets, a midterm exam, and a final exam

Prerequisites: PHYS 301

Enrollment Limit: 20

Enrollment Preferences: By seniority

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Exams and problem sets all have a significant quantitative component.

Spring 2025

LEC Section: 01 TR 11:20 am - 12:35 pm David R. Tucker-Smith

PHYS 402 (S) Applications of Quantum Mechanics (QFR)

This course will explore a number of important topics in the application of quantum mechanics to physical systems, including perturbation theory, the variational principle and the semiclassical interaction of atoms and radiation. The course will finish up with three weeks on quantum optics including an experimental project on non-classical interference phenomena. Applications and examples will be taken mostly from atomic physics with some discussion of solid state systems.

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 301
Enrollment Limit: 10 per sec
Enrollment Preferences: Physics and Astrophysics Majors
Expected Class Size: 16
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course has weekly problem sets, all of which have a substantial quantitative component.

Spring 2025
TUT Section: T1  F 1:10 pm - 2:25 pm  Betül Pamuk

PHYS 405  (F)  Electromagnetic Theory  (QFR)
This course builds on the material of Physics 201, and explores the application of Maxwell's Equations to understand a range of topics including electric fields and matter, magnetic materials, light, and radiation. As we explore diverse phenomena, we will learn useful approximation techniques and beautiful mathematical tools. In addition to weekly tutorial meetings, the class will meet once a week as a whole to introduce new material.
Class Format: Class will meet once as a whole to introduce new material and for informal discussion.
Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, and a final exam or final project, all of which have a substantial quantitative component
Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 209 or MATH 309
Enrollment Limit: 30
Enrollment Preferences: Preference will be given to physics and astrophysics majors.
Expected Class Size: 18
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Physics courses are all heavily dependent on QFR skills. Phys 405 will feature extensive use of vector calculus and differential equations while also asking students to develop facility with approximation techniques in solving complex problems throughout the semester.
Not offered current academic year

PHYS 411  (F)  Classical Mechanics  (QFR)
This course will explore advanced topics in classical mechanics. Central ideas include the calculus of variations, the Lagrangian and Hamiltonian formulations of mechanics, phase space, central-force motion, non-inertial reference frames (including implications for physics on a rotating Earth), rigid-body rotations, and non-linear dynamics & chaos, with additional topics from continuum and fluid mechanics as time permits. Numerical and perturbative techniques will be developed and used extensively. We will also examine the ways in which classical mechanics informs other fields of physics. In addition to weekly tutorial meetings the class will meet weekly as a whole to introduce and discuss new material.
Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, a final project, and a final exam, all of which have a substantial quantitative component
Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309
Enrollment Limit: 30
Enrollment Preferences: majors
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: weekly problem sets requiring substantial quantitative reasoning using analytical and numerical methods.

Fall 2024
TUT Section: T1  F 1:10 pm - 2:25 pm  Katharine E. Jensen, Frederick W. Strauch
PHYS 418 (S) Gravity (QFR)

This course is an introduction to Einstein's theory of general relativity. We begin with a review of special relativity, emphasizing geometrical aspects of Minkowski spacetime. Working from the equivalence principle, we then motivate gravity as spacetime curvature, and study in detail the Schwarzschild geometry around a spherically symmetric mass. After this application, we use tensors to develop Einstein's equation, which describes how energy density curves spacetime. With this equation in hand we study the Friedmann-Robertson-Walker geometries for an expanding universe, and finally, we linearize Einstein's equation to develop the theory of gravitational waves.

Requirements/Evaluation: weekly problem sets, a midterm exam, and a final exam, all of which have a substantial quantitative component
Prerequisites: PHYS 301 or PHYS 405 or PHYS 411, or permission of instructor
Enrollment Limit: none
Enrollment Preferences: none
Expected Class Size: 10
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: All problem sets and exams will have a substantial quantitative component.

Not offered current academic year

PHYS 451 (F) Condensed Matter Physics (QFR)

Condensed matter physics is an important area of current research and serves as the basis for modern electronic technology. We plan to explore the physics of metals, insulators, semiconductors, superconductors, and photonic crystals, with particular attention to structure, thermal properties, energy bands, and electronic properties.

Requirements/Evaluation: weekly readings and problem sets, and exams
Prerequisites: PHYS 301 (may be taken simultaneously); or permission of instructor
Enrollment Limit: 10
Enrollment Preferences: Physics majors
Expected Class Size: 6
Grading: yes pass/fail option, yes fifth course option

**PHYS 10 (W) Light and Holography**

This course will examine the art and science of holography. It will introduce modern optics at a level appropriate for a non-science major, giving the necessary theoretical background in lectures and discussion. Demonstrations will be presented and students will make several kinds of holograms in the lab. Thanks to a grant from the National Science Foundation, we have 7 well-equipped holography darkrooms available for student use. At the beginning of WSP, the class will meet for lecture and discussion three mornings a week and for lab 2 afternoons a week. The later part of the month will be mainly open laboratory time during which students, working in small groups, will conduct an independent project in holography approved by the instructor. Attendance at lectures and laboratory is required. Lectures will be in the morning, labs will be in the afternoon. A detailed schedule will be circulated to students who sign up for this course. Students who cannot attend the required sessions will be advised to select a different course as it is not possible to achieve a passing grade without being able to attend the classes and laboratories.

**Class Format:** The course has lecture and lab components, as detailed in the course description.
**Requirements/Evaluation:** attendance at all classes and labs, completion of 4 laboratory exercises, and a holography laboratory project (approved by the instructor); final poster presentation

**Prerequisites:** none

**Enrollment Limit:** 30

**Enrollment Preferences:** preference to students with no physics above Physics 109; then seniors, juniors, sophomores and first-years

**Expected Class Size:** 20

**Grading:** pass/fail only

**Unit Notes:** The course will be taught by Physics Department members Kevin Forkey (lectures) and Brough Morris (labs).

**Materials/Lab Fee:** $50

Not offered current academic year

**PHYS 12 (W) Drawing as a Learnable Skill**

Representational drawing is not merely a gift of birth, but a learnable skill. If you wanted to draw, but have never had the time to learn; or you enjoy drawing and wish to deepen your understanding and abilities, then this course is for you. This intensive course utilizes traditional drawing exercises to teach representational drawing. By using simple techniques and extensive exercises you will develop your ability to accurately see and realistically represent the physical world. You will learn to draw a convincing portrait, interior, and still life. This course is designed to develop your powers of observation and teach creative problem solving abilities. Students need no previous artistic experience, just the willingness and desire to learn. Students will be expected to attend and participate in all sessions. They will also be required to keep a sketchbook recording their progress and complete a final project. Evaluations will be based on participation, effort, and development.

**Requirements/Evaluation:** Other: Evaluations will be based on class attendance, participation, effort, and development.

**Prerequisites:** No prerequisites.

**Enrollment Limit:** 18

**Enrollment Preferences:** If overenrolled, selection will be based on seniority.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Stella Ehrich is a professional painter whose work includes portraits, landscapes and still life subjects. She studied for seven years at Studio Simi in Florence, she holds an MFA from Bennington College and a BFA from the Memphis Academy of Art.

**Materials/Lab Fee:** $35

**Attributes:** EXPE Experiential Education Courses

Not offered current academic year

**PHYS 22 (W) Research Participation**

Several members of the department will have student projects available dealing with their own research or that of current senior thesis students. Approximately 35 hours per week of study and actual research participation will be expected from each student.

**Class Format:** to be arranged with instructor

**Requirements/Evaluation:** students will be required to keep a notebook and write a 5-page paper summarizing their work

**Prerequisites:** permission of instructor

**Enrollment Limit:** 1-2

**Enrollment Preferences:** permission of instructor

**Grading:** pass/fail only

Not offered current academic year

**PHYS 31 (W) Senior Research: Physics**

To be taken by students registered for Physics 493, 494.

**Class Format:** thesis

**Grading:** pass/fail only
Not offered current academic year

**PHYS 32 (W) Senior Research: Astrophysics**

**Cross-listings:** ASTR 32

**Secondary Cross-listing**

To be taken by students registered for Astrophysics 495, 496.

**Class Format:** independent study

**Grading:** pass/fail only

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 32 ASTR 32

Not offered current academic year

**PHYS 99 (W) Independent Study: Physics**

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

**Class Format:** independent study

**Grading:** pass/fail only

Not offered current academic year
POLITICAL ECONOMY (Div II)
Chair: Professor Darel E. Paul

Advisory Committee
- Jon M. Bakija, Chair of Economics and W. Van Alan Clark ’41 Third Century Professor in the Social Sciences
- William M. Gentry, Carl Van Duyne Professor of Economics
- Cathy M. Johnson, James Phinney Baxter III Professor of Political Science
- Sara LaLumia, David A. Wells Professor of Economics
- James E. Mahon, Woodrow Wilson Professor of Political Science
- Nicole E. Mellow, Chair and Ephraim Williams Professor of Political Science; affiliated with: Political Science, Leadership Studies
- Darel E. Paul, Professor of Political Science, Chair of Political Economy Program; affiliated with: Political Science, Political Economy
- Sidney A. Rothstein, Assistant Professor of Political Science
- Lara D. Shore-Sheppard, Dean of the Faculty, Kimberly A. ’96 and Robert R. ’62 Henry Professor of Economics; affiliated with: Dean of the Faculty's Office, Economics
- Anand V. Swamy, Chair of the Executive Committee for the Center for Development Economics and The Willmott Family Third Century Professor of Economics; affiliated with: Economics, Center for Development Economics
- Owen Thompson, Associate Professor of Economics
- David J. Zimmerman, Professor of Economics and Orrin Sage Professor of Political Economy

Political Economy at Williams is the study of political and economic forces as they combine to produce public policy. These outputs of the political system are shaped by social forces, nongovernmental organizations, state institutions, markets, knowledge structures, political ideologies, normative goals, and moral values. Policy analysis seeks to both understand and evaluate public policies in their formulation, implementation, and effectiveness. The study of public policy is inherently interdisciplinary, and the Political Economy Program self-consciously incorporates the central analytical approaches of both Political Science and Economics, seeking to surmount the sometimes artificial barriers of specialization that may characterize a single discipline.

The Political Economy major takes students from introductory courses in Economics and Political Science all the way to a senior year group project of independent student research and concrete policy proposals. Three introductory courses and four electives in these two fields complement four courses peculiar to the Political Economy major. Three of these four — POEC 250, POEC 401 and POEC 402 — are taught jointly by a political scientist and an economist, and the major's culmination is a public presentation of student senior policy projects. As part of these projects, the major includes (within POEC 402) a class trip to Washington, DC during the first Sunday through Wednesday of spring break. All majors are required to participate in this trip. Given the program’s public policy orientation, majors must also have an active learning experience (such as an internship or a public policy-related winter study course) to fulfill an experiential education requirement.

MAJOR
The Political Economy major requires students to complete eleven (11) courses: three introductory courses in Economics and Political Science; one empirical methods course; three courses specific to the Political Economy Program; and four electives. The electives are organized into two categories — ‘skills’ courses and ‘depth’ courses — and must be completed across the major’s two foundational departments. Finally, all majors are required to fulfill an experiential education requirement, the purpose of which is to get students out into the world interacting with people in cases where the stakes are real. This often involves some element of community service, participation in the political process, or taking part in the making of or analysis of public policy beyond a purely academic engagement. This requirement is usually fulfilled through an internship or a winter study course, and must be approved by the chair prior to the student taking POEC 402 in the spring of senior year.

Three Introductory Courses
1. ECON 110: Principles of Microeconomics
2. ECON 120: Principles of Macroeconomics
3. PSCI 110: Introduction to American Politics

One Empirical Methods Course
4. POEC 253: Empirical Methods in Political Economy or ECON 255: Econometrics
Three Political Economy Program Courses

5. POEC 250: Economic Liberalism and Its Critics
6. POEC 401: Contemporary Problems in Political Economy
7. POEC 402: Political Economy of Public Policy Issues

Four Elective Courses

8. One ECON skills elective
9. One PSCI skills elective
10. One PSCI depth elective
11. One PSCI or ECON depth elective

Majors are required to take four electives, two each in two different categories across the two foundational departments of Economics and Political Science.

The first category is “skills” electives. Students are required to take two such electives. One must be a course in Economics that develops the econometric analytic skills of the student. The other must be a course in Political Science that develops the social science research skills of the student.

The second category is “depth” electives. Students are required to take two such electives on topics related to public policy in courses that are neither survey nor introductory. One must be a course in Political Science. The other may be taken in either Political Science or Economics.

Below are the courses that currently fulfill the “skills” and “depth” electives requirements. Note that all “skills” electives are simultaneously “depth” electives, but obviously students may not ‘double count’ a single course as fulfilling two distinct major requirements.

SKILLS ELECTIVES

ECON 230(S) LEC The Economics of Health and Health Care
  Taught by: Shyam Raman
  Catalog details
ECON 233(S) LEC Behavioral Economics and Public Policy
  Taught by: Matthew Chao
  Catalog details
ECON 257(F) LEC Economic Perspectives on Racial Inequality
  Taught by: Owen Thompson
  Catalog details
ECON 348 / ECON 548 LEC Human Capital and Development
  Taught by: Owen Ozier
  Catalog details
ECON 350(S) SEM Household Finance
  Taught by: David Love
  Catalog details
ECON 355 LEC Financial Crises, Credit Cycles, and Macroeconomic Policies
  Taught by: Andrew Hessler
  Catalog details
ECON 357 TUT The Economics of Higher Education
  Taught by: David Zimmerman
  Catalog details
ECON 360 LEC Monetary Economics
  Taught by: Kenneth Kuttner
  Catalog details
ECON 367(S) LEC The Political Economy of Social Insurance
  Taught by: Shyam Raman
  Catalog details
ECON 368 LEC Public Economics and Fiscal Policies
  Taught by: Asa Hansson
  Catalog details
ECON 377 LEC Inspiration/Perspiration: The Economics of Innovation
  Taught by: Steven Nafziger
  Catalog details
ECON 378 LEC Long-Run Comparative Development
  Taught by: Quamrul Ashraf
  Catalog details
ECON 381 / ECON 571(S) LEC Global Health Policy Challenges
  Taught by: Susan Godlonton
  Catalog details
ECON 382 TUT Gentrification and Neighborhood Change
  Taught by: Stephen Sheppard
Catalog details
ECON 453 SEM Research and Methods in Applied Microeconomics
  Taught by: Owen Thompson
Catalog details
ECON 456 SEM Income Distribution
  Taught by: Sara LaLumia
Catalog details
ECON 465 SEM Pollution and Labor Markets
  Taught by: Matthew Gibson
Catalog details
ECON 477 / ENVI 376 / CAOS 477(F) SEM Economics of Environmental Behavior
  Taught by: Sarah Jacobson
Catalog details
ECON 504(F) SEM Public Economics in Developing Countries
  Taught by: Jon Bakija
Catalog details
ECON 508 / ECON 308 TUT Skills for a Modern Economy and How to Pay for Them
  Taught by: David Evans
Catalog details
ECON 510 / ECON 352(S) LEC Financial Development and Regulation
  Taught by: Burak Uras
Catalog details
ECON 514 / ECON 389(S) SEM Tax Policy in Global Perspective
  Taught by: Jon Bakija
Catalog details
ECON 523 / ECON 379(S) SEM Program Evaluation for International Development
  Taught by: Pamela Jakiela
Catalog details
ECON 538 TUT Resilience and Macroeconomic Policy
  Taught by: Ralph Chami
Catalog details
LEAD 425 / PSCI 357(S) SEM Senior Seminar: Leadership and the Anxieties of Democracy
  Taught by: Mason Williams
Catalog details
PSCI 310 / LEAD 332 SEM New York City Politics: The Urban Crisis to the Pandemic
  Taught by: Mason Williams
Catalog details
PSCI 311 / LEAD 311 SEM Congress
  Taught by: Cathy Johnson
Catalog details
PSCI 315 / LEAD 315(S) SEM Parties in American Politics
  Taught by: Nicole Mellow
Catalog details
PSCI 316(F) SEM Policy Making Process
  Taught by: Cathy Johnson
Catalog details
PSCI 321 SEM Immigration Politics in the U.S.
  Taught by: Matthew Tokeshi
Catalog details
PSCI 353(S) SEM What is Democracy?
  Taught by: Michael MacDonald
Catalog details
PSCI 380 / SOC 390(S) SEM Sex Marriage Family
  Taught by: Darel Paul
Catalog details
PSCI 381 SEM The Conservative Welfare State
  Taught by: Darel Paul
Catalog details
DEPTH ELECTIVES
CAOS 351 / PSCI 319 / ENVI 351(F, S) SEM Marine Policy
  Taught by: Catherine Robinson Hall
Catalog details
ECON 204 / ENVI 234 / ECON 507 LEC Global Poverty and Economic Development
Taught by: Pamela Jakiela
Catalog details
ECON 205 SEM Public Economics

Taught by: William Gentry
Catalog details
ECON 213 / CAOS 213 / ENVI 213(S) LEC Introduction to Environmental and Natural Resource Economics

Taught by: Sarah Jacobson

PSCI 224(F) SEM Neo-liberalism: What Is It and Why Does It Matter?
The three core Political Economy Program courses (POEC 250, 401, and 402) must be completed at Williams without exception. Students are strongly encouraged to complete the empirical methods course (POEC 253 or ECON 255) and PSCI 110 at Williams, as versions of these courses offered elsewhere are usually highly imperfect substitutes that will not provide adequate preparation for the senior seminars; students may in rare cases be able to complete either of these requirements during study at another college or university (e.g., during study abroad), but only with prior permission from the chair.

The four electives may be completed during study at another college or university (e.g., during study abroad) with permission of the chair.
general, it is much easier to satisfy the “depth” electives abroad than the “skills” electives as the “skills” electives are based on pedagogy as well as subject matter. The policy of the Program is to grant credit for one course per semester abroad and two courses per year abroad. In extraordinary circumstances, credit for three courses for an entire year abroad may be granted with permission of the chair. Credit for A levels and IB exams in Economics and for introductory microeconomics and macroeconomics classes taken at other colleges and universities (subject to approval by the Economics department study away coordinator) is given consistent with the current policy of the Economics Department.

Students who score a 5 on the AP exam in Microeconomics or Macroeconomics may receive credit towards the major for the cognate introductory economics course(s). Students whose Economics Department placement exam scores allow them to place out of ECON 110 and/or ECON 120 may also receive credit towards the major for the corresponding class. No substitute higher-level coursework is required for majors receiving credit in this way (thus effectively reducing the number of required courses from 11 to 10 or 9). Students may not substitute AP credit for PSCI 110.

**RECOMMENDED PROGRESSION THROUGH THE REQUIRED MAJOR COURSES**

First-years who are considering a Political Economy major should take the three introductory classes in their first year at Williams: [1] ECON 110 Principles of Microeconomics; [2] ECON 120 Principles of Macroeconomics; and [3] PSCI 110 Introduction to American Politics. ECON 110 is a pre-requisite for POEC 253 and ECON 255 while ECON 110 & 120 are pre-requisites for POEC 250, POEC 401, POEC 402, and nearly all ECON electives in the major. PSCI 110 is a pre- or co-requisite for POEC 250, and is a pre-requisite for POEC 401 and POEC 402. PSCI 110 should ideally be taken in the first year and must be taken no later than sophomore year. Most importantly, upper class students are not admitted to the course. Please note that by College rule, students may take only their first course in the major pass/fail.

Prospective Political Economy majors should also ensure that their math coursework is sufficient. MATH 130 (Calculus I) or the equivalent is a prerequisite for the POEC methodology requirement (POEC 253 or ECON 255). Students might also consider taking STAT 161 or STAT 201 in their first year as that would give them the option of taking ECON 255 as sophomores or juniors.

Majors will ideally take POEC 250 in their sophomore year. POEC 401, taken fall of senior year, requires POEC 253 or ECON 255 as a prerequisite, so the methodology requirement must be completed in the sophomore or junior year. Note that both POEC 250 and POEC 253 are offered only once per year in the fall semester. Students should also get started on their electives during sophomore and junior years.

**THE DEGREE WITH HONORS IN POLITICAL ECONOMY**

Due to the special demands of this interdisciplinary major, the only route to honors in Political Economy is the thesis. Seniors may pursue the honors thesis course (Political Economy 493-W31) during the fall semester and winter study period. The third course contributing to such an honors program would normally be an elective in Political Science or Economics taken during the junior year. This course, which may be one of the required electives, must be closely related, indeed must prepare the ground for the honors thesis.

Juniors in the Political Economy major with a minimum 3.5 GPA in the program may apply for the honors thesis program by means of a written proposal submitted to the chair by mid-April. Written guidelines for such proposals are available on the program website. The proposal should have been discussed with at least two faculty members, and at least one faculty advisor from each discipline must be solicited by the student prior to submission of the proposal.

Final decisions about admission to the honors program will be made in late May after spring grades become available.

To achieve the degree with honors in Political Economy, the thesis must be completed by the end of winter study period and be judged of honors quality by a committee consisting of the two advisors and a third reader. A thesis judged to be of particular distinction will qualify its author for the degree with highest honors.

**STUDY ABROAD**

Despite the fact that Political Economy requires more courses than the typical major, many Political Economy majors go abroad. Typically the major credits obtained abroad are the electives. Since POEC 250 and POEC 253 are only offered in the fall, students considering spending only one semester abroad typically find spring to be the better choice. Nonetheless, many majors study away for the fall or the whole year. If you expect to be away during the fall of your junior year, it is critical that you either: (a) take POEC 253 fall of your sophomore year; or (b) complete MATH 130 as well as STAT 161 or 201 early enough that you can take ECON 255 (which is offered every semester) before the end of junior year. In addition, if you expect to be away fall of junior year, it is a good idea to take POEC 250 fall of sophomore year.

**TRANSITIONING TO THE NEW MAJOR STRUCTURE**

Students in the graduating classes of 2025 and 2026 may receive major credit for courses taken under the old major structure that are no longer granted credit under the new major structure. This includes: the former PSCI 202, 203 and 204 which will be credited to majors as a “depth” elective; and any elective granted credit at the time of enrollment regardless of its current elective category status. All majors regardless of graduation year are required to complete two Political Science electives and one Economics elective, with the fourth elective coming from either department—i.e. they must abide by the departmental distribution of electives in the new major structure.

**FAQ**

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.
Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the program chair.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description for “depth” electives. A full syllabi is generally required for “skills” electives.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

There is an effective limit of 2-3.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. Only Economics or Political Science courses can be awarded credit, and they must satisfy one of the elective categories (or in rarer cases one of the ECON or PSCI intro requirements).

Are there specific major requirements that cannot be fulfilled while on study away?

Yes.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. The POEC major requires 3 specific POEC courses (250, 401, and 402), and one empirical methods course (POEC 253 or ECON 255). The POEC courses are only offered in a single semester (fall for 250, 253, and 401 and spring for 402), and 401 and 402 must be taken in the senior year. 253 can be replaced with ECON 255, which is offered in fall or spring, but ECON 255 has an additional prerequisite of STAT 161, STAT 201, or STAT 202. Studying abroad in POEC requires careful planning.

POEC 250  (F) Economic Liberalism and Its Critics

Cross-listings:  PSCI 238 / ECON 299

Primary Cross-listing

Economic liberalism holds that society is better off if people enjoy economic freedom. Its critics point to what they believe this position ignores or what it wrongly assumes, and hence, how it would make bad policy. This course explores the relationship between politics and economics by surveying influential works of political economy. Its first part examines major thinkers in relation to the historical development of capitalism in Western Europe and the United States: the classical liberalism of Adam Smith, Karl Marx’s revolutionary socialism, and the reformist ideas of John Maynard Keynes. The second part considers mid-20th-century writers who revise and critique economic liberalism from a variety of perspectives, including Joseph Schumpeter, Friedrich Hayek, Milton Friedman, Ronald Coase, Arthur Okun, and Albert O. Hirschman. The third part surveys significant topics relevant to the themes of the course, with applications to current public policy issues, such as: power relations and autonomy in the workplace; asymmetric information and social insurance; economic inequality and distributive justice; equality of opportunity; the economics of health care; positional goods and the moral foundations of capitalism; social media and addiction; economic nationalism; behavioral economics; climate change and intergenerational equity; finance and financial crises; and rent-seeking. The combination of the historical focus of the early part of the course with discussion of modern policy issues and debates in the latter part of the course permits you to appreciate the ongoing dialogue between classical and contemporary views of political economy.

Class Format: This course uses a flipped classroom approach. Before each class meeting, students watch a lecture video, and (at least six times) write an essay relating to the assigned reading and video. In-person class time is devoted primarily to Socratic discussion.

Requirements/Evaluation: six short essays and a final exam

Prerequisites:  ECON 110 and 120 or equivalent; PSCI 110 (formerly PSCI 201; may be taken concurrently with POEC 250);  open to non-majors

Enrollment Limit:  30

Enrollment Preferences: Political Economy majors and sophomores intending a Political Economy major

Expected Class Size:  25

Grading:  no pass/fail option, no fifth course option

Distributions:  (D2)
POEC 253 (F) Empirical Methods in Political Economy  (WS) (QFR)
This course introduces students to common empirical tools used in policy analysis and implementation. Students will develop skills in statistical literacy to become critical consumers of public policy-relevant research. The emphasis in the course is split between an intuitive understanding of statistical foundations, and applications in data visualization and science communication. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; effective data visualization; statistical inference and hypothesis testing; and multiple regression analysis. A particular focus will be placed on understanding causality, the challenges of estimating causal relationships, and the design of evidence-based policy. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

Requirements/Evaluation: Problem sets, group project, midterm exam, final exam

Prerequisites: MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255

Enrollment Limit: 20

Enrollment Preferences: Political Economy majors, Environmental Policy majors and sophomores

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Unit Notes: does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major

Distributions: (D2) (WS) (QFR)

Writing Skills Notes: Students will write 3 coding-intensive data briefs over the course of the semester. Creation of original exhibits from publicly accessible data, use of citation management systems, and clarity in technical writing will be emphasized.

Quantitative/Formal Reasoning Notes: The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.

Attributes: POEC Required Courses
POEC 401 (F) Contemporary Problems in Political Economy

This course examines contemporary problems in political economy at and across diverse spatial scales. Using both Economics and Political Science methods of analysis, students will study the way societies respond to the myriad risks facing its citizens. The goal of this course is both to build upon theoretical debates encountered in POEC 250 as well as to prepare students for the public policy analysis they will do in POEC 402.

Requirements/Evaluation: two 7-10 page papers; multiple in-class group presentations; class participation
Prerequisites: ECON 110 and 120; PSCI 110 (formerly 201); POEC 253 or ECON 255 or equivalent, or permission of instructor; open to non-majors
Enrollment Limit: 20
Enrollment Preferences: Political Economy majors
Expected Class Size: 15
Grading: no pass/fail option, no fifth course option
Unit Notes: required for the Political Economy major
Distributions: (D2)
Attributes: POEC Required Courses

POEC 402 (S) Political Economy of Public Policy Issues

In this course, students form groups that conduct a political and economic analysis of a public policy issue of their choosing. They do extensive reading, conduct interviews in Washington, D.C. (during spring recess), write a major report on their findings and recommendations, and present and defend their findings in a public talk. Students visit Washington, D.C. Sunday night through Wednesday of the first week of spring vacation to conduct interviews relating to their group projects. This is a course requirement.

Class Format: student presentations
Requirements/Evaluation: group policy projects including an 80- to 100-page paper and 2-hour presentation
Prerequisites: POEC 250; POEC 253 or ECON 255; POEC 401; open only to Political Economy majors
Enrollment Limit: 20
Enrollment Preferences: open only to Political Economy majors
Expected Class Size: 15
Grading: no pass/fail option, no fifth course option
Unit Notes: required for the Political Economy major
Distributions: (D2)
Attributes: POEC Required Courses

POEC 493 (F) Honors Thesis: Political Economy

Due to the special demands of this interdisciplinary major, the only route to honors in Political Economy is the thesis, a substantial and original work of scholarship. Students pursue the honors thesis course (Political Economy 493-W31) during the fall semester and winter study period. They work closely with two faculty advisors -- one in Economics, one in Political Science -- throughout the thesis process.

Grading: no pass/fail option, no fifth course option
Winter Study

POEC 10  Key Trends in US Industrial Reshoring: Economics, Regulations and Capital Markets

The trends that are driving industrial reshoring in the United States cross a number of economic, regulatory, and tax policies, which are having major implications for the capital markets that are funding this domestic industrial expansion. This course will examine each of these trends. Specific topics will include: supply chain disruptions; automation; the CHIPS Act; public and private investor relations; and specialty debt funds. In addition to the instructor, a career professional in investment banking and private equity, other experienced professionals in corporate management, state regulation, and capital markets will provide additional insights during the course.

Class Format: Presentations from professionals in relevant fields will supplement class discussion.

Requirements/Evaluation: Group oral presentation about a key topic or case study discussed during the course, plus accompanying written report.

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: POEC majors.

Expected Class Size: 15

Grading:

Unit Notes: Bill Sprague ’80 is Managing Director and Head of the Infrastructure Finance and Advisory Group at Capstone Partners. Prior to Capstone Partners, Bill was previously Chief Executive Officer of Madison Williams and SMH Capital, a full service investment bank.

Not offered current academic year

POEC 31 (W) Honors Thesis: Political Economy

To be taken by students registered for Political Economy 493.

Class Format: thesis

Grading: pass/fail only

Not offered current academic year

POEC 99 (W) Independent Study: Political Economy

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

Class Format: independent study

Grading: pass/fail only

Not offered current academic year
Political science is interested in the question of power—how it is created, exercised, justified, and challenged to engage in problem solving, facilitate citizen action, and participate in world-making. Political scientists study democracy, war, group conflicts, law, rights, wealth distribution, and authority, as well as the individuals, institutions, and social forces that shape them. As a social science, the study of politics considers both the dynamics and ethics of power, which in turn involves conceptions of community, identity, justice, and citizenship. The effort to understand politics aims not only to describe and explain, but also to improve collective life. To this end, the Political Science Department strives to cultivate in its students the habits and skills of clear thought, rigorous analysis, and effective argumentation in writing and speech.

The Political Science major requires nine courses. Traditionally, students organize their major through the subfields that structure the discipline of political science (American politics, international relations, political theory, and comparative politics). Occasionally, students propose and develop individual concentrations that reflect their particular interests, regardless of subfields.

**MAJOR**

**Subfield Concentration Route:** Upon declaring a major, students choose one subfield: American politics, international relations, political theory, or comparative politics. The subfield concentration draws at least four (4) of the nine courses from one subfield including the appropriate core course from 110-140, two electives of the student’s choice at the 200 or 300 level and the senior seminar in the student’s subfield. Students selecting political theory as their subfield concentration must take Political Science 231 or Political Science 232 as one of their four subfield courses, in addition to taking Political Science 130 and prior to taking Political Science 430. With permission of the department chair, students may take a senior seminar in a different subfield, providing they take a third elective in the subfield of concentration. In addition, students must take courses in two subfields outside the subfield of concentration to satisfy the breadth requirement (all methods courses also count toward the breadth requirement). The faculty advisor must approve the student plan. Students must take at least one 300-level course and one 300- or 400-level research (R) course to complete the major.
In rare circumstances, students may devise a concentration of their own. In this event, the student prepares a curricular plan in consultation with a faculty advisor, explaining the nature of the concentration, why it cannot be accommodated in the traditional subfield structure, and the courses the student will take. The individual concentration also requires nine (9) courses, with at least five (5) thematically linked courses constituting the concentration. Of these five courses, one is from the 110-140 core courses, three are electives at the 200 or 300 level, and one is a senior seminar. In addition, students pursuing an individual concentration must take at least two other courses that illustrate breadth in political science. To complete the requirement, the student has their choice of any two other courses within the Political Science Department. The faculty advisor and the department chair must approve the student plan. Students must take at least one 300-level course and one 300- or 400-level research course to complete the major. (Many senior seminars are also research courses but, especially in political theory, not all are.) In addition, no more than two 100-level elective courses (courses outside of the 110-140 core courses) can count toward the major.

Individual Concentration Route:

When a student chooses to major in Political Science, they may register with any Political Science faculty member. The registering faculty member will ask for preferences for a permanent faculty advisor and an effort will be made to match students with their preferred advisor though this cannot be guaranteed. In all cases, students will be paired by the beginning of junior year with an advisor who will continue with them through graduation.

COURSE NUMBERING

The course numbering used by the Political Science Department reflects the format and specialization of a course. The 100-level courses are divided between our core courses and electives. The core courses, numbered from 110-140, serve as introductions both to the substance of politics and the subfields organizing the study of politics. The introductory subfield course must be completed before the senior year and preferably before junior year. The 100-level electives are designed to address political topics from multiple subfield perspectives; many are seminars designed for first-year students. The 200-level courses are electives that delve into political processes, problems, and philosophies, typically within one of the four subfields though occasionally in ways that cut across subfields. 100-level and 200-level courses have no prerequisites. 300-level courses are more specialized seminars and have prerequisites. 400-level courses are senior seminars offered for students in the major; senior seminars also are open to juniors and to non-majors if space permits. In general, the main subfield of non-core courses can be read from the middle digit of the course number: 0, 1 or 5 for American politics; 2 or 6 for international relations; 3 or 7 for political theory; 4 or 8 for comparative politics. Because the relevant course number may not be available, and as some courses may not fit the subfields or may fit multiple subfields, please check the “attributes” entry to confirm how the course is categorized by the department.

WINTER STUDY PROJECT

The department welcomes relevant WSP 99 proposals that can make important contributions to the student’s understanding of public affairs and politics. Majors, seniors, and students without previous WSP 99 experience have preference.

THE JUNIOR YEAR ABROAD

A major in Political Science can be readily and usefully combined with study off-campus. Generally, only one course taken per semester abroad in a program approved by the College may be counted toward the requirements for a degree in Political Science.

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, though sometimes a syllabus may be needed. How much we need may depend on our familiarity with the institution or program.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

Yes. Typically we allow not more than one course per semester, or two per year, to count for major credit.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No, although this depends on the course. If, after considering description and institution, we feel it is not rigorous enough, we will not count it.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. We do not allow the senior seminar requirement, nor the research requirement, to be fulfilled by study abroad.
Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

No. One such required course (either Ancient or Modern Political Thought for those specializing in political theory within the major) can be fulfilled by an appropriate study abroad course.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

When issues arise that’s almost always because the student did not keep department adequately informed of evolving plans.

PREPARATION FOR GRADUATE STUDY

The Department recommends that students contemplating graduate school, especially if they plan to study fields outside of political theory, take a course in research methods, such as PSCI 493, and/or a class in quantitative methods, such as POEC 253.

THE DEGREE WITH HONORS IN POLITICAL SCIENCE

To become a candidate for honors, the student must apply in the second semester of their junior year for PSCI 493(F), the Senior Thesis Research Design Seminar, by (1) submitting a “statement of interest and qualifications” and (2) having a record of academic excellence in Political Science, generally a major GPA of 3.5 or above. Accepted students who write a successful thesis research proposal in PSCI 493 will then be invited to continue on to PSCI 494(S), Senior Thesis Research and Writing Workshop. Also required for these students is participation in the senior thesis winter study course (PSCI 31). The fall and spring semester senior thesis courses are in addition to the required nine (9) courses for the major. Additional details can be found at the department website.

PSCI 110  (F)(S)  Introduction to American Politics: Power, Politics, and Democracy in America

Begun as an experiment over 200 years ago, the United States has grown into a polity that is simultaneously praised and condemned, critiqued and mythologized, modeled by others and remodeled itself. This course introduces students to the dynamics and tensions that have animated the American political order and that have nurtured these conflicting assessments. Topics include the founding of the American system and the primary documents (the Declaration of Independence, the Constitution, and the Federalist Papers), the primary institutions of national government then and now (Congress, the presidency, and the Supreme Court), and the politics of policy-making in the United States. We study structures, processes, key events, and primary actors that have shaped American political development. In investigating these topics, we explore questions such as these: How is power allocated? What produces political change? Is there is a trade-off between democratic accountability and effective governance? How are tensions between liberty and equality resolved? Do the institutions produce good policies, and how do we define what is good?

Requirements/Evaluation: depending on the section, some combination of response papers, short-to-medium papers, multimedia projects (podcasts, videos), exams, discussion groups, and class participation

Prerequisites: this is an introductory course, open to first-year students and sophomores; juniors and seniors may enroll only with the permission of instructor and under special circumstances

Enrollment Limit: 30

Enrollment Preferences: first-years and sophomores

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

PSCI 120  (F)(S)  Introduction to International Relations: World Politics

This course provides an overview of the central theories, concepts and debates in international relations. Students evaluate competing answers to
central questions in the field: What are the implications of an anarchic political structure for order and justice in world politics? What are the primary causes of international war and conflict? Are there necessary conditions for peace and stability? What role do moral and legal considerations play in world politics? How has globalization changed the way that the international system operates?

Requirements/Evaluation: Depending on the semester and instructor, some combination of essays, a midterm paper, one or two short response papers, a group project and presentations, a podcast, and an in-person final exam.

Prerequisites: This is an introductory course, open to first-year students and sophomores; juniors and seniors may enroll only with the permission of instructor and under special circumstances.

Enrollment Limit: 25

Enrollment Preferences: first-year students and sophomores

Expected Class Size: 25

Grading: no pass/fail option, yes fifth course option

PSCI 130  (F)(S)  Introduction to Political Theory

Is politics war by other means? Is it merely a practical way to meet our needs? Or is it, rather, the activity through which citizens pursue justice and the good life? And what is justice? How can it be established and secured? Where does it apply? To whom? What are the powers and obligations of citizenship? Who decides? On what basis? Political theory addresses questions such as these as it investigates the fundamental problems of how people can, do, and ought to live together. The questions have sparked controversy since the origins of political thinking; the answers remain controversial now. This course addresses the controversies, drawing examples from struggles over such matters as racism, colonialism, revolution, political founding, economic order, and the politics of sex and gender, while focusing on major works of ancient, modern, and contemporary theory by such authors as Plato, Aristotle, Machiavelli, Hobbes, Rousseau, Mill, Marx, Nietzsche, Beauvoir, Arendt, Fanon, Rawls, Foucault, and Young. Themes may include power, authority, freedom, justice, equality, democracy, neoliberalism, feminism, and violence, though the emphases will vary from semester to semester.

Requirements/Evaluation: Three papers, class participation, and occasional informal writing/Glow posts. The spring 2025 sections may include a podcast option and a final exam.

Prerequisites: none; this is an introductory course, open to all, including first-year students

Enrollment Limit: 25

Enrollment Preferences: first-years and sophomores

PSCI 140  (F)  Introduction to Comparative Politics

The comparative study of politics looks mainly at what goes on inside countries, the domestic dynamics of power, institutions, and identities. This class considers analytic concepts central to the study of politics generally--the state, legitimacy, democracy, authoritarianism, clientelism, nationalism--to comprehend political processes and transformations in various parts of the world. Themes include: Where does political power come from? Does economic development drive political change, or the other way around? What is democracy, how does it arise, and how might it fail? How does international war leave its mark on domestic politics? How do religion and politics interact? Materials include classic texts, recent theoretical works, journalism, commentary, fiction, and a variety of sources related to current events around the world.

Class Format: directed discussion

Requirements/Evaluation:  Three 3-page papers, a short interpretive exercise, and a short final exam

Prerequisites: none

Enrollment Limit: 30

PSCI 146  (S)  The world of wealth and work: An introduction to the politics of capitalism  (DPE)

From the Googleplex to derelict factories in Ohio, from our personal lives to the halls of high politics, from the sugar fields of Brazil to the corner offices of Wall Street, we are all navigating the same system: capitalism. This course will give students a map. Drawing on political science and political economy, we will ask fundamental questions about capitalism: Why are some parts of the world so much richer than others? Is sustainable economic growth possible? Why do some jobs pay more than others? Why do some things cost money but other things are free? What is the relationship between economic exploitation and race, gender, and other identities? Why are we working all the time? Can a democratic society have a capitalist economy? Students will explore these questions and engage themes central to the study of capitalism, including financialization, intersectionality, racial order, neoliberalism, class, contradiction, and accumulation. The course is designed for first-year students, especially those who have taken one or fewer political science courses.

Requirements/Evaluation:  Class participation; regular reading responses; two short papers; two presentations; final exam

Prerequisites: None

PSCI 155  (F)  Visionaries, Pragmatists, and Demagogues: An Introduction to Leadership Studies

Cross-listings:  LEAD 155
Secondary Cross-listing

This course introduces students to the major issues in the study of leadership, a central concept in the study of politics. The first part of the course will examine key theoretical problems that have occupied political thinkers from Plato and Confucius to Machiavelli and the American framers: What makes a leader successful? What kinds of regimes best serve to encourage good leaders and to constrain bad ones? What is the relationship between leadership and morality—can the ends justify the means? What functions does leadership fill, and what challenges do leaders face, in modern democratic states? The second half of the course will look at leaders in action, charting the efforts of politicians, intellectuals, and grassroots activists to shape the worlds in which they live. Case studies will include antislavery politics and the American Civil War; the global crises of the 1930s and 1940s; and the social movements of the 1960s and 1970s. In addition to active class participation, students will be expected to write a 5-page proposal for a research paper on a leader of their choice, a 10-page research paper, an in-class midterm exam, and a cumulative, in-class final exam.

Requirements/Evaluation: active class participation, 5-page research proposal, 10-page research paper, in-class midterm exam, and a cumulative in-class final exam

PSCI 158 (F) Power to the People?

Popular unrest. The resurgence of authoritarian styles and practices in politics. Democratic collapse. Political tumult around the globe in recent decades has put elites, and others, on edge as young democracies have collapsed and longer standing ones appear to be stumbling. In the United States, basic stability and democratic expansion have been accompanied by increasing citizen distrust of institutions, growing social divisions, contestation over basic citizenship rights, and political violence. The pandemic, related economic distress, social protests and insurrection have only sharpened the precarious state of U.S. democracy. Acute observers have long seen the U.S. as a harbinger of the promise and peril of modern democracies. What is the fate of democracy in the U.S.? What does that portend, if anything, for other democracies, or for the general principle of popular sovereignty—the idea that the people govern themselves? We investigate these and related questions, primarily through active, project-based group research activities, guided by political theory and empirical research in the social sciences. Our investigation will include substantial class-time collaboration with a similarly structured undergraduate course taught by a sociologist at Johns Hopkins University and may include an optional weekend research trip.

Requirements/Evaluation: active class participation, three 4-page essays, multiple group assignments, and class presentations

Prerequisites: first-year students

PSCI 160 (F) Refugees in International Politics (DPE) (WS)
Globally, refugees seem to create, and be caught up in, chronic crisis. This course evaluates how this can be—how a crisis can be chronic, and for whom this chronic crisis is a solution. We investigate who refugees are, in international law and popular understanding; read refugee stories; examine international and national laws distinguishing refugees from other categories of migrants; evaluate international organizations’ roles in managing population displacement; look at the way that images convey stereotypes and direct a type of aid; consider refugee camps in theory and example; and reflect on what exclusion, integration, and assimilation mean to newcomers and host populations. In whose interest is the prevailing system? Who might change it, and how?

Requirements/Evaluation: Ten essays: five lead, five response. The first two weeks’ essay grades will be unrecorded.

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: first-year students, to be selected randomly from list of those enrolled.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

Writing Skills Notes: In addition to writing every week, students will have a chance work on specific skills cumulatively.

Difference, Power, and Equity Notes: This course examines the way in which home states categorize people and oppress some, producing refugees; the way that host states categorize people and oppress some, using immigration to shore up the prevailing ethnic hierarchy; and why we worry about some of these categories of oppression more than others.

PSCI 208  (F)  Wealth in America  (WS)

The pursuit of wealth is an important feature of American political identity, captured by the ideas of the American dream and the Protestant work ethic. The accumulation of wealth has been lauded as both a worthy individual activity and a vital component of the nation's public interest. Yet inequality in wealth may conflict with the political equality necessary for democratic governance and public trust, leading to concerns that we are sacrificing community, fairness, and opportunity for the benefit of a small portion of the population. This course focuses on questions about the public value of wealth and its accumulation, which have become more pressing now that the richest one percent of Americans own about 40 percent of privately held wealth. Some readings will be historical, particularly those focusing on American political thought and the politics of the Gilded Age. Most readings will focus on contemporary political debates about the accumulation, concentration, and redistribution of wealth.

Requirements/Evaluation: four 5-page papers and a final 10-page paper that is a revision and extension of a short paper

Prerequisites: none; not suitable for first-year students

Enrollment Limit: 19

Enrollment Preferences: Political Science majors with concentration in American politics and Political Economy majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Unit Notes: American concentration

Distributions: (D2) (WS)

Writing Skills Notes: Four 5-page papers, peer review, and a revision of extension of one of these papers into a 10-page paper at the end of the semester. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

PSCI 209  (F)  Poverty in America
Cross-listings: WGSS 209

Primary Cross-listing

Although some protest that the U.S. is heading toward European-style socialism, social welfare programs in the U.S. differ in important ways from those in other wealthy and democratic nations. This course focuses on the adoption and development of policies to address poverty and inequality in the U.S. The issues we will explore include: What is poverty, and how do Americans perceive its dangers to individuals as well as the political community? What economic, historical, and sociological theories have been advanced to explain poverty? Why has the U.S. adopted some approaches to reduce poverty but not others? What enduring political conflicts have shaped the U.S. welfare state?

Requirements/Evaluation: class participation, two or three short papers, and a final paper

PSCI 211 (S) Do the People Govern? U.S. Public Opinion and Mass Political Behavior

America's founding documents explicitly state that the will of the people is the authority upon which our government rests. But do the people actually govern, and should they? Pessimists point out that most Americans know very little about politics and lack coherent political views, are easily manipulated by media and campaigns, and are frequently ignored by public officials anyway. Optimists counter that, even if individuals are often ignorant and/or confused about politics, in the aggregate, the public sends a coherent signal to public officials, who usually carry out the public's general wishes. In addition to engaging this debate about what the public thinks about politics, we will also explore how people behave in the political realm. What are the forces that shape whether citizens pay attention to politics, vote, work on campaigns, protest, or engage in other types of political action? How do resource gaps tied to inequalities in society (such as race, class, and gender) influence political behavior? And how do institutions such as the media and campaigns encourage or discourage it?

Requirements/Evaluation: class participation, one to two short papers (5-7 pages), one medium paper (8-12 pages), an oral presentation, and a final exam

PSCI 212 (S) From Tocqueville to Trump: Leadership and the Making of American Democracy  (DPE)

Cross-listings: LEAD 205

Secondary Cross-listing
America's founders didn't mean to create a democracy as we would now understand the term. But since the Revolution, leaders have been fighting to make real for all Americans the promise of government of, by, and for the people. In this course, we will look at how leaders have marshaled ideas, social movements, and technological changes to expand the scope of American democracy—and the reasons they have sometimes failed. We will examine how founders such as Benjamin Franklin and James Madison envisioned the relation between the people and the government; how workers, African Americans, and women fought to participate in American politics; and how globalization, polarization, and inequality are straining American democracy and political leadership in the 21st century. We will examine leadership to better understand American democracy—and vice versa. We will ask: What explains why some leaders have succeeded where others have failed? Have some periods of American democratic politics been more amenable to particular kinds of leadership than others? What makes American political leadership distinctive in international comparison? Who, exactly, has been permitted to participate in American politics, and on what terms? How has the relation between the governors and the governed changed over time, and what factors and events have shaped those relations? How has America's democratic experiment compared with (and interacted with) democracy elsewhere in the world? Is America really a democracy at all?

Requirements/Evaluation: 5-page document analysis, 10-page review essay, midterm and final in-class exams
Prerequisites: none

PSCI 213 (F) Mass Media and American Politics
According to recent estimates, the average American spends 11 hours per day consuming media—that is, watching television and movies, reading print sources, listening to music, radio, and podcasts, and scrolling social media. How does all of that media consumption influence the American political system? Scholars, practitioners, and observers of American politics have debated whether the net effect is positive or negative. Critics argue that today's media is shallow and uninformative, a vector of misinformation, and a promoter of extremism and violence. Some defenders argue that the media is a convenient scapegoat for problems that are endemic to human societies, while others claim that it actually facilitates political action aimed at addressing long-ignored injustices. In addition to addressing this important question about the health of American democracy, students will learn how the traditional media and social media influences Americans' political attitudes and behaviors. Among the topics we will discuss are the incentives, norms, and practices of news-making organizations; how politicians try to sway the public during campaigns; how the media covers campaigns; and how the media influences Americans' racial attitudes.

Requirements/Evaluation: two short (4-5 page) papers, one non-written assignment roughly equivalent to a 8-12 page paper in terms of workload, a final exam, and class participation
Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: Political science majors

PSCI 214 (S) Racial and Ethnic Politics in America
Arguably, the dominant discourse in American politics today is about race. Race is connected to salient issues like immigration and police conduct; to politicians across the political spectrum; and (some argue) to virtually everything in American politics, including fundamental concepts that have no manifest racial content, like partisanship and the size and scope of government. We will evaluate the role of race as it relates to public opinion, political behavior, campaigns, political institutions, and public policy debates, with special attention devoted to the nature of racial attitudes. Most of the course will focus on the historical and contemporary relations between whites and African Americans, but we will also explore topics involving other pan-ethnic communities, particularly Latinos and Asian Americans.

Requirements/Evaluation: class participation, one to two short papers (5-7 pages), one medium paper (8-12 pages), an oral presentation, and a final exam

PSCI 215  (S)  Race and Inequality in the American City  (DPE)

Cross-listings: LEAD 215

Primary Cross-listing

In the past half-century, American cities have gotten both much richer and much poorer. The making of "luxury cities" has gone hand-in-hand with persistent, concentrated poverty, extreme racial segregation, mass incarceration, and failing public services-social problems borne primarily by people of color. This course will examine the political underpinnings of inequality in American cities, with particular attention to the racialization of inequality. Among the topics we will cover are: the structures of urban political power; housing and employment discrimination; the War on Crime and the War on Drugs (and their consequence, mass incarceration); education; and gentrification. We will ask: How have city leaders and social movements engaged with urban problems? How have they tried to make cities more decent, just, and sustainable? Under what circumstances has positive leadership produced beneficial outcomes, and in what circumstances has it produced perverse outcomes? We will engage primarily with political science, but also with scholarship in other disciplines, including sociology, history, geography, and legal studies, all of which share an interest in the questions we will be exploring. Students will leave this course with a deeper understanding of contemporary urban problems, a knowledge of the political structures within which those problems are embedded, and a better sense of the challenges and opportunities leaders face in contemporary urban America.

Requirements/Evaluation: class participation; several short essays and a longer paper with presentation

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: Political Science majors and Leadership Studies concentrators

Expected Class Size: 25

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

LEAD 215(D2) PSCI 215(D2)

Difference, Power, and Equity Notes: Deploying historical and social-scientific analysis, this course seeks to help students understand the historical roots and political underpinnings of unequal access to social goods in American cities, with particular attention to the racialization of inequality, compound deprivation, and unearned advantage.
PSCI 216  (S)  American Constitutionalism I: Structures of Power
Cross-listings:  LEAD 216

Primary Cross-listing
How has the American Constitution been debated and understood over time? What is the relationship between constitutional and political change? This course examines the historical development of American constitutional law and politics from the Founding to the present. Our focus is on structures of power -- the limits on congressional lawmaking, growth of presidential authority, establishment of judicial review, conflicts among the three branches of the federal government, and boundaries between the federal and state and local governments. The specific disputes under these rubrics range from secession to impeachment, gun control to child labor, waging war to spurring commerce; the historical periods to be covered include the Marshall and Taney Court years, the Civil War and Reconstruction, the Progressive Era, the New Deal, the Warren Court, and the contemporary conservative ascendancy. Readings are drawn from Supreme Court opinions, presidential addresses, congressional debates and statutes, political party platforms, key tracts of American political thought, and secondary scholarship on constitutional development. Throughout the semester, our goal will be less to remember elaborate doctrinal rules and multi-part constitutional "tests" than to understand the changing nature of, and changing relationship between, constitutional power and constitutional meaning in American history.

Class Format: discussion
Requirements/Evaluation:  three essays (3-4 pages, 5-6 pages, 7-8 pages), a two-part final exam, and class participation
Prerequisites:  none
Enrollment Limit:  25
Enrollment Preferences:  Political Science majors
Expected Class Size:  18
Grading:  no pass/fail option,  yes fifth course option

PSCI 217  (S)  American Constitutionalism II: Rights and Liberties
Cross-listings:  LEAD 217

Primary Cross-listing
How has the American Constitution been debated and understood over time? What is the relationship between constitutional and political change? This course examines the historical development of American constitutional law and politics from the Founding to the present. Our focus is on rights and liberties -- freedom of speech and religion, property, criminal process, autonomy and privacy, and equality. The specific disputes under these rubrics range from abortion to affirmative action, hate speech to capital punishment, school prayer to same-sex marriage; the historical periods to be covered include the early republic, the ante-bellum era, the Civil War and Reconstruction, World Wars I and II, the Warren Court, and contemporary America. Readings are drawn from Supreme Court opinions, presidential addresses, congressional debates and statutes, political party platforms, key tracts of American political thought, and secondary scholarship on constitutional development. Throughout the semester, our goal will be less to remember elaborate doctrinal rules and multi-part constitutional "tests" than to understand the changing nature of, and changing relationship between, constitutional rights and constitutional meaning in American history.

Requirements/Evaluation:  three essays (3-4 pages, 5-6 pages, 7-8 pages), a two-part final exam, and class participation
Prerequisites:  none
Enrollment Limit:  25
Enrollment Preferences:  Political Science majors
**PSCI 218 (S) The American Presidency**

**Cross-listings:** LEAD 218

**Primary Cross-listing**

Impeachments. Investigations. Polarization. Did Donald Trump's tenure fundamentally alter the institution of the presidency? Or are its most significant features enduring? To study the presidency is to study human nature and individual personality, but also constitution and institution, rules and norms, bureaucracy and administration, strategy and contingency. This course examines the problems and paradoxes that attend the exercise of the most powerful political office in the world's oldest democracy: Can an executive office be constructed with sufficient energy to govern and also be democratically accountable? What are the limits on presidential power and what are the expectations of presidential performance? How much do we attribute the shaping of politics and policy outcomes to the agency of the individual in the office and to what extent are they the result of underlying structural, cultural, and institutional factors? How is the office and purpose of the presidency affected by an economic order predicated on private capital? By the character of the occupant? To answer these questions, we examine topics such as presidential selection; the bases of presidential power; character and leadership; inter-branch interactions; party, social movement, and interest group relations; and media interactions. Attention will focus largely on the modern, twentieth and twenty-first century, presidency, though older historical examples will also be used to help us gain perspective on how the presidency has changed over time and what the implications are for democratic governance.

**Class Format:** The course will feature both seminar discussion and several small group research projects.

**Requirements/Evaluation:** three 5 to 7-page papers, small group projects, oral presentations, and class participation involving weekly writing

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** Political Science majors and Leadership studies concentrators

**Cross-listings:** LEAD 220 / INTR 220 / AMST 201 / AFR 224

**Secondary Cross-listing**

This weekly tutorial has alternating primary and secondary writers (5pages/2pages). In weekly one-hour sessions, students read their work aloud followed by dialogue and critique. Primary papers are due to respondent/professor 48hrs before the tutorial meets; response papers are emailed to the professor 2hours before the weekly tutorial meets. Readings include: *We Charge Genocide*; Williams J. Maxwell, *F. B. Eyes: How J. Edgar Hoover's Ghostreaders Framed African American Literature*; Chalmers Johnson, *Blowback: The Costs and Consequences of American Empire*; Hugh Wilford, *The Mighty Wurlitzer: How the CIA Played America*; "Part III Supervision and Control of the CIA," *Rockefeller Commission Report*; Malcolm X *Speaks*; Sam Greenlee, *The Spook Who Sat By the Door*; and, *The Murder of Fred Hampton*. The tutorial is open to all students.

**Requirements/Evaluation:** Attend all classes; submit completed papers 24hours before seminar meets.
**Prerequisites:** none  
**Enrollment Limit:** 10  
**Enrollment Preferences:** Juniors and Seniors.  
**Expected Class Size:** 10  
**Grading:** no pass/fail option, no fifth course option

**PSCI 222  (F)  International Relations in the Cyber Age**  
This is a class about international politics in the age of cyberweapons. At a general level, it focuses on a set of core conceptual questions: How has the advent of cyberweapons changed how international politics works? Are cyberweapons that target critical infrastructure similar to nuclear weapons, or is that comparison fundamentally flawed? Do concerns about information security alter states’ most basic political calculations? How can we expect cyberweapons to shape the future of warfare, intelligence, and security competition? How effective are strategies like cross-domain deterrence?  
Should the world try to regulate the use of these technologies and, if so, how exactly? The course begins with several sessions that provide a technical overview of key information security concepts and an examination of some prominent hacks. In addition, the beginning of the course will include several classes on the theoretical implications of the advent of the cyber age, as well as a brief historical overview of information security in the post-World War II period. From there, the course will cover a number of important topics and case studies, such as Stuxnet, NotPetya, cyber espionage, intellectual property theft, threats to critical infrastructure, misinformation, propaganda, election interference, the potential implications of quantum computing, and the prospects for the establishment of an international cyber arms control regime. In general, the course will focus on competition between some of the world's premier cyber powers, such as China, Iran, Israel, North Korea, Russia, and the United States.  

**Requirements/Evaluation:** Class participation; Two analytical essays, 6-7 pages in length; Final exam

**Prerequisites:** None

**PSCI 223  (F)  International Law**  
International law embodies the rules that govern the society of states. It spells out who can be a sovereign state and how to become one, what states can do, what they cannot do, and who can punish transgressions. It also creates status for other actors, such as international organizations, soldiers, national liberation movements, refugees, terrorists, transnational air and sea shipping companies, and multinational corporations. International law is similar to domestic law, with one very crucial difference: it is not enforced by a centralized, sovereign state. There is no world government. In most other respects, it is the same: it protects the status quo, maintaining the unequal distribution of power among its members; it spells out legitimate and illegitimate ways of resolving conflicts of interest; it is biased toward the powerful and legitimates their interests; it tells its members how to act to coordinate their interests and minimize direct conflict; some of it is purely aspirational, some of it necessary for survival. Like domestic law, it is enforced only some of the time, and then against the weak more than the strong. Yet, law is still where we look for justice and, perhaps, for power to be tamed.

**Requirements/Evaluation:** Weekly quizzes, Glow posts, two papers on assigned topics, two group projects (video, audio, or paper)  

**Prerequisites:** None, although those who have not taken introduction to international relations at Williams will be required to review one lecture ppt,
then pass a basic quiz based on it by the end of the first week.

**Enrollment Limit:** 25

**Enrollment Preferences:** Political Science majors

**PSCI 224  (F) Neo-liberalism: What Is It and Why Does It Matter?**

We live in the era of neo-liberalism. But what does this mean? This course will focus on neo-liberalism in comparative perspective, looking mainly at the US and Europe. It will consider how neo-liberalism is defined, the role of states in making and maintaining neo-liberalism, the centrality of markets to neo-liberal conceptions, and the kinds of politics that produced and are produced by neo-liberalism. Economically, the course will look at the institutional configuration of neo-liberalism, changes in economies, growing inequality, the financial crises, and prevalence of debt. Politically, the course will address changes in the role of government, what governments do and do not do, the growing influence of financial interests, the role of identities in mobilizing support for and legitimating governments, and the impact of these developments on the status of citizenship and democracy.

**Requirements/Evaluation:** three papers: one 3-page, one 5-page, and one 10-page paper

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 20

SEM Section: 01  TR 9:55 am - 11:10 am  Michael D. MacDonald

**PSCI 225  (S) International Security**

**Cross-listings:** LEAD 225

**Primary Cross-listing**

This is a course about war and peace. It deals with some of the most foundational questions that concern scholars of security studies: What accounts for great power conflict and cooperation? Is intense security competition between major states inevitable, or can they get along, provided their main interests are protected? Does the structure of the international system necessarily cause conflict? Do particularly aggressive states? Can wars occur "by accident"? When and why do states choose to use military force? What role does statecraft play in matters of war and peace? How do nuclear weapons affect great power politics? The course will consider these questions from an interdisciplinary perspective that combines political science concepts with an historical approach to the evidence. The bulk of the course deals with the major events in the history of great power politics, such as the causes and conduct of World War I and World War II; the origins and course of the Cold War; the nuclear revolution; and the post-Cold War period. The course concludes with an examination of a number of major contemporary policy debates in security studies.

**Requirements/Evaluation:** class participation, two 6- to 8-page papers, final

PSCI 226 (S) Nuclear Weapons and World Politics
Cross-listings: LEAD 226
Primary Cross-listing
This is a course about international politics in the nuclear age. The class will address a combination of conceptual, empirical, and policy questions, such as: Have nuclear weapons had a "revolutionary" effect on world politics, such that, fundamentally, international relations no longer works in more or less the same way that it did before the advent of nuclear weapons in 1945? Do nuclear weapons have an essentially stabilizing or destabilizing effect? How, if at all, do nuclear weapons affect how political disputes run their course? How significant of a threat are concerns like nuclear proliferation, nuclear terrorism, and nuclear accidents? How does a state's nuclear posture affect basic political outcomes? Is it possible to return to a world without nuclear weapons? The course will focus on these questions using an interdisciplinary perspective that leverages political science concepts, historical case studies, and contemporary policy debates to generate core insights. It will not only survey the history of the nuclear age--and of individual countries' nuclear development--but also grapple with important contemporary policy dilemmas in the nuclear realm.
Requirements/Evaluation: class participation; two 6-8 page papers; short in-class presentations; final exam
Prerequisites: PSCI 202 or a significant amount of other PSCI coursework
Enrollment Limit: 25
Enrollment Preferences: Preference to students majoring in political science, particularly in the international relations subfield, and/or doing a concentration in leadership studies

PSCI 227 (F) International Relations of the Middle East
Cross-listings: LEAD 227
Primary Cross-listing
This is a course about the Middle East in international politics. The structure of the course combines political science concepts with a detailed survey of the region's diplomatic history. The basic format of the course will be to combine brief lectures--either posted on the class website beforehand or given at the start of each class--with an in-depth discussion of each class session's topic. The goal of these discussions is to generate debates over the conceptual, historical, and policy significance of the subjects that we cover. Specifically, the first section of the course will cover the emergence of the Persian Gulf as an area of strategic importance in international politics; U.S. policy toward Saudi Arabia and Iran after World War II; the origins of the Arab-Israeli dispute; the June 1967 and October 1973 Middle East conflicts; Egyptian-Israeli peace; the Iranian Revolution and the Iran-Iraq War; the 1991 Persian Gulf War and its consequences; and the rise of Al Qaeda, Hezbollah, and Hamas. The second part of the course focuses on the Iraq War and its consequences; the rise of ISIS; the Arab Spring; Turkey's changing foreign relations; and the war in Syria. The last section of the course covers contemporary policy challenges confronting the Middle East.
Requirements/Evaluation: class participation, two 6- to 8-page papers, final
Prerequisites: none
Enrollment Limit: 25

PSCI 228 (S) International Organization
Tens of thousands of international organizations populate our world. IGOs, whose members are sovereign states, range from the Nordic Association for Reindeer Research to NATO and the UN; INGOs, whose members are private groups and individuals, include the International Seaweed Association as well as Doctors Without Borders and Human Rights Watch. We will investigate theories about where they come from, what they do, and to whom they matter, and explore controversies surrounding their agency, legitimacy, efficiency, and accountability. We cover the history, structures and functions of international organizations using case studies.

Requirements/Evaluation: two short papers, a presentation, one longer paper, one group project.
Prerequisites: none, but the introduction to international politics (202) is strongly recommended. If you have not taken that, you will need to go through a four-hour online tutorial I have set up by the end of our first week. Open to first-year students

PSCI 231 (F) Ancient Political Thought

Cross-listings: PHIL 231

Primary Cross-listing

The core activity of this seminar is the careful reading and sustained discussion of selected works by Plato and Aristotle, but we will also engage such other thinkers as Epictetus and Augustine, and, from a political and theoretical point of view, selections from the Hebrew Bible and New Testament. Among the questions that we will address: What is justice? How can it be known and pursued? How is political power generated and exercised? What are the social and ethical prerequisites—and consequences—of democracy? Must the freedom or fulfillment of some people require the subordination of others? Does freedom require leading (or avoiding) a political life? What distinguishes that kind of life from others? What does it mean to be "philosophical" or to think "theoretically" about politics? Although we will attempt to engage the readings on their own terms, we will also ask how the vast differences between the ancient world and our own undercut or enhance the texts' ability to illuminate the dilemmas of political life for us.

Class Format: discussion

Requirements/Evaluation: three 7- to 8-page papers

PSCI 232 (S) Modern Political Thought

Cross-listings: PHIL 232

Primary Cross-listing

This course is a chronological survey of major works of political theory from the 16th to the 20th century. In discussions and writing, we will explore the diverse visions of modernity and of politics offered by such thinkers as Machiavelli, Hobbes, Locke, Rousseau, Marx, Mill, and Freud. They help us ask: What is freedom? Who is equal? Who should rule? With what limits and justifications? What form of government best serves the people? Who are the people, anyway? And on what grounds can we justify confidence in our provisional answers to such questions? Class will be primarily driven by discussion, often preceded by brief lectures. Attention to the writing process and developing an authorial voice will be a recurrent focus of our work inside and outside the classroom.

Requirements/Evaluation: three papers of 4-6 pages; class participation; brief informal writing tasks inside and outside of class meetings

Prerequisites: none; open to all

Enrollment Limit: 25

Enrollment Preferences: Political Theory concentrators, then Political Science majors

Expected Class Size: 25

Grading: yes pass/fail option, no fifth course option

Attributes: PSCI Political Theory Courses

Not offered current academic year
PSCI 234  (S)  Freedom

We all want to be free--at least most of us say we do. The desire for political freedom is as old as the ancient world and as new as today's movements and liberation struggles. But what do we mean when we claim to want freedom? What institutions and social conditions make political freedom possible? For instance, do the claims of individual freedom conflict with those of community? With equality? With authority? Does freedom make us happy? Is it what we really want? And if it is, will we find it by engaging or turning away from politics? This course confronts these questions through readings drawn from a variety of classic and contemporary sources, including works of fiction, autobiography, journalism, law, philosophy and political theory, and social science. Our discussions will address such topics as activism and stoicism; equality and economic freedom; sexual freedom and gender politics; freedom of speech and religion; citizenship, migration, and cosmopolitanism; racism and colonialism; mass incarceration; and the uses and limits of state power. This course is part of a joint program between Williams' Center for Learning in Action and the Berkshire County Jail in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates and will be held at the jail. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Transportation will be provided by the college. *Please note the atypical class hours, T. 4:45-8:30 pm*

Requirements/Evaluation: Class attendance and active participation, short essays, and a final paper.

Prerequisites: Not open to first-year students.

Enrollment Limit: 9

Enrollment Preferences: Final selection will be made on the basis of statements of interest solicited after pre-registration, and interviews with the instructor.

PSCI 236  (S)  Feminist Legal Theory  (DPE)

Cross-listings: WGSS 236

Primary Cross-listing

What can a critical analysis of gender and sexuality bring to the study of law, constitutions, legal interpretation, and the task of judging? Well-known contributions by feminist theorists include the conceptualization and critique of anti-discrimination frameworks, the legal analysis of intersecting systems of social subordination (particularly gender, race, class, sexuality, disability), and the theorization of "new" categories of rights (e.g. sexuate rights). Accompanying these interventions in the legal field is a deep and sustained inquiry into the subject of law: Who can appear before the law as the proper bearer of civil and human rights? What kinds of violations and deprivations can be recognized as harms in need of redress? Who gets to make these judgments, and according to what rules? While our examples will be drawn mainly from family law, the regulation of sex/reproduction, and workplace discrimination, the main task of this course will be to deepen our understanding of how the subject of law is constituted. Illustrative cases to aid our inquiry will be drawn primarily from the USA and Canada, with additional examples from India, South Africa, and possibly European law. Theorists we read will represent many kinds of feminist work that intersect with the legal field, including academic studies in political theory, philosophy, and cultural theory, along with contributions from community organizers engaged in anti-violence work and social justice advocacy.

Requirements/Evaluation: One oral presentation; three 6-8 page papers; regular class participation.

Prerequisites: None.

Enrollment Limit: 25

Enrollment Preferences: Preference will be given to PSCI and WGSS majors and JLST concentrators.

Expected Class Size: 25

Grading: yes pass/fail option, no fifth course option

Not offered current academic year

PSCI 238  (F)  Economic Liberalism and Its Critics

Cross-listings: POEC 250 / ECON 299

Secondary Cross-listing

Economic liberalism holds that society is better off if people enjoy economic freedom. Its critics point to what they believe this position ignores or what it wrongly assumes, and hence, how it would make bad policy. This course explores the relationship between politics and economics by surveying influential works of political economy. Its first part examines major thinkers in relation to the historical development of capitalism in Western Europe and the United States: the classical liberalism of Adam Smith, Karl Marx’s revolutionary socialism, and the reformist ideas of John Maynard Keynes. The second part considers mid-20th-century writers who revise and critique economic liberalism from a variety of perspectives, including Joseph Schumpeter, Friedrich Hayek, Milton Friedman, Ronald Coase, Arthur Okun, and Albert O. Hirschman. The third part surveys significant topics relevant to the themes of the course, with applications to current public policy issues, such as: power relations and autonomy in the workplace; asymmetric information and social insurance; economic inequality and distributive justice; equality of opportunity; the economics of health care; positional goods and the moral foundations of capitalism; social media and addiction; economic nationalism; behavioral economics; climate change and intergenerational equity; finance and financial crises; and rent-seeking. The combination of the historical focus of the early part of the course with discussion of modern policy issues and debates in the latter part of the course permits you to appreciate the ongoing dialogue between classical and contemporary views of political economy.

Class Format: This course uses a flipped classroom approach. Before each class meeting, students watch a lecture video, and (at least six times) write an essay relating to the assigned reading and video. In-person class time is devoted primarily to Socratic discussion.

Requirements/Evaluation: six short essays and a final exam

Prerequisites: ECON 110 and 120 or equivalent; PSCI 110 (formerly PSCI 201; may be taken concurrently with POEC 250); open to non-majors

PSCI 240  (S)  Political Theory and Comparative Politics

We live in a society that takes liberalism and capitalism for granted, as the norm that naturally centers collective life. This course draws on foundational thinkers in political theory and comparative politics to explore that premise. To that end, the course will discuss the origins, logic, and meaning of liberalism and capitalism and the relationships between them. Asking whether liberal thought, to borrow the famous joke about economists, assumes the can openers of liberalism and capitalism, taking as given that which is constructed historically, the course will look at leading theories about the role states play in constituting and maintaining capitalist economies, the definition and nature of power in liberal societies, and, more recently, the connection between identities, politics, classes, and states. The readings include Alexis de Tocqueville, Karl Marx, Max Weber, Karl Polanyi, Barrington Moore, Robert Putnam, Michel Foucault, and Edward Said.

Class Format: discussion

Requirements/Evaluation: three papers

Cross-listings: SOC 241

Primary Cross-listing

Although fewer than 1% of Americans have a degree from the country’s top 30 colleges and universities, 39% of Fortune 500 CEOs, 41% of federal judges, 44% of the writing and editorial staff at the New York Times, 64% of Davos attendees, and 100% of Supreme Court justices do. Is this a positive sign that the United States is governed by its most talented and capable members who have risen through hard work and equal opportunity? Or a negative one pointing to the power of a corrupt and self-selecting elite? This course explores the theme of meritocracy—rule by the intelligent—in comparative perspective. We will look at both old and new arguments regarding the proper role and definition of merit in political society as well as take the measure of meritocracy in present-day Singapore, France, and the United States. The course concludes with a focus on the current debate over American meritocracy and inequality.

Requirements/Evaluation: one short paper, one long paper, take-home final exam, discussion questions, class participation
Prerequisites: none

Enrollment Limit: 19
Enrollment Preferences: Political Science and Sociology majors, first-years and sophomores intending a Political Science or Sociology major
Expected Class Size: 19
Grading: no pass/fail option, no fifth course option
Distributions: (D2)

PSCI 245 (S) South African Politics

The course deals with South African politics since the end of apartheid. The readings will address the politics, policies, and composition of the African National Congress (ANC), the growth of black economic elites and the black middle class, the persistence of poverty and extreme inequality, expanding corruption, and why the ANC continues to prevail politically and electorally in spite of on-going poverty and worsening inequality, governmental failures, and corruption. It will pay particular attention to the ANC and corruption, and it will address why, thus far, the ANC has won national elections handily amidst growing dissatisfaction with overt and pervasive official corruption and misgovernment and the role racial solidarities and memories play in sustaining the ANC in office.

Requirements/Evaluation: Two 10-12 page papers and class participation.
Prerequisites: None.

Enrollment Limit: 25
Enrollment Preferences: Political Science, Global Studies, and Africana Studies majors and prospective majors.

PSCI 246  (F)  Introduction to Capitalism
Must we choose between “socialism or barbarism?” A century after Rosa Luxemburg’s challenge, it is clear that socialism did not win. Does this mean that we have descended to barbarism? Tracing the path of capitalist development in the rich democracies suggests a range of responses. Some states have developed robust institutions that provide for citizens’ basic needs and check the power of business; others leave the poor threatened by starvation and workers exposed to exploitation. How and why has capitalism evolved in different forms in different countries? This course introduces students to capitalism by examining the struggles between social groups that lead to variation in distributional outcomes and economic performance. Students will develop a conceptual toolkit to study the politics of capitalism based in the economic history of the rich democracies (Europe, United States) in the twentieth century. The second half of the course challenges students to apply this toolkit to the twenty-first century, focusing on attempts to transition from industrial manufacturing to services. We engage pressing questions around technological innovation, populism, financialization, and globalization.

Requirements/Evaluation: Class participation, two presentations, three essays.
Prerequisites: None.
Enrollment Limit: 25
Enrollment Preferences: Potential and actual PSCI and POEC majors.

PSCI 247  (S)  Political Power in Contemporary China
Cross-listings: ASIA 249
Primary Cross-listing
The People’s Republic of China has experienced rapid and extensive economic, social and cultural transformation over the past forty years. Its political system, however, is little changed. The Communist Party still monopolizes power and works hard to suppress organized opposition. Political dissent has taken various forms since 1979 but the regime has found ways to repress and divert it. Yet, in spite of the state’s efforts, opposition and dissent continue to bubble to the surface. The course will review the political development of the PRC since 1949 and, then, focus on the dynamics of political contention and regime persistence since the Tiananmen Crisis of 1989.

Requirements/Evaluation: 2-3 short papers and a final exam
Prerequisites: none

PSCI 248  (F)  The USA in Comparative Perspective  (WS)
Politics in the USA is often considered unique and incomparable, and US political science separates the study of American politics from comparative politics. This course overcomes this divide, considering politics and society in the United States comparatively, from a variety of viewpoints and by authors foreign and American, historical and contemporary. Important topics include: the colonial experience and independence; race relations and the African diaspora; national identity and authoritarian populist nationalism; war and state-building; American exceptionalism, religion, and foreign policy; criminal justice; and the origins and shape of the welfare state. (As the list suggests, the most common comparisons are with Latin America and
Western Europe, but several of our authors look beyond these regions.)

**Class Format:** a lecture in the first week; then ten weeks of tutorial; then a discussion class in the final week

**Requirements/Evaluation:** five 5- to 6-page papers, five 1- to 2-page responses, and one 1-page essay for the final class

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** sophomores and students who have been denied enrollment in the course previously

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**Writing Skills Notes:** Assignments are graded and returned weekly. After each student has written one long paper and one response, professor meets with them individually to discuss the composition and presentation of each genre. For the final class, students bring a one-page response written in “E-prime,” English without the verb “to be.”

**PSCI 250 (F) Political Psychology**

This course will examine the role of psychology in politics. The goal is to develop a rich understanding of the foundations of public opinion and political behavior. We will examine the role of social identities, partisan affiliation, concrete interests, values, issues, and ideology in shaping opinion and behavior, as well as the role of external forces such as campaigns, the media, and political elites. Along the way, we will consider a number of longstanding questions in the study of politics, such as: is the public rational? What are the root causes of racism? How does racism influence political choices? Why do people identify with political parties? Why do people vote or engage in other types of political action? How does the mass media and campaigns influence public opinion?

**Requirements/Evaluation:** class participation, 1-2 short papers (5-7 pages), 1 medium paper (8-12 pages), an oral presentation, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** If the course over-enrolls, please give first enrollment preference to political science majors, followed by political economy majors.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**Attributes:** PSCI American Politics Courses

**PSCI 251 (S) Thinking and Acting Politically in the Long Civil Rights Movement**

**Cross-listings:** AFR 258

**Primary Cross-listing**

In this course, students will explore the various theories of political action that animated the Long Civil Rights Movement. Students will examine how these theories helped frame the political ideals, ideologies, and behaviors of multiple sects of the Black Freedom struggle. By analyzing the political thought of thinkers like Ella Baker, Amzie Moore, Pauli Murray, Florynce Kennedy, Fannie Lou Hamer, Robert F. Williams, and Martin Luther King, Jr.—among others, students will appreciate how their experiences influenced their approach to politics in diverse ways. Subsequently, students will evaluate the theories’ arguments and political actions while determining which frameworks should motivate contemporary political organizing. By challenging the charismatic leader model of teaching and learning Civil Rights politics, students will understand the Civil Rights Movement as a grassroots movement buoyed by the political activities and energies of ordinary Black citizens. Moreover, they will develop a broader understanding of the mechanics of grassroots organizing and mobilize their studies appropriately to argue persuasively how ordinary people should contest injustice by considering tactics, mobilization strategies, political visions and ideologies, and strategic dilemmas. Consequently, they will not view Civil Rights history and theory as an episode of the past but as a force that continues to shape our political imaginations.

**Requirements/Evaluation:** several short papers, class participation involving weekly writing, group projects, oral presentations

PSCI 252 (F) Campaigns and Elections  
The 2022 midterm elections are happening in November. Though midterm elections historically generate less involvement than presidential elections, much is at stake in the upcoming midterms, as control of Congress and statehouses will likely determine what, if anything, President Biden achieves in the remainder of his term. This course will examine how we conduct the most fundamental of democratic processes in the United States: the people's choice of their representatives. We will examine factors that shape election outcomes such as the state of the economy, issues, partisanship, ideology, social identities with a special focus on race, interest groups, media, and the candidates themselves. A central question we will consider throughout the course if how "democratic" the conduct of campaigns actually is. For instance, does the citizenry have the motivation and capacity to hold public officials accountable? How do resource gaps tied to inequality in society (such as race and class) influence who votes and for whom? Do the mass media and political elites inform or manipulate the public? How closely do candidates resemble the constituencies they represent, and does it matter? We will apply our learning on many of these topics to the ongoing 2022 midterm elections.  
Requirements/Evaluation: class participation, 1-2 short papers (5-7 pages), 1 medium paper (8-12 pages), an oral presentation, and a final exam

PSCI 253 (S) The Tragedy of Venezuela  
The recent history of Venezuela offers a window into many of the most important political and economic issues faced by people in developing countries. Why does an abundance of oil seem to solve some problems while often leading to perverse economic and political outcomes? How can democracy be made to work better for ordinary people? What does it mean for a government to be truly sovereign? How does corruption grow and what can we do about it? When should we leave important decisions to technocratic experts? What does it mean today to be progressive? The course first briefly reviews Venezuelan post-Independence history, with an emphasis on the post-1958 democratic settlement. It then explores more deeply the reasons for the breakdown of this settlement, the rise of Hugo Chavez, and the decay of the "21st Century Socialist" regime under Chavez and Maduro. Materials include biographies, documentary films, short videos, economic data, and news reports.  
Class Format: discussion  
Requirements/Evaluation: a map quiz and four short papers  
Prerequisites: a course in comparative politics and a course in economics, or permission of the instructor  
Enrollment Limit: 25  
Enrollment Preferences: sophomores and PSCI majors
PSCI 255 (F) Comparative Politics of South Asia
South Asia is home to around 2 billion people (over 24% of the world), making it the most populous and densely populated region in the world. The region is also one of the poorest in the world and lags in human development. Ethnic, linguistic, and religious diversity is offset by common cultural traditions and practices that serve to unite the people of the Indian Subcontinent. The course introduces students to the comparative politics of South Asia, highlighting the complexities and potential of the region. Every week we explore a different component of South Asian politics. The course covers the creation of the states of modern South Asia, partition and independence, democratization, electoral politics and political parties, economic and social development, ethnic identity and conflict, and the contemporary regional challenges of democratic backsliding and climate change.

Requirements/Evaluation: three 5-7 page papers or one research paper; presentation; class participation

PSCI 256 (S) Electoral Politics in the Developing World
Electoral politics in the developing world often differs from democratic politics in Western Europe and the U.S. Electoral volatility, decrepit state institutions, weak parties, clientelism, and electoral violence in developing democracies complicate foundational theories on representation and accountability. The course surveys the electoral politics of low and middle-income democracies in the developing world, investigating its similarities and differences with the historical and contemporary politics of developed democracies. It examines work on electoral systems, formal and informal institutions, bureaucratic politics, political parties, party systems, clientelism, ethnic politics, and political violence. We will draw on case studies from Latin America, Africa, South Asia, Southeast Asia, and the Middle East to analyze the effectiveness of these theories. Assignments focus on crafting solutions to contemporary political challenges in the developing world.

PSCI 259 (S) George Orwell: Capitalism, Socialism and Totalitarianism
It is hard to overstate the enduring influence of George Orwell on political discourse in the 20th century and beyond. Before his death in 1950 at the young age of forty six, Orwell produced a stunningly large and diverse body of work in the fields of journalism, literature, and political commentary. Much of this work was inspired by his own experiences as a police officer in Burma, several years working and traveling with destitute workers in England and France, as well as his experiences fighting against fascism during the Spanish Civil War in the late 1930s. While a fairly obscure and struggling author for much of his life, Orwell achieved worldwide fame after the Second World War with the publication of Animal Farm (1945) and
1984 (1949). This tutorial has two main objectives. First, it will introduce students to Orwell's most important books and essays in the context of a turbulent political era marked by the Great Depression, the rise of totalitarianism, world war, and the emerging Cold War. Second, the tutorial will examine the past and ongoing uses and abuses of Orwell's legacy by scholars and analysts on both the political left and the right. As Louis Menand argues, "almost everything in the popular understanding of Orwell is a distortion of what he really thought and the kind of writer he was." The course will conclude by examining what Orwell's thought contributes to a consideration of current issues ranging from the emergence of cancel culture to the possibilities of democratic socialism in the 21st century.

Requirements/Evaluation: 4 lead essays of 5-6 pages and 4 response essays of 2 pages.

Prerequisites: At least one introductory political science course.

Enrollment Limit: 10

Enrollment Preferences: Declared and prospective political science majors.

PSCI 261 (F) The Arab-Israeli Conflict (WS)
This tutorial will cover the Arab-Israeli dispute--from both historical and political science perspectives--from the rise of the Zionist movement in the late nineteenth century to the present day. It will examine the various explanations that scholars have offered for why the conflict has persisted for so long, how it has evolved over time, the role that outside powers have played in shaping it, and how its perpetuation (or settlement) is likely to impact Middle East politics in the future. More specifically, the class will examine the origins of the Zionist movement; the role that the First World War played in shaping the dispute; the period of the British mandate; the rise of Palestinian nationalism; the Second World War and the creation of the state of Israel; the 1948, 1956, 1967, and 1973 Arab-Israeli wars; Israel's 1982 invasion of Lebanon and its consequences; the promise and ultimate collapse of the Oslo peace process during the 1990s and early 2000s; the rise of groups such as Hamas, Hezbollah, and Palestinian Islamic Jihad; the rightward shift in Israeli politics since 2000; the intensification of Israeli-Iranian antagonism and its implications; the shift in Israel's relations with the Sunni Arab world that has occurred in recent years; and the future of the conflict.

Requirements/Evaluation: Biweekly response papers; Biweekly critiques of partner's response papers; Class participation; Final analytical essay

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: Political Science Majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: This class will require students either to write a paper or critique their partner's paper on a weekly basis. Students will also be required to redraft their papers--based on feedback from both their partner and the instructor--with the goal of improving their ability to make compelling arguments in writing.

PSCI 268 (S) The Israeli-Palestinian Conflict
This is an introductory course on the conflict between Israelis and Palestinians. Approaching the issue historically, the course begins by addressing the development of Zionism as a movement, the arrival of Zionists in Mandate Palestine, the pursuit by Zionists of statehood and the in-gathering of Jews, and the responses of neighboring Arab states and local Palestinians to these processes. Drawing on the writings of both Zionists and Palestinians, the course will examine debates among both, how Palestinians responded to the growing presence of Zionists, and how Zionists
conceived of Palestinians and Palestinian nationalism (both secular and religious) before, during, and after the foundation of the state of Israel. After dealing with the pre-history of the state and the nakba, the course will address recent Israeli settlement policies on the West Bank, the controversies surrounding the Oslo Agreement, and the contemporary situations in the West Bank and Gaza. Finally, the course will address contemporary controversies about the prospects and feasibility of the "one-state" and "two-state" "solutions" to the Palestinian issue, and the implications of resolving, or not resolving, the Palestinian issue to the mutual satisfaction of Israelis and Palestinians.

Requirements/Evaluation: two papers totaling 20 pages and final examination

PSCI 280 (S) Silicon Valley: Digital Transformation and Democracy (WS)

Nearly every country in the world seeks to drive economic growth by promoting digital technologies. The universal model is Silicon Valley. In this tutorial, students will examine the origins of the Silicon Valley model and other countries' attempts to emulate it. Departing from "just so" stories of technological determinism, we take up the lens of comparative political economy to investigate the politics that allowed US tech firms to shape economic policy to meet their interests. It is no accident that tech became a symbol for economic growth in the 1970s, precisely when it also began to build powerful alliances in Washington. After investigating the origins of the Silicon Valley model, we trace attempts to adopt it in Europe and Asia, which highlight the model's political contingencies and some of the more salient conflicts over the tech sector. We focus on the ways in which the Silicon Valley model can threaten social welfare through economic inequality and precarious employment, and engage a variety of perspectives, including workplace ethnography, to examine these threats, as well as potential regulatory responses. The course concludes by considering what policies could be appropriate for supporting, while also regulating, the tech sector in the twenty-first century.

Requirements/Evaluation: Five 5-page papers; five 2-page responses; participation

Prerequisites: One introductory course in political science and/or permission of the instructor.

Enrollment Limit: 10

Enrollment Preferences: Preference will be given to sophomores and juniors majoring in PSCI and POEC.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will write essays each week. In addition, students will read each others' work and engage in structured critique.

PSCI 290 (F) How Change Happens in American Politics (WS)

Cross-listings: LEAD 290

Primary Cross-listing

An unprecedented assault on the U.S. Capitol, the rise of white nationalism, a pandemic, economic volatility, racial reckoning, the overturning of Roe v. Wade, and rapidly evolving environmental crises -- American politics in the last four years has been tumultuous. What might we expect to come next? From the Founding to the present, the American political order has undergone cataclysmic and thoroughgoing transformations, yet it has also proven to be remarkably stable and enduring. How can this be? Where do we find continuities and where upheavals? Who or what has been responsible for the continuities, and who or what for the changes? What sorts of transformations have been possible, and why -- what marriage of individual action and contextual factors have created political change in the past and in the present? Finally, what are the costs of change (and of
continuity) -- and who pays them? In this tutorial, we assess American political change, or lack of, to gain a sense of the role that political leaders have played in driving change. We examine when and how individuals and leadership have mattered vis-à-vis broader historical and contextual factors, including war, economic developments, demographic change, and constitutional and institutional practices. We consider general models of change, as well as specific case studies, including civil rights and social justice for racial and ethnic groups, gender equality and family relations, and reactionary or traditionalist politics. Finally, we will look at arguments that America has been "exceptional" -- or, unlike other countries -- as well as critiques of these arguments to help us gain an understanding of future prospects for political transformation.

Requirements/Evaluation: participation in weekly meetings as well as 4 lead essays (5-6 pages) and 4 critiques (2 pages)

Prerequisites: one prior course in political science

Enrollment Limit: 10

PSCI 291 (S) American Political Events (WS)

Scandals. Wars and assassinations. Contested elections, Supreme Court decisions, and constitutional amendments. As large as they loom in our daily experience and our historical memory, these sorts of events--concrete, discrete things that happen in and around the political world--are often underestimated as catalysts of political change. Indeed, in the study of American political development, we often look to complex processes and underlying causes as explanations for how and why ideas, institutions, and policies both emerge and evolve. Yet for all our focus on long-term and subtle causal mechanisms, events often serve as political turning points in ways that vary over time, last for extended periods of time, and are not always entirely predictable at the time. Beginning from the presumption that change often has proximate as well as latent causes, this tutorial focuses on events as critical junctures in American politics. Our concern with these events is not with why they happened as or when they did but, rather, with how they altered the American political order once they did--with how they caused shifts in political alignments, created demands for political action, or resulted in a reordering of political values. Over the course of the semester, we will look at ten different types of events, ranging from those that seem bigger than government and politics (economic collapse) to those that are the daily grist of government and politics (speeches), in each instance juxtaposing two different occurrences of a particular category of event. In so doing, we will seek to use controversial and consequential moments in American politics as a window into deeper questions about political change and the narratives we tell about it.

Requirements/Evaluation: five 5-to 7-page essays, five 2- to 3-page critiques, and a recorded oral final reflection

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: first-years and sophomores considering a major in Political Science

PSCI 305 (F) Environmental Political Thought (WS)

Cross-listings: STS 305

Primary Cross-listing

In the face of planetary crisis, it is as difficult as it is crucial to find the time and calm "to think what we are doing" (Hannah Arendt's famous line). This course aims to hold space for that thinking; to collaboratively find the presence of mind to take the measure of the doings that caused, and that may redress, the awful reality of earth's degradation. To do so, we will read, discuss, and write about some of the most significant book-length works of environmental political thought published in the last five years. These books conceptualize and intervene into the politics of phenomena such as climate change, species depletion, toxic pollution and (a special interest of the instructor) waste by applying—and sometimes reinventing—approaches from political theory, political economy, science & technology studies, philosophy, and critical theory. They consider the enmeshment of environmental problems with racism, colonialism, economic inequality, and speciesism, among other modalities of power, and weigh the promise of political action and organization to reconstitute relationships among earth's human and more-than-human elements. By interpreting, evaluating, applying and extending the arguments of these books in discussion and writing, students will be challenged to scrutinize their preconceptions and develop, support and articulate original arguments about politics and the environment.

Requirements/Evaluation: Four mini-essays of 2-3 pages each; one final paper of 7-10 pages that incorporates substantially revised material from at least one mini-essay; class participation

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Political theory concentrators, Political Science majors

PSCI 307 (F) American National Identity and State Power (WS)

Debates over American national identity, or what it means to be an American, have intensified in recent years, with a resurgent white Christian nationalism challenging progressive aspirations for a multiracial, environmentally sustainable, liberal democracy. At the same time, Republicans and Democrats fight over the scope and limits of government power on policies ranging from taxation and spending, to abortion, immigration, healthcare, policing, gun ownership, and voting rights. Are these conflicts related, and if so, how? Does how Americans define themselves as a nation inform the shape of the American state and the types of policies it creates? Or is it the reverse? Does the state and its policies make the nation, as many scholars claim? This tutorial investigates the relationship between state and nation over time in the United States. We will explore conflicts over how "the people" are defined in different moments, and we will examine how these conflicts connect to the exercise of state power in areas including territorial expansion, census taking, public health, immigration, social welfare, and policing.

Requirements/Evaluation: Five 5- to 7-page essays, five 2- to 3-page critiques, and a revised and extended 10- to 12-page final essay

Prerequisites: At least one political science class or permission of instructor.

Enrollment Limit: 10

Enrollment Preferences: Political science majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)
Writing Skills Notes: Extensive written feedback will be provided on tutorial essays and critiques. Additionally, the tutorial sessions will include attention to the quality of the written argument in the paper that is the focus of each session. At the end of the semester, students will be required to revise one of the tutorial papers incorporating the feedback, oral and written, provided by their tutorial partner and the instructor.

PSCI 310  (F) New York City Politics: The Urban Crisis to the Pandemic  (WS)
Cross-listings: LEAD 332

Primary Cross-listing

This course examines New York City’s political history from the 1970s to the present—a period during which the city underwent staggering economic and social changes. In the mid-1970s, New York was a poster child of urban crisis, plagued by arson and housing abandonment, crime, the loss of residents and jobs, and failing public services. By the early 21st century, the city had largely met these challenges and was once again one of the most diverse and economically vital places on earth—but also one marked by profound inequality. This course will examine how New Yorkers have contested core issues of capitalism and democracy—how those contests have played out as the city itself has changed and how they have shaped contemporary New York. Broad themes will include the city’s role as a showcase for neoliberalism, neoconservatism, technocratic centrism, and progressivism; the politics of race, immigration, and belonging; the relation of city, state, and national governments; and the sources of contemporary forms of inequality. Specific topics will include policing, school reform, and gentrification. As the primary assignment in the course, students will design, research, and write a 20-page paper on a topic of their choice.

Requirements/Evaluation: active class participation, 2-page preliminary proposal, 10-page research proposal, 2-page peer feedback, 18- to 20-page research paper

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: Political Science majors and Leadership Studies concentrators

PSCI 311  (F) Congress
Cross-listings: LEAD 311

Primary Cross-listing

Even before the pandemic, scholars, pundits, and the public thought Congress was in a state of crisis. Riven by polarized partisanship and gridlock, the most powerful assembly in the world seemed incapable of representing citizens and addressing problems. This seminar focuses on how Congress organizes itself to act as a collective body. In an organization comprised of equals, how and why do some senators and representatives acquire more power and authority than others? How does Congress act as an institution and not just a platform for 535 individuals? Why does Congress not act, especially when the U.S. confronts so many pressing problems, and how do legislators justify inaction? In what ways does this institution promote or hinder the legitimacy, responsiveness, and responsibility expected of a democratic governing institution?

Requirements/Evaluation: class participation, two short papers, and a final research paper

Prerequisites: PSCI 201 or permission of instructor

Enrollment Limit: 14

**PSCI 315 (S) Parties in American Politics**

**Cross-listings:** LEAD 315

**Primary Cross-listing**

Is the American party system what's wrong with American politics? It has been said that parties are essential to democracy, and in the U.S., political parties have played a central role in extending democracy, protecting rights, and organizing power. But their worth is a continuing subject of debate. Although parties have been celebrated for linking citizens to their government and providing the unity needed to govern in a political system of separated powers, they have also been disparaged for inflaming divisions among people and grid-locking the government. Other critics take aim at the two-party system with the claim that the major parties fail to offer meaningful choices to citizens. This course will investigate this debate over parties by examining their nature and role in American political life, both past and present. Throughout the course, we will explore such questions as: What constitutes a party? For whom do they function? How and why have they changed over time? Why a two-party system, and what role do third parties play? Is partisanship good or bad for democracy? For governance? What is the relationship between parties and presidents? How does partisanship become tribalism or polarization, and can this be prevented? We will explore answers to these questions through seminar discussion, analytic essays, and independent research culminating in the writing of a longer (15 to 20 page) research paper.

**Requirements/Evaluation:** In addition to active seminar participation, students will be responsible for writing two shorter (5-7 page) papers and a longer research paper (15-20 pages).

**Prerequisites:** prior political science course at the 200 or 300 level

**Enrollment Limit:** 14

**Enrollment Preferences:** Political Science majors

---

**PSCI 316 (F) Policy Making Process**

Politics as usual. It's a phenomenon we all love to hate. But what does it mean? When government policy is decided by politics, does that mean the policy is necessarily bad? Can we get rid of politics in policy making or improve on it somehow? What would "politics as unusual" look like anyway? This class examines the policy making process with particular emphasis on the United States: How do issues get defined as problems worthy of government attention? What kinds of alternatives are considered as solutions to these problems? Why do we end up with some policies but not others? Do certain kinds of processes yield better policies than others? How should we decide what constitutes a good policy?

**Requirements/Evaluation:** several short papers, research paper, class participation

**Prerequisites:** one course in PSCI or permission of instructor

**Enrollment Limit:** 14
Enrollment Preferences: Political Science and Political Economy majors, and students with an interest in public policy

Expected Class Size: 14

Grading: no pass/fail option, no fifth course option

Cross-listings: ENVI 351 / CAOS 351

Secondary Cross-listing

Coastal communities are home to nearly 40% of the U.S. population, but occupy only a small percentage of our country's total land area. Intense population density, critical transportation infrastructure, significant economic productivity, and rich cultural and historic value mark our coastal regions as nationally significant. But, coastal and ocean-based climate-induced impacts such as sea level rise, ocean warming and acidification pose extraordinary challenges to our coastal communities, and are not borne equally by all communities. This seminar considers our relationship with our ocean and coastal environments and the foundational role our oceans and coasts play in our Nation's environmental and economic sustainability as well as ocean and coastal climate resiliency. Through the lens of coastal and ocean governance and policy-making, we critically examine conflict of use issues relative to climate change, climate justice, coastal zone management, fisheries, ocean and coastal pollution and marine biodiversity.

Class Format: This class is taught only at Williams-Mystic in Mystic, Connecticut and includes coastal and near-shore interdisciplinary field seminars, and 10 days offshore.

Requirements/Evaluation: Weekly Readings; Class Participation; Small and large group strategy exercises (written and oral); Written Research Project: issues paper and draft research paper; Final Research Project: multiple formats available

Prerequisites: none

Enrollment Limit: 23

Enrollment Preferences: must be enrolled at Williams-Mystic in Mystic, Connecticut

Expected Class Size: 22

Grading: no pass/fail option, no fifth course option

Unit Notes: must be enrolled at Williams-Mystic in Mystic, Connecticut

Distributions: (D2)  (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
PSCI 319(D2) ENVI 351(D2) CAOS 351(D2)

Writing Skills Notes: Each student will write one 3-5 page research issues paper and one 8-10 page draft research paper as well as a final project with written components equaling 5-8 pages. Each submission receives written feedback from the professor, including research guidance, input on grammar, structure, language, analysis. Students also receive verbal feedback in individual conferences to discuss research paper organization, analysis, structure and grammar as well as final project input.

Difference, Power, and Equity Notes: Coastal and ocean policy issues relating to climate change, coastal zone management, fisheries, ocean pollution and marine biodiversity impact environmental and climate justice. Students examine coastal governance while considering the disproportionate burdens on underrepresented populations in U.S. coastal communities caused by climate change and coastal policies. Students analyze multi-disciplinary evidence and work to strengthen their integrative, analytical, writing, and advocacy skills.

PSCI 320 (F) Heroes and Villains: Iconic Leadership and the Politics of Memory (WS)

Cross-listings: LEAD 320

Secondary Cross-listing

Americans have been arguing intensely in recent years about how we should remember the leaders from our nation’s past. Does Thomas Jefferson’s statue belong on a university campus? Should college dorms be named for John C. Calhoun and Woodrow Wilson? Should Harriet Tubman’s portrait replace Andrew Jackson’s on the $20 bill? In this course we will look at how people in the United States and elsewhere have used their leaders’ images to hash out larger political issues of national identity, purpose, and membership. Why has historical commemoration gotten so contentious—or has it always been contentious? What’s really at stake when we depict our leaders? How (if at all) should we reconcile contemporary morality with historical context in assessing the leaders from our past? To address these questions, we will study portrayals of some of the most famous leaders in American history—including Alexander Hamilton, Abraham Lincoln, and Martin Luther King, Jr. Our sources will include political speeches, literature, film, and journalism as well as monuments and museum exhibits; though our examples will be drawn mostly from the United States, our conceptual framework will be transnational. As a final assignment, students will write an 18-20 page research paper on a topic of their choice related to the core themes of the course.

Requirements/Evaluation: Seminar participation, research proposal, peer workshop, research paper, in-class research presentation

Prerequisites: previous course in Leadership Studies, or Political Science, or permission of instructor

Enrollment Limit: 14

Enrollment Preferences: Leadership Studies concentrators, Political Science majors

PSCI 321 (F) Immigration Politics in the U.S.

The U.S. Census Bureau estimates that non-Hispanic whites will no longer be the majority racial group in the U.S. by 2044. This demographic change is fueled by past and current immigration, and the politics surrounding American immigration policy have intensified as a result. Donald Trump's rise to the presidency was fueled in part by his pledge to build a wall between the U.S. and Mexico. Meanwhile, efforts to reform the nation's immigration laws have been stuck in gridlock for years. How did we get to this point and what does the future hold? Why is immigration policy so contentious? What is at stake, and what do different groups believe to be at stake? To answer these questions, we will examine immigration from a multidisciplinary lens, but with special attention to immigration politics and policy. We will examine the history of immigration to the U.S. and the policies that have shaped it; recent developments in electoral and protest politics; the policy initiatives of recent presidential administrations, Congress, and state and local governments; and the incorporation of immigrants into U.S. society and politics, past and present.

Requirements/Evaluation: one 2- to 3-page paper; one 5- to 7-page paper; one oral presentation; one 15- to 20-page research paper; and class participation

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: Political Science majors

PSCI 323 (S) Law and Politics of the Sea

Cross-listings: CAOS 323

Primary Cross-listing

Can international law save the seas? That is one current bet. The sea law regime centers on the United Nations Convention on the Law of the Sea (UNCLOS), which gathers into one place what most countries consider to be scattered ancient laws about piracy, transit through other countries’ territorial waters, fishing, jurisdiction over ships, and so forth. It also creates ocean zones, with rules for each, and a system for taxing firms that it licensed to exploit minerals on the high seas, and sharing the proceeds with developing countries. It seeks to mitigate conflicts among countries and companies as they energetically compete to exploit the seas. In 2023, UNCLOS launched a follow-on treaty, the Agreement on the Conservation and Sustainable Use of Marine Biological Diversity of Areas Beyond National Jurisdiction (BBNJ), which adds areas in the high seas that all nations commit to protect. This course explores the politics and practices that arise from UNCLOS and BBNJ. We engage with the agreements’ history, content, and exclusions, examine the incentives they provide states and criminals, and assess the way that geopolitical and climate collapse create new opportunities and constraints for states, firms, international organizations, and activists. Topics include piracy, naval officers’ guidelines, conflict in the South China Sea, bonded labor, refugee quarantine on islands, marine genetic resources, Arctic transit, and ocean pollution. This is a way to understand major deals regarding the oceans; it is also a way to understand what it means to consider an international legal agreement a solution to something.

Requirements/Evaluation: Three 6-page papers, longer final paper, class participation including weekly writing

Prerequisites: Introduction to International Relations, and/or International Law, or permission of instructor

Enrollment Limit: 18

Enrollment Preferences: Political science majors, Marine Studies majors, seniors

PSCI 326 (S) The Cyber Revolution (WS)

This is a course about how the advent of digital technologies, and especially those related to cybersecurity, have reshaped international politics, as well as how they might affect the world order in the future. At its most basic level, it addresses a question that is of fundamental importance to both scholars and policymakers alike: Have cyberweapons and digital technologies revolutionized the way that international politics works, in a manner similar to the impact that nuclear weapons have had on the international system since 1945? Specifically, the course will focus on what is known as the “theory of the cyber revolution”; threats to critical infrastructure; the most significant cyberattacks that have occurred to date, namely, the US-Israeli Stuxnet attack on Iran’s nuclear facilities in 2006-2010 and Russia’s NotPetya attack on Ukraine in 2017; zero-day markets; information warfare and its effects on, respectively, authoritarian and democratic political systems; and the role that critical information technologies—such as advanced semiconductors, quantum computing, and artificial intelligence systems—might play in the evolution of international security competition in future decades.

Requirements/Evaluation: Biweekly analytical essays, biweekly critiques, final paper, class participation

Prerequisites: PSCI 120

Enrollment Limit: 10

Enrollment Preferences: Preference given to PSCI majors, especially those concentrating in the international relations subfield

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option
**Distributions:** (D2) (WS)

**Writing Skills Notes:** Students will be writing biweekly analytical essays, biweekly critiques of their partner's work, and a final paper. Moreover, they will be providing peer review of one another's work throughout the semester.

**PSCI 329  Politics of the Powerless**
American politics is often unequal, and well-organized advantaged interests tend to triumph. What do disadvantaged interests do in light of these power dynamics? Give up? Compromise? Struggle on? Why do relatively powerless interests sometimes win in American politics? Is it because they have an exceptional leader? A phenomenal strategy? Fortuitous events? This course examines the political dynamics of disputes in which disadvantaged interests push for major change. We will study past campaigns and then research and discuss contemporary reform efforts.

**Requirements/Evaluation:** class discussion, two short papers, and research paper

**Prerequisites:** one course in Political Science or permission of instructor

**PSCI 332  (S)  The Body as Property  (DPE)**
From an ethical standpoint, human bodies are fundamentally different from objects that can be owned, acquired, and exchanged. Yet history furnishes us with countless examples of laws, administrative rules, and social conventions that treat the human body as a form of property. The institution of slavery is a particularly egregious example. But there are other examples of treating the body as property that seem more ambiguous, or even benign: the employment contract in which bodily services are offered in exchange for payment; the feminist slogan "my body, my choice"; or even the every-day transfer of bodily properties into creative projects that then become part of the things people own --- chairs, tables, houses, music, art, and intellectual property. If it is not itself a form of property, how can we explain the use of the human body to acquire possessions, create wealth, and mediate the exchange of other kinds of property? These and other tensions between the concept of property and that of humanity will be the focus of this course. How is property defined, and how far should law go to erode or reinforce distinctions between property and humanity? Course readings focus on Locke, Hegel, Marx, and critical perspectives from feminist theory, critical theory, and critical legal studies (Cheryl Harris, Alexander Kluge, Oskar Negt, Carole Pateman, Rosalind Petchesky, and Dorothy Roberts, among others).

**Requirements/Evaluation:** five 5- to 7-page essays, five 2- to 3-page critiques, and a 2-3-page final reflection essay.

**Prerequisites:** prior coursework in political theory, cultural theory, philosophy, or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Political Science majors (priority given to those concentrating in Political Theory ); Justice & Law Studies concentrators (priority given to those with extensive JLST coursework).

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**Difference, Power, and Equity Notes:** The course fulfills the Difference, Power, and Equity (DPE) requirement by examining how, in the context of legally-sanctioned power relations, bodily differences are constructed, monetized, and used to generate wealth. Race, class, and gender inequalities are central to the analysis.

PSCI 334 (S) Theorizing Global Justice
While economic exchanges, cultural convergence, and technological innovations have brought people in different parts of the world closer together than ever before, globalization has also amplified differences in material wealth and social inequalities. Ill health, inadequate sanitation, and lack of access to safe drinking water are increasingly common. Yet, more than ever before, the means exist in affluent regions of the world to alleviate the worst forms of suffering and enhance the well-being of the poorest people. How are we to understand this contradiction as a matter of justice? What is the relationship between justice and equality, and what do we owe one another in a deeply divided world? Course readings will engage your thinking on the central debates in moral philosophy, normative approaches to international political economy, and grassroots efforts to secure justice for women and other severely disadvantaged groups. Key theorists include Amartya Sen, Martha Nussbaum, John Rawls, Thomas Pogge, Nancy Fraser, Paul Farmer, Vandana Shiva, Majid Rahnema, and Enrique Dussel.
Class Format: discussion
Requirements/Evaluation: oral presentation, weekly blog posts, and three papers (3 pages, 7 pages and 8-10 pages)
Prerequisites: at least one course in political theory or philosophy or permission of instructor

PSCI 337 (S) Visual Politics
Cross-listings: ARTH 337 / AMST 370
Primary Cross-listing
Even casual observers know that appearances matter politically and that the saturation of politics by visual technologies, media, and images has reached unprecedented levels. Yet the visual dimensions of political life are at best peripheral topics in contemporary political science and political theory. This seminar explores how our understanding of politics and political theory might change if visuality were made central to our inquiries. Treating the visual as a site of power and struggle, order and change, we will examine not only how political institutions and conflicts shape what images people see and how they make sense of them but also how the political field itself is visually constructed. Through these explorations, which will consider a wide variety of visual artifacts and practices (from 17th century paintings to the optical systems of military drones and contemporary forms of surveillance), we will also take up fundamental theoretical questions about the place of the senses in political life. Readings may include excerpts from ancient and modern theorists, but our primary focus will be contemporary and will bring political theory into conversation with other fields, particularly art history and visual studies but also film and media studies, psychoanalysis, neuroscience, and STS. Possible authors include Arendt, Bal, Belting, Benjamin, Browne, Buck-Morss, Butler, Campt, Clark, Crary, Deleuze, Deleuze, Fanon, Foucault, Freedberg, Hobbes, Kittler, Mercier, Mitchell, Mulvey, Plato, Rancièr, Scott, Sexton, Starr, Virilio, Warburg, and Zeki.
Requirements/Evaluation: regular, engaged class participation, several Glow posts, and *either* three 7- to 8-page papers *or* on short and one much longer paper.
Prerequisites: at least one prior course in political theory, cultural theory, visual studies, or art history; or permission of instructor
Enrollment Limit: 16
Enrollment Preferences: Political Science and Art History majors (including students in the grad program); then qualified students from all disciplines welcome, space permitting
Expected Class Size: 16
Grading: no pass/fail option, no fifth course option
Distributions: (D2)
This course is cross-listed and the prefixes carry the following divisional credit:
PSCI 344 (S) Palestinian Nationalism

Palestinian Nationalism: This tutorial will cover the history, bases of support, objectives, and accomplishments and failures of Palestinian nationalism over the past century. It will address how the Palestinian nation has been defined, who has defined it, what factions and classes have controlled its organizations, and the reasons why it has failed to achieve its goals. The tutorial will address the evolution of Palestinian nationalism historically and thematically, employing both primary and secondary sources. The readings will consist mostly of Palestinian authors, with an emphasis on documents, histories, and political analyses. Two questions will anchor the tutorial: how is the nation defined and what, if any, class interests are folded into various definitions?

Requirements/Evaluation: Read the assigned materials, write a 5-page paper every other week, and comment on the student's partner's paper in the other weeks.

Prerequisites: Political Science Majors and students with background in Middle East

Enrollment Limit: 10

Enrollment Preferences: Political Nationalism

PSCI 345 (F) The Meaning of Life and Politics in Ancient Chinese Thought

Cross-listings: ASIA 345

Primary Cross-listing

How can we live a good life? What standards should we use to judge how political power is constituted and used? This class will involve students in close reading of, and exegetical writing about, core texts of ancient Chinese philosophy in English translation. The purpose is to gain an understanding of a number of different perspectives on life and politics, especially Confucianism, Legalism and Daoism. While the primary focus will be on the meaning of the texts in the context of their own times, contemporary applications of core concepts will also be considered. The class will begin with background readings, since no prior work in Chinese philosophy or history is assumed. Then the class will read significant portions of the following canonical works: Yijing, Analects, Mencius, Daodejing, Zhuangzi, and Han Feizi.

Requirements/Evaluation: two 5-page papers and one 15-page paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: preference to seniors but all are welcome.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

PSCI 349 (S) Cuba and the United States (DPE) (WS)

We examine the long and deeply felt history of dependence and conflict between Cuba and its colossal neighbor to the north. The course begins with the political economy of the colony, then covers the Cuba-US relationship from José Martí and 1898 through the Cold War to the present, emphasizing the revolutionary period. Tutorial topics include: sovereignty and the Platt Amendment; culture and politics; race and national identity;
policies on gender and sexual identity; the institutions of "popular power"; the post-Soviet "Special Period"; the evolution of the Cuban exile community in the US; and the fraught agenda of reform and generational transition. Materials include journalism, official publications, biographies, travel accounts, polemics, policy statements of the US government, and a wide range of academic works.

**Class Format:** a lecture in the first week; then ten weeks of tutorial; then a discussion class in the final week

**Requirements/Evaluation:** five 5- to 6-page papers, five 1- to 2-page responses, and one 1-page essay for the final class

**Prerequisites:** any course on Latin America or permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**Writing Skills Notes:** Assignments are graded and returned weekly. After each student has written one long paper and one response, the professor meets with them individually to discuss the composition and presentation of each genre. For the final class, students write a one-page paper in E' (E-prime), English without the verb "to be."

**Difference, Power, and Equity Notes:** Among other topics, the course describes an independence war fought by insurgents dedicated to color-blind citizenship (even as the "civilized world" embraced scientific racism); neo-colonialism under the Platt Amendment and after; race and the Revolution; gender and the changing treatment of sexual identity under the Revolution; and the categorical power differences that arise when only one political party is permitted to organize.

**PSCI 353 (S) What is Democracy?**

This is a research course that will investigate the meaning of democracy through readings and a research paper. The readings will begin with claims that democracy consists of government by elites, that the democratic component consists of elections that amount to choosing between rival slates of elites, and that agreements among elites set the boundaries for permissible democratic decision making. To examine this claim, the readings will address two fundamental issues. First, it will consider the the terms of American foreign policy after the Cold War, how it sets these, and continuities and discontinuities between the Clinton and Bush administrations. Where did Democratic and Republican foreign policy elites agree and disagree and what happened to proposals that were outside the elite consensus? Second, the course will consider the prelude and official responses to the 2008-11 financial crisis. What policies paved the way for and resolved the crisis, how were they reached, and who participated in formulating them? In other words, to what extent and in what respects were these fundamental turning points made "democratically"? Having done preliminary reading on these two issues, students will conduct in-depth research into aspects of one of these questions and write a research paper.

**Requirements/Evaluation:** One 5 page paper, 25 page research paper, presentation of paper to class, and class participation.

**Prerequisites:** Instructors permission.

**Enrollment Limit:** 14

**Enrollment Preferences:** Political Science majors or prospective majors, sophomores, juniors, and seniors, and permission of instructor.

**PSCI 354 (F) Nationalism in East Asia**

**Cross-listings:** HIST 318 / ASIA 354
Nationalism is a major political issue in contemporary East Asia. From anti-Japanese demonstrations in China, to tensions on the Korea peninsula, to competitive elections in Taiwan, to controversies in Japan about how history is portrayed in high school textbooks, national identity is hotly debated and politically mobilized all across the region. This course begins with an examination of the general phenomena of nationalism and national identity and their historical development in East Asia. It then considers how nationalism is manifest in the contemporary politics and foreign relations of China, Japan, South Korea, North Korea and Taiwan.

Requirements/Evaluation: 2-3 short papers; final exam

PSCI 356  (S)  Democratization in India and Pakistan

Cross-listings: GBST 357 / ASIA 356

Primary Cross-listing

Democratization has had both successes and failures in postcolonial South Asia. The region is home to the world's largest democracy in India, often cited as an unlikely and puzzling success story. At the same time, periods of democratic rule in Pakistan and Bangladesh are broken up by military interference, Sri Lanka's democracy is plagued by ethnic conflict, and Afghanistan has been unable to sustain democracy due to weak state institutions. What explains this diverse and uneven pattern of democracy in South Asia? The course delves into theories on political parties, ethnic politics, electoral institutions, civil-military relations, political violence, state-building, inter-state conflict, and civil wars to understand the variation in regime type in the region. It covers domestic and international factors that lead to democratization and democratic backsliding. We will focus on the role of political parties in democratization; the emergence of political dynasties; changes in the characteristics of the political elite; investigate claims of democratic deepening; and examine the effect of inter-state wars, land disputes, and insurgencies on democratic stability in the region.

Requirements/Evaluation: three 5 to 7-page papers or one research paper; presentation; class participation

Prerequisites: previous course in political science or permission of the instructor

PSCI 357  (S)  Senior Seminar: Leadership and the Anxieties of Democracy  (WS)

Cross-listings: LEAD 425

Secondary Cross-listing

This course, the senior capstone for Leadership Studies, examines the challenges and opportunities facing political leaders in contemporary liberal democracies. We will begin by seeking to place our current moment in the longer arc of history, examining the distinctive institutional and structural
constraints facing contemporary political leaders and examining in detail previous eras in which the American political system has come under great pressure. Then, we will look at some important factors that shape how followers approach would-be leaders: inequality and economic precarity; identity and group consciousness; notions of membership, community, and hierarchy; and fraying institutions. While the course will focus primarily on the United States, our conceptual framework will be global. Our primary questions will be these: Why does transformative leadership seem so difficult today? How does political leadership in the 21st century differ from leadership in earlier eras? What conditions are necessary to sustain effective leadership in the contemporary world? As a final assignment, students will craft an 18-20-page research paper on a topic of their choice related to the themes of the course.

**Requirements/Evaluation:** Seminar participation, research proposal, peer workshop, research paper, in-class research presentation

**Prerequisites:** LEAD 155 or permission of the instructor

**Enrollment Limit:** 14

**Enrollment Preferences:** Open to Leadership Studies concentrators or with the permission of the instructor; preference given to Political Science majors

**Expected Class Size:** 14

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**
LEAD 425(D2) PSCI 357(D2)

**Writing Skills Notes:** Students receive iterative feedback on their research projects: Their initial proposals receive substantive feedback from fellow students as well as substantive and stylistic feedback from the professor looking toward a formal proposal; and their formal proposals receive extensive comments from both the professor and a student colleague looking toward the final paper. The students will submit writing for feedback the third week of March, the third week of April, and the third week of May.

**PSCI 360  (F) Right-Wing Populism**

After the fall of the Berlin Wall in 1989, the political scientist Francis Fukuyama famously declared "the end of history". From now on only liberal democracy, free market capitalism, and global integration had a future. Everything else -- including political ideology, nationalism, conservative religion, and sovereignty -- was consigned to the ash heap. Thirty years later the future looks seriously derailed. A right-wing populism marked by Brexit, Trump, Le Pen, and a host of 'far-right' political movements in the very heartland of democratic globalizing capitalism has shaken liberal certainties. This course is an investigation into contemporary right-wing populism in Europe and North America in its social, economic, and political context. We will discuss theories of right-wing populism's appeal from both left and right perspectives. We will also investigate specific cases of right-wing populism including France's National Rally and Eric Zemmour, the Netherlands' Geert Wilders, Sweden's Sweden Democrats, Hungary's Fidesz, Poland's Law and Justice Party, and America's Trumpism and QAnon. We will also reflect on important electoral tests of right-wing populism in 2024, especially the US presidential election and (perhaps) the UK general election.

**Requirements/Evaluation:** two short papers; one research proposal; every-class discussion questions; class participation.

**Prerequisites:** one course in comparative or American politics; or permission of instructor

**Enrollment Limit:** 18

**Enrollment Preferences:** Political Science majors

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

PSCI 361 (S) Black Political Thought
Cross-listings: AFR 364

Primary Cross-listing

This seminar will introduce students to the study of Black Political Thought as a set of critical normative and diagnostic gestures that help theorize the Black experience. By thrusting students into the “problem space” of Black Political Thought, students will examine the historical and structural conditions, normative arguments, theories of action, ideological conflicts, and conceptual evolutions that help define African American political imagination. Students will take up the central philosophical questions that shaped the tradition from the early nineteenth century to the present by engaging historical thinkers like Anna Julia Cooper, W.E.B. DuBois, Frantz Fanon, Ida B. Wells-Barnett, and Ella Baker and contemporary theorists like Saidiya Hartman, Charles Mills, bell hooks, and Frank Wilderson—among others. Guided by a Black diasporic consciousness, students will explore the canon’s structural and ideological accounts of slavery, colonialism, patriarchy, racial capitalism, Jim Crow, and state violence and, subsequently, critique and imagine visions of Black liberation. With a theoretical grounding in the “Black radical tradition,” students will leave this course with the conceptual resources and philosophical tools needed to realize political theory’s potential as an instrument they can employ in their daily lives to normatively and diagnostically evaluate political, economic, cultural, and social institutions.

Requirements/Evaluation: Weekly discussion questions; two (1-2 pages) short reading responses; and three essay-style writing assignments, including one short (3-4 pages), one medium (5-6 pages), and one longer (10-12 pages)

Prerequisites: at least one prior course in political theory or permission of the instructor

Enrollment Limit: 16

Enrollment Preferences: political theory concentrators, Political Science majors, Africana majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

PSCI 361 (S) Modern Jewish Political Theory
Cross-listings: REL 330 / JWST 492

Secondary Cross-listing

By the late 19th century, Jews across Europe were faced with an urgent political problem. Amidst bourgeoning national self-consciousness throughout the continent, despite the liberalizing promises of the Enlightenment, Jews remained a vulnerable, segregated, and stigmatized minority population. Jews had to decide where to pin their hopes. Should they ally themselves with the liberals or the communists? Should they embrace nationalism or cosmopolitanism? Should they, perhaps, abandon Europe altogether and re-constitute themselves elsewhere? If so, should they focus their efforts on relocation to the historical land of Israel? Or could they go anywhere? Wherever they might go, should they aspire to build a modern Jewish nation-state, a semi-autonomous Jewish community, or some other arrangement? Should this coincide with the cultivation of a distinctively Jewish modern language? If so, should it be Hebrew or Yiddish? In this course we will assess various answers to these questions proffered by Jewish political thinkers in the modern period. We will pay particular attention to the construction of “Jews” and “Judaism” in these arguments. And we will ask persistently: what constitutes a “Jewish justification” for a political claim in modern Jewish political theory? Coverage will include: Jewish liberalism, political Zionism, Yiddishist autonomism, messianic quietism, and other views. We will read mostly primary sources, including texts by: Hermann Cohen, Theodore Herzl, Chaim Zhitlowsky, Franz Rosenzweig, Leo Strauss, Hannah Arendt, and many others.

Requirements/Evaluation: six short (1-2 pages) response papers; two 6- to 8-page papers, each analyzing a different view in depth; a final 18- to 20-page paper that incorporates the two previously submitted 6-8 page papers, but also compares the two views and adjudicates between them

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Religion majors, Jewish Studies concentrators, and Political Science students on the “Theory” track

PSCI 376  (S)  The Impact of Black Panther Party Intellectuals on Political Theory  (DPE) (WS)
Cross-listings:  INTR 320 / LEAD 319 / AMST 308
Primary Cross-listing
This seminar examines the historical and contemporary impact of the Black Panther Party--and key allies such as Angela Davis--on political theory. Texts include: narratives from 1966-2016; memoirs; political critiques; theoretical analyses; interviews; speeches; government documents. The seminar will examine: original source materials; academic/popular interpretations and representations of the BPP; hagiography; iconography; political rebellion, political theory. Readings: Liberation, Imagination and the Black Panther Party; Soledad Brother: The Prison Writings of George Jackson; Mao's Little Red Book; The Communist Manifesto; Still Black, Still Strong; Imprisoned Intellectuals; Comrade Sisters: Women in the Black Panther Party.
Requirements/Evaluation: Requirements: students attend each seminar class and come prepared to discuss the readings; participate in discussions; present a collective analysis with Q/A for the seminar; submit a mid-term paper and a final paper or a group project.
Prerequisites: None.
Enrollment Limit: 19
Enrollment Preferences: Juniors and Seniors with previous courses taken in Africana Studies, American Studies, Political Science, Philosophy.

PSCI 378  (F)  Origins of the State
When and how did the state come into existence as a form of political organization? This course explores theories of state origins that refer back to an invented past or are simply located in "once upon a time." We will ask how political myths and philosophical speculation on human "prehistory" draw boundaries between past and present, as well as between self and other. Paying attention to common oppositions such as nature/civilization, primitive/advanced, anarchy/social order, feminine/masculine, ruler/ruled and stasis/progress, we will investigate how these antagonisms work together to create the idea of the state that still dominates political imagination today. Course readings touch briefly on social contract theories (Locke, Hobbes, Rousseau, Kant) before turning to the core material for our exploration: alternative narratives of the origins of the state based on ancient Greek and Roman mythology and the political projects of modern-day socialists (Marx, Engels, Bebel, and more recent writers). How did it come to be that the socialist imagination comingled ancient myths with modern ethnological studies of non-European peoples--studies written largely from a colonialist standpoint? Must the figures of "woman" and "native" be continually pressed into the service of state theory, even in a supposedly alternative account? More broadly, how do socialist theories relate to other well-known theories of the state, e.g. as a monopoly on the legitimate use of violence (Weber), a form of colonization of lands and peoples (postcolonial studies and Critical Indigenous Theory), and a patriarchal institution controlling productive and reproductive labor (feminist theory)? (Please note that this is not a history course. It is a study of political myth-making and the concept of the state in political theory.)

Cross-listings: AMST 400 / AFR 372 / GBST 400 / INTR 400

Secondary Cross-listing

This seminar focuses on the entwined histories of liberation movements against racism, enslavement, and imperialism in the US, Cuba and Africa. Readings include: Hugh Thomas, *Cuba: A History*; Che Guevara: *The Motorcycle Diaries*; Walter Rodney, *How Europe Underdeveloped Africa*; Laird Bergad, *The Comparative Histories of Slavery in Brazil, Cuba, and the United States*; Thomas Sankara, *Women's Liberation and the African Freedom Struggle*; Nelson Mandela and Fidel Castro, *How Far We Slaves Have Come!* Students will read and analyze texts, screen documentaries, collectively compile a comprehensive bibliography, and present group analyses. The seminar is open to all students; however, priority is given to seniors majoring in American Studies.

Requirements/Evaluation:  Reading and analysis of texts, collective compilation of a comprehensive bibliography, presentation of group analyses; two brief papers due at midterm and the end of the semester

Prerequisites:  None

PSCI 380  (S)  Sex Marriage Family

Cross-listings:  SOC 390

Primary Cross-listing

Something has happened to America over the past fifteen years. Large minorities of young adults, especially young men, are now celibate. Cohabitation has skyrocketed but marriage is disappearing, and the country's birth rate is at an all-time low. Not surprisingly, loneliness has become epidemic. A similar story can be told for most other developed countries. The implications for political polarization, economic growth, social insurance programs, public health, military defence, even national survival are grim. What is the cause of this loss of faith in the future? Can public policy reverse these trends? This course is an investigation into relations between the sexes in the developed world, the fate of children and the family, and
government attempts to shape them. The course investigates family models in historical and comparative context; the family and the welfare state; the economics of sex, gender, marriage, and class inequality; the dramatic value and behavioral changes of Gen Z around sex, cohabitation, and parenthood; and state policies to encourage partnership/marriage and childbearing.

**PSCI 381 (S) The Conservative Welfare State**

Conservatives in the United States are traditionally hostile to state power in general and the welfare state in particular. In much of the rest of the world, however, conservatives harbor no hatred of the state and, when in power, have constructed robust systems of social welfare to support conservative values. This course offers an analysis of the conservative welfare state with particular interest in public policies around social insurance, employment, the family, and immigration. The course traces the conservative welfare state's development from its origins in late nineteenth and early twentieth century corporatism, through the rise of Christian Democracy and the consolidation of conservative welfare regimes in continental Europe after World War Two, to its current challenges from secularism, feminism, and neoliberalism. The course also investigates divergent conservative models in East Asia and Latin America as well as new 'illiberal' welfare states in contemporary Hungary and Poland. It concludes with a discussion of the prospects of right-populist politics in the United States.

**Requirements/Evaluation:** Two short papers, research paper proposal, every-class discussion questions, class participation.

**Prerequisites:** One course in Political Science

**Enrollment Limit:** 19

**PSCI 387 (S) The Firm**

The rise of gigantic tech firms--Google, Apple, Facebook, Amazon--has sparked widespread worries about the role of business power in capitalist democracy. Are these firms monopolies? How can they be better regulated? Should they be? This course studies the politics of business by centering analysis on the firm. From the perspective of the workplace, we investigate the firm as an arena of power, where workers and managers meet each other in continuous contests for control. From the perspective of the public sphere, we investigate the firm as an actor whose power maps uneasily onto the channels of democratic representation. Approaching the firm as both arena and actor in a number of capitalist democracies, we will compare the politics of business across different sectors, but will focus especially on tech and finance.

**Requirements/Evaluation:** Class participation; two 5- to 7-page essays; one presentation; one final essay.

**Prerequisites:** One introductory course in political science or economics, and/or permission of the instructor.

**Enrollment Limit:** 15

PSCI 413  (S)  Senior Seminar in American Politics: Polarized America

With red states and blue states, partisan divisions in Congress, and even disputes about wearing masks to protect against the coronavirus, few question the fact of a polarized America. But what is the polarization about and what caused it? Is it manufactured by a political elite using the rules of the game to maintain power while ignoring the concerns of the people? Is it a capitalist strategy to divide the public in order to advance the interests of the wealthy corporate elite? Does it reflect a polity divided by racial and ethnic tensions with different visions of the nation’s past and future? Does it reflect increased inequality in a fast-changing global economy? How can a government of separated institutions operate and come to collective decisions given this discord? Can the framers’ vision of deliberative, representative government meet the challenges of a polarized polity?

Requirements/Evaluation: class participation, weekly writing assignments, two short papers, final project

Prerequisites: At least one course in American politics

Enrollment Limit: 16

Enrollment Preferences: Seniors majoring in political science with concentration in American politics

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: PSCI American Politics Courses

PSCI 415  (S)  Senior Seminar: The Rites of American Politics

Custom and tradition abound in American politics. As adherents of a political creed, we recite the Pledge of Allegiance before school and sing the Star-Spangled Banner before football. As wielders of political agency, we fashion signs to convey maxims with wit and devise chants to imbue marches with force. As skeptics of political officeholders, we observe the familiar patterns of grandstanding when legislators interrogate witnesses at committee hearings and the distinctive cadence of interruption when judges question advocates at oral arguments. As members of a political community, we fill out forms to pay into the coffers of governmental programs and wait in lines to secure the documents that confer governmental benefits. From the patriotic to the participatory, the performative to the pedestrian, our political acts -- shared with and repeated by others across our great national expanse each and every day -- are always more textured, more illuminating, and more consequential than we could possibly realize in the moment. But what, exactly, do they mean? And how, precisely, do they matter? Proceeding from the idea that these sorts of ubiquitous cultural practices are fundamentally and constitutively relevant for our politics, that they both reflect and instigate fissures and junctions in the political order, this course focuses, quasi-anthropologically, on the choreography of American politics -- the narrative mythology, visual symbolism, ceremonial rituals, linguistic tropes, and behavioral habits that sustain America as a polity and shape Americans as a people. Our interest is in the rites that attend not
only to our own citizenship but also to our very consciousness as political beings; our purpose is equally to identify, to interpret, and to investigate them.

Requirements/Evaluation: two 3-4 page essays, one 6-8 page mini research paper, an experiential project, a final portfolio of revised work accompanied by a 2-3 page reflection, and class participation

Prerequisites: senior standing in Political Science or permission of the instructor

Enrollment Limit: 16

PSCI 420 (F) Senior Seminar: The Nuclear Revolution

Cross-listings: LEAD 330

Primary Cross-listing

This is a course about international politics in the nuclear age. In broad terms, it focuses on a very basic question: Does international politics still work essentially the same way as it did in the prenuclear era, or has it undergone a "revolution," in the most fundamental sense of the word? The structure of the course combines political science concepts and historical case studies, with the goal of generating in-depth classroom debates over key conceptual, historical, and policy questions. The basic format of the course will be to combine very brief lectures with detailed class discussions of each session's topic. The course will begin--by focusing on the Manhattan Project--with a brief technical overview of nuclear physics, nuclear technologies, and the design and effects of nuclear weapons. The course will then examine the following subjects: the dropping of the atomic bombs on Japan; theories of the nuclear revolution; the early Cold War period; the development and implications of thermonuclear weapons; the Berlin and Cuban missile crises; nuclear accidents; nuclear terrorism and illicit nuclear networks; the future of nuclear energy; regional nuclear programs; preventive strikes on nuclear facilities; nuclear proliferation; and contemporary policy debates.

Requirements/Evaluation: class participation, three 8- to 10-page papers

Prerequisites: PSCI 202

Enrollment Limit: 15

Enrollment Preferences: Political Science major seniors with an International Relations concentration

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

Attributes: PSCI International Relations Courses

Not offered current academic year

PSCI 423 (S) Senior Seminar: Humanitarianism (DPE)

Since the mid-1980s, humanitarianism has been one dominant attitude that powerful and privileged countries, organizations and people have adopted with regard to poverty or disaster elsewhere. Humanitarianism aims at rescue, striving to keep marginal people alive until some solution can be found. It aims not to address crises’ causes nor to assist with solutions—which it considers political—just to keep human bodies alive. Critics contend that humanitarianism produces harm, provides structural incentives for people to do more or less than they need to, and deepens inequality between actors and targets. They contend that it legitimates a view of the status quo, in which such terrible things are bound to happen without real cause. This course confronts humanitarianism as an ideology through reading its defenders and critics, and as a political strategy assessing its usefulness, to whom.

Class Format: three students start class discussion every day; one reads a short (4-page) essay and two read shorter (two-page) essays

Requirements/Evaluation: three longer essays, six shorter essays, constructive participation

Prerequisites: PSCI 202 and at least one elective in international relations

Enrollment Limit: 16

Enrollment Preferences: Political science seniors then juniors; other seniors, then juniors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course asks students to investigate the way that assumptions about superiority, and “helping practices” adopting those assumptions, can either reinforce or undermine unequal social and political outcomes and categories. We evaluate liberal and postcolonial (structural violence) models of international aid.

Attributes: PSCI International Relations Courses

Not offered current academic year

PSCI 426 (F) The Arab-Israeli Conflict (WS)

The Arab-Israeli dispute receives more attention than arguably any other ongoing conflict in international politics, and for very good reason. The fact that it has lasted as long as it has—well over a century—been characterized by a remarkable (and depressing) degree of intensity; involved competing nationalisms, as well as different religions, cultures, and ethnicities; centered on territorial claims over land that is of special significance; and been connected to a number of important geopolitical questions, including ones involving great power competition, has made it a major focus of scholars of the Middle East, international relations analysts, and, of course, the general public. The issue is also of special interest, for a variety of reasons, in American political discourse. This seminar will examine the conflict in depth, beginning with its origins in the late nineteenth century, and ending with how it might run its course in the future. Specifically, the course will begin with an overview of the dispute’s history and most salient aspects. Thereafter, it will cover Zionism and the Palestinian nationalist cause; the creation of the state of Israel and the 1948-1949 Arab-Israeli war; the June 1967 war; the debate, and controversy, over the “Israel lobby” in the United States; the October 1973 war and its aftermath; the road to the 1979 Egyptian-Israeli peace treaty; the arguably underappreciated role that nuclear weapons have played in the conflict; the rise and collapse of the Oslo peace process in the 1990s, as well as the outbreak of the Second Intifada in 2000; and the future of the dispute.

Requirements/Evaluation: class participation, three critical analytical essays, peer critiques/exchanges, final paper

Prerequisites: PSCI 120 and at least one other PSCI course from the international relations subfield
Enrollment Limit: 19

Enrollment Preferences: Political science majors, especially seniors, will be given priority for enrollment.

Expected Class Size: 19

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will need to do a large amount of analytical writing in this course, as well as critique and edit one another's papers. There will also be a component of the class that involves doing writing workshops.

PSCI 431  Senior Seminar in Political Theory: Rethinking the Political

What is politics? The question, an important part of political theory at least since Socrates, has taken on renewed significance in recent years, as theorists have sought to rethink the political in response to twentieth century dictatorships and world wars; feminist, queer, anti-racist, post- and decolonial struggles; the transformations wrought by neoliberal globalization; the emergence of "algorithmic governance"; the recent resurgence of populist nationalism; and deepening recognition of climate crises. This seminar engages some of the major attempts at rethinking produced in the 20th and 21st centuries, particularly at those that, characterizing liberalism as masking structures of subordination and elements of conflict in political life, undervaluing the importance of citizen action and public space, or being ill-suited to altered technological and ecological conditions, seek to rework or move beyond it. In addition to those who argue for an expanded and emancipatory conception of politics, we will consider arguments against politics as primary path to improvement or focus of commitment. Authors read may include Schmitt, Strauss, Rawls, Arendt, Wolin, Rancière, Brown, Connolly, Hartman, Sharpe, Moten, Wynter, Sexton, Edelman, Muñoz, Coulthard, Simpson, Lazzarato, Haraway, Latour.

Requirements/Evaluation: Regular, engaged class participation; short Glow posts; one 6-8 page paper; one 10-12 page paper

Prerequisites: Junior or senior standing and two or more theory courses or consent of instructor. Non-majors with theory interests and backgrounds are welcome

Enrollment Limit: 15

Not offered current academic year

PSCI 432  (S)  Senior Seminar: Critical Theory

This seminar focuses on the political thought of Herbert Marcuse, investigating the influences of leftist social movements of the 1960s on his critical theory. Marcuse famously supported the aims of student activism, feminism, black liberation movements and Third World anti-colonialism during that period, publicly affirming their efforts to integrate ethical idealism with concrete concerns for the economic wellbeing and political freedom of oppressed groups. Drawing on Freud, and challenged by his philosophical exchanges with Angela Davis, Marcuse came to the view that these movements were addressing not only material deprivations such as poverty and structural oppression, but also the effects of social alienation and a damaged psychic life. He saw these movements as successfully bridging the longstanding tension between the ideal elements of our humanity and the physical conditions for human existence (a tension represented in philosophy by the contrast between Kant and Marx). Yet he stopped short of identifying new social movements with the Marxist notion of a revolutionary class. Why this hesitation? Was his caution warranted? To provide a broader context for Marcuse's critical theory, we will read a selection of his writings alongside related texts by Kant, Marx, Freud, and Davis. Looking at but also beyond his political solidarity with the emancipatory movements of the 1960s, we will then consider how Marcuse's work can be placed in conversation with more recent critical theory, including ideas emerging from the Occupy Wall Street movement and feminist approaches to aesthetics and psychoanalytic theory.

Requirements/Evaluation: regular class participation, short (1 pg) response papers, and drafts leading up to a 15-page final essay

Prerequisites: junior or senior standing required; in addition, prior coursework in political theory, cultural theory, philosophy, or permission of
PSCI 433 (S) Senior Seminar: Dignity

Cross-listings: JLST 433

Primary Cross-listing

Discredited over the centuries by skeptics of many ideological persuasions, dignity has nevertheless remained central to the vocabulary of political protest movements from the left and the right. In the post-WWII period, dignity has also served as the grounding principle for international human rights conventions and national constitutions. But what is the meaning of dignity? Does dignity belong specifically to the human species, or is it equally the property of all living beings? If everybody, or perhaps everything, has its own dignity, what could the concept possibly add to our understanding of social relations, political processes, and legal judgments? Course readings will be as wide-ranging as the concept is broad. Some of our touchstones will be: Kant’s moral philosophy, writings from the nineteenth-century abolitionist movement, Marxist theories of the dignity of labor, international human rights conventions, and court cases from Germany, Namibia, South Africa and the United States.

Requirements/Evaluation: Regular class participation, short (1 pg) response papers, and drafts leading up to a 15-page final essay.

Prerequisites: Junior or senior standing required; in addition, JLST concentration or prior coursework in political theory/cultural theory/philosophy.

Enrollment Limit: 12

Enrollment Preferences: Senior political science majors with concentration in political theory; JLST concentrators.

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

PSCI 440 (F) Settler Colonialism: What is it and what does it do?

What is "settler colonialism" and what does it do? We hear the term often, and it carries connotations -- usually of illegitimacy. But knowing that something is, or is supposed to be, bad does not tell us what it is. It does not tell us either whether or when a society that originated in what is called settler colonialism can outgrow its origins or whether it is forever defined by them. This course will consist of two parts. First, it will read several theoretical works on settler colonialism, identifying several key issues, and then will read a long account of the rise and fall of settler colonialism in Algeria. We will consider what settler colonialism is, what forms it comes in, and how it differs from other forms of colonialism, what prompts it, whether settlers, who usually are meant to be loyal to their colonial patrons remain loyal and when they shift to rebellion, and the nature of the colonial power (which is not always a state). We will also consider the impact and responses of the prior populations. Do they choose to co-exist, co-operate, resist? And what does the imposition of settler colonialism do to their loyalties and collective identities? Do they retain their old identities or form new ones, and do the distinct groups that are amalgamated into the 'colonized' by natives become united or maintain earlier differences? Does their resistance build on their experiences with colonialism or does it revert to previous ways? And why does resistance almost always take the form of nationalism? The second part of the course will consist of a 25-page research paper on one aspect or another of the issue of settler colonialism. We will work together on how to define and refine a topic and how to pursue it. Students also will present the core of their paper to the class.
Authoritarian regimes are plentiful in the world today. Some appear durable and resilient; they are not simply transient political failures awaiting a breakthrough to democracy. This course will consider the history and contemporary experience of authoritarian regimes, beginning with political philosophical analyses of classical theorists such as Montesquieu, Moore, and Arendt. Attention then turns to how post-World War II authoritarianism has been understood from a variety of perspectives, including: the “transitions to democracy” approach; analysis of problems of authoritarian control and authoritarian power-sharing; and examination of “authoritarian reliance,” among others.

Requirements/Evaluation: 3 papers of 5-7 pages, discussion leadership, oral report on an authoritarian regime of student’s choice, class participation.

Prerequisites: Political science major or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Senior comparative politics concentrators; other political science senior majors; other political science majors; permission of instructor.

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)

Attributes: PSCI Comparative Politics Courses

Not offered current academic year
Enrollment Limit: 12
Enrollment Preferences: permission of the department
Expected Class Size: 8
Grading: no pass/fail option, no fifth course option
Distributions: (D2)

Fall 2024
HON Section: 01 MWF 10:00 am - 10:50 am Justin Crowe

PSCI 494 (S) Senior Thesis Research and Writing Workshop
Reserved for and required of those students invited to continue in the honors program following the department's approval of their research proposal at the end of the fall semester seminar, the spring semester Senior Thesis Research and Writing Workshop provides a focused forum for the exchange of ideas among thesis writers, who will regularly circulate excerpts of their work-in-progress for peer review and critique. During this time, students will work primarily with their assigned faculty advisor, with the workshop leader's primary role becoming one of coordination, troubleshooting, and general guidance. Near the end of the semester, students will receive feedback on their complete draft from their advisor and two additional faculty readers selected by the workshop leader; following revisions, the final work—a roughly 35 page piece of original scholarship—will be submitted to and evaluated by a committee of faculty chosen by the department for the awarding of honors as well as presented publicly to the departmental community at an end-of-year collective symposium.

Requirements/Evaluation: a roughly 35 page piece of original scholarly work that will be submitted to an advisor and faculty readers and then revised in accordance with their feedback, peer review of other thesis writers' work-in-progress, public presentation at an end-of-year collective symposium
Prerequisites: PSCI 493 and departmental approval at the conclusion of that course

Enrollment Limit: 12
Enrollment Preferences: permission of the department
Expected Class Size: 8
Grading: no pass/fail option, no fifth course option
Distributions: (D2)

Spring 2025

Winter Study -----------------------------------------------------

PSCI 14 (W) JA SelCom: A Case Study in Selection Processes

As a member of SelCom (SElection COMmittee), you will become a cohort with current members of JAAB (the Junior Advisor Advisory Board) to select the next class of JAs. You will participate in every step of the JA application evaluation process -- reading written applications, conducting interviews, discussing applicants with SelCom, and deciding on the final makeup of next year's JA class. Every SelCom member will complete anti-bias training at the beginning of Winter Study; working through biases to make thoughtful evaluations is crucial to this process. This is a fantastic opportunity for students who want to take on a leadership role that requires critical thinking and collaboration. Your input will help shape the entry system, the JA role, and the very essence of the Williams community in the coming school year. The SelCom schedule is roughly as follows (subject to change). SelCom will likely meet 4-5 days per week. Week 1: SelCom members will undergo anti-bias training and then spend the first week conducting interviews with applicants and cleaning transcripts to ensure readability. Week 2-3: The committee will discuss applications with identifying information blinded to help mitigate bias in the selection process. Week 3-4: SelCom will revisit applications with consideration given to the personal identity of each applicant. The committee will then extend offers to a select number of candidates. Members may reconvene at some point in the spring semester (after the initial round of JA offers have been accepted or rejected) to determine which applicants on the waitlist should receive offers.
If you are interested in serving on SelCom during winter study, you must fill out this application form by **October 29 at 11:59pm**:
https://docs.google.com/forms/d/e/1FAIpQLSeIfDaCz1P2OhKnKbqIarAv8GPxdQXEQ_QfWAWAJigayF95prQ/viewform. JAAB will decide which applicants will serve on SelCom and inform all applicants of their application status by the end of the day on Monday, November 3. SelCom applicants who are not selected to serve on SelCom will have until November 12 (winter study registration deadline) to enroll in another winter study course.

**Requirements/Evaluation:** Attendance and active participation

**Prerequisites:** Anyone wanting to register for the SelCom Winter Study class needs to fill out the application form.

**Enrollment Limit:** 25

**Enrollment Preferences:** Open to students who are in the classes of 2025, 2024.5, 2024, 2023.5, and 2023 AND who are not applying for the JA role for the 2023-2024 academic year.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Attributes:** EXPE Experiential Education Courses

Not offered current academic year

**PSCI 15 (W) Climate Art & Activism**

"Most of us are terrified by climate change and frozen by the confusion of what we should do to address this issue. Artists transform that energy into a determined roar, urging us all to play our part in stopping climate change with what we have, no matter where we are. Ultimately, we need hope and encouragement to make change happen, and art is a beacon of light." - Dekila Chungyalpa. In recent decades we have seen an exciting number of works by contemporary artists that illuminate the climate crisis. Presented by cultural institutions around the world and published in multiple forums, these works highlight a new canon of climate change themed art that engages and inspires the public to affect change. In this Winter Study course students will be exposed to projects that examine environmental themes: indigenous history, fossil fuel destruction, environmental injustice, climate migration and more. Maya Lin's Ghost Forest, Olafur Eliasson's Ice Watch, Theo Cuthand's Ex extractions , LaToya Ruby Frazier's The Notion of Family, Zhao Liang's Behemoth, Chantal Bilodeau's Sila, are just a few examples of works by visual artists, filmmakers, and playwrights we will examine for their different aesthetic portrayals of climate change. We will take field trips to MASS MOCA, Williams College Museum of Art, and The Clark Institute's library to look at works up close. We will also explore the local environmental history of toxic pollution in the Hoosic River. Students will be asked to read essays, view films and work on their projects outside of class. For a final project students will write a short personal essay on their own climate story (i.e.: when they first became aware of climate change, how climate change is impacting where they are from) and translate this essay into a proposal for a future creative work. Students will also propose strategies for how their creative projects can engage the public in activism. Students from all departments are welcome.

**Requirements/Evaluation:** Paper(s) or report(s); Presentation(s)

**Prerequisites:** No prerequisites.

**Enrollment Limit:** 12

**Enrollment Preferences:** I will give priority to students in these departments: political science, environmental science, art history, art.

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Eve Morgenstern is an award winning documentary filmmaker and photographer who has covered environmental topics. Eve is also the founder of Soon is Now, a climate change themed art and live performance project in Beacon, NY.

**Materials/Lab Fee:** $50

**PSCI 21 (W) Fieldwork in Public Affairs and Private Non-Profits**

This course is a participant-observation experience in which students work full-time for a governmental or nongovernmental (including voluntary, activist, and grassroots) organization or for a political campaign. Examples include: town government offices; state or federal administrative offices (e.g., environmental agencies, housing authorities); interest groups that lobby government (e.g., ACLU, NRA); nonprofit organizations such as service providers or think tanks (e.g., Habitat for Humanity, Cato Institute); and grassroots, activist or community development organizations (e.g., Greenpeace or neighborhood associations). The instructors and members of the Political Science Department are available to help students find placements. Students can also email clia@williams.edu for the most up-to-date information. Students should then make their own contracts with the
The student's fieldwork mentor should send a confirmation letter to the instructor verifying the placement and describing the nature of the work to be performed. Interested students should reach out to Paula Consolini at pconsoli@williams.edu by October 30th. A group meeting of all students will occur before winter study to prepare and after to discuss the experience. During winter study, students are responsible for keeping a journal of their experiences and observations. Additionally, students write final papers summarizing and reflecting upon the experience in light of assigned readings. Every year, course instructors arrange for some distinct sections of this course to provide specialized fieldwork opportunities in the area for small groups of students.

**Requirements/Evaluation:** A 10-page paper or comparable creative work such as a program or project design, video, webpage, or set of infographics.

**Prerequisites:** Interested students must complete the course interest form located at https://forms.gle/iXyDxFTd27Z9FkiMA or email CLIA Director Paula Consolini at clia@williams.edu before the Winter Study Course registration deadline.

**Enrollment Limit:** 25

**Enrollment Preferences:** Political science majors

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** Paula Consolini will co-teach.

**Attributes:** EXPE Experiential Education Courses  STUX Winter Study Student Exploration

**PSCI 22  (W) LIFT: Learning Intervention for Teens**

This mentorship-based course pairs Williams students with teenagers involved in the Berkshire County juvenile justice system, usually due to truancy. LIFT is an official Commonwealth of Massachusetts probation diversion program. Sponsored by Pittsfield Chief of Police Mike Wynn '93 and Professor Cheryl Shanks, the course is entirely run by Williams students who have previously served as mentors. Williams students provide positive mentorship, helping the teens envision, construct, and present an independent, educational project of the teen's choosing. Past projects have ranged from 3D printing Mike Tyson's glove to how to cook the perfect steak to utilizing the music recording studio to assessing the performance of NBA players before and after injury. The project and other course activities aim to cultivate initiative, creativity, focus, and skills in goal-setting, research, and communication, to show teens that school can empower them and not just be another form of incarceration. The course culminates with a project presentation in which each mentor/mentee pair formally presents their work to an audience that includes professionals in the juvenile court system, state elected officials, police chiefs, district attorneys, the teens' peers and families, faculty, and community members. Williams students are expected to attend training, meet with their teens three times a week, and co-facilitate a final presentation. Because LIFT is an after-school program, this course meets Tuesday through Thursday from 3:30-5:30 pm. Williams students will additionally meet on Mondays from 4:00 to 5:00 pm in a "mentors-only" meeting to report their progress and share their experiences. Absences cannot be accommodated; the teens cannot be let down. Williams students will undergo training as well as a criminal background check. To apply, please fill out the linked Google Form and register on PeopleSoft. The student leaders, Kiara Muñoz Diaz and Sophia Nogueira, will select the applicants, with some advice from the deans' office and course sponsors. (All must be Covid-vaccinated and agree to a background check to participate. These are mandated by the state and require Social Security Numbers -- lack of a SSN may, unfortunately, prevent you from participating in the program.) Applications are due on October 21st at 11:59 pm. Selected mentors will be notified via email by November 4th. Please reach out to Kiara Muñoz Diaz (km32) or Sophia Nogueira (snn2) with any questions or concerns! Link to the application: https://forms.gle/x9ngWXQ71kywAj28A

**Class Format:** The group meets as a whole; additionally, pairs meet separately. At times this is in a classroom, at other times, the library or makerspace or studio.

**Requirements/Evaluation:** Successful mentorship throughout the term, contribution to the mentors' log, and final joint presentation.

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** Students will be evaluated based on a statement of application.

**Expected Class Size:** 10

**Grading:** pass/fail only

**Unit Notes:** Mike Wynn just retired as the Chief of the Pittsfield Police Department. He graduated from Williams in 1993.

**Attributes:** EXPE Experiential Education Courses

Not offered current academic year
PSCI 23 (W) The Practice of Politics

Just as planning and execution in sports or combat is most fruitfully analyzed without regard to one's sympathies in the contest, the successful practice of politics in campaigns and constituent assemblies may best be understood apart from party and ideology, as essentially the same game for both sides. This course will examine the political struggle in concrete and practical terms. Our exploration of strategy and tactics will begin by looking at the rules and realities of politics in the students' own hometowns, move through examples from American electoral history, and touch on the depiction of campaigns in movies and literature. The impact of ideology and personality on electoral outcomes, the value and cost of different methods of voter persuasion, and the role of candidates, field staff, managers, consultants, pollsters, and media experts will all be weighed. Students will also learn about the realities of legislative life, including relations with leadership, staff, lobbyists, reporters, and constituents, and the challenge of maintaining clarity in chaotic situations. Students will prepare a written campaign plan based on political conditions in their home legislative district and make an oral presentation to the class on that plan. They will also write a press release, a fundraising letter, and other brief campaign materials.

Requirements/Evaluation:  Paper(s) or report(s); Presentation(s)

Prerequisites: None

Enrollment Limit: 15

Enrollment Preferences: Preference to Political Science majors and to students who can demonstrate prior engagement with political campaigns or institutions.

Expected Class Size: NA

Grading: pass/fail only

Unit Notes: Joe Markley has thirty years of experience in every aspect of politics, including five terms in the Connecticut State Senate, employment as a manager and consultant for state and federal campaigns, and extensive grassroots organizing.

Materials/Lab Fee: $17

Attributes: STUX Winter Study Student Exploration

Not offered current academic year

PSCI 27 (W) The Work of the Supreme Court: A Simulation

Cross-listings:

Primary Cross-listing

This course will provide students with an understanding of the institutional characteristics and decision-making process of the U.S. Supreme Court so they can better incorporate its opinions into their roles as informed citizens and future leaders. At the outset, students will be provided with briefs, decisions and other materials relevant to a case pending before the Court. Where possible, cases are selected that address constitutional issues that have important political, social and/or historical significance. Past examples include whether a Colorado baker has constitutional protection from state anti-discrimination laws when he refused to sell a wedding cake to a gay couple, whether a privately-held company has a constitutional right to refuse on religious grounds to implement the women's health requirements in the Affordable Care Act, whether a high school student has a First Amendment right to express opinions contrary to his school's anti-drug policy, and whether "Enemy Combatants" detained at Guantanamo have a constitutional right to contest the legality of their confinement in federal district courts. Four students (two on each side) will be assigned to research and argue the case before the student "Supreme Court", which will consist of the other nine students. Each of the student Justices will study their assigned Justice and ask questions, decide the case and write an opinion as they believe their assigned Justice would. Once the Supreme Court issues its decision in the case, the instructors will schedule a follow up discussion to compare the Court's decision with the one the students reached.

Requirements/Evaluation:  Paper(s) or report(s); Presentation(s); Performance(s)

Prerequisites: An interest in the important and increasingly controversial role the Supreme Court has in the nation's political, social, legal and institutional development.

Enrollment Limit: 13

Enrollment Preferences: Based on class seniority.

Expected Class Size: NA

Grading: pass/fail only

Unit Notes: Mr. Groban is a former Special Assistant U.S. Attorney for the Southern District of New York and has over 45 years' experience litigating constitutional and other issues in state and federal courts.

Materials/Lab Fee: $100
This course is cross-listed and the prefixes carry the following divisional credit:

PSCI 28  (W)  Shakespeare and the Law in the Movies

This course will begin with an analysis of the social, political and, most importantly, religious framework of the Elizabethan world into which Shakespeare was born in 1564. We will examine the development of the English common law from its earliest origins in medieval times through Shakespeare's day and then analyze the relationship of a number of his early history plays to the Elizabethan concept of law and social order. We will consider several additional plays, including but not limited to, *The Merchant of Venice*, *A Midsummer Night's Dream*, *The Winter's Tale*, *Julius Caesar*, *Hamlet*, and *Measure for Measure*, to learn how Shakespeare used the law and legal principles in those works. Among the questions to be examined are how faithful was he to the law as he understood it? What dramatic licenses did he take? What did his use of the law tell us about Shakespeare the playwright and the dramatist? Film clips from Royal Shakespeare Company productions of the trial scenes in several of the plays listed above will be utilized to demonstrate the legal principles under discussion. In addition, we will take up the infamous "Authorship Question" much beloved by under-employed PhD. candidates. Was William Shakespeare of Stratford-upon-Avon the Author of the Plays, a man all but unknown outside of Oxfordshire, obscure, almost an historical nonperson, who could not even spell his own name the same way on any page of his last will and testament? Or was the true Author one of several much more prominent Elizabethans, who by birth, education and experience far outshone the Stratfordian and who had every compelling reason to keep his (or her...!) Authorship a secret? We will examine carefully all the evidence to reach a fair and just conclusion, and in the last class I will reveal for the first time in history to a mathematical certainty who was the real Author of the Plays.

We will also meet with Allyn Burrows, artistic director of Shakespeare and Co, Lennox, MA

Requirements/Evaluation:  Presentation(s); Performance(s)

Prerequisites: None except a willingness to read carefully the trial scene portions of the plays assigned and then participate enthusiastically in the ensuing class discussion about Shakespeare's use of the law as constrained by the requirements of the stage.

Enrollment Limit:  10

Enrollment Preferences: Seniors before juniors before sophomores before first years

Expected Class Size:  NA

Grading:  pass/fail only

Unit Notes: Philip R. McKnight, Esq., Williams 1965, J.D., 1968, University of Chicago Law School, trial and appellate attorney in New York, Connecticut and Europe. Adjunct Professor, Williams College and the Massachusetts College of Liberal Arts, 2005-

PSCI 34 Jedi Training - Ethical Martial Arts for Scholar Athletes

Most martial arts in the public consciousness - in movies and on TV - cater to our most violent instincts, and while cinematic carnage may offer a useful catharsis for many viewers, it does not offer much one could copy in real life without getting, justifiably, arrested. While many of the victorious protagonists in such movies and tv shows portray fighting as a last resort, there is typically no more noble alternative offered by way of a character in the narrative who prevails without violence. A notable exception, of course, are the peaceful warrior archetypes known as Jedi - a mystical knighthood order in the fictional Star Wars universe trained to guard peace and justice and specially attuned to the energy that unites all things. This course contends that the actual martial art of Aikido, "the Way of Peace", is as close as we can get to the training that would have been given to the Jedi a long time ago in a galaxy far far away. Aikido is, like George Lucas's fictional Jedi, derived directly from the ways of the Japanese Samurai. Aikido blends Jujutsu body techniques with Kenjutsu sword work, and weaves them together with the ethical premise that resolving conflict works better when you don't hurt the other person. In practical terms, there are no kicks and no punches, and it looks rather like dancing with someone who doesn't know they want to dance with you. Two hours of Aikido training each day will improve each student's strength, balance, posture, flexibility, and confidence. Training will also include exercises to address mind-body integration, leadership presence, authenticity, and relaxation techniques. Everyone will also learn how to throw their friends across the room. 25% of training time will be devoted to wooden sword, staff, and dagger techniques. Students will also meet with the instructor once or twice a week to cover philosophical elements central to aikido practice and to discuss their individual projects.

Requirements/Evaluation: Paper(s) or report(s); Performance(s); Creative project(s); Other: Project options are fairly flexible, but should entail the equivalent effort of a good 10-page paper

Prerequisites: same physician's approval on file as the school requires to participate on sports teams. In Aikido women train as equals to men. Students do not have to be great athletes - they just have to enjoy physical activity.

Enrollment Limit: 20
Enrollment Preferences: questionnaire
Expected Class Size: NA
Grading:

Unit Notes: Robert Kent '84 holds a 4th degree black belt in Aikido, and an MA in Philosophy, writing his thesis on the Ethics of Authenticity. He is President of Aiki Extensions, which brings the strategic insights and practical wisdom of Aikido into the world.

Materials/Lab Fee: $95

PSCI 99 (W) Independent Study: Political Science

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

Class Format: independent study
Grading: pass/fail only
Not offered current academic year
PSYCHOLOGY

(Div III, with some exceptions as noted in course descriptions)

Chair: Professor Noah Sandstrom

- Victor A. Cazares, Assistant Professor of Psychology; affiliated with: Psychology, Neuroscience
- Jeremy D. Cone, Associate Professor of Psychology
- Eliza L Congdon, Assistant Professor of Psychology
- Rebecca J. Crochiere, Assistant Professor of Psychology
- Susan L. Engel, Senior Lecturer in Psychology; Senior Faculty Fellow, Rice Center for Teaching; The Class of 1959 Director of Program in Teaching
- Yunshu Fan, Visiting Assistant Professor of Psychology
- Steven Fein, Professor of Psychology
- Alex Flores, Assistant Professor of Psychology
- Cynthia Guo, Visiting Assistant Professor of Psychology
- Amie A. Hane, Professor of Psychology; affiliated with: Psychology, Public Health, Neuroscience
- Nicole T. Harrington, Visiting Assistant Professor of Psychology
- Kris N. Kirby, Professor of Psychology
- Nate Kornell, Professor of Psychology, Chair of Cognitive Science Program; affiliated with: Psychology, Cognitive Science
- Jennifer McQuaid, Visiting Lecturer in Psychology
- Shivon A. Robinson, Assistant Professor of Psychology; affiliated with: Psychology, Neuroscience
- Marlene J. Sandstrom, Hales Professor of Psychology
- Noah J. Sandstrom, Chair and Professor of Psychology; affiliated with: Psychology, Neuroscience
- Kenneth K. Savitsky, Professor of Psychology
- Madison Sewell, Visiting Assistant Professor of Psychology
- Catherine B. Stroud, Professor of Psychology

MAJOR

For the degree in Psychology, students must complete a minimum of nine courses as outlined below:

PSYC 101 Introductory Psychology
PSYC 201 Experimentation and Statistics

Three 200-level courses from the list below:

COGS/PHIL/PSYC 222 Minds, Brains, and Intelligent Behavior: An Introduction to Cognitive Science
NSCI 201/BIOL 212/PSYC 212 Neuroscience
PSYC 221 Cognitive Psychology
PSYC 232 Developmental Psychology
PSYC 242 Social Psychology
PSYC 252 Psychological Disorders
PSYC 272 Psychology of Education
Either PSYC 221 or 222, but not both, can count towards the three required 200-level courses.

Three 300-level courses from at least two of the areas listed below:

- Area 1: Behavioral Neuroscience (courses with middle digit 1)
- Area 2: Cognitive Psychology (courses with middle digit 2)
- Area 3: Developmental Psychology (courses with middle digit 3)
- Area 4: Social Psychology (courses with middle digit 4)
- Area 5: Clinical Psychology (courses with middle digit 5)
- Area 6: Other/Interdisciplinary Psychology (courses with middle digit 6)
- Area 7: Educational Psychology (courses with middle digit 7)

At least one of these courses must be from among those carrying the format designation Empirical Lab Course.

One 400-level Psychology course.

Students who place out of Psychology 101 are still required to take nine courses to complete the major.

The department recommends that students take Psychology 201 in their sophomore year. The department requires that 201 be completed by the end of the junior year.

**COURSE NUMBERING RATIONALE**

As is the case in all departments, the first digit of a Psychology course number indicates the relative level of the course. Where appropriate, the second digit corresponds to the Areas listed above.

**THE DEGREE WITH HONORS IN PSYCHOLOGY**

Students who are candidates for honors need take only two 300-level courses from two different areas, but they must enroll in Psychology 493-W31-494 and write a thesis based on original empirical work. Presentation of a thesis, however, should not be interpreted as a guarantee of a degree with honors. Guidelines for pursuing the degree with honors are available from the department.

**STUDY ABROAD**

With some advance planning, studying abroad (especially for one semester) can easily be worked into the psychology major. To facilitate this, we recommend that students:

- Meet with the Study Abroad advisor as soon as they decide that they are interested in studying abroad.
- Take PSYC 201 (Experimentation and Statistics) in the sophomore year.

Think ahead to the 300-level courses they are interested in taking so that they can fulfill the 200-level prerequisites before they go away or, if possible, while they are away. In our experience, study abroad programs in the following places are most likely to offer psychology courses: England, Ireland, Scotland, Spain, Australia, New Zealand, Hawaii, and Scandinavia. Students should procure the descriptions of the psychology courses they are considering taking and bring them to their meeting with the advisor.

There are some costs to studying away, particularly for the year. This limits students’ opportunity to choose the particular 300-level courses they would like to take and they must sometimes settle for those that are open, those which happen to be offered, or those for which they have the prerequisites, once they return in their senior year. Many students who are keen on psychology begin doing research with professors during their junior year, and for some this leads to an honors thesis in the senior year, summer research, etc. If you are going away for the entire year and do not make such connections with a professor ahead of time (i.e., before you go), you may lose out on some of these opportunities to deepen your involvement in the major on campus. On the other hand, studying abroad can be an invaluable learning experience, so you need to think carefully, in consultation with your advisor and/or the Study Abroad advisor, about the costs and benefits of it. Very occasionally, a student who just begins taking psychology courses late in the sophomore year and wishes to go abroad for the year finds that they are not able to do both, or is restricted in the choice of study-abroad programs.

**FAQ**

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

**Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

**What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**
Course title and description, complete syllabus, including readings/assignments, and exams or other written work. In addition, the course content cannot overlap substantially with material already taken at Williams.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. Students are required to take at least one empirical project course (which includes a lab component and data collection). This must be completed at Williams.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. The empirical project course must be completed here (see answer to previous question above). Other major requirements that must be completed here are the Senior Seminar and our Statistics and Experimentation course (PSYC 201). On very rare occasions students have been given credit for PSYC 201 taken elsewhere, but this is extremely unlikely. Most institutions break the material up into two different courses, or don't include all of the components that we feel are an important foundation for the major.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. Students should be sure that have taken PSYC 201 PRIOR to their senior year at the latest. It is best to take it during sophomore year whenever possible.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

There have been instances.

PSYC 100 (W) Intensive: Social Psychology
A survey of theory and research in social psychology. Topics include conformity, group dynamics, stereotyping and prejudice, aggression, altruism, attraction and love, the self, social perception, attitudes and attitude change, and cultural psychology. Applications in areas such as advertising, law, economics and business, and politics will also be discussed.

Requirements/Evaluation: two in-class exams, one paper (5 pages), and a final exam
Prerequisites: permission of a dean
Enrollment Limit: 25
Enrollment Preferences: students who need to make up a deficiency
Expected Class Size: NA
Grading: no pass/fail option, no fifth course option
Unit Notes: This course is designed to count for both full semester and Winter Study credit. Once a dean approves enrollment, the Registrar’s Office will register students in PSYC 100 and PSYC 40.
Distributions: (D3)
Not offered current academic year

PSYC 101 (F)(S) Introductory Psychology
An introduction to the major subfields of psychology: behavioral neuroscience, cognitive, developmental, social, and psychological disorders and treatment. The course aims to acquaint students with the major methods, theoretical points of view, and findings of each subfield. Important concepts are exemplified by a study of selected topics and issues within each of these areas.

Class Format: Lectures will be presented during the scheduled time. To complement the lectures, students will participate in two short discussions/laboratory experiences that will be offered at a variety of times outside the lecture period.

Requirements/Evaluation: five unit quizzes, a final exam, and two brief lab reports (or related brief reports, depending on the availability of labs)
Prerequisites: none
Enrollment Limit: 180
Enrollment Preferences: First-year students and sophomores
Expected Class Size: 180
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)
Attributes: NSCI Required Courses TEAC Teaching Sequence Courses

sandstr Smith

PSYC 127  (S)  The Psychology of Success  (WS)
This course will examine the psychology of success from a scientific perspective. After considering what success means, we will examine two broad 
influences on success: personality (e.g., intelligence, grit, and mental illness) and environment (e.g., schooling, parenting, and practice). We will talk 
about barriers to success, the search for success, and the cost of searching for success. Each week we will read a book or a set of articles (or possibly 
documentaries or podcasts). One partner will write a paper and the other will write a response. This course is not meant to make you more successful; 
the goal is to think critically about important issues, use evidence to make arguments, be skeptical, and practice writing and speaking in a convincing 
and engaging way.
Requirements/Evaluation: written work and discussion of that work; a five-page paper will be due every other week and a one-page response will be 
required other weeks
Prerequisites: none
Enrollment Limit: 10
Enrollment Preferences: highest priority will be given to incoming first-years followed by rising sophomores
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D2)  (WS)
Writing Skills Notes: Students will submit a paper every other week (minimum 5 pages), and in alternate weeks they will write a response to their 
partner’s paper. The instructor will provide detailed feedback on the papers.
Not offered current academic year

PSYC 201  (F)(S)  Experimentation and Statistics  (QFR)
An introduction to the basic principles of research in psychology. We focus on how to design and execute experiments, analyze and interpret results, 
and write research reports. Students conduct a series of research studies in different areas of psychology that illustrate basic designs and methods of 
analysis. You must register for lab and lecture with the same instructor.
Requirements/Evaluation: research reports, exams, and problem sets
Prerequisites: PSYC 101; not open to first-year students except with permission of instructor
Enrollment Limit: 16
Enrollment Preferences: Psychology majors
Expected Class Size: 16
Grading: no pass/fail option, yes fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: This course has problem sets focused on experimental design and quantitative data analysis. Students will 
help design and conduct experiments, analyze the data, and report their findings.
Attributes: COGS Related Courses PHLH Statistics Courses
PSYC 212 (F) Neuroscience

Cross-listings: BIOL 212 / NSCI 201

Secondary Cross-listing

This course is designed to give an overview of the field of neuroscience progressing from a molecular level onwards to individual neurons, neural circuits, and ultimately regulated output behaviors of the nervous system. Topics include a survey of the structure and function of the nervous system, basic neurophysiology and neurochemistry, development, learning and memory, sensory and motor systems, and clinical disorders. Throughout the course, many examples from current research in neuroscience are used to illustrate the concepts being considered. The lab portion of the course will emphasize a) practical hands-on exercises that amplify the material presented in class; b) interpreting and analyzing data; c) presenting the results in written form and placing them in the context of published work; and d) reading and critiquing scientific papers.

Requirements/Evaluation: Evaluation will be based on participation in discussion groups, exercises, problem sets and quizzes performed in small groups, lab reports, midterm exams, and a final exam.

Prerequisites: PSYC 101 or BIOL 101; open to first-year students only with permission of instructor

Enrollment Limit: 72

Enrollment Preferences: Sophomores and Biology and Psychology majors

Expected Class Size: 72

Grading: yes pass/fail option, no fifth course option

Distributions: (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

Attributes: COGS Interdepartmental Electives NSCI Required Courses PSYC 200-level Courses

PSYC 221 (S) Cognitive Psychology

This course surveys research on human cognition. Topics include perception, attention, learning, memory, categorization, language, judgment, decision making, reasoning, and problem solving.
PSYC 222 (F) Minds, Brains, and Intelligent Behavior: An Introduction to Cognitive Science

Cross-listings: PHIL 222 / COGS 222

Secondary Cross-listing
This course will emphasize interdisciplinary approaches to the study of intelligent systems, both natural and artificial. Cognitive science synthesizes research from cognitive psychology, computer science, linguistics, neuroscience, and contemporary philosophy. Special attention will be given to the philosophical foundations of cognitive science, representation and computation in symbolic and connectionist architectures, concept acquisition, problem solving, perception, language, semantics, reasoning, and artificial intelligence.

Requirements/Evaluation: midterm and final exams, and weekly exercises
Prerequisites: PSYC 101 or any PHIL course or CSCI 134 or permission of instructor; background in more than one of these is recommended.
Enrollment Limit: 25
Enrollment Preferences: sophomore and first-year students, with additional preference given to students who satisfy more of the prerequisites. Do not contact the instructor to plead for special enrollment consideration.
Expected Class Size: 25
Grading: no pass/fail option, no fifth course option
Distributions: (D3)

Fall 2024
LEC Section: 01 TR 11:20 am - 12:35 pm Joseph L. Cruz

PSYC 232 (F)(S) Developmental Psychology
An introduction to the study of human growth and development from conception through emerging adulthood. Topics for discussion include prenatal and infant development, perceptual and motor development, language acquisition, cognitive development, and social and emotional development. These topics form the basis for a discussion of the major theories of human development, including those about early experience, neural plasticity, dynamic systems, information processing, social learning, attachment, parenting, and family systems.

Requirements/Evaluation: attendance and active class participation, 3 exams (2 midterms and final), and regular writing assignments
Prerequisites: PSYC 101
Enrollment Limit: 50
Enrollment Preferences: Preference will be given to sophomores and junior psychology majors and senior psychology majors who still need to fulfill a 200-level requirement.
Expected Class Size: 50
Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

PSYC 272 (S) Psychology of Education

This course introduces students to a broad range of theories and research on education. What can developmental research tell us about how children learn? What models of teaching work best, and for what purposes? How do we measure the success of various education practices? What is the best way to describe the psychological processes by which children gain information and expertise? What accounts for individual differences in learning, and how do teachers (and schools) address these individual needs? How do social and economic factors shape teaching practices and the educational experiences of individual students? The course will draw from a wide range of literature (research, theory, and first-hand accounts) to consider key questions in the psychology of education. Upon completion of the course, students should be familiar with central issues in pre-college education and know how educational research and the practice of teaching affect one another.

Class Format: discussion

Requirements/Evaluation: two exams and a final project

Prerequisites: PSYC 101

Enrollment Limit: 50

Enrollment Preferences: Psychology majors and those who plan to become teachers

Expected Class Size: 50

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

PSYC 312 (S) From Order to Disorder(s): The Role of Genes & the Environment in Psychopathology

Cross-listings: NSCI 322

Primary Cross-listing

This course examines how experimental methods in neuroscience can be used to understand the role of nature (genes) and nurture (the environment) in shaping the brain and behavior. In particular, we will explore how neuroscience informs our understanding of psychiatric disorders such as anxiety, depression, and schizophrenia. We will investigate the biological underpinning of these disorders as well as their treatments. Readings will include human studies as well as work based on animal models. Topics will include: the ways in which environmental and genetic factors shape risk and resiliency in the context of psychiatric disease, the neural circuits and peripheral systems that contribute to psychopathology, and the mechanisms through which interventions may act. In the laboratory component of the course, students will gain hands-on experience in using animal models to study complex behavior and their associated neural mechanisms.

Requirements/Evaluation: class presentations, participation in discussions, project proposal (5 pages), empirical project paper (5-7 pages), poster and poster presentation, participation in all phases of the empirical project research experience (experiment design, data collection, data graphing, data analysis) including oral and written presentation of key findings.

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201)

Enrollment Limit: 16

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

PSYC 313  (F)  Opioids and the Opioid Crisis: The Neuroscience Behind an Epidemic
Cross-listings:  NSCI 313

Primary Cross-listing
Opioid misuse, including addiction, has emerged as a major health epidemic in the United States. This course will explore the science of opioids as well as the historical and societal context surrounding their use. We will examine the neurobiological mechanisms through which opioids interact with pain pathways and reward circuits within the brain and we will explore how changes in these systems contribute to opioid tolerance, dependence, and addiction. We will consider how genetic, environmental and behavioral factors can powerfully influence these processes. Finally, we will consider alternative approaches to pain management as well as interventions for the treatment of opioid use disorder. Critical evaluation of peer-reviewed primary literature from animal and human studies will serve as a foundation for class discussions. Evaluation will be based on class presentations, participation in discussions and written assignments.

Requirements/Evaluation:  class presentations, participation in discussions, three position papers (approximately 2 pages double-spaced), an APA style literature review (approximately 5-7 pages double-spaced), a research proposal (approximately 5-7 pages double spaced) and an oral presentation of the project proposal.

Prerequisites:  PSYC 212 (same as BIOL 212 or NSCI 201)

Enrollment Limit:  19

Enrollment Preferences:  Psychology majors and Neuroscience concentrators

Expected Class Size:  19

Grading:  no pass/fail option,  no fifth course option

PSYC 314  (S)  Learning and Memory in Health and Disease
Cross-listings:  NSCI 314

Primary Cross-listing
This class will examine the neuroscientific basis of different types of learning and memory (such as declarative memory, motor memory, and associative memory), including the brain circuits, cellular mechanisms, and signaling pathways that mediate these different processes. In addition, we will explore how these processes can be disrupted in different diseases and disorders (such as Alzheimer's disease or post-traumatic stress disorder) and we will discuss the strategies and targets for therapeutic intervention. Class meetings will include a mix of lectures, discussions, and student presentations. Critical evaluation of peer-reviewed studies involving both human and animal models will serve as a foundation for class discussions. Working in small teams, students will also design and conduct an empirical project related to the course material.

Requirements/Evaluation:  In-class presentations and participation in discussions, completion of an empirical research project which will include a project proposal (3-5 pages), data collection and analysis, and a final report (10-20 pages) along with a poster presentation.

Prerequisites:  PSYC 212/NSCI 201/BIOL 212

Enrollment Limit:  16

Enrollment Preferences:  Psychology majors and Neuroscience concentrators

Expected Class Size:  16

Grading:  no pass/fail option,  no fifth course option

Distributions:  (D3)

This course is cross-listed and the prefixes carry the following divisional credit:
NSCI 314(D3) PSYC 314(D3)
PSYC 316 (S) Neuroscience of Decision-Making

Cross-listings: NSCI 316

Primary Cross-listing

Humans are constantly making decisions: big and small, conscious and unconscious. This seminar will explore different aspects of the decision-making process, including (1) the algorithms for decision-making, (2) the neurological basis of decision-making and (3) the psychological, social, and physiological factors that influence our decision-making. We will examine how scientific approaches can help us understand complex social issues related to decision making. For example: how can stereotypes be understood as a failure in belief updating; how does confirmation bias lead to partisanship; and how to think of xenophobia from the "explore-exploit trade-off" perspective? In this course, we will explore how the brain and its neural networks contribute to these phenomena. The laboratory component of the course will introduce the research tools for studying different aspects of decision-making, including experimental paradigms, computational models and methods of analysis. Students will apply these tools to collaboratively design and conduct behavioral experiments and will analyze neural recording data to understand the relationship between neural activity and decision-making behaviors. Over the course of the semester, students will have the opportunity to develop skills in computer programming to better understand computational models and data analysis.

Requirements/Evaluation: Class presentations, participation in discussions, keeping a decision journal, short response papers and laboratory assignments, participation and presentation of empirical laboratory studies.

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201) or permission of instructor.

Enrollment Limit: 16

Enrollment Preferences: Psychology majors, Neuroscience concentrators, and Cognitive Science concentrators

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

---

PSYC 319 (S) Neuroethics

Cross-listings: STS 319 / NSCI 319

Primary Cross-listing

Neuroscience studies the brain and mind, and thereby some of the most profound aspects of human existence. In the last decade, advances in our understanding of brain function and in our ability to manipulate brain function have raised significant ethical challenges. This tutorial will explore a variety of important neuroethical questions. Potential topics will include pharmacological manipulation of "abnormal" personality; the use of "cosmetic pharmacology" to enhance cognition; the use of brain imaging to detect deception or to understand the ability, personality or vulnerability of an individual; the relationship between brain activity and consciousness; manipulation of memories; the neuroscience of morality and decision making. In addition to exploring these and other ethical issues, we will explore the basic science underlying them.

Requirements/Evaluation: six 5-page position papers and five 2-page response papers as well as participation in discussions

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201); or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
Writing Skills Notes: In alternating weeks, each student in a tutorial pair will write a 5-page essay based on the assigned readings. Essays will be discussed during tutorial meetings and written feedback from the professor will be provided for each essay. At the end of the semester, students will choose one of their prior essays to revise as their final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

TUT Section: T1    TBA    Noah J. Sandstrom

PSYC 326 (S)  Choice and Decision Making

Despite the impression many people have, we really are amazingly good decision makers most of the time. Even so, we do make mistakes; occasionally we even make choices that we know are likely to turn out badly for us. In this course we will survey theoretical and experimental approaches to understanding both our strengths and weaknesses as decision makers. Topics include adaptive rationality, the debate over cognitive biases, fast and frugal heuristics, impulsivity and self-control, addictions and bad habits, paternalism, and moral decision making.

Requirements/Evaluation: problem sets, essay papers, and class participation
Prerequisites: PSYC 221 or 222 or permission of instructor; permission is typically given to students who have successfully completed ECON 110
Enrollment Limit: 19
Enrollment Preferences: senior Psychology majors who need the course to fulfill the major
Expected Class Size: 19
Grading: no pass/fail option, yes fifth course option
Distributions: (D3)

PSYC 332 (S)  Children's Mathematical Thinking and Learning
Are babies statistical experts? Will I ever be good at calculus? What are we born with and what do we learn? Before children are ever taught formal mathematics in a classroom, they are confronted with situations where they must use their informal understanding of geometry, space, and number to successfully navigate their environments. In this course we read and discuss both foundational and cutting-edge articles from neuroscience, cognitive science, education, and psychology to understand how humans bridge this gap between the informal and formal mathematical worlds. We will also tackle questions such as: How do culture and language affect numerical understanding? What are the sources of children's mathematical misconceptions? What are the effects of early environmental input or input deprivation on mathematical development? What do we know about gender differences in math achievement? How do stereotypes, prejudice, and math anxiety affect math performance? For your laboratory component, you will work with a small group of other students to develop an original research project that tests a specific hypothesis about children's mathematical thinking and learning. Data will be collected either online or in community schools, with the permission of parents, teachers, and children. Your results will be written-up in your final paper, which will be in the style of an empirical journal article.

Class Format: community-based data collection in local schools
Requirements/Evaluation: class participation, discussion leader, weekly open-notes reading quizzes, individual 12- to 15-page final paper based on empirical group research project
Prerequisites: PSYC 201 and PSYC 232 or permission of the instructor
Enrollment Limit: 16
Enrollment Preferences: Psychology majors, upperclassmen, students with a demonstrated interest in the course material
Expected Class Size: 16
Grading: no pass/fail option, no fifth course option
Distributions: (D3)
Attributes: PSYC Area 3 - Developmental Psychology PSYC Empirical Lab Course TEAC Teaching Sequence Courses

PSYC 335  (F) Early Experience and the Developing Infant
The period from conception to age three is marked by impressive rapidity in development and the plasticity of the developing brain affords both fetus and infant an exquisite sensitivity to context. This course delves into the literature that highlights the dynamic interactions between the developing fetus/infant and the environment. The course readings span a range of disciplines and cover a diversity of hot topics in the study of prenatal and infant development, including empirical research drawn from the developmental, neuroscience, psychopathology, and pediatric literatures.
Requirements/Evaluation: active class participation, weekly three-page papers, two oral presentations (20 minutes each and using PowerPoint), a midterm, and one final 12-15 page paper
Prerequisites: PSYC 201, PSYC 212, and PSYC 232 or permission of instructor

PSYC 336  (S) Identity Development in Adolescence and Young Adulthood
Who am I? How do others see me, and how do I want them to see me? What are my core values? Who do I want to become? These questions
underlie what some theorists consider to be the fundamental developmental task of adolescence and young adulthood: Identity development. In this course, we will read and discuss the theoretical and empirical literature to understand how adolescents and young adults develop a unique, multifaceted sense of self. We'll explore how the biological, cognitive, and social transitions of this period prompt the development of identity. We'll also emphasize the role of family, peers, school, social media, and youths' own agency in informing their identity development. Special attention will be paid to the topics of gender identity, racial and ethnic identity, sexual orientation, and personality.

Requirements/Evaluation: class participation, serving as discussion leader several times during the semester, one-page response papers due every class, one 5-7 page essay, individual 10-12 page research proposals, research proposal presentation

Prerequisites: PSYC 232 or permission of the instructor

Enrollment Limit: 19

Enrollment Preferences: Psychology majors

PSYC 338 (S) Inquiry, Invention and Ideas

Children tinker, explore and create, but some more than others, and under some conditions more than others. What leads children to investigate, invent and build their own ideas? We will examine the development of curiosity, invention, and the ability to have or construct an idea. We will also look at what accounts for individual differences between children, including the role of intelligence, creativity, social cues, and opportunity. We will look at how these processes unfold at home and in school, and discuss the educational implications of the research we read, and the research we conduct.

Requirements/Evaluation: three 3- to 5-page thought papers, one empirical project, and a final journal-style paper reporting on your research.

Prerequisites: PSYC 101, and PSYC 232 or PSYC 272, or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: preference given to Psychology majors

PSYC 341 (F) The Social Psychology of Prejudice

Cross-listings: WGSS 339

Primary Cross-listing

This course will examine social psychological theories and research that are relevant to the understanding of stereotypes, prejudice, and discrimination. We will take a variety of social psychological perspectives, emphasizing sociocultural, cognitive, personality, or motivational explanations. We will examine the impact that stereotypes and prejudice have on people’s perceptions of and behaviors toward particular groups or group members and will explore a variety of factors that tend to exacerbate or weaken this impact. We also will consider sources of prejudice and processes through which it is maintained, strengthened, or revised. In addition, we will examine some of the effects that stereotypes, prejudice, and discrimination can have on members of stereotyped groups, as well as some implications of the social psychological research findings for issues such as education, sports, and business and government policies. A major component of this course will be the examination of classic and ongoing empirical research.

Class Format: empirical lab course

Requirements/Evaluation: weekly brief papers, oral reports, two longer papers
Prerequisites: PSYC 201 and 242
Enrollment Limit: 16
Enrollment Preferences: senior, then junior Psychology majors

Course TEAC Related Courses

PSYC 342  (F)  Social Judgment
This course focuses on how people make judgments and decisions in their social lives and why they are sometimes biased and irrational in their choices. We will place a strong emphasis on exploring how ideas from the judgment and decision-making literature can aid in our understanding of social psychological phenomena, including planning for the future, understanding other people, and resolving interpersonal conflicts. We will also place an emphasis on people's judgments and decisions as they pertain to their happiness and well-being, exploring how concepts in the judgment and decision-making literature can help us to understand why certain types of outcomes are more satisfying than others and why people sometimes choose in ways that fail to maximize their well-being. As we explore these questions, we will survey a variety of methods and perspectives, ranging from classic social psychological experiments to techniques imported from behavioral economics and cognitive psychology.
Requirements/Evaluation: a series of short papers; written and oral report of a research proposal
Prerequisites: PSYC 242 and PSYC 201, or permission of instructor
Enrollment Limit: 19
Enrollment Preferences: Psychology majors
Expected Class Size: 19
Grading: no pass/fail option, no fifth course option
Distributions: (D3)
Attributes: PSYC Area 4 - Social Psychology

PSYC 344  (S)  Contemporary Social Psychology
This course surveys recent and cutting-edge findings published in social psychology in the last few years—research that builds on old classics, as well as research that opens up new lines of inquiry. We'll consider the latest research in each of the major subareas of social psychology (social influence, social cognition, and social relations). We'll also consider recent applications of social psychological thinking in law, business, health, and well-being. Throughout the course, we'll think about not just new ideas and new content areas but also about new methods and scientific approaches, modern data analytic strategies, and novel data sources (such as behavior on social media or linguistic analyses of text).
Requirements/Evaluation: a series of papers; written and oral reports of research
Prerequisites: PSYC 242
Enrollment Limit: 16
Enrollment Preferences: Psychology majors
Expected Class Size: 16
PSYC 345  (S) Psychology and Politics
This course will explore the field of political psychology primarily from a social psychological perspective, though also from a political science perspective. The goal of this course is to develop an understanding of how people's personalities, identities, and social contexts shape their political attitudes and behavior. Topics will include polarization, partisanship, political engagement, authoritarianism and belief in conspiracy theories, stereotyping and prejudice, media effects, and emotion. Throughout the course, we will consider the relationship between psychology and our political institutions. We will evaluate how psychology can be used to help our institutions better embody democratic values and, conversely, how it has been used to further anti-democratic actions as well.

Requirements/Evaluation: Class participation, weekly reaction papers on course readings (1-2 pages), constructive participation in the empirical research project, independent write-up of the research project (10-20 pages), poster/oral presentation of the project.

Prerequisites: PSYC 201 and PSYC 242 or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

PSYC 346  (F) Environmental Psychology
Cross-listings: ENVI 346

Primary Cross-listing

This is a course on contemporary social psychology as it pertains to the natural environment. Our two primary questions in this course are: (1) how can research and theory in social psychology help us understand the ways in which people engage with threats to the natural environment?, and (2) how can social psychology help us encourage environmentally responsible behavior and sustainable practices? Because human choice and behavior play such an important role in environmental problems, a consideration of human psychology may therefore be an important part of environmental solutions.

Requirements/Evaluation: a series of papers, two essay exams, written and oral reports of research

Prerequisites: PSYC 242 recommended, PSYC 201, or a comparable course in statistics and research methodology, is also recommended.

Enrollment Limit: 19

Enrollment Preferences: Psychology majors, Environmental Studies majors, and Environmental Studies concentrators

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 346(D3) PSYC 346(D3)
**PSYC 351  (F) Clinical Neuropsychology**

Clinical neuropsychology is a fascinating interdisciplinary subfield within clinical psychology that investigates the relationship between brain functions and behavior, including emotions and cognition. In this course, we will consider different cognitive functions, as well as an array of pediatric and adult neurological disorders, such as epilepsy, Parkinson's disease, stroke, and traumatic brain injury. Course goals include understanding the behavioral and cognitive characteristics associated with disorders and their underlying biology, how assessment tools are used in the diagnostic process, and how interventions may be implemented to improve function. To achieve these goals, we will discuss case studies and research articles, and we will take a hands-on approach by learning how to administer and interpret neuropsychological tests, paying particular attention to their strengths, limitations, and generalizability. We will also explore how neuropsychological test results can inform clinical interventions. Throughout these discussions, we will consider the ethical issues associated with neuropsychological testing and intervention.

**Class Format:** Class will only meet 2 of the 3 possible days each week, determined by the instructor.

**Requirements/Evaluation:** Attendance and active participation in class and online discussions, three 2-page papers with peer review, one group project/presentation, one final case report (5-7 pages)

**Prerequisites:** PSYC 201 and PSYC 252 or permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Attributes:** NSCI Group C Electives  PSYC Area 5 - Clinical Psychology  Not offered current academic year

**PSYC 353  (F) Family and School-Based Interventions**

The development of child psychopathology is influenced by a complex interplay of factors related to the individual (e.g., genetic risk), the family (e.g., instances of abuse), the school environment (e.g., incidents of bullying), and the broader context (e.g., socioeconomic factors like poverty). In comparison to adults, the manifestation of symptoms in children and adolescents is more directly linked to their immediate surroundings. Consequently, interventions primarily centered around the family and school settings are commonly employed in the prevention and treatment of psychological and behavioral issues. Throughout this course, we will delve into the associations between risk and protective factors from various settings and the emergence of externalizing and internalizing symptoms in children and adolescents. A comprehensive examination of the role of parenting and family dynamics in the origins of disorders in children will be undertaken. Our discussions will also encompass a spectrum of practical and ethical considerations associated with working with children and families. The objectives of this course include gaining an enhanced understanding of crucial risk and protective factors, exploring how such knowledge can be applied at the individual, family, and population levels, and grasping the utilization of behavior analysis and case conceptualization as tools for crafting precise and effective interventions for children and adolescents. To accomplish these objectives, we will analyze case studies and research articles, adopting a hands-on approach to applying knowledge of risk and protective factors in both assessment and intervention design. Emphasis will be placed on addressing the myriad practical and ethical challenges linked to working with children and families during these discussions.

**Requirements/Evaluation:** Attendance and active participation in discussions, two 5-7 page written papers, and one group project/presentation.

**Prerequisites:** PSYC 201 and PSYC 252 or permission of instructor.

**Enrollment Limit:** 19

**Enrollment Preferences:** Psychology majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

**Attributes:** PSYC Area 5 - Clinical Psychology  TEAC Teaching Sequence Courses
PSYC 354  (F)  Health Psychology
In this course, students will contrast the traditional biomedical model of health with the biopsychosocial model of health with a goal of understanding how biological, psychological, and sociocultural factors influence health and well-being. We will explore psychological theory and research that targets health promotion, disease prevention, and management of chronic illness. Course readings will include empirical articles, excerpts from popular science books, and news/media articles on public health issues. Discussions will center on using the biopsychosocial model to better understand health processes (e.g., stress, substance use, physical inactivity) and outcomes (e.g., insomnia, diabetes, heart disease), with a special focus on health disparities among historically disadvantaged groups in the United States. Students also will learn about cognitive, behavioral, and mindfulness-based treatments ("behavioral medicine") that promote healthy behavior and the management of chronic illness/disease (e.g., pain, HIV/AIDS, cancer). All students will design and conduct an empirical research project based on the course material.

Requirements/Evaluation: class presentations, reading responses, participation in class discussions, completion of an empirical project, APA-style empirical paper (10-20 pages double-spaced) and poster/oral presentation of the empirical project.

Prerequisites: PSYC 201 and PSYC 252, or permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

Not offered current academic year

PSYC 355  (S)  Psychotherapy: Theory and Research
Psychotherapy is young. Barely 100 years old, it is a psychological endeavor that attempts to promote change and healing through social interaction. How does talking with a psychotherapist facilitate change -- emotionally, cognitively, behaviorally? How exactly does psychotherapy help people achieve relief from psychological disorders and other identified problems? In this course, we will study some of the key modalities of psychotherapy by examining the theories and scientific research that surround them. We will also examine the sociocultural and political contexts in which these approaches evolved. We will engage in close reading and critical analysis of primary source theoretical papers, the "raw data" (videotapes and transcripts) of therapy sessions, case studies, and contemporary empirical research on the outcomes and change processes of psychotherapy. Students will learn how to evaluate the efficacy claims of both standard and new therapies and about the mechanisms by which those therapies work. Current controversies in psychotherapy and psychotherapy research will be addressed and debated as well. All students will design and conduct an empirical research project based on the course material.

Requirements/Evaluation: attendance and active class participation, daily writing responses of 5-10 sentences related to course readings, 5 thought papers (2-3 pages in length), 2 small group oral presentations, and a 10-15 page final empirical project

Prerequisites: PSYC 201 and PSYC 252

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3)

Attributes: PSYC Area 5 - Clinical Psychology PSYC Empirical Lab Course
PSYC 356  (F)  Asylum: Understanding the Psychological Effects of Persecution, Trauma, and the Migration Experience

Asylum is a specific form of humanitarian relief granted to an individual who can legally establish a history of previous persecution, or fear of future persecution, on account of their race, religion, nationality, political opinion, or membership in a particular social group. What are the psychological effects of being physically and emotionally persecuted because of who you are, what you believe, and/or your identity? Using the framework of asylum, we will study the effects of persecution, loss, and displacement on mental health and well-being, and the psychological impacts of traumatic stress and of seeking asylum in the United States. Through close reading of empirical studies, case studies, narratives, and legal writing, we will consider the psychological outcomes most frequently reported by asylum seekers, as well as the effects of traumatic stress on attachment and interpersonal relationships, family functioning and the capacity for recovery and post-traumatic growth. We will explore various types of persecution (e.g., gender-based violence, gang-violence, political persecution, and family separation) and their global health context. Finally, we will examine the social determinants, legal frameworks, and social justice implications of therapeutic interventions and resettlement. Students will also explore the clinical literature on psychological outcomes and how this research is informing both psychotherapy and social service interventions in the US and humanitarian settings across the globe. Guest speakers will punctuate our time over the semester, so that students can understand the role of lawyers, clinicians (medical and psychological) and global mental health researchers in addressing issues of forced displacement.

Requirements/Evaluation:  Attendance and active participation, weekly reaction exercises (brief papers and presentations), and a final paper on an asylum-related topic of particular interest to the student.

Prerequisites:  PSYC 252 is encouraged but not required. Students who have not taken PSYC 252 are encouraged to contact the instructor.

Enrollment Limit:  19

Enrollment Preferences:  Psychology majors will have priority, but non-majors with interests in issues of asylum are encouraged to register.

Expected Class Size:  19

Grading:  no pass/fail option,  no fifth course option

PSYC 357  (F)  Clinical Psychology & Social Justice: Centering Marginalized Perspectives  (DPE)

In this course, students will evaluate the critical question of whether and how clinical psychology can address mental health disparities and promote social justice. Students will gain a substantive understanding of research and theory examining psychopathology, including historical perspectives, expression and conceptualization of psychopathology, etiological theories from varied disciplines, and intervention and prevention strategies. We will take a liberation psychology and intersectional approach to examine the ways in which various intersecting systems of oppression and privilege shape the mental health and lived experiences of individuals and communities. Throughout the course, we will center topics and people that have been epistemically excluded from the field of clinical psychology. Topics such as racism, discrimination, resistance, pride, collective care, and queer affirming interventions will be addressed and the voices of those with marginalized identities (for example, due to their race, ethnicity, gender identity, sexual orientation, immigration status) will be highlighted. Students will evaluate current research and theory with attention to bias, inequities, methodological rigor, and potential usefulness for promoting social justice, through prevention, intervention, and policy.

Requirements/Evaluation:  Course requirements include: a) reading empirical articles; b) participating in class discussions; c) completing daily assignments; d) a 2-page research proposal (double-spaced); e) conducting a research project in a small group; f) a short presentation on a student-selected topic and reading; and g) a final research paper based upon the small group research project (approximately 15 double-spaced pages).

Prerequisites:  PSYC 201. PSYC 252 recommended.

Enrollment Limit:  16

Enrollment Preferences:  Psychology majors

Expected Class Size:  16

Grading:  no pass/fail option,  yes fifth course option

Distributions:  (D3)  (DPE)

Difference, Power, and Equity Notes:  Students will examine how clinical psychology can address mental health disparities & promote social justice. To do so, students will: use scientific reasoning & quantitative skills to critically examine how intersecting systems of oppression and privilege shape
the mental health of individuals & communities; evaluate research and theory with attention to bias, inequities, and usefulness for promoting social
justice; and conduct a research project using socially just research practices.

PSYC 358  (S)  Developmental Psychopathology: Trajectories of Risk and Resilience

Why do some youth develop psychopathology in the face of adversity whereas others do not? How do we define psychological disorders in youth? Is
resilience a static trait, or can it be promoted? How do we prevent youth from developing psychopathology? In this course, students will address these
and other questions using a risk and resilience framework that examines the interactions among multiple risk and protective factors in the pathway to
psychopathology. Specifically, students will examine the interactions between individual characteristics (e.g., neurobiological, interpersonal, cognitive,
and emotional factors) and environmental contexts (e.g., family, school, peer, early adversity, poverty) in the development of risk and resiliency.
Application of etiological models and empirical findings to prevention and intervention approaches will be explored. Throughout the course, students
will evaluate current research based upon theory, methodological rigor, and clinical impact.

Requirements/Evaluation:  Evaluation will be based on oral participation, daily assignments, 1 presentation, and four 5-page position papers.
Prerequisites:  PSYC 252; PSYC 201 recommended
Enrollment Limit:  19
Enrollment Preferences:  Psychology majors and Public Health concentrators
Expected Class Size:  19
Grading:  no pass/fail option,  no fifth course option

PSYC 361  (F)  Nonviolence and Positive Psychology

In this course we will explore the theory and practice of nonviolence in the context of empirical research in Positive Psychology. Nonviolence refers to
choosing not to threaten or injure others, and its practice requires cultivating personal qualities that enable such a choice. Positive Psychology refers to
the scientific study of those personal qualities that enable people to live happy and fulfilling lives. We will begin by studying the history and moral
theories of nonviolence. Using research from across the subdisciplines of psychology, we will then evaluate the empirical claims of those theories
regarding psychological benefits of nonviolence to the practitioner, attitude change in the adversary, and effects on the larger community. An important
focus of the course will be to critically assess the research methods and data analyses used in these studies. Topics will include self-control, gratitude,
empathy, forgiveness, tolerance, courage, aggression, resisting violent assault, and civil disobedience.

Class Format:  Class meetings will be primarily discussion-based
Requirements/Evaluation:  Class attendance and participation, discussion leadership, literature searches for relevant empirical research papers,
short papers in the form of research summaries, and a final paper in the form of an empirical research proposal.
Prerequisites:  Any 200-level course in PSYC or permission of instructor
Enrollment Limit:  19
Enrollment Preferences:  Psychology majors
Expected Class Size:  19
Grading:  no pass/fail option,  yes fifth course option
Distributions:  (D3)
Attributes:  PSYC Area 6 - Other/Interdisciplinary Psychology

Not offered current academic year
PSYC 362  (F)  Cultural Psychology

What is culture? How does culture influence the way we think and behave? How does it affect the neuro underpinnings in our brain? How is culture represented, impacted, and transformed in the digital age? This course will introduce you to the field of cultural psychology, and explore the role of cultural meanings, practices, and institutions on human psychology. We will discuss how culture emerges through evolution and examine how the same psychological processes that give rise to rich cultural practices also bear negative consequences on our society, such as stereotype and prejudice. We will also examine how human culture is transformed through digitalization, immigration, and globalization, and how it is represented on mass media and social media. Through the course, you will learn to critically examine human behaviors in the contexts of diverse cultural beliefs, to reflect on your own upbringings through a cultural lens, and to gain an appreciation for cultures other than your own.

Requirements/Evaluation:  Students are expected to participate in and periodically lead class discussions. As part of this, students must complete assigned readings prior to class meetings. Finally, students will participate in an individual or small-group project culminating in a written and oral presentation.

Prerequisites:  PSYC 201 and at least one other 200-level psychology course

Enrollment Limit:  16

Enrollment Preferences:  Psychology majors

Expected Class Size:  16

Grading:  no pass/fail option, no fifth course option

Distributions:  (D3)

PSYC 372  (F)  Advanced Seminar in Teaching and Learning

This advanced seminar will give students an opportunity to connect theory to practice. Each student will have a teaching placement in a local school, and participate in both peer and individual supervision. In addition, we will read a range of texts that examine different approaches to teaching, as well as theory and research on the process of education. What is the best way to teach? How do various theories of child development and teaching translate into everyday practices with students? Students will be encouraged to reflect on and modify their own teaching practices as a result of what we read as well as their supervision. Questions we will discuss include: What is the relationship between educational goals and curriculum development? What is the relation between substance (knowledge, skills, content) and the interpersonal dynamic inherent in a classroom setting? How do we assess teaching practices and the students' learning? What does it take to be an educated person?

Requirements/Evaluation:  this course involves a field placement, weekly readings, as well as seminar discussion, supervision, and a graded journal

Prerequisites:  PSYC 232 or PSYC 272 or permission of instructor

Enrollment Limit:  12

Enrollment Preferences:  Psychology majors and those who plan to become teachers

Expected Class Size:  12

Grading:  no pass/fail option, no fifth course option

PSYC 397  (F)  Independent Study: Psychology

Open to upperclass students with permission of the instructor and department. Students interested in doing an independent study should make prior arrangements with the appropriate professor. The student and professor then complete the independent study proposal form available at the Registrar's Office and should submit it to the department chair for approval prior to the beginning of the drop/add period.

Requirements/Evaluation:  Determined by individual instructors

Prerequisites:  Permission of instructor

Enrollment Limit:  none

Enrollment Preferences:  Upperclass students

Expected Class Size:  NA
PSYC 398 (S) Independent Study: Psychology
Open to upperclass students with permission of the instructor and department. Students interested in doing an independent study should make prior arrangements with the appropriate professor. The student and professor then complete the independent study proposal form available at the Registrar's Office and should submit it to the department chair for approval prior to the beginning of the drop/add period.

Requirements/Evaluation: Determined by individual instructors
Prerequisites: Permission of instructor
Enrollment Limit: none
Enrollment Preferences: Upperclass students
Expected Class Size: NA
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)

PSYC 403 (F) The Psychology of Love
This seminar will examine psychological approaches to the study of attraction, affiliative bonds, attachment, and relationship health across the lifespan. These topics will be introduced via review articles, books, and films. Students will analyze these topics more deeply with presentations and student-led discussions of original research articles from across multiple perspectives and subdisciplines of psychology.

Requirements/Evaluation: participation in class discussion, selection and presentation of relevant empirical papers, four position papers, and a final presentation
Prerequisites: none
Enrollment Limit: 10
Enrollment Preferences: senior Psychology majors
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D3)

PSYC 405 (F) Why We Believe What We Believe
As scientists, we aspire to hold beliefs that are based in evidence. As humans, however, we are likely to embrace beliefs influenced by a variety of social, historical, cultural, political, racial, and religious factors. In this class, we will explore the question of why we cling to certain beliefs, even in the face of significant contradictory evidence. For example, what assumptions do we make about social situations and why are we so convinced these assumptions are correct? How does our culture affect our views of social phenomena such as psychological disorders, parenting, or educational systems and why do we hold on to them so fiercely? What assumptions do we make about the nature of memory, emotions, and cognitions and are these assumptions valid? Are there "defensive moves" that we make when we are challenged racially, even when we are committedly antiracist? And, if so, why? In class, we will explore source material from popular culture (books, films, podcasts, and popular press articles) related to some of these issues and we will examine claims made about different belief systems. We will then critically evaluate these claims by exploring the available
empirical psychological evidence. The format of this class is student-led discussions.

Requirements/Evaluation: Students will be required to develop and lead rigorous generative discussions with their classmates several times during the semester. In addition, students will be expected to actively participate in discussions and to write three 5-7 page position papers.

Prerequisites: none
Enrollment Limit: 10
Enrollment Preferences: senior Psychology majors
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D3)

Fall 2024
SEM Section: 01 MR 2:35 pm - 3:50 pm Nicole T. Harrington

PSYC 406 (F) Are there any universal psychological phenomena? (DPE)

In this course, we will critically examine the ways culture, identities, power, systems, and privilege have shaped our understanding of human behavior as well as the consequences for policy, education, intervention, and prevention. Students will: a) evaluate the ways in which unmeasured cultural variables may have influenced the findings of seminal research articles and psychological theories; b) identify new methodological approaches, concepts, and processes that are revealed when we centralize people and topics that have been excluded from the research literature; c) examine ways the field has contributed to structural oppression and inequities; and d) design studies that provide robust tests of universality, elucidate the limits of universality, and have implications for addressing inequities. This student-led course will allow students to identify topics of interest in multiple sub-disciplines of psychology, select empirical readings, and lead class discussion.

Requirements/Evaluation: Course requirements include reading empirical articles, participating in class discussions, selecting relevant topics and readings for class discussions, leading 2 class discussions, and writing three empirically-based papers (approximately 5 pages double-spaced).

Prerequisites: None
Enrollment Limit: 14
Enrollment Preferences: Senior psychology majors
Expected Class Size: 14
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (DPE)

Difference, Power, and Equity Notes: Students will address the question of whether there any universal psychological phenomena. To do so, students will use scientific reasoning and quantitative skills to critically examine the ways culture, identities, power, systems, and privilege have shaped our understanding of human behavior as well as the consequences for policy, education, intervention, and prevention. Students will use an intersectional approach to understand the ways identity and systems shape psychological phenomena.

Not offered current academic year

PSYC 407 (F) Success and Failure

The theme of this psychology senior seminar will be success. We will discuss the path to personal success, including the relative importance of hard work, genetic talent, and luck; barriers to success like poverty and discrimination; the importance of parents, family, teachers, and friends; and what we really mean by success. For each topic we cover, we will read a book or watch a film, then delve deeper by reading and discussing scientific journal articles. Class meetings will be student-led discussions. Students will write three 5-7 page papers. The larger goal will be to practice useful life skills such as how to lead and participate in a meeting (i.e., a class discussion), how to write engagingly and convincingly, and how to assess an argument skeptically and discuss it using evidence.

Class Format: student-led discussions
Requirements/Evaluation: participate in and lead class discussions, choose class reading assignments, and write essays
Prerequisites: senior Psychology majors or permission of instructor in rare cases
Enrollment Limit: 10
Enrollment Preferences: senior Psychology majors
Growing up is a universal human experience, yet humans are shaped by distinct forces as they navigate infancy, childhood, adolescence, and adulthood. This seminar will zoom in on five key inflection points in the human lifespan (times when our environment or the choices we make may have an outsized impact on our life’s trajectory): 1) birth/infancy, 2) school entry, 3) adolescence, 4) emerging adulthood, and 5) death/dying. We will discuss popular media depictions of humans in each of these transition points (such as the film Babies, and the book Being Mortal). We will then compare, contrast, and evaluate these popular depictions of “growing up” or “growing old” with accounts from empirical research from all sub-disciplines of psychology. The empirical evidence will take the form of journal articles that match the themes of the media depiction but use the scientific method to try to characterize the cultural and personal forces that most affect the human experience and shape a person’s identity in key moments of the lifespan. The course will be guided by broad questions such as -- To what extent do humans shape their own destiny versus being shaped by cultural, environmental, or genetic forces beyond their control? Are there some types of experience that are stronger predictors of long-term outcomes than others? Are there any human experiences that are truly universal? What can psychology, as a field, tell us about “growing up” as a human on this planet, and where might it fall short?

Class Format: Class will only meet 2 of the 3 possible days each week, determined by the instructor.

Requirements/Evaluation: Students are expected to co-lead discussions several times during the semester, choose empirical readings, participate in discussions, and write a total of three 5-7-page evidence-based argument papers.

Prerequisites: None

Enrollment Limit: 14

Enrollment Preferences: Open only to senior psychology majors

Expected Class Size: 14

Grading: no pass/fail option, yes fifth course option

Distributions: (D3)

Not offered current academic year

PSYC 410 (F) Psychology of the Internet

This course will explore the impact of the internet and digital technologies on human behavior, cognition, and society. We will draw from theoretical frameworks and empirical research across psychological subdisciplines as well as popular media sources. Specific topics will include online identity formation, digital communities, the psychological effects of social media, the proliferation of conspiracy theories and other extreme content, and the interplay between technology and mental health. Larger goals of the course include: using scientific data to understand real-world phenomena; crafting evidence-based arguments in conversation and in written form; leading and participating in productive group discussions; and equipping ourselves with analytical tools to navigate and contribute to the digital landscape thoughtfully and ethically.

Requirements/Evaluation: Weekly readings, leading and participating in class discussion, writing three 5-7 page papers.

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: Senior psychology majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D3)
**PSYC 411 (F) How do we think?**

In this seminar, we will seek to understand how the mind operates and how various factors shape our thinking. We will explore how emotion, values, and beliefs influence cognitive processes and consider the means by which rationality and heuristics influence decision-making. We will compare algorithms used by the brain with those used in artificial intelligence systems. We will also examine how the ways we think shape our interactions with society. Through student-facilitated discussions, we will explore how psychological research informs our understanding of cognition. We will examine how accurately (or inaccurately) popular media reflect research findings. Students will identify gaps in our knowledge and propose novel research to fill those gaps. Finally, we will apply findings from the literature to help develop interventions to combat cognitive blind spots, distortions, and biases, and to foster happiness, well-being, and deeper connections.

**Requirements/Evaluation:** Students will serve as discussion facilitators several times during the semester. Students will be expected to actively participate in discussions. Assignments will include three 5-7 page papers of different types.

**Prerequisites:** None

**Enrollment Limit:** 14

**Enrollment Preferences:** Senior Psychology majors

**Expected Class Size:** 14

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3)

Not offered current academic year

---

**PSYC 412 (F) Feelings & Emotions: Shaping the Brain and Society**

This course will explore what emotions are, the evolutionary origins of emotions, and the tools and techniques researchers use to study emotions both in humans and in animal models. We will examine how brain state(s) may underlie different emotions and challenge widely held notions about how an individual’s emotion can influence behavior and social factors. Questions we will explore include: Is it better to be emotional or rational? What are ‘gut feelings’? Are there gender differences in emotionality and, if so, what are their origins? Popular press literature and scientific studies will fuel student-led discussions as we seek to develop an evidence-based understanding of emotions and how they shape the world around us.

**Requirements/Evaluation:** Course requirements include weekly readings, leading at least two class discussions, and writing three papers: one literature review (5-7 pages), one claim- and empirically-driven paper (5-7 pages), and one op-ed (3 pages).

**Prerequisites:** none

**Enrollment Limit:** 14

**Enrollment Preferences:** Senior psychology majors

**Expected Class Size:** 14

**Grading:** no pass/fail option, yes fifth course option

**PSYC 418 (F) Suckers and Scammers**

Virtually all of us are familiar with at least one account of a truly impressive scam - an event, device, or scheme that attracts attention, trust, and money, and then turns out to be a fake, sometimes with devastating consequences for everyone. What are the psychological processes and mechanisms employed by the scammers, as well as those who fall for such schemes? In this course we will consider several books and films that depict well-publicized recent examples (for instance, Bad Blood, The Rachel Divide, and The Talented Mr. Madoff). We’ll use research from scientific journals to understand the psychology of both the scammer and those who fell for their schemes. We’ll consider, among other things, the developmental origins of deception, what motivates people to pull one over on others, the role of identity maintenance, how we decide who to trust, and what it takes to convince oneself of something implausible. We’ll use psychological research from all of the subdisciplines of psychology to find out what these cases might have in common, and also look at studies that illuminate unique features of each situation. Most class meetings will be student-led discussions. You will write three or four 5-7-page papers. The larger goals include: learning how to use scientific data to answer a wide range of questions about everyday life; how to engage in fruitful evidence-based argument; and how to write to think, and to persuade.

**Requirements/Evaluation:** weekly readings, leading two class discussions, and writing three 5-7 page papers
**Prerequisites:** none  
**Enrollment Limit:** 10  
**Enrollment Preferences:** senior Psychology majors  
**Expected Class Size:** 10  
**Grading:** no pass/fail option, no fifth course option  
**Distributions:** (D3)

**Winter Study**  

**PSYC 10 (W) Yoga, Creativity & Mindfulness**
Winter Study is an ideal time to set new intentions, and to focus on physical and mental well-being. This course offers a retreat in which students can de-stress, refresh, and tap into their creative strength. Primarily a yoga class, we will meet 4-6 hours each week to deep dive into the mindful practice of yoga. We'll also explore accessible ways to cultivate mindfulness, whether it's through journaling, mindful walking or eating, or guided meditation. The course is specifically designed so that students will have plenty of unstructured time each week. Early in the month, our group will go on a 2 day retreat at the renowned Kripalu Center for Yoga & Health in Stockbridge, Massachusetts. Located in a beautiful natural setting with breathtaking views, Kripalu offers a variety of daily yoga and mindfulness classes as well as delicious organic and vegan food. This will be a nourishing time for students to spend some healthy quiet time and to get to know each other better. Back on campus, we will continue to practice yoga together three times a week, and will also visit the Clark Art Museum, WCMA or MassMoca, where we'll enjoy guided tours exploring the intersection of art + mindfulness, and will even do yoga in the galleries themselves. Throughout the month, students will explore their own creativity, whether it's creative writing/journaling, or working with paper and colored pencils in a mandala making workshop. There will be a reading list and a final creative project. We'll share our projects in the last week of the class, and examples might be leading a guided meditation, sharing a drawing, painting or poem, or designing a yoga or mindfulness self-practice.

Requirements/Evaluation: Presentation(s); Creative project(s)
Prerequisites: No experience in yoga is required, but it is recommended.

Enrollment Limit: 21

Enrollment Preferences: Preference will be given to sophomores and juniors as well as a balance of personal pronouns. Students are encouraged to email in advance to express why they are interested in the course.

Expected Class Size: NA
Grading: pass/fail only

Unit Notes: Mary Edgerton has taught yoga at Williams for many years, working with students, athletes, faculty and staff. She also offers multiple classes to other members of the community.

Materials/Lab Fee: $300

PSYC 21 (W) Psychology Internships

Would you like to explore applications of psychology in the "real world?" This course gives students an opportunity to work full-time during Winter Study in a mental health, business, education, law, or another setting in which psychological theories and methods are applied to solve problems. Students are responsible for locating their own potential internships whether in the local area, their hometowns, or elsewhere, and are welcome to contact the course instructor for suggestions on how to do this. In any case, all students considering this course must consult with the instructor about the suitability of the internship being considered before the Winter Study registration period. Please prepare a brief description of the proposed placement, noting its relevance to psychology, and the name and contact information of the agency supervisor. Before Thanksgiving break, the student will provide a letter from the agency supervisor which describes the agency, and the student's role and responsibilities during Winter Study. Enrolled students will meet the instructor before Winter Study to discuss matters relating to ethics and their goals for the course, and after Winter Study to discuss their experiences and reflections.

Requirements/Evaluation: evaluation will be based on a 10-page minimum final paper summarizing the student's experiences and reflections, a journal kept throughout the experience, and the supervisor's evaluation

Prerequisites: approval by Kris Kirby is required

Enrollment Limit: 20

Enrollment Preferences: Students who have taken a PSYC course

Expected Class Size: NA

Grading: pass/fail only

Attributes: STUX Winter Study Student Exploration

PSYC 22 (W) Introduction to Research in Psychology

This course provides a research opportunity for students who want to understand how psychologists ask compelling questions and find answers about behavior. Several faculty members, whose subfields include behavioral neuroscience, cognitive psychology, social psychology, clinical psychology,
developmental psychology, and the psychology of education, will have student projects available. Since projects involve faculty research, interested students must consult with members of the Psychology Department before electing this course. In addition, students should discuss with faculty what the weekly time requirements will be. Enrollment will be limited by available space in faculty research labs

Requirements/Evaluation: evaluation will be based on the quality of research participation, student's lab journal, and either an oral presentation or a written 10-page report of the research project

Prerequisites: Students who have taken a PSYC course.

Enrollment Limit: 12

Enrollment Preferences: selection will be based on evaluation of departmental application and number of faculty available as mentors

Expected Class Size: NA

Grading: pass/fail only

Attributes: STUX Winter Study Student Exploration

PSYC 23 What Comes Next? Critical Approaches to Life After College

Discussions of post-grad with college students are often limited to the topics of careers, life skills, personal finances, and reaching key milestones. This course will take up an expansive view of life after college that decenters these more conventional topics. Instead, we'll explore life beyond work, how to build and sustain communities, politics and civic engagement, learning outside of higher education institutions, identity formation, reimagined ambition, and much more. We'll engage with research, personal narratives, and fictional depictions relating to the years after college. Students will examine and critique cultural expectations and anxieties surrounding college graduates. Some class time will be reserved for topics chosen by students. Work outside of class will include weekly journal reflections, an interview assignment, preparation of two brief presentations, and a final five-page paper exploring selected ideas from the course. Students will finish the course with an expanded vision for life after college and a critical analysis of conventional narratives and wisdom about young adulthood.

Requirements/Evaluation: Paper(s) or report(s); Presentation(s)

Prerequisites: Junior or senior status

Enrollment Limit: 15

Enrollment Preferences: Seniors will be prioritized

Expected Class Size: NA

Grading:

Unit Notes: Corinne Greenblatt is a Senior Data Analyst in Institutional Research at Williams College. She graduated from Barnard College in 2020 and works remotely from Upper Manhattan.

PSYC 25 Exploring K-12 Education in the Berkshires

Interested in education? Exploring K-12 Education in the Berkshires provides a wonderful opportunity to dive into a project in one of our local K-12 schools. Special projects ranging from curriculum development to project based learning are offered in collaboration with local teachers and administrators to provide an intensive rich learning and teaching experience for Williams students. Students will be mentored by host teachers and will have the opportunity to explore other topics in education as well through further connections at their host schools, a weekly dinner speaker series and weekly reflections sessions. Typical projects involve 15-20 hours/week. Hours in the school are coordinated between the Williams student and the teacher. Final project will be decided on a case by case in advance basis depending on the school. Orientation for this class will occur in fall so that students are well connected with their host teacher and their school prior to the start of winter study.

Requirements/Evaluation: Paper(s) or report(s); Other: The final project will align with the specific project they are involved with at the schools. For example it might be curriculum lessons, a video of a student teaching a lesson or giving a talk at the school.

Prerequisites: None

Enrollment Limit: 16

Enrollment Preferences: Students will be asked in an application why they are interested in the course and why it might pertain to their
undergraduate or post graduate interests and experiences.

**Expected Class Size:** NA

**PSYC 28  From "sketchy" to "abusive": Current research on harmful sexual behavior in college students**

There are many lenses to use when considering why sexual violence happens on college campuses, and no single one fully or correctly tells the whole story. This course will look at current research across the fields of psychology, sociology, and public health to consider what is known about how and why people engage in harmful sexual behaviors. We will also consider what the implications of that research are for everything from prevention programs, to policies in schools, to legislative action.

**Requirements/Evaluation:** Paper(s) or report(s); Presentation(s)

**Prerequisites:** None

**Enrollment Limit:** 12

**Enrollment Preferences:** Preference for students who have an academic interest (psychology, public health, sociology, WGSS) in understanding the topic area.

**Expected Class Size:** NA

**Grading:**

**Unit Notes:** Meg Bossong ’05 is the Executive Director of MASOC, the MA professional association of clinicians who work with children, youth, and young adults with problem sexual behaviors. She was previously the director of the PEACe Office at Williams.

**PSYC 99  (W) Independent Study: Psychology**

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

**Class Format:** independent study

**Grading:** pass/fail only

**Not offered current academic year**
Public health seeks to understand, and also to protect and improve, health at the level of a community or population. Communities make decisions and allocate resources that, intentionally or not, fundamentally shape human life. For example, great reductions in sickness and early death have come from social interventions with relatively low financial cost, such as physically separating drinking water from sewage, or distributing aspirin, condoms, mosquito nets, vaccines or soap, or sharing new ideas about life’s possibilities. The way a society is organized affects the way that social and scientific knowledge is distributed within it; access to that knowledge shapes health at the individual level. At its heart, the study of public health focuses on questions about relationships between science and society, and between reality and possibility: what effective public health policy is and how we can measure its effectiveness; what the relationship is, and ought to be, between research and policy; how we reconcile important moral and economic claims, or balance other values that compete with maximizing health; what counts as disease, over time and among cultures; how we think about cause and responsibility; what constitutes a healthy environment; how our fundamental beliefs determine our approaches to health decisions; and how such decisions ought to be made.

Requirements

Application to the concentration must be completed in the Spring of sophomore year. Applications are due during pre-registration. Application materials can be obtained on the public health website public-health.williams.edu by early April or by e-mailing the chair of the program. Due to excess demand for the concentration, applicants are not guaranteed admittance to the program. Depending on availability, a few students may be admitted in the Spring of Junior year with a mid-April deadline.

All students wishing to pursue the Area of Concentration should take this course early in their careers, preferably sophomore year. Students may petition the advisory committee to substitute a course taken in a study-abroad program focused on global health, providing that the course is equivalent in scope. However, students who plan to take advantage of this option should have taken at least two other courses from among the electives by the end of their sophomore year, and should recognize that those who lack a foundation in the core issues of the field may find it more challenging to prepare their proposal for admission to the concentration.

Statistics

Statistical analysis is at the heart of the quantitative tools necessary to study the health of populations. One course in statistics from the list below is required of all concentrators.

Elective Courses

Concentrators must take at least three electives, with at least two different prefixes, from the list below. Elective courses are grouped by category, but these clusters are not meant to constrain students to a single “track” within the program. Instead, each student is free to determine, with the guidance of an advisory committee member(s), a set of electives that provides an intellectually coherent exploration of their particular areas of interest within the field of public health. In choosing electives, students should consider the balance of breadth versus depth that will allow them to gain theoretical and methodological sophistication in one or more areas. Students may not substitute an independent study for any of these electives. Winter Study courses may not be counted towards the electives.

Experiential Component

Because many public health challenges cannot be fully appreciated until one has hands-on experience with real communities and actual populations, each concentrator must have at least one relevant field-based educational experience with a research component. This requirement may be met through participation in an approved study abroad program (see below), one of the Winter study courses marked with an asterisk, a WS99 project, or a not-for-credit summer or academic-year internship. In every case, the advisory committee must approve the project in advance. Please note that experiential component should address both the “public” and “health” in public health. Projects that center on clinical or lab or that do not have a meaningful health component will generally not satisfy the PH experiential requirement.

PHLH 402 (S) Senior Seminar in Public Health
The capstone seminar provides concentrators with the opportunity to reflect upon and synthesize their experiential learning in the context of understanding gained from a cohesive set of elective courses, and through the lens of a variety of intellectual and disciplinary frameworks. A second goal is to give concentrators experience working in a multi-disciplinary team to address a real-world, and in many cases very daunting, public health problem. Students will read, discuss, and compose written reflections on primary source empirical papers addressing a range of issues and disciplines in the field of public health. For example, topics may include the social determinants of health, environmental health risks, and access to health care. Students will also be divided into three or four research teams to investigate a contemporary real-life issue in public health by designing a study; collecting and analyzing data; and disseminating findings by written report and formal oral presentation to the public health advisory committee faculty. The capstone course is required of all concentrators, but may be opened to other students with relevant experience at the discretion of the instructor and the advisory committee, if space permits.

Written Proposal

To be considered for admission to the Area of Concentration in Public Health, students must submit a written statement describing the portfolio of courses, study abroad, and experiential learning component(s) they intend to pursue. In this proposal, candidates for the concentration should describe their intellectual goals, and if relevant, how these relate to their professional goals. A fundamental purpose of the proposal requirement is to encourage the student to consider concretely how s/he will engage with socio-cultural, behavioral, policy, and/or biomedical aspects of population health. To this end, students should address whether a methodological or disciplinary emphasis ties their chosen courses together, and how the intended experiential component will relate to this set of questions. This proposal is due by the end of course registration period in the spring of the sophomore year, and should be prepared in consultation with a member of the advisory committee. Concentrators are required to revisit and update their proposal prior to registration in the spring of the junior year, and to provide documentation of their internship experience both prospectively and retrospectively. Please note electives will not be offered every year. Students should check the course catalog as they considering possible electives.

STUDY ABROAD AND INTERNSHIPS

Although not a requirement for the PH concentration, study abroad and/or overseas internships provide a crucial opportunity to engage with global health issues through field-based coursework and independent research projects. The Public Health program in coordination with the Study Abroad Advisor and the Office of Career Counseling will advise students on opportunities in these areas. In particular, students may want to consider one of the several Global Health options offered through SIT. One or more courses completed on an approved study abroad program can be counted toward the three elective courses, with permission of the Chair. You can find general study away guidelines for Public Health at [public-health.williams.edu](http://public-health.williams.edu).

---

PHLH 201 (S)  Dimensions of Public Health  (DPE)

Public health is concerned with protecting and improving health at the level of a community or population. Although individual behavior is an essential element of public health, collective, rather than individual, outcomes are the focus of public health study. In this course we will survey the field of public health, introducing students to core concepts and methods that highlight the interrelationship of individual choice and social institutions with environmental and biological factors in producing health outcomes at the population level. We will develop these concepts and methods within the context of signal cases and public health crises.

**Requirements/Evaluation:** a sequence of three assignments (a report, an infographic and a presentation) that focuses on a particular public health problem, peer reviews and active contribution to class discussion

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** sophomores, potential Public Health concentrators

**Expected Class Size:** 19

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** No divisional credit (DPE)

**Difference, Power, and Equity Notes:** This course fulfills the DPE requirement because of its central focus on the ways that difference and power shape health outcomes in the U.S. and internationally. It uses an interdisciplinary approach to explore issues including the historical relations between communities of color, healthcare providers, and public health practitioners; contestation over the role of markets and government in public health; and differing explanations for the patterns of race, class, etc., in health outcomes.

**Attributes:** PHLH Core Courses

---

PHLH 220 (F)  International Nutrition  (DPE)

Global malnutrition continues to represent one of the most challenging issues of international development. Problems of both under- and overnutrition beginning as early as in utero can detrimentally influence the health, development and survival of resource-limited populations. This course introduces students to the most prevalent nutritional issues through a food policy perspective and exposes them to a wide variety of interventions, policies and current debates in the field of international nutrition. In addition to exploring the multi-level and multi-disciplinary programmatic approaches for the prevention and treatment of the related nutritional problems, students will gain exposure and experience in program design and proposal writing. Readings will involve both real-world programmatic documents/evaluations as well as peer-reviewed journal articles. Examples will be drawn from Africa, Asia and Latin America.

**Requirements/Evaluation:** five 1-page essays, one final term paper (10-15 pages), one oral presentation, and active class participation

**Prerequisites:** PHLH 201 or permission of instructor
Enrollment Limit: 19

Enrollment Preferences: Public Health concentrators

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course exposes the issues of difference, power and inequity by exploring the unequal distribution of resources and power at the global, national and intra-national level within the international nutrition context. We will also critically engage with issues of power, cultural difference and related ethics in the context of international development and nutrition programming.

Attributes: PHLH Nutrition, Food Security + Environmental Health

Fall 2024

SEM Section: 01 M 7:00 pm - 9:40 pm Marion Min-Barron

PHLH 270 (S) Healthcare Workers (DPE)

Health care is the largest industry in the US, employing more than one of every 10 private-sector workers. Jobs in the industry, ranging from subcontracted hospital cleaners to university-affiliated specialist surgeons, reflect and reproduce the kind of inequality we see elsewhere in the economy. We will start with an historical perspective, using sources like Patricia D'Antonio's American Nursing: a History of Knowledge, Authority, and the Meaning of Work, Gretchen Long's Doctoring Freedom: The Politics of African American Medical Care in Slavery and Emancipation, and The Next Shift by Gabriel Winant, to understand the development of the modern health care industry in the US, its relationship to the process of deindustrialization in cities like Pittsburgh, PA and the shifting racial and gendered character of the paid labor force. From that framing we will investigate the present. What are working conditions like in each sector, what kind of organizing is there, and how do workers interact across sectors? We will spend some time on Marxist feminist theories of care work and how they relate to this industry. Students will be invited to think about themselves as possible future health care workers, and how they might want to interact with the history of the industry, and the low paid, racialized, gendered sector of care workers that health care depends upon. We will have several guest speakers with expertise on the local health care economy, and spend some time learning about comparative experiences in other countries, including colonial experiences with nursing.

Requirements/Evaluation: Assignments will include a short paper and a longer research project. Participation in discussion will form part of the grade.

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: public health concentrators

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: No divisional credit (DPE)

Difference, Power, and Equity Notes: The class asks students to reflect critically on power differences within the health care industry and their shifting relation to race, class, gender and colonial history.

Attributes: PHLH Social Determinants of Health

Not offered current academic year

PHLH 351 (F) Racism in Public Health (DPE)

Cross-listings: AAS 351

Primary Cross-listing

Across the nation, states, counties and communities have declared racism a public health crisis. This push to identify systemic racism as a high priority in public health action and policy is an important symbolic and political move. It names the faults of histories, systems and institutions but also brings to the spotlight the individual and community responsibility to dismantle racism in the US. In this tutorial, we will examine racism in public health policy, practice and research through an investigation of several mediums of evidence and information, ranging from peer reviewed literature to news editorials, podcasts and documentaries. We will explore specific pathways by which legacies of colonialism and racism function in various public health disciplines such as epidemiology, social & behavioral sciences, health policy and environmental health while also examining the dynamics of power
and history in research and community practice. We will take deep dives into issues on how health can be impacted by redlining, racist medical
algorithms, racial trauma and stress and police violence, to name a few. Students will also have two opportunities to select their own case studies, as
a way for you to research and learn about particular racial health issues that are of personal interest. This course is also about self-reflection and
exploration of the ways in which our identities and lived experiences impact our understanding and perspective. We will gain skills in speaking across
differences and articulation of how our own perceptions and lived experiences of race and racism impact our study of public health. This tutorial
requires an openness to self-reflection and the practice of listening and articulation.

Requirements/Evaluation: bi-weekly tutorial papers, weekly journaling, oral commentaries and tutorial discussion

Prerequisites: PHLH 201 or instructor approval.

Enrollment Limit: 10

Enrollment Preferences: 1-Public Health concentrators. 2- Asian American Studies concentrators.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AAS 351(D2) PHLH 351(D2)

Difference, Power, and Equity Notes: In this course students will examine and critically examine the inequities and race based social and health
injustices, and the ways racism infiltrates public health action and policy, both historically and currently. They will also refine their self reflection skills
in understanding how their own positions of privilege and power, or lack thereof, inform their understanding of public health.

PHLH 402 (S) Senior Seminar in Public Health

The capstone seminar provides concentrators with the opportunity to reflect upon and synthesize their experiential learning in the context of
understanding gained from a cohesive set of elective courses, and through the lens of a variety of intellectual and disciplinary frameworks. A second
goal is to give concentrators experience working in a multi-disciplinary team to address a real-world, and in many cases very daunting, public health
problem. Students will read, discuss, and compose written reflections on primary source empirical papers addressing a range of issues and disciplines
in the field of public health. For example, topics may include the social determinants of health, environmental health risks, and access to health care.
Students will also be divided into small research teams to interact with local organizations and investigate a contemporary real-life issue in public
health. The capstone course is required of all concentrators, but may be opened to other students with relevant experience at the discretion of the instructor and the advisory committee, if space permits.

**Requirements/Evaluation:** active seminar participation, written reflections, contribution to the team research project, and a 12- to 15-page final paper

**Prerequisites:** completion of at least four courses counting towards the PHLH concentration

**Enrollment Limit:** 12

**Enrollment Preferences:** senior Public Health concentrators; students who are not senior Public Health concentrators should contact the instructor

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** No divisional credit

**Attributes:** EXPE Experiential Education Courses PHLH Core Courses

**Winter Study ---------------------------------------------**

**PHLH 16 (W) Addiction Studies & Diagnostics**

On a December night in 1987, I went to my first AA meeting and it has stuck within and beside me for 36 years. I have (literally) traveled around the world due to abstinence and friendships in recovery communities. The goal of this class is for students to develop a personal understanding of the basics of addiction and treatment of this brain disease. This class is designed for experiential learning. You will learn and apply the 11 diagnostic criteria of addictions to real people in recovery. I will bring in speakers that are in recovery from addiction. Students will be required to make full and complete diagnoses based on the stories told and follow up questions. Students will be required to attend on-line or in-person meetings to get familiar with the cultures and communities. In our final class, students will present group research into areas of addiction that they have found interesting and present annotated bibliographies to exhibit the research behind their work. Individually, students can present papers to me if they wish to start or extend research outside of this Winter Study class. The long-term goal of this class is to raise awareness of what addiction is and is not. At the end of the month, students can decide to enable or help a person who is impacted by addiction. They will know, first hand, that there is both help and treatment. It will allow them to be a better family member, neighbor, co-worker, or/and friend.

**Requirements/Evaluation:** Paper(s) or report(s); Presentation(s)

**Prerequisites:** None

**Enrollment Limit:** 25

**Enrollment Preferences:** first and second-years get preference

**Expected Class Size:** NA

**Grading:** pass/fail only

**Unit Notes:** I am Dir. of Clinical Services at Greylock Recovery in W'town and 37 years sober. This is the 13th time teaching this class.

**PHLH 23 Navigating Ethical Challenges in Medical School and Beyond: Practical and Philosophical Issues**

This course introduces students to bioethical issues that often arise during medical school and residency, where they play a key role in the professional identity formation of clinicians, and to tools for navigating and resolving them. Often these issues concern ethical questions that clinicians face throughout their medical careers, but are first encountered during clerkships and residencies where the status of physicians-in-training adds unique ethical complexity. Others directly concern training. While the course may be of greatest interest to pre-med students, it is also suitable for students who are not but who are generally curious about medical ethics and clinical ethics decision making. The course is organized into two parts, and uses a case-based approach throughout. The first part focuses on philosophical foundations and conceptual tools for analyzing ethical issues in clinical practice, as well as on the concepts of moral distress and moral injury. The second part focuses on practical tools. During this portion, students learn to use the 4-box framework for clinical ethics decision making, which is widely used in clinical ethics consultations. In addition, the class explores
institutional resources for resolving clinical ethics dilemmas and conflicts, such as ethics consultation services, hospital ethics committees, and chaplaincy services; students will also participate in a conflict resolution workshop sponsored by the Center for Learning in Action. Topics and cases covered in the course will center the experience and role of medical students and residents, and are likely to include: disclosure and truth telling; medical errors and whistleblowing; professional relationships; informed consent; end-of-life decision making; conscientious refusals; responding to bigotry and prejudice; disparities, inequities, and resource allocation, and intersections of clinical ethics with public health ethics.

Class Format: The course is team-taught by Altiery De Jesus (MD/Chief Resident) and Pedroni (Philosopher/Bioethicist). Students in the course will participate in a conflict resolution workshop sponsored by the Center for Learning in Action, date and time TBD but potentially outside of regular class meeting hours. The class will also include in-class discussions with 1-2 guest lecturers.

Requirements/Evaluation: Students will be expected to attend all class sessions (minimum 6 hrs/week), complete background readings in advance of class, contribute to class discussions, and participate in a conflict resolution workshop arranged by the Center for Learning in Action (date and time TBD, but possibly outside regular class meeting hours). In addition, students will work in small groups to prepare and present a case analysis as a part of a series of mock Ethics Grand Rounds during the final week of the term. Final evaluation for the course will be based on attendance, quality of participation, and the Ethics Grand Rounds case presentations.

Prerequisites: None

Enrollment Limit: 12

Enrollment Preferences: Pre-med or Public Health students; proximity to graduation

Expected Class Size: 10

Grading:

Unit Notes: Does *not* satisfy the Experiential Component for the Public Health Concentration.

Not offered current academic year

PHLH 99 (W) Independent Study: Public Health

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

Class Format: independent study

Grading: pass/fail only

Not offered current academic year
The Quantitative/Formal Reasoning (QFR) requirement is intended to help students become adept at reasoning mathematically and abstractly. The ability to apply a formal method to reach conclusions, use numbers comfortably, and employ the research tools necessary to analyze data lessens barriers to carrying out professional and economic roles. The hallmarks of a QFR course are the representation of facts in a language of mathematical symbols and the use of formal rules to obtain a determinate answer. Primary evaluation in these courses is based on multistep mathematical, statistical, or logical inference (as opposed to descriptive answers).

Prior to senior year, all students must satisfactorily complete ONE QFR course. Students requiring extra assistance (as assessed during First Days) are normally placed into Mathematics 100/101/102, which is to be taken before fulfilling the QFR requirement.

**AMST 150 (F) Data for Justice** (DPE) (QFR)

**Cross-listings:** STS 150 / SOC 150 / WGSS 150 / INTR 150

**Secondary Cross-listing**

This course is a unique and inclusive introduction to data science where quantitative thinking, programming, and social justice intertwine. We will build our data science skills using R, a popular open-source data science tool. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration. But rather than divorcing these techniques from the social issues they can help illuminate, we ground them in a social justice context. Overall, we will apply data science skills to topics drawn from criminal justice, environmental justice, diversity and inclusion in arts and media, education equity, and much more, with the goal of growing our collective capacity to use data science as a tool for social good. During a time when humans are increasingly subjugated to data-driven algorithmic decisions, when there are social media accounts dedicated to highlighting misuses of data, and when artificial intelligence makes faking data a nearly trivial task, using data to ethically and carefully promote justice is more important than ever.

**Class Format:** This course is taught in a highly interactive format and will frequently use a flipped-classroom approach. Students should expect substantial time devoted to in-class collaboration.

**Requirements/Evaluation:** Students will complete regularly assigned activities, problem sets, and other assessments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based approach.

**Prerequisites:** None. This course assumes no prior knowledge of data science or R programming. An interest in social justice and a willingness to engage intensively with data and computing are essential.

**Enrollment Limit:** 18

**Enrollment Preferences:** Students without prior college-level courses in statistics and programming.

**Expected Class Size:** 18

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

STS 150(D2) AMST 150(D2) SOC 150(D2) WGSS 150(D2) INTR 150(D2)

**Difference, Power, and Equity Notes:** This course uses data science as a lens for injustice in spheres such as criminal justice, environmental justice, diversity and inclusion in arts and media, education equity. We will consider race, gender, LGBTQ+, disability, and other axes of identity. Additionally, we will adopt a data-critical perspective, thinking about how social forces shape data and our understanding of it.

**Quantitative/Formal Reasoning Notes:** This course teaches quantitative tools in R, a widely-adopted data science platform. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration.

**AMST 363 (S) Data for Justice Research Practicum** (DPE) (QFR)
Cross-listings:  WGSS 363 / STS 363 / INTR 350

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this inclusive, collaborative, research-based course, students will bring statistical, computational, and/or mathematical approaches to bear on issues of social justice. Guided closely by the instructor, students will work in groups to carry out original research in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. Prior research experience is not required; one goal of this course is to build skills for advanced research.

Class Format: This course is an intensive research practicum. Formation of research groups and selection of research topics will be facilitated by the instructor. The primary modality of work is peer collaboration.

Requirements/Evaluation: To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based, ungraded assessment framework.

Prerequisites: INTR 150 (Data for Justice), or prior equivalent exposure to computing, statistics, and social justice topics as approved by the instructor.

Enrollment Limit: 10

Enrollment Preferences: Students who have a declared major in Division I or II, who meet the prerequisites of the course, and who fill out the instructor's preregistration survey (contact the instructor for link).

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 363(D2) STS 363(D2) INTR 350(D2) AMST 363(D2)

Difference, Power, and Equity Notes: Students will research issues of social justice in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

Quantitative/Formal Reasoning Notes: Students will use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

Spring 2025

SEM Section: 01  TR 9:55 am - 11:10 am  Chad M. Topaz
SEM Section: 02  TR 11:20 am - 12:35 pm  Chad M. Topaz

ASTR 111  (F) Introduction to Astrophysics  (QFR)

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies. ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

Class Format: The class has weekly afternoon laboratory sessions, which will alternate between 'hands-on' activities and problem-solving/discussion sessions. Nighttime observing sessions will occur throughout the semester.

Requirements/Evaluation: weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

Prerequisites: a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

Enrollment Limit: 28; 14/lab

Enrollment Preferences: potential Astronomy majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option
### ASTR 206 (S) Astrobiology (QFR)

This course will focus on the development of complex life and its observational signatures, both on Earth and on other worlds. We will first investigate the conditions that have led to the development of complex life on Earth. We will view Earth over time from an outsider's perspective and challenge preconceptions about the basic requirements for life. We will also explore the 'hot spots' in the search for life beyond Earth in our Solar System. Observations in the next decade may reveal biosignatures in the atmospheres of exoplanets. We will learn about these future observations, while also interacting with current research-grade data for other planets and learning about the methods used to constrain the physical conditions on other worlds. Using quantitative models, we will test the stability of Earth-like planets to the variable and potentially hostile conditions of evolving solar systems.

#### Requirements/Evaluation:
Weekly problem sets, one paper, two mid-term exams, and a final exam

#### Prerequisites:
Math 130 and at least one prior physical science course (either Astronomy, Physics, Geosciences, or Chemistry), or permission of instructor

#### Enrollment Limit: 20

#### Enrollment Preferences:
Science majors, with preference given to students majoring in Astronomy, Astrophysics, or Geosciences

#### Expected Class Size: 12

#### Grading:
Yes pass/fail option, yes fifth course option

#### Distributions: (D3) (QFR)

### ASTR 402 (S) Between the Stars: The Interstellar Medium (QFR)

The matter between the stars—the interstellar medium—tells the story of the evolution of galaxies and the stars within them. Stars are accompanied by diffuse matter all through their lifetimes, from their birthplaces in dense molecular clouds, to the stellar winds they eject as they evolve, and to their final fates as they shed their outer layers, whether as planetary nebulae or dazzling supernovae. As these processes go on, they enrich the interstellar medium with the products of the stars' nuclear fusion. Interpreting the emission from this interstellar gas is one of astronomers' most powerful tools to measure the physical conditions, motions, and composition of our own galaxy and others. In this course we will study the interstellar medium in its various forms, from cold, dense, star-forming molecular clouds to X-ray-emitting bubbles formed by supernovae. We will learn about the physical mechanisms that produce the radiation we observe, including radiative ionization and recombination, collisional excitation of "forbidden" lines, collisional ionization, and synchrotron radiation. Applying our understanding of these processes, we will analyze the physical conditions and chemical compositions of a variety of nebulae. Finally, we will discuss the evolution of interstellar material in galaxies across cosmic time. This course is observing-intensive. Throughout the semester, students will work in small groups to design, carry out, analyze, and critique their own observations of the interstellar medium taken using the rooftop telescope.

#### Class Format:
Tutorial meetings will be scheduled with the professor. Students will also complete observing projects using the rooftop telescope.

#### Requirements/Evaluation:
Weekly problem sets, 10-page final paper, and observing projects

#### Prerequisites:
ASTR 111 and PHYS 201 or permission of instructor
Enrollment Limit: 10
Enrollment Preferences: juniors and seniors
Expected Class Size: 6
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: In this course, students will derive quantitative physical formulas, use these equations to calculate and compare physical properties, and generate and analyze graphical representations of data. They will also make and analyze measurements of astronomical data through observing projects.

Spring 2025
TUT Section: T1 TBA Anne Jaskot

ASTR 413 (F) Building Stars: A Physical Model of Stellar Structure (QFR)
How does the Sun shine? How does the Sun evolve with time? What physical processes determine the power output of the Sun? In this course we will explore our modern understanding of how stars work, and why they have a range of sizes, temperatures, and luminosities. As we go, we will discuss the laws of physics at work in our Sun and other stars. Over the course of the semester, we will build a working computer model of the Sun using the basic laws of nuclear fusion, radiative transfer, thermal mechanics, and hydrostatic equilibrium.

Class Format: Lectures will include time for computer programming work
Requirements/Evaluation: weekly problem sets, weekly coding homework assignments, two mid-term exams, and a final project
Prerequisites: PHYS 142 or 151, any prior class that makes use of programming, or permission of instructor
Enrollment Limit: 10
Enrollment Preferences: Astronomy, Astrophysics, or Physics majors, with first preference to Astronomy or Astrophysics majors
Expected Class Size: 6
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: In this course, students will use differential equations and numerical coding techniques to test and explore the relationships between physical laws using the Sun and other stars as examples. They will make quantitative comparisons between their calculations and observed stellar properties.

Fall 2024
LEC Section: 01 TR 11:20 am - 12:35 pm Jason E. Young

ASTR 498 (S) Independent Study: Astronomy or Astrophysics (QFR)
Astronomy/Astrophysics independent study, directed by one of the Astronomy faculty: Pasachoff/Jaskot/Flaherty
Requirements/Evaluation: Regular work with the instructor; submitted presentations and papers as agreed upon
Prerequisites: suitable Astronomy/Astrophysics/Physics/Math-Stats-Geosciences/Chemistry courses
Enrollment Limit: 10
Enrollment Preferences: research topic
Expected Class Size: 5
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Substantial quantitative and formal reasoning are involved

Spring 2025
IND Section: 01 TBA David R. Tucker-Smith
BIMO 321 (F) Biochemistry I: Structure and Function of Biological Molecules  (QFR)

Cross-listings:  BIOL 321 / CHEM 321

Primary Cross-listing

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

Prerequisites: BIOL 101, CHEM 200 and CHEM 201; or either CHEM 155 or 256 and CHEM 251

Enrollment Limit: 12/lab

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 36

Grading: no pass/fail option, no fifth course option

Unit Notes: Cannot be counted towards the Biology major in addition to BIOL 222

Distributions:  (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

BIOL 321(D3) BIMO 321(D3) CHEM 321(D3)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular problem sets in which quantitative/formal reasoning skills are practiced.

BIMO 322 (S) Biochemistry II: Metabolism  (QFR)

Cross-listings: CHEM 322 / BIOL 322

Primary Cross-listing

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

Class Format: Lecture three hours per week and laboratory three hours per week.

Requirements/Evaluation: several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

Prerequisites: BIOL 101, plus either: CHEM 156 and CHEM 256, or CHEM 155 and CHEM 156, or CHEM 200 and CHEM 201, or permission of instructor
Enrollment Limit: 48
Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators
Expected Class Size: 48
Grading: no pass/fail option, no fifth course option
Unit Notes: cannot be counted towards the Biology major in addition to BIOL 222
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
BIMO 322(D3) CHEM 322(D3) BIOL 322(D3)

BIOL 202 (F) Genetics (QFR)
Genetics, classically defined as the study of heredity, is today a multidisciplinary field whose principles provide critical insight and tools to most areas of biology and medicine. This course covers the experimental basis for our current understanding of the inheritance, structures, and functions of genes. It introduces approaches used by contemporary geneticists and molecular biologists to explore questions in areas of biology ranging from evolution to medicine. A primary focus of the course is on students developing familiarity with problem solving, the logic and quantitative reasoning required to understand how genetic mechanisms lead to biological patterns. The laboratory part of the course provides an experimental introduction to modern genetic analysis as well as introductions to interpreting genetic reasoning in the primary research literature. Laboratory experiments include investigating chromosome structure using microscopy, mapping a mutation to the genome by integrating multiple streams of evidence, and determining the structure of a DNA plasmid using molecular tools.
Class Format: Lecture: three hours per week, Lab: three hours per week.
Requirements/Evaluation: bi-weekly problem sets; weekly laboratory exercises and laboratory reports; three exams
Prerequisites: BIOL 101 and 102
Enrollment Limit: 120
Enrollment Preferences: students interested in the Biology major
Expected Class Size: 60
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course develops quantitative skills through solving problems. Students learn to apply basic calculations and logic to predict the outcomes of biological systems, for example, describing the likelihood that an individual will be affected by an inherited disease. Application of quantitative and logical analysis contributes to a large component of the in-class work and the graded material for the class, in the form of problem sets, exams, and data analysis for lab reports.

BIOL 203 (F) Ecology (QFR)

Cross-listings: ENVI 203

Primary Cross-listing

This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

Requirements/Evaluation: pre-class quizzes, lab reports, two mid-term exams, and a final exam

Prerequisites: BIOL 102, or ENVI 102, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: students planning to pursue Biology and/or ENVI

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

BIOL 203(D3) ENVI 203(D3)

Quantitative/Formal Reasoning Notes: Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to linear models, multidimensional data analysis and contingency tables.

Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

Prerequisites: BIOL 101, CHEM 200 and CHEM 201; or either CHEM 155 or 256 and CHEM 251

Enrollment Limit: 12/lab

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 36

Grading: no pass/fail option, no fifth course option

Unit Notes: Cannot be counted towards the Biology major in addition to BIOL 222

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
BIOL 321(D3) BIMO 321(D3) CHEM 321(D3)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular problem sets in which quantitative/formal reasoning skills are practiced.

Attributes: BIGP Courses BIMO Required Courses

BIOL 322 (S) Biochemistry II: Metabolism (QFR)

Cross-listings: BIMO 322 / CHEM 322

Secondary Cross-listing

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

Class Format: Lecture three hours per week and laboratory three hours per week.
**Requirements/Evaluation:** several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

**Prerequisites:** BIOL 101, plus either: CHEM 156 and CHEM 256, or CHEM 155 and CHEM 156, or CHEM 200 and CHEM 201, or permission of instructor

**Enrollment Limit:** 48

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

BIMO 322(D3) CHEM 322(D3) BIOL 322(D3)

**Quantitative/Formal Reasoning Notes:** The laboratory program is quantitative covering data analyses, numerical transformations, graphical displays.

**BIOL 420 (S) Mathematical Biology** (QFR)

**Cross-listings:** MATH 412

**Secondary Cross-listing**

This course will provide an introduction to the many ways in which mathematics can be used to understand, analyze, and predict biological dynamics. We will learn how to construct mathematical models that capture essential properties of biological processes while maintaining analytic tractability. Analytic techniques, such as stability and bifurcation analysis, will be introduced in the context of both continuous and discrete time models. Additionally, students will couple these analytic tools with numerical simulation to gain a more global picture of the biological dynamics. Possible biological applications may include, but are not limited to, single and multi-species population dynamics, neural and biological oscillators, tumor cell growth, and infectious disease dynamics.

**Requirements/Evaluation:** problem sets, quizzes/exams, participation, final project and paper

**Prerequisites:** MATH 250 and MATH 309, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** preference for senior math/stats major and also based on an interest statement

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

MATH 412(D3) BIOL 420(D3)

**Quantitative/Formal Reasoning Notes:** The course will introduce methods for developing and analyzing mathematical models.

CAOS 213 (S) Introduction to Environmental and Natural Resource Economics (QFR)

Cross-listings: ECON 213 / ENVI 213

Secondary Cross-listing

We'll use economics to provide one perspective on reasons humans harm the environment and overuse natural resources, and what we can do about it. We'll study climate change, pollution in general, cost benefit analysis, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We'll talk about how economists put a dollar value on nature and ecosystem services (as well as human health and life!), and the concerns people may have about doing so. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth. Consideration of justice and equity will be woven throughout the whole semester.

Requirements/Evaluation: problem sets, short essays, final paper; intermediate assignments may include a poster, one or more short presentation(s), other brief writing assignment(s)

Prerequisites: ECON 110 or equivalent

Enrollment Limit: 30

Enrollment Preferences: first-year and sophomore students

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: this course will count toward both the Environmental Studies major and concentration

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 213(D2) ENVI 213(D2) CAOS 213(D2)

Quantitative/Formal Reasoning Notes: We will use formal theory expressed in math and graphs, perform calculations, and consume statistical data.

CAOS 327 (F) Coastal Processes and Geomorphology (QFR)

Cross-listings: ENVI 327 / GEOS 327

Secondary Cross-listing

Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces—wind, waves, storms, and people—that shape the coastal zone, as well as the geologic formations—sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs—that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

Class Format: lecture two times a week with a lab one time per week

Requirements/Evaluation: lab reports, quizzes, and an independent research project

Prerequisites: Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.
Enrollment Limit: 15
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Unit Notes: This course counts toward the GEOS Group B Electives - Sediments + Life.
Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
ENVI 327(D3) GEOS 327(D3) CAOS 327(D3)

CAOS 477 (F) Economics of Environmental Behavior (QFR)
Cross-listings: ENVI 376 / ECON 477
Secondary Cross-listing
A community maintains a fishery; a firm decides whether to get a green certification; you choose to fly home or stay here for spring break: behaviors of people and firms determine our impact on the environment. We'll use economics to model environmental behavior and to assess how policies can help or hurt the environment. Topics we may study include: common pool resources, voluntary conservation, social norms and nudges, discrimination and justice, rationality, firm responses to mandatory and voluntary regulation, voting and public opinion, and international environmental agreements. We'll also build familiarity with the main methodologies of modern economic research: theoretical modeling, empirical analysis of observational data, and experiments.
Class Format: Class sessions will largely consist of presentations and discussions of academic research papers, as well as lab sessions to work on empirical exercises and other interactive activities
Requirements/Evaluation: class participation, regular reading markup, empirical exercises, oral presentation(s), and an original research paper using an experiment, observational data, or theory
Prerequisites: ECON 251 and (ECON 255 or STAT 346)
Enrollment Limit: 19
Enrollment Preferences: senior Economics majors and junior Economics majors considering a thesis
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:

SEM Section: 01 TR 8:30 am - 9:45 am Sarah A. Jacobson

CHEM 100 (F) Chemistry Matters (QFR)
Chemistry matters! From fueling the world's economy to preventing the next pandemic to forecasting future climate change, chemistry touches all aspects of daily life. This course provides an introduction to chemical principles and applications for students with little or no high school chemistry
background. Through the lens of contemporary issues and applications (e.g. energy, environment, materials, medicine, etc.), students will be introduced to concepts fundamental to studying matter at the molecular level. Particular emphasis will be placed on skills essential for students to understand chemistry in these contexts, including quantitative reasoning and the development of chemical literacy and intuition. Laboratory meetings will be used to reinforce lecture material through experimentation at the bench and active learning exercises.

Class Format: lecture, three times per week and laboratory, three hours per week

Requirements/Evaluation: problem set assignments, laboratory work and analysis, quizzes/exams and a final assessment

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement).

Enrollment Limit: 32; 16/lab

Enrollment Preferences: First-year students with little or no high school chemistry experience.

Expected Class Size: 32

Grading: yes pass/fail option, no fifth course option

Unit Notes: CHEM 100 may be taken concurrently with MATH 102--see under Mathematics; CHEM 100 or its equivalent is a prerequisite to CHEM 101.

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular problem sets and in class activities in which quantitative/formal reasoning skills are practiced.

Fall 2024

LEC Section: 01 MWF 9:00 am - 9:50 am Katie M. Hart
LAB Section: 02 W 1:00 pm - 4:00 pm
LAB Section: 03 R 1:00 pm - 4:00 pm

CHEM 101 (F)(S) Concepts of Chemistry (QFR)

This course broadens and deepens the foundation in chemistry of students who have had one or more years of chemistry at the high school level. Most students begin study of chemistry at Williams with this course. Familiarity with stoichiometry, basic concepts of equilibria, the model of an atom, Lewis structures and VSEPR, and gas laws is expected. Principal topics for this course include modern atomic theory, molecular structure and bonding, states of matter, chemical equilibrium (acid-base and solubility), and an introduction to atomic and molecular spectroscopies. Laboratory periods will largely focus on experiment design, data analysis, literature, scientific writing, and other skills critical to students’ development as scientists. The course is of interest to students who anticipate professional study in chemistry, related sciences, or one of the health professions, as well as to those who want to explore the fundamentals of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: problem sets and/or quizzes, laboratory work, and exams

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement) or CHEM 100.

Enrollment Limit: 45; 16/lab

Enrollment Preferences: first-year students

Expected Class Size: 45/lecture

Grading: yes pass/fail option, no fifth course option

Unit Notes: CHEM 101 or its equivalent is a prerequisite for both CHEM 200 and CHEM 201 and is required for the BIMO concentration.

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Attributes: BIMO Required Courses

Fall 2024
CHEM 200 (S) Advanced Chemical Concepts (QFR)

This course treats an array of topics in modern chemistry, emphasizing broad concepts that connect and weave through the various subdisciplines of the field—biochemistry, inorganic chemistry, organic chemistry, and physical chemistry. It provides the necessary background in chemical science for students who are planning advanced study or a career in chemistry, biological science, geoscience, environmental science, or a health profession. Topics include coordination complexes, thermodynamics, electrochemistry, and kinetics. Laboratory sections will give students hands-on experience involving synthesis, characterization, and reactivity studies of coordination and organic complexes; spectroscopic analyses; thermodynamics; electrochemistry; and kinetics. Students will hone their skills in the presentation of results through written reports and worksheets.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: homework assignments, laboratory work, quizzes, midterm exam, and a final exam

Prerequisites: CHEM 101

Enrollment Limit: 35; 16/lab

Enrollment Preferences: first-year students, then sophomores

Expected Class Size: 35

Grading: no pass/fail option, no fifth course option

Unit Notes: CHEM 200 is required for the BIMO concentration

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Attributes: BIMO Required Courses

CHEM 201 (F) Organic Chemistry: Introductory Level (QFR)

This course provides the necessary background in organic chemistry for students who are planning advanced study or a career in chemistry, the biological sciences, or the health professions. It initiates the systematic study of the common classes of organic compounds with emphasis on theories
of structure and reactivity. Specific topics include basic organic structures and bonding, delocalization and conjugation, acidity & basicity, nucleophilic addition and substitution reactions, stereochemistry and molecular energetics. The theory and interpretation of infrared (IR) and nuclear magnetic resonance (NMR) spectroscopy, as well as the fundamentals of molecular modeling as applied to organic molecules are presented. The coordinated laboratory work includes organic synthesis, purification and separation techniques, as well as characterization by IR and NMR spectroscopy.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quantitative problem solving, laboratory performance, three midterm exams, and a final exam

Prerequisites: CHEM 101 or CHEM 151, 153, or 155

Enrollment Limit: 40; 12/lab

Enrollment Preferences: Seniors, juniors, sophomores, first-year students

Expected Class Size: 40

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem solving in which quantitative/formal reasoning skills are practiced and evaluated.

CHEM 321  (F)  Biochemistry I: Structure and Function of Biological Molecules  (QFR)

Cross-listings: BIOL 321 / BIMO 321

Secondary Cross-listing

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

Prerequisites: BIOL 101, CHEM 200 and CHEM 201; or either CHEM 155 or 256 and CHEM 251

Enrollment Limit: 12/lab

CHEM 361 (S) Quantum Chemistry and Chemical Dynamics (QFR)
This course introduces quantum mechanics, which serves as the basis for understanding molecular structure and spectroscopy. We will begin by discussing the Schrödinger wave equation and then apply this to understanding the translational, vibrational, and rotational structure of molecules. This leads to a discussion of atomic/molecular electronic structure and spectroscopy. Computational methods will be taught to illustrate key quantum mechanical concepts, interpret experimental data, and extend hypotheses. Applications will be chosen from contemporary research fields, including photochemistry, laser spectroscopy, environmental/atmospheric chemistry, organometallic chemistry, and physical organic chemistry.

**Requirements/Evaluation:** class participation, problem sets, exams, and laboratory work

**Prerequisites:** CHEM 155 or CHEM 256; or CHEM 200; or permission of instructor; and strongly recommend MATH 150 or MATH 151

**Enrollment Limit:** 16; 8/lab

**Enrollment Preferences:** seniors, then juniors

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course fulfills the QFC requirement and relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

---

### CHEM 366  (F) Thermodynamics and Statistical Mechanics  (QFR)

The thermodynamic laws provide us with our most powerful and general scientific principles for predicting the direction of spontaneous change in physical, chemical, and biological systems. This course develops the concepts of energy, entropy, free energy, temperature, heat, work, and chemical potential within the framework of classical and statistical thermodynamics. The principles developed are applied to a variety of problems: chemical reactions, phase changes, energy technology, industrial processes, and environmental science. Laboratory experiments provide quantitative and practical demonstrations of the theory of real and ideal systems studied in class.

**Class Format:** lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** class participation, oral presentations, problem sets, laboratory work, and an independent project

**Prerequisites:** CHEM 155 or CHEM 256; or CHEM 200; and basic knowledge of applied integral and differential calculus

**Enrollment Limit:** 16/lab

**Enrollment Preferences:** Chemistry majors: seniors, juniors, then sophomores

**Expected Class Size:** 16

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course fulfills the QFC requirement and relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

### COGS 224  (F) Introduction to Formal Linguistics  (QFR)

**Cross-listings:** PHIL 221

**Primary Cross-listing**
The sentence “Every cookie is chocolate chip and three of them are oatmeal raisin” is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that “three of them” picks out a subset of the group picked out by “every cookie”, and that there’s no such thing as a cookie that is both chocolate chip and oatmeal raisin. There two ways to understand “Many students took every class”. According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

Requirements/Evaluation: Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)
Prerequisites: No prerequisites
Enrollment Limit: 20
Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors.
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
PHIL 221(D2) COGS 224(D2)
Quantitative/Formal Reasoning Notes: This course teaches the fundamentals of the formal analysis of language. Students will learn to provide translation schemes from English to a logical language (typed lambda calculus).

Fall 2024
LEC Section: 01 MR 1:10 pm - 2:25 pm Christian De Leon

CSCI 104 (F) Data Science and Computing for All (QFR)
Many of the world's greatest discoveries and most consequential decisions are enabled or informed by the analysis of data from a myriad of sources. Indeed, the ability to wrangle, visualize, and draw conclusions from data is now a critical tool in the sciences, business, medicine, politics, other academic disciplines, and society as a whole. This course lays the foundations for quantifying relationships in data by exploring complementary computational, statistical, and visualization concepts. These concepts will be reinforced by lab experiences designed to teach programming and statistics skills while analyzing real-world data sets. This course will also examine the broader context and social issues surrounding data analysis, including privacy and ethics.
Requirements/Evaluation: Weekly lab assignments involving programming, a project, and examinations.
Prerequisites: None; previous programming experience or statistics is not required.
Enrollment Limit: 30;15/lab
Enrollment Preferences: Not open to those who have completed or are currently enrolled in a Computer Science course numbered 136 or higher. Preference given to those who have not previously taken a computer science or statistics course.
Expected Class Size: 30
Grading: yes pass/fail option, no fifth course option
Unit Notes: Additional details about the class are available here: https://www.cs.williams.edu/~cs104. Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.
CSCI 134 (F)(S) Introduction to Computer Science (QFR)

This course introduces students to the science of computation by exploring the representation and manipulation of data and algorithms. We organize and transform information in order to solve problems using algorithms written in a modern object-oriented language. Topics include organization of data using objects and classes, and the description of processes using conditional control, iteration, methods and classes. We also begin the study of abstraction, self-reference, reuse, and performance analysis. While the choice of programming language and application area will vary in different offerings, the skills students develop will transfer equally well to more advanced study in many areas. In particular, this course is designed to provide the programming skills needed for further study in computer science and is expected to satisfy introductory programming requirements in other departments.

Requirements/Evaluation: weekly programming projects, weekly written homeworks, and two examinations.

Prerequisites: none, except for the standard prerequisites for a (QFR) course; previous programming experience is not required

Enrollment Limit: 30; 15/lab

Enrollment Preferences: if the course is over-enrolled, enrollment will be determined by lottery.

Expected Class Size: 30/lec

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/. Students with prior experience with object-oriented programming should discuss appropriate course placement with members of the department.

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

Attributes: COGS Interdepartmental Electives
CSCI 136  (F)(S)  Data Structures and Advanced Programming  (QFR)
This course builds on the programming skills acquired in Computer Science 134. It couples work on program design, analysis, and verification with an introduction to the study of data structures. Data structures capture common ways in which to store and manipulate data, and they are important in the construction of sophisticated computer programs. Students are introduced to some of the most important and frequently used data structures: lists, stacks, queues, trees, hash tables, graphs, and files. Students will be expected to write several programs, ranging from very short programs to more elaborate systems. Emphasis will be placed on the development of clear, modular programs that are easy to read, debug, verify, analyze, and modify.

Requirements/Evaluation:  programming and written assignments, quizzes, examinations
Prerequisites:  CSCI 134 or equivalent; fulfilling the Discrete Mathematics Proficiency requirement is recommended, but not required
Enrollment Limit:  30;15/lab
Enrollment Preferences:  if the course is over-enrolled, enrollment will be determined by lottery.
Expected Class Size:  30/lec
Grading:  yes pass/fail option,  no fifth course option

Unit Notes: Please see the Computer Science Department website for more information on selecting an introductory computer science class:
https://csci.williams.edu/

Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: This course include regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 237  (F)(S)  Computer Organization  (QFR)
This course studies the basic instruction set architecture and organization of a modern computer. It provides a programmer's view of how computer systems execute programs, store information, and communicate. Over the semester the student learns the fundamentals of translating higher level languages into assembly language, and the interpretation of machine languages by hardware. At the same time, a model of computer hardware organization is developed from the gate level upward.
Requirements/Evaluation: weekly programming assignments and/or problem sets, quizzes, midterm and final exams

Prerequisites: CSCI 136

Enrollment Limit: 24;12/lab

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2024

CSCI 256 (F)(S) Algorithm Design and Analysis (QFR)

This course investigates methods for designing efficient and reliable algorithms. By carefully analyzing the structure of a problem within a mathematical framework, it is often possible to dramatically decrease the computational resources needed to find a solution. In addition, analysis provides a method for verifying the correctness of an algorithm and accurately estimating its running time and space requirements. We will study several algorithm design strategies that build on data structures and programming techniques introduced in Computer Science 136. These include greedy, divide-and-conquer, dynamic programming, and network flow algorithms. Additional topics of study include algorithms on graphs and strategies for handling potentially intractable problems.

Requirements/Evaluation: Problem sets, midterm and final examinations

Prerequisites: CSCI 136 and fulfillment of the Discrete Mathematics Proficiency requirement

Enrollment Limit: 24

Enrollment Preferences: Preference will be given to students who need the class in order to complete the major. Ties will be broken by seniority (seniors first, then juniors, etc.).

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course will have weekly problem sets in which students will formally prove statements about the behavior and performance of algorithms. In short, the course is about applying abstract and mathematical reasoning to the study of algorithms and computation.

Fall 2024
LEC Section: 01 MWF 12:00 pm - 12:50 pm Aaron M. Williams

Spring 2025
LEC Section: 01 MR 1:10 pm - 2:25 pm Samuel McCauley
LEC Section: 02 MR 2:35 pm - 3:50 pm Samuel McCauley
CSCI 315  (F)  Computational Biology  (QFR)

Cross-listings:  PHYS 315

Secondary Cross-listing

This course will provide an overview of Computational Biology, the application of computational, mathematical, statistical, and physical problem-solving techniques to interpret the rapidly expanding amount of biological data. Topics covered will include database searching, DNA sequence alignment, clustering, RNA structure prediction, protein structural alignment, methods of analyzing gene expression, networks, and genome assembly using techniques such as string matching, dynamic programming, hidden Markov models, and statistics.

Requirements/Evaluation:  weekly Python programming assignments, code reviews, problem sets, plus a few quizzes and a final project

Prerequisites:  programming experience (e.g., CSCI 136) and mathematics (PHYS/MATH 210 or MATH 150) and physical science (PHYS 142/151, or CHEM 101/15X), or permission of instructor

Enrollment Limit:  10

Enrollment Preferences:  if over-enrolled, a questionnaire will be circulated

Expected Class Size:  8

Grading:  no pass/fail option,  no fifth course option

Distributions:  (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
CSCI 315(D3) PHYS 315(D3)

Quantitative/Formal Reasoning Notes:  problem sets and programming assignments

Attributes:  BIGP Courses

Fall 2024
LEC Section:  01  MR 2:35 pm - 3:50 pm  Daniel P. Aalberts

CSCI 334  (S)  Principles of Programming Languages  (QFR)

This course examines the concepts and structures governing the design and implementation of programming languages. It presents an introduction to the concepts behind compilers and run-time representations of programming languages; features of programming languages supporting abstraction and polymorphism; and the procedural, functional, object-oriented, and concurrent programming paradigms. Programs will be required in languages illustrating each of these paradigms.

Requirements/Evaluation:  weekly problem sets and programming assignments, a midterm examination, and a final examination

Prerequisites:  CSCI 136

Enrollment Limit:  30

Enrollment Preferences:  current or expected Computer Science majors

Expected Class Size:  30

Grading:  yes pass/fail option,  no fifth course option

Distributions:  (D3)  (QFR)

Quantitative/Formal Reasoning Notes:  This course include regular and substantial problem sets and labs in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2025
LEC Section:  01  MR 1:10 pm - 2:25 pm  Daniel W. Barowy
LEC Section:  02  MR 2:35 pm - 3:50 pm  Daniel W. Barowy

CSCI 338  (S)  Parallel Processing  (QFR)

This course explores different parallel programming paradigms used for writing applications on today's parallel computer systems. The course will
introduce concurrency (i.e. multiple simultaneous computations) and the synchronization primitives that allow for the creation of correct concurrent applications. It will examine how a variety of systems organize parallel processing resources and enable users to write parallel programs for these systems. Covered programming paradigms will include multiprogramming with processes, message passing, threading in shared memory multiprocessors, vector processing, graphics processor programming, transactions, MapReduce, and other forms of programming for the cloud. Class discussion is based on assigned readings. Assignments provide students the opportunity to develop proficiency in writing software using different parallel programming paradigms.

Requirements/Evaluation:  homework assignments, programming projects, and up to two exams
Prerequisites:  CSCI 136 or equivalent programming experience, and CSCI 237, or permission of instructor
Enrollment Limit:  24
Enrollment Preferences:  current or expected Computer Science majors
Expected Class Size:  24
Grading:  no pass/fail option,  no fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: The course will consist of substantial problem sets and programming assignments in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2025
LEC Section: 01  TR 9:55 am - 11:10 am  Kelly A. Shaw

CSCI 339  (F)  Distributed Systems  (QFR)
This course studies the key design principles of distributed systems, which are collections of independent networked computers that function as single coherent systems. Covered topics include communication protocols, processes and threads, naming, synchronization, consistency and replication, fault tolerance, and security. Students also examine some specific real-world distributed systems case studies, including Google and Amazon. Class discussion is based on readings from the textbook and research papers. The goals of this course are to understand how large-scale computational systems are built, and to provide students with the tools necessary to evaluate new technologies after the course ends.

Requirements/Evaluation:  weekly homework assignments, midterm exam, 3 major programming projects, and a final project
Prerequisites:  CSCI 237
Enrollment Limit:  24
Enrollment Preferences:  current or expected Computer Science majors
Expected Class Size:  24
Grading:  no pass/fail option,  no fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2024
LEC Section: 01  MR 1:10 pm - 2:25 pm  Jeannie R Albrecht

CSCI 345  (S)  Robotics and Digital Fabrication  (QFR)
This course is a hands-on exploration of topics in robotics and digital fabrication. We will experience firsthand how ideas and methods from computer science can be applied to make physical objects, including robots and other machines. The emphasis will be on creative, hands-on experimentation. Along the way, students will learn the basics of embedded systems programming (Arduino), breadboarding, soldering, printed circuit board (PCB) design, mechanical computer-aided design (CAD)--both conventional (OnShape) and programmatic (OpenSCAD)--as well digital fabrication (3D-printing, laser cutting). Students will learn both how to build their own prototypes and how to send out designs to have parts machined professionally. Students will work in teams throughout. The course will culminate in a team robotic design competition testing both functionality and creativity.

Requirements/Evaluation:  Evaluation based on assignments, projects, and exams.
Prerequisites: CSCI 237
Enrollment Limit: 18; 9/lab
Enrollment Preferences: Current or expected Computer Science majors
Expected Class Size: 18
Grading: no pass/fail option, no fifth course option
Materials/Lab Fee: A fee of $150-$200 will be added to the term bill to cover the purchase of consumable electronics, motors, 3D-printing filament, and stock used in the assignments and final project.
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: The course will include programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2025
LEC Section: 01 TR 9:55 am - 11:10 am James M. Bern
LAB Section: 02 T 1:00 pm - 2:30 pm James M. Bern
LAB Section: 03 T 2:30 pm - 4:00 pm James M. Bern

CSCI 357 (S) Algorithmic Game Theory (QFR)
This course focuses on topics in game theory and mechanism design from a computational perspective. We will explore questions such as: how to design algorithms that incentivize truthful behavior, that is, where the participants have no incentive to cheat? Should we let drivers selfishly minimize their commute time or let a central algorithm direct traffic? Does Arrow's impossibility result mean that all voting protocols are doomed? The overarching goal of these questions is to understand and analyze selfish behavior and whether it can or should influence system design. Students will learn how to model and reason about incentives in computational systems both theoretically and empirically. Topics include types of equilibria, efficiency of equilibria, auction design and mechanism design with money, two-sided markets and mechanism design without money, incentives in computational applications such as P2P systems, and computational social choice.
Requirements/Evaluation: weekly problem sets and/or programming assignments, two midterm exams, and a final project.
Prerequisites: CSCI 256
Enrollment Limit: 24
Enrollment Preferences: current or expected Computer Science majors
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: The course will consist problem sets and programming assignments in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2025
LEC Section: 01 TF 1:10 pm - 2:25 pm Shikha Singh

CSCI 358 (F) Applied Algorithms (QFR)
This course is about bridging the gap between theoretical running time and writing fast code in practice. The course is divided into two basic topics. The first is algorithmic: we will discuss some of the most useful tools in a coder's toolkit. This includes topics like randomization (hashing, filters, approximate counters), linear and convex programming, similarity search, and cache-efficient algorithms. Our goal is to talk about why these efficient algorithms make seemingly difficult problems solvable in practice. The second topic is applications: we will discuss how to implement algorithms in an efficient way that takes advantage of modern hardware. Specific topics covered will include blocking, loop unrolling, pipelining, as well as strategies for performance analysis. Projects and assessments will include both basic theoretical aspects (understanding why the algorithms we discuss actually work), and practical aspects (implementing the algorithms we discuss to solve important problems, and optimizing the code so it runs as quickly as possible).
Requirements/Evaluation: Over the course of each week, there will be either a homework or an assignment. Homeworks and assignments have
similar structure, with both a coding and problem set component, but assignments will be weighted more heavily and must be completed individually. There will also be a take-home final at the end of the year.

**Prerequisites:** CSCI 256 and CSCI 237

**Enrollment Limit:** 24

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

---

**Fall 2024**

**LEC Section:** 01  TF 1:10 pm - 2:25 pm  Samuel McCauley

**CSCI 361 (F) Theory of Computation** (QFR)

**Cross-listings:** MATH 361

**Primary Cross-listing**

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory--the examination of what problems can be solved and what problems cannot be solved--and the study of complexity theory--the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

**Requirements/Evaluation:** weekly problem sets and one or more exams

**Prerequisites:** CSCI 256 or both a 300-level MATH course and permission of instructor

**Enrollment Limit:** 24

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 361(D3) CSCI 361(D3)

**Quantitative/Formal Reasoning Notes:** This course include regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** COGS Interdepartmental Electives

**LEC Section:** 02  TR 9:55 am - 11:10 am  Shikha Singh

**CSCI 375 (F) Natural Language Processing** (QFR)

Natural language processing (NLP) is a set of methods for making human language accessible to computers. NLP underlies many technologies we use on a daily basis including automatic machine translation, search engines, email spam detection, and automated personalized assistants. These methods draw from a combination of algorithms, linguistics and statistics. This course will provide a foundation in building NLP models to classify, generate, and learn from text data.

**Requirements/Evaluation:** Evaluation based on assignments, projects, and exams.

**Prerequisites:** CSCI 136, and either CSCI 256 or STAT 201/202.

**Enrollment Limit:** 24
CSCI 381 (F) Deep Learning (QFR)
This course is an introduction to deep neural networks and how to train them. Beginning with the fundamentals of regression and optimization, the course then surveys a variety of neural network architectures, which may include multilayer feedforward neural networks, convolutional neural networks, recurrent neural networks, and transformer networks. Students will also learn how to use deep learning software such as PyTorch or Tensorflow.

Requirements/Evaluation: Evaluation based on assignments, projects, and exams.
Prerequisites: CSCI 136 and fulfillment of the Discrete Mathematics Proficiency requirement
Enrollment Limit: 24
Enrollment Preferences: Current or expected Computer Science majors
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.
Attributes: COGS Interdepartmental Electives

Fall 2024
LEC Section: 01    MWF 9:00 am - 9:50 am    Mark Hopkins

ECON 110 (F)(S) Principles of Microeconomics (QFR)
This course is an introduction to the study of the forces of supply and demand that determine prices and the allocation of resources in markets for goods and services, markets for labor, and markets for natural resources. The focus is on how and why markets work, why they may fail to work, and the policy implications of both their successes and failures. The course focuses on developing the basic tools of microeconomic analysis and then applying those tools to topics of popular or policy interest such as minimum wage legislation, pollution control, competition policy, international trade policy, discrimination, tax policy, and the role of government in a market economy.

Requirements/Evaluation: problem sets, quizzes, short essays, two midterms, final exam
Prerequisites: none
Enrollment Limit: 40
Enrollment Preferences: This course is required of Economics and Political Economy majors and highly recommended for those non-majors interested in Environmental Studies and Women's, Gender and Sexuality Studies.
Expected Class Size: 40
Grading: yes pass/fail option, no fifth course option
Unit Notes: The department recommends students follow this course with ECON 120 or with a lower-level elective that has ECON 110 as its prerequisite; students may alternatively proceed directly to ECON 251 after taking this introductory course.
Distributions: (D2) (QFR)
Quantitative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

Attributes: POEC Required Courses

ECON 120 (F)(S) Principles of Macroeconomics (QFR)
This course provides an introduction to the study of the aggregate national economy. It develops the basic theories of macroeconomics and applies them to topics of current interest. Issues to be explored include: the causes of inflation, unemployment, recessions, and depressions; the role of government fiscal and monetary policy in stabilizing the economy; the determinants of long-run economic growth; the long- and short-run effects of taxes, budget deficits, and other government policies on the national economy; the role of financial frictions in amplifying recessions; and the workings of exchange rates and international finance.

Requirements/Evaluation: Depending on instructor, may include: problem sets, short essays, quizzes, reading assignments, either one or two midterms, and a final exam.

Prerequisites: ECON 110

Enrollment Limit: 40

Enrollment Preferences: First-year students and sophomores.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

ECON 213 (S) Introduction to Environmental and Natural Resource Economics (QFR)
Cross-listings: ENVI 213 / CAOS 213
We'll use economics to provide one perspective on reasons humans harm the environment and overuse natural resources, and what we can do about it. We'll study climate change, pollution in general, cost benefit analysis, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We'll talk about how economists put a dollar value on nature and ecosystem services (as well as human health and life!), and the concerns people may have about doing so. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth. Consideration of justice and equity will be woven throughout the whole semester.

Requirements/Evaluation: problem sets, short essays, final paper; intermediate assignments may include a poster, one or more short presentation(s), other brief writing assignment(s)

Prerequisites: ECON 110 or equivalent

Enrollment Limit: 30

Enrollment Preferences: first-year and sophomore students

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: this course will count toward both the Environmental Studies major and concentration

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
ECON 213(D2) ENVI 213(D2) CAOS 213(D2)

Quantitative/Formal Reasoning Notes: We will use formal theory expressed in math and graphs, perform calculations, and consume statistical data.

Spring 2025
LEC Section: 01    MWF 8:30 am - 9:45 am     Sarah A. Jacobson

ECON 229 (F) Law and Economics (QFR)
This course applies the tools of microeconomic analysis to private (i.e., civil) law. This analysis has both positive and normative aspects. The positive aspects deal with how individuals respond to the incentives created by the legal system. Examples include: how intellectual property law encourages the creation of knowledge while simultaneously restricting the dissemination of intellectual property; how tort law motivates doctors to avoid malpractice suits; and how contract law facilitates agreements. The normative aspects of the analysis ask whether legal rules enhance economic efficiency (or, more broadly, social welfare). Examples include: what legal rules are most appropriate for mitigating pollution, ensuring safe driving, and guaranteeing workplace safety? The course will also cover the economics of legal systems; for example, what are the incentives for plaintiffs to initiate lawsuits and what role do lawyers play in determining outcomes.

Class Format: discussion

Requirements/Evaluation: class participation, problem sets, paper based on actual court cases, a midterm exam, and a final exam

Prerequisites: ECON 110

Enrollment Limit: 35

Enrollment Preferences: ECON and POEC majors (and potential majors) will receive priority if the course is overenrolled

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: This course uses economic models to explore the logic of legal concepts. While some arguments will be qualitative, students will also use numerical examples to illustrate the principles of the course.

Attributes: JLST Interdepartmental Electives POEC Depth

Fall 2024
SEM Section: 01    W 7:00 pm - 9:40 pm     William M. Gentry
ECON 232  (S)  Financial Markets, Institutions and Policies  (QFR)
The focus of the course will be on how firms, financial markets, and central banks interact in the economy. Key questions addressed in the course include: How do firms allocate their resources to enhance their value? How are firms evaluated by the financial markets? How are asset prices determined, and how are these prices related to interest rates? Are financial markets efficient, and what are the implications of their efficiency or lack thereof? How does the financial system help with the management of risks faced by society? We will also study the role of the central bank (the Federal Reserve in the US), monetary policy, and government regulation and their impacts on financial decision making. Key questions include: How do central banks set monetary policy and how do those policies affect the economy and the financial decision-making process? How does monetary policy change when interest rates are (virtually) zero?

Class Format: There will be a mix of lecture and discussion.

Requirements/Evaluation: 5-7 Problem Sets, Quantitative Exercises, Group Paper, and Final Exam

Prerequisites: ECON 110 and ECON 120

Enrollment Limit: 25

Enrollment Preferences: Sophomore and Junior Economics majors

Expected Class Size: 25

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)  (QFR)

Quantitative/Formal Reasoning Notes: We will use mathematical models, graphs, and data analysis to understand financial decisions at the firm and economy-wide levels.

Attributes: POEC Depth

Spring 2025
LEC Section: 01    TR 11:20 am - 12:35 pm     Nate  Vellekoop

ECON 251  (F)(S)  Price and Allocation Theory  (QFR)
A study of the determination of relative prices and their importance in shaping the allocation of resources and the distribution of income. Subjects include: behavior of households in a variety of settings, such as buying goods and services, saving, and labor supply; behavior of firms in various kinds of markets; results of competitive and noncompetitive markets in goods, labor, land, and capital; market failure; government policies as sources of and responses to market failure; welfare criteria; limitations of mainstream analysis.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets and multiple exams, including a final exam. They may also include one or more quizzes, short essays, collaborative projects, or presentations.

Prerequisites: ECON 110 and MATH 130 or its equivalent

Enrollment Limit: 30

Enrollment Preferences: Current or prospective Economics majors.

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)  (QFR)

Quantitative/Formal Reasoning Notes: Course involves developing and analyzing mathematical models of real-world phenomena, grounded in tools like calculus and game theory. Students are assumed to be comfortable with topics from introductory calculus, including differentiation and integration.

ECON 252 (F)(S) Macroeconomics (QFR)
A study of aggregate economic activity: output, employment, inflation, and interest rates. The class will develop a theoretical framework for analyzing economic growth and business cycles. The theory will be used to evaluate policies designed to promote growth and stability, and to understand economic developments in the U.S. and abroad. Instructors may use elementary calculus in assigned readings, exams and lectures.
Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets and/or written assignments, midterm(s), and a final exam.
Prerequisites: ECON 110 and 120 and MATH 130 or its equivalent
Enrollment Limit: 30
Enrollment Preferences: Current or prospective Economics majors.

ECON 255 (F)(S) Econometrics (QFR)
An introduction to the theory and practice of applied quantitative economic analysis. This course familiarizes students with the strengths and weaknesses of the basic empirical methods used by economists to evaluate economic theory against economic data. Emphasizes both the statistical foundations of regression techniques and the practical application of those techniques in empirical research, with a focus on understanding when a causal interpretation is warranted. Computer exercises will provide experience in using the empirical methods, but no previous computer experience is expected. Highly recommended for students considering graduate training in economics or public policy.
Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets, multiple exams, a group project, and possible additional assignments or quizzes.
Prerequisites: MATH 130, plus STAT 161, 201 or 202 (or equivalent, including a score of 5 on the AP Statistics Exam), plus one course in ECON; STAT 101 will also serve as a prerequisite, but only if taken prior to the fall of 2018
Enrollment Limit: 30
Enrollment Preferences: Current or prospective Economics and Political Economy majors.
Expected Class Size: 30
Grading: no pass/fail option, no fifth course option
Unit Notes: Students may substitute the combination of STAT 201 and 346 for ECON 255
Distributions: (D2) (QFR)
Quantitative/Formal Reasoning Notes: Course teaches research tools necessary to analyze data.
Attributes: POEC Required Courses

Fall 2024
LEC Section: 01 TR 11:20 am - 12:35 pm Owen Ozier
Evidence from across the developing world suggests that the "binding constraints" to economic growth can be remarkably heterogeneous—i.e., the growth potential of stagnating or underperforming economies may be unlocked in a large variety of ways. For instance, pre-reform China had been constrained by poor supply incentives in agriculture, whereas Brazil has been held back by an inadequate supply of credit, South Africa by poor employment incentives in manufacturing, El Salvador by insufficient production incentives in tradables, Zimbabwe by bad governance, and so forth.

How can developing-country policymakers determine country-specific constraints like these, thus enabling them to pragmatically pursue a selected set of growth-promoting policies rather than attempting to implement a "laundry list" of reforms that are naively based on "best practice" rules-of-thumb? This course will serve as a primer on "growth diagnostics," an empirically-driven analytical framework for identifying the most binding constraints to economic growth in a given country at a point in time, thereby allowing policymakers to develop well-targeted reforms for relaxing these constraints while being cognizant of the nation's prevailing economic, political, and social context. The course will first build on the basic theories and empirics of economic growth to elucidate the diagnostic framework and will then employ a wide range of country-specific case studies to demonstrate how the framework can be operationalized for policy making. Throughout the semester, students will be required to work in groups, each representing a given developing or emerging-market economy, in order to build a growth diagnostic for their group's assigned country by the end of the course.

Requirements/Evaluation: extensive class participation, several short (5-page) reports, a final group project comprising a country growth diagnostic, and a final group presentation on the diagnostic

Prerequisites: for undergraduates ECON 251, ECON 252, and either ECON 255 or STAT 346

Enrollment Limit: 19

Enrollment Preferences: CDE fellows and senior Economics majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ECON 345(D2) ECON 545(D2)

Quantitative/Formal Reasoning Notes: The course material will be draw heavily on mathematical and statistical models of economic growth and macroeconomic development, and students will be required to routinely develop mathematical models and/or conduct econometric analysis in their assignments.
Enrollment Preferences: Economics majors

Expected Class Size: 25

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: uses extensive mathematical modeling, including engaging with results from econometrics and statistics

Spring 2025

LEC Section: 01 TR 8:30 am - 9:45 am Greg Phelan

ECON 367 (S) The Political Economy of Social Insurance (WS) (QFR)
The Great Society policies of the 1960s dramatically changed the ways people living in poverty interacted with the federal government, but the benefits associated with these policies seem to have stagnated. Since 1965, the annual poverty rate in the United States has hovered between 10% and 15%, though far more than 15% of Americans experience poverty at some point in their lives. In this course, we will study public policies that, explicitly or implicitly, have as a goal improving the well-being of the poor in the United States. These policies include social insurance programs such as Unemployment Insurance; safety net programs such as Temporary Assistance to Needy Families, Supplemental Nutrition Assistance Program, Medicaid, and housing assistance; education programs such as Head Start and public education; and parts of the tax code, including the Earned Income Tax Credit and Child Tax Credit. We will explore the design and function of these programs, with a particular focus on the context in which they were developed. What political incentives and constraints have strung up our social safety net? How do these factors affect the goals of policy, the trade-offs inherent to the policy’s design, and why poverty has not sustained a downward trend in the United States? Through careful consideration, students will learn how to communicate a path forward for public policy which accounts for theoretical economic expectations and the reality of political constraints in policy design.

Class Format: Lecture with substantial class discussion.

Requirements/Evaluation: Several short policy memos, participation in class discussion, and a final analytical essay.

Prerequisites: ECON 253 or 255

Enrollment Limit: 25

Enrollment Preferences: Students majoring in economics or political economy.

Expected Class Size: 25

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (WS) (QFR)

Writing Skills Notes: Students will write 4 policy memos over the course of the semester followed by a longer, final analytical essay. Synthesis of peer-reviewed literature, use of citation management systems, and clarity in technical writing will be emphasized. Students will receive timely, substantial, individualized feedback to develop their technical writing ability over the course of the semester. Opportunities to meet with professor outside of class at any stage of writing.

Quantitative/Formal Reasoning Notes: This course will use quantitative tools of economics. Focus on building data visualization & science communication skills after ECON 255.

Attributes: POEC Skills

Spring 2025

LEC Section: 01 TF 2:35 pm - 3:50 pm Shyam Raman

ECON 371 (F) Time Series Econometrics and Empirical Methods for Macro (QFR)
Econometric methods in many fields including macro and monetary economics, finance and international growth and development, as well as numerous fields beyond economics, have evolved a distinct set of techniques which are designed to meet the practical challenges posed by the typical empirical questions and available time series data of these fields. The course will begin with an introductory review of concepts of estimation and inference for large data samples in the context of the challenges of multivariate endogenous systems, and will then focus on associated methods for analysis of short run dynamics such as vector autoregressive techniques and methods for analysis of long run dynamics such as cointegration techniques. Students will be introduced to concepts and techniques analytically, but also by intuition, learning by doing, and by computer simulation.
and illustration. The course is particularly well suited for economics majors wishing to explore advanced empirical methods, or for statistics, mathematics or computer science majors wishing to learn more about the ways in which the subject of their majors interacts with the field of economics. The method of evaluation will include a term paper. ECON 252 and either STATS 346 or ECON 255 are formal prerequisites, although for students with exceptionally strong math/stats backgrounds these can be waived subject to instructor permission. Students who complete this course will also be permitted to enroll in Econ 471 (a follow up senior seminar course) during the spring semester if they are interested.

Requirements/Evaluation: term paper and regular homework assignments

Prerequisites: ECON 252 and either ECON 255 or STATS 346

Enrollment Limit: 19

Enrollment Preferences: students wishing to write an honors thesis, and students with strong MATH/STAT/CSCI backgrounds

Expected Class Size: 19

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: Uses quantitative/formal reasoning intensively in the form of mathematical and statistical arguments, as well as computer programming.

Fall 2024

SEM Section: 01  W 7:00 pm - 9:40 pm  Peter L. Pedroni

ECON 384  (F)  Corporate Finance  (QFR)

This course analyzes the major financial decisions facing firms. While the course takes the perspective of a manager making decisions about both what investments to undertake and how to finance these projects, it will emphasize the underlying economic models that are relevant for these decisions. Topics include capital budgeting, links between real and financial investments, capital structure choices, dividend policy, and firm valuation.

Class Format: Lecture / discussion

Requirements/Evaluation: Problem sets, exams, short project

Prerequisites: ECON 251, 252, and some familiarity with statistics (e.g., ECON 255)

Enrollment Limit: 25

Enrollment Preferences: Economics majors; seniority

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: The course uses quantitative models to evaluate decisions.

Fall 2024

LEC Section: 01  MWF 11:00 am - 12:15 pm  Caitlin E. Hegarty

ECON 385  (F)  Games and Information  (QFR)

This course is a mathematical introduction to strategic thinking and its applications. Ideas from game theory, including Nash equilibrium and its refinements, commitment and credibility, repeated games, and information asymmetries, incentive contracts, and signaling, will be introduced. Applications will be drawn from economics, history, and politics around the globe, and include topics such as: trust between strangers, corruption and fraud, racial bias, violence and deterrence. And we will explore how to write and recognize game-theory models to help make sense of strategic interactions in the world around us.

Requirements/Evaluation: Two exams, regular problem sets and assignments in which students create game-theoretic models.

Prerequisites: ECON 251 or permission of instructor

Enrollment Limit: 25

Enrollment Preferences: juniors
ECON 389 (S) Tax Policy in Global Perspective (QFR)

Cross-listings:

Secondary Cross-listing

Government policy is important for economic development. To finance their policies, governments must build the fiscal capacity to implement a tax system. In turn, fiscal capacity—the ability for the government to raise revenue—depends on economic development. This endogeneity between fiscal capacity and economic development creates challenges for tax policy in developing countries. Given these challenges, what types of taxes should countries use to raise revenues? How can governments build the fiscal capacity to generate revenue to finance critical services? This class explores tax policy from a global and comparative perspective. Because most students will be CDE fellows, we will emphasize tax policy issues, examples, and evidence that are pertinent to developing countries. However, many tax policy lessons are universal so we will also learn about tax policies in developed countries, especially issues relevant for transnational transactions. Topics addressed include: how economic principles can be applied to the efficiency and equity consequences of tax policies; how personal income taxes, corporate income taxes, and value-added taxes are designed and administered and how they influence the economy; ideas for fundamental tax reforms; the debate over progressive taxes versus "flat" taxes; how taxes affect incentives to save and invest; how market failures and administrative problems may influence the optimality of tax policy; the implications of global capital flows and corporate tax avoidance for tax policy; tax holidays and other special tax incentives for investment; empirical evidence on the influence of taxes on foreign direct investment, labor supply, and tax evasion; tax policy towards natural resources such as minerals and oil; case studies of efforts to reform tax administration and reduce tax evasion and corruption; taxes on land and property; taxes on imports and exports; presumptive taxation; and the informal economy and its implications for tax policy.

Requirements/Evaluation: midterm exam, several problem sets, two 10-page essays

Prerequisites: one public economics course or microeconomics course (ECON 504 or ECON 110), and one empirical methods course (POEC 253 or ECON 255, 502, or 503); students who have previously taken ECON 351 will not be enrolled

Enrollment Limit: 19

Enrollment Preferences: CDE students, but undergraduates with the prerequisites are welcome

Expected Class Size: 15-19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
ECON 389(D2) ECON 514(D2)

Quantitative/Formal Reasoning Notes: The course builds on other QFR Reasoning econ classes.

Attributes: POEC Depth POEC Skills

Spring 2025

SEM Section: 01 MR 2:35 pm - 3:50 pm Jon M. Bakija

ECON 454 (F) Macroeconomic Perspectives on Labor Markets (QFR)

This seminar will cover aggregate trends in the labor market from a macroeconomic perspective, along with the tools that economists use to study them. We will think about the workforce as a whole but we will also highlight research that studies heterogeneity within the economy, such as patterns by race, gender, education, or occupation. Students will learn basic search and matching models, as well as related empirical methods. We will read papers that employ a variety of survey and administrative data, and we will discuss what types of research questions are best answered by each data
source. We will use real data to apply the methods we learn. Potential topics include occupational mismatch, wage inequality, and monopsony.

**Requirements/Evaluation:** Class participation, short assignments, midterm exam, and a final project

**Prerequisites:** Econ 251, 252, and 255

**Enrollment Limit:** 19

**Enrollment Preferences:** Junior and senior economics majors

**Expected Class Size:** 19

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantitative/Formal Reasoning Notes:** Course includes regular problem sets that require quantitative and formal reasoning skills.

**ECON 471 (S) Topics in Advanced Econometrics (QFR)**

The course uses both a practical and conceptual/theory based approach, with emphasis on methods of structural identification of dynamics in VARs and long run cointegration and nonlinear function estimation and analysis, both in conventional time series and especially panel time series which contain spatial dimensions. The course will also investigate methods of computer simulation related to these techniques. The course is well suited for students considering empirically oriented honors theses in fields that employ these techniques, such as macro, finance, growth, trade and development, as well as fields outside of economics that use time series data. It is also well suited for students majoring in economics, statistics, computer sciences or mathematics who wish to expand their econometrics training and understanding to a more advanced level.

**Requirements/Evaluation:** periodic homework assignments, term paper

**Prerequisites:** ECON 371

**Enrollment Limit:** 19

**Enrollment Preferences:** students with strong quantitative backgrounds, and to students intending to write an honors thesis

**Expected Class Size:** 19

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantitative/Formal Reasoning Notes:** Course will make use of mathematics, statistics and computer analysis for the conceptualization and implementation of the econometric topics that are taught.

ENVI 203 (F) Ecology (QFR)

Cross-listings: BIOL 203

Secondary Cross-listing

This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

Requirements/Evaluation: pre-class quizzes, lab reports, two mid-term exams, and a final exam

Prerequisites: BIOL 102, or ENVI 102, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: students planning to pursue Biology and/or ENVI

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
BIOL 203(D3) ENVI 203(D3)

Quantitative/Formal Reasoning Notes: Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to linear models, multidimensional data analysis and contingency tables.

ENVI 213 (S) Introduction to Environmental and Natural Resource Economics (QFR)

Cross-listings: ECON 213 / CAOS 213

Secondary Cross-listing
We'll use economics to provide one perspective on reasons humans harm the environment and overuse natural resources, and what we can do about it. We'll study climate change, pollution in general, cost benefit analysis, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We'll talk about how economists put a dollar value on nature and ecosystem services (as well as human health and life!), and the concerns people may have about doing so. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth. Consideration of justice and equity will be woven throughout the whole semester.

**Requirements/Evaluation:** problem sets, short essays, final paper; intermediate assignments may include a poster, one or more short presentation(s), other brief writing assignment(s)

**Prerequisites:** ECON 110 or equivalent

**Enrollment Limit:** 30

**Enrollment Preferences:** first-year and sophomore students

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** this course will count toward both the Environmental Studies major and concentration

**Distributions:** (D2)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

LEC Section: 01    MWF 8:30 am - 9:45 am     Sarah A. Jacobson

**ENVI 327  (F) Coastal Processes and Geomorphology  (QFR)**

**Cross-listings:** GEOS 327 / CAOS 327

**Secondary Cross-listing**

Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces--wind, waves, storms, and people--that shape the coastal zone, as well as the geologic formations--sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs--that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

**Class Format:** lecture two times a week with a lab one time per week

**Requirements/Evaluation:** lab reports, quizzes, and an independent research project

**Prerequisites:** Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.

**Enrollment Limit:** 15

**Enrollment Preferences:** Geosciences majors

**Expected Class Size:** 15
**Grading:** yes pass/fail option, yes fifth course option

**SEM Section: 01 TR 8:30 am - 9:45 am Sarah A. Jacobson**

**GEOS 234 (S) Introduction to Materials Science (QFR)**

**Cross-listings:** PHYS 234

**Secondary Cross-listing**
Materials Science is the study of how the microscopic structure of materials—whether steel, carbon fiber, glass, wood, plastic, or mayonnaise—determines their macroscopic mechanical, thermal, electric, and other properties. Topics of this course include classifying materials; material structure; thermodynamics and phase transformations; material properties and testing; how solids bend, flow, and ultimately break; and how
to choose the right material for design applications. Materials Science is a highly interdisciplinary field and as a result the course prerequisites are broad but also flexible. Interested students who are unsure about their preparation are strongly encouraged to contact the instructor.

**Class Format:** lecture (3 hours per week) plus three to four small-group laboratory sessions throughout the semester (to be scheduled with instructor)

**Requirements/Evaluation:** weekly problem sets, class participation, and midterm and final exams, all of which have a substantial quantitative component

**Prerequisites:** high school physics and chemistry, preferably at the AP level, and MATH 140 or AP Calculus (BC), and one 200-level PHYS, CHEM, or GEOS course; or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** based on students' scientific background and seniority

**Expected Class Size:** 10

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** This course does not count toward the Geosciences major.

**Distributions:** (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 234(D3) GEOS 234(D3)

**Quantitative/Formal Reasoning Notes:** Weekly problem sets and exams all have a substantial quantitative component.

**Attributes:** MTSC Courses

**Spring 2025**

**LEC Section: 01** MR 2:35 pm - 3:50 pm Katharine E. Jensen

**GEOS 327 (F) Coastal Processes and Geomorphology** (QFR)

**Cross-listings:** ENVI 327 / CAOS 327

**Primary Cross-listing**

Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces--wind, waves, storms, and people--that shape the coastal zone, as well as the geologic formations--sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs--that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change.

Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

**Class Format:** lecture two times a week with a lab one time per week

**Requirements/Evaluation:** lab reports, quizzes, and an independent research project

**Prerequisites:** Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.

**Enrollment Limit:** 15

**Enrollment Preferences:** Geosciences majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option
Unit Notes: This course counts toward the GEOS Group B Electives - Sediments + Life.

Distributions:  (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 327(D3) GEOS 327(D3) CAOS 327(D3)

Quantitative/Formal Reasoning Notes: This course will involve the use of MATLAB software to quantitatively analyze coastal process and geomorphological data.

Attributes: ENVI Natural World Electives  GEOS Group B Electives - Sediments + Life

Fall 2024

LEC Section: 01  MWF 8:30 am - 9:45 am  Alex A. Apotsos

INTR 150  (F)  Data for Justice  (DPE) (QFR)

Cross-listings: STS 150 / AMST 150 / SOC 150 / WGSS 150

Primary Cross-listing

This course is a unique and inclusive introduction to data science where quantitative thinking, programming, and social justice intertwine. We will build our data science skills using R, a popular open-source data science tool. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration. But rather than divorcing these techniques from the social issues they can help illuminate, we ground them in a social justice context. Overall, we will apply data science skills to topics drawn from criminal justice, environmental justice, diversity and inclusion in arts and media, education equity, and much more, with the goal of growing our collective capacity to use data science as a tool for social good. During a time when humans are increasingly subjugated to data-driven algorithmic decisions, when there are social media accounts dedicated to highlighting misuses of data, and when artificial intelligence makes faking data a nearly trivial task, using data to ethically and carefully promote justice is more important than ever.

Class Format: This course is taught in a highly interactive format and will frequently use a flipped-classroom approach. Students should expect substantial time devoted to in-class collaboration.

Requirements/Evaluation: Students will complete regularly assigned activities, problem sets, and other assessments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based approach.

Prerequisites: None. This course assumes no prior knowledge of data science or R programming. An interest in social justice and a willingness to engage intensively with data and computing are essential.

Enrollment Limit: 18

Enrollment Preferences: Students without prior college-level courses in statistics and programming.

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Distributions:  (D2)  (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 150(D2) AMST 150(D2) SOC 150(D2) WGSS 150(D2) INTR 150(D2)

Difference, Power, and Equity Notes: This course uses data science as a lens for injustice in spheres such as criminal justice, environmental justice, diversity and inclusion in arts and media, education equity. We will consider race, gender, LGBTQ+, disability, and other axes of identity. Additionally, we will adopt a data-critical perspective, thinking about how social forces shape data and our understanding of it.

Quantitative/Formal Reasoning Notes: This course teaches quantitative tools in R, a widely-adopted data science platform. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration.

Fall 2024

LEC Section: 02  TR 11:20 am - 12:35 pm  Chad M. Topaz

INTR 350  (S)  Data for Justice Research Practicum  (DPE) (QFR)
Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this inclusive, collaborative, research-based course, students will bring statistical, computational, and/or mathematical approaches to bear on issues of social justice. Guided closely by the instructor, students will work in groups to carry out original research in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. Prior research experience is not required; one goal of this course is to build skills for advanced research.

Class Format: This course is an intensive research practicum. Formation of research groups and selection of research topics will be facilitated by the instructor. The primary modality of work is peer collaboration.

Requirements/Evaluation: To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based, ungraded assessment framework.

Prerequisites: INTR 150 (Data for Justice), or prior equivalent exposure to computing, statistics, and social justice topics as approved by the instructor.

Enrollment Limit: 10

Enrollment Preferences: Students who have a declared major in Division I or II, who meet the prerequisites of the course, and who fill out the instructor's preregistration survey (contact the instructor for link).

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
WGSS 363(D2) STS 363(D2) INTR 350(D2) AMST 363(D2)

Difference, Power, and Equity Notes: Students will research issues of social justice in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

Quantitative/Formal Reasoning Notes: Students will use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

Spring 2025

SEM Section: 01 TR 9:55 am - 11:10 am Chad M. Topaz
SEM Section: 02 TR 11:20 am - 12:35 pm Chad M. Topaz

MATH 113 (S) The Beauty of Numbers (QFR)

This course will be an introduction to number theory and mathematical thinking and logic, with emphasis throughout on mathematics as a way of thinking and approaching the world. Have you ever wondered what keeps your credit card information safe every time you buy something online? Number theory! Number Theory is one of the oldest branches of mathematics. In this course, we will discover the beauty and usefulness of numbers, from ancient Greece to modern cryptography. We will look for patterns, make conjectures, and learn how to prove these conjectures. Starting with nothing more than basic high school algebra, we will develop the logic and critical thinking skills required to realize and prove mathematical results. Topics to be covered include the meaning and content of proof, prime numbers, divisibility, rationality, modular arithmetic, Fermat's Last Theorem, the Golden ratio, Fibonacci numbers, coding theory, and unique factorization. This course is meant to give you an appreciation for numbers and mathematics and to enhance your logical reasoning skills. Although most people will not use calculus or geometry in their jobs or everyday lives, mathematics enhances our abilities to think logically and reason effectively. This skill is useful in all aspects of life. Number theory, in particular, is a great area of mathematics that allows one to jump in right away without a lot of pre-requisite knowledge. We will look at examples, look for patterns, make conjectures, and we will spend a lot of time learning how to rigorously prove those conjectures.

Requirements/Evaluation: projects, homework assignments, and exams

Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test) or permission of instructor. Anyone who has previously taken a 200-level math course or higher must obtain instructor permission to take the course.

Enrollment Limit: 25

Enrollment Preferences: If over-enrolled, course selection will be based on answers to a questionnaire.

Expected Class Size: 25
Spring 2025

LEC Section: 01    TR 11:20 am - 12:35 pm    Allison Pacelli

MATH 130  (F)(S)  Calculus I  (QFR)

Calculus permits the computation of velocities and other instantaneous rates of change by a limiting process called differentiation. The same process also solves "max-min" problems: how to maximize profit or minimize pollution. A second limiting process, called integration, permits the computation of areas and accumulations of income or medicines. The Fundamental Theorem of Calculus provides a useful and surprising link between the two processes. Subtopics include trigonometry, exponential growth, and logarithms.

Requirements/Evaluation: Weekly homework and quizzes, 2 exams during the semester, and one final

Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test); this is an introductory course for students who have not seen calculus before

Enrollment Limit: 50

Enrollment Preferences: first-year students

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students who have previously taken a calculus course may not enroll in MATH 130 without the permission of instructor

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This a calculus course.

Fall 2024

LEC Section: 01    MWF 8:00 am - 8:50 am    Lori A. Pedersen

LEC Section: 02    MWF 9:00 am - 9:50 am    Lori A. Pedersen

Spring 2025

LEC Section: 01    MWF 9:00 am - 9:50 am    Leo Goldmakher

MATH 140  (F)(S)  Calculus II  (QFR)

Calculus answers two basic questions: how fast is something changing (the derivative) and how much is there (the integral). This course is about integration, and the miracle that unites the derivative and the integral (the Fundamental Theorem of Calculus.) Understanding calculus requires in part the understanding of methods of integration. This course will also solve equations involving derivatives ("differential equations") for population growth or pollution levels. Exponential and logarithmic functions and trigonometric and inverse functions will also play an important role. This course is the right starting point for students who have seen derivatives, but not necessarily integrals, before.

Requirements/Evaluation: homework, quizzes, and/or exams

Prerequisites: MATH 130 or equivalent; students who have received the equivalent of advanced placement of AB 4, BC 3 or higher may not enroll in MATH 140 without the permission of instructor

Enrollment Limit: 50

Enrollment Preferences: based on who needs calculus the soonest

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Unit Notes: students who have higher advanced placement must enroll in MATH 150 or above

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is a math class
MATH 150  (F)(S)  Multivariable Calculus  (QFR)
Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives, multiple integrals. There is also a unit on infinite series, sometimes with applications to differential equations.

Requirements/Evaluation:  Problem sets and exams

Prerequisites:  MATH 140 or equivalent, such as satisfactory performance on an Advanced Placement Examination

Enrollment Limit:  50

Enrollment Preferences:  Preference will be given to prospective math and stats majors, or students who need this as a course to serve as a prerequisite for other courses.

Expected Class Size:  40

Grading:  yes pass/fail option,  yes fifth course option

Unit Notes:  Students with the equivalent of advanced placement of AB 4 or above should enroll in MATH 150, students with a BC 3 or higher should enroll in Math 151 when it is being offered, and Math 150 otherwise.

Distributions:  (D3)  (QFR)

Quantitative/Formal Reasoning Notes:  mathematics

MATH 151  (F)  Multivariable Calculus  (QFR)
Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives and multiple integrals. The goal of the course is Stokes Theorem, a deep and profound generalization of the Fundamental Theorem of Calculus. The difference between this course and MATH 150 is that MATH 150 covers infinite series instead of the theorems of vector calculus. Students with the equivalent of BC 3 or higher should enroll in MATH 151, as well as students who have taken the equivalent of an integral calculus and who have already been exposed to infinite series. For further clarification as to whether MATH 150 or MATH 151 is appropriate, please consult a member of the math/stat department.

Requirements/Evaluation:  problem sets and exams

Prerequisites:  AP BC 3 or higher or integral calculus with infinite series

Enrollment Limit:  50

Enrollment Preferences:  First-years, sophomores, and juniors

Expected Class Size:  40

Grading:  yes pass/fail option,  yes fifth course option

Unit Notes:  MATH 151 satisfies any MATH 150 prerequisite; credit will not be given for both MATH 150 and MATH 151

Distributions:  (D3)  (QFR)

Quantitative/Formal Reasoning Notes:  This course builds quantitative skills
MATH 200 (F)(S) Discrete Mathematics (QFR)
In contrast to calculus, which is the study of continuous processes, this course examines the structure and properties of finite sets. Topics to be covered include mathematical logic, elementary number theory, mathematical induction, set theory, functions, relations, elementary combinatorics and probability, and graphs. Emphasis will be given on the methods and styles of mathematical proofs, in order to prepare the students for more advanced math courses.

Class Format: This will not be a typical lecture course; instead it will be a blend of lecture and discovery-based learning, with weekly small group meetings with TA's.

Requirements/Evaluation: Spring: Evaluation will be based on homework, exams, and participation in weekly small group meetings.
Prerequisites: Calculus at the level of an AP course or Williams College Math 130 or 140. Students who have taken a 300-level or 400-level math course should obtain permission of the instructor before enrolling.

Enrollment Limit: 40
Enrollment Preferences: Preference given to first and second year students intending to major in mathematics or computer science.

Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course involves developing the formal mathematical language of logic and set theory. It also involves using quantitative tools to solve problems relating to combinatorics, probability, number theory, and other fields of discrete mathematics.

MATH 210 (S) Mathematical Methods for Scientists (QFR)
Cross-listings: PHYS 210
Secondary Cross-listing
This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week
Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component
Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131
Enrollment Limit: 50
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 210(D3) MATH 210(D3)

Quantitative/Formal Reasoning Notes: This course will have weekly problem sets using advanced calculus methods.

Spring 2025
LEC Section: 01    TR 9:55 am - 11:10 am    Frederick W. Strauch

MATH 250  (F)(S)  Linear Algebra  (QFR)
Many social, political, economic, biological, and physical phenomena can be described, at least approximately, by linear relations. In the study of systems of linear equations one may ask: When does a solution exist? When is it unique? How does one find it? How can one interpret it geometrically? This course develops the theoretical structure underlying answers to these and other questions and includes the study of matrices, vector spaces, linear independence and bases, linear transformations, determinants and inner products. Course work is balanced between theoretical and computational, with attention to improving mathematical style and sophistication.

Requirements/Evaluation: homework and exams
Prerequisites: MATH 150/151 or MATH 200
Enrollment Limit: 60
Enrollment Preferences: Students who have officially declared a major that requires Math 250.
Expected Class Size: 40
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: In this course, students will engage in both quantitative and formal reasoning.
Attributes: COGS Related Courses

LEC Section: 02    MWF 10:00 am - 10:50 am    Ivo Terek

MATH 309  (F)(S)  Differential Equations  (QFR)
Ordinary differential equations (ODEs) frequently arise as models of phenomena in the natural and social sciences. This course presents core ideas of ODEs from an applied standpoint. Topics covered early in the course may include numerical solutions, separation of variables, integrating factors, and constant coefficient linear equations. Later, we will focus on nonlinear ODEs, for which it is usually impossible to find analytical solutions. Tools from dynamical systems will be introduced to allow us to obtain information about the behavior of the ODEs without explicitly knowing the solution.

Requirements/Evaluation: quizzes/exams, problem sets, participation
Prerequisites: MATH 150/151 and MATH 250
Enrollment Limit: 40
Enrollment Preferences: discretion of the instructor
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: 300-level mathematics course

Fall 2024
MATH 313 (S) Introduction to Number Theory (WS) (QFR)
The study of numbers dates back thousands of years, and is fundamental in mathematics. In this course, we will investigate both classical and modern questions about numbers. In particular, we will explore the integers, and examine issues involving primes, divisibility, and congruences. We will also look at the ideas of number and prime in more general settings, and consider fascinating questions that are simple to understand, but can be quite difficult to answer. This course will include a significant focus on mathematical proof writing and problem solving skills. This includes writing clear and rigorous mathematical proofs, clearly explaining mathematical ideas verbally and in writing, determining how to approach certain types of problems, looking for patterns and making conjectures, and asking good questions about the implications of certain ideas and theorems.

Requirements/Evaluation: Problem sets, project, and exams
Prerequisites: MATH 250 or permission of instructor
Enrollment Limit: 19
Enrollment Preferences: If course is over-enrolled, enrollment preference will be based on answers to a questionnaire. Some preference will be given to students who have not yet had Math 355.
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (WS) (QFR)
Writing Skills Notes: Students will complete weekly problem sets, with a strong emphasis on proof writing, as well as 2 5-10 page papers/projects. There will be feedback given on mathematical writing as well as accuracy, and discussion time during class on writing in math.
Quantitative/Formal Reasoning Notes: This course requires working with various number systems, performing explicit computations, and proving mathematical results using logical reasoning practices.

MATH 326 (F) Differential Geometry (QFR)
Differential Geometry is the study of curvature. In turn, curvature is the heart of geometry. The goal of this course is to start the study of curvature, concentrating on the curvature of curves and of surfaces, leading to the deep Gauss-Bonnet Theorem, which links curvature with topology.

Class Format: lecture
Requirements/Evaluation: Evaluation will be based primarily on problem sets, midterms and a final exam
Prerequisites: MATH 250
Enrollment Limit: 30
Enrollment Preferences: Preference to mathematics majors.
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It is a mathematics upper level course.

MATH 331 (F) The little Questions (QFR)
Using math competitions such as the Putnam Exam as a springboard, in this class we follow the dictum of the Ross Program and "think deeply of
simple things”. The two main goals of this course are to prepare students for competitive math competitions, and to get a sense of the mathematical landscape encompassing elementary number theory, combinatorics, graph theory, and group theory (among others). While elementary frequently is not synonymous with easy, we will see many beautiful proofs and “a-ha” moments in the course of our investigations. Students will be encouraged to explore these topics at levels compatible with their backgrounds.

**Requirements/Evaluation:** homework, classwork, and exams

**Prerequisites:** MATH 250 or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** members or alternates of the Putnam team, Mathematics, Physics or Computer Science majors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** http://web.williams.edu/Mathematics/sjmiller/public_html/331Fa24/

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is an upper level math course where students learn advanced material and solve challenging problems.

---

**Fall 2024**

**LEC Section:** 01 MWF 10:00 am - 10:50 am Steven J. Miller

**MATH 334 (S) Graph Theory (QFR)**

A graph is a collection of vertices, joined together by edges. In this course, we will study the sorts of structures that can be encoded in graphs, along with the properties of those graphs. We'll learn about such classes of graphs as multi-partite, planar, and perfect graphs, and will see applications to such optimization problems as minimum colorings of graphs, maximum matchings in graphs, and network flows.

**Requirements/Evaluation:** problem sets, exams, and a short final project

**Prerequisites:** MATH 200 or MATH 250

**Enrollment Limit:** 30

**Enrollment Preferences:** Math majors

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course involves the writing of mathematical proofs.

---

**Spring 2025**

**LEC Section:** 01 MWF 9:00 am - 9:50 am Ralph E. Morrison

**MATH 338 (F) Intermediate Logic (QFR)**

**Cross-listings:** PHIL 338

**Secondary Cross-listing**

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have take PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic.

Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.
Requirements/Evaluation: problem sets and exams  
Prerequisites: some class in which student has studied formal reasoning  
Enrollment Limit: 20  
Enrollment Preferences: Philosophy majors; juniors and seniors  
Expected Class Size: 15  
Grading: yes pass/fail option, yes fifth course option  
Distributions: (D3) (QFR)  
This course is cross-listed and the prefixes carry the following divisional credit:  
PHIL 338(D2) MATH 338(D3)  
Quantitative/Formal Reasoning Notes: This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

MATH 341 (F)(S) Probability (QFR)  
Cross-listings: STAT 341  
Primary Cross-listing  
The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.  
Requirements/Evaluation: homework, classwork, and exams  
Prerequisites: MATH 150 and MATH 250 or permission of the instructor  
Enrollment Limit: 50  
Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.  
Expected Class Size: 20  
Grading: yes pass/fail option, yes fifth course option  
Distributions: (D3) (QFR)  
This course is cross-listed and the prefixes carry the following divisional credit:  
STAT 341(D3) MATH 341(D3)  
Quantitative/Formal Reasoning Notes: This is a 300-level Math/Stat course.

MATH 345 (S) Introduction to Numerical Analysis (QFR)  
Numerical analysis is the study of algorithms that use numerical approximation to solve problems which arise in scientific applications. This course provides an introduction to the theory, development, and analysis of algorithms for obtaining numerical solutions. We will also use mathematical software to facilitate numerical experimentation. Topics discussed in the course include: Error Analysis and Convergence Rates of Algorithms; Root Finding for Nonlinear Equations; Approximating Functions; Numerical Differentiation and Integration; Numerical Solutions of Ordinary Differential Equations; Iterative Methods for Solving Linear Systems.
Requirements/Evaluation: Evaluation will be based on homework, projects, and exams.
Prerequisites: Math 250 and Math 150/151
Enrollment Limit: 30
Enrollment Preferences: Mathematics and Statistics majors.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is an advanced mathematics class that will cover the fundamental ideas of Numerical Analysis. The students will study in depths various algorithms that provide numerical solutions to various questions in science.

Spring 2025
LEC Section: 01 MWF 11:00 am - 11:50 am Christina Athanasouli

MATH 350 (F)(S) Real Analysis (QFR)
Why is the product of two negative numbers positive? Why do we depict the real numbers as a line? Why is this line continuous, and what do we mean when we say that? Perhaps most fundamentally, what is a real number? Real analysis addresses such questions, delving into the structure of real numbers and functions of them. Along the way we'll discuss sequences and limits, series, completeness, compactness, derivatives and integrals, and metric spaces. Results covered will include the Cantor-Schroeder-Bernstein theorem, the monotone convergence theorem, the Bolzano-Weierstrass theorem, the Cauchy criterion, Dirichlet's and Riemann's rearrangement theorem, the Heine-Borel theorem, the intermediate value theorem, and many others. This course is excellent preparation for graduate studies in mathematics, statistics, and economics.
Requirements/Evaluation: Problem sets and exams.
Prerequisites: MATH 250 or permission of instructor.
Enrollment Limit: 40
Enrollment Preferences: Juniors and Seniors.
Expected Class Size: 25
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is an advanced mathematics course.

Fall 2024
LEC Section: 01 MR 2:35 pm - 3:50 pm Leo Goldmakher

Spring 2025
LEC Section: 01 TR 11:20 am - 12:35 pm Cesar E. Silva

MATH 351 (S) Applied Real Analysis (QFR)
This course is designed to introduce students to the underpinnings of real analysis, primarily in the context of Fourier series. By the end of the semester people will be comfortable making epsilon and delta type arguments. These types of arguments are one of the main pillars of modern mathematics. In a similar way, Fourier series and their generalizations are one of the pillars of the modern digital world.
Requirements/Evaluation: homework, classwork, and exams.
Prerequisites: MATH 150 and MATH 250 or permission of the instructor.
Enrollment Limit: 50
Enrollment Preferences: Seniors
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
MATH 355 (F)(S) Abstract Algebra (QFR)

Algebra gives us tools to solve equations. The integers, the rationals, and the real numbers have special properties which make algebra work according to the circumstances. In this course, we generalize algebraic processes and the sets upon which they operate in order to better understand, theoretically, when equations can and cannot be solved. We define and study abstract algebraic structures such as groups, rings, and fields, as well as the concepts of factor group, quotient ring, homomorphism, isomorphism, and various types of field extensions. This course introduces students to abstract rigorous mathematics.

Requirements/Evaluation: Problem sets and exams
Prerequisites: MATH 250 or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: Students who have officially declared a major that requires Math 355.
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: 300-level math course

MATH 361 (F) Theory of Computation (QFR)

Cross-listings: CSCI 361
Secondary Cross-listing

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory—the examination of what problems can be solved and what problems cannot be solved—and the study of complexity theory—the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Requirements/Evaluation: weekly problem sets and one or more exams
Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor
Enrollment Limit: 24
Enrollment Preferences: current or expected Computer Science majors
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
MATH 361(D3) CSCI 361(D3)

Quantitative/Formal Reasoning Notes: This course include regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.
MATH 374  (F)  Topology  (QFR)

In Real Analysis you learned about metric spaces---any set of objects endowed with a way of measuring distance---and the topology of sets in such spaces (open, closed, bounded, etc). In this course we flip this on its head: we explore how to develop analysis (limits, continuity, etc) in spaces where the topology is known but the metric is not. This will lead us to a bizarre and fascinating version of geometry in which we cannot distinguish between shapes that can be continuously deformed into one another. Not only does this theory turn out to be beautiful in the abstract, it plays an important role in math, physics, and data analysis. This course is excellent preparation for graduate programs in mathematics.

Requirements/Evaluation: Problem sets, exams, an expository essay.
Prerequisites: MATH 350 or 351; not open to students who have taken MATH 323. If you didn't cover metric spaces in real analysis, that's OK!
Enrollment Limit: 30
Enrollment Preferences: Juniors and seniors
Expected Class Size: 20
Grading: no pass/fail option, yes fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: It's math.

MATH 382  (S)  Fourier Analysis  (QFR)

Fourier analysis is the study of waves and frequencies. More precisely, the goal of Fourier analysis is to decompose a complicated function into a simple combination of pure waves, thereby gleaning insight into the behavior of the function itself. It's difficult to overstate the impact of this branch of mathematics; it is foundational throughout theoretical mathematics (e.g., to study the distribution of prime numbers), applied mathematics (e.g., to solve differential equations), physics (e.g., to study properties of light and sound), computer science (e.g., to compute with large integers and matrices), audio engineering (e.g., to pitch-correcting algorithms), medical science (e.g., throughout radiology), etc. The goal of this course is to cover the basic theory (fourier series, the fourier transform, the fast fourier transform) and explore a number of applications, including Dirichlet's theorem on primes in arithmetic progressions, the isoperimetric inequality, the heat equation, and Heisenberg's uncertainty principle.

Class Format: Every week, each student will either give a lecture (based on provided readings) or explain solutions to selected problems.
Requirements/Evaluation: Every week, each student will either give a lecture (based on provided readings) or explain solutions to selected problems.
Prerequisites: MATH 350 or MATH 351 or permission of instructor.
Enrollment Limit: 10
Enrollment Preferences: By lottery.
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: It's math!
MATH 389  (S)  Advanced Analysis  (WS) (QFR)
This course further develops and explores topics and concepts from real analysis, with special emphasis on introducing students to subject matter and techniques that are useful for graduate study in mathematics or an allied field. Material will be drawn, based on student interest, from many areas, including analytic number theory, Fourier series and harmonic analysis, generating functions, differential equations and special functions, integral operators, equidistribution theory and probability, random matrix theory and probabilistic methods. This will be an intense, fast paced class which will give a flavor for graduate school. In addition to standard homework problems, students will also write reviews for MathSciNet, referee papers for journals, write programs in SAGE or Mathematica to investigate and conjecture, and read classic and current research papers.

Class Format: lecture
Requirements/Evaluation: evaluation will be based primarily on homework, classwork, and exams
Prerequisites: MATH 350 or 351 and one additional 300-level MATH course, or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: students interested in graduate school in mathematics or an allied discipline
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Unit Notes: http://web.williams.edu/Mathematics/sjmiller/public_html/389/
Distributions: (D3) (WS) (QFR)
Writing Skills Notes: Students will improve and expand their writing skills by taking course material as a starting point and writing chapters for a book under contract with the American Mathematical Society. This will involve numerous iterations of the content, with feedback both from the professor and from an editor.
Quantitative/Formal Reasoning Notes: This is a post-core 300 level math class.

Spring 2025
LEC Section: 01    TR 11:20 am - 12:35 pm    Steven J. Miller

MATH 403  (F)  Measure and Ergodic Theory  (QFR)
An introduction to measure theory and ergodic theory. Measure theory is a generalization of the notion of length and area, and has been used in the study of stochastic (probabilistic) systems. The course covers the construction of Lebesque and Borel measures, measurable functions, and Lebesque integration. Ergodic theory studies the probabilistic behavior of dynamical systems as they evolve through time, and is based on measure theory. The course will cover basic notions, such as ergodic transformations, weak mixing, mixing, Bernoulli transformations, and transformations admitting and not admitting an invariant measure. There will be an emphasis on specific examples such as group rotations, the binary odometer transformations, and rank-one constructions. The Ergodic Theorem will also be covered, and will be used to illustrate notions and theorems from measure theory.

Requirements/Evaluation: Homework and exams
Prerequisites: MATH 350 or MATH 351 or permission of instructor
Enrollment Limit: 25
Enrollment Preferences: Mathematics majors
Expected Class Size: 15-20
Grading: yes pass/fail option, yes fifth course option
Unit Notes: senior major course
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It is an advanced mathematics course.

Fall 2024
LEC Section: 01    MR 2:35 pm - 3:50 pm    Cesar E. Silva

MATH 408  (F)  L-Functions and Sphere Packing  (WS) (QFR)
Optimal packing problems arise in many important problems, and have been a source of excellent mathematics for centuries. The Kepler Problem
(what is the most efficient way to pack balls in three-space) is a good example. The original formulation has been used in such diverse areas as stacking cannonballs on battleships to grocers preparing fruit displays, and its generalizations allow the creation of powerful error detection and correction codes. While the solution of the Kepler Problem is now known, the higher dimensional version is very much open. There has been remarkable progress in the last few years, with number theory playing a key role in these results. We will develop sufficient background material to understand many of these problems and the current state of the field. Pre-requisites are real analysis.

**Requirements/Evaluation:** Class participation, homework, exams and participation in writing a textbook on the material. Each student will be responsible for working on a chapter of a book based on this material. In addition to obtaining critical writing feedback from myself and my co-author (who is a world expert in the subject), depending on timing we will also be able to share comments from an editor of a major publishing house or a referee. Chapters can range from short snapshots of a subject, on the order of 5 pages, to longer technical derivations of perhaps 10-30 pages.

**Prerequisites:** Math 350 or 351

**Enrollment Limit:** 40

**Enrollment Preferences:** Senior math majors, students planning on graduate study in a STEM field

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (WS) (QFR)

**Writing Skills Notes:** Students will improve and expand their writing skills by taking course material as a starting point and writing chapters for a book under contract with the American Mathematical Society. This will involve numerous iterations of the content, with feedback both from the professor and from an editor.

**Quantitative/Formal Reasoning Notes:** This is a 400 level math class

LEC Section: 01  MWF 11:00 am - 11:50 am  Steven J. Miller

**MATH 411 (S) Commutative Algebra** (QFR)

Cohomological Algebra is an essential area of mathematics that provides indispensable tools to many areas, including Number Theory and Algebraic Geometry. This course will introduce you to the fundamental concepts for the study of commutative rings, with a special focus on the notion of "prime ideals," and how they generalize the well-known notion of primality in the set of integers. Commutative algebra has applications ranging from algebraic geometry to coding theory. For example, one can use commutative algebra to create error correcting codes. It is perhaps most often used, however, to study curves and surfaces in different spaces. To understand these structures, one must study polynomial rings over fields. This course will be an introduction to commutative algebra. Possible topics include polynomial rings, localizations, primary decomposition, completions, and modules.

**Requirements/Evaluation:** homework and exams

**Prerequisites:** MATH 355 or permission of instructor

**Enrollment Limit:** 25

**Enrollment Preferences:** Math majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**MATH 412 (S) Mathematical Biology** (QFR)

**Cross-listings:** BIOL 420

**Primary Cross-listing**

This course will provide an introduction to the many ways in which mathematics can be used to understand, analyze, and predict biological dynamics. We will learn how to construct mathematical models that capture essential properties of biological processes while maintaining analytic tractability.
Analytic techniques, such as stability and bifurcation analysis, will be introduced in the context of both continuous and discrete time models. Additionally, students will couple these analytic tools with numerical simulation to gain a more global picture of the biological dynamics. Possible biological applications may include, but are not limited to, single and multi-species population dynamics, neural and biological oscillators, tumor cell growth, and infectious disease dynamics.

**Requirements/Evaluation:** problem sets, quizzes/exams, participation, final project and paper  
**Prerequisites:** MATH 250 and MATH 309, or permission of instructor  
**Enrollment Limit:** 30  
**Enrollment Preferences:** preference for senior math/stats major and also based on an interest statement  
**Expected Class Size:** 30  
**Grading:** yes pass/fail option, no fifth course option  
**Distributions:** (D3) (QFR)  

*This course is cross-listed and the prefixes carry the following divisional credit:*  
MATH 412(D3) BIOL 420(D3)  

**Quantitative/Formal Reasoning Notes:** The course will introduce methods for developing and analyzing mathematical models.

Spring 2025  
LEC Section: 01  TR 9:55 am - 11:10 am  Julie C. Blackwood

**MATH 426 (F) Differential Topology** (QFR)  
Differential topology marries the rubber-like deformations of topology with the computational exactness of calculus. This subfield of mathematics asks and answers questions like "Can you take an integral on the surface of a doughnut?" and includes far-reaching applications in relativity and robotics. This tutorial will provide an elementary and intuitive introduction to differential topology. We will begin with the definition of a manifold and end with a generalized understanding of Stokes' Theorem.

**Requirements/Evaluation:** weekly homework and exams, and possibly student presentations  
**Prerequisites:** MATH 350 (students who have not taken MATH 350 may enroll only with permission of the instructor)  
**Enrollment Limit:** 30  
**Enrollment Preferences:** mathematics seniors, mathematics majors  
**Expected Class Size:** 10  
**Grading:** no pass/fail option, no fifth course option  
**Distributions:** (D3) (QFR)  

**Quantitative/Formal Reasoning Notes:** There will be weekly math problem sets.

Fall 2024  
LEC Section: 01  MWF 9:00 am - 9:50 am  Ivo Terek

**MATH 453 (S) Partial Differential Equations** (QFR)  
In this course, we further explore the world of differential equations. Mainly, we cover topics in partial differential equations. Partial Differential Equations (PDEs) are fundamental to the modeling of many natural phenomena, arising in many fields, including fluid mechanics, heat and mass transfer, electromagnetic theory, finance, elasticity, and more. The goals of this course are to discuss the following topics: classification of PDEs in terms of order, linearity and homogeneity; physical interpretation of canonical PDEs; solution techniques, including separation of variables, series solutions, integral transforms, and the method of characteristics.

**Requirements/Evaluation:** Evaluation will be based on homework, projects, and exams.  
**Prerequisites:** MATH 150-151; MATH/PHYS 210 or MATH 309  
**Enrollment Limit:** 20  
**Enrollment Preferences:** Mathematics and Physics majors.  
**Expected Class Size:** 15
Grading: yes pass/fail option, yes fifth course option

Distribution: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an advanced mathematics class dedicated to the study of partial differential equations (PDEs). These equations are the most important mathematical tools for the study of complex physical phenomena such as waves and fluids (including both air and water), heat transfer, electromagnetism, and finance.

Spring 2025

LEC Section: 01 TR 11:20 am - 12:35 pm Bhagya Athukorallage

PHIL 203 (S) Introductory Logic (QFR)
Logic is the study of reasoning and argument. More particularly, it concerns itself with the differences between good and bad reasoning, between strong and weak arguments. This course is an introduction to the precise characterization of good logical reasoning. We will learn a to a formal language, Monadic First-Order Logic, designed to cleanly represent good inference patterns. Learning this language will primarily involve learning two skills: (i) translation between sentences of English and formulas of the logical language, and (ii) proving the validity of logical arguments using a system of natural deduction. No prior mathematical/logical/formal experience is assumed for this course.

Requirements/Evaluation: A midterm, a final, frequent problem sets.

Prerequisites: none

Enrollment Limit: 40

Enrollment Preferences: Preference given to philosophy majors.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distribution: (D2) (QFR)

Quantitative/Formal Reasoning Notes: This course teaches two formal languages of logic: sentential logic and predicate logic.

Attributes: Linguistics PHIL Contemp Metaphysics + Epistemology Courses

Spring 2025

LEC Section: 01 MR 1:10 pm - 2:25 pm Christian De Leon

PHIL 221 (F) Introduction to Formal Linguistics (QFR)

Cross-listings: COGS 224

Secondary Cross-listing

The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip and oatmeal raisin. There two ways to understand "Many students took every class". According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

Requirements/Evaluation: Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

Prerequisites: No prerequisites

Enrollment Limit: 20

Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors.
**PHIL 338 (F) Intermediate Logic** (QFR)

**Cross-listings:** MATH 338

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have take PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

**Requirements/Evaluation:** problem sets and exams

**Prerequisites:** some class in which student has studied formal reasoning

**Enrollment Limit:** 20

**Enrollment Preferences:** Philosophy majors; juniors and seniors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PHIL 338(D2) MATH 338(D3)

**Quantitative/Formal Reasoning Notes:** This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

**Attributes:** PHIL Contemp Metaphysics + Epistemology Courses
of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating and lighting, and energy storage. Students will learn to compare the efficiencies and environmental impacts of various energy sources and uses.

Class Format: Two meetings per week. Some weeks that means two lectures. Other weeks, that means one lecture plus one lab, with the class divided between two lab sections.

Requirements/Evaluation: weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative

Prerequisites: high school physics, high school chemistry, and mathematics at the level of MATH 130

Enrollment Limit: 10 per lab

Enrollment Preferences: non-physics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

LAB Section: 03  R 2:25 pm - 3:50 pm  Protik K. Majumder

PHYS 131 (F) Introduction to Mechanics (QFR)
We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.

Requirements/Evaluation: exams, labs, and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead

Enrollment Limit: 24 per lab

Enrollment Preferences: seniority

Expected Class Size: 60

Grading: yes pass/fail option, yes fifth course option

Unit Notes: PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This class will have weekly problem sets requiring substantial quantitative reasoning

Fall 2024

LEC Section: 01  MWF 11:00 am - 11:50 am  Graham K. Giovanetti
LAB Section: 02  M 1:00 pm - 4:00 pm  Graham K. Giovanetti

PHYS 132 (S) Electromagnetism and the Physics of Matter (QFR)
This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics, radioactivity, and uses of radiation.

**Class Format:** lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, quizzes and exams

**Prerequisites:** PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)

**Enrollment Limit:** 22 per lab

**Enrollment Preferences:** sophomores

**Expected Class Size:** 60

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** Significant homework, exams, quizzes requiring mathematical and physical reasoning.

**PHYS 141 (F) Mechanics and Waves (QFR)**

This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

**Class Format:** lecture, three hours per week; laboratory, three hours approximately every other week; conference section, 1.5 hours approximately every other week

**Requirements/Evaluation:** weekly problem sets, labs, two 1-hour exams, and a final exam, all of which have a substantial quantitative component

**Prerequisites:** High school physics (strongly recommended) and MATH 130 or equivalent placement, or permission of the instructor. High school physics at the AP, IB, or equivalent level is neither required nor expected.

**Enrollment Limit:** 24 per lab

**Enrollment Preferences:** first-year students and science majors

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of physics or as the basis for future advanced study of these topics.

Class Format: lecture, three hours weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and problem-solving/discussion sessions

Requirements/Evaluation: weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151

Enrollment Limit: 14/L

Enrollment Preferences: first-year students

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

PHYS 151 (F) Seminar in Modern Physics (QFR)

Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity extended physics into the realm of high speeds and high energies and requires us to rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our notions of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system. This course covers the same core material as PHYS 142 but in a small seminar format for students with strong prior preparation in physics.

Class Format: lecture/discussions plus one 3-hour lab per week

Requirements/Evaluation: class participation, weekly lab assignments, weekly problem sets, exams

Prerequisites: placement by the department (see "advanced placement" section in the description about the department). Students may take either PHYS 142 or PHYS 151 but not both

Enrollment Limit: 18

Enrollment Preferences: first-years

Expected Class Size: 16

Grading: yes pass/fail option, yes fifth course option

Unit Notes: this is a small seminar designed for first-year students who have placed out of PHYS 141

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: all assignments in the course have a substantial quantitative component

---

Fall 2024

LEC Section: 01 MWF 11:00 am - 12:15 pm Catherine Kealhofer
LAB Section: 02 T 1:00 pm - 4:00 pm Catherine Kealhofer
The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell’s equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: problem sets, labs/conference section assignments, two midterms, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151

Enrollment Limit: 10 per lab

Enrollment Preferences: prospective physics majors, then by seniority

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

---

Waves and oscillations characterize many different physical systems, including vibrating strings and springs, waves at the beach, or those that we hear as sound or see as light. Quantum mechanics describes particles with wave functions, and gravitational waves distort the very fabric of the universe. Despite these diverse settings, waves exhibit several common characteristics, so understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. We conclude with a focus on electromagnetic waves and in particular on optical examples of wave phenomena such as interference, diffraction, and lasers. Throughout the course we will introduce and develop mathematical tools which will continue to see use in higher-level physics.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: problem sets, labs, midterm examinations, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 201; co-requisite: PHYS/MATH 210 or MATH 309 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: sophomores

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Weekly problem sets and laboratories which develop and use quantitative skills.
PHYS 210  (S)  Mathematical Methods for Scientists  (QFR)

Cross-listings:  MATH 210

Primary Cross-listing

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites:  MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit:  50

Enrollment Preferences:  sophomores and juniors

Expected Class Size:  30

Grading:  yes pass/fail option,  yes fifth course option

Distributions:  (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 210(D3) MATH 210(D3)

Quantitative/Formal Reasoning Notes: This course will have weekly problem sets using advanced calculus methods

Spring 2025

LEC Section: 01    TR 9:55 am - 11:10 am     Frederick W. Strauch

PHYS 234  (S)  Introduction to Materials Science  (QFR)

Cross-listings:  GEOS 234

Primary Cross-listing

Materials Science is the study of how the microscopic structure of materials—whether steel, carbon fiber, glass, wood, plastic, or mayonnaise—determines their macroscopic mechanical, thermal, electric, and other properties. Topics of this course include classifying materials; material structure; thermodynamics and phase transformations; material properties and testing; how solids bend, flow, and ultimately break; and how to choose the right material for design applications. Materials Science is a highly interdisciplinary field and as a result the course prerequisites are broad but also flexible. Interested students who are unsure about their preparation are strongly encouraged to contact the instructor.

Class Format: lecture (3 hours per week) plus three to four small-group laboratory sessions throughout the semester (to be scheduled with instructor)

Requirements/Evaluation: weekly problem sets, class participation, and midterm and final exams, all of which have a substantial quantitative component

Prerequisites:  high school physics and chemistry, preferably at the AP level, and MATH 140 or AP Calculus (BC), and one 200-level PHYS, CHEM, or GEOS course; or permission of instructor

Enrollment Limit:  20

Enrollment Preferences: based on students' scientific background and seniority

Expected Class Size:  10

Grading:  yes pass/fail option,  yes fifth course option

Unit Notes: This course does not count toward the Geosciences major.

Distributions:  (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 234(D3) GEOS 234(D3)

Quantitative/Formal Reasoning Notes: Weekly problem sets and exams all have a substantial quantitative component.
PHYS 301  (F)  Quantum Physics  (QFR)
This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics, beginning with a discussion of the Schrodinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.

Class Format: lecture, three hours per week; laboratory, three hours per week
Requirements/Evaluation: weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial quantitative component
Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309
Enrollment Limit:  8 per lab
Enrollment Preferences: physics majors
Expected Class Size: 24
Grading:  yes pass/fail option,  no fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: Phys 301 relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

PHYS 302  (S)  Statistical Mechanics & Thermodynamics (QFR)
Macroscopic objects are made up of huge numbers of fundamental particles interacting in simple ways--obeying the Schrödinger equation, Newton's and Coulomb's Laws--and these objects can be described by macroscopic properties like temperature, pressure, magnetization, heat capacity, conductivity, etc. In this course we will develop the tools of statistical physics, which will allow us to predict the cooperative phenomena that emerge in large ensembles of interacting particles. We will apply those tools to a wide variety of physical questions, including the behavior of gases, polymers, heat engines, biological and astrophysical systems, magnets, and electrons in solids.

Class Format: lecture/discussion three hours per week and weekly laboratory work
Requirements/Evaluation: weekly problem sets and labs, plus exams, all of which have a substantial quantitative component
Prerequisites: required: PHYS 201, PHYS/MATH 210 or MATH 309; recommended: PHYS 202, PHYS 301
Enrollment Limit: 14 per lab
Enrollment Preferences: physics majors
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: weekly problem sets, exams, and labs, all of which have a substantial quantitative component

LAB Section: 03    R 1:10 pm - 3:50 pm     Daniel P. Aalberts

PHYS 315  (F)  Computational Biology  (QFR)

Cross-listings:  CSCI 315

Primary Cross-listing

This course will provide an overview of Computational Biology, the application of computational, mathematical, statistical, and physical problem-solving techniques to interpret the rapidly expanding amount of biological data. Topics covered will include database searching, DNA sequence alignment, clustering, RNA structure prediction, protein structural alignment, methods of analyzing gene expression, networks, and genome assembly using techniques such as string matching, dynamic programming, hidden Markov models, and statistics.

Requirements/Evaluation:  weekly Python programming assignments, code reviews, problem sets, plus a few quizzes and a final project

Prerequisites:  programming experience (e.g., CSCI 136) and mathematics (PHYS/MATH 210 or MATH 150) and physical science (PHYS 142/151, or CHEM 101/15X), or permission of instructor

Enrollment Limit:  10

Enrollment Preferences:  if over-enrolled, a questionnaire will be circulated

Expected Class Size:  8

Grading:  no pass/fail option,  no fifth course option

Distributions: (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

Quantitative/Formal Reasoning Notes: problem sets and programming assignments

Attributes:  BIGP Courses

Fall 2024

LEC Section: 01    MR 2:35 pm - 3:50 pm     Daniel P. Aalberts

PHYS 321  (S)  Introduction to Particle Physics  (QFR)

The Standard Model of particle physics incorporates special relativity, quantum mechanics, and almost all that we know about elementary particles and their interactions. This course introduces some of the main ideas and phenomena associated with the Standard Model. After a review of relativistic kinematics, we will learn about symmetries in particle physics, relativistic wave equations, elements of quantum field theory, Feynman diagrams, and selected applications of quantum electrodynamics, the weak interactions, and quantum chromodynamics. We will conclude with a discussion of spontaneous symmetry breaking and the Higgs mechanism.

Requirements/Evaluation:  weekly problem sets, a midterm exam, and a final exam

Prerequisites:  PHYS 301

Enrollment Limit:  20

Enrollment Preferences:  By seniority

Expected Class Size:  10

Grading:  yes pass/fail option,  yes fifth course option

Distributions: (D3)  (QFR)

Quantitative/Formal Reasoning Notes: Exams and problem sets all have a significant quantitative component.
PHYS 402  (S)  Applications of Quantum Mechanics  (QFR)
This course will explore a number of important topics in the application of quantum mechanics to physical systems, including perturbation theory, the variational principle and the semiclassical interaction of atoms and radiation. The course will finish up with three weeks on quantum optics including an experimental project on non-classical interference phenomena. Applications and examples will be taken mostly from atomic physics with some discussion of solid state systems.

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, and a final exam, all of which have a substantial quantitative component
Prerequisites:  PHYS 301
Enrollment Limit:  10 per sec
Enrollment Preferences:  Physics and Astrophysics Majors
Expected Class Size:  16
Grading:  no pass/fail option,  no fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: This course has weekly problem sets, all of which have a substantial quantitative component.

Spring 2025
TUT Section: T1  F 1:10 pm - 2:25 pm  Betül  Pamuk

PHYS 411  (F)  Classical Mechanics  (QFR)
This course will explore advanced topics in classical mechanics. Central ideas include the calculus of variations, the Lagrangian and Hamiltonian formulations of mechanics, phase space, central-force motion, non-inertial reference frames (including implications for physics on a rotating Earth), rigid-body rotations, and non-linear dynamics & chaos, with additional topics from continuum and fluid mechanics as time permits. Numerical and perturbative techniques will be developed and used extensively. We will also examine the ways in which classical mechanics informs other fields of physics. In addition to weekly tutorial meetings the class will meet weekly as a whole to introduce and discuss new material.

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, a final project, and a final exam, all of which have a substantial quantitative component
Prerequisites:  PHYS 202 and PHYS/MATH 210 or MATH 309
Enrollment Limit:  30
Enrollment Preferences:  majors
Expected Class Size:  24
Grading:  no pass/fail option,  no fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: weekly problem sets requiring substantial quantitative reasoning using analytical and numerical methods.

Fall 2024
TUT Section: T1  F 1:10 pm - 2:25 pm  Katharine E. Jensen,  Frederick W. Strauch

PHYS 451  (F)  Condensed Matter Physics  (QFR)
Condensed matter physics is an important area of current research and serves as the basis for modern electronic technology. We plan to explore the physics of metals, insulators, semiconductors, superconductors, and photonic crystals, with particular attention to structure, thermal properties, energy bands, and electronic properties.

Requirements/Evaluation: weekly readings and problem sets, and exams
Prerequisites:  PHYS 301 (may be taken simultaneously); or permission of instructor
POEC 253 (F) Empirical Methods in Political Economy (WS) (QFR)
This course introduces students to common empirical tools used in policy analysis and implementation. Students will develop skills in statistical literacy to become critical consumers of public policy-relevant research. The emphasis in the course is split between an intuitive understanding of statistical foundations, and applications in data visualization and science communication. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; effective data visualization; statistical inference and hypothesis testing; and multiple regression analysis. A particular focus will be placed on understanding causality, the challenges of estimating causal relationships, and the design of evidence-based policy. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

Requirements/Evaluation: Problem sets, group project, midterm exam, final exam
Prerequisites: MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255
Enrollment Limit: 20
Enrollment Preferences: Political Economy majors, Environmental Policy majors and sophomores
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Unit Notes: does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major
Distributions: (D2) (WS) (QFR)
Writing Skills Notes: Students will write 3 coding-intensive data briefs over the course of the semester. Creation of original exhibits from publicly accessible data, use of citation management systems, and clarity in technical writing will be emphasized.
Quantitative/Formal Reasoning Notes: The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.
Attributes: POEC Required Courses

PSYC 201 (F)(S) Experimentation and Statistics (QFR)
An introduction to the basic principles of research in psychology. We focus on how to design and execute experiments, analyze and interpret results, and write research reports. Students conduct a series of research studies in different areas of psychology that illustrate basic designs and methods of analysis. You must register for lab and lecture with the same instructor.

Requirements/Evaluation: research reports, exams, and problem sets
Prerequisites: PSYC 101; not open to first-year students except with permission of instructor
Enrollment Limit: 16
Enrollment Preferences: Psychology majors
SOC 150  (F)  Data for Justice  (DPE) (QFR)
Cross-listings: STS 150 / AMST 150 / WGSS 150 / INTR 150
Secondary Cross-listing
This course is a unique and inclusive introduction to data science where quantitative thinking, programming, and social justice intertwine. We will build our data science skills using R, a popular open-source data science tool. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration. But rather than divorcing these techniques from the social issues they can help illuminate, we ground them in a social justice context. Overall, we will apply data science skills to topics drawn from criminal justice, environmental justice, diversity and inclusion in arts and media, education equity, and much more, with the goal of growing our collective capacity to use data science as a tool for social good. During a time when humans are increasingly subjugated to data-driven algorithmic decisions, when there are social media accounts dedicated to highlighting misuses of data, and when artificial intelligence makes faking data a nearly trivial task, using data to ethically and carefully promote justice is more important than ever.

Class Format: This course is taught in a highly interactive format and will frequently use a flipped-classroom approach. Students should expect substantial time devoted to in-class collaboration.

Requirements/Evaluation: Students will complete regularly assigned activities, problem sets, and other assessments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based approach.

Prerequisites: None. This course assumes no prior knowledge of data science or R programming. An interest in social justice and a willingness to engage intensively with data and computing are essential.

Enrollment Limit: 18

Enrollment Preferences: Students without prior college-level courses in statistics and programming.

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
STS 150(D2) AMST 150(D2) SOC 150(D2) WGSS 150(D2) INTR 150(D2)
**Difference, Power, and Equity Notes:** This course uses data science as a lens for injustice in spheres such as criminal justice, environmental justice, diversity and inclusion in arts and media, education equity. We will consider race, gender, LGTBQ+, disability, and other axes of identity. Additionally, we will adopt a data-critical perspective, thinking about how social forces shape data and our understanding of it.

**Quantitative/Formal Reasoning Notes:** This course teaches quantitative tools in R, a widely-adopted data science platform. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration.

LEC Section: 02  TR 11:20 am - 12:35 pm  Chad M. Topaz

**STAT 101 (F)(S) Elementary Statistics and Data Analysis (QFR)**

It is impossible to be an informed citizen in today's world without an understanding of data. Whether it is opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines, etc, we need to be able to interpret and gain information from statistics. This course will introduce the common methods used to analyze and present data with an emphasis on interpretation and informed decision making.

**Requirements/Evaluation:** weekly homework, quizzes, exams, and a project

**Prerequisites:** MATH 102 (or demonstrated proficiency on a diagnostic test)

**Enrollment Limit:** 50

**Enrollment Preferences:** juniors and seniors

**Expected Class Size:** 35

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202.

**Distributions:** (D3)  (QFR)

**Quantitative/Formal Reasoning Notes:** It is a quantitative course.

**Attributes:** COGS Related Courses  PHLH Statistics Courses

**STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)**

This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

**Requirements/Evaluation:** Weekly homework, quizzes, two midterms and a final exam (midterms include take-home components), and a data analysis project. Students will need to become familiar with the statistical software STATA.

**Prerequisites:** MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

**Enrollment Limit:** 40

**Enrollment Preferences:** Economics majors, sophomores

**Expected Class Size:** 40

**Grading:** yes pass/fail option, no fifth course option

**Unit Notes:** Students with calculus background should consider STAT 201. Students without any calculus background should consider STAT 101. Students with AP Stat 4 or 5 should consider Stat 202. Please refer to the placement chart on the Math&Stat department website for more information.

**Distributions:** (D3)  (QFR)

**Quantitative/Formal Reasoning Notes:** Reasoning with data
STAT 201 (F)(S) Statistics and Data Analysis (QFR)
Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science, is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, "Data, data, data! I can't make bricks without clay." In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

Requirements/Evaluation: weekly homework and projects, midterm exams, and a final exam.
Prerequisites: MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent
Enrollment Limit: 40
Enrollment Preferences: Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors
Expected Class Size: 40
Grading: yes pass/fail option, yes fifth course option
Unit Notes: Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Students will learn to choose, carry out, interpret, and communicate analyses of data.
Attributes: COGS Related Courses PHLH Statistics Courses

STAT 202 (F)(S) Introduction to Statistical Modeling (QFR)
Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

Requirements/Evaluation: Homework problems; quizzes; exams; a final project (on a topic that interests you!). Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.
Prerequisites: MATH 140 and STAT 101/161/201/AP Statistics 4/5, or permission of instructor.
Enrollment Limit: 40
Enrollment Preferences: Prospective Statistics majors and more senior students
Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students with a 4 on the AP Stats exam should contact the department for proper placement. Students with STAT 201 are strongly encouraged to take STAT 346 or other 300-level statistics electives.

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

STAT 335  (S) Introductory Biostatistics and Epidemiology  (QFR)
Epidemiology is the study of disease and disability in human populations, while biostatistics focuses on the development and application of statistical methods to address questions that arise in medicine, public health, or biology. This course will begin with epidemiological study designs and core concepts in epidemiology, followed by key statistical methods in public health research. Topics will include multiple regression, analysis of categorical data (two sample methods, sets of 2x2 tables, RxC tables, and logistic regression), survival analysis (Cox proportional hazards model), and if time permits, a brief introduction to regression with correlated data.

Requirements/Evaluation: Evaluation will be primarily based on weekly assignments (regular homework or mini-projects), two midterm exams, and a final exam.

Prerequisites: Stat 201 or Stat 202, or permission of instructor (prior experience should include a working understanding of multiple linear regression, the basics of statistical inference, and R).

Enrollment Limit: 20

Enrollment Preferences: Statistics majors and prospective majors who have not yet taken Stat 346; public health concentrators

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Students will learn how to choose, implement, and interpret statistical analyses relevant to public health studies.

STAT 341  (F)(S) Probability  (QFR)

Cross-listings: MATH 341

Secondary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.
**Requirements/Evaluation:** homework, classwork, and exams

**Prerequisites:** MATH 150 and MATH 250 or permission of the instructor

**Enrollment Limit:** 50

**Enrollment Preferences:** Priority will be given to Mathematics majors and to Statistics Majors.

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STAT 341(D3) MATH 341(D3)

**Quantitative/Formal Reasoning Notes:** This is a 300-level Math/Stat course.

Spring 2025
LEC Section: 01    TR 9:55 am - 11:10 am    Steven J. Miller

**STAT 342 (S) Introduction to Stochastic Processes (QFR)**

Stochastic processes are mathematical models for random phenomena evolving in time or space. Examples include the number of people in a queue at time t or the accumulated claims paid by an insurance company in an interval of time t. This course introduces the basic concepts and techniques of stochastic processes used to construct models for a variety of problems of practical interest. The theory of Markov chains will guide our discussion as we cover topics such as martingales, random walks, Poisson process, birth and death processes, and Brownian motion.

**Requirements/Evaluation:** weekly homework/labs, classwork, and exams

**Prerequisites:** STAT 341

**Enrollment Limit:** 30

**Enrollment Preferences:** senior Statistics majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is a statistics class with a focus on mathematical skills and translating real world phenomena into mathematical descriptions.

Spring 2025
LEC Section: 01    TF 2:35 pm - 3:50 pm    Elizabeth M. Upton

---

**STAT 344 (S) Statistical Design of Experiments (QFR)**

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially e-commerce, are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place.

We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look at both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

**Requirements/Evaluation:** Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).

**Prerequisites:** STAT 161 or 201 or 202, or equivalent, and Math 140 or equivalent, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Statistics majors, seniors, juniors, sophomores, first years

**Expected Class Size:** 15
Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We’ll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Spring 2025
LEC Section: 01   MWF 10:00 am - 10:50 am   Richard D. De Veaux

STAT 346  (F)(S)  Regression Theory and Applications  (QFR)
This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

Requirements/Evaluation:  Weekly homework, quizzes, theory and data analysis exams, and final course project.
Prerequisites:  MATH/STAT 341, MATH 250, and at least one of STAT 201 or 202. Or permission of the instructor.
Enrollment Limit:  30
Enrollment Preferences:  Statistics Majors
Expected Class Size:  20
Grading:  yes pass/fail option,  no fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

Fall 2024
LEC Section: 01   TR 9:55 am - 11:10 am   Xizhen  Cai

Spring 2025
LEC Section: 01   TR 9:55 am - 11:10 am   Xizhen  Cai

STAT 355  (F)  Multivariate Statistical Analysis  (QFR)
To better understand complex processes, we study how variables are related to one another and how they work in combination. In addition, we want to make inferences about more than one variable at a time. Elementary statistical methods might not apply. In this course, we study the tools and the intuition that are necessary to analyze and describe such datasets with more than multiple variables. Topics covered will include data visualization techniques for data sets with more variables, clustering algorithms, parametric and non-parametric techniques to estimate joint distributions, techniques for combining variables, performing dimension reduction, and making inferences.

Requirements/Evaluation:  Homework, projects, quizzes, and exams.
Prerequisites:  MATH 250, and STAT 346 or permission of instructor
Enrollment Limit:  15
Enrollment Preferences:  Juniors/seniors
Expected Class Size:  10
Grading:  yes pass/fail option,  no fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: It is an advanced statistics class with prerequisites that are QFR courses.

Fall 2024
LEC Section: 01   TF 1:10 pm - 2:25 pm   Xizhen  Cai
STAT 360 (F) Statistical Inference (QFR)
How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.
Requirements/Evaluation: Homework, Quizzes, Exams
Prerequisites: MATH 250, STAT 201 or 202, STAT 341
Enrollment Limit: 15
Enrollment Preferences: Statistics majors
Expected Class Size: 15
Grading: no pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: A rigorous mathematical course laying the foundation for reasoning with data

Fall 2024
LEC Section: 01  MWF 10:00 am - 10:50 am    Richard D. De Veaux

STAT 442 (S) Statistical Learning and Data Mining (QFR)
In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today’s data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.
Class Format: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.
Requirements/Evaluation: class participation, weekly homework, exams and an end-of-term project
Prerequisites: MATH/STAT 341 and STAT 346, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is an advanced statistics class involving theory and application of statistical methods to data.

Spring 2025
LEC Section: 01  MR 2:35 pm - 3:50 pm    Anna C. Neufeld

STAT 458 (F) Generalized Linear Models- Theory and Applications (QFR)
This course will explore generalized linear models (GLMs)--the extension of linear models, discussed in Stat346, to response variables that have specific non-normal distributions, such as counts and proportions. We will consider the general structure and theory of GLMs and see their use in a range of applications. As time permits, we will also examine extensions of these models for clustered data such as mixed effects models and generalized estimating equations.
Requirements/Evaluation: Weekly homework consisting of theoretical exercises and data analyses carried out in R. Short frequent quizzes and one midterm (with an in-class and take-home component). Final project and final exam.
Prerequisites: STAT 346, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: Seniors and Statistics majors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Fall 2024

LEC Section: 01  TF 2:35 pm - 3:50 pm  Elizabeth M. Upton

STS 150 (F) Data for Justice  (DPE) (QFR)

Cross-listings: AMST 150 / SOC 150 / WGSS 150 / INTR 150

Secondary Cross-listing

This course is a unique and inclusive introduction to data science where quantitative thinking, programming, and social justice intertwine. We will build our data science skills using R, a popular open-source data science tool. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration. But rather than divorcing these techniques from the social issues they can help illuminate, we ground them in a social justice context. Overall, we will apply data science skills to topics drawn from criminal justice, environmental justice, diversity and inclusion in arts and media, education equity, and much more, with the goal of growing our collective capacity to use data science as a tool for social good. During a time when humans are increasingly subjugated to data-driven algorithmic decisions, when there are social media accounts dedicated to highlighting misuses of data, and when artificial intelligence makes faking data a nearly trivial task, using data to ethically and carefully promote justice is more important than ever.

Class Format: This course is taught in a highly interactive format and will frequently use a flipped-classroom approach. Students should expect substantial time devoted to in-class collaboration.

Requirements/Evaluation: Students will complete regularly assigned activities, problem sets, and other assessments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based approach.

Prerequisites: None. This course assumes no prior knowledge of data science or R programming. An interest in social justice and a willingness to engage intensively with data and computing are essential.

Enrollment Limit: 18

Enrollment Preferences: Students without prior college-level courses in statistics and programming.

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 150(D2) AMST 150(D2) SOC 150(D2) WGSS 150(D2) INTR 150(D2)

Difference, Power, and Equity Notes: This course uses data science as a lens for injustice in spheres such as criminal justice, environmental justice, diversity and inclusion in arts and media, education equity. We will consider race, gender, LGTBIQ+, disability, and other axes of identity. Additionally, we will adopt a data-critical perspective, thinking about how social forces shape data and our understanding of it.

Quantitative/Formal Reasoning Notes: This course teaches quantitative tools in R, a widely-adopted data science platform. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration.

Fall 2024

STS 363 (S) Data for Justice Research Practicum  (DPE) (QFR)

Cross-listings: WGSS 363 / INTR 350 / AMST 363
Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this inclusive, collaborative, research-based course, students will bring statistical, computational, and/or mathematical approaches to bear on issues of social justice. Guided closely by the instructor, students will work in groups to carry out original research in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. Prior research experience is not required; one goal of this course is to build skills for advanced research.

**Class Format:** This course is an intensive research practicum. Formation of research groups and selection of research topics will be facilitated by the instructor. The primary modality of work is peer collaboration.

**Requirements/Evaluation:** To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based, ungraded assessment framework.

**Prerequisites:** INTR 150 (Data for Justice), or prior equivalent exposure to computing, statistics, and social justice topics as approved by the instructor.

**Enrollment Limit:** 10

**Enrollment Preferences:** Students who have a declared major in Division I or II, who meet the prerequisites of the course, and who fill out the instructor's preregistration survey (contact the instructor for link).

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 363(D2) STS 363(D2) INTR 350(D2) AMST 363(D2)

**Difference, Power, and Equity Notes:** Students will research issues of social justice in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

**Quantitative/Formal Reasoning Notes:** Students will use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

**ASTR 111 (F) Introduction to Astrophysics (QFR)**

The science of astronomy spans vast scales of space and time, from individual atoms to entire galaxies and from the universe's beginning to the future fate of our Sun. In this course, we will survey some of the main ideas in modern astrophysics, with an emphasis on the physics of stars and galaxies.

ASTR 111 is the first course in the Astrophysics and Astronomy major sequences. It is also appropriate for students planning to major in one of the other sciences or mathematics and for others who would like a quantitative introduction that emphasizes the relationship of contemporary physics to astronomy. Topics include gravity and orbits, radiation laws and stellar spectra, physical characteristics of the Sun and other stars, star formation and evolution, black holes, galaxies, the expanding universe, and the Big Bang. Students will also use telescopes to observe stars, nebulae, planets, and galaxies and to make daytime observations of the Sun.

**Class Format:** The class has weekly afternoon laboratory sessions, which will alternate between 'hands-on' activities and problem-solving/discussion sessions. Nighttime observing sessions will occur throughout the semester.

**Requirements/Evaluation:** weekly problem sets, two hour-long tests, a final exam, lab reports, and an observing portfolio

**Prerequisites:** a year of high school Physics, concurrent college Physics, or permission of instructor, and MATH 140 or equivalent

**Enrollment Limit:** 28; 14/lab

**Enrollment Preferences:** potential Astronomy majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** The course requires regular problem sets and quantitative assignments. The course will emphasize how physical equations explain the observed properties of the universe.

Fall 2024

LAB Section: 02   M 1:10 pm - 3:50 pm    Kevin Flaherty, Anne Jaskot
LEC Section: 01   TR 11:20 am - 12:35 pm    Anne Jaskot
LAB Section: 03   R 1:10 pm - 3:50 pm    Kevin Flaherty, Anne Jaskot

**ASTR 206 (S) Astrobiology (QFR)**
This course will focus on the development of complex life and its observational signatures, both on Earth and on other worlds. We will first investigate the conditions that have led to the development of complex life on Earth. We will view Earth over time from an outsider's perspective and challenge preconceptions about the basic requirements for life. We will also explore the 'hot spots' in the search for life beyond Earth in our Solar System. Observations in the next decade may reveal biosignatures in the atmospheres of exoplanets. We will learn about these future observations, while also interacting with current research-grade data for other planets and learning about the methods used to constrain the physical conditions on other worlds. Using quantitative models, we will test the stability of Earth-like planets to the variable and potentially hostile conditions of evolving solar systems.

Requirements/Evaluation: weekly problem sets, one paper, two mid-term exams, and a final exam

Prerequisites: Math 130 and at least one prior physical science course (either Astronomy, Physics, Geosciences, or Chemistry), or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Science majors, with preference given to students majoring in Astronomy, Astrophysics, or Geosciences

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: In this course students will make quantitative comparisons between environmental conditions on Earth, other planetary bodies, and models. The students will also examine observations regarding the detection and characterization of planetary bodies, including contemporary data.
ASTR 413 (F) Building Stars: A Physical Model of Stellar Structure (QFR)

How does the Sun shine? How does the Sun evolve with time? What physical processes determine the power output of the Sun? In this course we will explore our modern understanding of how stars work, and why they have a range of sizes, temperatures, and luminosities. As we go, we will discuss the laws of physics at work in our Sun and other stars. Over the course of the semester, we will build a working computer model of the Sun using the basic laws of nuclear fusion, radiative transfer, thermal mechanics, and hydrostatic equilibrium.

Class Format: Lectures will include time for computer programming work

Requirements/Evaluation: weekly problem sets, weekly coding homework assignments, two mid-term exams, and a final project

Prerequisites: PHYS 142 or 151, any prior class that makes use of programming, or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Astronomy, Astrophysics, or Physics majors, with first preference to Astronomy or Astrophysics majors

Expected Class Size: 6

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: In this course, students will use differential equations and numerical coding techniques to test and explore the relationships between physical laws using the Sun and other stars as examples. They will make quantitative comparisons between their calculations and observed stellar properties.

Fall 2024

LEC Section: 01 TR 11:20 am - 12:35 pm Jason E. Young

ASTR 498 (S) Independent Study: Astronomy or Astrophysics (QFR)

Astronomy/Astrophysics independent study, directed by one of the Astronomy faculty: Pasachoff/Jaskot/Flaherty

Requirements/Evaluation: Regular work with the instructor; submitted presentations and papers as agreed upon

Prerequisites: suitable Astronomy/Astrophysics/Physics/Math-Stats-Geosciences/Chemistry courses

Enrollment Limit: 10

Enrollment Preferences: research topic

Expected Class Size: 5

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Substantial quantitative and formal reasoning are involved

Spring 2025

IND Section: 01 TBA David R. Tucker-Smith

BIMO 321 (F) Biochemistry I: Structure and Function of Biological Molecules (QFR)

Cross-listings: BIOL 321 / CHEM 321

Primary Cross-listing

This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and principles of enzymatic assays.

Class Format: lecture, three times per week and laboratory, four hours per week

**Requirements/Evaluation:** quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

**Prerequisites:** BIOL 101, CHEM 200 and CHEM 201; or either CHEM 155 or 256 and CHEM 251

**Enrollment Limit:** 12/lab

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 36

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** Cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:** BIOL 321(D3) BIMO 321(D3) CHEM 321(D3)

**Quantitative/Formal Reasoning Notes:** This course fulfills the QFR requirement with regular problem sets in which quantitative/formal reasoning skills are practiced.

**Attributes:** BIGP Courses BIMO Required Courses

**LEC Section:** 01  MWF 10:00 am - 10:50 am  B Thuronyi

**BIMO 322 (S) Biochemistry II: Metabolism (QFR)**

**Cross-listings:** CHEM 322 / BIOL 322

**Primary Cross-listing**

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

**Class Format:** Lecture three hours per week and laboratory three hours per week.

**Requirements/Evaluation:** several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

**Prerequisites:** BIOL 101, plus either: CHEM 156 and CHEM 256, or CHEM 155 and CHEM 156, or CHEM 200 and CHEM 201, or permission of instructor

**Enrollment Limit:** 48

**Enrollment Preferences:** junior and senior Biology and Chemistry majors and BIMO concentrators

**Expected Class Size:** 48

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** cannot be counted towards the Biology major in addition to BIOL 222

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:** BIMO 322(D3) CHEM 322(D3) BIOL 322(D3)

**Quantitative/Formal Reasoning Notes:** The laboratory program is quantitative covering data analyses, numerical transformations, graphical displays.

**Attributes:** BIGP Courses BIMO Required Courses
BIOL 202  (F)  Genetics  (QFR)

Genetics, classically defined as the study of heredity, is today a multidisciplinary field whose principles provide critical insight and tools to most areas of biology and medicine. This course covers the experimental basis for our current understanding of the inheritance, structures, and functions of genes. It introduces approaches used by contemporary geneticists and molecular biologists to explore questions in areas of biology ranging from evolution to medicine. A primary focus of the course is on students developing familiarity with problem solving, the logic and quantitative reasoning required to understand how genetic mechanisms lead to biological patterns. The laboratory part of the course provides an experimental introduction to modern genetic analysis as well as introductions to interpreting genetic reasoning in the primary research literature. Laboratory experiments include investigating chromosome structure using microscopy, mapping a mutation to the genome by integrating multiple streams of evidence, and determining the structure of a DNA plasmid using molecular tools.

Class Format: Lecture: three hours per week, Lab: three hours per week.

Requirements/Evaluation: bi-weekly problem sets; weekly laboratory exercises and laboratory reports; three exams

Prerequisites: BIOL 101 and 102

Enrollment Limit: 120

Enrollment Preferences: students interested in the Biology major

Expected Class Size: 60

Grading: no pass/fail option, no fifth course option

Distributions: (D3)  (QFR)

Quantitative/Formal Reasoning Notes: This course develops quantitative skills through solving problems. Students learn to apply basic calculations and logic to predict the outcomes of biological systems, for example, describing the likelihood that an individual will be affected by an inherited disease. Application of quantitative and logical analysis contributes to a large component of the in-class work and the graded material for the class, in the form of problem sets, exams, and data analysis for lab reports.

BIOL 203  (F)  Ecology  (QFR)

Cross-listings: ENVI 203

Primary Cross-listing

This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

Requirements/Evaluation: pre-class quizzes, lab reports, two mid-term exams, and a final exam

Prerequisites: BIOL 102, or ENVI 102, or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: students planning to pursue Biology and/or ENVI
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
BIOL 203(D3) ENVI 203(D3)

Quantitative/Formal Reasoning Notes: Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to linear models, multidimensional data analysis and contingency tables.

LEC Section: 01  TR 8:30 am - 9:45 am  Manuel A. Morales

BIOL 305  (S) Evolution  (QFR)
This course offers a critical analysis of contemporary concepts in biological evolution. We focus on the relation of evolutionary mechanisms (e.g., selection, drift, and migration) to long term evolutionary patterns (e.g., evolutionary innovations, origin of major groups, and adaptation). Topics include micro-evolutionary models, natural and sexual selection, speciation, the inference of evolutionary history, evolutionary medicine among others.

Requirements/Evaluation: independent research project, problem sets, participation in discussions and exams
Prerequisites: BIOL 102 and one 200 level BIOL course
Enrollment Limit: 24
Enrollment Preferences: Seniors and biology majors
Expected Class Size: 24
Grading: yes pass/fail option, yes fifth course option
Unit Notes: satisfies the distribution requirement for the Biology major
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: We will use mathematical models to study population genetics.

LAB Section: 03  Cancelled

BIOL 321  (F) Biochemistry I: Structure and Function of Biological Molecules  (QFR)

Cross-listings: BIMO 321 / CHEM 321

Secondary Cross-listing
This course introduces the foundational concepts of biochemistry with an emphasis on the structure and function of biological macromolecules. Specifically, the structure of proteins and nucleic acids are examined in detail in order to determine how their chemical properties and their biological behavior result from those structures. Other topics covered include catalysis, enzyme kinetics, mechanism and regulation; the molecular organization of biomembranes; and the flow of information from nucleic acids to proteins. In addition, the principles and applications of the methods used to characterize macromolecules in solution and the interactions between macromolecules are discussed. The laboratory provides a hands-on opportunity to study macromolecules and to learn the fundamental experimental techniques of biochemistry including electrophoresis, chromatography, and
principles of enzymatic assays.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quizzes, a midterm exam, a final exam, problem sets and performance in the laboratories including lab reports

Prerequisites: BIOL 101, CHEM 200 and CHEM 201; or either CHEM 155 or 256 and CHEM 251

Enrollment Limit: 12/lab

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 36

Grading: no pass/fail option, no fifth course option

Unit Notes: Cannot be counted towards the Biology major in addition to BIOL 222

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
BIOL 321(D3) BIMO 321(D3) CHEM 321(D3)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular problem sets in which quantitative/formal reasoning skills are practiced.

BIOL 322 (S) Biochemistry II: Metabolism (QFR)

Cross-listings: BIMO 322 / CHEM 322

Secondary Cross-listing

This lecture course provides an in-depth presentation of the complex metabolic reactions that are central to life. Emphasis is placed on the biological flow of energy including alternative modes of energy generation (aerobic, anaerobic, photosynthetic); the regulation and integration of the metabolic pathways including compartmentalization and the transport of metabolites; and biochemical reaction mechanisms including the structures and mechanisms of coenzymes. This comprehensive study also includes the biosynthesis and catabolism of small molecules (carbohydrates, lipids, amino acids, and nucleotides). Laboratory experiments introduce the principles and procedures used to study enzymatic reactions, bioenergetics, and metabolic pathways.

Class Format: Lecture three hours per week and laboratory three hours per week.

Requirements/Evaluation: several exams and performance in the laboratories including lab reports that emphasize conceptual and quantitative and/or graphic analysis of data

Prerequisites: BIOL 101, plus either: CHEM 156 and CHEM 256, or CHEM 155 and CHEM 156, or CHEM 200 and CHEM 201, or permission of instructor

Enrollment Limit: 48

Enrollment Preferences: junior and senior Biology and Chemistry majors and BIMO concentrators

Expected Class Size: 48

Grading: no pass/fail option, no fifth course option

Unit Notes: cannot be counted towards the Biology major in addition to BIOL 222

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
BIMO 322(D3) CHEM 322(D3) BIOL 322(D3)

Quantitative/Formal Reasoning Notes: The laboratory program is quantitative covering data analyses, numerical transformations, graphical displays.
BIOL 420 (S) Mathematical Biology (QFR)

Cross-listings: MATH 412

Secondary Cross-listing

This course will provide an introduction to the many ways in which mathematics can be used to understand, analyze, and predict biological dynamics. We will learn how to construct mathematical models that capture essential properties of biological processes while maintaining analytic tractability. Analytic techniques, such as stability and bifurcation analysis, will be introduced in the context of both continuous and discrete time models. Additionally, students will couple these analytic tools with numerical simulation to gain a more global picture of the biological dynamics. Possible biological applications may include, but are not limited to, single and multi-species population dynamics, neural and biological oscillators, tumor cell growth, and infectious disease dynamics.

Requirements/Evaluation: problem sets, quizzes/exams, participation, final project and paper

Prerequisites: MATH 250 and MATH 309, or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: preference for senior math/stats major and also based on an interest statement

Expected Class Size: 30

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 412(D3) BIOL 420(D3)

Quantitative/Formal Reasoning Notes: The course will introduce methods for developing and analyzing mathematical models.
Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces--wind, waves, storms, and people--that shape the coastal zone, as well as the geologic formations--sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs--that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

**Class Format:** lecture two times a week with a lab one time per week

**Requirements/Evaluation:** lab reports, quizzes, and an independent research project

**Prerequisites:** Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.

**Enrollment Limit:** 15

**Enrollment Preferences:** Geosciences majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** This course counts toward the GEOS Group B Electives - Sediments + Life.

**Distributions:** (D3) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**
ENVI 327(D3) GEOS 327(D3) CAOS 327(D3)

**Quantitative/Formal Reasoning Notes:** This course will involve the use of MATLAB software to quantitatively analyze coastal process and geomorphological data.

**Attributes:** ENVI Natural World Electives GEOS Group B Electives - Sediments + Life
CAOS 477 (F) Economics of Environmental Behavior (QFR)

Cross-listings: ENVI 376 / ECON 477

Secondary Cross-listing

A community maintains a fishery; a firm decides whether to get a green certification; you choose to fly home or stay here for spring break: behaviors of people and firms determine our impact on the environment. We'll use economics to model environmental behavior and to assess how policies can help or hurt the environment. Topics we may study include: common pool resources, voluntary conservation, social norms and nudges, discrimination and justice, rationality, firm responses to mandatory and voluntary regulation, voting and public opinion, and international environmental agreements. We'll also build familiarity with the main methodologies of modern economic research: theoretical modeling, empirical analysis of observational data, and experiments.

Class Format: Class sessions will largely consist of presentations and discussions of academic research papers, as well as lab sessions to work on empirical exercises and other interactive activities

Requirements/Evaluation: class participation, regular reading markup, empirical exercises, oral presentation(s), and an original research paper using an experiment, observational data, or theory

Prerequisites: ECON 251 and (ECON 255 or STAT 346)

Enrollment Limit: 19

Enrollment Preferences: senior Economics majors and junior Economics majors considering a thesis

Expected Class Size: 19

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

SEM Section: 01 TR 8:30 am - 9:45 am Sarah A. Jacobson

CHEM 100 (F) Chemistry Matters (QFR)

Chemistry matters! From fueling the world's economy to preventing the next pandemic to forecasting future climate change, chemistry touches all aspects of daily life. This course provides an introduction to chemical principles and applications for students with little or no high school chemistry background. Through the lens of contemporary issues and applications (e.g. energy, environment, materials, medicine, etc.), students will be introduced to concepts fundamental to studying matter at the molecular level. Particular emphasis will be placed on skills essential for students to understand chemistry in these contexts, including quantitative reasoning and the development of chemical literacy and intuition. Laboratory meetings will be used to reinforce lecture material through experimentation at the bench and active learning exercises.

Class Format: lecture, three times per week and laboratory, three hours per week

Requirements/Evaluation: problem set assignments, laboratory work and analysis, quizzes/exams and a final assessment

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement).

Enrollment Limit: 32; 16/lab

Enrollment Preferences: First-year students with little or no high school chemistry experience.

Expected Class Size: 32

Grading: yes pass/fail option, no fifth course option

Unit Notes: CHEM 100 may be taken concurrently with MATH 102—see under Mathematics; CHEM 100 or its equivalent is a prerequisite to CHEM 101.
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular problem sets and in class activities in which quantitative/formal reasoning skills are practiced.

Fall 2024

CHEM 101 (F)(S) Concepts of Chemistry (QFR)
This course broadens and deepens the foundation in chemistry of students who have had one or more years of chemistry at the high school level. Most students begin study of chemistry at Williams with this course. Familiarity with stoichiometry, basic concepts of equilibria, the model of an atom, Lewis structures and VSEPR, and gas laws is expected. Principal topics for this course include modern atomic theory, molecular structure and bonding, states of matter, chemical equilibrium (acid-base and solubility), and an introduction to atomic and molecular spectroscopies. Laboratory periods will largely focus on experiment design, data analysis, literature, scientific writing, and other skills critical to students’ development as scientists. The course is of interest to students who anticipate professional study in chemistry, related sciences, or one of the health professions, as well as to those who want to explore the fundamentals of chemistry as part of their general education. This course may be taken pass/fail; however, students who are considering graduate study in science or in the health professions should elect to take this course for a grade.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: problem sets and/or quizzes, laboratory work, and exams

Prerequisites: Students are required to take the online Chemistry Placement Survey prior to registering for the course (chemistry.williams.edu/placement) or CHEM 100.

Enrollment Limit: 45; 16/lab

Enrollment Preferences: first-year students

Expected Class Size: 45/lecture

Grading: yes pass/fail option, no fifth course option

Unit Notes: CHEM 101 or its equivalent is a prerequisite for both CHEM 200 and CHEM 201 and is required for the BIMO concentration.

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

CHEM 200 (S) Advanced Chemical Concepts (QFR)

This course treats an array of topics in modern chemistry, emphasizing broad concepts that connect and weave through the various subdisciplines of the field—biochemistry, inorganic chemistry, organic chemistry, and physical chemistry. It provides the necessary background in chemical science for students who are planning advanced study or a career in chemistry, biological science, geoscience, environmental science, or a health profession. Topics include coordination complexes, thermodynamics, electrochemistry, and kinetics. Laboratory sections will give students hands-on experience involving synthesis, characterization, and reactivity studies of coordination and organic complexes; spectroscopic analyses; thermodynamics; electrochemistry; and kinetics. Students will hone their skills in the presentation of results through written reports and worksheets.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: homework assignments, laboratory work, quizzes, midterm exam, and a final exam

Prerequisites: CHEM 101

Enrollment Limit: 35; 16/lab

Enrollment Preferences: first-year students, then sophomores

Expected Class Size: 35

Grading: no pass/fail option, no fifth course option

Unit Notes: CHEM 200 is required for the BIMO concentration

CHEM 201 (F) Organic Chemistry: Introductory Level (QFR)

This course provides the necessary background in organic chemistry for students who are planning advanced study or a career in chemistry, the biological sciences, or the health professions. It initiates the systematic study of the common classes of organic compounds with emphasis on theories of structure and reactivity. Specific topics include basic organic structures and bonding, delocalization and conjugation, acidity & basicity, nucleophilic addition and substitution reactions, stereochemistry and molecular energetics. The theory and interpretation of infrared (IR) and nuclear magnetic resonance (NMR) spectroscopy, as well as the fundamentals of molecular modeling as applied to organic molecules are presented. The coordinated laboratory work includes organic synthesis, purification and separation techniques, as well as characterization by IR and NMR spectroscopy.

Class Format: lecture, three times per week and laboratory, four hours per week

Requirements/Evaluation: quantitative problem solving, laboratory performance, three midterm exams, and a final exam

Prerequisites: CHEM 101 or CHEM 151, 153, or 155

Enrollment Limit: 40; 12/lab

Enrollment Preferences: Seniors, juniors, sophomores, first-year students

Expected Class Size: 40

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFR requirement with regular and substantial problem solving in which quantitative/formal reasoning skills are practiced and evaluated.
CHEM 321 (F) Biochemistry I: Structure and Function of Biological Molecules (QFR)

CHEM 361 (S) Quantum Chemistry and Chemical Dynamics (QFR)

This course introduces quantum mechanics, which serves as the basis for understanding molecular structure and spectroscopy. We will begin by discussing the Schrodinger wave equation and then apply this to understanding the translational, vibrational, and rotational structure of molecules. This leads to a discussion of atomic/molecular electronic structure and spectroscopy. Computational methods will be taught to illustrate key quantum mechanical concepts, interpret experimental data, and extend hypotheses. Applications will be chosen from contemporary research fields, including photochemistry, laser spectroscopy, environmental/atmospheric chemistry, organometallic chemistry, and physical organic chemistry.

Requirements/Evaluation: class participation, problem sets, exams, and laboratory work

Prerequisites: CHEM 155 or CHEM 256; or CHEM 200; or permission of instructor; and strongly recommend MATH 150 or MATH 151

Enrollment Limit: 16; 8/lab

Enrollment Preferences: seniors, then juniors

Expected Class Size: 16

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course fulfills the QFC requirement and relies heavily upon mathematics and quantitative reasoning in
CHEM 366  (F)  Thermodynamics and Statistical Mechanics  (QFR)
The thermodynamic laws provide us with our most powerful and general scientific principles for predicting the direction of spontaneous change in physical, chemical, and biological systems. This course develops the concepts of energy, entropy, free energy, temperature, heat, work, and chemical potential within the framework of classical and statistical thermodynamics. The principles developed are applied to a variety of problems: chemical reactions, phase changes, energy technology, industrial processes, and environmental science. Laboratory experiments provide quantitative and practical demonstrations of the theory of real and ideal systems studied in class.

Class Format: lecture, three times per week and laboratory, four hours per week
Requirements/Evaluation: class participation, oral presentations, problem sets, laboratory work, and an independent project
Prerequisites:  CHEM 155 or CHEM 256; or CHEM 200; and basic knowledge of applied integral and differential calculus
Enrollment Limit:  16/lab
Enrollment Preferences: Chemistry majors: seniors, juniors, then sophomores
Expected Class Size:  16
Grading:  no pass/fail option,  yes fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: This course fulfills the QFC requirement and relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.
Attributes:  BIMO Interdepartmental Electives
Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Fall 2024

LEC Section: 01 MR 1:10 pm - 2:25 pm Christian De Leon

CSCI 104 (F) Data Science and Computing for All (QFR)

Many of the world's greatest discoveries and most consequential decisions are enabled or informed by the analysis of data from a myriad of sources. Indeed, the ability to wrangle, visualize, and draw conclusions from data is now a critical tool in the sciences, business, medicine, politics, other academic disciplines, and society as a whole. This course lays the foundations for quantifying relationships in data by exploring complementary computational, statistical, and visualization concepts. These concepts will be reinforced by lab experiences designed to teach programming and statistics skills while analyzing real-world data sets. This course will also examine the broader context and social issues surrounding data analysis, including privacy and ethics.

Requirements/Evaluation: Weekly lab assignments involving programming, a project, and examinations.

Prerequisites: None; previous programming experience or statistics is not required.

Enrollment Limit: 30;15/lab

Enrollment Preferences: Not open to those who have completed or are currently enrolled in a Computer Science course numbered 136 or higher. Preference given to those who have not previously taken a computer science or statistics course.

Expected Class Size: 30

Grading: yes pass/fail option, no fifth course option

Unit Notes: Additional details about the class are available here: https://www.cs.williams.edu/~cs104. Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 134 (F)(S) Introduction to Computer Science (QFR)

This course introduces students to the science of computation by exploring the representation and manipulation of data and algorithms. We organize and transform information in order to solve problems using algorithms written in a modern object-oriented language. Topics include organization of data using objects and classes, and the description of processes using conditional control, iteration, methods and classes. We also begin the study of abstraction, self-reference, reuse, and performance analysis. While the choice of programming language and application area will vary in different
offerings, the skills students develop will transfer equally well to more advanced study in many areas. In particular, this course is designed to provide the programming skills needed for further study in computer science and is expected to satisfy introductory programming requirements in other departments.

**Requirements/Evaluation:** weekly programming projects, weekly written homeworks, and two examinations.

**Prerequisites:** none, except for the standard prerequisites for a (QFR) course; previous programming experience is not required

**Enrollment Limit:** 30/15/lab

**Enrollment Preferences:** if the course is over-enrolled, enrollment will be determined by lottery.

**Expected Class Size:** 30/sec

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/. Students with prior experience with object-oriented programming should discuss appropriate course placement with members of the department.

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course includes regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

**Attributes:** COGS Interdepartmental Electives

**CSCI 136 (F)(S) Data Structures and Advanced Programming** (QFR)

This course builds on the programming skills acquired in Computer Science 134. It couples work on program design, analysis, and verification with an introduction to the study of data structures. Data structures capture common ways in which to store and manipulate data, and they are important in the construction of sophisticated computer programs. Students are introduced to some of the most important and frequently used data structures: lists, stacks, queues, trees, hash tables, graphs, and files. Students will be expected to write several programs, ranging from very short programs to more elaborate systems. Emphasis will be placed on the development of clear, modular programs that are easy to read, debug, verify, analyze, and modify.

**Requirements/Evaluation:** programming and written assignments, quizzes, examinations
Prerequisites:  CSCI 134 or equivalent; fulfilling the Discrete Mathematics Proficiency requirement is recommended, but not required

Enrollment Limit:  30/15/lab

Enrollment Preferences: if the course is over-enrolled, enrollment will be determined by lottery.

Expected Class Size:  30/lec

Grading:  yes pass/fail option,  no fifth course option

Unit Notes:  Please see the Computer Science Department website for more information on selecting an introductory computer science class: https://csci.williams.edu/

Distributions:  (D3)  (QFR)

Quantitative/Formal Reasoning Notes:  This course include regular and substantial problem sets, labs, and/or projects in which quantitative/formal reasoning skills are practiced and evaluated.

CSCI 237  (F)(S)  Computer Organization  (QFR)
This course studies the basic instruction set architecture and organization of a modern computer. It provides a programmer's view of how computer systems execute programs, store information, and communicate. Over the semester the student learns the fundamentals of translating higher level languages into assembly language, and the interpretation of machine languages by hardware. At the same time, a model of computer hardware organization is developed from the gate level upward.

Requirements/Evaluation:  weekly programming assignments and/or problem sets, quizzes, midterm and final exams

Prerequisites:  CSCI 136

Enrollment Limit:  24/12/lab

Enrollment Preferences:  current or expected Computer Science majors

Expected Class Size:  24

Grading:  no pass/fail option,  no fifth course option

Distributions:  (D3)  (QFR)

Quantitative/Formal Reasoning Notes:  The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2024
LAB Section: 05  R 1:00 pm - 2:30 pm  Kelly A. Shaw
LAB Section: 06  R 2:30 pm - 4:00 pm  Kelly A. Shaw
CSCI 256  (F)(S)  Algorithm Design and Analysis  (QFR)
This course investigates methods for designing efficient and reliable algorithms. By carefully analyzing the structure of a problem within a mathematical framework, it is often possible to dramatically decrease the computational resources needed to find a solution. In addition, analysis provides a method for verifying the correctness of an algorithm and accurately estimating its running time and space requirements. We will study several algorithm design strategies that build on data structures and programming techniques introduced in Computer Science 136. These include greedy, divide-and-conquer, dynamic programming, and network flow algorithms. Additional topics of study include algorithms on graphs and strategies for handling potentially intractable problems.

Requirements/Evaluation: Problem sets, midterm and final examinations
Prerequisites: CSCI 136 and fulfillment of the Discrete Mathematics Proficiency requirement
Enrollment Limit: 24
Enrollment Preferences: Preference will be given to students who need the class in order to complete the major. Ties will be broken by seniority (seniors first, then juniors, etc.).
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course will have weekly problem sets in which students will formally prove statements about the behavior and performance of algorithms. In short, the course is about applying abstract and mathematical reasoning to the study of algorithms and computation.

LEC Section: 01  MR 1:10 pm - 2:25 pm  Samuel McCauley
LEC Section: 02  MR 2:35 pm - 3:50 pm  Samuel McCauley

CSCI 315  (F)  Computational Biology  (QFR)
Cross-listings: PHYS 315
Secondary Cross-listing
This course will provide an overview of Computational Biology, the application of computational, mathematical, statistical, and physical problem-solving techniques to interpret the rapidly expanding amount of biological data. Topics covered will include database searching, DNA sequence alignment, clustering, RNA structure prediction, protein structural alignment, methods of analyzing gene expression, networks, and genome assembly using techniques such as string matching, dynamic programming, hidden Markov models, and statistics.

Requirements/Evaluation: weekly Python programming assignments, code reviews, problem sets, plus a few quizzes and a final project
Prerequisites: programming experience (e.g., CSCI 136) and mathematics (PHYS/MATH 210 or MATH 150) and physical science (PHYS 142/151, or CHEM 101/15X), or permission of instructor
Enrollment Limit: 10
Enrollment Preferences: if over-enrolled, a questionnaire will be circulated
**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
CSCI 315(D3) PHYS 315(D3)

**Quantitative/Formal Reasoning Notes:** problem sets and programming assignments

**Attributes:** BIGP Courses

---

**Fall 2024**

LEC Section: 01  MR 2:35 pm - 3:50 pm  Daniel P. Aalberts

**CSCI 334  (S) Principles of Programming Languages** (QFR)

This course examines the concepts and structures governing the design and implementation of programming languages. It presents an introduction to the concepts behind compilers and run-time representations of programming languages; features of programming languages supporting abstraction and polymorphism; and the procedural, functional, object-oriented, and concurrent programming paradigms. Programs will be required in languages illustrating each of these paradigms.

**Requirements/Evaluation:** weekly problem sets and programming assignments, a midterm examination, and a final examination

**Prerequisites:** CSCI 136

**Enrollment Limit:** 30

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 30

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course include regular and substantial problem sets and labs in which quantitative/formal reasoning skills are practiced and evaluated.

LEC Section: 01  MR 1:10 pm - 2:25 pm  Daniel W. Barowy

**CSCI 338  (S) Parallel Processing** (QFR)

This course explores different parallel programming paradigms used for writing applications on today's parallel computer systems. The course will introduce concurrency (i.e. multiple simultaneous computations) and the synchronization primitives that allow for the creation of correct concurrent applications. It will examine how a variety of systems organize parallel processing resources and enable users to write parallel programs for these systems. Covered programming paradigms will include multiprocessing with processes, message passing, threading in shared memory multiprocessors, vector processing, graphics processor programming, transactions, MapReduce, and other forms of programming for the cloud. Class discussion is based on assigned readings. Assignments provide students the opportunity to develop proficiency in writing software using different parallel programming paradigms.

**Requirements/Evaluation:** homework assignments, programming projects, and up to two exams

**Prerequisites:** CSCI 136 or equivalent programming experience, and CSCI 237, or permission of instructor

**Enrollment Limit:** 24

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** The course will consist of substantial problem sets and programming assignments in which
This course studies the key design principles of distributed systems, which are collections of independent networked computers that function as single coherent systems. Covered topics include communication protocols, processes and threads, naming, synchronization, consistency and replication, fault tolerance, and security. Students also examine some specific real-world distributed systems case studies, including Google and Amazon. Class discussion is based on readings from the textbook and research papers. The goals of this course are to understand how large-scale computational systems are built, and to provide students with the tools necessary to evaluate new technologies after the course ends.

**Requirements/Evaluation:** weekly homework assignments, midterm exam, 3 major programming projects, and a final project

**Prerequisites:** CSCI 237

**Enrollment Limit:** 24

**Enrollment Preferences:** current or expected Computer Science majors

**Expected Class Size:** 24

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

---

This course is a hands-on exploration of topics in robotics and digital fabrication. We will experience firsthand how ideas and methods from computer science can be applied to make physical objects, including robots and other machines. The emphasis will be on creative, hands-on experimentation. Along the way, students will learn the basics of embedded systems programming (Arduino), breadboarding, soldering, printed circuit board (PCB) design, mechanical computer-aided design (CAD)--both conventional (OnShape) and programmatic (OpenSCAD)--as well digital fabrication (3D-printing, laser cutting). Students will learn both how to build their own prototypes and how to send out designs to have parts machined professionally. Students will work in teams throughout. The course will culminate in a team robotic design competition testing both functionality and creativity.

**Requirements/Evaluation:** Evaluation based on assignments, projects, and exams.

**Prerequisites:** CSCI 237

**Enrollment Limit:** 18; 9/lab

**Enrollment Preferences:** Current or expected Computer Science majors

**Expected Class Size:** 18

**Grading:** no pass/fail option, no fifth course option

**Materials/Lab Fee:** A fee of $150-$200 will be added to the term bill to cover the purchase of consumable electronics, motors, 3D-printing filament, and stock used in the assignments and final project.

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** The course will include programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

---
CSCI 357  (S)  Algorithmic Game Theory  (QFR)
This course focuses on topics in game theory and mechanism design from a computational perspective. We will explore questions such as: how to design algorithms that incentivize truthful behavior, that is, where the participants have no incentive to cheat? Should we let drivers selfishly minimize their commute time or let a central algorithm direct traffic? Does Arrow's impossibility result mean that all voting protocols are doomed? The overarching goal of these questions is to understand and analyze selfish behavior and whether it can or should influence system design. Students will learn how to model and reason about incentives in computational systems both theoretically and empirically. Topics include types of equilibria, efficiency of equilibria, auction design and mechanism design with money, two-sided markets and mechanism design without money, incentives in computational applications such as P2P systems, and computational social choice.

Requirements/Evaluation: weekly problem sets and/or programming assignments, two midterm exams, and a final project.
Prerequisites: CSCI 256
Enrollment Limit: 24
Enrollment Preferences: current or expected Computer Science majors
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: The course will consist problem sets and programming assignments in which quantitative/formal reasoning skills are practiced and evaluated.

Spring 2025
LEC Section: 01  TF 1:10 pm - 2:25 pm  Shikha  Singh

CSCI 358  (F)  Applied Algorithms  (QFR)
This course is about bridging the gap between theoretical running time and writing fast code in practice. The course is divided into two basic topics. The first is algorithmic: we will discuss some of the most useful tools in a coder's toolkit. This includes topics like randomization (hashing, filters, approximate counters), linear and convex programming, similarity search, and cache-efficient algorithms. Our goal is to talk about why these efficient algorithms make seemingly difficult problems solvable in practice. The second topic is applications: we will discuss how to implement algorithms in an efficient way that takes advantage of modern hardware. Specific topics covered will include blocking, loop unrolling, pipelining, as well as strategies for performance analysis. Projects and assessments will include both basic theoretical aspects (understanding why the algorithms we discuss actually work), and practical aspects (implementing the algorithms we discuss to solve important problems, and optimizing the code so it runs as quickly as possible).

Requirements/Evaluation: Over the course of each week, there will be either a homework or an assignment. Homeworks and assignments have similar structure, with both a coding and problem set component, but assignments will be weighted more heavily and must be completed individually. There will also be a take home final at the end of the year.
Prerequisites: CSCI 256 and CSCI 237
Enrollment Limit: 24
Enrollment Preferences: current or expected Computer Science majors
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Fall 2024
LEC Section: 01  TF 1:10 pm - 2:25 pm  Samuel  McCauley
CSCI 361 (F) Theory of Computation (QFR)

Cross-listings: MATH 361

Primary Cross-listing

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory—the examination of what problems can be solved and what problems cannot be solved—and the study of complexity theory—the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Requirements/Evaluation: weekly problem sets and one or more exams

Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 361(D3) CSCI 361(D3)

Quantitative/Formal Reasoning Notes: This course include regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Attributes: COGS Interdepartmental Electives

LEC Section: 01 TR 8:30 am - 9:45 am Shikha Singh

CSCI 375 (F) Natural Language Processing (QFR)

Natural language processing (NLP) is a set of methods for making human language accessible to computers. NLP underlies many technologies we use on a daily basis including automatic machine translation, search engines, email spam detection, and automated personalized assistants. These methods draw from a combination of algorithms, linguistics and statistics. This course will provide a foundation in building NLP models to classify, generate, and learn from text data.

Requirements/Evaluation: Evaluation based on assignments, projects, and exams.

Prerequisites: CSCI 136, and either CSCI 256 or STAT 201/202.

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors.

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: The course will consist of programming assignments and problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

Attributes: COGS Interdepartmental Electives

Fall 2024
LEC Section: 01 TR 9:55 am - 11:10 am Katie A. Keith

CSCI 381 (F) Deep Learning (QFR)
This course is an introduction to deep neural networks and how to train them. Beginning with the fundamentals of regression and optimization, the course then surveys a variety of neural network architectures, which may include multilayer feedforward neural networks, convolutional neural networks, recurrent neural networks, and transformer networks. Students will also learn how to use deep learning software such as PyTorch or Tensorflow.

Requirements/Evaluation: Evaluation based on assignments, projects, and exams.

Prerequisites: CSCI 136 and fulfillment of the Discrete Mathematics Proficiency requirement

Enrollment Limit: 24

Enrollment Preferences: Current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Attributes: COGS Interdepartmental Electives

Fall 2024
LEC Section: 01 MWF 9:00 am - 9:50 am Mark Hopkins

ECON 110 (F)(S) Principles of Microeconomics (QFR)

This course is an introduction to the study of the forces of supply and demand that determine prices and the allocation of resources in markets for goods and services, markets for labor, and markets for natural resources. The focus is on how and why markets work, why they may fail to work, and the policy implications of both their successes and failures. The course focuses on developing the basic tools of microeconomic analysis and then applying those tools to topics of popular or policy interest such as minimum wage legislation, pollution control, competition policy, international trade policy, discrimination, tax policy, and the role of government in a market economy.

Requirements/Evaluation: problem sets, quizzes, short essays, two midterms, final exam

Prerequisites: none

Enrollment Limit: 40

Enrollment Preferences: This course is required of Economics and Political Economy majors and highly recommended for those non-majors interested in Environmental Studies and Women's, Gender and Sexuality Studies.

Expected Class Size: 40

Grading: yes pass/fail option, no fifth course option

Unit Notes: The department recommends students follow this course with ECON 120 or with a lower-level elective that has ECON 110 as its prerequisite; students may alternatively proceed directly to ECON 251 after taking this introductory course.

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

LEC Section: 02 TF 2:35 pm - 3:50 pm Matthew Chao

Spring 2025
ECON 120 (F)(S) Principles of Macroeconomics (QFR)

This course provides an introduction to the study of the aggregate national economy. It develops the basic theories of macroeconomics and applies them to topics of current interest. Issues to be explored include: the causes of inflation, unemployment, recessions, and depressions; the role of government fiscal and monetary policy in stabilizing the economy; the determinants of long-run economic growth; the long- and short-run effects of taxes, budget deficits, and other government policies on the national economy; the role of financial frictions in amplifying recessions; and the workings of exchange rates and international finance.

Requirements/Evaluation: Depending on instructor, may include: problem sets, short essays, quizzes, reading assignments, either one or two midterms, and a final exam.

Prerequisites: ECON 110

Enrollment Limit: 40

Enrollment Preferences: First-year students and sophomores.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

ECON 213 (S) Introduction to Environmental and Natural Resource Economics (QFR)

Cross-listings: ENVI 213 / CAOS 213

Primary Cross-listing

We'll use economics to provide one perspective on reasons humans harm the environment and overuse natural resources, and what we can do about it. We'll study climate change, pollution in general, cost benefit analysis, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We'll talk about how economists put a dollar value on nature and ecosystem services (as well as human health and life!), and the concerns people may have about doing so. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth. Consideration of justice and equity will be woven throughout the whole semester.

Requirements/Evaluation: problem sets, short essays, final paper; intermediate assignments may include a poster, one or more short presentation(s), other brief writing assignment(s)

Prerequisites: ECON 110 or equivalent

Enrollment Limit: 30

Enrollment Preferences: first-year and sophomore students

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option
ECON 229  (F)  Law and Economics  (QFR)
This course applies the tools of microeconomic analysis to private (i.e., civil) law. This analysis has both positive and normative aspects. The positive aspects deal with how individuals respond to the incentives created by the legal system. Examples include: how intellectual property law encourages the creation of knowledge while simultaneously restricting the dissemination of intellectual property; how tort law motivates doctors to avoid malpractice suits; and how contract law facilitates agreements. The normative aspects of the analysis ask whether legal rules enhance economic efficiency (or, more broadly, social welfare). Examples include: what legal rules are most appropriate for mitigating pollution, ensuring safe driving, and guaranteeing workplace safety? The course will also cover the economics of legal systems; for example, what are the incentives for plaintiffs to initiate lawsuits and what role do lawyers play in determining outcomes.

Class Format: discussion
Requirements/Evaluation: class participation, problem sets, paper based on actual court cases, a midterm exam, and a final exam
Prerequisites: ECON 110
Enrollment Limit: 35
Enrollment Preferences: ECON and POEC majors (and potential majors) will receive priority if the course is overenrolled
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2)  (QFR)
Quantitative/Formal Reasoning Notes: This course uses economic models to explore the logic of legal concepts. While some arguments will be qualitative, students will also use numerical examples to illustrate the principles of the course.
Attributes: JLST Interdepartmental Electives  POEC Depth

Fall 2024
SEM Section: 01    W 7:00 pm - 9:40 pm     William M. Gentry

ECON 232  (S)  Financial Markets, Institutions and Policies  (QFR)
The focus of the course will be on how firms, financial markets, and central banks interact in the economy. Key questions addressed in the course include: How do firms allocate their resources to enhance their value? How are firms evaluated by the financial markets? How are asset prices determined, and how are these prices related to interest rates? Are financial markets efficient, and what are the implications of their efficiency or lack thereof? How does the financial system help with the management of risks faced by society? We will also study the role of the central bank (the Federal Reserve in the US), monetary policy, and government regulation and their impacts on financial decision making. Key questions include: How do central banks set monetary policy and how do those policies affect the economy and the financial decision-making process? How does monetary policy change when interest rates are (virtually) zero?

Class Format: There will be a mix of lecture and discussion.
Requirements/Evaluation: 5-7 Problem Sets, Quantitative Exercises, Group Paper, and Final Exam
Prerequisites: ECON 110 and ECON 120
Enrollment Limit: 25
Enrollment Preferences: Sophomore and Junior Economics majors
Spring 2025

LEC Section: 01    TR 11:20 am - 12:35 pm     Nate  Vellekoop

ECON 251  (F)(S)  Price and Allocation Theory  (QFR)
A study of the determination of relative prices and their importance in shaping the allocation of resources and the distribution of income. Subjects include: behavior of households in a variety of settings, such as buying goods and services, saving, and labor supply; behavior of firms in various kinds of markets; results of competitive and noncompetitive markets in goods, labor, land, and capital; market failure; government policies as sources of and responses to market failure; welfare criteria; limitations of mainstream analysis.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets and multiple exams, including a final exam. They may also include one or more quizzes, short essays, collaborative projects, or presentations.

Prerequisites: ECON 110 and MATH 130 or its equivalent

Enrollment Limit: 30

Enrollment Preferences: Current or prospective Economics majors.

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions:  (D2)  (QFR)

Quantitative/Formal Reasoning Notes: Course involves developing and analyzing mathematical models of real-world phenomena, grounded in tools like calculus and game theory. Students are assumed to be comfortable with topics from introductory calculus, including differentiation and integration.
Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: Course involves mathematical modeling of real-world phenomena, analyzing quantitative results, and describing those results in words.

LEC Section: 02  MWF 11:00 am - 12:15 pm  Kenneth N. Kuttner

ECON 255 (F)(S) Econometrics (QFR)
An introduction to the theory and practice of applied quantitative economic analysis. This course familiarizes students with the strengths and weaknesses of the basic empirical methods used by economists to evaluate economic theory against economic data. Emphasizes both the statistical foundations of regression techniques and the practical application of those techniques in empirical research, with a focus on understanding when a causal interpretation is warranted. Computer exercises will provide experience in using the empirical methods, but no previous computer experience is expected. Highly recommended for students considering graduate training in economics or public policy.

Requirements/Evaluation: Requirements vary by professor, but typically include frequent problem sets, multiple exams, a group project, and possible additional assignments or quizzes.
Prerequisites: MATH 130, plus STAT 161, 201 or 202 (or equivalent, including a score of 5 on the AP Statistics Exam), plus one course in ECON; STAT 101 will also serve as a prerequisite, but only if taken prior to the fall of 2018
Enrollment Limit: 30
Enrollment Preferences: Current or prospective Economics and Political Economy majors.
Expected Class Size: 30
Grading: no pass/fail option, no fifth course option
Unit Notes: Students may substitute the combination of STAT 201 and 346 for ECON 255
Distributions: (D2) (QFR)
Quantitative/Formal Reasoning Notes: Course teaches research tools necessary to analyze data.

ECON 345 (S) Growth Diagnostics (QFR)
Cross-listings:
Primary Cross-listing
Evidence from across the developing world suggests that the "binding constraints" to economic growth can be remarkably heterogeneous—i.e., the growth potential of stagnating or underperforming economies may be unlocked in a large variety of ways. For instance, pre-reform China had been constrained by poor supply incentives in agriculture, whereas Brazil has been held back by an inadequate supply of credit, South Africa by poor
employment incentives in manufacturing, El Salvador by insufficient production incentives in tradables, Zimbabwe by bad governance, and so forth. How can developing-country policymakers determine country-specific constraints like these, thus enabling them to pragmatically pursue a selected set of growth-promoting policies rather than attempting to implement a "laundry list" of reforms that are naively based on "best practice" rules-of-thumb? This course will serve as a primer on "growth diagnostics," an empirically-driven analytical framework for identifying the most binding constraints to economic growth in a given country at a point in time, thereby allowing policymakers to develop well-targeted reforms for relaxing these constraints while being cognizant of the nation's prevailing economic, political, and social context. The course will first build on the basic theories and empirics of economic growth to elucidate the diagnostic framework and will then employ a wide range of country-specific case studies to demonstrate how the framework can be operationalized for policy making. Throughout the semester, students will be required to work in groups, each representing a given developing or emerging-market economy, in order to build a growth diagnostic for their group's assigned country by the end of the course.

**Requirements/Evaluation:**
- Extensive class participation, several short (5-page) reports, a final group project comprising a country growth diagnostic, and a final group presentation on the diagnostic

**Prerequisites:**
- For undergraduates: ECON 251, ECON 252, and either ECON 255 or STAT 346

**Enrollment Limit:** 19

**Enrollment Preferences:** CDE fellows and senior Economics majors

**Expected Class Size:** 19

**Grading:**
- No pass/fail option, no fifth course option

**Distributions:** (D2) (QFR)

**This course is cross-listed and the prefixes carry the following divisional credit:**
- ECON 345(D2) ECON 545(D2)

**Quantitative/Formal Reasoning Notes:**
- The course material will be draw heavily on mathematical and statistical models of economic growth and macroeconomic development, and students will be required to routinely develop mathematical models and/or conduct econometric analysis in their assignments.

Spring 2025

**SEM Section:** 01 TR 9:55 am - 11:10 am Quamrul H. Ashraf

---

**ECON 364 (S) Theory of Asset Pricing (QFR)**

What is the price of time? What is the price of risk? How do markets allocate resources across time and uncertain states of the world? This course theoretically studies how markets allocate scarce resource across time and when outcomes are risky. The "goods" in such markets are called "assets" and the prices of "assets" determine the cost of trading resources across time and across uncertain states of the world. We theoretically investigate how equilibrium determines the price of time, then asset price implications; then asset allocations and prices in the presence of risk; finally, implications for new assets.

**Requirements/Evaluation:**
- Problem sets and exams

**Prerequisites:**
- ECON 251 or ECON 252; and ECON 255 or STAT 201

**Enrollment Limit:** 25

**Enrollment Preferences:** Economics majors

**Expected Class Size:** 25

**Grading:**
- No pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantitative/Formal Reasoning Notes:**
- Uses extensive mathematical modeling, including engaging with results from econometrics and statistics

Spring 2025

**LEC Section:** 01 TR 8:30 am - 9:45 am Greg Phelan

---

**ECON 367 (S) The Political Economy of Social Insurance (WS) (QFR)**

The Great Society policies of the 1960s dramatically changed the ways people living in poverty interacted with the federal government, but the benefits associated with these policies seem to have stagnated. Since 1965, the annual poverty rate in the United States has hovered between 10% and 15%,
though far more than 15% of Americans experience poverty at some point in their lives. In this course, we will study public policies that, explicitly or implicitly, have as a goal improving the well-being of the poor in the United States. These policies include social insurance programs such as Unemployment Insurance; safety net programs such as Temporary Assistance to Needy Families, Supplemental Nutrition Assistance Program, Medicaid, and housing assistance; education programs such as Head Start and public education; and parts of the tax code, including the Earned Income Tax Credit and Child Tax Credit. We will explore the design and function of these programs, with a particular focus on the context in which they were developed. What political incentives and constraints have strung up our social safety net? How do these factors affect the goals of policy, the trade-offs inherent to the policy's design, and why poverty has not sustained a downward trend in the United States? Through careful consideration, students will learn how to communicate a path forward for public policy which accounts for theoretical economic expectations and the reality of political constraints in policy design.

Class Format: Lecture with substantial class discussion.
Requirements/Evaluation: Several short policy memos, participation in class discussion, and a final analytical essay.
Prerequisites: ECON 253 or 255
Enrollment Limit: 25
Enrollment Preferences: Students majoring in economics or political economy.
Expected Class Size: 25
Grading: no pass/fail option, yes fifth course option

Distributions: (D2)  (WS) (QFR)
Writing Skills Notes: Students will write 4 policy memos over the course of the semester followed by a longer, final analytical essay. Synthesis of peer-reviewed literature, use of citation management systems, and clarity in technical writing will be emphasized. Students will receive timely, substantial, individualized feedback to develop their technical writing ability over the course of the semester. Opportunities to meet with professor outside of class at any stage of writing.
Quantitative/Formal Reasoning Notes: This course will use quantitative tools of economics. Focus on building data visualization & science communication skills after ECON 255.
Attributes: POEC Skills

Spring 2025
LEC Section: 01    TF 2:35 pm - 3:50 pm     Shyam Raman

ECON 371  (F) Time Series Econometrics and Empirical Methods for Macro  (QFR)
Econometric methods in many fields including macro and monetary economics, finance and international growth and development, as well as numerous fields beyond economics, have evolved a distinct set of techniques which are designed to meet the practical challenges posed by the typical empirical questions and available time series data of these fields. The course will begin with an introductory review of concepts of estimation and inference for large data samples in the context of the challenges of multivariate endogenous systems, and will then focus on associated methods for analysis of short run dynamics such as vector autoregressive techniques and methods for analysis of long run dynamics such as cointegration techniques. Students will be introduced to concepts and techniques analytically, but also by intuition, learning by doing, and by computer simulation and illustration. The course is particularly well suited for economics majors wishing to explore advanced empirical methods, or for statistics, mathematics or computer science majors wishing to learn more about the ways in which the subject of their majors interacts with the field of economics. The method of evaluation will include a term paper. ECON 252 and either STATS 346 or ECON 255 are formal prerequisites, although for students with exceptionally strong math/stats backgrounds these can be waived subject to instructor permission. Students who complete this course will also be permitted to enroll in Econ 471 (a follow up senior seminar course) during the spring semester if they are interested.
Requirements/Evaluation: term paper and regular homework assignments
Prerequisites: ECON 252 and either ECON 255 or STATS 346
Enrollment Limit: 19
Enrollment Preferences: students wishing to write an honors thesis, and students with strong MATH/STAT/CSCI backgrounds
Expected Class Size: 19
Grading: no pass/fail option, yes fifth course option
Distributions: (D2)  (QFR)
Quantitative/Formal Reasoning Notes: Uses quantitative/formal reasoning intensively in the form of mathematical and statistical arguments, as well
This course analyzes the major financial decisions facing firms. While the course takes the perspective of a manager making decisions about both what investments to undertake and how to finance these projects, it will emphasize the underlying economic models that are relevant for these decisions. Topics include capital budgeting, links between real and financial investments, capital structure choices, dividend policy, and firm valuation.

**Class Format:** Lecture / discussion

**Requirements/Evaluation:** Problem sets, exams, short project

**Prerequisites:** ECON 251, 252, and some familiarity with statistics (e.g., ECON 255)

**Enrollment Limit:** 25

**Enrollment Preferences:** Economics majors; seniority

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (QFR)

**Quantitative/Formal Reasoning Notes:** The course uses quantitative models to evaluate decisions.

---

This course is a mathematical introduction to strategic thinking and its applications. Ideas from game theory, including Nash equilibrium and its refinements, commitment and credibility, repeated games, and information asymmetries, incentive contracts, and signaling, will be introduced. Applications will be drawn from economics, history, and politics around the globe, and include topics such as: trust between strangers, corruption and fraud, racial bias, violence and deterrence. And we will explore how to write and recognize game-theory models to help make sense of strategic interactions in the world around us.

**Requirements/Evaluation:** Two exams, regular problem sets and assignments in which students create game-theoretic models.

**Prerequisites:** ECON 251 or permission of instructor

**Enrollment Limit:** 25

**Enrollment Preferences:** juniors

**Expected Class Size:** 25

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** students who have taken MATH 335 or CSCI 357 cannot receive credit for this class

**Distributions:** (D2) (QFR)

**Quantitative/Formal Reasoning Notes:** Mathematical analysis of strategic interaction is emphasized throughout,
Government policy is important for economic development. To finance their policies, governments must build the fiscal capacity to implement a tax system. In turn, fiscal capacity—the ability for the government to raise revenue—depends on economic development. This endogeneity between fiscal capacity and economic development creates challenges for tax policy in developing countries. Given these challenges, what types of taxes should countries use to raise revenues? How can governments build the fiscal capacity to generate revenue to finance critical services? This class explores tax policy from a global and comparative perspective. Because most students will be CDE fellows, we will emphasize tax policy issues, examples, and evidence that are pertinent to developing countries. However, many tax policy lessons are universal so we will also learn about tax policies in developed countries, especially issues relevant for transnational transactions. Topics addressed include: how economic principles can be applied to the efficiency and equity consequences of tax policies; how personal income taxes, corporate income taxes, and value-added taxes are designed and administered and how they influence the economy; ideas for fundamental tax reforms; the debate over progressive taxes versus "flat" taxes; how taxes affect incentives to save and invest; how market failures and administrative problems may influence the optimality of tax policy; the implications of global capital flows and corporate tax avoidance for tax policy; tax holidays and other special tax incentives for investment; empirical evidence on the influence of taxes on foreign direct investment, labor supply, and tax evasion; tax policy towards natural resources such as minerals and oil; case studies of efforts to reform tax administration and reduce tax evasion and corruption; taxes on land and property; taxes on imports and exports; presumptive taxation; and the informal economy and its implications for tax policy.

Requirements/Evaluation: midterm exam, several problem sets, two 10-page essays
Prerequisites: one public economics course or microeconomics course (ECON 504 or ECON 110), and one empirical methods course (POEC 253 or ECON 255, 502, or 503); students who have previously taken ECON 351 will not be enrolled
Enrollment Limit: 19
Enrollment Preferences: CDE students, but undergraduates with the prerequisites are welcome
Expected Class Size: 15-19
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
ECON 389(D2) ECON 514(D2)
Quantitative/Formal Reasoning Notes: The course builds on other QFR Reasoning econ classes.
Attributes: POEC Depth POEC Skills

Spring 2025
SEM Section: 01  MR 2:35 pm - 3:50 pm  Jon M. Bakija

ECON 454  (F)  Macroeconomic Perspectives on Labor Markets  (QFR)
This seminar will cover aggregate trends in the labor market from a macroeconomic perspective, along with the tools that economists use to study them. We will think about the workforce as a whole but we will also highlight research that studies heterogeneity within the economy, such as patterns by race, gender, education, or occupation. Students will learn basic search and matching models, as well as related empirical methods. We will read papers that employ a variety of survey and administrative data, and we will discuss what types of research questions are best answered by each data source. We will use real data to apply the methods we learn. Potential topics include occupational mismatch, wage inequality, and monopsony.
Requirements/Evaluation: Class participation, short assignments, midterm exam, and a final project
Prerequisites: Econ 251, 252, and 255
Enrollment Limit: 19
Enrollment Preferences: Junior and senior economics majors
Expected Class Size: 19
Grading: no pass/fail option, yes fifth course option
Distributions: (D2) (QFR)
Quantitative/Formal Reasoning Notes: Course includes regular problem sets that require quantitative and formal reasoning skills.

Fall 2024
SEM Section: 01  MWF 8:30 am - 9:45 am  Caitlin E. Hegarty
ECON 471  (S)  Topics in Advanced Econometrics  (QFR)
The course uses both a practical and conceptual/theory based approach, with emphasis on methods of structural identification of dynamics in VARs and long run cointegration and nonlinear function estimation and analysis, both in conventional time series and especially panel time series which contain spatial dimensions. The course will also investigate methods of computer simulation related to these techniques. The course is well suited for students considering empirically oriented honors theses in fields that employ these techniques, such as macro, finance, growth, trade and development, as well as fields outside of economics that use time series data. It is also well suited for students majoring in economics, statistics, computer sciences or mathematics who wish to expand their econometrics training and understanding to a more advanced level.

Requirements/Evaluation: periodic homework assignments, term paper
Prerequisites: ECON 371
Enrollment Limit: 19
Enrollment Preferences: students with strong quantitative backgrounds, and to students intending to write an honors thesis
Expected Class Size: 19
Grading: no pass/fail option, yes fifth course option
Distributions: (D2)  (QFR)
Quantitative/Formal Reasoning Notes: Course will make use of mathematics, statistics and computer analysis for the conceptualization and implementation of the econometric topics that are taught.

Spring 2025
SEM Section: 01   W 7:00 pm - 9:40 pm   Peter L. Pedroni

ECON 477  (F)  Economics of Environmental Behavior  (QFR)
Cross-listings: CAOS 477 / ENVI 376

Primary Cross-listing
A community maintains a fishery; a firm decides whether to get a green certification; you choose to fly home or stay here for spring break: behaviors of people and firms determine our impact on the environment. We'll use economics to model environmental behavior and to assess how policies can help or hurt the environment. Topics we may study include: common pool resources, voluntary conservation, social norms and nudges, discrimination and justice, rationality, firm responses to mandatory and voluntary regulation, voting and public opinion, and international environmental agreements. We'll also build familiarity with the main methodologies of modern economic research: theoretical modeling, empirical analysis of observational data, and experiments.

Class Format: Class sessions will largely consist of presentations and discussions of academic research papers, as well as lab sessions to work on empirical exercises and other interactive activities

Requirements/Evaluation: class participation, regular reading markup, empirical exercises, oral presentation(s), and an original research paper using an experiment, observational data, or theory
Prerequisites: ECON 251 and (ECON 255 or STAT 346)
Enrollment Limit: 19
Enrollment Preferences: senior Economics majors and junior Economics majors considering a thesis
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option

Cross-listings:

Secondary Cross-listing

Evidence from across the developing world suggests that the "binding constraints" to economic growth can be remarkably heterogeneous—i.e., the growth potential of stagnating or underperforming economies may be unlocked in a large variety of ways. For instance, pre-reform China had been constrained by poor supply incentives in agriculture, whereas Brazil has been held back by an inadequate supply of credit, South Africa by poor employment incentives in manufacturing, El Salvador by insufficient production incentives in tradables, Zimbabwe by bad governance, and so forth. How can developing-country policymakers determine country-specific constraints like these, thus enabling them to pragmatically pursue a selected set of growth-promoting policies rather than attempting to implement a "laundry list" of reforms that are naively based on "best practice" rules-of-thumb? This course will serve as a primer on "growth diagnostics," an empirically-driven analytical framework for identifying the most binding constraints to economic growth in a given country at a point in time, thereby allowing policymakers to develop well-targeted reforms for relaxing these constraints while being cognizant of the nation's prevailing economic, political, and social context. The course will first build on the basic theories and empirics of
economic growth to elucidate the diagnostic framework and will then employ a wide range of country-specific case studies to demonstrate how the framework can be operationalized for policy making. Throughout the semester, students will be required to work in groups, each representing a given developing or emerging-market economy, in order to build a growth diagnostic for their group's assigned country by the end of the course.

Requirements/Evaluation: extensive class participation, several short (5-page) reports, a final group project comprising a country growth diagnostic, and a final group presentation on the diagnostic

Prerequisites: for undergraduates ECON 251, ECON 252, and either ECON 255 or STAT 346

Enrollment Limit: 19

Enrollment Preferences: CDE fellows and senior Economics majors

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
ECON 345(D2) ECON 545(D2)

Quantitative/Formal Reasoning Notes: The course material will be draw heavily on mathematical and statistical models of economic growth and macroeconomic development, and students will be required to routinely develop mathematical models and/or conduct econometric analysis in their assignments.

Spring 2025

SEM Section: 01 TR 9:55 am - 11:10 am Quamrul H. Ashraf

ENVI 108 (S) Energy Science and Technology (QFR)

Cross-listings: PHYS 108

Secondary Cross-listing

Energy use has skyrocketed in the United States and elsewhere in the world, causing significant economic and political shifts, as well as concerns for the environment. This course will address the physics and technology of energy generation, consumption, and conservation. It will cover a wide range of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating and lighting, and energy storage. Students will learn to compare the efficiencies and environmental impacts of various energy sources and uses.

Class Format: Two meetings per week. Some weeks that means two lectures. Other weeks, that means one lecture plus one lab, with the class divided between two lab sections.

Requirements/Evaluation: weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative

Prerequisites: high school physics, high school chemistry, and mathematics at the level of MATH 130

Enrollment Limit: 10 per lab

Enrollment Preferences: non-physics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 203  (F)  Ecology  (QFR)

Cross-listings:  BIOL 203

Secondary Cross-listing
This course combines lectures & discussion with field and indoor laboratory activities to explore factors that determine the distribution and abundance of plants and animals in natural systems. The course begins with an overview of global environmental patterns and then builds from the population to ecosystem level. Throughout the course, we will emphasize the connection between basic ecological principles and current environmental issues. Selected topics include population dynamics (competition, predation, mutualism); community interactions (succession, food chains and diversity) and ecosystem function (biogeochemical cycles, energy flow). Laboratory activities are designed to engage students in the natural history of the region and build skills in data analysis and scientific writing.

Requirements/Evaluation:  pre-class quizzes, lab reports, two mid-term exams, and a final exam

Prerequisites:  BIOL 102, or ENVI 102, or permission of instructor

Enrollment Limit:  30

Enrollment Preferences:  students planning to pursue Biology and/or ENVI

Expected Class Size:  30

Grading:  yes pass/fail option,  yes fifth course option

Distributions:  (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
BIOL 203(D3)  ENVI 203(D3)

Quantitative/Formal Reasoning Notes:  Much of the material in this course centers on the interpretation and application of mathematical models used to describe ecological systems. The laboratory section of this course also contains a large data analysis component (based in R). Students are introduced to linear models, multidimensional data analysis and contingency tables.

ENVI 213  (S)  Introduction to Environmental and Natural Resource Economics  (QFR)

Cross-listings:  ECON 213 / CAOS 213

Secondary Cross-listing
We'll use economics to provide one perspective on reasons humans harm the environment and overuse natural resources, and what we can do about it. We'll study climate change, pollution in general, cost benefit analysis, environmental justice, natural resources (like fisheries, forests, and fossil fuels), and energy. We'll talk about how economists put a dollar value on nature and ecosystem services (as well as human health and life!), and the concerns people may have about doing so. We will take an economic approach to global sustainability, and study the relationship between the environment and economic growth. Consideration of justice and equity will be woven throughout the whole semester.

Requirements/Evaluation:  problem sets, short essays, final paper; intermediate assignments may include a poster, one or more short presentation(s), other brief writing assignment(s)

Prerequisites:  ECON 110 or equivalent

Enrollment Limit:  30

Enrollment Preferences:  first-year and sophomore students

Expected Class Size:  30

Grading:  yes pass/fail option,  yes fifth course option

Unit Notes:  this course will count toward both the Environmental Studies major and concentration
Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces—wind, waves, storms, and people—that shape the coastal zone, as well as the geologic formations—sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs—that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

Class Format: lecture two times a week with a lab one time per week

Requirements/Evaluation: lab reports, quizzes, and an independent research project

Prerequisites: Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.

Enrollment Limit: 15

Enrollment Preferences: Geosciences majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Unit Notes: This course counts toward the GEOS Group B Electives - Sediments + Life.

Distributions: (D3) (QFR)

SEM Section: 01 TR 8:30 am - 9:45 am Sarah A. Jacobson

GEOS 234 (S) Introduction to Materials Science (QFR)

Cross-listings: PHYS 234

Secondary Cross-listing

Materials Science is the study of how the microscopic structure of materials--whether steel, carbon fiber, glass, wood, plastic, or mayonnaise--determines their macroscopic mechanical, thermal, electric, and other properties. Topics of this course include classifying materials; material structure; thermodynamics and phase transformations; material properties and testing; how solids bend, flow, and ultimately break; and how to choose the right material for design applications. Materials Science is a highly interdisciplinary field and as a result the course prerequisites are broad but also flexible. Interested students who are unsure about their preparation are strongly encouraged to contact the instructor.

Class Format: lecture (3 hours per week) plus three to four small-group laboratory sessions throughout the semester (to be scheduled with instructor)

Requirements/Evaluation: weekly problem sets, class participation, and midterm and final exams, all of which have a substantial quantitative component

Prerequisites: high school physics and chemistry, preferably at the AP level, and MATH 140 or AP Calculus (BC), and one 200-level PHYS, CHEM, or GEOS course; or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: based on students' scientific background and seniority

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: This course does not count toward the Geosciences major.

Distributions: (D3) (QFR)
Can people live safely along the coast? Recent events like SuperStorm Sandy and the Tohoku Tsunami have shown us how the ocean can rise up suddenly and wreak havoc on our lives and coastal infrastructure. Only educated geoscientists can evaluate the risks and define informed strategies to prevent future coastal catastrophes. Currently almost half the global population lives within 100 km of the coast, with a large percent of those living in densely populated cities (e.g., New York, New Orleans, Los Angeles, Shanghai, Hong Kong, Cape Town, Sydney, Mumbai). Despite the growing risks and challenges associated with climate change and rising sea levels, the coastal population continues to grow rapidly. To help ensure these growing populations can live safely along the coast requires a detailed understanding of the processes that shape the coastal zone. These processes act across a variety of scales, from deep-time geologic processes that dictate coastal shape and structure, to decadal-scale processes that determine shoreline position and evolution, to weekly and daily processes such as storms and tides. This course will provide an in-depth look at the forces--wind, waves, storms, and people--that shape the coastal zone, as well as the geologic formations--sandy beaches, rocky cliffs, barrier islands, deltas, and coral reefs--that are acted upon and resist these forces. Coastal dynamics are strongly affected by human interventions, such as seawalls, dredged channels, and sand dune removal, as well as by sea level rise and changes in storm frequency and magnitude associated with climate change. Finally, the course will provide students with a perspective on how the U.S. seeks to manage its coastal zone, focusing on sea level rise and coastal development. This class will include a quantitative lab that will use MATLAB software to model and evaluate various coastal processes. Students will gain a basic understanding of MATLAB functionality, and will be asked to independently apply what they have learned to various data sets provided by the instructor.

**Class Format:** lecture two times a week with a lab one time per week

**Requirements/Evaluation:** lab reports, quizzes, and an independent research project

**Prerequisites:** Either GEOS 104 or GEOS 210; or permission of instructor. No prior knowledge is necessary, but this course does build on principles used to explore complex scientific challenges.

**Enrollment Limit:** 15

**Enrollment Preferences:** Geosciences majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** This course counts toward the GEOS Group B Electives - Sediments + Life.

**Distributions:** (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
ENVI 327(D3) GEOS 327(D3) CAOS 327(D3)

**Quantitative/Formal Reasoning Notes:** This course will involve the use of MATLAB software to quantitatively analyze coastal process and geomorphological data.

**Attributes:** ENVI Natural World Electives GEOS Group B Electives - Sediments + Life
Cross-listings: STS 150 / AMST 150 / SOC 150 / WGSS 150

Primary Cross-listing

This course is a unique and inclusive introduction to data science where quantitative thinking, programming, and social justice intertwine. We will build our data science skills using R, a popular open-source data science tool. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration. But rather than divorcing these techniques from the social issues they can help illuminate, we ground them in a social justice context. Overall, we will apply data science skills to topics drawn from criminal justice, environmental justice, diversity and inclusion in arts and media, education equity, and much more, with the goal of growing our collective capacity to use data science as a tool for social good. During a time when humans are increasingly subjugated to data-driven algorithmic decisions, when there are social media accounts dedicated to highlighting misuses of data, and when artificial intelligence makes faking data a nearly trivial task, using data to ethically and carefully promote justice is more important than ever.

Class Format: This course is taught in a highly interactive format and will frequently use a flipped-classroom approach. Students should expect substantial time devoted to in-class collaboration.

Requirements/Evaluation: Students will complete regularly assigned activities, problem sets, and other assessments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based approach.

Prerequisites: None. This course assumes no prior knowledge of data science or R programming. An interest in social justice and a willingness to engage intensively with data and computing are essential.

Enrollment Limit: 18

Enrollment Preferences: Students without prior college-level courses in statistics and programming.

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 150(D2) AMST 150(D2) SOC 150(D2) WGSS 150(D2) INTR 150(D2)

Difference, Power, and Equity Notes: This course uses data science as a lens for injustice in spheres such as criminal justice, environmental justice, diversity and inclusion in arts and media, education equity. We will consider race, gender, LGTQ+, disability, and other axes of identity. Additionally, we will adopt a data-critical perspective, thinking about how social forces shape data and our understanding of it.

Quantitative/Formal Reasoning Notes: This course teaches quantitative tools in R, a widely-adopted data science platform. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration.

INTR 350 (S) Data for Justice Research Practicum (DPE) (QFR)

Cross-listings: WGSS 363 / STS 363 / AMST 363

Primary Cross-listing

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this inclusive, collaborative, research-based course, students will bring statistical, computational, and/or mathematical approaches to bear on issues of social justice. Guided closely by the instructor, students will work in groups to carry out original research in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. Prior research experience is not required; one goal of this course is to build skills for advanced research.

Class Format: This course is an intensive research practicum. Formation of research groups and selection of research topics will be facilitated by the instructor. The primary modality of work is peer collaboration.

Requirements/Evaluation: To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based, ungraded assessment framework.

Prerequisites: INTR 150 (Data for Justice), or prior equivalent exposure to computing, statistics, and social justice topics as approved by the instructor.
Enrollment Limit: 10

Enrollment Preferences: Students who have a declared major in Division I or II, who meet the prerequisites of the course, and who fill out the instructor's preregistration survey (contact the instructor for link).

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
WGSS 363(D2) STS 363(D2) INTR 350(D2) AMST 363(D2)

Difference, Power, and Equity Notes: Students will research issues of social justice in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

Quantitative/Formal Reasoning Notes: Students will use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

Spring 2025

SEM Section: 01    TR 9:55 am - 11:10 am     Chad M. Topaz
SEM Section: 02    TR 11:20 am - 12:35 pm     Chad M. Topaz

MATH 113  (S) The Beauty of Numbers  (QFR)

This course will be an introduction to number theory and mathematical thinking and logic, with emphasis throughout on mathematics as a way of thinking and approaching the world. Have you ever wondered what keeps your credit card information safe every time you buy something online? Number theory! Number Theory is one of the oldest branches of mathematics. In this course, we will discover the beauty and usefulness of numbers, from ancient Greece to modern cryptography. We will look for patterns, make conjectures, and learn how to prove these conjectures. Starting with nothing more than basic high school algebra, we will develop the logic and critical thinking skills required to realize and prove mathematical results. Topics to be covered include the meaning and content of proof, prime numbers, divisibility, rationality, modular arithmetic, Fermat's Last Theorem, the Golden ratio, Fibonacci numbers, coding theory, and unique factorization. This course is meant to give you an appreciation for numbers and mathematics and to enhance your logical reasoning skills. Although most people will not use calculus or geometry in their jobs or everyday lives, mathematics enhances our abilities to think logically and reason effectively. This skill is useful in all aspects of life. Number theory, in particular, is a great area of mathematics that allows one to jump in right away without a lot of pre-requisite knowledge. We will look at examples, look for patterns, make conjectures, and we will spend a lot of time learning how to rigorously prove those conjectures.

Requirements/Evaluation: projects, homework assignments, and exams

Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test) or permission of instructor. Anyone who has previously taken a 200-level math course or higher must obtain instructor permission to take the course.

Enrollment Limit: 25

Enrollment Preferences: If over-enrolled, course selection will be based on answers to a questionnaire.

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: proof writing and logic

Spring 2025

LEC Section: 01    TR 11:20 am - 12:35 pm     Allison Pacelli

MATH 130  (F)(S) Calculus I   (QFR)

Calculus permits the computation of velocities and other instantaneous rates of change by a limiting process called differentiation. The same process also solves "max-min" problems: how to maximize profit or minimize pollution. A second limiting process, called integration, permits the computation of areas and accumulations of income or medicines. The Fundamental Theorem of Calculus provides a useful and surprising link between the two processes. Subtopics include trigonometry, exponential growth, and logarithms.
**Requirements/Evaluation:** Weekly homework and quizzes, 2 exams during the semester, and one final

**Prerequisites:** MATH 102 (or demonstrated proficiency on a diagnostic test); this is an introductory course for students who have not seen calculus before

**Enrollment Limit:** 50

**Enrollment Preferences:** first-year students

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** students who have previously taken a calculus course may not enroll in MATH 130 without the permission of instructor

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is a calculus course.

**Spring 2025**
LEC Section: 01 MWF 9:00 am - 9:50 am Leo Goldmakher

---

**MATH 140 (F)(S) Calculus II (QFR)**

Calculus answers two basic questions: how fast is something changing (the derivative) and how much is there (the integral). This course is about integration, and the miracle that unites the derivative and the integral (the Fundamental Theorem of Calculus.) Understanding calculus requires in part the understanding of methods of integration. This course will also solve equations involving derivatives (“differential equations”) for population growth or pollution levels. Exponential and logarithmic functions and trigonometric and inverse functions will also play an important role. This course is the right starting point for students who have seen derivatives, but not necessarily integrals, before.

**Requirements/Evaluation:** homework, quizzes, and/or exams

**Prerequisites:** MATH 130 or equivalent; students who have received the equivalent of advanced placement of AB 4, BC 3 or higher may not enroll in MATH 140 without the permission of instructor

**Enrollment Limit:** 50

**Enrollment Preferences:** based on who needs calculus the soonest

**Expected Class Size:** 30

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** students who have higher advanced placement must enroll in MATH 150 or above

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This is a math class

**MATH 150 (F)(S) Multivariable Calculus (QFR)**

Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives, multiple integrals. There is also a unit on infinite series, sometimes with applications to differential equations.

**Requirements/Evaluation:** Problem sets and exams
Prerequisites: MATH 140 or equivalent, such as satisfactory performance on an Advanced Placement Examination

Enrollment Limit: 50

Enrollment Preferences: Preference will be given to prospective math and stats majors, or students who need this as a course to serve as a prerequisite for other courses.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students with the equivalent of advanced placement of AB 4 or above should enroll in MATH 150, students with a BC 3 or higher should enroll in Math 151 when it is being offered, and Math 150 otherwise.

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: mathematics

Spring 2025
LEC Section: 01 MWF 10:00 am - 10:50 am Palak Arora

MATH 151 (F) Multivariable Calculus (QFR)
Applications of calculus in mathematics, science, economics, psychology, the social sciences, involve several variables. This course extends calculus to several variables: vectors, partial derivatives and multiple integrals. The goal of the course is Stokes Theorem, a deep and profound generalization of the Fundamental Theorem of Calculus. The difference between this course and MATH 150 is that MATH 150 covers infinite series instead of the theorems of vector calculus. Students with the equivalent of BC 3 or higher should enroll in MATH 151, as well as students who have taken the equivalent of an integral calculus and who have already been exposed to infinite series. For further clarification as to whether MATH 150 or MATH 151 is appropriate, please consult a member of the math/stat department.

Requirements/Evaluation: problem sets and exams

Prerequisites: AP BC 3 or higher or integral calculus with infinite series

Enrollment Limit: 50

Enrollment Preferences: First-years, sophomores, and juniors

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Unit Notes: MATH 151 satisfies any MATH 150 prerequisite; credit will not be given for both MATH 150 and MATH 151

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course builds quantitative skills

Fall 2024
LEC Section: 02 MWF 10:00 am - 10:50 am Susan R. Loepp
LEC Section: 01 MWF 9:00 am - 9:50 am Susan R. Loepp
LEC Section: 03 MWF 11:00 am - 11:50 am Susan R. Loepp

MATH 200 (F)(S) Discrete Mathematics (QFR)
In contrast to calculus, which is the study of continuous processes, this course examines the structure and properties of finite sets. Topics to be covered include mathematical logic, elementary number theory, mathematical induction, set theory, functions, relations, elementary combinatorics and probability, and graphs. Emphasis will be given on the methods and styles of mathematical proofs, in order to prepare the students for more advanced math courses.

Class Format: This will not be a typical lecture course; instead it will be a blend of lecture and discovery-based learning, with weekly small group
meetings with TA's.

Requirements/Evaluation: Spring: Evaluation will be based on homework, exams, and participation in weekly small group meetings.

Prerequisites: Calculus at the level of an AP course or Williams College Math 130 or 140. Students who have taken a 300-level or 400-level math course should obtain permission of the instructor before enrolling.

Enrollment Limit: 40

Enrollment Preferences: Preference given to first and second year students intending to major in mathematics or computer science.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course involves developing the formal mathematical language of logic and set theory. It also involves using quantitative tools to solve problems relating to combinatorics, probability, number theory, and other fields of discrete mathematics.

Fall 2024

LEC Section: 02 TR 9:55 am - 11:10 am Lori A. Pedersen

MATH 210 (S) Mathematical Methods for Scientists (QFR)

Cross-listings: PHYS 210

Secondary Cross-listing

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131

Enrollment Limit: 50

Enrollment Preferences: sophomores and juniors

Expected Class Size: 30

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
PHYS 210(D3) MATH 210(D3)

Quantitative/Formal Reasoning Notes: This course will have weekly problem sets using advanced calculus methods

Spring 2025
LEC Section: 01 TR 9:55 am - 11:10 am Frederick W. Strauch

MATH 250 (F)(S) Linear Algebra (QFR)

Many social, political, economic, biological, and physical phenomena can be described, at least approximately, by linear relations. In the study of systems of linear equations one may ask: When does a solution exist? When is it unique? How does one find it? How can one interpret it
geometrically? This course develops the theoretical structure underlying answers to these and other questions and includes the study of matrices, vector spaces, linear independence and bases, linear transformations, determinants and inner products. Course work is balanced between theoretical and computational, with attention to improving mathematical style and sophistication.

Requirements/Evaluation: homework and exams
Prerequisites: MATH 150/151 or MATH 200
Enrollment Limit: 60
Enrollment Preferences: Students who have officially declared a major that requires Math 250.
Expected Class Size: 40
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: In this course, students will engage in both quantitative and formal reasoning.

MATH 309  (F)(S) Differential Equations  (QFR)
Ordinary differential equations (ODEs) frequently arise as models of phenomena in the natural and social sciences. This course presents core ideas of ODEs from an applied standpoint. Topics covered early in the course may include numerical solutions, separation of variables, integrating factors, and constant coefficient linear equations. Later, we will focus on nonlinear ODEs, for which it is usually impossible to find analytical solutions. Tools from dynamical systems will be introduced to allow us to obtain information about the behavior of the ODEs without explicitly knowing the solution.

Requirements/Evaluation: quizzes/exams, problem sets, participation
Prerequisites: MATH 150/151 and MATH 250
Enrollment Limit: 40
Enrollment Preferences: discretion of the instructor
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: 300-level mathematics course

Fall 2024
LEC Section: 01  TR 9:55 am - 11:10 am  Julie C. Blackwood

Spring 2025
LEC Section: 01  TR 8:30 am - 9:45 am  Bhagya Athukorallage

MATH 313  (S) Introduction to Number Theory  (WS) (QFR)
The study of numbers dates back thousands of years, and is fundamental in mathematics. In this course, we will investigate both classical and modern questions about numbers. In particular, we will explore the integers, and examine issues involving primes, divisibility, and congruences. We will also look at the ideas of number and prime in more general settings, and consider fascinating questions that are simple to understand, but can be quite difficult to answer. This course will include a significant focus on mathematical proof writing and problem solving skills. This includes writing clear and rigorous mathematical proofs, clearly explaining mathematical ideas verbally and in writing, determining how to approach certain types of problems, looking for patterns and making conjectures, and asking good questions about the implications of certain ideas and theorems.
Requirements/Evaluation: Problem sets, project, and exams
Prerequisites: MATH 250 or permission of instructor
Enrollment Limit: 19
Enrollment Preferences: If course is over-enrolled, enrollment preference will be based on answers to a questionnaire. Some preference will be given to students who have not yet had Math 355.
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (WS) (QFR)

Writing Skills Notes: Students will complete weekly problem sets, with a strong emphasis on proof writing, as well as 2 5-10 page papers/projects. There will be feedback given on mathematical writing as well as accuracy, and discussion time during class on writing in math.
Quantitative/Formal Reasoning Notes: This course requires working with various number systems, performing explicit computations, and proving mathematical results using logical reasoning practices.

Spring 2025
LEC Section: 01    TR 9:55 am - 11:10 am     Allison Pacelli

MATH 326 (F) Differential Geometry  (QFR)
Differential Geometry is the study of curvature. In turn, curvature is the heart of geometry. The goal of this course is to start the study of curvature, concentrating on the curvature of curves and of surfaces, leading to the deep Gauss-Bonnet Theorem, which links curvature with topology.
Class Format: lecture
Requirements/Evaluation: Evaluation will be based primarily on problem sets, midterms and a final exam
Prerequisites: MATH 250
Enrollment Limit: 30
Enrollment Preferences: Preference to mathematics majors.
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It is a mathematics upper level course.

Fall 2024
LEC Section: 01    MWF 11:00 am - 11:50 am     Ivo Terek

MATH 331 (F) The little Questions  (QFR)
Using math competitions such as the Putnam Exam as a springboard, in this class we follow the dictum of the Ross Program and "think deeply of simple things". The two main goals of this course are to prepare students for competitive math competitions, and to get a sense of the mathematical landscape encompassing elementary number theory, combinatorics, graph theory, and group theory (among others). While elementary frequently is not synonymous with easy, we will see many beautiful proofs and "a-ha" moments in the course of our investigations. Students will be encouraged to explore these topics at levels compatible with their backgrounds.
Requirements/Evaluation: homework, classwork, and exams
Prerequisites: MATH 250 or permission of instructor
Enrollment Limit: 30
Enrollment Preferences: members or alternates of the Putnam team, Mathematics, Physics or Computer Science majors
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Unit Notes: http://web.williams.edu/Mathematics/sjmiller/public_html/331Fa24/
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an upper level math course where students learn advanced material and solve challenging problems.

Fall 2024
LEC Section: 01    MWF 10:00 am - 10:50 am    Steven J. Miller

MATH 334  (S) Graph Theory  (QFR)
A graph is a collection of vertices, joined together by edges. In this course, we will study the sorts of structures that can be encoded in graphs, along with the properties of those graphs. We’ll learn about such classes of graphs as multi-partite, planar, and perfect graphs, and will see applications to such optimization problems as minimum colorings of graphs, maximum matchings in graphs, and network flows.

Requirements/Evaluation: problem sets, exams, and a short final project
Prerequisites: MATH 200 or MATH 250
Enrollment Limit: 30
Enrollment Preferences: Math majors
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course involves the writing of mathematical proofs.

Spring 2025
LEC Section: 01    MWF 9:00 am - 9:50 am    Ralph E. Morrison

MATH 338  (F) Intermediate Logic  (QFR)
Cross-listings: PHIL 338

Secondary Cross-listing
In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have take PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

Requirements/Evaluation: problem sets and exams
Prerequisites: some class in which student has studied formal reasoning
Enrollment Limit: 20
Enrollment Preferences: Philosophy majors; juniors and seniors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
PHIL 338(D2) MATH 338(D3)

Quantitative/Formal Reasoning Notes: This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.
MATH 341 (F)(S) Probability (QFR)

Cross-listings: STAT 341

Primary Cross-listing

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

Requirements/Evaluation: homework, classwork, and exams

Prerequisites: MATH 150 and MATH 250 or permission of the instructor

Enrollment Limit: 50

Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STAT 341(D3) MATH 341(D3)

Quantitative/Formal Reasoning Notes: This is a 300-level Math/Stat course.

MATH 345 (S) Introduction to Numerical Analysis (QFR)

Numerical analysis is the study of algorithms that use numerical approximation to solve problems which arise in scientific applications. This course provides an introduction to the theory, development, and analysis of algorithms for obtaining numerical solutions. We will also use mathematical software to facilitate numerical experimentation. Topics discussed in the course include: Error Analysis and Convergence Rates of Algorithms; Root Finding for Nonlinear Equations; Approximating Functions; Numerical Differentiation and Integration; Numerical Solutions of Ordinary Differential Equations; Iterative Methods for Solving Linear Systems.

Requirements/Evaluation: Evaluation will be based on homework, projects, and exams.

Prerequisites: Math 250 and Math 150/151

Enrollment Limit: 30

Enrollment Preferences: Mathematics and Statistics majors.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an advanced mathematics class that will cover the fundamental ideas of Numerical Analysis. The students will study in depths various algorithms that provide numerical solutions to various questions in science.
MATH 350  (F)(S)  Real Analysis  (QFR)
Why is the product of two negative numbers positive? Why do we depict the real numbers as a line? Why is this line continuous, and what do we mean when we say that? Perhaps most fundamentally, what is a real number? Real analysis addresses such questions, delving into the structure of real numbers and functions of them. Along the way we’ll discuss sequences and limits, series, completeness, compactness, derivatives and integrals, and metric spaces. Results covered will include the Cantor-Schroeder-Bernstein theorem, the monotone convergence theorem, the Bolzano-Weierstrass theorem, the Cauchy criterion, Dirichlet’s and Riemann’s rearrangement theorem, the Heine-Borel theorem, the intermediate value theorem, and many others. This course is excellent preparation for graduate studies in mathematics, statistics, and economics.

Requirements/Evaluation: Problem sets and exams.
Prerequisites: MATH 250 or permission of instructor.
Enrollment Limit: 40
Enrollment Preferences: Juniors and Seniors.
Expected Class Size: 25
Grading: no pass/fail option, yes fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: This is an advanced mathematics course.

Fall 2024
LEC Section: 01  MR 2:35 pm - 3:50 pm  Leo Goldmakher

Spring 2025
LEC Section: 01  TR 11:20 am - 12:35 pm  Cesar E. Silva

MATH 351  (S)  Applied Real Analysis  (QFR)
This course is designed to introduce students to the underpinnings of real analysis, primarily in the context of Fourier series. By the end of the semester people will be comfortable making epsilon and delta type arguments. These types of arguments are one of the main pillars of modern mathematics. In a similar way, Fourier series and their generalizations are one of the pillars of the modern digital world.

Requirements/Evaluation: homework, classwork, and exams
Prerequisites: MATH 150 and MATH 250 or permission of the instructor.
Enrollment Limit: 50
Enrollment Preferences: Seniors
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)  (QFR)
Quantitative/Formal Reasoning Notes: Math

Spring 2025
LEC Section: 01  MR 2:35 pm - 3:50 pm  Palak Arora

MATH 355  (F)(S)  Abstract Algebra  (QFR)
Algebra gives us tools to solve equations. The integers, the rationals, and the real numbers have special properties which make algebra work according to the circumstances. In this course, we generalize algebraic processes and the sets upon which they operate in order to better understand, theoretically, when equations can and cannot be solved. We define and study abstract algebraic structures such as groups, rings, and fields, as well as the concepts of factor group, quotient ring, homomorphism, isomorphism, and various types of field extensions. This course introduces students to abstract rigorous mathematics.
MATH 361 (F) Theory of Computation (QFR)

Cross-listings: CSCI 361

Secondary Cross-listing

This course introduces a formal framework for investigating both the computability and complexity of problems. We study several models of computation including finite automata, regular languages, context-free grammars, and Turing machines. These models provide a mathematical basis for the study of computability theory—the examination of what problems can be solved and what problems cannot be solved—and the study of complexity theory—the examination of how efficiently problems can be solved. Topics include the halting problem and the P versus NP problem.

Requirements/Evaluation: weekly problem sets and one or more exams

Prerequisites: CSCI 256 or both a 300-level MATH course and permission of instructor

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

MATH 361(D3) CSCI 361(D3)

Quantitative/Formal Reasoning Notes: This course include regular and substantial problem sets in which quantitative/formal reasoning skills are practiced and evaluated.

LEC Section: 02 TR 9:55 am - 11:10 am Shikha Singh

MATH 374 (F) Topology (QFR)

In Real Analysis you learned about metric spaces—any set of objects endowed with a way of measuring distance—and the topology of sets in such spaces (open, closed, bounded, etc). In this course we flip this on its head: we explore how to develop analysis (limits, continuity, etc) in spaces where the topology is known but the metric is not. This will lead us to a bizarre and fascinating version of geometry in which we cannot distinguish between shapes that can be continuously deformed into one another. Not only does this theory turn out to be beautiful in the abstract, it plays an important role...
in math, physics, and data analysis. This course is excellent preparation for graduate programs in mathematics.

**Requirements/Evaluation:** Problem sets, exams, an expository essay.

**Prerequisites:** MATH 350 or 351; not open to students who have taken MATH 323. If you didn't cover metric spaces in real analysis, that's OK!

**Enrollment Limit:** 30

**Enrollment Preferences:** Juniors and seniors

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** It's math.

---

**Fall 2024**

LEC Section: 01  TR 11:20 am - 12:35 pm  Leo Goldmakher

**MATH 382 (S) Fourier Analysis (QFR)**

Fourier analysis is the study of waves and frequencies. More precisely, the goal of Fourier analysis is to decompose a complicated function into a simple combination of pure waves, thereby gleaning insight into the behavior of the function itself. It's difficult to overstate the impact of this branch of mathematics; it is foundational throughout theoretical mathematics (e.g., to study the distribution of prime numbers), applied mathematics (e.g., to solve differential equations), physics (e.g., to study properties of light and sound), computer science (e.g., to compute with large integers and matrices), audio engineering (e.g., to pitch-correcting algorithms), medical science (e.g., throughout radiology), etc. The goal of this course is to cover the basic theory (fourier series, the fourier transform, the fast fourier transform) and explore a number of applications, including Dirichlet's theorem on primes in arithmetic progressions, the isoperimetric inequality, the heat equation, and Heisenberg's uncertainty principle.

**Class Format:** Every week, each student will either give a lecture (based on provided readings) or explain solutions to selected problems.

**Requirements/Evaluation:** Evaluation will be based on lectures and presentation of problem solutions.

**Prerequisites:** MATH 350 or MATH 351 or permission of instructor.

**Enrollment Limit:** 10

**Enrollment Preferences:** By lottery.

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** It's math!

**Spring 2025**

TUT Section: T1  TBA  Leo Goldmakher

**MATH 389 (S) Advanced Analysis (WS) (QFR)**

This course further develops and explores topics and concepts from real analysis, with special emphasis on introducing students to subject matter and techniques that are useful for graduate study in mathematics or an allied field. Material will be drawn, based on student interest, from many areas, including analytic number theory, Fourier series and harmonic analysis, generating functions, differential equations and special functions, integral operators, equidistribution theory and probability, random matrix theory and probabilistic methods. This will be an intense, fast paced class which will give a flavor for graduate school. In addition to standard homework problems, students will also write reviews for MathSciNet, referee papers for journals, write programs in SAGE or Mathematica to investigate and conjecture, and read classic and current research papers.

**Class Format:** lecture

**Requirements/Evaluation:** evaluation will be based primarily on homework, classwork, and exams

**Prerequisites:** MATH 350 or 351 and one additional 300-level MATH course, or permission of instructor

**Enrollment Limit:** 30

**Enrollment Preferences:** students interested in graduate school in mathematics or an allied discipline
Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Unit Notes: http://web.williams.edu/Mathematics/sjmiller/public_html/389/

Distributions: (D3) (WS) (QFR)

Writing Skills Notes: Students will improve and expand their writing skills by taking course material as a starting point and writing chapters for a book under contract with the American Mathematical Society. This will involve numerous iterations of the content, with feedback both from the professor and from an editor.

Quantitative/Formal Reasoning Notes: This is a post-core 300 level math class.

Spring 2025

LEC Section: 01 TR 11:20 am - 12:35 pm Steven J. Miller

MATH 403 (F) Measure and Ergodic Theory (QFR)

An introduction to measure theory and ergodic theory. Measure theory is a generalization of the notion of length and area, and has been used in the study of stochastic (probabilistic) systems. The course covers the construction of Lebesgue and Borel measures, measurable functions, and Lebesgue integration. Ergodic theory studies the probabilistic behavior of dynamical systems as they evolve through time, and is based on measure theory. The course will cover basic notions, such as ergodic transformations, weak mixing, mixing, Bernoulli transformations, and transformations admitting and not admitting an invariant measure. There will be an emphasis on specific examples such as group rotations, the binary odometer transformations, and rank-one constructions. The Ergodic Theorem will also be covered, and will be used to illustrate notions and theorems from measure theory.

Requirements/Evaluation: Homework and exams

Prerequisites: MATH 350 or MATH 351 or permission of instructor

Enrollment Limit: 25

Enrollment Preferences: Mathematics majors

Expected Class Size: 15-20

Grading: yes pass/fail option, yes fifth course option

Unit Notes: senior major course

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: It is an advanced mathematics course.

Fall 2024

LEC Section: 01 MR 2:35 pm - 3:50 pm Cesar E. Silva

MATH 408 (F) L-Functions and Sphere Packing (WS) (QFR)

Optimal packing problems arise in many important problems, and have been a source of excellent mathematics for centuries. The Kepler Problem (what is the most efficient way to pack balls in three-space) is a good example. The original formulation has been used in such diverse areas as stacking cannonballs on battleships to grocers preparing fruit displays, and its generalizations allow the creation of powerful error detection and correction codes. While the solution of the Kepler Problem is now known, the higher dimensional version is very much open. There has been remarkable progress in the last few years, with number theory playing a key role in these results. We will develop sufficient background material to understand many of these problems and the current state of the field. Pre-requisites are real analysis.

Requirements/Evaluation: Class participation, homework, exams and participation in writing a textbook on the material. Each student will be responsible for working on a chapter of a book based on this material. In addition to obtaining critical writing feedback from myself and my co-author (who is a world expert in the subject), depending on timing we will also be able to share comments from an editor of a major publishing house or a referee. Chapters can range from short snapshots of a subject, on the order of 5 pages, to longer technical derivations of perhaps 10-30 pages.

Prerequisites: Math 350 or 351

Enrollment Limit: 40

Enrollment Preferences: Senior math majors, students planning on graduate study in a STEM field

Expected Class Size: 20
Quantitative/Formal Reasoning Notes: This is a 400 level math class

MATH 412  (S)  Mathematical Biology  (QFR)

Cross-listings:  BIOL 420

Primary Cross-listing

This course will provide an introduction to the many ways in which mathematics can be used to understand, analyze, and predict biological dynamics. We will learn how to construct mathematical models that capture essential properties of biological processes while maintaining analytic tractability. Analytic techniques, such as stability and bifurcation analysis, will be introduced in the context of both continuous and discrete time models. Additionally, students will couple these analytic tools with numerical simulation to gain a more global picture of the biological dynamics. Possible biological applications may include, but are not limited to, single and multi-species population dynamics, neural and biological oscillators, tumor cell growth, and infectious disease dynamics.

Requirements/Evaluation:  problem sets, quizzes/exams, participation, final project and paper
Prerequisites:  MATH 250 and MATH 309, or permission of instructor
Enrollment Limit:  30
Enrollment Preferences:  preference for senior math/stats major and also based on an interest statement
Expected Class Size:  30
Grading:  yes pass/fail option,  no fifth course option
Distributions:  (D3)  (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
MATH 412 (D3) BIOL 420 (D3)

Quantitative/Formal Reasoning Notes: The course will introduce methods for developing and analyzing mathematical models.

Spring 2025

LEC Section: 01    TR 9:55 am - 11:10 am    Julie C. Blackwood

MATH 426 (F) Differential Topology (QFR)

Differential topology marries the rubber-like deformations of topology with the computational exactness of calculus. This sub field of mathematics asks and answers questions like "Can you take an integral on the surface of a doughnut?" and includes far-reaching applications in relativity and robotics. This tutorial will provide an elementary and intuitive introduction to differential topology. We will begin with the definition of a manifold and end with a generalized understanding of Stokes Theorem.

Requirements/Evaluation: weekly homework and exams, and possibly student presentations
Prerequisites: MATH 350 (students who have not taken MATH 350 may enroll only with permission of the instructor)
Enrollment Limit: 30
Enrollment Preferences: mathematics seniors, mathematics majors
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: There will be weekly math problem sets.

Fall 2024

LEC Section: 01    MWF 9:00 am - 9:50 am    Ivo Terek

MATH 453 (S) Partial Differential Equations (QFR)

In this course, we further explore the world of differential equations. Mainly, we cover topics in partial differential equations. Partial Differential Equations (PDEs) are fundamental to the modeling of many natural phenomena, arising in many fields, including fluid mechanics, heat and mass transfer, electromagnetic theory, finance, elasticity, and more. The goals of this course are to discuss the following topics: classification of PDEs in terms of order, linearity and homogeneity; physical interpretation of canonical PDEs; solution techniques, including separation of variables, series solutions, integral transforms, and the method of characteristics.

Requirements/Evaluation: Evaluation will be based on homework, projects, and exams.
Prerequisites: MATH 150-151; MATH/PHYS 210 or MATH 309
Enrollment Limit: 20
Enrollment Preferences: Mathematics and Physics majors.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an advanced mathematics class dedicated to the study of partial differential equations (PDEs). These equations are the most important mathematical tools for the study of complex physical phenomena such as waves and fluids (including both air and water), heat transfer, electromagnetism, and finance.

Spring 2025

LEC Section: 01    TR 11:20 am - 12:35 pm    Bhagya Athukorallage

PHIL 203 (S) Introductory Logic (QFR)

Logic is the study of reasoning and argument. More particularly, it concerns itself with the differences between good and bad reasoning, between strong and weak arguments. This course is an introduction to the precise characterization of good logical reasoning. We will learn a to a formal
language, Monadic First-Order Logic, designed to cleanly represent good inference patterns. Learning this language will primarily involve learning two skills: (i) translation between sentences of English and formulas of the logical language, and (ii) proving the validity of logical arguments using a system of natural deduction. No prior mathematical/logical/formal experience is assumed for this course.

Requirements/Evaluation: A midterm, a final, frequent problem sets.

Prerequisites: none

Enrollment Limit: 40

Enrollment Preferences: Preference given to philosophy majors.

Expected Class Size: 40

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

Quantitative/Formal Reasoning Notes: This course teaches two formal languages of logic: sentential logic and predicate logic.

Attributes: Linguistics PHIL Contemp Metaphysics + Epistemology Courses

Spring 2025

LEC Section: 01 MR 1:10 pm - 2:25 pm Christian De Leon

PHIL 221 (F) Introduction to Formal Linguistics (QFR)

Cross-listings: COGS 224

Secondary Cross-listing

The sentence "Every cookie is chocolate chip and three of them are oatmeal raisin" is a perfectly grammatical sentence of English, but it's self-contradictory. What does it take to realize this fact? One must grasp the meanings of the various parts of the sentence. In particular, one must grasp that "three of them" picks out a subset of the group picked out by "every cookie", and that there's no such thing as a cookie that is both chocolate chip and oatmeal raisin. There two ways to understand "Many students took every class". According to one, there is a single group of students that had their hands extremely full this semester. According to the other, every class was well-populated, potentially by different groups. The reason for this is that there are two underlying structures that the original sentence can realize. This course serves as an introduction to formal methods in the scientific study of language. Our goal will be to characterize phenomena like those above with logical and mathematical precision. The focus will be on model-theoretic semantics, the sub-field of linguistics that studies meanings. Along the way we will discuss principles of syntax, the sub-field that studies sentence structures, and pragmatics, the sub-field that studies inferences of non-literal content. This is a formal course, but no prior logical or mathematical background will be expected. Starting from scratch, students will learn the building blocks of current-day linguistic research. This introduction will be of use to students interested in language from a variety of perspectives, including philosophy, cognitive science, and computer science.

Requirements/Evaluation: Weekly problem sets, plus a final project (paper/presentation/other type, to be discussed with instructor)

Prerequisites: No prerequisites

Enrollment Limit: 20

Enrollment Preferences: Preference given to seniors and philosophy/cognitive science majors.

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 221(D2) COGS 224(D2)

Quantitative/Formal Reasoning Notes: This course teaches the fundamentals of the formal analysis of language. Students will learn to provide translation schemes from English to a logical language (typed lambda calculus).

Attributes: COGS Interdepartmental Electives COGS Related Courses Linguistics PHIL Contemp Metaphysics + Epistemology Courses

Fall 2024

LEC Section: 01 MR 1:10 pm - 2:25 pm Christian De Leon
PHIL 338 (F) Intermediate Logic (QFR)

Cross-listings: MATH 338

Primary Cross-listing

In this course, we will begin with an in-depth study of the theory of first-order logic. We will first get clear on the formal semantics of first-order logic and various ways of thinking about formal proof: natural deduction systems, semantic tableaux, axiomatic systems and sequent calculi. Our main goal will be to prove things about this logical system rather than to use this system to think about ordinary language arguments. In this way the goal of the course is significantly different from that of Logic and Language (PHIL 203). Students who have take PHIL 203 will have a good background for this class, but students who are generally comfortable with formal systems need not have taken PHIL 203. We will prove soundness and completeness, compactness, the Lowenheim-Skolem theorems, undecidability and other important results about first-order logic. As we go through these results, we will think about the philosophical implications of first-order logic. From there, we will look at extensions of and/or alternatives to first-order logic. Possible additional topics would include: modal logic, the theory of counterfactuals, alternative representations of conditionals, the use of logic in the foundations of arithmetic and Godel's Incompleteness theorems. Student interest will be taken into consideration in deciding what additional topics to cover.

Requirements/Evaluation: problem sets and exams
Prerequisites: some class in which student has studied formal reasoning
Enrollment Limit: 20
Enrollment Preferences: Philosophy majors; juniors and seniors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHIL 338(D2) MATH 338(D3)

Quantitative/Formal Reasoning Notes: This is a class in Formal Logic. PHIL 203 satisfies the QFR requirement. If anything, this class will be significantly more formal.

Attributes: PHIL Contemp Metaphysics + Epistemology Courses

SEM Section: 01 TF 2:35 pm - 3:50 pm Keith E. McPartland

PHYS 108 (S) Energy Science and Technology (QFR)

Cross-listings: ENVI 108

Primary Cross-listing

Energy use has skyrocketed in the United States and elsewhere in the world, causing significant economic and political shifts, as well as concerns for the environment. This course will address the physics and technology of energy generation, consumption, and conservation. It will cover a wide range of energy sources, including fossil fuels, hydropower, solar energy, wind energy, and nuclear energy. We will discuss energy use in transportation, manufacturing, building heating and lighting, and energy storage. Students will learn to compare the efficiencies and environmental impacts of various energy sources and uses.

Class Format: Two meetings per week. Some weeks that means two lectures. Other weeks, that means one lecture plus one lab, with the class divided between two lab sections.
Requirements/Evaluation: weekly assignments, two hour tests, and a final project culminating in an oral presentation to the class and a 10-page paper; all of these will be substantially quantitative
Prerequisites: high school physics, high school chemistry, and mathematics at the level of MATH 130
Enrollment Limit: 10 per lab
Enrollment Preferences: non-physics majors
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:

LAB Section: 02    R 1:10 pm - 2:25 pm     Protik K. Majumder

PHYS 131  (F) Introduction to Mechanics  (QFR)
We focus first on the Newtonian mechanics of point particles: the relationship between velocity, acceleration, and position; the puzzle of circular motion; forces, Newton's laws, and gravitation; energy and momentum; and the physics of vibrations. Then we turn to the basic properties of waves, such as interference and refraction, as exemplified by sound and light waves. We also study the optics of lenses, mirrors and the human eye. This course is not intended for students who have successfully completed an AP physics course in high school.

Requirements/Evaluation: exams, labs, and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 130; students who scored 4 or 5 on an AP physics exam, or 6 or 7 on the IB Physics HL exam may not take this course and are encouraged to take PHYS 141 instead

Enrollment Limit:  24 per lab
Enrollment Preferences: seniority
Expected Class Size:  60
Grading: yes pass/fail option, yes fifth course option

Unit Notes: PHYS 131 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

Distributions: (D3)  (QFR)

Quantitative/Formal Reasoning Notes: This class will have weekly problem sets requiring substantial quantitative reasoning

LAB Section: 03    T 1:00 pm - 4:00 pm     Graham K. Giovanetti
LEC Section: 01    MWF 11:00 am - 11:50 am     Graham K. Giovanetti

PHYS 132  (S) Electromagnetism and the Physics of Matter  (QFR)
This course is intended as the second half of a one-year survey of physics with some emphasis on applications to medicine. In the first part of the semester we will focus on electromagnetic phenomena. We will introduce the concept of electric and magnetic fields and study in detail the way in which electrical circuits and circuit elements work. The deep connection between electric and magnetic phenomena is highlighted with a discussion of Faraday's Law of Induction. Following our introduction to electromagnetism we will discuss some of the most central topics in twentieth-century physics, including Einstein's theory of special relativity and some aspects of quantum theory. We will end with a treatment of nuclear physics, radioactivity, and uses of radiation.

Class Format: lecture three hours per week, laboratory three hours approximately every other week, and conference section 1 hour approximately every other week

Requirements/Evaluation: weekly problem sets, labs, quizzes and exams

Prerequisites: PHYS 131 or 141 or permission of instructor, and MATH 130 (formerly 103)

Enrollment Limit:  22 per lab
Enrollment Preferences: sophomores
Expected Class Size:  60
Grading:  yes pass/fail option,  yes fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: Significant homework, exams, quizzes requiring mathematical and physical reasoning.

PHYS 141  (F)  Mechanics and Waves  (QFR)
This is the typical first course for a prospective physics major. It covers most of the same topics as PHYS 131, but with a higher level of mathematical sophistication. It is intended for students with solid backgrounds in the sciences, either from high school or college, who are comfortable with basic calculus.

Class Format: lecture, three hours per week; laboratory, three hours approximately every other week; conference section, 1.5 hours approximately every other week

Requirements/Evaluation: weekly problem sets, labs, two 1-hour exams, and a final exam, all of which have a substantial quantitative component

Prerequisites: High school physics (strongly recommended) and MATH 130 or equivalent placement, or permission of the instructor. High school physics at the AP, IB, or equivalent level is neither required nor expected.

Enrollment Limit:  24 per lab
Enrollment Preferences:  first-year students and science majors

Expected Class Size:  40
Grading:  yes pass/fail option,  yes fifth course option

Unit Notes: PHYS 141 can lead to either PHYS 132 (for students wanting a one-year survey of physics) or PHYS 142 (for students considering a Physics or Astrophysics major)

Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes: This course consists of lectures, problem-solving conferences, lab exercises, problem sets and exams, all of which have a substantial quantitative component.

PHYS 142  (S)  Foundations of Modern Physics  (QFR)
Newtonian Mechanics, spectacular as it is in describing planetary motion and a wide range of other phenomena, only hints at the richness of behaviors seen in the universe. Special relativity, which extends physics into the realm of high speeds and high energies, requires we rethink our basic notions of space and time. Quantum mechanics successfully describes atoms, molecules, and solids while at the same time calling into question our expectation of what can be predicted by a physical theory. Statistical physics reveals new behaviors that emerge when many particles are present in a system.

This course will survey ideas from each of these three arenas, and can serve either as a terminal course for those seeking to complete a year of physics or as the basis for future advanced study of these topics.

Class Format: lecture, three hours weekly; laboratory, 2-3 hours most weeks, alternating between 'hands-on' sessions and problem-solving/discussion sessions

Requirements/Evaluation: weekly homework, labs, two hour tests, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 141 and MATH 130, or equivalent; PHYS 131 may substitute for PHYS 141 with the permission of instructor; students may not take both PHYS 142 and PHYS 151
Enrollment Limit: 14/L  
Enrollment Preferences: first-year students  
Expected Class Size: 30  
Grading: yes pass/fail option, yes fifth course option  
Distributions: (D3) (QFR)  
Quantitative/Formal Reasoning Notes: Heavily problem-solving focused, involving algebraic manipulations, single-variable calculus, generating and reading graphs, etc.

Spring 2025

LAB Section: 02    T 1:00 pm - 4:00 pm     Catherine Kealhofer

PHYS 201  (F) Electricity and Magnetism  (QFR)
The classical theory of electricity and magnetism is very rich yet it can be written in a remarkably succinct form using Maxwell's equations. This course is an introduction to electricity and magnetism and their mathematical description, connecting electric and magnetic phenomena via the special theory of relativity. Topics include electrostatics, magnetic fields, electromagnetic induction, DC and AC circuits, and the electromagnetic properties of matter. The laboratory component of the course is an introduction to electronics where students will develop skills in building and debugging electrical circuits.

Class Format: lecture, three hours per week; laboratory, three hours per week  
Requirements/Evaluation: problem sets, labs/conference section assignments, two midterms, and a final exam, all of which have a substantial quantitative component  
Prerequisites: PHYS 142 OR 151; MATH 150 or 151; with a preference for MATH 151  
Enrollment Limit: 10 per lab
Enrollment Preferences: prospective physics majors, then by seniority

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course involves significant problem-solving and mathematical analysis of phenomena using calculus, numerical methods, and other quantitative tools.

Fall 2024

LEC Section: 01  MWF 10:00 am - 10:50 am     David R. Tucker-Smith
LAB Section: 02  W 1:00 pm - 4:00 pm     David R. Tucker-Smith
LAB Section: 03  R 1:00 pm - 4:00 pm     David R. Tucker-Smith

PHYS 202  (S) Vibrations, Waves and Optics  (QFR)
Waves and oscillations characterize many different physical systems, including vibrating strings and springs, waves at the beach, or those that we hear as sound or see as light. Quantum mechanics describes particles with wave functions, and gravitational waves distort the very fabric of the universe. Despite these diverse settings, waves exhibit several common characteristics, so understanding of a few simple systems can provide insight into a wide array of phenomena. In this course we begin with the study of oscillations of simple systems with only a few degrees of freedom. We then move on to study transverse and longitudinal waves in continuous media in order to gain a general description of wave behavior. We conclude with a focus on electromagnetic waves and in particular on optical examples of wave phenomena such as interference, diffraction, and lasers. Throughout the course we will introduce and develop mathematical tools which will continue to see use in higher-level physics.

Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: problem sets, labs, midterm examinations, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 201; co-requisite: PHYS/MATH 210 or MATH 309 or permission of instructor

Enrollment Limit: 30

Enrollment Preferences: sophomores

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Weekly problem sets and laboratories which develop and use quantitative skills.

LAB Section: 02  W 1:00 pm - 4:00 pm     Frederick W. Strauch

PHYS 210  (S) Mathematical Methods for Scientists  (QFR)

Cross-listings: MATH 210

Primary Cross-listing

This course covers a variety of mathematical methods used in the sciences, focusing particularly on the solution of ordinary and partial differential equations. In addition to calling attention to certain special equations that arise frequently in the study of waves and diffusion, we develop general techniques such as looking for series solutions and, in the case of nonlinear equations, using phase portraits and linearizing around fixed points. We study some simple numerical techniques for solving differential equations. An optional session in Mathematica will be offered for students who are not already familiar with this computational tool.

Class Format: three hours per week

Requirements/Evaluation: several exams and weekly problem sets, all of which have a substantial quantitative component

Prerequisites: MATH 150 or 151 and familiarity with Newtonian mechanics at the level of PHYS 131
Enrollment Limit: 50
Enrollment Preferences: sophomores and juniors
Expected Class Size: 30
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
PHYS 210(D3) MATH 210(D3)
Quantitative/Formal Reasoning Notes: This course will have weekly problem sets using advanced calculus methods

Spring 2025
LEC Section: 01 TR 9:55 am - 11:10 am Frederick W. Strauch

PHYS 234 (S) Introduction to Materials Science (QFR)
Cross-listings: GEOS 234
Primary Cross-listing
Materials Science is the study of how the microscopic structure of materials—whether steel, carbon fiber, glass, wood, plastic, or mayonnaise—determines their macroscopic mechanical, thermal, electric, and other properties. Topics of this course include classifying materials; material structure; thermodynamics and phase transformations; material properties and testing; how solids bend, flow, and ultimately break; and how to choose the right material for design applications. Materials Science is a highly interdisciplinary field and as a result the course prerequisites are broad but also flexible. Interested students who are unsure about their preparation are strongly encouraged to contact the instructor.
Class Format: lecture (3 hours per week) plus three to four small-group laboratory sessions throughout the semester (to be scheduled with instructor)
Requirements/Evaluation: weekly problem sets, class participation, and midterm and final exams, all of which have a substantial quantitative component
Prerequisites: high school physics and chemistry, preferably at the AP level, and MATH 140 or AP Calculus (BC), and one 200-level PHYS, CHEM, or GEOS course; or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: based on students' scientific background and seniority
Expected Class Size: 10
Grading: yes pass/fail option, yes fifth course option
Unit Notes: This course does not count toward the Geosciences major.
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
PHYS 234(D3) GEOS 234(D3)
Quantitative/Formal Reasoning Notes: Weekly problem sets and exams all have a substantial quantitative component.
Attributes: MTSC Courses

Spring 2025
LEC Section: 01 MR 2:35 pm - 3:50 pm Katharine E. Jensen

PHYS 301 (F) Quantum Physics (QFR)
This course serves as a one-semester introduction to the formalism, and phenomenology of quantum mechanics, beginning with a discussion of the Schrodinger wave equation, the concept of matter waves, and wave-packets. With this introduction as background, we will continue our discussion with a variety of one-dimensional problems such as the particle-in-a-box and the harmonic oscillator. We then extend this work to systems in two and three dimensions, including a detailed discussion of the structure of the hydrogen atom. Along the way we will develop connections between mathematical formalism and physical predictions of the theory. Finally, we conclude the course with a discussion of angular momentum and spins, with applications to atomic physics, entanglement, and quantum information.
Class Format: lecture, three hours per week; laboratory, three hours per week

Requirements/Evaluation: weekly problem sets, laboratory reports / write-ups, a midterm exam, and final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309

Enrollment Limit: 8 per lab

Enrollment Preferences: physics majors

Expected Class Size: 24

Grading: yes pass/fail option, no fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Phys 301 relies heavily upon mathematics and quantitative reasoning in all elements, including problem sets, examinations, and laboratories.

Fall 2024

LAB Section: 03    W 1:00 pm - 4:00 pm    Charlie Doret, Frederick W. Strauch
LEC Section: 01    MWF 9:00 am - 9:50 am    Charlie Doret

PHYS 302 (S) Statistical Mechanics & Thermodynamics (QFR)
Macroscopic objects are made up of huge numbers of fundamental particles interacting in simple ways—obeying the Schrödinger equation, Newton’s and Coulomb’s Laws—and these objects can be described by macroscopic properties like temperature, pressure, magnetization, heat capacity, conductivity, etc. In this course we will develop the tools of statistical physics, which will allow us to predict the cooperative phenomena that emerge in large ensembles of interacting particles. We will apply those tools to a wide variety of physical questions, including the behavior of gases, polymers, heat engines, biological and astrophysical systems, magnets, and electrons in solids.

Class Format: lecture/discussion three hours per week and weekly laboratory work

Requirements/Evaluation: weekly problem sets and labs, plus exams, all of which have a substantial quantitative component

Prerequisites: required: PHYS 201, PHYS/MATH 210 or MATH 309; recommended: PHYS 202, PHYS 301

Enrollment Limit: 14 per lab

Enrollment Preferences: physics majors

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: weekly problem sets, exams, and labs, all of which have a substantial quantitative component

LEC Section: 01    MWF 8:30 am - 9:45 am    Daniel P. Aalberts
LAB Section: 02    W 1:10 pm - 3:50 pm    Daniel P. Aalberts

PHYS 315 (F) Computational Biology (QFR)

Cross-listings: CSCI 315

Primary Cross-listing
This course will provide an overview of Computational Biology, the application of computational, mathematical, statistical, and physical problem-solving techniques to interpret the rapidly expanding amount of biological data. Topics covered will include database searching, DNA
sequence alignment, clustering, RNA structure prediction, protein structural alignment, methods of analyzing gene expression, networks, and genome assembly using techniques such as string matching, dynamic programming, hidden Markov models, and statistics.

Requirements/Evaluation: weekly Python programming assignments, code reviews, problem sets, plus a few quizzes and a final project

Prerequisites: programming experience (e.g., CSCI 136) and mathematics (PHYS/MATH 210 or MATH 150) and physical science (PHYS 142/151, or CHEM 101/15X), or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: if over-enrolled, a questionnaire will be circulated

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

Attributes: BIGP Courses

Fall 2024

LEC Section: 01  MR 2:35 pm - 3:50 pm  Daniel P. Aalberts

PHYS 321  (S) Introduction to Particle Physics  (QFR)

The Standard Model of particle physics incorporates special relativity, quantum mechanics, and almost all that we know about elementary particles and their interactions. This course introduces some of the main ideas and phenomena associated with the Standard Model. After a review of relativistic kinematics, we will learn about symmetries in particle physics, relativistic wave equations, elements of quantum field theory, Feynman diagrams, and selected applications of quantum electrodynamics, the weak interactions, and quantum chromodynamics. We will conclude with a discussion of spontaneous symmetry breaking and the Higgs mechanism.

Requirements/Evaluation: weekly problem sets, a midterm exam, and a final exam

Prerequisites: PHYS 301

Enrollment Limit: 20

Enrollment Preferences: By seniority

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: Exams and problem sets all have a significant quantitative component.

Spring 2025

LEC Section: 01  TR 11:20 am - 12:35 pm  David R. Tucker-Smith

PHYS 402  (S) Applications of Quantum Mechanics  (QFR)

This course will explore a number of important topics in the application of quantum mechanics to physical systems, including perturbation theory, the variational principle and the semiclassical interaction of atoms and radiation. The course will finish up with three weeks on quantum optics including an experimental project on non-classical interference phenomena. Applications and examples will be taken mostly from atomic physics with some discussion of solid state systems.

Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, and a final exam, all of which have a substantial quantitative component

Prerequisites: PHYS 301

Enrollment Limit: 10 per sec

Enrollment Preferences: Physics and Astrophysics Majors
Expected Class Size: 16
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course has weekly problem sets, all of which have a substantial quantitative component.

Spring 2025
TUT Section: T1  F 1:10 pm - 2:25 pm  Betül Pamuk

PHYS 411  (F) Classical Mechanics  (QFR)
This course will explore advanced topics in classical mechanics. Central ideas include the calculus of variations, the Lagrangian and Hamiltonian formulations of mechanics, phase space, central-force motion, non-inertial reference frames (including implications for physics on a rotating Earth), rigid-body rotations, and non-linear dynamics & chaos, with additional topics from continuum and fluid mechanics as time permits. Numerical and perturbative techniques will be developed and used extensively. We will also examine the ways in which classical mechanics informs other fields of physics. In addition to weekly tutorial meetings the class will meet weekly as a whole to introduce and discuss new material.
Requirements/Evaluation: weekly problem sets, tutorial participation, presentations, a final project, and a final exam, all of which have a substantial quantitative component
Prerequisites: PHYS 202 and PHYS/MATH 210 or MATH 309
Enrollment Limit: 30
Enrollment Preferences: majors
Expected Class Size: 24
Grading: no pass/fail option, no fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: weekly problem sets requiring substantial quantitative reasoning using analytical and numerical methods.

Fall 2024
TUT Section: T1  F 1:10 pm - 2:25 pm  Katharine E. Jensen, Frederick W. Strauch

PHYS 451  (F) Condensed Matter Physics  (QFR)
Condensed matter physics is an important area of current research and serves as the basis for modern electronic technology. We plan to explore the physics of metals, insulators, semiconductors, superconductors, and photonic crystals, with particular attention to structure, thermal properties, energy bands, and electronic properties.
Requirements/Evaluation: weekly readings and problem sets, and exams
Prerequisites: PHYS 301 (may be taken simultaneously); or permission of instructor
Enrollment Limit: 10
Enrollment Preferences: Physics majors
Expected Class Size: 6
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: serious problem sets
Attributes: MTSC Courses

Fall 2024
SEM Section: 01  MR 1:10 pm - 2:25 pm  Daniel P. Aalberts

POEC 253  (F) Empirical Methods in Political Economy  (WS) (QFR)
This course introduces students to common empirical tools used in policy analysis and implementation. Students will develop skills in statistical literacy to become critical consumers of public policy-relevant research. The emphasis in the course is split between an intuitive understanding of statistical foundations, and applications in data visualization and science communication. Through hands-on work with data and critical assessment of existing empirical social scientific research, students will develop the ability to choose and employ the appropriate tool for a particular research problem, and to understand the limitations of the techniques. Topics to be covered include basic principles of probability; effective data visualization; statistical inference and hypothesis testing; and multiple regression analysis. A particular focus will be placed on understanding causality, the challenges of estimating causal relationships, and the design of evidence-based policy. Throughout the course, the focus will be on public policy applications relevant to the fields of political science, sociology, and public health, as well as to economics.

Requirements/Evaluation: Problem sets, group project, midterm exam, final exam

Prerequisites: MATH 130 or its equivalent; one course in ECON; not open to students who have taken ECON 255

Enrollment Limit: 20

Enrollment Preferences: Political Economy majors, Environmental Policy majors and sophomores

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Unit Notes: does not satisfy the econometrics requirement for the Economics major; POEC 253 cannot be substituted for ECON 255, or count as an elective towards the Economics major

Distributions: (D2) (WS) (QFR)

Writing Skills Notes: Students will write 3 coding-intensive data briefs over the course of the semester. Creation of original exhibits from publicly accessible data, use of citation management systems, and clarity in technical writing will be emphasized.

Quantitative/Formal Reasoning Notes: The course teaches econometrics, i.e. statistics as economists use it, with applications in economics, political science, and other fields.

Attributes: POEC Required Courses

Fall 2024

LEC Section: 01 TR 8:30 am - 9:45 am Shyam Raman

PSYC 201 (F)(S) Experimentation and Statistics (QFR)

An introduction to the basic principles of research in psychology. We focus on how to design and execute experiments, analyze and interpret results, and write research reports. Students conduct a series of research studies in different areas of psychology that illustrate basic designs and methods of analysis. You must register for lab and lecture with the same instructor.

Requirements/Evaluation: research reports, exams, and problem sets

Prerequisites: PSYC 101; not open to first-year students except with permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Psychology majors

Expected Class Size: 16

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course has problem sets focused on experimental design and quantitative data analysis. Students will help design and conduct experiments, analyze the data, and report their findings.

SOC 150 (F) Data for Justice (DPE) (QFR)

Cross-listings: STS 150 / AMST 150 / WGSS 150 / INTR 150

Secondary Cross-listing
This course is a unique and inclusive introduction to data science where quantitative thinking, programming, and social justice intertwine. We will build our data science skills using R, a popular open-source data science tool. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration. But rather than divorcing these techniques from the social issues they can help illuminate, we ground them in a social justice context. Overall, we will apply data science skills to topics drawn from criminal justice, environmental justice, diversity and inclusion in arts and media, education equity, and much more, with the goal of growing our collective capacity to use data science as a tool for social good. During a time when humans are increasingly subjugated to data-driven algorithmic decisions, when there are social media accounts dedicated to highlighting misuses of data, and when artificial intelligence makes faking data a nearly trivial task, using data to ethically and carefully promote justice is more important than ever.

Class Format: This course is taught in a highly interactive format and will frequently use a flipped-classroom approach. Students should expect substantial time devoted to in-class collaboration.

Requirements/Evaluation: Students will complete regularly assigned activities, problem sets, and other assessments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based approach.

Prerequisites: None. This course assumes no prior knowledge of data science or R programming. An interest in social justice and a willingness to engage intensively with data and computing are essential.

Enrollment Limit: 18

Enrollment Preferences: Students without prior college-level courses in statistics and programming.

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
STS 150(D2) AMST 150(D2) SOC 150(D2) WGSS 150(D2) INTR 150(D2)

Difference, Power, and Equity Notes: This course uses data science as a lens for injustice in spheres such as criminal justice, environmental justice, diversity and inclusion in arts and media, education equity. We will consider race, gender, LGTBQ+, disability, and other axes of identity. Additionally, we will adopt a data-critical perspective, thinking about how social forces shape data and our understanding of it.

Quantitative/Formal Reasoning Notes: This course teaches quantitative tools in R, a widely-adopted data science platform. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration.

STAT 101 (F)(S) Elementary Statistics and Data Analysis (QFR)

It is impossible to be an informed citizen in today's world without an understanding of data. Whether it is opinion polls, unemployment rates, salary
differences between men and women, the efficacy of vaccines, etc, we need to be able to interpret and gain information from statistics. This course will introduce the common methods used to analyze and present data with an emphasis on interpretation and informed decision making.

Requirements/Evaluation: weekly homework, quizzes, exams, and a project
Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test)
Enrollment Limit: 50
Enrollment Preferences: juniors and seniors
Expected Class Size: 35
Grading: yes pass/fail option, yes fifth course option
Unit Notes: Students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202.
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: It is a quantitative course.

STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)
This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

Requirements/Evaluation: Weekly homework, quizzes, two midterms and a final exam (midterms include take-home components), and a data analysis project. Students will need to become familiar with the statistical software STATA.
Prerequisites: MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent
Enrollment Limit: 40
Enrollment Preferences: Economics majors, sophomores
Expected Class Size: 40
Grading: yes pass/fail option, no fifth course option
Unit Notes: Students with calculus background should consider STAT 201. Students without any calculus background should consider STAT 101. Students with AP Stat 4 or 5 should consider Stat 202. Please refer to the placement chart on the Math&Stat department website for more information.

STAT 201 (F)(S) Statistics and Data Analysis (QFR)
Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science, is often
based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, “Data, data, data! I can’t make bricks without clay.” In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

**Requirements/Evaluation:** weekly homework and projects, midterm exams, and a final exam.

**Prerequisites:** MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent

**Enrollment Limit:** 40

**Enrollment Preferences:** Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** Students will learn to choose, carry out, interpret, and communicate analyses of data.

**Attributes:** COGS Related Courses PHLH Statistics Courses

**STAT 202 (F)(S) Introduction to Statistical Modeling** (QFR)

Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world – and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

**Requirements/Evaluation:** Homework problems; quizzes; exams; a final project (on a topic that interests you!). Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.

**Prerequisites:** MATH 140 and STAT 101/161/201/AP Statistics 4/5, or permission of instructor.

**Enrollment Limit:** 40

**Enrollment Preferences:** Prospective Statistics majors and more senior students

**Expected Class Size:** 25

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** Students with a 4 on the AP Stats exam should contact the department for proper placement. Students with STAT 201 are strongly encouraged to take STAT 346 or other 300-level statistics electives.

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

**Attributes:** PHLH Statistics Courses

LEC Section: 01 TR 8:30 am - 9:45 am Anna C. Neufeld
**STAT 335** (S) **Introduction to Biostatistics and Epidemiology** (QFR)

Epidemiology is the study of disease and disability in human populations, while biostatistics focuses on the development and application of statistical methods to address questions that arise in medicine, public health, or biology. This course will begin with epidemiological study designs and core concepts in epidemiology, followed by key statistical methods in public health research. Topics will include multiple regression, analysis of categorical data (two sample methods, sets of 2x2 tables, RxC tables, and logistic regression), survival analysis (Cox proportional hazards model), and if time permits, a brief introduction to regression with correlated data.

**Requirements/Evaluation:** Evaluation will be primarily based on weekly assignments (regular homework or mini-projects), two midterm exams, and a final exam.

**Prerequisites:** Stat 201 or Stat 202, or permission of instructor (prior experience should include a working understanding of multiple linear regression, the basics of statistical inference, and R).

**Enrollment Limit:** 20

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** Students will learn how to choose, implement, and interpret statistical analyses relevant to public health studies.

**Attributes:** PHLH Statistics Courses

---

**STAT 341** (F)(S) **Probability** (QFR)

**Cross-listings:** MATH 341

**Secondary Cross-listing**

The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.

**Requirements/Evaluation:** homework, classwork, and exams

**Prerequisites:** MATH 150 and MATH 250 or permission of the instructor

**Enrollment Limit:** 50

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STAT 341(D3) MATH 341(D3)

**Quantitative/Formal Reasoning Notes:** This is a 300-level Math/Stat course.
STAT 342 (S) Introduction to Stochastic Processes (QFR)

Stochastic processes are mathematical models for random phenomena evolving in time or space. Examples include the number of people in a queue at time t or the accumulated claims paid by an insurance company in an interval of time t. This course introduces the basic concepts and techniques of stochastic processes used to construct models for a variety of problems of practical interest. The theory of Markov chains will guide our discussion as we cover topics such as martingales, random walks, Poisson process, birth and death processes, and Brownian motion.

Requirements/Evaluation: weekly homework/labs, classwork, and exams
Prerequisites: STAT 341
Enrollment Limit: 30
Enrollment Preferences: senior Statistics majors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is a statistics class with a focus on mathematical skills and translating real world phenomena into mathematical descriptions.

STAT 344 (S) Statistical Design of Experiments (QFR)

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially e-commerce, are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look at both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

Requirements/Evaluation: Homework problems--both individual and in groups, midterm, final, and projects (on topics that interest you!).
Prerequisites: STAT 161 or 201 or 202, or equivalent, and Math 140 or equivalent, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: Statistics majors, seniors, juniors, sophomores, first years
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

STAT 346 (F)(S) Regression Theory and Applications (QFR)

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear and multiple regression,
using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

**Requirements/Evaluation:** Weekly homework, quizzes, theory and data analysis exams, and final course project.

**Prerequisites:** MATH/STAT 341, MATH 250, and at least one of STAT 201 or 202. Or permission of the instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** Statistics Majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

---

**STAT 355 (F) Multivariate Statistical Analysis (QFR)**

To better understand complex processes, we study how variables are related to one another and how they work in combination. In addition, we want to make inferences about more than one variable at a time. Elementary statistical methods might not apply. In this course, we study the tools and the intuition that are necessary to analyze and describe such datasets with more than multiple variables. Topics covered will include data visualization techniques for data sets with more variables, clustering algorithms, parametric and non-parametric techniques to estimate joint distributions, techniques for combining variables, performing dimension reduction, and making inferences.

**Requirements/Evaluation:** Homework, projects, quizzes, and exams.

**Prerequisites:** MATH 250, and STAT 346 or permission of instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Juniors/seniors

**Expected Class Size:** 10

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** It is an advanced statistics class with prerequisites that are QFR courses

---

**STAT 360 (F) Statistical Inference (QFR)**

How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.

**Requirements/Evaluation:** Homework, Quizzes, Exams

**Prerequisites:** MATH 250, STAT 201 or 202, STAT 341

**Enrollment Limit:** 15

**Enrollment Preferences:** Statistics majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

LEC Section: 01    MWF 10:00 am - 10:50 am     Richard D. De Veaux

STAT 442  (S)  Statistical Learning and Data Mining  (QFR)
In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

Class Format: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Requirements/Evaluation: class participation, weekly homework, exams and an end-of-term project

Prerequisites: MATH/STAT 341 and STAT 346, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an advanced statistics class involving theory and application of statistical methods to data.

Spring 2025

LEC Section: 01    MR 2:35 pm - 3:50 pm     Anna C. Neufeld

STAT 458  (F)  Generalized Linear Models- Theory and Applications  (QFR)
This course will explore generalized linear models (GLMs)--the extension of linear models, discussed in Stat346, to response variables that have specific non-normal distributions, such as counts and proportions. We will consider the general structure and theory of GLMs and see their use in a range of applications. As time permits, we will also examine extensions of these models for clustered data such as mixed effects models and generalized estimating equations.

Requirements/Evaluation: Weekly homework consisting of theoretical exercises and data analyses carried out in R. Short frequent quizzes and one midterm (with an in-class and take-home component). Final project and final exam.

Prerequisites: STAT 346, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Seniors and Statistics majors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Fall 2024

LEC Section: 01    TF 2:35 pm - 3:50 pm     Elizabeth M. Upton

STS 150  (F)  Data for Justice  (DPE) (QFR)
This course is a unique and inclusive introduction to data science where quantitative thinking, programming, and social justice intertwine. We will build our data science skills using R, a popular open-source data science tool. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration. But rather than divorcing these techniques from the social issues they can help illuminate, we ground them in a social justice context. Overall, we will apply data science skills to topics drawn from criminal justice, environmental justice, diversity and inclusion in arts and media, education equity, and much more, with the goal of growing our collective capacity to use data science as a tool for social good. During a time when humans are increasingly subjugated to data-driven algorithmic decisions, when there are social media accounts dedicated to highlighting misuses of data, and when artificial intelligence makes faking data a nearly trivial task, using data to ethically and carefully promote justice is more important than ever.

**Class Format:** This course is taught in a highly interactive format and will frequently use a flipped-classroom approach. Students should expect substantial time devoted to in-class collaboration.

**Requirements/Evaluation:** Students will complete regularly assigned activities, problem sets, and other assessments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based approach.

**Prerequisites:** None. This course assumes no prior knowledge of data science or R programming. An interest in social justice and a willingness to engage intensively with data and computing are essential.

**Enrollment Limit:** 18

**Enrollment Preferences:** Students without prior college-level courses in statistics and programming.

**Expected Class Size:** 18

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 150(D2) AMST 150(D2) SOC 150(D2) WGSS 150(D2) INTR 150(D2)

**Difference, Power, and Equity Notes:** This course uses data science as a lens for injustice in spheres such as criminal justice, environmental justice, diversity and inclusion in arts and media, education equity. We will consider race, gender, LGTBO+, disability, and other axes of identity. Additionally, we will adopt a data-critical perspective, thinking about how social forces shape data and our understanding of it.

**Quantitative/Formal Reasoning Notes:** This course teaches quantitative tools in R, a widely-adopted data science platform. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration.

**Fall 2024**

**STS 363 (S) Data for Justice Research Practicum**  (DPE)  (QFR)

**Cross-listings:** WGSS 363 / INTR 350 / AMST 363

**Secondary Cross-listing**

Civil rights activist, educator, and investigative journalist Ida B. Wells said that "the way to right wrongs is to shine the light of truth upon them." In this inclusive, collaborative, research-based course, students will bring statistical, computational, and/or mathematical approaches to bear on issues of social justice. Guided closely by the instructor, students will work in groups to carry out original research in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. Prior research experience is not required; one goal of this course is to build skills for advanced research.

**Class Format:** This course is an intensive research practicum. Formation of research groups and selection of research topics will be facilitated by the instructor. The primary modality of work is peer collaboration.

**Requirements/Evaluation:** To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based, ungraded assessment framework.

**Prerequisites:** INTR 150 (Data for Justice), or prior equivalent exposure to computing, statistics, and social justice topics as approved by the instructor.
Enrollment Limit: 10

Enrollment Preferences: Students who have a declared major in Division I or II, who meet the prerequisites of the course, and who fill out the instructor’s preregistration survey (contact the instructor for link).

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:
WGSS 363(D2) STS 363(D2) INTR 350(D2) AMST 363(D2)

Difference, Power, and Equity Notes: Students will research issues of social justice in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

Quantitative/Formal Reasoning Notes: Students will use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

- Saadia Yacoob, Assistant Professor of Religion

MAJOR

The major in Religion is designed to perform two related functions: to expose the student to the methods and issues involved in the study of religion as a phenomenon of psychological, sociological, and cultural/historical dimensions; and to confront students with the beliefs, practices, and values of specific religions through a study of particular religious traditions. It is a program that affords each student an opportunity to fashion their own sequence of study within a prescribed basic pattern constructed to ensure both coherence and variety. Beginning with the class of 2016, the major in Religion will consist of at least nine semester courses as follows:

Required Sequence Courses

REL 200 Theories and Methods in the Study of Religion
One 300-level seminar or tutorial
REL 401 Senior seminar

Elective Courses

Six electives at the 100-, 200-, or 300-level (with a maximum of one 100-level class to count towards major).

In addition, each major will select a specialization route in the major in conversation with and with the approval of the department. The specialization will consist of at least four courses. There are two ways to meet this requirement. A major could fulfill the requirement by concentration in one of the College’s coordinate programs or by designating four specialization courses that can be supported by the resources of the Religion department faculty and the College. In other words, these four courses might be from among the six electives and one 300-level seminar or tutorial or might include additional coursework from other programs and departments (whether cross-listed or not).

The major will culminate in a year-long senior project. The first semester will remain a seminar (REL 401) on a topic in the study of religion set by the faculty member in consultation with incoming seniors. The spring semester will consist of participation in a research colloquium (not a course taken for credit). In this colloquium, each senior major will present their individual research projects, begun in the senior seminar, drawing on their specializations and advised by members of the faculty.

For those who wish to go beyond the formally-listed courses into a more intensive study of a particular religious tradition, methodological trend, or religious phenomenon (e.g., ritual, symbol-formation, mysticism, theology, etc.), there is the opportunity to undertake independent study or, with the
approval of the department, to pursue a thesis project.

The value of the major in Religion derives from its fostering of a critical appreciation of the complex role religion plays in every society, even those that consider themselves non-religious. The major makes one sensitive to the role religion plays in shaping the terms of cultural discourse, of social attitudes and behavior, and of moral reflection. But it also discloses the ways in which religion and its social effects represent the experience of individual persons and communities. In doing these things, the major further provides one with interdisciplinary analytical tools and cross-cultural experience and opens up new avenues for dealing with both the history of a society and culture and the relationships between different societies and cultures. What one learns as a Religion major is therefore remarkably applicable to a wide range of other fields of study or professions.

Students declaring Religion as a major will identify an area of specialization and link it to their senior seminar final paper and be expected to present it in a spring colloquium during their senior year.

THE DEGREE WITH HONORS IN RELIGION

The degree with honors in Religion requires the above-mentioned nine courses and the preparation of a thesis of 75+ pages with a grade of B+ or better. A thesis may combine revised work done in other courses with new material prepared while enrolled either in Religion 493-W31 or Religion W31-494. Up to two-thirds of the work in the thesis may be such revised work, but at least one-third must represent new work. The thesis must constitute a coherent whole either by its organizing theme or by a focus on a particular religious tradition. Candidates will also be expected to present the results of their thesis orally in a public presentation. Students who wish to be candidates for honors in Religion will submit proposals and at least one paper that may be included in the thesis to the department in the spring of their junior year. Students must normally have at least a 3.5 GPA in Religion to be considered for the honors program.

The chair will serve as advisor to non-majors.

STUDY ABROAD

The Williams College Religion Department encourages potential majors to study abroad in order to enhance their education and gain international perspectives on religious studies. There are many excellent study abroad opportunities offering students a variety of possible experiences: among them cultural immersion, field work, intensive language learning, independent study, participation in another educational system. Many of our majors study in the Williams College Oxford Program, but our majors also regularly pursue a semester or year-long study in other programs.

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description. Sometimes a course title is sufficient, but for many courses we also need to see a description of some sort because the title is unclear.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

No.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. 3 courses: Religion 200, one 300-level Religion seminar or tutorial, and Religion 401 Senior Seminar.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. Make sure that they have or will be able to take REL 200, because it is offered only once a year.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

None to date.

REL 102 (F) The Meaning of Life
As Henry David Thoreau put it, "The mass of men lead lives of quiet desperation," attempting to fill the void of their existence with sex, money, ephemeral amusements, and the steady accumulation of unnecessary possessions - basically killing time until the day they die. For some people this might seem to be enough, but this course is for those of us who lie awake at night wondering things like: "Why are we here?" "What does it mean to live a good life?" "How can I be happy?" "What is our duty to others?" "What really matters?" and the biggest question of them all: "What is the Meaning of Life?" This course will trace the diverse responses to these important questions offered by philosophers and religious thinkers in different cultures and time periods. We will read their texts critically and discuss how they can be directly relevant to our lives. Students will also be introduced to abstract theorizing in Religious Studies about how different cultures and traditions have historically come to live meaningfully. Authors and texts to be read may include Aristotle, Hannah Arendt, Marcus Aurelius, the Bhagavad Gita, H. H. Dalai Lama, the Dhammapada, Viktor Frankl, Søren Kierkegaard, Martin Luther King Jr, Shantideva, Peter Singer, Leo Tolstoy, Ibn Tufayl, Max Weber, and Slavoj Zizek.

**Requirements/Evaluation:**
- attendance and participation, journal and short writing assignments, midterm and final exams

**Prerequisites:** none

**Enrollment Limit:** 40

**Enrollment Preferences:** potential religion majors

**Expected Class Size:** 40

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

*Not offered current academic year*

**REL 105 (S) Introduction to European Art Before 1700**

**Cross-listings:** ARTH 101

**Secondary Cross-listing**

A team-taught introduction to the art and architecture of Europe from the ancient Mediterranean to Baroque Italy. This course celebrates the glory of works of art as physical objects, to be viewed and contemplated, to be sure, but also often to be worshiped, worn, touched (even licked), held, exhibited, bought and sold, passed through or around, and lived in. To help students begin to appreciate how these works of art might have been understood by those who originally made and used them, the course sets its objects of study within a number of revealing historical contexts, from the social and the political to the philosophical and the art historical. To give students time with original works of art, our discussion-centered conferences use the wealth of art resources in Williamstown: the Clark Art Institute, the buildings and sculpture of the Williams College Campus, and the Williams College Museum of Art.

**Class Format:** This course has 2 components: lectures and conferences. The lectures will be three times weekly, the conferences once per week. Both lectures and conferences will be held in person.

**Requirements/Evaluation:** Three shorter essays (one of which may be in the form of a final exam, either take-home or in-person), several quizzes, and engaged participation in conference sections

**Prerequisites:** none

**Enrollment Limit:** 60

**Enrollment Preferences:** Preference will be based on a short questionnaire, which students will be asked to complete if the course is over-enrolled.

**Expected Class Size:** 60

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

REL 107 (F) Islamophobia: A Global Perspective (DPE)

Cross-listings: GBST 105

Secondary Cross-listing

This course's goal is to show how the racialization of Islam and Muslims has been constitutive to the latter's imagination. It looks at how difference works and has worked, how identities and power relationships have been grounded in lived experience, and how one might both critically and productively approach questions of difference, power, and equity. The course goes back to the founding moments of an imagined white-Christian Europe and how the racialization of Muslim bodies was central to this project and how anti-Muslim racism continues to be relevant in our world today. The course will give a global perspective on Islamophobia and how it is structuring and used by political actors in various territories. The course will show how Muslims were constructed as subjects in history, politics, and society from the very beginning of the making of Europe and the Americas to the end of the Cold War to the post-9/11 era. The course is based on the literature of multidisciplinary studies by leading scholars in the field, drawing from anthropology, gender studies, history, political science, religious studies, postcolonial studies, decolonial studies, and sociology.

This course's goal is to show how the racialization of Islam and Muslims has been constitutive to the latter's imagination. This course is cross-listed and the prefixes carry the following divisional credit:

GBST 105(D2) REL 107(D2)

Difference, Power, and Equity Notes: The course critically examines difference, power, and equity. Thematically, it looks at the racialization of Islam and the intersection of race, religion, class, and gender in the construction of the 'Muslim problem' from a historical as well as a global contemporary perspective. On one side, the course content explores forms of difference and power. On the other side, the course attempts to help students to engage in alternative forms of action to address these inequalities.

REL 109 Apocalypse (WS)

An end of days. A utopia to come. A great cosmic reversal of fortune. A revelation of truth that leads to radical transformation. Each of these themes and many more fall under the genre of imagination that we associate with the apocalypse. In order to understand the persistence and prevalence of apocalyptic imaginations, we will move back and forth through time. On the one hand, we will read the Book of Revelation in relationship to a selection of ancient Zoroastrian, Jewish, Greek, Christian, and Muslim texts identified with apocalyptic traditions. On the other hand, we will read these texts in relationship to and alongside select literature and movements of apocalypse in the U.S.A. We will pay particular attention to how apocalyptic imaginations reflect upon and interact with social structures of class, colonization, ethnicity, gender, race, and sexuality.
REL 110  (S)  Religion in Everyday Life  (WS)

When studying religions, people generally turn to studying scriptures, the life and teachings of the religion's founder, and the fundamental doctrines of the religion. What this approach does not allow us to understand, however, is the way that such religious traditions actually manifest themselves in the world. This course introduces students to an alternative approach to studying religion, by exploring the way these religions are lived and experienced by individuals and communities in a variety of contexts. We will see how religion intersects with people's lived experiences of gender, race, class, sexuality, and broader socio-cultural and political contexts. We will explore this approach to religion through an engagement with ethnography (the qualitative research method in the social-sciences generally described as "participant-observation"). Students will not only learn about the theory and practice of this methodology, but will also conduct their own ethnographic research project over the course of the semester. This will involve: designing a feasible project and research question, selecting local research sites and subjects, taking field-notes and conducting interviews, and finally analyzing data and writing an ethnographic essay.

Class Format: Semester-long community-based field research. Regular in-class peer-review exercises.

Requirements/Evaluation: regular reading responses, semester-long research project with frequent small assignments building up to the final product (class presentation and approximately 10-page paper)

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: first-year students and sophomores; students interested in Religious Studies

Expected Class Size: 10-12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (WS)

Writing Skills Notes: Students will learn a specific mode of qualitative/ethnographic writing through a semester-long field-based project. This involves many scaffolded assignments of field-based research and writing, for which they receive very regular feedback from the instructor, as well as extensive peer-review exercises. There will be a number of readings on writing style and technique, as well as class discussion and workshopping activities. The final essay will itself be developed in multiple steps.

REL 111  (F)  Oracle, Prophecy, Possession: Communicating with Divine Powers

Cross-listings: CLAS 111

Primary Cross-listing

This course explores a set of practices and contexts in which humans have sought to interact with divine powers. We shall ask how humans interact with divine powers through the techniques of spirit possession, prophecy, and consulting with oracles. Importantly, we shall also ask how these interactions reveal and produce what it is to be human, with attention to differences among humans and the relation between humans and nonhuman forces (divine powers but also natural forces and other animals). The bulk of the course will focus on ancient examples from cultural contexts near the Mediterranean Sea, but we shall also consider other geographical regions and some modern practices and contexts. Ideal for students interested in
ancient religions but also those interested in questions of power, agency, and how the ways that we imagine what it means to be human involve questions about nonhuman forces (whether imagined in religious, scientific, philosophical, or other terms).

**Class Format:** The class will include 1 or more field trips

**Requirements/Evaluation:** weekly GLOW posts; 2 3-page papers; 1 collaborative project; 1 final project

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** first-year students, then second-year students, then majors in religion or classics

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

**REL 112 (F) Sex, Gender, Religion**

**Cross-listings:** WGSS 112

**Primary Cross-listing**

The relationship between sex, gender, and religion is one that is hotly debated in our current political context. Many contemporary issues such as abortion, sexual identity, transgender rights are all informed by religious traditions. While religion is most often critiqued for its misogyny and homophobia, it also opens up unexpected possibilities for gender and sexual diversity. This course will consider both these paradoxes and contradictions in religious traditions and their engagement with gender and sexuality. The course will consider how religious traditions have shaped our current discourses on sexual and gender diversity, how religious tradition understand and interact with modern constructions of sexual and gender identity, and how religious queer communities imagine queer possibilities in conversation with their religious traditions. In exploring these topics, the course will cover global religious traditions both historically and in the contemporary.

**Requirements/Evaluation:** weekly responses, midterm essay, final project.

**REL 115 (F) Latina Feminist Spiritualities (DPE) (WS)**

**Cross-listings:** WGSS 115 / LATS 115

**Secondary Cross-listing**

Self-proclaimed feminist activists, who hail from a variety of ethnic Latina/o/x/e (Latine) backgrounds, have often appealed to "ancestral" and "spiritual traditions" as integral to their activism and commitments. Some Latine feminists turned to "spiritual" traditions including brujería/witchcraft; curanderismo and Indigenous healing traditions; Santería/Lukumí and other AfroDiasporic traditions; astrology; home altars; various "mystical" traditions such as Kabbalah and Sufism, as well as Christian mystics like Teresa of Avila or Sor Juana Inés de la Cruz. Others have turned to the appropriation of "Eastern" traditions such as yoga, Tibetan Buddhism, and Zen Buddhism. This course engages students in an intensive introduction to some of the varieties of Latine feminist thought and contexts, including how activists, writers, and artists think about women, gender, sexuality, race,
class, colonialism, the earth, healing, and a better world. How do these feminists of different Latine backgrounds and contexts imagine a better world? How and why do they appeal to spiritual traditions as a source of wisdom, healing, and lived practice for a better world? In this course, we seek to understand both particular Latine feminist spiritual practices on their own terms, as well as why such writers and activists appeal to "the spiritual" in Latine contexts. We will also consider how they frame notions of "the spiritual" in relationship to notions of "the religious" and "the secular."

Requirements/Evaluation: Grading is based on 5-6 page papers written on alternating weeks and brief 1-2 page response papers shared on alternating weeks as well as participation and two paper revisions.

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: Latina/o Studies concentrators, religion majors, first-year students interested in Latina/o Studies and/or religion

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

REL 118 (F) Emerson's American Religion and Ethics

Whether it is cause for veneration or blame, the writings of Ralph Waldo Emerson [1803-1882] have significantly shaped American values, ideals, and attitudes. Emerson has inspired rebels against tradition, revelers in nature, and explorers of the soul. But his writing has also been derided as ethereal, individualistic, and high-minded. This course is an immersion in the essays and poetry of Ralph Waldo Emerson. While we will nod occasionally toward Emerson's historical context, our task will not be to historicize him. We will respond directly to Emerson as humanistic scholars and as human beings who are addressed by his writing. We will investigate critically how he makes arguments, how he uses language, the concepts he develops, his sense of what has gravity and what is frivolous, the anxieties and desires that lie beneath the surface of his texts, what he admires, what he disdains. But we will also respond to his ideas as living invitations to clarify our own thinking. We will critique, but also champion or build with his ideas of genius, the over-soul, the self, fate, reason, sincerity, character, beauty, America, religion, experience, creativity, and more. Students will be asked to develop their own thinking about these ideas and show how their thinking can work with or against Emerson's. This course is an opportunity to cultivate a relationship of intellectual intimacy with a profound and expansive human consciousness, reflect critically on yourself and on Emerson in this relationship, and exercise key capacities necessary for the humanistic study of religion and ethics: analytical reasoning, critical introspection, interpretative judgment, and creative expression.

Requirements/Evaluation: Class participation, regular in-class writing assignments, midterm exam, final exam

Prerequisites: None

Enrollment Limit: 18

REL 121 (S) Getting Spiritual With Rumi: From Sufism to Self-Help
Although he lived about 800 years ago, Rumi is often described as the "best-selling poet in the United States." His poetry and sayings are shared endlessly on the internet and social media, celebrating above all his inspiring words on love and beauty. Rumi's spiritual wisdom is seen as transcending the confines of organized religion, with its divisive dogmas and restrictive rules. What is much less well-known is that Rumi was a devout Muslim mystic, a practitioner of the Islamic spiritual tradition of Sufism. This course will take the poetry and teachings of Rumi as a lens to reflect on spirituality, both in a practical and introspective way, as well as a matter of historical and cultural analysis. We will read two types of translations of Rumi: those that adapt Rumi’s work for a modern Western audience, and those that are more direct translations of Rumi’s work in its original Islamic idiom. We will also do some broader readings to contextualize the medieval Sufi background that Rumi functioned within, as well as the contemporary scene of popular spirituality and self-help in the US. Through these comparative readings, we will consider the following: What does spirituality and self-cultivation mean to you personally? How does the experience and significance of spirituality change, from the context of traditional Sufism, to 21st century self-help and popular spirituality? What does this tell us about broader trends and conditions in our society? What do these intersecting traditions have to offer us in our world today?

Class Format: This course is part of a joint program between Williams’ Center for Learning in Action and the Berkshire County Jail in Pittsfield, MA. The class will be composed equally of nine Williams students and nine inmates and will be held at the jail. An important goal of the course is to encourage students from different backgrounds to think together about issues of common human concern. Transportation will be provided by the college. *Please note the atypical class hours, Th. 4:45-8:30 pm

Requirements/Evaluation: Personal journaling; Short response papers; Creative final project

Prerequisites: None

Enrollment Limit: 9

Enrollment Preferences: Demonstrated interest in problems of mass incarceration, criminal justice, etc. As well as interest in spirituality.

Expected Class Size: 9

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

REL 126 (F) Religion, Politics, and Society: A Global Perspective (DPE)

Cross-listings: GBST 101

Secondary Cross-listing

In spite of predictions that religion would wither away in the face of modernization, even casual observation indicates that it remains a powerful force in contemporary political life. Our goal is to obtain an enhanced understanding and appreciation of the salience of religion in public life. The course will be divided into three parts. The first part focuses on different theoretical approaches to making sense of the relation between religion, politics, and society, discussing especially the concept of the 'secular' in Western thought and decolonial critique thereof. The second part will take a global perspective on the relation between religion and politics. We will discuss cases of Buddhism, Christianity (Catholicism and Protestantism), Confucianism, Hinduism, Islam (Sunni and Shi’a), and Judaism. The third part focuses on religion in the USA. Here, we will discuss the role of religion in American political culture, the relation of religion to the state, the relevance of religious interests and their political mobilization, religious minorities in the United States, and many other aspects of religion in the US society. Although the study of religion and politics raises a host of deep philosophical questions, the principal aim of the course is to understand how religion affects politics (and vice versa), rather than to explore the normative dimensions of questions raised by the interaction of these two forces.

Requirements/Evaluation: Class participation and three papers, in these proportions: 10% attendance; 20% participation; 20% first paper (7 pages); 30% second paper (8-10 pages); and 20% third paper (7 pages). No final exam.

Prerequisites: none

Enrollment Limit: 35

REL 149  (S)  The Sacred in South Asia

Cross-listings: ASIA 242 / ANTH 249

Secondary Cross-listing

Is religious identity necessarily singular and unambiguous? The jinn - Islamic spirits born of fire - are sought out for their healing and other powers not only by Muslims in India, but by Hindus, Christians and Sikhs, as well. In parts of Bengal statues of the Hindu goddess Durga are traditionally sculpted by Muslim artisans. Buddhist pilgrimage sites in Sri Lanka contain tombs of Muslim Sufi saints and shrines of Hindu deities. South Asia - where a fifth of humanity lives - provides some of the most striking examples of pluralism and religiously composite culture in our contemporary world. Yet at the same time, strident religious majoritarianism has been a defining feature of the politics of India, Pakistan and Sri Lanka for decades, and haunts Nepal and Bangladesh as well. Are these two modes of religious being - pluralistic and composite on the one hand, singular and majoritarian on the other - reflective of two different conceptions of selfhood? What if we turn from questions of community and identity to questions of unseen power and the sacred? This course is an exploration of lived religion in South Asia. It is simultaneously a study of popular Hinduism, Buddhism and Islam and an introduction to the anthropology of religion. Centered on in-depth studies of popular sites of ‘syncretic’ ritual practice (shared across religious difference) as well as studies of mass mobilizations that seek to align the religious community with the nation, we approach from multiple angles what the sacred might mean in modernity.

Requirements/Evaluation: weekly (1 page) posts on readings, two short (5 page) papers, and one (12-14 page) final research paper.

Prerequisites: Interest in the topic!

Enrollment Limit: 20

Enrollment Preferences: Students in all fields of study are most welcome; if overenrolled, priority will be given to majors in Anthropology, Sociology, Religion and Asian Studies.

REL 166  (F)  Being Muslim, Being American: American Muslim Literature in the 21st century  (DPE)

Cross-listings: AMST 166 / COMP 166 / ENGL 268

Primary Cross-listing

Islam and Muslims in the United States are the subject of extensive public scrutiny and media coverage in broader public discourses. It is less common, however, to hear Muslims’ own voices speak about their lives, experiences, beliefs, and commitments. This course will take a literary approach to exploring American Muslims’ own narratives about themselves, which will serve as an introduction to religion in contemporary U.S. culture. We will address questions such as: How do American Muslims attempt to fashion their identity in the wake of 9/11? What are the pressures and demands of American national belonging and cultural citizenship that Muslims must navigate? How are race, gender, ethnic heritage, and immigration definitive of Muslim experiences and self-understandings? How are Muslims approaching the tensions between communal belonging and individuality? What are the competing claims and contestations about authentic expressions of Islam? We will be engaging such themes through an analysis of popular memoirs, autobiographies, novels, short stories, poetry, films, and comedy.

Requirements/Evaluation: regular reading responses, short midterm essays, and final paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: First-year students and sophomores
Expected Class Size: 15
Grading: no pass/fail option, yes fifth course option

REL 201 (F) The Hebrew Bible
Cross-listings: JWST 201 / COMP 201
Primary Cross-listing
The Hebrew Bible is perhaps the single most influential work in the history of Western philosophy, literature, and art. But the overwhelming presence of the text in nearly every aspect of modern culture often obscures the sheer brilliance of its narrative technique as well as the complex interplay between law, history, prophecy, and poetry. This course offers a comprehensive introduction to the literary, historical, and theological aspects of the Hebrew Bible with an eye towards developing a sophisticated understanding of the text in its ancient context. Through the close reading of substantial portions of the Hebrew Scripture in translation and the application of various modern critical approaches to culture and literature, students will explore fundamental questions about the social, ritual, and philosophical history of ancient Israel, as well as the fundamental power of storytelling that has resonated across two millennia.

Requirements/Evaluation: Class participation, short written assignments, midterm and final exams.
Prerequisites: none
Enrollment Limit: 40
Enrollment Preferences: If the course is overenrolled, preference will be given to Jewish Studies concentrators and Religion and Comparative Literature majors.
Expected Class Size: 40
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2)

REL 203 (F) Judaism: Before the Law

Cross-listings: JWST 101

Primary Cross-listing

This course introduces the academic study of Judaism through a humanistic exploration of "the Law" as a concept in Jewish thought and practice. Coverage will include the Law of Moses in the Hebrew Bible, the rabbinic distinction between "Oral Law" and "Written Law," medieval philosophical justifications for the Law, modern interpretations of the Law as Moral Law, Hasidic challenges to the centrality of the Law, and twentieth-century Jewish fiction that is haunted by a felt absence of the Law. Topics may also include the nature of rabbinic authority, methods of Jewish legal interpretation and innovation, and Jewish law as it pertains specifically to women, gentiles, idolaters, food consumption, and the Land of Israel. Course materials will include classical sources such as the Talmud and Midrash, modern philosophical texts, Franz Kafka's *The Trial* with his parable "Before The Law," ethnographic accounts of contemporary Jewish observance, and much else. *All readings will be in translation.*

Requirements/Evaluation: class participation, three short papers, and a final longer paper

Prerequisites: none

REL 204 (S) What is Islamic Art?  (DPE) (WS)

Cross-listings: ARTH 206

Secondary Cross-listing

Through a deep engagement with primary sources--visual, performative and textual--this tutorial introduces students to global cultures that have participated in the production of Islamic art and culture through the centuries. Through a diverse set of readings, we will discuss how Islamic art is viewed today. How did, for instance, Colonialism and Orientalism from the 18th to the 20th centuries create an entrenched narrative for the study of the field, that continues to hold sway to this day? How have Muslim cultures defined their own artistic production? In particular, how can specific artworks, such as figural painting or palace architecture, be understood as "Islamic"? What are some key scholarly debates around the term "Islamic Art"? The tutorial is specifically designed keeping in mind the period of soul-searching the field is currently going through, even to the point of questioning the very term "Islamic art" and its epistemological parameters. By familiarizing students to an important discipline in art history, the aim of the tutorial is to provide alternate methodologies as well as epistemologies that run parallel to more mainstream or familiar avenues of study.

Requirements/Evaluation: focused bi-monthly writing assignments, 5-7 pages in length, and bi-monthly peer response papers, 2 pages in length.

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: Art History majors and seniors, Religion majors

Expected Class Size: 8

Grading: no pass/fail option, no fifth course option

Distributions: (D1)  (DPE) (WS)
This course is cross-listed and the prefixes carry the following divisional credit:

ARTH 206(D1) REL 204(D2)

Writing Skills Notes: This tutorial helps students develop writing skills in terms of grammar, structure, and organization. It is designed to teach students how to make clear, well-articulated arguments. Students will receive extensive feedback every other week on their writing assignments from the instructor and their peers. There will also be a comprehensive mid-semester review from the instructor.

Difference, Power, and Equity Notes: In addition to introducing students to an important field of art history, the tutorial analyzes how Islamic art was codified and examined during the colonial and post-colonial periods, and how that understanding has come to define the field over the last century. The course will encourage students to challenge longstanding biases and assumptions when studying these artworks.

REL 206  (S)  The Book of Job and Joban Literature

Cross-listings: COMP 206 / JWST 206

Primary Cross-listing

The Book of Job has often been described as the most philosophical book of the Hebrew Bible. The story of one man's struggle to understand the cause of his suffering and his relationship to God represents the finest flowering of the Near Eastern wisdom literature tradition. Through its exploration of fundamental issues concerning human suffering, fate and divinity, and the nature of philosophical self-examination, Job has served as a touchstone for the entire history of existential literature. At the same time, the sheer poetic force of the story has inspired some of the greatest artistic and literary meditations in the Western tradition. This course will engage in a close reading of the Book of Job in its full cultural, religious, and historical context with special attention to its literary, philosophical, and psychological dimensions. We will then proceed to investigate key modern works in several genres that involve Joban motifs, themes, and text both explicitly and implicitly. These texts will include Franz Kafka's *The Trial*, Archibald MacLeish's *J.B.*, Robert Frost's "Masque of Reason," Carl Jung's *Answer to Job*, and William Blake's *Illustrations to the Book of Job*. All readings are in translation.

Requirements/Evaluation: Evaluation will be based on class participation, short written assignments, and midterm and final exams.

Prerequisites: none

Enrollment Limit: 18

Enrollment Preferences: If the course is overenrolled, preference will be given to students who have already taken a course in biblical literature.

REL 210  (F)  Distant Encounters: East Meets West in the Art of the European Middle Ages  (WS)

Cross-listings: ARTH 212 / ARAB 212

Secondary Cross-listing

In this tutorial, students will investigate the rich artistic consequences -- in architecture, manuscript illumination, mosaic, sculpture, panel painting, fresco, metalwork, and other minor arts -- of European contact with the Eastern Mediterranean between approximately 300 and 1450 CE. From the beginnings of Christianity, pilgrims from Europe made the long journey to sacred sites in what they called the Holy Land (extending across parts of present-day Egypt, Israel, Syria, and Turkey), the place of Christ's life, death, and believed resurrection. Large numbers of pilgrims even made the long journey to the Holy Land, and especially to Jerusalem, to visit a range of sacred sites related to Christ and his saints. When these sites became less accessible with the spread of Islam in the seventh century -- and even before this time -- Europeans sought to recreate many of them at home. Later, from 1095 onward, Christian Europeans attempted to reclaim and hold the Holy Land from non-Christians by force, through an ill-fated series of five major and several lesser "crusades." Over the centuries, before, during, and after the Crusades, exposure to the peoples, ideas, and cultures of
the Eastern Mediterranean also came through trade and through the travel and settlement of non-Europeans in Europe itself, particularly in Spain, Sicily, and Venice. Through all of these centuries, moreover, the Christian, Greek-speaking empire of Byzantium, focused on its great capital of Constantinople (present-day Istanbul), interacted in myriad ways, both friendly and hostile, with the Latin-speaking polities of Western Europe, focused at least symbolically on their ancient capital of Rome. Together, by way of open discussion, we will explore artistic production within each of these different cross-cultural contexts of East-West encounter. In the process, we will reflect on how art could function as a conduit for the exchange of ideas in the Middle Ages, and how it could be used both to negotiate and to intensify cultural difference.

Requirements/Evaluation: participation in discussion; five 4-5-page papers; five 1-2-page papers; and one 6-8-page final paper

REL 211 (F) Envisioning the Sacred: Representation and Religion in Christian and Muslim Cultures (WS)

Cross-listings: ASIA 212 / ARTH 215

Secondary Cross-listing

How did medieval Christians and pre-modern Muslims imagine the sacred and how did they give what they imagined pictorial form? How were these pictures used, both in public and in private life, and why? How did the art of these unique religious traditions forge connections between the visible and invisible worlds? Paying particular attention to the function and experience of works of art within Christian and Islamic cultures, this seminar examines the evolution of devotional visual expression, while also exploring the problems sacred images generated in these distinct yet often overlapping traditions. Through readings and class discussion, the course will investigate, among other topics: the varied attitudes toward the representability of God in Judaism, Islam, and Christianity; the impact of earlier image traditions on the religious art of medieval Christians and pre-modern Muslims; the cult of the devotional image, concerns over idolatry, and the destruction of images; ideas about spiritual versus physical vision and their influence on the making and viewing of pictures; the relationship of sacred images to relics and to various aspects of organized ritual; and the possible roles played by pictures of the sacred in silencing or giving voice to dissent.

Requirements/Evaluation: Participation in class discussion; oral presentation; five 3-4-page papers, and a final 6-page paper

Prerequisites: None

Enrollment Limit: 12

Enrollment Preferences: Sophomores then juniors, but open to all

REL 215  (F)  Religion in Latinx Literature, Art & Film

Cross-listings:  LATS 219

Secondary Cross-listing

LATS 219--Religion in Latinx Literature, Art & Film  This course will examine how a selective range of US Latinx writers, artists, and filmmakers--particularly in fiction, memoir, visual arts and films by and about Latinidad--depict, describe, and discuss religious themes, broadly considered. Latinx-authored novels and memoirs, artwork by Latina/o/x visual artists, and films depicting Latinx life through the lens of Latinx film-makers will be read, viewed, and studied to facilitate discussion about what it means to be Latina/o/x and religious. How do fictional, autobiographical and artistic depictions of Latinx people, communities, and their religiosities/spiritualities promote or deter understanding of Latinidad in the U.S.A.?

Requirements/Evaluation:  In this course, students will read and write short essays about novels and/or memoirs (4-5 pages), critically analyze film and artwork in short papers (3-4 pages), and write a research paper (8-10 pages) that analyzes the nexus of Latinx religion and art, whether fiction, film, memoir, or the visual arts. Attendance, participation, Glow discussion forums, and written assignments will all constitute assessment tools for this course.

Prerequisites:  No prerequisites.

Enrollment Limit:  20

Enrollment Preferences:  Students with at least one prior LATS or Religion course will be given preference if an enrollment overload. Also sophomores, juniors, and seniors will be given preference over first year students.

Expected Class Size:  15-20

Grading:  yes pass/fail option,  yes fifth course option

Distributions:  (D2)

REL 219  (F)  Realizing Utopias

Cross-listings:  STS 219

Primary Cross-listing

Our world can be better.  We are faced with unfolding global catastrophes, such as the pandemic, anthropogenic climate change, economic crises, racialized injustice, and political polarization, and many people seem to have lost their capacity to imagine better futures. Perhaps that is why we as a society have no problem picturing the end of the world--fictional dystopias and apocalypses are abundant while (e)utopias are scarce. This a problem because, as numerous political theorists have observed, it is hard to organize meaningful change around cynicism and nihilism. But our dystopian present makes it even more important to imagine and even realize utopias. This course will help us do so. Our core collective goal will be to explore pragmatic realizations of radical hope. Complementing urgent efforts to resist or mitigate intense injustice in the present, we will aspire to articulate bold visions for emancipatory communities of the future. Rather than primarily focusing on the limitations of existing institutions, this seminar will treat these as problems to be solved rather than as reasons to accept the status quo, and we will embrace affirmative projects of designing the frameworks for better worlds. But we also don't want to blind ourselves to the challenges of being visionary. In brief, we will engage in serious explorations of the underlying principles and rationales for various emancipatory political communities while also pragmatically assessing their potential difficulties. We will spend the first part of the course reading political theory (on issues such as resource allocation, collective decision making, and social justice) alongside various artistic and political manifestos. We will spend one week reading utopian novels (including as possibilities socialist, anarchist, techno-futurist, ecotopias, Afrofuturist, queer utopias, and many more). But the majority of the course will be project-based. Students will form small teams to engage in radical thought experiments and then construct and refine their ideas of better possible societies/political communities. These teams will produce 1) policy papers to address how their utopian societies would deal with real world issues, and 2) artifacts (such as art, manifestos, pamphlets, short stories, videos, or the like) that might appear in the futures they envision, exploring both their ideals and their limits. The semester will culminate in a public exhibition of these works. Thinkers to be considered may include: Marx & Engels, José Esteban Muñoz, Boaventura de Sousa

REL 222 (F) The Jewish Art of Interpretation
Cross-listings: JWST 222
Primary Cross-listing

Turn it and turn it, for everything is in it. This famous rabbinic dictum offers an enigmatic yet comprehensive account of the principles that have defined the Jewish practice of interpretation for over two millennia. The imperative to keep a text, word, image, or concept in constant motion, in order to generate as many meanings and cross-meanings as possible, challenges us to transform the act of interpretation itself into a virtuosic craft or art that can engage the human imagination as diversely and powerfully as the creation of the works being interpreted. At the same time, emphasis on the dynamism between text and interpreter should dispel the notion that only expansive works have expansive meanings. If interpretation itself is an art, then even the shortest text can contain "everything" within it when it participates in that art. This course will engage students in a radical experiment in the art of interpretation. Through a deep encounter with a selection of miniature texts, ranging from ancient rabbinic proverbs and medieval fables to the modern parables and fragments of Franz Kafka, as well as folklore and jokelore from every period in Jewish history up to the present, we will develop an interpretive practice that combines analytic, critical, and creative principles in both written and oral contexts. The goal throughout is to explore interactively how the making of meaning is an integral part of the human experience.

Requirements/Evaluation: class participation, regular short written and oral assignments, and a final project
Prerequisites: none
Enrollment Limit: 18
Enrollment Preferences: If the class is overenrolled, preference will be given to Jewish Studies concentrators and Religion majors.
Expected Class Size: 18
Grading: no pass/fail option, no fifth course option

REL 224 (S) U.S. Latinx Religions
Cross-listings: AMST 224 / LATS 224
Secondary Cross-listing

In this course, we will engage aspects of Latina/o/x/e religious beliefs, experiences, practices, and expressions in the United States of America. Given the diversity of Latinx communities and religious lives in the U.S.A., we consider select contexts that help us understand the challenges of studying and defining the "religious" and its hybridity in Latinx contexts. We will survey certain selected religious traditions and practices in Latinidad -- such as popular devotions to La Virgen de Guadalupe, healing traditions and curanderismo, home altar traditions, Latinx Pentecostalism, crypto-Judaism, Latinx Muslims, and African-rooted spiritualities such as Santería. In addition, we will study Latinx approaches to traditional US religious expressions of Roman Catholicism and Protestantism. By focusing on particular moments of religious expression as elucidated in specific historiographies,
ethnographies, art, literature, film, we will seek to garner a greater understanding of how Latinx communities express and practice their religious traditions and spiritualities.

**Class Format:** discussion

**Requirements/Evaluation:** class participation, discussion forum posts, a 3-4 short essay on the nature of Latinx spirituality; a 5-page essay on a religious tradition previously unfamiliar to the student, and an 8-10-page final research paper doing comparative religious study.

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** LATS concentrators and AMST and REL majors

**Expected Class Size:** 15-20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

**REL 232 (S) Islam in Africa** (DPE)

**Cross-listings:** GBST 232 / AFR 232 / ARAB 232 / HIST 202

**Primary Cross-listing**

Islam in Africa is often relegated to the peripheries in the study of Islam, a religion most associated with Arabs and the Middle East. On the flip side, Islam is also portrayed as foreign to African belief systems and institutions. The relationship between Islam and Africa, however, begins with the very advent of Islam when early Arab Muslim communities took refuge in the Abyssinian empire in East Africa. This course explores the history of Islam and Muslim societies on the African continent by focusing on the localized practices of Islam while also connecting it to Islam as a global phenomenon. The course will begin with a historical focus on the spread of Islam in Africa from East Africa and North Africa in the seventh century all the way to the spread of Islam through Sufi brotherhoods in the eighteenth and nineteenth centuries. The course will also take an anthropological approach, exploring the diverse practices of Islam in African Muslim communities and the social and cultural impact of Islam on African societies. Among the topics the course will cover include African Muslim intellectual traditions, local healing practices, religious festivals, early modern African Muslim abolitionist movements, and the historical interactions between African and Asian Muslim communities in the Indian ocean world.

**Requirements/Evaluation:** Two essays during the semester and final project.

**Prerequisites:** None

**Enrollment Limit:** 25

**Enrollment Preferences:** REL, HIST, ARAB, AFR, GBST majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

**REL 237 (F) Islam in the United States: Race, Religion, Politics** (DPE)
Malcolm X is one of the most iconic yet controversial figures in the black freedom struggle in the United States. His story and legacy powerfully illustrate the complex intersections of Muslim identity, political resistance, and national belonging. From the early period of "Black Muslim" movements represented by Malcolm X, to the current "War on Terror" era, American Muslims have faced a complex intersection of exclusions and marginalization, in relation to national belonging, race, and religion. Taking Malcolm X as our point of departure, this course examines how American Muslims have navigated these multiple layers of marginalization. We will therefore consider how the broader socio-political contexts that Muslims are a part of shape their visions of Islam, and how they contest these competing visions among themselves. In so doing, we will examine the complex relation between religion, race, and politics in the United States. Throughout the course, we will be engaging with historical and anthropological material, autobiographies, documentaries, films, historical primary-source documents, music, and social media materials. The course fosters critical thinking about diversity by challenging assumptions of who Muslims are, what being American means, and what Islam is. It also focuses on the complex interaction of different dimensions of diversity, from religion to ideology, race, nationality, ethnicity, culture, gender, and language.

Requirements/Evaluation: regular reading responses, 2 midterm essays, final exam

Prerequisites: none

Enrollment Limit: 20

REL 241 (F) History of Sexuality

Cross-listings: GBST 241 / HIST 292 / WGSS 239

Primary Cross-listing

Is sexuality an immutable aspect of who we are or is it socially constructed? How have people understood sex and sexuality throughout history? Why does religion have any say in the sexual lives of individuals and society? What are sexual transgressions and why are they punished? Is sex a commodity that can be exchanged for money? Is sex political? This course will explore these questions through a historical approach, focusing in particular on the shifting understanding of sex and sexuality across historical time and different geographical regions. In investigating the category of sexuality, this course will push us to consider three key questions: 1) Is sexuality a useful category for historical analysis, 2) how have our assumptions regarding sexuality and sexual ethics taken shape and changed over time and 3) how do social, cultural, political, and economic conditions affect changing meanings of sexuality. Historical studies will be read in conjunction with different theoretical frameworks about sexuality. Reading historical accounts of sexuality alongside theoretical pieces will allow us to consider how historians construct an argument and the influence of theoretical frameworks in shaping scholarship. Some of the theorists we will read in the course include: Michel Foucault, David Halperin, Afsaneh Najmabadi, Valerie Traub, and Carla Freccero.

Requirements/Evaluation: reading responses, two essays, and final research paper

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Religion, History, and Women's, Gender and Sexuality Studies majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

REL 242 (S) Women, Gender, and Sexuality in Islam  (DPE)

Cross-listings: WGSS 242 / ARAB 242

Primary Cross-listing

The figure of the Muslim woman is an object of intense scrutiny in Western society. Claims that Muslim women are oppressed and the incompatibility of Islam and feminism abound. This course will consider women and gender roles in the Islamic tradition and how Muslim women have interpreted and negotiated these discourses. We will explore questions of masculinity, femininity, and sexuality across various historical periods as well as through contemporary Muslim feminist scholarship and literature (including film and novels). We will begin with insights into the politics of representing Muslim women, exploring how Muslim women are depicted in popular culture and media and ask the crucial question: do Muslim women need saving? We will then explore: how Muslim women have claimed religious authority through scriptural interpretation; how they have negotiated their position in Islamic law both historically and in contemporary Muslim societies; and the lives of pious women in Sufism--the mystical tradition of Islam. We will conclude with Muslim feminist scholarship and recent works on Islamic masculinities. Throughout the course, emphasis will be placed on the diversity of interpretations in Islam around women, gender, and sexuality and on Muslim women's own articulations about their religious identity and experiences. Some of the topics covered in this course include: marriage and divorce, slavery, modesty and veiling, and homosexuality.

Requirements/Evaluation: weekly discussion post, midterm essay, and final paper (6-8 pages)

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Religion, Women's, Gender and Sexuality Studies and Arabic majors
Difference, Power, and Equity Notes: This course explores the relationship between gender, authority, and civilizational discourse. To that end, the course will explore: 1) how assumptions about gender shaped the legal and Quranic exegetical tradition and Muslim feminist critiques. 2) The construction of the oppressed Muslim woman in justifying military invasion and nationalistic rhetoric. This course will introduce students to critical tools in decolonial feminism and the relationship between gender and power.

REL 243  (F)  Islamic Law: Past and Present
Cross-listings:  HIST 302 / ARAB 243 / ASIA 243 / WGSS 243
Primary Cross-listing
From fear of the Shari'a to its implementation in so called "Islamic countries," Islamic law is perhaps best associated with draconian punishments and the oppression of women. Islamic law is ever present in our public discourse today and yet little is known about it. This course is designed to give students a foundation in the substantive teachings of Islamic law. Islamic law stretches back over 1400 years and is grounded in the Quran, the life example of the Prophet Muhammad, and juridical discourse. Teetering between legal and ethical discourse, the Shari'a moves between what we normally consider law as well as ethics and etiquette. The course will explore four key aspects of the law: its historical development, its ethical and legal content, the law in practice, and the transformation of Islamic law through colonialism and into the contemporary. Specific areas we will cover include: ritual piety, family and personal status law, criminal law, and dietary rules.

Requirements/Evaluation: weekly responses, midterm essay, final essay

REL 244  (S)  Mind and Persons in Indian Thought
Cross-listings:  ASIA 244 / PHIL 245
Primary Cross-listing
In this course, we follow the Indian philosophical conversation concerning the self and the nature of consciousness, particularly as they are found in its various Yogic traditions. We start with some of the Hindu views about the self and the mind and consider their ethical implications. We then consider a range of Buddhist critiques of these views, focusing more particularly on the Madhyamaka, which radicalizes the critique of the self into a global anti-realist and skeptical stance. We also examine the Yogacara school, which offers a process view of reality focusing on the analysis of experience. We conclude by considering some of the later Hindu holistic views of the self as responses to the Buddhist critique. In this way we come to realize that far from being the irrational foil of "the West," Indian tradition is a rich resource for thinking through some of the central questions that have challenged philosophers in both traditions.

Class Format: discussion
**REL 247 (S) Anti-Muslim Racism: A Global Perspective** (DPE)

**Cross-listings:** GBST 243

**Secondary Cross-listing**
The racialization of Islam and Muslims has been constitutive to how they have been imagined in Europe and elsewhere. This course looks at how difference works and has worked, how identities and power relationships have been grounded in lived experience, and how one might both critically and productively approach questions of difference, power, and equity. It goes back to the founding moments of an imagined white (at the beginning Christian) Europe and how the racialization of Muslim and Jewish bodies was central to this project, and how anti-Muslim racism continues to be relevant in our world today. The course will not only show how Muslims were constructed as subjects in history, politics and society from the very beginning of the making of Europe and the Americas to the end of the Cold War to the post-9/11 era. Rather, it also looks at how Muslims live through Islamophobia. It looks at processes of racialization of Muslims within the Muslim community and between Muslim communities, while also considering which agencies Muslims take to determine their own future. The course draws from anthropology, gender studies, history, political science, religious studies, postcolonial studies, decolonial studies, and sociology.

**Requirements/Evaluation:** Active class participation, two response papers, and a comprehensive, open-book and open-note final exam.

**Prerequisites:** none

**Enrollment Limit:** 25

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** Also qualifies for the GBST Urbanizing World track

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

Not offered current academic year

---

**REL 249 (F) Antisemitism** (DPE)

**Cross-listings:** JWST 249

**Primary Cross-listing**
In this course, students will investigate intellectual traditions, political movements, and cultural objects that construct Jews, Jewishness, or Judaism as a negative principle. Where is Judaism portrayed as the darkness by contrast to the light? When are Jews depicted as a pernicious force that explains the presence of evil in the world? How is Jewishness used as a critical category to identify what is retrograde, deracinating, or base? We will interpret materials from a variety of times and places, including the ancient world, the medieval period, and the present day. We will also explore prominent theoretical approaches to the interpretation of these materials. Is there a continuous phenomenon that connects every assertion of Jewish malevolence for over two thousand years of human history? Or should claims about Jewish malevolence be presumed to have an entirely distinct meaning, origin, and purpose in each historical context? Which particular threats are Jews, Judaism, and Jewishness typically alleged to pose? How does the idea of a Jewish threat fit with ideas about race, gender, ethnicity, religion, class, sexuality, and nationality? This is a course about negative meaning-making. Our primary goal throughout the course is to study how shadows of thought, symbolism, and story are cast. It is a course about how language, images, structures, and institutions are used to constitute an antagonist: villainy, the demonic, the enemy, the conspiratorial cabal, the exploitative interloper, “the Jew.” And it is a course about the tragic consequences for real people -- for Jews and for all humanity -- when negative principles and fantasies are not contained by realism, reasonableness, and compassion.

Requirements/Evaluation: Class participation, regular in-class writing assignments, midterm exam, final exam
Prerequisites: none
Enrollment Limit: 18
Enrollment Preferences: Jewish Studies concentrators, Religion majors, and students who have taken JWST 203
Expected Class Size: 18
Grading: no pass/fail option, no fifth course option

REL 254 (S) The Theory and Practice of Meditation in the Modern World
This course invites students to examine theoretically and experientially meditation. Throughout the course, we examine meditations belonging to various Buddhist traditions through our own practice. We study some of the manuals where these meditations are taught and connect these practices to some of the more important ideas of the tradition. In studying and practicing meditation, we follow a gradual approach, starting from the most basic practices to more advanced ones. We also connect the practices and ideas we consider with modern scientific approaches, examining practices such as mindfulness therapy and the practice of positive emotions from a psychological perspective. In the process, we re-contextualize Buddhist ideas by connecting them with modern approaches, particularly those inspired by biology, psychology and ecology. Throughout the course, students will keep a daily practice of meditation and record their experiences in a journal so as to be able to come to an informed understanding combining a theoretical grasp of the issues raised by meditation and their own personal appreciation.
Class Format: mixture of lecture, discussion, and practice of meditation
Requirements/Evaluation: full attendance and participation, regular practice of meditation, two middle-length essays, and a meditation journal
Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: Religion majors, students who have taken REL 288
Expected Class Size: 18
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2)
REL 255 (F) Buddhism: Ideas and Practices

Cross-listings: ANTH 255 / ASIA 255

Primary Cross-listing

This course introduces students to Buddhism by examining its ideas and practices as they have taken place in actual social contexts rather than as disembodied textual objects. After examining the main ideas and narratives of the tradition, we turn our attention to Thailand where we examine how these ideas and narratives have shaped a whole range of practices, from meditation to shamanistic rituals. We then consider the transformations that Buddhism is undergoing in contemporary society, examining the rise of meditation movement, the changing role of monks and laity, the resurgence of the nun order, the rise of Buddhist social activism and the development of new Buddhist social philosophies. We ask questions such as: How can Buddhism adapt to a modern global consumerist society? What are the transformations involved in this process and the role that Buddhism can play in such a global society? Should Buddhists take advantage of the opportunities of this new global culture or should they adopt a critical stance toward its consumerist values?

Class Format: discussion

Requirements/Evaluation: full attendance and active participation; two essays

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: religion majors or future religion majors

Expected Class Size: 25

Grading: yes pass/fail option, yes fifth course option

REL 258 (F) Buddhism, Social Change, & Reproductive Justice in the Anthropocene (DPE) (WS)

Cross-listings: ANTH 258 / WGSS 225 / ASIA 258

Secondary Cross-listing

This course considers how three women profoundly shaped the Buddha's life and legacy in terms of social change & reproductive justice. Our central characters are Maya--the Buddha's mother, who died shortly after delivering him; Pajapati--the Buddha's stepmother & aunt who raised him; and Yasodhara--his wife, whom he abandoned when he left home to seek enlightenment. We explore the classical Buddhist discourses and modern biographies to explore how these three women impacted what the Buddha taught and practiced in terms of social and gender justice. These women helped shape the Buddha's radical decision to found the first renunciate order for women in Asian history and helped shape Buddhist attitudes towards female empowerment, bodily autonomy, and reproductive justice for that past 2500 years. Our historical genealogy will explore how Buddhism continues to disrupt modern hierarchies of sex, gender, caste, & class while claiming reproductive and social justice. Along the way we consider: How did these three women reject existing social hierarchies in the Buddha's day and with what impacts for modern Buddhist practices and institutions? How do the social transformations of the Buddha’s day still impact modern struggles for gender justice & reproductive justice in the Anthropocene?

Requirements/Evaluation: Attendance, writing weekly essays or written feedback. There are no grades first half of the semester but weekly feedback on writing.

Prerequisites: none, but a course in ANTH or REL is preferred

Enrollment Limit: 10

Enrollment Preferences: ANTH, REL, WGSS majors and ASIA concentrators

Expected Class Size: 10
Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

REL 262 (S) Time and Blackness

Cross-listings: AMST 208 / AFR 208

Secondary Cross-listing

The concept of time has been one of the most examined, yet least explicitly theorized, concepts in Africana Studies. While the field is saturated with historical studies and literary analyses that take up issues of cultural memory—which involves thinking about time—time itself has rarely been the subject of sustained inquiry. This may be due to its abstractness as an idea, and the level of analysis its conceptualization demands, or because time in the Black experience cannot be understood outside of the meaning of race, which itself is not completely tangible. In this tutorial, "Time and Blackness," we will explore how Black writers across a number of genres—spiritual autobiography, fiction, memoir, literary criticism, and cultural theory—understand and create paradigms of time to organize their work. The following questions will structure our investigation: What are the constituent elements of time in Black writings? How does race shape the ways Black writers conceive the experience of time? And, finally, to what can we attribute the recent surge in explicit, theoretical examinations of "time and blackness"?

Requirements/Evaluation: assignments will include six 2-page response papers; two 5-page writing assignments; and a final, 10-page review essay on how time is understood in a genre of writing

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: concentrators in Africana Studies, majors in Religious Studies, and majors in American Studies

REL 263 (F) Giving God a Backbeat: Rap Music, Religion & Spirituality

Cross-listings: AFR 221

Secondary Cross-listing

On the surface, religion and rap music may seem as if they have little in common. Yet, like other Black musical traditions such as spirituals and the blues, rap is rooted in African American religious traditions. In this course, we will explore the ways in which rap music intersects with the sacred and secular worlds. Through an examination of black religious traditions, lyrics, music videos, and digital media, we will unearth what Anthony Pinn calls the "spiritual and religious sensibilities" of rap music. Grounded in culture-centered criticism, we will investigate the rhetoric of rap and religion through the theoretical ideas of Black Liberation Theology and hip-hop feminism.

Requirements/Evaluation: students will be evaluated on their class participation, Twitter threads, response papers, quizzes, and a final class group project

Prerequisites: none

Enrollment Limit: 18
Enrollment Preferences: First year, sophomore, and juniors

Expected Class Size: 15

REL 268 (S) Where are all the Jews? (DPE) (WS)

Cross-listings: COMP 363 / JWST 268 / ARAB 363

Secondary Cross-listing

Until four decades ago, many Maghrebi and Middle Eastern cities and villages teemed with Jewish populations. However, the creation of the Alliance Israelite Universelle's schools (1830s), the establishment of the State of Israel in 1948, the decolonization process in the Maghreb and the Middle East, and the Arab defeat in the Six-Day War accelerated the departure of Arab and Berber Jews from their homelands to other destinations, including France, Israel, Canada, the United States, and different Latin American countries. Arab and Berber Jews' departure from their ancestral lands left a socioeconomic and cultural void that Maghrebi and Middle Eastern cultural production has finally started to address, albeit shyly. The course will help students understand the depth of Jewish life in the Maghreb and the Middle East, and interrogate the local and global factors that led to their disappearance from both social and cultural memories for a long time. Reading fiction, autobiographies, ethnographies, historiographical works, and anthropological texts alongside documentaries films, the students will understand how literature and film have become a locus in which amnesia about Arab/Berber Jews is actively contested by recreating a bygone world. Resisting both conflict and nostalgia as the primary determinants of Jewish-Muslim relations, the course will help students think about multiple ways in which Jews and Muslims formed communities of citizens despite their differences and disagreements.

Requirements/Evaluation: 400-word weekly, focused responses on Glow; a book review (600 words); two five-page papers as mid-terms; one ten-page final paper; one presentation.

Prerequisites: none

Enrollment Limit: 14

Enrollment Preferences: students interested in critical and comparative literary, religious or historical studies.

Expected Class Size: 14

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
COMP 363(D1) REL 268(D2) JWST 268(D2) ARAB 363(D1)

Writing Skills Notes: Students are required to present an outline of their papers before submitting a draft paper. The professor will give feedback on each written work to improve students’ writing skills. Students are required to incorporate the feedback to improve their drafts before they become final. Students will receive detailed and consistent feedback about their writing. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Difference, Power, and Equity Notes: Students in this course will understand the historical process that lead to the disappearance of Arab/Berber Jews. Students also will work out alternative ways to grasp Jewish-Muslim relations beyond nostalgia and conflict. Finally, students enrolled in the course will grapple with and try to disentangle the complexity of Jewish-Muslim citizenship in both pre-colonial and postcolonial contexts.

REL 269 (F) Mindfulness Examined: Meditation, Emotion, and Affective Neuroscience (DPE) (WS)

Cross-listings: ASIA 269 / STS 269 / ANTH 269
This course asks students to practice and study mindfulness while observing their own minds, emotions, and behavior for an entire semester. We examine the historic roots and current applications of mindfulness, both as a Buddhist meditation practice as well as a secular tool to improve our awareness of awareness. Throughout, we are interested in the nexus of mind, brain, and emotions and the ways that mindfulness has been studied within contemplative and affective neuroscience, integrative neurobiology, and evolutionary psychology. How and why has the research on mindfulness and other meditative practices exploded since 2000? How has this research helped us understand and explain how our minds as well as brains shape everyday emotions and behaviors? We examine the ways evolutionary psychologists, clinical psychiatrists, neuroscientists, clinicians, and medical anthropologists have studied and applied mindfulness to better understand human emotions. We consider the applications of mindfulness for clinicians, therapists, and educators—all of whom attend to how emotions impact interpersonal relationships. We will train in a variety of meditation practices all semester, while learning to better appreciate our own minds, emotions, and relationships.

Requirements/Evaluation: weekly tutorial papers and discussion
Prerequisites: A prior class or some experience with meditation is recommended
Enrollment Limit: 10
Enrollment Preferences: ANTH, SOC, REL, ASST majors; PHLH, STS concentrators; seniors and juniors
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
ASIA 269(D2) STS 269(D2) REL 269(D2) ANTH 269(D2)

Writing Skills Notes: This class will involve weekly tutorial essays or oral responses, intensive written feedback on every essay, and a mid-semester ‘writing chat’ with the instructor.

Difference, Power, and Equity Notes: This class fulfills the Difference, Power, and Equity requirement because it will explore the ways that mindfulness can address the growing epidemic of anxiety, depression, and other mental health issues we find in the US today. We study mindfulness from an intersectional perspective and relate its benefits to intersecting inequities and intergenerational trauma in the US today.

REL 270 (S) Reading Jesus, Writing Gospels: Christian Origins in Context (WS)

Cross-listings: CLAS 270 / COMP 263

Primary Cross-listing

What were the religious and cultural landscapes in which Christianity emerged? How did inhabitants of the ancient Mediterranean world speak about the concept and significance of religion? How have scholars of early Christianity answered these questions? What are the implications of their reconstructions of early Christian history? The course is divided into four parts. The first part establishes the course’s interpretive approach. The second part of this course explores aspects of the formation of Christianity from its origins as a Jewish movement until its legalization. The third part of the course focuses on the earliest literature produced to memorialize Jesus. The final part of the course emphasizes modern interpretations of Jesus and the movement of which he was a part; here we shall be examining how scholars make use of ancient materials to frame their arguments and the modern contexts and legacies of making meaning out of biblical and other ancient materials.

Class Format: lecture/discussion
Requirements/Evaluation: three 3-page papers (with revisions), one 5- to 7-page paper (that builds on one of the earlier 3 page papers), and a final paper (7-10 pages, that draws on some of the earlier writing in addition to new writing)
Prerequisites: none; open to all
Enrollment Limit: 19
Enrollment Preferences: sophomores, especially potential majors in Religion, Classics, and Comparative Literature
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (WS)
This course is cross-listed and the prefixes carry the following divisional credit:
REL 270(D2) CLAS 270(D1) COMP 263(D1)

Writing Skills Notes: Students will write a series of short essays, with required revisions, to develop their skills in close reading of ancient texts and interpretive analysis of modern scholarship about Christian origins. In each successive section of the course, writing from the prior unit will inform the subsequent papers.

Not offered current academic year

REL 274 (F) Ritual, Power and Transgression
Cross-listings: ANTH 299

Secondary Cross-listing
The focus of this course is on the role of ritual in harnessing political power. In the first part of the semester, we examine some of the ways in which different cultures manufacture social order and political power through categories of inclusion and exclusion, clean and dirty, proper and improper, licit and illicit. We will be particularly attuned to the ways in which these categories are performed through and maintained by rituals and how bodies are deployed in ritual spaces as instruments of persuasion and control. We will also look in depth at a variety of ritual forms, including scapegoating and sacrifice, and how they serve as engines of political control and protest, and we will examine the uses of dead bodies and memorials as vehicles for gaining and maintaining political power and the destruction and desecration of bodies and memorials as a form of political protest and dissent. Throughout the semester, we will be relating theoretical texts and historical cases to current political struggles in this country and abroad.

Requirements/Evaluation: class participation, biweekly responses to instructor prompts, two short (500 words) response papers, and one 12-page (2400 words) research paper

REL 276 (S) Gnosis, Gnostics, Gnosticism (DPE)
Cross-listings: COMP 258

Primary Cross-listing
Reality is not what it seems. Salvation by knowledge, arch-heresy, an eternal source of mystical insights and experiences, secret esoteric teachings available only to a few. All these and more have been claims made about gnosis, Gnostics, and Gnosticism. This course will introduce you to the key ancient texts and ideas associated with Gnostics in modern forms of esotericism and spiritualities. We shall explore how claims about gnosis offer modes of critiquing and seeking to transform unjust social and political systems.

Class Format: lecture/discussion

Requirements/Evaluation: weekly GLOW posts, 1 textual analysis paper, 1 historiographical analysis paper, and a final paper that entails a revision and expansion of earlier writing for the course.

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: students with prior coursework in biblical or other ancient literature or history

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
Difference, Power, and Equity Notes: This course situates "gnosis" as a practical epistemological orientation used both to disrupt and challenge power arrangements deemed unjust and to empower those who are marginalized within dominant power structures. At the same time, the course interrogates "gnostic" epistemological claims as capable of being used to reinstall hierarchical power structures. Attention to power and equity and how difference is produced is at the center of the course.

REL 278 (S) Tantra
Cross-listings: ASIA 278

Primary Cross-listing

Tantra—a term shrouded in mystique and controversy—often finds itself fetishized in the Euro-American imagination, conjuring images of transgressive sex, illicit substances, antinomian violence, and the spiritualization of the erotic, the terrifying, and the sublime. This course aims to demystify Tantra and—by locating it in various political, economic, religious, aesthetic, and philosophical contexts—explore its rich, complex history and practices beyond the sensationalist stereotypes. First and foremost, we also devote significant attention to understanding Tantra’s intricate connection to what is referred to as “Esoteric” Buddhism. Our exploration will also ask, what did Tantra look like in practice? How have tantric traditions related to Hindu, Buddhist, and Occult movements? What philosophical assumptions does Tantra rest on? What ethical issues does it evoke? How has Tantra been connected to transgressive notions of gender and desire? How has Tantra been related to the body? What were its connection to ideals of sovereignty? What has been the relationship between Tantra and magic? By tracing the evolution and adaptation of Tantra and Esoteric Buddhism across different cultures and time periods, this course takes a global historical approach, focusing on three key geographies: South Asia, where Tantra has deep roots and complex entanglements; medieval Japan, where Esoteric Buddhism developed unique forms and practices; and modern international Occult movements, where Tantra has been reimagined and integrated into new spiritual contexts. By critically engaging with primary and secondary sources, and by diving deeply into the philosophical and ethical dimensions of Tantra, this course will challenge students to engage critically with the foundational beliefs and moral dilemmas intrinsic to tantric practices in different cultural and historical contexts. We will scrutinize the philosophical underpinnings that sustain various tantric philosophical systems, including approaches to dualism, the nature of reality and embodiment, the function of language, and the pursuit of enlightenment. Ethical considerations are paramount, as we explore how tantric traditions have navigated the boundaries of societal norms through transgressive practices, raising questions about consent, power dynamics, and the redefinition of purity and impurity. The course will also examine radical tantric notions of gender and desire, challenges to conventional morality, and their potential to subvert established hierarchies and notions of sovereignty. Lastly, we will continuously strive to subvert simplistic ideas of authenticity.

Requirements/Evaluation: Readings, weekly critical responses, 10-12 page research paper.

REL 279 (S) Islam on the Indian Ocean
Cross-listings: ASIA 279 / CAOS 279 / ARAB 279

Primary Cross-listing

While colonial and Eurocentric geographies speak in terms of continental separation, historically the continents of Africa and Asia have been connected to one another through a dual link: Islam and the Indian Ocean. Indian Ocean trade and travel have historically connected East Africa, the
Arabian Peninsula, South Asia, and South East Asia, shaping the lives of people and communities who lived not only along the coasts but also inland. This course focuses on these transregional connections, looking at the Indian ocean as a connective space that binds people and regions together rather than separating them. The course will also examine the role of Islam as a religious, economic, social and political force that brought together Muslim communities throughout the regions along the Indian ocean. In exploring these connections, the course will cover a broad historical period, from the 7th century with the rise of Islam to European colonialism and the emergence of a global economy in the nineteenth century.

REL 281  (F)  Religion and Science

Cross-listings: STS 281

Primary Cross-listing

In the last few years the deniers of religion such as Dennett and Dawkins have forcefully argued that recent scientific developments show the degree to which religion is irrelevant to a modern understanding of what it means to be human. Atran and Boyer have made a similar case, arguing that recent progresses in our understanding of human cognition demonstrate that religion is a purely natural phenomenon that has little if any value for human development. Theologians such as Haught and Polkinghorne have rejected these views, arguing that a proper understanding of scientific developments such as evolution and quantum mechanics suggests religiously relevant views of the universe and our place therein. This course considers these competing perspectives while offering critical reflections on the views and categories involved in these controversies. We also examine the works of reflective naturalists such as Bellah and Herrstein, who argue that far from showing the irrelevance of religious ideas and practices, the new mind and life sciences suggest a much more nuanced view according to which religion is both grounded in the natural world and central to the development of human culture. Hence, it cannot be easily discounted as irrelevant to a scientifically informed understanding of what it means to be human.

REL 284 (F) From the Battlefield to the Hermit's Cell: Art and Experience in Norman Europe  (WS)

Cross-listings: WGSS 284 / ARTH 218

Secondary Cross-listing

This tutorial provides students with the chance to investigate in-depth the three of the most astonishing works of art created during the entire Middle Ages: the Bayeux Tapestry (c.1077-1082), the Cappella Palatina (c.1130s-1166), and the Psalter of Christina of Markyate (1120s-1160s). Created within a hundred years of each other all within territories controlled by the Normans--a warrior dynasty that settled in northern France in the 10th century and then expanded north into England and south into Italy in the 11th and 12th centuries--each of these works is unprecedentedly ambitious in scale, dazzling in its material properties, and survives in its original wholeness, a rarity in the medieval world. Despite these similarities, however, each work is very different from the other two and so sheds light on very different aspects of Norman experience, across Europe. The Bayeux Tapestry, likely made by female embroiderers for a baronial hall, is a giant textile (over 70 meters long) that in gruesome and fascinating detail tells the story of the Norman invasion of England by William the Conqueror in 1066. The Cappella Palatina in Palermo, in turn, commissioned by King Roger II, is a royal chapel covered in sumptuous mosaics that reveals through its decoration and ritual the dynamic interaction of Islamic, Byzantine, and Latin Christian traditions in the multicultural Norman kingdom of Sicily in the 12th century. And the Psalter of Christina of Markyate, a large prayerbook made for the use of a female recluse in southern England, contains 40 full-page paintings and 215 decorated initials, a vast and inventive program of imagery that through its creative profundity helped reshape private devotional art and culture for centuries to come. Through their variety, then, these three objects--an embroidery, a building, and a book--give students insight into the rich array of concerns and aspirations, from the political to the spiritual and from the public to the private, that gave substance and meaning to 11th- and 12th-century European life, for women as well as men. What is more, these three remarkable works of art have been the focus of much interesting scholarship in recent years, so an exploration of some of that literature provides a compelling introduction to the discipline of art history itself, past and present.

Requirements/Evaluation: Participation in discussion; five 4-5-page tutorial papers; five 1-2-page response papers.

Prerequisites: None

Enrollment Limit: 10

Enrollment Preferences: First years and sophomores, but open to all.

Writing Skills Notes: In this tutorial, students will develop skills of critical reading and focus on how to craft clear and persuasive arguments of their own. To help them achieve these goals, they will receive timely comments on their written work, especially the five 5-7-page papers they will submit,
REL 285 (S) Haunted: Ghosts in the Study of Religion

Haunting offers a powerful way to speak about forces that affect us profoundly while remaining invisible or elusive. "What is it that holds sway over us like an unconditional prescription? The distance between us and that which commands our moves-or their opposite, our immobility-approaches us: it is a distance that closes in on you at times, it announces a proximity closer than any intimacy or familiarity you have ever known" (Avital Ronell, Dictations: On Haunted Writing [1986] xvi-xvii). The figure of the ghost has been developed by those seeking to grapple with the ongoing effects of modern slavery, colonialism, state-sponsored terrorism, the holocaust, and personal trauma and loss. Building upon the insights about memory, history, and identity that haunting has been used to address, this course will challenge you to explore the study of religion by way of its "seething absences." We shall ask how the study of religion has endeavored to address loss, trauma, and its persistent effects, what "holds sway" over various approaches to the study of religion, as well as how "religion" constitutes its own ghostly presence, haunting other domains.

Class Format: tutorial; meeting in pairs, each student will either write and present a paper or respond to their partner's paper

Requirements/Evaluation: two 1-page papers (written and presented), five 5-page papers, and five oral critiques (based on written notes) of their partner's paper; students will revise two papers

REL 286 (F) The Bible & US Borders: Latinx Encounters

Cross-listings: LATS 285

Primary Cross-listing

This course seeks to understand migration in the current historical, social and political moment, especially on the US-Mexico border. We will explore migration and borders through the lenses of history, politics, and religion, with particular focus on the Christian Bible and its influence, both positively and negatively, in the understanding of recent migration experiences on the USA-Mexico border. For example, we analyze instances of and reflections on migration in the Bible, in light of various interpretations and applications emerging today in debates over migration, including by politicians and "Christian nationalists." The perspectives of Latinx communities in the USA with regard to border politics and policies will be front and center in this course. The Bible, monographs and essays on Bible, borders, migration, and religion, especially from Latinx authors and thinkers, will constitute the readings for the course, along with recent data, policies, and reports on the border and "border security." Who is coming to the US-Mexico border and why, and what does religion and biblical interpretation have to do with how the US government and US people think and act on the border?

Requirements/Evaluation: Participation in class discussions; two to three short essays (3-5 pages each) analyzing selected readings; a longer final research paper (8-10 pages) on an aspect of Bible and Migration of interest to the student defined in consultation with the professor.

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Religion majors and Latinx Studies concentrators, and those interested in these areas of study

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2)

REL 286(D2) LATs 285(D2)
REL 288 (F) Embodiment and Consciousness: A Cross-Cultural Exploration

Cross-listings: PHIL 288

This course examines some of the central questions raised by the study of the consciousness: the place of intentionality, the role of emotions, the relation with the body, the nature of subjectivity, the scope of reflexivity, the nature of perceptual presence, etc. In confronting these difficult questions, we do not proceed purely theoretically but consider the contributions of various observation-based traditions, from Buddhist psychology and meditative practices to phenomenology to neurosciences. We begin by examining some of the central concepts of Buddhist psychology, its treatment of the mind as a selfless stream of consciousness, its examination of the variety of mental factors and its accounts of the relation between cognition and affects.

We also introduce the practice of meditation as a way to observe the mind and raise questions concerning the place of its study in the mind-sciences. We pursue this reflection by examining the views of James, Husserl, Sartre and Merleau-Ponty, particularly as they concern the methods for the study of the mind and the relation between consciousness, reflexivity and the body. In this way, we develop a rich array of analytical tools and observational practices to further our understanding of the mind. But we also question the value of these tools based on first person approaches by relating them to the third person studies of the mind. In this way, we come to appreciate the importance of considering the biology on which mental processes are based and the light that this approach throws on the nature of consciousness. We conclude by considering the relation between first and third person studies of the mind, focusing on the concept of the embodied mind as a fruitful bridge between these different traditions.

Requirements/Evaluation: regular practice of meditation, a class presentation, a short essay (6-pages); a long final research paper (15 pages)

REL 292 (S) Religion and Politics in Puerto Rico, Cuba and the Diaspora
Cross-listings: LATS 253
Secondary Cross-listing
This course analyzes the role of religion in Caribbean history and politics, with a focus on Puerto Rico and Cuba. These Caribbean Islands have lived out contested colonized histories and experiences, as well as diasporic realities in several key US communities, such as New York City and Miami. Since 1898, the US government and military have played a significant role in both Islands, forcibly shaping their economies and politics. Religion, particularly the Protestant missionary enterprise after the US invasions in 1898, has also shaped histories and politics on the islands and throughout their diasporas. We will analyze the role and impact of Protestant religion in these historically indigenous, African descendant, and Roman Catholic religious spaces, as well as how these religious engagements and theologies impacted migration and the creation of diasporic communities in the US. Both the role of religion in the imperialist endeavor and in the solidarity movements that responded will occupy our time in this course, with special attention to key figures in both sides of such efforts. With some enhanced understanding of the intertwining of religion and politics in Puerto Rico, Cuba and their diasporic communities, participants in this class will also consider implications for other Caribbean nations, such as the Dominican Republic, as well as, selectively, Latin American countries that have experienced US interventions and the creation of diasporic communities.
Class Format: This course will follow a lecture-discussion format, in which students are expected to come to class prepared to address the assigned readings, to have completed short assignments in preparation for discussions, to make presentations to the class, and/or to lead discussions.
Requirements/Evaluation: Evaluation in this course will be based on class participation, online discussion forum posts based on readings, two short 5-6 page essays on an aspect of Puerto Rican or Cuban political/religious reality discussed in class, and a final 8-10 page research essay on a theme in the course agreed upon by student and professor.

LEC Section: 01 W 1:10 pm - 3:50 pm Efrain Agosto
REL 294 (S) Paul and Early Christianity: Race, Ethnicity, Empire, and the New Testament

In the Christian New Testament, 13 letters are attributed to "Paul" (out of a total of 27 documents that comprise the New Testament). These letters have been a rich source for a host of political and theological debates over the last two millennia, but in this course, we will examine them as expressions of earliest Christianity's encounter with race, ethnicity, gender, and the ethics of a new religious movement, established in the midst of the oppressive Roman imperial order. Seven of these letters were almost certainly written by someone known to us as Paul of Tarsus. How Paul, a devout Jew, addressed controversial issues in his newfound communities, often in equally controversial ways, will guide our discussions of the role of religion and politics in his world as well as our own. Reading the letters of Paul and related documents in the New Testament, and interpretations of Paul over the centuries, including in modern scholarship, especially by African American, Asian American, and Latinx biblical scholars, theologians, artists, and thinkers will focus our study of religion and politics, ancient and modern.

Requirements/Evaluation: Students will prepare oral and written summaries of the letters (at least one per student) from their own perspectives in conversation with scholarly interpretation, as well as write short papers (two for the semester, 3-4 pages each) on relevant themes for today inherent in these ancient documents. There will also be a final, research paper (8-10 pages) examining race, ethnicity, gender, and/or politics -- then and now -- using several of the letters as sources for the written exploration.

Prerequisites: None

Secondary Cross-listing

How should people treat each other? What constitutes human nature and does it tend towards good or evil? How should we organize society, by focusing on laws and regulations, or on ritual and moral guidance? What is the nature of moral rulership? What is the proper relationship between the individual and larger units of society, from the family to the state? These are some of the key questions that the school of thought that has come to be known as "Confucianism" addresses. As the dominant moral and political philosophy for thousands of years in much of East Asia, Confucianism has shaped our world, past and present, in innumerable ways. In this class we will focus on the foundational texts of the Confucian tradition: the Analects (purported to record the words of Confucius himself), Mengzi (often romanized as "Mencius"), and Xunzi. Beyond those questions noted above, we will further examine how these texts construct their arguments; how they were first composed, compiled, and circulated; how they employ such key concepts as "humaneness" (ren), "moral power" (de), and "ritual propriety" (li); and how they functioned as part of the larger philosophical, linguistic, political, and historical context that we now think of as "early China."

Requirements/Evaluation: Evaluation is based on writing assignments (3-4 pages, 5-6 pages, and 10-12 pages) and participation in class discussions.

Prerequisites: None.
Enrollment Limit: 19
Enrollment Preferences: Enrollment priority goes to current or prospective majors in the Department of Asian Languages, Literatures, and Cultures; current or prospective Asian Studies concentrators; and Religion majors.
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

CHIN 215(D1) REL 295(D2) ASIA 215(D1)

Writing Skills Notes: Writing will include short writing assignments (1 paragraph, 3-4 pages, and 5-6 pages) that will involve drafts, feedback and revision, and one longer final paper of 10-12 pages that will involve close consultation with the instructor during the writing process.

Difference, Power, and Equity Notes: Throughout the course we will examine how these texts deal with issues of differentials of power, both political and social, in a range of contexts. In particular, we will discuss how these texts conceptualize political and social power and how they see hierarchy
and difference functioning in both beneficial and deleterious ways in society.

REL 299 (S) Shakespeare's Torah

Cross-listings: JWST 299

Primary Cross-listing

For readers and speakers of the English language over the past five centuries, no literary body of work has been more central than the writings of William Shakespeare. His plays and poems have shaped the linguistic, philosophical, and artistic representation of human experience in ways that permeate every aspect of our lives. Shakespeare's capacious work and its central preoccupation with the essential questions of humanity have also inspired an extensive tradition of commentary, interpretation, and performance. In this regard, his work occupies a position similar to the one held by the collection of writings known in the Jewish tradition as Torah. This term refers both to the set of books contained in the Hebrew Bible and to the rabbinic tradition that emerged from reading those books, which in turn has provided the core principles for over two millennia of Jewish interpretive practice. This course invites students to read Shakespeare as Torah by applying the essential features of that practice to his extraordinary work. Through a deep and sustained encounter with four plays in four different genres (Hamlet, Henry IV, Twelfth Night, and The Tempest), we will combine analytic, critical, and creative principles to make meaning in and out of these texts. The goal throughout is to explore how the Jewish art of interpretation can illuminate our experience of Shakespeare's humanity.

Requirements/Evaluation: class participation, regular short written and oral assignments, and a final project

Prerequisites: none

Enrollment Limit: 18

Enrollment Preferences: If the class is overenrolled, preference will be given to Jewish Studies concentrators, Religion majors, and students who have taken REL/JWST 222.

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

REL 301 (S) Social Construction (DPE)

Cross-listings: COMP 315 / WGSS 302 / STS 301 / SOC 301

Primary Cross-listing

"Social construction" can often seem like the great collegial insight. By now, you've all heard that categories such as race, gender, and sexuality are in some sense not part of nature, but instead are created and maintained socially or culturally. The idea of social construction has been vital to critical race theory and queer theory, and, in this course, we will push ourselves into philosophy of science to see whether or not these same insights apply to everything. If we know that “Whiteness,” "heterosexuality," and "masculinity," for instance, are all socially constructed, we will ask if the same is true of "electrons," "money," "the solar system," and "climate change." Can it be that all of our reality is socially constructed? Or does social construction have limits? If so, what are they? We will also ask more fundamental questions, such as: What does it mean to say something is socially constructed? How does social construction relate to claims that an aspect of the world is "real" or "not real?" Is social construction a theory about language, power, culture, societies, human perceptions, or the limits of science? What kind of political, ethical, ontological, or epistemological work do theories of social construction do? We will begin with different accounts of the social construction of race, gender, and sexuality. In the second part of the course, we will dig deeper into philosophical debates about social construction as such. Then we will explore constructionism about natural science. In the last part of the course, we will change gears and explore typical work in the theory of social science aimed at explaining the construction and ontology of social worlds. The class will culminate in a project in which students will put their social construction theories into practice.

Requirements/Evaluation: regular attendance and participation, short weekly reflection papers, a 8-10 page research paper, and final project

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Preference will be given to majors and concentrators from STS, ANSO, COMP, REL, PHIL, WGSS, AAS, LATS, JWST.
and AFR. If the class is overenrolled students will be asked to submit an email about themselves and why they want to take the course.

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

COMP 315(D1) WGSS 302(D2) STS 301(D2) SOC 301(D2) REL 301(D2)

**Difference, Power, and Equity Notes:** Central to REL 301 will be an analysis of the social construction of race, gender, and sexuality. It will show how power and difference are tied up in their construction and maintenance of these categories. Students will be taught how to critically analyze race, gender, and sexuality as well as social construction as such. Students will also learn sophisticated tools for studying systems of social power and difference.

**REL 306 (F) Feminist Approaches to Religion**  (WS)

**Cross-listings:** WGSS 307

**Primary Cross-listing**

What does feminist theory have to offer the study and practice of religion? How have participants in various religious traditions helped to produce and enact different kinds of feminist approaches to critique and transform religions? Feminisms and religions have a long though often troubled history of interconnection. In this course, we shall explore a range of feminist analyses that have either emerged out of particular religious contexts or have been applied to the study of religious traditions and practices. The course prioritizes attention to the intersections and interactions of gender, race, ethnicity, sexuality, and nationality (among other factors) with religion.

**Requirements/Evaluation:** weekly GLOW posts before class, one "position paper" for class discussion (3 pages), a research question with rationale for interest and potential action plan (1 page), exploratory research statement (2 pages), essay on interpretive approach to research project (3 pages), participation in writing workshop on 7-page early drafts of final papers, one 15-page final paper.

**Prerequisites:** none; open to all

**Enrollment Limit:** 15

**Enrollment Preferences:** Religion and Women's, Gender and Sexuality Studies majors have priority, and then students who have taken either REL 200 or WGSS 101.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Attributes:** WGSS Theory Courses

Not offered current academic year

**REL 308 (S) What is Power?**

**Cross-listings:** STS 308 / SOC 308

**Primary Cross-listing**

What is power? Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures? What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or
agency? Or ideology? This course begins with the observation that power is often described as a causal relation—an individual's power is supposed to equal their capacity to produce a change in someone else's behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: critical theory about power and philosophy of science about cause and effect. We will touch on classic philosophical accounts of power and causation, but focus our attention on more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt, Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, and Max Weber. (Note that in 2023 this course will also fulfill the senior seminar requirement for STS)

Requirements/Evaluation: critical annotations for every class, midterm review essay (4-6 pages), final essay (10-12 pages)

Prerequisites: None.

REL 312 (S) The Mughal Empire: Power, Art, and Religion in India

Cross-listings: ASIA 312 / GBST 312 / HIST 312

Secondary Cross-listing

Established in the early 1500s, the Mughal Empire was one of the grandest and the longest to rule the Indian subcontinent for over three hundred years. Commanding unprecedented resources and administering a population of 100 to 150 million at its zenith—much larger than any European empire in the early modern world—the Mughals established a centralized administration, with a vast complex of personnel, money, and information networks. Mughal emperors were also political and cultural innovators of global repute. Moreover, while the Mughal dynasty was brought to an end with British colonial rule over India in 1857, the Mughal administrative structures and cultural influences continued to have a lasting impact on the British and later Indian states that followed. Centered around the intersection of the themes of power, patronage of art and architecture and religion, this course will ask: What factors contributed to the durability of the Mughal Empire for three centuries? How did global trade and innovations in taxation contribute to its wealth and stability? How did this dynasty of Muslim monarchs rule over diverse, and largely non-Muslim populations? How did they combine Persian cultural elements with regional ones to establish an empire that was truly Indian in nature? How were the Mughals viewed in their contemporary world of gunpowder empires like the Safavids of Persia and the Ottomans of Turkey? Readings will include the best of the recent scholarship on this vastly influential empire and a rich collection of primary sources, including emperor's memoirs, accounts of European travelers, and racy biographies, which will allow students make their own analysis. They will also have the opportunity to interpret paintings (some of which are held in the WCMA collections) and architecture. They will also discuss how the Mughals are remembered in South Asian film and music.

Requirements/Evaluation: participation, several short essays, one final paper

REL 318  (S)  Myths and the Making of Latine California  (WS)
Cross-listings: LATS 318 / AMST 318

Secondary Cross-listing
California is home not only to the largest ethnic Mexican population in the USA but also to the largest Central American population, while also being home to long-standing Latine communities hailing from Chile to Cuba. Since the era of Spanish colonization, especially starting in 1769, California has been woven into fantastic imaginations among many peoples in the Americas. Whether imagined as Paradise or Hell, as environmental disaster or agricultural wonderland, as a land of all nations or a land of multiracial enmity, many myths have been inscribed onto and pursued within the space we call California. In a state whose name comes from an early modern Spanish novel, how did certain narratives of California come to be, who has imagined California in certain ways, and why? What impact have these myths had on different Latine populations in the history of California, and how have different Latines shaped, contested, and remade these myths as well as the California landscape that they share with other peoples? In this course, we consider "myth" as a category of socially powerful narratives and not just a simple term that refers to an "untrue story." We examine myths by focusing on a few specific moments of interaction between the Latine peoples who have come to make California home and the specific places in which they have interacted with each other. Of special interest are select creation stories (found in Jewish, Christian, and Indigenous traditions), imaginations of the Spanish missions, the Gold Rush, agricultural California, wilderness California, California as part of Greater México, California as "sprawling, multicultural dystopia," and California as "west of the west," including its imagination as a technological and spiritual "frontier."

Requirements/Evaluation: this course will be mostly discussion oriented, with grading based upon participation, short writing exercises, one 3-page review essay with mandatory revision, one 5- to 8-page midterm review essay, and a final 10- to 15-page comparative review essay

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Latina/o Studies concentrators, Religion majors, American Studies majors, Environmental Studies majors and concentrators, Comparative Literature majors

REL 319  (S)  Milton's Paradise Lost
Cross-listings: ENGL 315

Secondary Cross-listing
If you know anything about John Milton, you probably think of him as some blind guy who wrote a really long poem about the Bible. It's hard to shake the feeling that Milton is the fustiest of English poets--dull, pious, brilliant and all, and not someone you would read if you didn't have to. But then what are we to make of the following? The first piece that Milton wrote that was read widely throughout Europe was a boisterous defense of the English Revolution. Milton was most famous in his lifetime as the poet who went to bat for the Puritan insurgents--the poet who came right out and said that the king looked better without his head. Of all the major English poets, Milton is the revolutionary. So a course on Milton is by necessity a course on literature and revolution. We will read Paradise Lost, widely regarded as the greatest non-dramatic poem in English, and a few other books to help us prepare for that big one. Some questions: How did the mid-seventeenth century, probably the most tumultuous decades in the history of modern Britain, transform the culture of the English-speaking world? What is the relationship between literature and the state or between literature and radical politics? Is there a poetics of revolution? How can a poet who seems to be writing for Sunday school--about God and Adam and Eve and the serpent--really have been writing about rebellion all along?
REL 320 (F) "You Do You!" The Ethics and Politics of Personal Authenticity
From the breathtaking expansion of the "self-help" industry to corporate advertisement, from the fashion and entertainment industries to cultural politics around sexuality and race, the rhetoric and ideal of personal authenticity pervades our daily existence. From every corner we are told: "To thine own self be true!" This powerful moral ideal has arguably become an inescapable and hegemonic frame of U.S. cultural life in the 21st century (and more broadly middle-class life around the globe). The imperative of authentic self-realization -- to discover and become your "true self," in opposition to mere conformity to social conventions and independent of external expectations -- is seen as essential if we are to live a healthy and fulfilling life, and to fully realize what it means to be human in the deepest sense. This course will interrogate this ideal and imperative of personal authenticity from several angles. We will begin by examining some contemporary manifestations of this ethos. We will then explore the historical roots and evolution of the emphasis on authentic selfhood in the modern West, as well as comparable notions of sincerity, selfhood, interiority, and introspection in other (non-liberal, non-Christian) cultural contexts and religious traditions. We will also consider the ideal of authenticity in light of contemporary social theory, as well as engage a variety of ethical-political critiques of authenticity. Through this, we will investigate a number of important questions: Is there such a thing as the "true self" that is autonomous and free of social influences and norms, and how does one discover this true self? What are the limits and social consequences of this aspiration towards authentic selfhood? What are the effects of the widespread commodification of authenticity, and how should we understand the relation between personal authenticity and the conditions of late-stage capitalism? Is the rhetoric of personal authenticity simply an expression of narcissistic individualism, or is there a higher moral value and ideal that it speaks to? Can community cohesion and shared collective purpose be sustained alongside the imperative of authenticity? How does the ideal of authentic selfhood interact with collective or socially-conferred identities (like race, heritage, or religion)? Is personal authenticity ultimately just a white secular value, or is it an available and achievable ideal for those who do not fit this hegemonic mold?

Requirements/Evaluation: In-class participation; Personal journaling; Semester-long research project with multiple stages and steps, culminating in a final 12-15 page paper; 3 reading response papers (that serve as steps towards research project)
Prerequisites: None

REL 325 (F) Faith and Profit in the Medieval Mediterranean
In many historical societies, there have been tensions between the demands of economic and religious life. What can I sell, what should I do with money, and how shall I interact with strangers? What is the relationship between religious ideals and the habits of everyday life? These questions can become especially acute when representatives of two or more competing belief systems interact with each other. The medieval Mediterranean
provides numerous rich examples of societies and individuals facing these questions. In this class, we will look at how medieval Jews, Christians, and Muslims resolved these and other dilemmas in the market societies surrounding the Mediterranean basin, as they created their own forms of religious law and economic philosophy. In the process, we will gain a more profound understanding of the roots of modern debates about capitalism, property, and economic justice.

Requirements/Evaluation: Attendance and participation, two short papers, one final 12-15-page research paper

Prerequisites: None

REL 330 (S) Modern Jewish Political Theory

Cross-listings: PSCI 375 / JWST 492

Primary Cross-listing

By the late 19th century, Jews across Europe were faced with an urgent political problem. Amidst bourgeoning national self-consciousness throughout the continent, despite the liberatory promises of the Enlightenment, Jews remained a vulnerable, segregated, and stigmatized minority population. Jews had to decide where to pin their hopes. Should they ally themselves with the liberals or the communists? Should they embrace nationalism or cosmopolitanism? Should they, perhaps, abandon Europe altogether and re-constitute themselves elsewhere? If so, should they focus their efforts on relocation to the historical land of Israel? Or could they go anywhere? Wherever they might go, should they aspire to build a modern Jewish nation-state, a semi-autonomous Jewish community, or some other arrangement? Should this coincide with the cultivation of a distinctively Jewish modern language? If so, should it be Hebrew or Yiddish? In this course we will assess various answers to these questions proffered by Jewish political thinkers in the modern period. We will pay particular attention to the construction of "Jews" and "Judaism" in these arguments. And we will ask persistently: what constitutes a "Jewish justification" for a political claim in modern Jewish political theory? Coverage will include: Jewish liberalism, political Zionism, Yiddishist autonomism, messianic quietism, and other views. We will read mostly primary sources, including texts by: Hermann Cohen, Theodore Herzl, Chaim Zhitlowsky, Franz Rosenzweig, Leo Strauss, Hannah Arendt, and many others.

Requirements/Evaluation: six short (1-2 pages) response papers; two 6- to 8-page papers, each analyzing a different view in depth; a final 18- to 20-page paper that incorporates the two previously submitted 6-8 page papers, but also compares the two views and adjudicates between them

Prerequisites: none

REL 332 (F) Islam and Feminism

Cross-listings: ARAB 332 / WGSS 334

Primary Cross-listing
This course examines the relationship between feminism and Islam, exploring Islamic feminism, decolonial feminism, and the critiques of imperialist feminism, homonationalism, and femonationalism. The first part of the course will begin with a critical examination of orientalist and colonial representations of Muslim women as oppressed and in need of liberation. We will then explore Muslim responses to such critiques that were entwined with nationalist and independence movements. This historical backdrop is critical to understanding why the question of women and their rights and roles become crucial to Muslim self-understanding and Islamic reform. The second part of the course will explore the breadth of Islamic feminist literature, covering: 1) feminist readings of scripture; 2) feminist critiques of Islamic law; and 3) feminist theology. The final part of the course will focus on Muslim feminist and decolonial feminist critiques of feminism and its link to imperialism and the weaponization of gender and sexuality in global discourse.

Requirements/Evaluation: weekly responses, midterm essay, final research paper

Prerequisites: none

REL 334 (S) Imagining Joseph

Cross-listings: ANTH 334 / COMP 334 / JWST 334

Secondary Cross-listing

Beloved son, rival brother, faithful servant, dreamer, seer, object of desire, lover, husband, bureaucrat, Joseph is one of the most fully-limned and compelling figures in the Jewish, Christian, and Muslim scriptural traditions. The story of Joseph unfolds over fourteen chapters in the Hebrew Bible, and is the subject of the fourth longest sura in the Qur'an. Through millennia, the story of Joseph has inspired a wealth of interpretations, commentary, apocrypha, re-tellings, and back-story, including an apocryphal book of scripture about Joseph and his wife, Asenath, Sufi poetry about Joseph and Zuleikha (Potiphar's wife), a trilogy by the 20th century German novelist Thomas Mann, a musical by Andrew Lloyd Weber, and many expressions in Western visual art. The course will explore these various expressions, looking to them for the ways in which Joseph has captured the imaginations of peoples and cultures across time and space. The course will be organized as a collaborative seminar in which the class will read the foundational scriptures together, followed by thematic discussions to which students will contribute insights from their own readings of particular peripheral texts. Students will learn the pleasures of close and intense exegetical reading in approaching the Hebrew Bible and Qur'an, as well as the more expansive pleasures of linking post-scriptural expressions together.

Requirements/Evaluation: occasional response papers; substantial final project and paper; class participation

Spring 2025

SEM Section: 01 W 1:10 pm - 3:50 pm Peter Just
In the twentieth century, Jewish history and humanitarian history became deeply intertwined. As the victims of persecution and expulsion, mass violence and genocide, Jews repeatedly figured as the recipients of aid and humanitarian intervention. At the same time, Jewish political figures, legal thinkers, intellectuals and scholars, social activists, and aid workers played central roles in the establishment of humanitarian organizations and in debates about the moral, political, and legal frameworks that have shaped approaches to humanitarianism across the decades since World War I. This research seminar is designed to open up big questions about the history of humanitarianism and to carve out space for students to conduct research on a particular place, time, and aspect of that larger history in conversation with other students working on related topics. In the first half of the semester, in discussions of common readings, we will examine various works of scholarship that connect to the history of humanitarianism from the nineteenth century to the present. Beginning in the first half of the semester and with greater intensity in the second half of the semester, you will conduct independent archival research on some aspect of the history of humanitarianism using the digitized archives of the American Jewish Joint Distribution Committee, culminating in a twenty-plus-page paper. In the final weeks of the semester, the seminar will continue to meet weekly as a research colloquium, to provide a forum for you to present your research and drafts in progress and to give feedback on fellow students’ work. In this seminar, we are not merely studying history; you are actually doing history. Over the semester, you will learn how to pose historical questions; to engage critically with readings beyond summarizing them; to synthesize an enormous amount of source material; and to learn how to write more clearly. The goal is for each student to produce a polished research paper based on engagement with archival sources and relevant secondary literature that will serve as a capstone to your coursework at Williams or as a potential jumping-off point for future research projects, including a senior thesis in History or Jewish Studies.

**REL 340 Science, Religion, and the (post)colony: Critical approaches to the global history of knowledge (DPE)**

Histories of science and religion have been deeply intertwined with colonial and postcolonial history. Colonial claims to legitimacy were often rooted in perceptions of scientific and technological superiority, and colonial expansion often marched in lockstep with missionary activity and forced conversions. In the process, race and human difference emerged as concepts at the intersection of scientific and religious discourses and was forged within the colonial framework. This colonial history of science and religion impacted how scientific and religious thought, practices and institutions developed through the period of decolonization and into today. Similarly, the attendant history of race and human difference continues to influence postcolonial and contemporary discourses around race, ethnicity, identity and migration. In this course, we will trace key moments in the history of science and religion and their relation to coloniality. We will start in the sixteenth century with the rise of modern European empires, move into the height of modern colonialism, indigenous genocides and chattel slavery, and trace decolonization from the middle of the nineteenth into today. Throughout, we will investigate how science and religion emerged as concepts, practices and institutions, and how these narratives impacted, and were impacted by colonial expansion and history. We will pay particular attention to questions of race, gender, sexuality and human difference as key concepts and practices that emerged at the intersections of science, religion and (post)colonialism.
Difference, Power, and Equity Notes: The course addresses questions of race, gender, sexuality and human difference as seen through the history of science, technology and medicine. Students will creatively engage with critical race theory, postcolonial theory and queer theory. They will also investigate human suffering as a category that provides a deeper understanding of difference, diversity and equality.

Not offered current academic year

REL 347  (F)  Monstrosity
Cross-listings:  STS 411

Primary Cross-listing

The history of science is full of monsters. From the grotesque homunculi of alchemical lore, through the stitched-together corpses of the gothic imagination, to the fearsome mutants of the atomic age, each era has birthed its own nightmares as it has strived to unlock the secrets of nature. At the heart of this course lies the premise that monsters--be they born of alchemy, literature, or the lab--serve as critical mirrors to a society's norms, embodying the deviations and transgressions against the constructed "normal" within various cultural and historical contexts. Monsters often challenge and redefine boundaries, reflecting inherent ideas of the natural, anxieties about gender and race, and troubling binary oppositions such as human versus animal, animate versus inanimate, and the living versus the dead. This course will show how the concept of monstrosity has shaped scientific inquiry, medical practices, and technological advancements. We will trace a roughly chronological and thematic journey navigating through different epochs and aspects of monstrosity: from early notions of the connection between demons and disease, through the marvels of the "Scientific Revolution," to the spectacle of anatomical wonders and "freak shows." We will explore the eerie corridors of Gothic and early horror literature, where science births its own type of monsters, and scrutinize how the dawn of evolutionary theory produced new notions of monsters, mutants, and other anomalous bodies. The course will further examine the dark intersections of eugenics, race, and monstrosity, before venturing into the realm of genetic anomalies and anxieties reflecting changing notions of biological inheritance. We will explore the concepts of abjection and the monstrous feminine, revealing how monstrosity intersects with the constructions of gender, sexuality, and desire. We will spend a week on the psychological appeal of horror and speculations about why we love to be terrorized. Finally, we look ahead to the future, contemplating how ongoing scientific and medical innovations continue to redefine the boundaries of what is considered monstrous. (This course will function as a senior seminar for Science & Technology Studies concentrators, but it is also open to students with other concentrations/interests.)

Requirements/Evaluation: Weekly critical reflections, an independent research project culminating in a 10-15 page research paper (Alternatively, students may opt to create a work of fiction paired with a shorter research paper instead of the final research paper, pending the instructor's approval).

Prerequisites: none.

Enrollment Limit: 15

Enrollment Preferences: Preference will be given to STS concentrators.

Expected Class Size: 10

Grading: no pass/fail option, yes fifth course option

Distributions: (D2)

REL 353  (S)  Disinterest in the Bhagavad Gita
In this course, students will read the Bhagavad Gita alongside selected responses to it. These responses range from philosophical and theological commentaries written in Sanskrit by Shankaracharya, Abhinavagupta, and Ramanuja, to later "Bhakti" poetic responses in other Indian languages, to 18th and 19th century European aesthetic and political commentary (Herder, Schlegel, Hegel), to the work of 20th century commentators like M.K. Gandhi, B.G. Tilak, B.R. Ambedkar and D.D. Kosambi. We will examine the Gita's theory of action and the place of disinterest in this theory. We will inquire into the social, metaphysical, and political conditions of possibility of such disinterestedness, and think about disinterestedness itself as a condition for political action and aesthetic experience. Finally, we will reflect on how such a comparative history of interpretation might help us model a dialectical history of thought.

Requirements/Evaluation: Weekly meetings, weekly reading; weekly essay or response. Attendance in 2-3 lectures over the semester.

Prerequisites: No prerequisites

Enrollment Limit: 10

Enrollment Preferences: Majors in English and Comparative Literature; Religion, Classics, or Philosophy majors; Sophomores looking to major in any of these.

Expected Class Size: 8-10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

REL 358 (F) Religion and Law (DPE)

Cross-listings: GBST 358

Primary Cross-listing

This course explores the concept of "law" through an investigation of the complex relationship between law, ethics, and religion. In doing so, we will look at legal theoretical texts as well as legal anthropological studies to pose critical questions about the nature of law, the functioning logic of law, the relationship between law and lived experience, and the legal construction of categories and facts. In the course, we will consider two intersections of religion and law: the particularities of religious legal traditions and the relationship between religion and secular law. Topics will include the secular legal construction of religion, the relationship between law and ethics, the nature of legal hermeneutics, and the racial, gender, and sexual politics of legal interpretation.

Requirements/Evaluation: reading response, two essays, final research paper

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Religion majors

Expected Class Size: 10

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

GBST 358(D2) REL 358(D2)

Difference, Power, and Equity Notes: Law is seen as both a repressive and liberatory force. In taking a critical approach to the nature of law and legal interpretation, this course prepares students to think about the language of "rule of law," "order," and "justice" as a complex relationship between law and power.

Not offered current academic year
REL 360 (F) The Gothic Cathedral: An Art History

Cross-listings: ARTH 360

Secondary Cross-listing

Through their enormous scale, through the gravity-defying complexity of their construction, and through the sumptuousness of their materials and decoration, Gothic cathedrals -- the medieval equivalent of the blockbuster movie, and then some -- have amazed visitors for centuries. The widespread social media reaction of shock and dismay to the fire at Notre Dame Cathedral in Paris four years ago, moreover, indicates that this power of the cathedral to dazzle and to capture hearts remains very much alive. But how have art historians, specifically, made sense of these extraordinary, and extraordinarily complex, monuments? And how have the questions they have asked about the cathedral changed over time? Through a close examination of a number of influential books, in particular -- each one of them a kind of miniature cathedral in its own right -- this 300-level seminar will investigate the shifting interpretation of the Gothic Cathedral over the past 150 years. In so doing, the seminar aims to shed light not only on the fascinating multiplicity of realities that make up the Gothic cathedral but also on the changing shape of the discipline of art history itself, from its beginnings to the early 2020s.

Requirements/Evaluation: participation in class discussion; 1 or 2 oral presentations; four 3-4-page papers, and a 6-8-page paper

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: art majors and sophomores, but open to all

**REL 420 (F) Islam and the Image (DPE) (WS)**  
**Cross-listings:** ARTH 521  
**Secondary Cross-listing**  
This seminar responds to a recent incident at a US liberal arts university where a professor was sacked for showing images of Prophet Muhammad as part of her section on Islamic art. Why is image-making so hotly contested in Islam? What is the history of figural depictions in this tradition? The seminar explores artworks made for Muslim patrons from the medieval period to the modern era, considering how paintings produced for Muslim audiences can be situated within the frameworks of "Islamic art," a loaded historiographical term that has been questioned in recent times. The seminar also addresses some of the major problems that continue to haunt art scholarship in the field. For most of its history, the academic study of Islamic art has seldom considered contemporaneous literary voices that shed light on the motivations behind artworks. Furthermore, the historiography, deeply entrenched in its colonial and orientalist roots, has largely isolated images from their supporting texts—a curious oversight in light of the fact that painting in Muslim lands has historically been primarily an art of the book. These biases have affected the way museums have collected, displayed and interpreted paintings. For example, Western museums continue to place figural depictions made for books and albums in "South Asian" collections while textual manuscripts and calligraphic specimens made for the same Muslim audiences—even at times bound in the same albums—are categorized as "Islamic art." What does this isolation of text from image imply about prevailing views of Islamic art? To better understand the cultural, historical and religious context surrounding artworks students will read primary literature ranging from autobiography to devotional poetry, often written by the very patrons and subjects of the paintings to be discussed.

**Requirements/Evaluation:** class participation, short weekly writing assignments, final essay project  
**Prerequisites:** Undergraduates wishing to enroll must have taken at least one art history course or one religious studies course. Undergraduates must email indicating their interest in the course prior to enrolling.

Enrollment Limit: 19  
Enrollment Preferences: MA students, then advanced undergraduates  
Expected Class Size: 12  
Grading: no pass/fail option, no fifth course option  
Distributions: (D2)  (DPE) (WS)

**REL 425 (S) Fragments and Healing: Disability Studies and Late Antique Art**  
**Cross-listings:** ARTH 425 / ARTH 584  
**Secondary Cross-listing**  
This seminar will investigate some of the ways that contemporary Disability Studies can help us see and think about the complexities of differently
abled bodies in Late Antiquity (broadly, from ca. 200 until ca. 750), the formative period for Christian art (and consequently for much of Western art). Disability Studies is an extremely active and rich body of literature and art that has not often been brought into conversation with historical periods of art, and so this seminar seeks to open up discussion of the insights possible from that conversation, not only how Late Antique art can be re-interpreted, but also how that period of art can reveal under-explored areas in the field of Disability Studies. The seminar will undertake a mutual interrogation of accepted notions in both fields and, in this way, to explore some new understandings of Disability Studies’ capacities for allowing us to think with our art, culture, and bodies. The means at our disposal for this seminar are art of Late Antiquity and of the contemporary world, and that idea of mutual interrogation also operates in our study and display of that art. The seminar will look at art of healing and recuperation, art produced by and directed at diversely-abled bodies, and at fragments and restoration, and think about art as documents, reflections, and determinants of those bodies, now and in the past. It will, for this reason, work around the collection of WCMA, with exhibition and collection research, and the historical archives of the Library holdings, so that the widest possible study of bodies and difference is opened for our thinking and dialogue.

Requirements/Evaluation: participation in discussion; three 1-2-page reading reports; one 3-5-page exhibition response; one 15-20-page final essay

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: senior art-history majors and graduate students; other students will need instructor consent

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Unit Notes: In this seminar, students will develop skills of crafting clear and persuasive arguments through an iterative writing process. Further, to help them achieve these goals, they will receive timely comments on their written work.

Winter Study  ---------------------------------------------------------------

REL 11  Explorations in Embodied Consciousness through Yoga and Meditation
Have you ever wondered what it means to say you are alive? Diverse yoga traditions have been exploring this question in depth for centuries. Yoga proposes we know existentially through experience, and we know intellectually with various forms of thought and language. This course emphasizes experiential explorations while introducing key terms from the tradition for orientation. We explore how experiential knowledge across the spectrum of our existence is indispensable to support positive transformation in our moment-by-moment lived, embodied experience. Yoga offers practical means for direct, experiential knowledge of ourselves specifically through meditation. This course begins with each participant undertaking individual, formal instruction in Neelakantha Meditation as taught in Blue Throat Yoga. In the first week of class, each participant will be scheduled for a one-hour time slot for this personal teaching to take place. This meditation is an easeful practice anyone can learn through this formal process of instruction. We then move as a class into explorations of embodied sensation in conjunction with practical, concrete anatomical information about muscles and bones, breathing and organs, mind and senses. Through practices of yoga asana, ballwork, body scan, breathing, journaling and savasana we gain access to embodied, experiential knowledge. Key select ideas from yoga tradition help us to name and register what is happening in our experience, like a map helping us know where we are in a territory. To further our understanding we read from the Recognition Sutras, a pithy tenth century yoga masterpiece from Kashmir. Each week we welcome a guest teacher sharing their expertise in practice and study. Out of class activities include online yoga anatomy course, anatomy coloring book, sutra text reading, personal embodied practice and journaling. Three two page journal entries and a final project presentation, video or paper is also required.
Requirements/Evaluation:   Other: Selected journal excerpts and option for presentation, performance, video or paper for final project.
Prerequisites:   None
Enrollment Limit:  12
Enrollment Preferences:   Demonstrated interest in embodied practices and reflective inquiry; interconnections and relevance of this course with the academic and campus life of the student.
Expected Class Size:  NA
Grading:
Unit Notes: Tasha Judson, M.Ed., E-RYT500 and director of Tasha Yoga, has taught yoga full time for over twenty years and travels regularly to India.  An authorized teacher of meditation, she is excited to bring her unique network of connections to this course.

REL 30  (W)  Senior Project: Religion
An advanced course for senior Religion majors (who are not writing theses) to further develop their senior seminar paper into a polished 25 page research paper (which will also be the focus of a brown-bag presentation during the spring semester). The course will help the students with general research methods, workshoppping, paper writing, and presentation practice.
Class Format: senior project
Requirements/Evaluation:  participation in research and writing workshops, completion of research project.
Prerequisites: REL 401
Enrollment Limit: 10
Enrollment Preferences: For senior religion majors
Expected Class Size: 10
Grading: pass/fail only
Not offered current academic year

REL 31 (W) Senior Thesis: Religion
Religion senior thesis.
Class Format: thesis
Grading: pass/fail only
Not offered current academic year

REL 99 (W) Independent Study: Religion
Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.
Class Format: independent study
Grading: pass/fail only
Not offered current academic year
MAJOR—French Language and Literature

The French major seeks to provide training in literary and cultural analysis and linguistic expression through the study of selected texts from the French-speaking world. Emphasis is placed on the changes in form and subject matter from the early modern period to the contemporary era.

The major consists of nine courses. One of these courses must be the 400-level senior seminar during the student's final year at the College.

Students entering the major program at the 200-level may, with the permission of the Department, choose as part of their major program, one course in Art History, History, Philosophy, Comparative Literature or other subjects that relate to and broaden their study of French. Students entering the major program at a very advanced level may, in some cases and with the permission of the Department, include two such courses in their major program.

Working with the major advisor, the student will formulate a curricular plan that will ensure balance and coherence in courses taken. Such balance and coherence will be based on the above areas of literary and cultural investigation. Prospective majors should discuss their program with the major advisor by the end of their sophomore year. This is especially imperative for students who are planning to spend a part or all of their junior year in France.

Inasmuch as all courses in French assume the active participation of each student in discussions conducted in the foreign language, regular attendance at class meetings is expected.

MAJOR—French Studies

The major in French Studies is an interdisciplinary program that provides students with the opportunity to acquire skills and knowledge embracing the cultural, historical, social, and political heritage of France and the Francophone world. The program allows for an individualized course of study involving work in several departments and the opportunity to study abroad.

Students electing the French Studies major should register with the French Studies faculty advisor during their sophomore year. At that time, they should submit a feasibility plan that articulates their projected program.

The French Studies major consists of ten courses satisfying the following requirements:

- at least five RLFR courses in French language, literature, film, or culture;
- the RLFR senior seminar during the student's final year at the College;

Electives: The remaining courses needed to complete the major must be drawn from at least three different departments and relate primarily to an aspect of the cultures, histories, societies, and politics of France and the Francophone world. These courses will be selected in consultation with members of the Department of Romance Languages. Appropriate electives might include:

- AFR 360 Political Thought Frantz Fanon
- ARTH 254 Manet to Matisse
- HIST 390 Haitian and French Revolutions
- RLFR 101-450 All courses in French and Francophone language, literature, film, and culture

THE DEGREE WITH HONORS IN FRENCH

Students majoring in French may apply to be admitted to the Honors Program in French upon demonstrating the following: (1) fluency of spoken and written language; (2) potential for successful independent research, as demonstrated by strong performance in advanced-level coursework; (3) interest and motivation; and (4) overall quality and feasibility of the proposal.

By May 15th of their junior year, candidates will have found a thesis advisor, and given the Department a three- to five-page proposal and a preliminary bibliography. (In some cases, and upon consultation with the Department, candidates will have the option to choose a second reader in addition to their primary advisor; for example, when the thesis is interdisciplinary enough in nature that it requires the expertise of an additional reader). This proposal will be discussed by the Department; by June 1st, the candidate will be informed whether they can proceed with the thesis, and
if so, what changes need to be made to the focus and scope of the project. The summer before the senior year will be spent reading, researching (in relevant archives or with field work), and compiling a more detailed bibliography.

Upon their return to Williams, candidates will devote to their theses two semesters of independent study (beyond the nine courses required for the major) and the winter study period of their senior year (493-W31-494). The thesis will be written in French and will usually not be shorter than fifty pages. By the end of the Fall semester, students will normally have a clear outline of the project, have done substantial research, and produced the draft of at least the first half of the project. During January this draft will be suitably rewritten and edited with a view to a final version, while the candidates will also begin work on remaining chapters.

Candidates will submit what they have written to the department on the last day of Winter Study.

On the Tuesday of the first week of the spring semester candidates will make a presentation of the project at a departmental colloquium in French. The thesis will be promptly discussed and evaluated to determine whether or not the student should continue in the honors program. The second semester of independent thesis work will be spent writing more chapters, as well as revising, rewriting, and polishing the project where necessary. The completed thesis in its final form will be due on April 25th. At the end of the Spring term, the student will present and defend the final project before members of the Department and others by invitation. The grade will be awarded once members of the Department have consulted after the defense.

THE CERTIFICATE IN FRENCH

The Certificate in French Language and Cultures consists of a sequence of seven courses for which the student must earn a cumulative grade average of B or higher.

For students with no prior study of French, the course sequence will consist of RLFR 101-102, RLFR 103, RLFR 104, and three additional courses, with at least one of these at the 200-level or higher taken at Williams. For students starting the sequence at RLFR 103 or higher, six additional courses must be taken, including at least three French courses at the 200-level or higher. For these students starting at French 103 or higher, two electives may be taken in other departments: one elective should be in French or Francophone culture (art, literature, theatre, music) and the other in French or Francophone civilization (history, political science, philosophy).

PLACEMENT

A placement test in French is administered at Williams at the opening of the fall semester. Incoming first-year students who register for any French course above the 101 level must take this test, regardless of their previous preparation.

STUDY ABROAD

We encourage all students of French to complement their courses at Williams with the life-changing experience of studying abroad in a Francophone country. In particular, French majors and certificate students are strongly advised to complete part of the requirements for the major or certificate by studying abroad, for either a semester or a year. Most study abroad programs require applicants to have completed a fifth-semester French course in college (French 105) or higher before they go abroad. Credit for up to a total of 4 courses towards the major or certificate can be granted for either a semester or a full year abroad, at the discretion of the Romance Languages Department. Students who are planning to get credit for their study abroad courses should meet with a French faculty member in advance, to review the courses they intend to take abroad. Normally, only courses that focus on French language or Francophone literature, history, politics, art, and culture may be counted towards the major or certificate. The final assignment of course credit will be authorized in consultation with the student’s French advisor, once the student has returned to Williams. Such credits can only be determined by review of course format, course materials, and evidence of satisfactory academic performance; students should thus provide not only their study abroad transcript, but retain course materials (including syllabi, papers, exams, and other projects) for potential review back at Williams. While students can gain credit for 100-, 200-, and 300-level courses during their time abroad, the 400-level senior seminar must be taken during the senior year at Williams. Early planning is essential: Students interested in studying abroad are strongly urged to attend the yearly Francophone Study Away Information Session (held each October) during their first year or sophomore year. Students will receive credit for only those study abroad programs recommended and approved by the Dean of Study Away and the Romance Languages Department. Williams has long-term affiliations with the following programs: Hamilton College (Paris), Sweet Briar College (Paris), CUPA (Paris), Middlebury College (Paris), Wellesley College (Aix-en-Provence), Boston University (Grenoble), and both SIT and CIEE (in Morocco, Senegal, and Madagascar). For more on all approved study-abroad programs, see the webpages for the French program (french.williams.edu) and Study Away (study-away.williams.edu/programs). Finally, the Department does not administer proficiency exams (for study abroad, fellowships, or job applications) to students who have not completed a French course at Williams; and most study abroad programs will not accept students who have not taken any college courses in French (at Williams) prior to their application. Students should thus plan well ahead (as early as their first year and sophomore year) to take appropriate courses at Williams, before applying for and taking part in study abroad programs in the Francophone world.
This year-long course offers a complete introduction to the French language and is designed to help you become fully conversant in French by focusing on four fundamental language skills: listening, speaking, reading, and writing. Through daily practice, class activities, interactive discussion, listening exercises, written work, reading assignments, and active engagement with music, video, and film, you will quickly gain confidence and increasing facility with your abilities to speak and understand both spoken and written French. In addition, our study of grammar, vocabulary, and communication skills will be organized around an engaging and dynamic introduction to a variety of French-speaking cultures around the world, from France and Belgium, to Québec and Martinique, to Sénégal and Morocco. Conducted in French.

Requirements/Evaluation: Active class participation, workbook exercises and compositions, chapter tests, midterm, and final exam.

Prerequisites: None. For students who’ve never formally studied French. Students who’ve previously studied French (in any formal course, at any level) MUST take the French Placement Test in the summer or during First Days. For more info: https://french.williams.edu

Enrollment Limit: 18

Enrollment Preferences: All are welcome, but if over-enrolled, preference will be given to first-year and second-year students and those with compelling justification for admission.

Expected Class Size: 18

Grading: yes pass/fail option, no fifth course option

Unit Notes: RLFR 101-102 is a year-long course. Credit is granted only if both semesters (RLFR 101 and 102) are taken. RLFR 101-102 students must also take the French Winter Study Course. This commitment to a year-long immersion in French is designed to help students become fully conversant in French by the end of the academic year.

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: Through its focus on French and Francophone cultures around the world, this course enables students to gain both linguistic and cultural proficiency, and to engage with the great diversity of colonial and post-colonial cultures, histories, and identities in France and Belgium, Québec and Martinique, Sénégal and Morocco.

Fall 2024

SEM Section: 01  M-F 10:00 am - 10:50 am  Brian Martin

RLFR 102  (S) Introduction to French Language and Francophone Cultures

This year-long course offers a complete introduction to the French language and is designed to help you become fully conversant in French by focusing on four fundamental language skills: listening, speaking, reading, and writing. Through daily practice, class activities, interactive discussion, listening exercises, written work, reading assignments, video-observations, and film-viewing, you will quickly gain confidence and increasing facility with your abilities to speak and understand both spoken and written French. In addition, our study of grammar, vocabulary, and communication skills will be organized around an engaging and dynamic introduction to a variety of French-speaking cultures around the world, from France and Belgium, to Québec and Martinique, to Sénégal and Morocco. Conducted in French.

Class Format: This class meets 5 times a week from M-F. Students are required to attend class from Monday to Friday.

Requirements/Evaluation: participation, daily homework including weekly short writing assignments, oral and written mid-semester and final exams

Prerequisites: RLFR 101, or by Placement Test, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Preference will go to first- and second-year students and those with compelling justification for admission. Statement of interest solicited if overenrolled.

Expected Class Size: 18

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Spring 2025

LEC Section: 01  M-F 10:00 am - 10:50 am  Sophie F. Saint-Just

RLFR 103  (F) Intermediate Studies in French Language and Francophone Cultures

As a continuation of French 101-102, this dynamic first-semester intermediate course is designed to help you improve your French, while at the same
time learning more about French and Francophone cultures, politics, literature, and film. Through the active study and daily practice of listening, speaking, reading, and writing in French, you will: continue developing your communication skills and learn to express your opinions and ideas; improve your command of spoken and written French through a revision of important grammatical structures; strengthen your reading and writing skills in order to prepare you for further study of literary texts; and develop an increased vocabulary and cultural appreciation of French-speaking cultures around the world.

Class Format: This class is scheduled to meet 5 times a week. Students will meet with the instructor 3 times a week, with the French TA once a week, and will do guided group work once a week.

Requirements/Evaluation: Class participation, Homework, Regular tests, Short Writing Assignments and Final Exam.

Prerequisites: RLFR 101-102, or by Placement Test, or Permission of Instructor

Enrollment Limit: 18

Enrollment Preferences: All are welcome, but if over-enrolled, preference will be given to first-year and second-year students and those with compelling justification for admission.

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Distributions: (D1)

Fall 2024
SEM Section: 01  M-F 9:00 am - 9:50 am  Preea Leelah
SEM Section: 02  M-F 10:00 am - 10:50 am  Preea Leelah

RLFR 104  (S) Intermediate French II: Advanced Intermediate Studies in French

As a continuation of French 103, this course will help students gain greater fluency in French, through an exploration of French and Francophone literature, film, media, politics, and culture. With a focus on listening, speaking, reading, and writing, students will review advanced grammar expand their vocabulary, gain greater confidence, and both discuss and debate central questions in the social, political, and cultural landscape of French-speaking communities in Europe, Africa, and the Caribbean.

Requirements/Evaluation: Participation, Homework, Writing Assignments, Quizzes, Final Project.

Prerequisites: RLFR 103, or by Placement Test, or Permission of Instructor.

Enrollment Limit: 18

Enrollment Preferences: Enrollment preference for students who completed RLFR 103 in Fall 2024, or those who have placed into RLFR 104 on the French Placement Test.

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Distributions: (D1)

RLFR 105  (F) Advanced French: Advanced Studies in French Language and Francophone Culture  (DPE) (WS)

In this French course, we will read and examine literary texts from the twelfth to the 19th centuries, and films from the twentieth and twenty-first centuries. In order to analyze them, we will briefly situate them in their social and historical contexts. These works will help us better understand contemporary France and explore France's colonial past. We will also learn how to write two short research paper in French in the form of an explication de texte. While the themes, authors, time periods will vary, our approach will remain the same. Three themes, love, fear, and France's colonial past, will serve as the course's organizing principles. A small section of the course will be devoted to grammar revisions in order to continue to improve our reading and language skills. Throughout the semester we will develop our writing skills in French. Conducted in French

Requirements/Evaluation: class participation, online grammar exercises, 2 four-page papers, 1 class introduction, 2 low-stakes one-page response papers
Prerequisites: RLFR 104, placement exam, or by permission of instructor

Enrollment Limit: 15

Enrollment Preferences: All are welcome, but if overenrolled, preference will be given to first- and second-year students and French major and certificate students. If necessary, a statement of interest will be solicited.

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE) (WS)

Writing Skills Notes: In this course students will practice writing two short structured papers in French where there will present their interpretation of literary or visual text. Students will write two response papers.

Difference, Power, and Equity Notes: In this course student will examine visual and literary texts that reframe difference, power and equity in relation to race, class, gender, ethnicity, sexuality, and religion.

RLFR 106 (S) Advanced French: Danger and Desire in French Film and Fiction (DPE)

Cross-listings: COMP 107

Primary Cross-listing

This is an advanced course in French language designed to help you improve your speaking, comprehension, reading, and writing, through the dynamic study of short literary texts and films focusing on danger and desire in nineteenth-, twentieth-, and twenty-first-century France and the Francophone World. Through active discussion and debate, textual and cinematic analysis, grammatical review, and careful writing and revision, you will improve your command of spoken and written French, strengthen your ability to express complex ideas, expand your vocabulary, and deepen your understanding of French and Francophone fiction, film, and cultures. This is an ideal course to prepare for study abroad or for more advanced coursework in French and Francophone literature and cinema. As a focus for improving your French, we will examine a broadly range of texts and films on danger and desire in France, Québec, and Algeria from 1820 to 2025, with an emphasis on passion and ambition, infatuation and seduction, betrayal and vengeance, courage and cruelty, warfare and resistance. Works to include nineteenth-century texts by Chateaubriand, Duras, Balzac, Mérimée, Flaubert, Maupassant, Zola; twentieth-century texts by Colette, Camus, Sartre, Beauvoir, Duras, Ernaux, Guibert, Quint, Lindon, Vilrouge; and twenty-first-century films by Caron, Ozon, Ducastel, Martineau, Dercourt, and Becker. Conducted in French.

Requirements/Evaluation: Active class participation, grammar exercises, midterm exam, and two papers.

Prerequisites: Exceptional performance in RLFR 104; successful performance in RLFR 105; or by placement test; or permission of the instructor.

Enrollment Limit: 16

Enrollment Preferences: All are welcome, but if over-enrolled, preference will be given to French Majors and French Certificate students.

Expected Class Size: 16

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

COMP 107(D1) RLFR 106(D1)

Difference, Power, and Equity Notes: This course centers on a critical examination of difference, power, and equity in French film and fiction. The content examines the effects of class, ethnicity, gender, and sexuality on social inequalities among rich and poor, soldiers and civilians, nations and colonies, men and women. The course employs critical tools to teach students how to articulate and interrogate social injustice, through reading, viewing, discussion, writing, and revision.

Spring 2025

SEM Section: 01 TR 9:55 am - 11:10 am Brian Martin

RLFR 107 (S) Advanced French: Formation and Transformation (DPE)
This advanced course is designed to help you refine your French speaking, comprehension, and writing skills in preparation for studying abroad or for more advanced French coursework. We will explore the themes of formation (the French term that means at once education and training) and personal transformation, through fictional and autobiographical texts and films. How do individuals find their place in societies and both define and redefine their own identities? Is it possible to reflect critically on one's own formation, or is it easier to do so through works of fiction? We will also reflect on our own educational experiences as we read works by authors such as Marguerite Duras, Maryse Condé, Annie Ernaux, and Pierre Bourdieu, and watch both recent and classic films from 1950s France to 2020s Québec.

Requirements/Evaluation: One close-reading presentation and essay, one discussion-leading presentation, two analytical essays, final project

Prerequisites: Successful performance in RLFR 105 or 106, or by placement test, or permission of the instructor.

Enrollment Limit: 20

Enrollment Preferences: Students from all majors welcome, but if over-enrolled, preference will be given to French majors and certificate students.

Expected Class Size: 20

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: This course explores questions of difference, power, and equity through a critical analysis of educational systems in France and the Francophone World. Although education is assumed to create equity (in both France and in North America), the content of this course will help students nuance this view and articulate how different social identities are often excluded from the power and opportunity that education seems to promise.

Not offered current academic year

RLFR 206 (S) The Outsider in French & Francophone Film Adaptations of Literary Texts (DPE)

Cross-listings: COMP 209

Primary Cross-listing

In this course students will examine the figure of the outsider (queer, black, woman, intruder, loner) in several French and Francophone literary texts and their film adaptations and will explore questions such as: how are such outsiders translated onto the screen? To what extent does outsider status help maintain, challenge, or reveal hegemonic discourse? In what ways do non-Western and Western filmmakers (re)cast power and privilege through the figure of the outsider in their film adaptations (of Western canonical texts)? Students will read original French and Francophone literary texts and apply theories of film adaptation to their analyses.

Requirements/Evaluation: Three response papers, one short essay on film adaption, one video essay with a student partner

Prerequisites: Students should have taken RLFR 105 or above, or placement test, or by permission of instructor

Enrollment Limit: 16

Enrollment Preferences: Comparative Literature majors, Africana Studies concentrators, French majors and certificates

Expected Class Size: 12

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLFR 206(D1) COMP 209(D1)

Difference, Power, and Equity Notes: This course fulfills the DPE requirement because it focuses via the figure of the outsider on power dynamics (based on sexual identity race, class, gender) between cultural producers in literary texts and their film adaptations.

Attributes: FMST Core Courses

SEM Section: 01 TR 11:20 am - 12:35 pm Sophie F. Saint-Just

RLFR 213 (F) Francophone North America in the 21st Century: Revendications, réparations et retrouvailles

This course investigates post-2000 productions from Acadie, Haiti, Louisiana, and Quebec to examine the socio-literary changes and the current phenomenon of "L'Archipel linguistique." Looking at the concept of "Retrouvailles," or the gathering of Francophone regions through literary expression
in a largely Anglophone continent, we will examine how literature depicts current affairs, as well as what it can do to produce change. In addition to novels and films, we will rely on radio shows, news pieces, and TV shows to get a broader picture of the present stakes. All course discussions will be in French. Topics will include socio-political and cultural issues, (neo)colonialism, activism, linguistic insecurity, and race relations as they are addressed in visual art, music, and literature. Some of the texts covered in this course are *Kukum* (2019) by Michel Jean, *L’Enigme du retour* (2009) by Dany Laferrière, *Ô Malheureuse* (2019) by Ashlee Michot, *Suite des sens* (2023) by Jean Arceneaux, *Alma* (2006) by Georgette LeBlanc. Conducted in French.

**Requirements/Evaluation:** Evaluation is based on active in-class engagement, two short written compositions, two short presentations, and a final project.

**Prerequisites:** French 105 or 106, or results of the Williams College French Placement Test, or permission of instructor.

**Enrollment Limit:** 20

**Enrollment Preferences:** Preference given to French majors or French certificate students and Comp Lit majors.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1)

Not offered current academic year

---

**RLFR 216 (S) Women Behaving Badly: Deviant Women in Early Modern French Literature** (DPE)

**Cross-listings:** WGSS 216

**Primary Cross-listing**

Female deviance often implies resisting a dominant and oppressive patriarchal status quo embedded within cultural and historical backgrounds. This course explores female characters in early modern French literature who refuse to conform to established gender roles. Defying social constructs of femininity, through either judicious negotiations or more aggressive and violent behavior, is an important trope in the writings of both male and female authors of the seventeenth and eighteenth centuries. What constitutes deviant behavior, however, depends on social definitions of gender roles, which evolve over time. In this course, we will first examine women's place within the historical and socio-cultural context of the Ancien Régime, which will lead to an examination of female behavior censured during the seventeenth and eighteenth centuries. We will then reflect on how we, as modern readers, perceive such deviancy at it relates to the past. Finally, we will discuss the relevance of studying deviant women in light of current events, such as the #MeToo movement, which has led to a new level of consciousness and empathy for the plight of marginalized groups. Potential readings to include Corneille's *Médée*, Madame de la Fayette's *Princesse de Clèves*, Laclos's *Liaisons dangereuses*, and Isabelle de Charrière's *Lettre à Mistriss Henley*.

**Requirements/Evaluation:** active class participation, one presentation (8-10 minutes), three to four papers (3-5 pages), and a longer final paper

**Prerequisites:** strong performance in RLFR 105; successful performance in RLFR 106; or by French placement exam; or by permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** French majors and certificate students; Comparative Literature majors; Women's, Gender and Sexuality Studies majors; and those with compelling justification for admission

**Expected Class Size:** 15

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 216(D2) RLFR 216(D1)

**Difference, Power, and Equity Notes:** This course focuses on a critical examination of difference, power, and equity in early modern France. Through the study of deviant women, the course thus challenges students to examine the effects of class, race, ethnicity, gender, and sexuality in narratives on women, misogyny, and criminality.

Spring 2025

SEM Section: 01 TR 9:55 am - 11:10 am Preea Leelah

---

**RLFR 217 (F) Fierté, Sororité, Vitalité: Trans and Non-Binary Narratives of Francophone Expression**
Ten years have passed since Time magazine announced to the world with its June 2014 cover story that the "Transgender Tipping Point" was upon us. The cover spoke to a nation confronting transgender equality as "America's Next Civil Rights Frontier." While this "tipping point" is perhaps salient in the United States, trans(gender), non-binary, and genderqueer identities have world histories with their own vocabularies, knowledge systems, and critiques of normativities. As an important branch of feminist, gender, and sexuality studies, transgender studies continue to revolutionize intersectional inquiry and activist initiatives. In this course, students will explore the genealogical roots of Francophone trans literatures, art, and media as they overlap with fields like critical race studies, Indigenous studies, medicine and technology, carcerality, care, sex work, and entertainment. This course provides an introduction trans studies and trans of color critique and focuses particularly on the contemporary period to gives students insight into the ongoing debates that structure the field and its near future. The course will also have a strong focus on genre and medium as students engage with visual art collections (Kehinde Wiley's Tahiti and Namsa Leuba's Illusions), documentary film (Véronique Kanor's Les femmes viennent aussi de Mars), serial web comics (Sophie Labelle's Assignée garçon), podcasts (Lauren Bastide's La Poudre with Paul Preciado), poetry and performance art (Kama La Mackerele's Zom-Fam), short stories (Chantal Spitz's "Joséphine" and Magali Nirina Marson's "Je me déserte..."), and novels (Ananda Devi's Le rire des déesses, Emmanuelle Bayamack-Tam's Arcadie, and Abdellah Taïa's Un pays pour mourir). Conducted in French.

Requirements/Evaluation: Evaluation will be based on active participation and preparation, one presentation, one short essay, one multimedia midterm project, and a final paper.

Prerequisites: French 105 or 106, or results of the College Placement Exam, or permission of instructor.

Enrollment Limit: 20

Enrollment Preferences: Fench majors and certificate students.

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

RLFR 225 (F) Remembering the Great War: The First World War in Literature and Film (DPE)

Cross-listings: COMP 224

Secondary Cross-listing

From 1914 to 1918, the First World War ravaged Europe and slaughtered millions of soldiers and civilians from across the globe. Known as the "war to end (all) war(s)," World War I set the stage for an entire century of military conflict and carnage. New technologies led to unprecedented violence in the trenches, killing and wounding as many as 41 million soldiers and civilians. Beyond the slaughter at the front, the Great War also led to the global influenza pandemic that claimed up to 50 million lives, and the Armenian genocide that presaged the later atrocities of the Holocaust. The war also led to massive political transformation, from the Irish Rebellion and Russian Revolution, to the collapse of the German, Russian, Austro-Hungarian, and Ottoman Empires, and the redrawing of national borders across Europe and the Middle East. Even the end of the war with the Treaty of Versailles lay the groundwork for new animosities that would lead to the Second World War just two decades later. However, the First World War also inspired great social change, from the emergence of the United States as a global leader and the founding of the League of Nations, to growing discontent with colonial rule in Asia and Africa, and greater power for women whose wartime labor influenced the post-war passage of their right to vote in countries across Europe and North America. In our study of the Great War, we will examine texts and films that bear witness to the suffering and courage of soldiers and civilians, and consider the legacy of the war in the twentieth- and twenty-first centuries. Readings to include memoirs and novels by Barbusse, Barker, Brittain, Cocteau, Graves, Hemingway, Jünger, Remarque, Wharton, Woolf; poetry by Apollinaire, Brooke, Mackintosh, McCrae, Owen, Sassoon; films by Attenborough, Boyd, Chaplin, Jeunet, Ozon, Renoir, Trumbo, Walsh, Weir; and archival materials on the roles of Williams students and faculty during the First World War. Readings and Discussions in English.

Requirements/Evaluation: Active class participation, two shorter papers (4-5 pages), a midterm, and a longer final paper (5-7 pages).

Prerequisites: None.

Enrollment Limit: 16

Enrollment Preferences: All are welcome, but if the course is overenrolled, preference will be given to Comparative Literature majors and French majors and certificate students; if the course is over-enrolled, students will submit a form online.

Expected Class Size: 16

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
**COMP 224(D1) RLFR 225(D1)**

**Difference, Power, and Equity Notes:** As the course description explains, this course centers on a critical examination of difference, power, and equity during WWI. The content examines the effects of class, race, ethnicity, gender, and sexuality on social inequalities among soldiers & civilians, nations & colonies, men & women. The course also employs critical tools to teach students how to articulate and interrogate the social injustices of the Great War, from reading & discussion, to analytical essays & archival investigation.

*Not offered current academic year*

**RLFR 229    Black Outside the U.S.**

This course explores multiple ways Black identity evolves, adapts and is experienced differently depending on location. Students analyze Black experience in the U.S., France and Senegal through a range of texts from books and social media to music and film. One key aspect of the course is a study abroad trip to Senegal, which increases cultural awareness through experiential learning. This combination of textual learning with experiential knowledge exemplifies how language, religion, gender, geography, and performance shape one’s racial identity. In the first section of the course, students investigate Black experience in the U.S., focusing on such topics as the one-drop rule, racial profiling and where mixed people fit within Black/White tensions. The second section highlights the politics of language in France. Students explore how words like “Black,” “noir” and “race” have strong political connotations in France and spur both resistance to and alliance with Black American civil rights history. In the third part of the course, students visit Dakar, Senegal, and analyze Blackness through their own observations and encounters. Their trip insights jumpstart the final focus of the course on Senegal. Students investigate the influence of French colonialism on Black identity in Senegal, which makes the two geographical experiences of Blackness very different but still forever linked.

**Class Format:** seminar, the course includes a required spring break trip to Dakar, Senegal, which is no additional cost to students

**Requirements/Evaluation:** evaluation will be based on class participation, short weekly reading responses, two 4-5 page papers, a presentation based on the spring break trip, and a final presentation including a short 2-page report

**Prerequisites:** none

**Enrollment Limit:** 8

**Enrollment Preferences:** students who have taken other AFR courses, Francophone speakers and students

**Expected Class Size:** 8

**Grading:**

**Distributions:** (D2)

**Attributes:** AFR Core Electives GBST Borders, Exiles + Diaspora Studies

*Not offered current academic year*

**RLFR 232  (S)  Liberté, Egalité, Fraternité ? Race, Gender, and Political Power in Eighteenth-Century France**  (DPE)

**Cross-listings:** COMP 219

**Primary Cross-listing**

The French Revolution of 1789 was, to a large extent, inspired by Enlightenment thinkers such as Voltaire, Rousseau, and Diderot who promoted ideas on individual liberty, scientific progress, religious freedom, and secularism. The Revolution brought with it promises of a society freed from the abuses of an absolute monarchy. Yet as feminist thinker Olympe de Gouges would note, when France redefined its notion of citizenship after 1789, it did not include women and people of color. This course examines Enlightenment ideas that led to the French Revolution, while analyzing how those ideas failed to bring true equality. Voltaire, Buffon, and Montesqueieu all advocated for the abolition of slavery, but they also held racist and sexist views, justified by pseudoscientific discourse. By further juxtaposing these thinkers with feminist and abolitionist authors such as Olympe de Gouges and Claire de Duras, we will examine how eighteenth-century female authors advocated for the rights of women. Finally, we will analyze artworks such as Marie-Guillelmine Benoist's *Portrait d'une nègresse* (1800) and discuss how France is using such works today to reckon with its history of discrimination.

**Requirements/Evaluation:** active class participation, one presentation (8-10 minutes), three to four papers (3-5 pages), and a longer final paper

**Prerequisites:** excellent performance in RLFR 105; successful performance in RLFR 106; other RLFR 200-level courses; or by French placement exam; or by permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** French majors and certificate students; Comparative Literature majors; and those with compelling justification for admission

**Expected Class Size:** 20
RLFR 232 (D1) COMP 219(D1)

**Difference, Power, and Equity Notes:** In its focus on Race, Gender, and Political Power, this course centers on a critical examination of difference, power, and equity in eighteenth-century France. Through the study of enlightenment and feminist thinkers and leaders, the course asks students to analyze the social, political, and discursive effects of class, race, ethnicity, gender, and sexuality in narratives on revolution, and to re-examine both past and present definitions of "liberty, equality, fraternity."

Not offered current academic year

**RLFR 234 (S) Francophone Oceania: The Other Side of the Postcard**

Manava i Te Ao Ma'ohi! Tongan-Fijian author Epeli Hau'ofa writes: "Centuries before Europeans entered the Pacific, in the days when boundaries were not imaginary lines in the ocean but points of entry that were constantly negotiated and even contested, the sea was open to anyone who could navigate a way through." Of critical importance to Oceanian communities and scholarship today is the project of remembering and re-membering the stories, knowledges, travel routes, and more-than-human ecologies that have crisscrossed the vast aqueous landscapes of this "other" side of the globe. This course is a comprehensive survey of the literature, modern history, and aesthetics that inform the field of contemporary Francophone Oceanian Studies. Major concepts in Indigenous Oceanian philosophy and genealogies of thought (from Ma'ohi, Kanak, and Ni-Vanuatu communities in particular), European imperialism and racial politics, gender and sexuality, maritime knowledges, the French nuclear agenda and climate fiction will be studied. Students will use multimedia formats and storytelling techniques to cross-examine narrative development, philosophy, and Oceanian history from a comparative perspective. Texts may include: Dèwé Gorodé's *Sous les cendres des conques* (1985), Chantal T. Spitz's *L'île des rêves écrasés* (1991), Claudine Jacques' *L'Âge du perroquet-banane, Parabole païenne* (2002), Ari'irau's *Matamimi ou la vie nous attend* (2006), Nicholas Kurtovitch's *Dans le ciel splendide* (2015), Titaua Peu's *Pina* (2016), and Titaua Porcher's *Hina, Maui et compagnie* (2018) among others. Conducted in French.

**Requirements/Evaluation:** Evaluation will be based on active participation and preparation, two short presentations, a guided journal, and a final project.

**Prerequisites:** RLFR 105 or 106; or results of the College Placement exam; or permission of Instructor.

**Enrollment Limit:** 20

**Enrollment Preferences:** French majors and certificate holders

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

Not offered current academic year

**RLFR 260 (F) Francophone Graphic Novels (DPE)**

**Cross-listings:** COMP 260

**Primary Cross-listing**

In this class we will read contemporary graphic novels and bandes dessinées from Côte d'Ivoire, Morocco, Guadeloupe, Lebanon, France, and Québec to analyze how they approach subjects such as colonial history, migration and discrimination, gender and sexuality, and representations of disability and the racialized body. We will pay particular attention to the visual form and the critical theory of the graphic novel to further understand why this hybrid genre has become so popular and widespread, and how it is shaping conversations about difference and power in the Francophone world. *Conducted in French.*

**Requirements/Evaluation:** weekly 1-page response papers, midterm 4-5-page paper, presentation and final 7-8-page research paper

**Prerequisites:** RLFR 105, 106, by placement or by permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** French majors and certificate students, Comparative Literature majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (DPE)
Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

COMP 260(D1) RLFR 260(D1)

Difference, Power, and Equity Notes: The readings in this course focus on French colonial and Francophone postcolonial history, contemporary migration, and structures of discrimination built on race, religion, gender, and ableism in the French-speaking world. We will explore how graphic novels in their hybrid visual/verbal forms propose different ways of shaping the dynamics and the discourse of difference and power.

Fall 2024

SEM Section: 01    TR 9:55 am - 11:10 am    Katarzyna M. Pieprzak

RLFR 262  (S)  Lâche pas la patate: Francophone Culture in Louisiana

The expression "Lâche pas la patate," or "don't drop the potato" is a way of saying "don't ever stop speaking French in Louisiana." This begs the question: why preserve a language? In Louisiana, Francophone activists have been fighting to preserve their unique dialect of French--or what Professor Barry Jean Ancelet calls "the problem language"--for decades. By promoting the education and use of French in the state, what else are they preserving? From historical, thematic, and literary perspectives, this course is designed to provide an answer to such questions through the examination of Francophone Louisiana from its foundation as a French colony to today. In this course, we rely on contemporary publications and media in French to get a broader picture of the current stakes in Francophone Louisiana. Topics will include sociolinguistics, race relations, creolization, activism, and Americanization. Primary sources include rituals, cartoons, films, memes, music, literature, and cuisine. Texts and media (such as films and podcasts) included are *Les Aventures de Boudini et ses amis*, *Tout bec doux*, *Ô Malheureuse*, *Film Quest*, *L'Habitation Saint-Ybars*, *Bayou zen*, *Finding Cajun*, *Mille misères La Veillée*, *Charrer-Veiller*, *Feux Follets*, *Istrouma : Manifeste Houma*. Conducted in French.

Requirements/Evaluation: Evaluation is based on active in-class engagement, a mid-term exam, two short presentations, and a final research project.

Prerequisites: French 105 or 106; or results of the College Placement Test, or permission of instructor.

Enrollment Limit: 20

Enrollment Preferences: French majors/certificate students, comp lit majors.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

RLFR 307  (F)  Building Francophone Cities: Literature, Art and History  (DPE)

Cross-listings: COMP 308

Primary Cross-listing

Through literature, visual art, and urban history, this class will engage with the remarkable histories, presents and imagined futures of five Francophone cities: Casablanca (Morocco), Algiers (Algeria), Kinshasa (Democratic Republic of the Congo), Fort-de-France (Martinique) and Port-au-Prince (Haiti). We will learn about their colonial foundations and postcolonial transformations while paying attention to how these urban spaces and their people and histories are represented and imagined by poetry, novels, and visual art. (Conducted in French)

Requirements/Evaluation: Active participation, weekly 1-page response papers, midterm 5-page paper, final project (oral presentation and 8-page paper).

Prerequisites: RLFR 105 or above, or by permission of instructor

Enrollment Limit: 18

Enrollment Preferences: French majors or certificate students, Comp. Lit. majors

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLFR 307(D1) COMP 308(D1)
This course examines the French colonial history and postcolonial futures of five major Francophone cities and pays particular attention to questions of representation of class, race and gender in the historical, literary and visual record.

Not offered current academic year

RLFR 316  (F)  Paris on Fire: Incendiary Voices from the City of Light  (DPE)

Cross-listings:  WGSS 315 / COMP 314

Primary Cross-listing

During the 1830s, Honoré de Balzac described Paris as a “surprising assemblage of movements, machines, and ideas, a city of one hundred thousand novels, the head of the world,” but also characterized the French capital as a “land of contrasts,” a “monstrous wonder,” a “moral sewer.” Similarly, writers from Victor Hugo to Émile Zola have simultaneously celebrated Parisian elegance and condemned the appalling misery of Paris’s urban poor. Since 1889, Paris has been feted as the “City of Light” for its Enlightenment legacy, Eiffel Tower modernity, and luminous energy, captured in countless paintings, photographs, and film. However, Paris is also the site of revolution, resistance, and riots. From revolutionary revolt (1830, 1848, 1871), to wartime resistance (1870, 1914-18, 1940-44), to reformist and race riots (1968 and 2005), Paris has repeatedly sparked with incendiary passion and political protest. As fires raged during the 2005 riots, many heard the echo of Hitler’s 1944 question, “Is Paris burning?” and asked: why was Paris burning again at the dawn of the twenty-first century? Following the 2015 terrorist attacks, many wondered yet again what the future would hold for the City of Light. To answer these questions, we will examine the social, political, and literary landscape of Paris during the nineteenth, twentieth, and twenty-first centuries, from urbanization and modernization, to occupation and liberation, to immigration and globalization.

Readings to include poetry, short stories, and novels by Hugo, Balzac, Baudelaire, Maupassant, Verne, Zola, Apollinaire, Colette, Duras, Perec, Rochefort, and Charef. Films to include works by Clair, Truffaut, Godard, Minnelli, Clément, Lelouch, Luhrmann, Kassovitz, Besson, and Jeunet.

Conducted in French.

Requirements/Evaluation:  Active class participation, midterm exam, and two papers.

Prerequisites:  Strong performance in RLFR 106, or another RLFR 200-level or 300-level course, or permission of the instructor.

Enrollment Limit:  16

Enrollment Preferences:  French Majors and French Certificate students, Comparative Literature Majors.

Expected Class Size:  16

Grading:  yes pass/fail option,  no fifth course option

Distributions:  (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLFR 316(D1) WGSS 315(D2) COMP 314(D1)

Difference, Power, and Equity Notes:  This course examines the operations of difference, power, and equity in French film and fiction, history and politics, art and culture, from 1830 to 2025. In readings, lectures, and discussions, we will look at how class, ethnicity, gender, and sexuality structure the lives and struggles of the working class and urban poor, women and men, migrants and immigrants. Students will learn critical tools to better understand and interrogate social inequity and injustice.

RLFR 318  (F)  Twentieth-Century French Novel: From Adversity to Modernity  (DPE)

Cross-listings:  COMP 318

Primary Cross-listing

In his futurist novel Paris in the Twentieth Century (1863), Jules Verne envisions an era of technological superiority, complete with hydrogen cars and high-speed trains, televisions and skyscrapers, computers and the internet. But in Verne’s vision of modernity, technological sophistication gives way to intellectual stagnation and social indifference, in a world where poetry and literature have been abandoned in favor of bureaucratic efficiency, mechanized surveillance, and the merciless pursuit of profit. To contest or confirm this dystopic vision, we will examine a broad range of twentieth-century novels and their focus on adversity and modernity. In a century dominated by the devastation of two World Wars, the atrocities of colonial empire, and massive social and political transformation, the novel both documented and interrogated France’s engagement with race and
ethnicity, gender and sexuality, colonialism and immigration. Within this historical context, we will discuss the role of the novel in confronting war and disease, challenging poverty and greed, and exposing urban isolation and cultural alienation in twentieth-century France. Readings to include novels by Colette, Genet, Camus, Duras, Ernaux, Guibert, Begag. Lectures to include discussions of Gide, Proust, Sartre, Beauvoir, Cixous, Foucault, Jelloun, Djébar. Films to include works by Fassbinder, Annaud, Lioret, Ducastel, Martineau, Téchiné, Charef. Conducted in French.

Requirements/Evaluation:  
Active class participation, two shorter papers, a midterm, and a longer final paper.

Prerequisites: A 200-level course (at Williams or abroad), or by placement test, or permission of the instructor.

Enrollment Limit: 16

Enrollment Preferences: French majors and certificate students, Comparative Literature majors, and those with compelling justification for admission. Seniors returning from Study Abroad (in France or other Francophone countries) are particularly welcome.

Expected Class Size: 16

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

COMP 318(D1) RLFR 318(D1)

Difference, Power, and Equity Notes: As the course description explains, this course focuses on a critical examination of difference, power, and equity in twentieth-century France. The course also employs critical tools to teach students how to examine the roles of race and ethnicity, gender and sexuality, colonialism and immigration, in the French novel's critical representation of war and disease, poverty and greed, urban isolation and cultural alienation during the twentieth-century.

Not offered current academic year

RLFR 320 (F) Transcending Boundaries: The Creation and Evolution of Creole Cultures (DPE)

Cross-listings: COMP 310 / GBST 306 / AFR 306

Primary Cross-listing

Born out of a history of resistance, Creole cultures transcend racial boundaries. This course provides a comprehensive framework for understanding the creation of Creole nations in various parts of the world. Beginning with an examination of the dark history of slavery and French colonialism, we will reflect upon the cultural transformation that took place when people speaking mutually unintelligible languages were brought together. We will then delve into the study of how deterritorialized peoples created their languages and cultures, distinct from the ones imposed by colonizing forces. As we journey from the past to the present, we will also explore how international events such as a worldwide pandemic, social justice, racism, and police brutality are currently affecting these islands. Potential readings will include prominent authors from different Creole-speaking islands, including Frantz Fanon and Aimé Césaire from Martinique, Maryse Condé from Guadeloupe, Ananda Devi from Mauritius and Jacques Roumain from Haiti. Conducted in French with introductions to different creoles.

Requirements/Evaluation: Active class participation, three papers (of 3-4 pages each), presentation, final research paper (7-8 pages)

Prerequisites: Any RLFR 200-level course or above, or by permission of instructor.

Enrollment Limit: 18

Enrollment Preferences: All are welcome. If overenrolled, preference will be given to French majors and certificate students; Comparative Literature majors; Africana Studies students; Global Studies students; and those with compelling justification for admission

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

COMP 310(D1) RLFR 320(D1) GBST 306(D2) AFR 306(D2)

Difference, Power, and Equity Notes: This course qualifies for a Difference, Power, and Equity requirement because it examines the history of slavery as related to French colonialism in different parts of the world. It also considers International issues of social justice, racism and police brutality.

Not offered current academic year

RLFR 330 (S) Unveiling Herstory: Heroines of the Francophone Enlightenment (DPE)

On May 10, 2022, Paris unveiled the first statue of a black woman, Solitude, an emblematic figure of courage and resilience in the eighteenth-century
fight against slavery in Guadeloupe. Against the backdrop of the contemporary French movement wherein statues of Enlightenment thinkers like Diderot, Rousseau, and Voltaire have been vandalized and sparked intense debates on memory and politics, Solitude's recognition adds a profound dimension. Once revered as iconoclastic and progressive these male figures have in recent years been scrutinized for perpetuating ideals associated with white male hegemony, challenging conventional notions of freedom and equality. This tutorial invites students to reevaluate the Enlightenment movement, navigating beyond traditional narratives centered around male figures like Voltaire and Rousseau. It explores the transformative era post-French Revolution, shining a spotlight on the exceptional contributions made by women who defied societal norms within the eighteenth-century francophone world. Adopting a global perspective, the course not only examines events in France but also delves into its former colonies, particularly Haiti and Guadeloupe. By scrutinizing literary and ethnographic texts, as well as visual imagery, the course unravels the stories of remarkable women like Charlotte Corday, a key influencer during the Reign of Terror, and Sanité Belair, an active participant in the Haitian Revolution. The overarching goal is to underscore the significant roles and contributions of these women, often marginalized in historical narratives. Moreover, the course addresses the impact of archival gaps, shedding light on how the destruction of judicial archives by the French in their former colonies has shaped the remembrance of figures like Solitude and Belair.

Prerequisites: Any RLFR 200-level course or above, or by permission of instructor.

Enrollment Limit: 10

Enrollment Preferences: All are welcome. If overenrolled, preference will be given to French majors and certificate students; and those with compelling justification for admission

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: This course examines the history of slavery and French colonialism. It also explores issues of female empowerment, racism, social justice and equity.

RLFR 360 (F) Repairing a Broken World: Intro to North African Contemporary Art (DPE)

Cross-listings: ARTH 460 / ARTH 560 / ARAB 360 / COMP 361

Primary Cross-listing

How do artists respond to a world in crisis? How does visual art engage violent histories, injured bodies, social injustice and ecological disaster? In this course we will explore the political and ethical concept of repair as it emerges in the work of contemporary North African visual artists. Repair is both a material and symbolic transformational practice of putting together something that is torn or broken. It is never complete, nor does it redeem a history of harm or violence. Rather repair is an invitation: a bringing of people, histories, objects, buildings, feelings and geographies into relation with one another in order to link worlds that have been splintered and separated. It is also a call to imagine other futures. North African contemporary artists have deeply engaged in this type of repair work, attending to colonial history, economies of extraction and environmental damage, race and slavery, housing inequity, gender identity and broken transmission of memory. We will dive into the work of individual artists as well as collectives while reading theoretical texts about broken-world thinking, reparative epistemology, alternative archives, and material reparations.

Class Format: Conducted in French.

Requirements/Evaluation: For undergrads: Active participation, 8 1-page response papers, 5-page mid-term paper, 10-12 page final paper and presentation. For grad students: Active participation, 8 response papers, 5-page mid-term paper, and 20-page final paper and presentation.

Prerequisites: Any RLFR 200-level course or above, or by permission of instructor.

Enrollment Limit: 18

Enrollment Preferences: If over-enrolled, preference will be given to RLFR, ARAB, ARTH and COMP majors, and only 2 spots will be offered to Grad Art students.

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
**RLFR 378 (S) Proust's "In Search of Lost Time"

**Cross-listings:** ENGL 378 / COMP 378

**Secondary Cross-listing**

In this seminar we will study Marcel Proust's novel-sequence *In Search of Lost Time*, widely regarded as one of the most transformative works of 20th-century fiction. The first-person narrative chronicling the life of a fictional figure bearing a close relationship to Proust himself spans several decades from the late 19th to the early 20th century, centering on French high society as it enters the modern world, shaped by historical events such as the Dreyfus Affair and the First World War. Proust's exploration of the consciousness of the protagonist, an aspiring writer, has led readers to see him as a philosopher of aesthetics, of the psyche, of time and memory, and of the nature of desire. His narrative ranges from meditations on such subjects to social satire to absorbing and sometimes soap opera-like plots exploring upward and downward social mobility and a wide array of sexual entanglements, straight and queer. Through his fluent prose, Proust renders the vicissitudes of desire, loss, and joy, of betrayal and emotional intransigence, and tests the power of memory and the imagination to recapture the past. Because of the length of *In Search of Lost Time*, the emphasis of the course will be more on reading (about 7 to 7½ hours per week) and less on writing (four or five 1½-page journal entries and a final paper of 8-10 pages) than the average 300-level course; and approximately one-third of the sequence will be bracketed as optional reading.

**Requirements/Evaluation:** Regular class participation, several 2-page journal entries, and a final paper of 8-10 pages

**Prerequisites:** a 100-level ENGL course, a score of 5 on the AP English Lit exam, or a score of 6 or 7 on the Higher Level IB English exam

**Enrollment Limit:** 22

**Expected Class Size:** 16-18

**Grading:** yes pass/fail option, yes fifth course option

**RLFR 412 (S) Senior Seminar: Nineteenth-Century French Novel: Desperate Housewives and Extreme Makeovers** (DPE)

**Cross-listings:** WGSS 408 / COMP 412

**Primary Cross-listing**

In 1834, Honoré de Balzac wrote that "Paris is a veritable ocean. Sound it: you will never know its depth." The same can be said of the French nineteenth-century novel and its boundless ability to echo the past and illuminate the present. From the Romanticism of Stendhal and Hugo, and the Realism of Balzac and Flaubert, to the Naturalism of Zola and Maupassant, the novel became a forum for examining illicit sexuality, institutional misogyny, social injustice, criminal passions, revolutionary struggles, and Parisian pleasures in nineteenth-century France. Characters such as the miserable housewife Emma Bovary, the reluctant revolutionary Jean Valjean, the social climber Julien Sorel, the ambitious undergraduate Eugène de Rastignac, and the domestically abused Gervaise Macquart became synonymous with France's turbulent social and political landscape from the 1830s to the 1880s. As recent film adaptations make clear, these desperate housewives and extreme makeovers continue to haunt our twenty-first-century present. Reinterpreted by such actors as Gérard Depardieu, Isabelle Huppert, Uma Thurman, Claire Danes, and Jennifer Aniston, the nineteenth-century novel continues to sound out the scandalous and sensational depths of our own century. Readings to include novels by Balzac, Stendhal, Hugo, Flaubert, Maupassant, Zola. Films to include adaptations by Clément, Berri, August, Arteta, Lelouch, Chabrol. Conducted in French.

**Requirements/Evaluation:** Active class participation, midterm exam, and two papers.

**Prerequisites:** A 200-level or 300-level RLFR course at Williams, or Advanced coursework during Study Abroad in France or the Francophone World,
or permission of the instructor.

**Enrollment Limit:** 16

**Enrollment Preferences:** French Majors and French Certificate students, Comparative Literature Majors, Women’s, Gender, & Sexuality Studies Majors.

**Expected Class Size:** 16

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 408(D2) RLFR 412(D1) COMP 412(D1)

**Difference, Power, and Equity Notes:** This course analyzes difference, power, and equity through its examination of gender diversity, institutional misogyny, urban criminality, human sexuality, social injustice, and revolutionary struggle in nineteenth-century France. In class discussions and critical essays on 1830s-1880s France, students will examine and articulate the inequities and injustices between women and men, the privileged and oppressed, the wealthy and working class, and both the rural and urban poor.

**RLFR 414 (S) Senior Seminar: Coming of Age: French and Francophone Childhood and Adolescent Film**  (DPE)

**Cross-listings:** COMP 414

**Primary Cross-listing**

Like the bildungsroman in literature, the coming of age story is a genre in itself in cinema. In this senior seminar, we will watch, discuss, and analyze French and Francophone childhood and adolescent narrative films whose protagonists bring into focus larger issues such as racial discrimination, class, gender, sexual identity, social mobility, repression from the state, regime change, delinquency, justice, bereavement, and human trafficking. We will watch seminal films by Euzhan Palcy, the Dardennes brothers, Céline Sciamma, Férid Boughédir, François Truffaut, Faiza Ambah, and Raoul Peck.

**Requirements/Evaluation:** three three-page response papers; thesis statement, methodology, and works cited list on one page; 2 low-stakes presentations and one script of a video essay or academic journal "special issue" essay

**Prerequisites:** 200-level RLFR courses

**Enrollment Limit:** 19

**Enrollment Preferences:** French and Comparative Literature majors and certificate students

**Expected Class Size:** 10

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

**Difference, Power, and Equity Notes:** This course qualifies for a Difference, Power, and Equity requirement because the films we focus on racial inequality, class, gender, sexual identity, post slavery society in the Caribbean, lack of social mobility, repression from the state, regime change, delinquency, justice, bereavement, and human trafficking.

Not offered current academic year

**RLFR 415 (S) Breaking the Silence: Women Voices, Empowerment and Equality in the Francophone World**  (DPE)

**Cross-listings:** WGSS 415 / COMP 415

**Primary Cross-listing**

How have Francophone women challenged the historical and current effects of colonialism and gendered racism in France and the Francophone world? How have Francophone women writers challenged the status quo of patriarchy and advocated for change? Beginning with political activist Olympe de Gouges, who published *Le droit de la femme et de la citoyenne* (1791) challenging gender inequality in France, we will then examine Claire
de Duras' portrayal of the intersection between race and gender, Simone de Beauvoir's challenge to traditional femininity and gender roles, and Ananda Devi's intimate portrayal of violence against women in post-colonial societies. Throughout the course, we will use a feminist and intersectional lens to analyze how Francophone women writers have broken the silence then and now.

**Requirements/Evaluation:** Three 3-4-page response papers, a final 10-page research paper, presentation and active participation.

**Prerequisites:** Any 200-level RLFR course, or by permission of instructor

**Enrollment Limit:** 18

**Enrollment Preferences:** Senior French majors and students completing the certificate in French, but open to advanced students of French; Comparative Literature majors; Women's, Gender and Sexuality Studies majors; and those with compelling justification for admission.

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

RLFR 13 (W) Creative Portraiture in the Darkroom

In this course, we will revisit the boundaries between self-portraiture and portraiture. Working in pairs, students will both practice being a model and a photographer: they will pose as a model for their classmates and assist a classmate in creating a self-portrait. In addition, using as a point of departure Hippolyte Bayard's photograph Self-Portrait as a Drowned Man, one of the first self-portraits in the history of photography, students will learn how to use the view camera (the large format camera used during the invention of photography in 1839 and still in use today). We will also study the characteristics of film photography, specifically, light, chemicals, sensitive media, and negative, and use them as tools to make creative portraits in the darkroom. By the end of the course, students will have learned to shoot with a 4 x 5 view camera and have practiced with manipulations in the darkroom in order to create unique portraits. Each student will exhibit their work as a triptych in an exhibition. This class requires an average of 10 weekly lab or studio hours outside of regular classes.

Requirements/Evaluation: Paper(s) or report(s); Creative project(s)

Prerequisites: Knowledge of black and white analog photography is preferred but not required.

Enrollment Limit: 10

Expected Class Size: NA

Grading: pass/fail only

Unit Notes: Daniel Goudrouffe is a professional photographer. Employing a documentarian approach to depict the Caribbean, Goudrouffe expresses a collective awareness of the impact of enslavement and colonialism on everyday life. His work constitutes a rare cont

Visiting Assistant Professor: M. Sassi

The study of Italian in the target language encourages students to gain a deep appreciation of the language, culture and literature through active participation and meaningful experience with the culture on its own terms. Italian courses at Williams are therefore conducted exclusively in Italian in order to enhance and reinforce the emotive and cognitive involvement of the students as they are introduced to the Italian world-view in a lively and natural manner. Students desirous of more contact with Italian are encouraged to attend the weekly Italian Table in the designated college dining hall. More information can be found at cfllc.williams.edu/italian.

RLIT 101  (F)  Elementary Italian
This course is designed for beginners. Its goal is to allow students to develop basic oral/listening and reading/writing proficiency in Italian. During the semester, students will be trained in grammar, pronunciation, listening-oral skills, reading, and writing in Italian by studying various communication settings and real-life situations. *The class is conducted entirely in Italian.*

**Class Format:** five hours a week with the professor

**Requirements/Evaluation:** participation, homework, compositions, quizzes, an oral exam, oral presentation, midterm and final exams

**Prerequisites:** none; not open to those who have had one year or more of high school Italian

**Enrollment Limit:** 20

**Enrollment Preferences:** instructor will prioritize on the basis of study abroad plans and year at Williams

**Expected Class Size:** 20

**Grading:** no pass/fail option, yes fifth course option

**Unit Notes:** students registered for RLIT 101-102 are required to attend and pass the sustaining program during Winter Study; credit granted only if both semesters (RLIT 101 and 102) are taken

**Distributions:** (D1)

Fall 2024

SEM Section: 01    M-F 9:00 am - 9:50 am     Mario  Sassi

RLIT 102  (S)  Elementary Italian
This course is designed for beginners who already have some basic knowledge of Italian. Its goal is for students to review and expand their oral/listening and reading/writing proficiency in Italian. During the semester, students will continue to learn Italian grammar, vocabulary, and pronunciation while improving listening-oral skills, reading, and writing in Italian. *The class is conducted entirely in Italian.*

**Requirements/Evaluation:** participation, homework, compositions, quizzes, an oral exam, oral presentation, midterm and final exams

**Prerequisites:** RLIT 101 and the Winter Study sustaining program; not open to those who have had one year or more of high school Italian

**Enrollment Limit:** 20

**Enrollment Preferences:** instructor will prioritize on the basis of study abroad plans and year at Williams

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

Spring 2025
**RLIT 103 (F) History of Italy in Movies**

The course aims primarily to enhance the student's speaking, reading, and writing abilities while introducing the history of Italy and its rich cinematic culture. Students will review and expand the previous semesters' grammar structures to achieve a higher level of fluency and sophistication in language production. The class is intended as a continuation of Italian 101 and 102, but welcomes study-abroad returnees and students who have an intermediate level of Italian. **The class is conducted entirely in Italian.**

**Requirements/Evaluation:** oral presentations, midterm exams, tests, compositions, participation, final project

**Prerequisites:** RLIT 101/102 or by permission of the instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Students from 101/102 classes, as well as study-abroad returnees

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

---

**RLIT 105 (F) Pathway to Proficiency**

The course aims primarily to enhance the student's speaking, reading, and writing ability while introducing the formal study of Italian culture and society by analyzing short literary texts, articles, films, shows, and podcasts. In addition, students will review and expand the previous semesters' grammar structures to achieve a higher level of fluency and sophistication in language production. Italian 105 is intended for study-abroad returnees and other advanced speakers; students who have been particularly successful in Italian 101-102 are also encouraged to enroll. **The class is conducted entirely in Italian.**

**Requirements/Evaluation:** oral presentations, midterm and final exams, tests, compositions, participation

**Prerequisites:** RLIT 101/102 or by permission of the instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Students from 101/102 classes, as well as study-abroad returnees.

**Expected Class Size:** 15

THE MAJOR IN SPANISH

Students who major in Spanish can expect to acquire linguistic fluency along with in-depth knowledge of the cultures of Spain and Latin America. Through the study of the major writers and historical events of the Spanish-speaking world, our program offers training in literary analysis and linguistic expression, as well as a deep appreciation of Hispanic civilizations.

The major consists of nine courses above the 102 level. In exceptional circumstances, the Department may decide to accept RLSP 101-102 for the Spanish major. One of the nine courses must be the 400-level senior seminar taken during the student's final year at the College; another must be a course that substantially focuses on literature or cultural texts produced before 1800. Students entering at the 200-level may, with the permission of the Department, choose as part of their major program one course not conducted in Spanish but offered by faculty in Romance Languages or another Department or Program, such as Latino/a Studies, Comparative Literature, History, etc., provided that the subject matter relate to and broaden their study of Spanish. Students entering at a very advanced level may, in some cases and with the permission of the Department, include two such courses in their major program. Working with a member of the Spanish faculty, the student will formulate a curricular plan that will ensure balance and coherence in courses taken prior to declaring a major in Spanish. This is especially imperative for students who are planning to spend a part or all of their junior year in Latin America or Spain.

THE DEGREE WITH HONORS IN SPANISH

Students majoring in Spanish may apply to be admitted to the Honors Program in Spanish upon demonstrating the following: (1) fluency of spoken and written language; (2) potential for successful independent research, as demonstrated by strong performance in advanced-level coursework; (3) interest and motivation; and (4) overall quality and feasibility of the proposal. Two routes are available to those who wish to apply for the degree with honors.

The first of these involves the writing of a senior thesis.

By May 15th of their junior year, candidates will have found a thesis advisor, and given the Department a three- to five-page proposal and a preliminary bibliography. (In some cases, and upon consultation with the Department, candidates will have the option to choose a second reader in addition to their primary advisor; for example, when the thesis is interdisciplinary enough in nature that it requires the expertise of an additional reader).

This proposal will be discussed by the Department; by June 1st, the candidate will be informed whether they can proceed with the thesis, and if so, what changes need to be made to the focus and scope of the project. The summer before the senior year will be spent compiling a more detailed bibliography and reading.

Upon their return to Williams, candidates will devote to their theses two semesters of independent study (beyond the nine courses required for the major) and the winter study period of their senior year (493-W31-494). The thesis will be written in Spanish and will usually not be shorter than fifty pages. By the end of the Fall semester, students will normally have a clear outline of the project, have done substantial research, and produced the draft of at least the first half of the project. During January this draft will be suitably rewritten and edited with a view to a final version, while the candidates will also begin work on remaining chapters.

Candidates will submit what they have written to the department on the last day of Winter Study.

On the Tuesday of the first week of the spring semester candidates will make a presentation of the project at a departmental colloquium in Spanish. The thesis will be promptly discussed and evaluated to determine whether or not the student should continue in the honors program. The second semester of independent thesis work will be spent writing more chapters, as well as revising, rewriting, and polishing the project where necessary. The completed thesis in its final form will be due on April 25th. At the end of the Spring term, the student will present and defend the final project before members of the Department and others by invitation. The grade will be awarded once members of the Department have consulted after the defense.

The second route is a group of three clearly related courses (offered by the Department of Romance Languages or by other departments, such as History, Art, Philosophy, English, etc.), only one of which may be counted in the nine courses comprising the major. One of the courses will be an Independent Study (plus senior year WSP 30) in the spring of the senior year, at the end of which the student will write an essay that synthesizes the...
content of the three related courses. Students may apply for this route by November 2 of the senior year.

In the case of both routes to the degree with honors, the department’s recommendation for graduation with honors will be based on the originality and thoroughness of the finished project.

THE CERTIFICATE IN SPANISH

The Certificate in Spanish Language and Culture consists of a sequence of seven courses for which the student must earn a cumulative grade average of B or higher. Those so interested should express their intent to the chair of the department by March 1 or earlier.

For students with no prior Spanish background, the course sequence will consist of Spanish 101-102, Spanish 103 and 104, and three courses in Spanish above the 104 level, with at least one of these courses at the 200-level or higher taken at Williams. If the student starts out the sequence at Spanish 103, in addition to the three courses in Spanish beyond the 104 level (including a 200-level course or higher), two electives may be taken in other departments. One elective should be in Spanish or Latin-American cultural history (art, literature, drama, music) and the other in Spanish or Latin-American intellectual, political, or social history. Spanish 200, 201, or 208 can be counted for the elective requirement.

Electives may be considered from a variety of departments and programs. However, students should consult with the chair of Romance Languages before making any enrollment decisions.

PLACEMENT

Students come to study Spanish at Williams with a wide range of backgrounds and prior experiences. Some will have studied Spanish for many years in high school and earlier. Others will have grown up speaking Spanish with family and friends but had little opportunity to study the language at school. Others have lived in Spanish-speaking countries or otherwise studied in immersive contexts. And for others, Spanish is a brand-new language that they are eager to begin learning.

Whatever your previous experience with Spanish, ¡Bienvenida! ¡Bienvenido! We are glad to have you with us. In order to figure out the most appropriate point of entry, we ask that all students who wish to begin their study of Spanish in the new academic year take the department's placement exam when it is offered during First Days. The only students who don't need to take the placement exam are those who qualify as “true beginners,” those with no previous experience of Spanish and for whom 101-102 is obviously the right choice. Everyone else should take the placement test. After you do, the Registrar’s Office will notify you of the level and/or course the Spanish faculty have recommended for you. You should feel free to reach out to the department chair, your recommended instructor, or any other faculty member if you have questions or concerns about your placement.

STUDY ABROAD

Spanish majors, as well as non-majors interested in further exposure to the language and the culture, are strongly encouraged to study in Spain or Latin America for either a semester or a full year. We recommend that you start planning for study abroad as early as possible, and that you speak to our faculty early on to go over the many possible destinations and programs available to you. In recent years, Williams students have studied in such varied and far-flung locations as Buenos Aires, Havana, Lima, Barcelona, and Madrid. Those who are interested in Madrid may wish to consider the Hamilton College program, with which we maintain consortial ties. Credit for up to four courses can be granted at the discretion of the Department for study overseas. Those four courses count towards the certificate or the major in Spanish. Students interested in study abroad should consult with a member of the department at their earliest convenience.

FAQ

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?

Yes, in some cases, provisional approval can be granted (students should be sure to contact the department for details).

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?

Course title and description, and complete syllabus, including readings/assignments. If it is a program we are familiar with, the course title and description are enough. If it is a new program/new type of course we need all the available materials (syllabus, assignments, etc.).

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?

Yes. Four maximum.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?

Yes. They have to be courses that focus on language, culture, history, or politics of the target language/culture.

Are there specific major requirements that cannot be fulfilled while on study away?

Yes. Our Senior Seminars are required for the major.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study
away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

No.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn't:

This hardly ever happens but could happen if a student doesn't seek out pre-approval from a faculty member.

---

**RLSP 101 (F) Elementary Spanish**

This course focuses on grammar, elementary composition, practice in conversation, and reading of short, easy prose. It is taught by the intensive oral method.

**Requirements/Evaluation:** Engaged daily participation, regular homework exercises, quizzes, a midterm, and a final exam. All students must take the Winter Study Sustaining program to continue to RLSP 102.

**Prerequisites:** This course is for students who have no previous background in Spanish.

**Enrollment Limit:** 18

**Enrollment Preferences:** This course is introductory. Students who have a background in Spanish should seek an alternate course. Preference will be given to those with potential interest in pursuing the certificate, major, and/or studying away in a Spanish speaking country.

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1)

*Fall 2024*

SEM Section: 01  M-F 10:00 am - 10:50 am  Soledad Fox

---

**RLSP 102 (S) Elementary Spanish**

This course is a continuation of RLSP 101 and must be completed after also taking the Winter Study Sustaining Program to be eligible for credit. It focuses on grammar, elementary composition, practice in conversation, and reading of easy texts. It is taught by the intensive oral method.

**Class Format:** The class meets five hours a week; students will complete workbook and lab exercises weekly.

**Requirements/Evaluation:** Daily preparation and participation, regular assignments, frequent tests, a midterm and a final. At least two cultural activities per semester must be attended.

**Prerequisites:** RLSP 101; this course is for students who have studied less than two years of Spanish in secondary school. Students must complete RLSP 101 as well as the Winter Study sustaining program to be eligible to enroll.

**Enrollment Limit:** 20

**Enrollment Preferences:** Students enrolled in RLSP 101.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Unit Notes:** Students in RLSP 101-102 are required to attend and pass the sustaining program during the winter study period.

**RLSP 103 (F) Intensive Intermediate Spanish**

**RLSP 103 (F) Intensive Intermediate Spanish.** This course is a continuation of Spanish 101-102. It is designed to help students improve their proficiency in each of the major skill-groups (listening, speaking, reading and writing) while providing an introduction to the cultures of the Spanish-speaking world. Classroom activities and homework are designed to increase vocabulary and improve your ability to handle daily life in a
Spanish-speaking country, to express your views on complex subjects such as art and politics, and to increase your knowledge of the cultural traditions of Latin America and Spain. Film screenings and readings in Hispanic literature, culture and politics will provide material for in-class discussion and some writing assignments. This course provides the linguistic and cultural training that is necessary to engage the diverse Spanish-speaking communities of Latin America, Spain and the US; it will help to prepare students for further literary and cultural studies as well as provide skills that are increasingly essential in fields such as medicine, law, and education. Conducted in Spanish.

Class Format: Class meets four hours a week: three times with the professor (either in the morning or at noon) and one time in the afternoon with the TA.

Requirements/Evaluation: Regular attendance and active in-class participation, workbook exercises and weekly compositions, quizzes, midterm and final exams.

Prerequisites: RLSP 101-102 or by Spanish placement exam

Enrollment Limit: 20

Enrollment Preferences: If the course is over-subscribed, priority will be given to first-year students and others with a demonstrable commitment to study of Spanish.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D1)

RLSP 104 (S) Intensive Intermediate Spanish, Upper Level

This course is a continuation of Spanish 103. During the spring semester we resume our work to expand your proficiency in each of the major skill-groups (listening, speaking, reading and writing) while increasing familiarity with the vibrant cultures of the Spanish-speaking world. Students in both sections of RLSP 104 can once again expect to sample a variety of written and audiovisual media--poems and short fiction, essays, journalism, blogs and film--to deepen their understanding of Hispanic cultures. However, Section 2 will have a more distinct focus on cinema: we will watch a series of classic and contemporary films and develop the specialized vocabulary and skills needed to analyze them in class discussions and student writing. Regardless of which section you are in, students in Spanish 104 can expect to write regularly and to meet with their professor, teaching associate and classmates in varying combinations for four hours each week. This course is designed to prepare students for further literary and cultural studies in Spanish--including the challenges of study abroad--and to hone communication skills that are increasingly essential in professional fields such as medicine, law, and education. Conducted in Spanish. Más and its accompanying Cuaderno de Práctica will serve as our primary texts. Conducted in Spanish. For students who have not taken Spanish 103 at Williams, the departmental placement exam is required for enrollment in this course.

Class Format: Seminar. Students will spend 4 hours per week in class in engagement with their Professor, Teaching Associate (TA), and classmates. In addition to the regular MWF classes with their Professor, students will meet for one additional hour per week with the TA. As will be explained in the course syllabus and at the first class meeting, this additional hour with the TA will take place at a time (to be decided during the first weeks of class) that is mutually beneficial for the TA and students.

Requirements/Evaluation: Weekly 1- to 2-page compositions, daily homework and class participation, oral reports, midterm exams and a final exam.

Prerequisites: RLSP 103 or by Spanish placement exam or permission of instructor.

Enrollment Limit: 20

Enrollment Preferences: If the course is over-subscribed, priority will be given to first-year students and others with a demonstrable commitment to study of Spanish.

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D1)
RLSP 105 (F) Advanced Grammar, Composition, Conversation

In this course students will refine their knowledge of Spanish grammar and vocabulary towards further fluency in speaking and writing. The focus of the class is grammar through active engagement with grammar exercises as well as relevant cultural materials. The section that meets at 9 a.m. will have a focus on Latin American poetry, and the section that meets at noon will focus on the politics and culture of contemporary Spain. Students will produce regular grammar and composition exercises as well as oral reports. They will also meet with the Teaching Associate, in smaller groups, weekly.

Class Format: students must participate in TA sessions once a week.

Requirements/Evaluation: regular grammar and composition assignments, a mid-term, occasional quizzes, oral reports; active participation and regular attendance required.

Prerequisites: RLSP 104, or results of the Williams College Placement Test, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: first-year students, potential majors

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

Distributions: (D1)

---

RLSP 106 (S) Advanced Grammar and Composition through Literature (WS)

This course is designed for advanced students who wish to further polish and refine their grammatical, lexical, and writing skills in Spanish. The course may be taken immediately after 104, by placement exam results, or even after students have begun to sample the Department's literature and culture offerings at the 200- and 300-level. Classic works of short fiction by celebrated Latin American authors such as Gabriel García Márquez and Julio Cortázar will be discussed; selected Latin American films will be viewed as well. For written and oral assignments: weekly essays, in-class presentations, and language-laboratory activities. Conducted in Spanish.

Requirements/Evaluation: A weekly essay based on the stories read in class. Written lab exercises. Participation in the grammatical and literary discussions. Oral presentations, quizzes, a mid-term exam, and a final exam

Prerequisites: RLSP 104, any course 201+, placement exam or permission of instructor

Enrollment Limit: 12

Enrollment Preferences: In the event of over-enrollment, preference will be given to sophomores.

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (WS)

Writing Skills Notes: Weekly essays, corrected for both language and content. Constant feedback from instructor. Students will be required to revise and rewrite their graded essays.
RLSP 201 (F) The Spanish Labyrinth
How can you learn to separate the stereotypical images of Spain from its current reality? How can we talk about one “Spain” when the country is a complex composite of ancient and diverse cultural remnants mixed with recent influxes of immigrants, and separatist movements? How has the vulnerable peninsula survived centuries of violent upheavals and divisiveness; dramatic economic rises and collapses? How have recent events and political tensions affected Spain's health system, demographics, and economy? This course aims to offer students a strong foundation in Spanish issues, whether they have already spent time abroad, or hope to do so in the future. In this course we will approach Spain by studying examples of its literary and artistic production, from periods of brilliant cultural exchange, and times of censorship, repression, and crisis. Some topics of focus will be the Inquisition, the Civil War, contemporary Spain's obsession with its own recent past, and its uncertain future. Secondary texts will also be provided for historical and socio-political background and reference. Conducted in Spanish. We will also use films and music.

Requirements/Evaluation: Conducted entirely in Spanish. Evaluation will be based on active daily participation and attendance, oral presentations, 2 short papers and a final research project.
Prerequisites: RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: Spanish majors, certificate candidates, and anyone who has studied away in Spain or plans to.
Expected Class Size: 20
Grading: no pass/fail option, no fifth course option
Distributions: (D1)

Fall 2024
SEM Section: 01    TR 11:20 am - 12:35 pm     Soledad Fox

RLSP 202 (S) Introduction to the Analysis of Literature in Spanish (WS)
This course is intended for students who are considering a major in Spanish, including those who have recently completed RLSP 105, 107, 200, 201 or 209. Using a textbook, Aproximaciones al estudio de la literatura hispánica, we will study the fundamentals of genre analysis while reading selected works of prose, poetry, and drama from Latin America and Spain. In addition to studying the principles and techniques of literary analysis, this course will continue to develop your speaking, writing, and reading comprehension skills with a particular emphasis on composition. Conducted in Spanish.

Class Format: Students are expected to be active participants at all scheduled class meetings, which will be used for discussion and collaborative analysis of literary texts as well as workshopping student writing.

Requirements/Evaluation: Graded assignments will include three essays of five pages each as well as consistent preparation and class participation.
Prerequisites: RLSP 105, 107, 200, 209, or placement exam results indicating readiness for a 200-level course
Enrollment Limit: 20
Enrollment Preferences: first- and second-year students who are considering the major in Spanish
Expected Class Size: 20
Grading: no pass/fail option, no fifth course option
Distributions: (D1) (WS)

Writing Skills Notes: Each student will write and revise three essays of roughly give pages each. Feedback will be provided regarding grammar, style, and argument. On Fridays we will workshop student papers.

Spring 2025
SEM Section: 01    MWF 11:00 am - 11:50 am     Jennifer L. French

RLSP 203 (F) From Modernismo to El Boom de la Novela
A survey of some of the leading imaginative writers of Ibero America. Readings will begin with the modernista poets and go on to include fiction of Mexico by Rulfo, a wide sampling of verse by Pablo Neruda, and narratives of the "Boom" period by authors such as Borges, Cortázar, Lispector, and García Márquez. Conducted in Spanish.

Requirements/Evaluation: Response journals, three 6- to 8-page papers, a mid-term and final exam, and class participation.
**Prerequisites:** RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Seniors, juniors, and then sophomores

**Expected Class Size:** 12

**Grading:** yes pass/fail option, yes fifth course option

---

**RLSP 205 (S) Magical Realists, Fantasists, Experimentalists: The Latin-American Novel in Translation** (DPE)

**Cross-listings:** COMP 205

**Primary Cross-listing**

A course specifically designed to enable students who have no knowledge of Spanish to read and discover those Latin-American authors who, in the twentieth century and after, have attracted world-wide attention. Among the texts to be discussed: Borges, Labyrinths; Cortázar, Blow-up and Hopscotch; Lispector, the Hour of the Star; lesser works by Fuentes and Puig; and by Nobel Prize-winner Gabriel García Márquez, One Hundred Years of Solitude. Conducted in English

**Requirements/Evaluation:** class participation, two brief papers, a midterm, and a final exam

**Prerequisites:** none

**Enrollment Limit:** 22

**Enrollment Preferences:** Latina/o Studies concentrators, Comp Lit majors

**Expected Class Size:** 22

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** does not carry credit for the Spanish major or the certificate

**Distributions:** (D1) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COMP 205(D1) RLSP 205(D1)

**Difference, Power, and Equity Notes:** This course offers students an opportunity to read some major works of fiction that have challenged the canon of European and American literature. Through the readings, class members will understand that great literature comes not only from London or Paris, from the U.S. or Russia. Several of these novels, moreover, directly challenge European and Western cultural hegemony and make an implicit claim for the legitimacy of Latin American cultural concerns.

**Attributes:** GBST Latin American Studies

---

**RLSP 206 (S) Latin-American Civilizations**

An introduction to the multiple elements constituting Latin-American culture. Class assignments include readings from selected Latin-American essayists and screenings of classic films. Particular focus on the conflict between local and foreign cultural traditions. Areas to be considered: Spanish Catholicism, the influence of European liberalism and U.S. expansion, the Indian and African contribution, and the cultural impact of social revolution in Mexico and Cuba. Conducted in Spanish.

**Requirements/Evaluation:** two essays on assigned topics, response journals, one oral presentation, active discussion of the ideas and the facts presented in class, a midterm, and a final

**Prerequisites:** RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

**Enrollment Limit:** 12
Enrollment Preferences: Juniors, sophomores, first-years.
Expected Class Size: 12
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)

RLSP 210 (S) Graphic Novels, Spain, and Economic Crisis
The massive economic crisis that began in 2007 affected all areas of life in Spain, among other things, led to the rise of several social movements and critiques of neoliberalism. In this class we will study graphic novels -- a booming medium in contemporary Spain -- along with other mediums such as literature and film to see how they reflect this key moment in Spanish society. We will consider the ways in which these novels represent new social movements as well as effects of the crisis that continue to this day. In the process, we will not only gain a better understanding of contemporary Spain, but also unpack the characteristics of visual storytelling. Readings may include Miguel Brieva’s Lo que me está pasando, Manel Fontdevila’s ¡No os indignéis tanto!, and Isaac Rosa’s & Cristina Bueno’s Aquí vivió: Historia de un desahucio.
Requirements/Evaluation: Conducted entirely in Spanish. Evaluation will be based on active participation and attendance, one group presentation, four take-home essay quizzes, and one final project (12-15 pages).
Prerequisites: Spanish 105 or 106, or results of the College Placement Exam, or permission of instructor.
Enrollment Limit: 20
Enrollment Preferences: Spanish majors and certificate students.
Expected Class Size: 15
Grading: yes pass/fail option, no fifth course option
Distributions: (D1)
Not offered current academic year

RLSP 217 (S) Love and marriage in Medieval and Early Modern Spain
We are often told that love is a natural human feeling and marriage its happiest consequence. But these two conditions are constructed and depend on society's dominant values. In this class we focus on pre-modern Spain to study the principles and fears that create definitions of love and marriage, also with a view to how some of these have survived to this day in our own communities. Our theoretical frames will come from the medieval and early modern periods, but also from contemporary definitions and critiques. Primary sources will include lyrical traditions, the writings of King Alfonso X, the works of Santa Teresa de Ávila, San Juan de la Cruz, Lope de Vega, Tirso de Molina, Pedro Calderón de la Barca, Miguel de Cervantes, among others.

Requirements/Evaluation: Active and meaningful participation, short assignments, one final project.
Prerequisites: RLSP 105 or 200, or results of Williams College Placement Exam, or permission of instructor
Enrollment Limit: 22
Enrollment Preferences: Spanish and Comparative Literature majors
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D1)
Not offered current academic year

RLSP 219 (F) Latin American Diasporic Cultures: The Venezuelan Case

The history of Latin America cannot be fully understood without the study of the mass migrations that have taken place to and from the region throughout the 20th and 21st centuries. These displacements differ in nature, do not share a single origin, route, or destination. They primarily stem from complex political conflicts (racial, gender, sexual, economic, climatic) and have left a definitive mark on the hemispheric cultural imagination. This course aims to study the narratives surrounding migration and migrants in Latin America. What are the geographies of displacement? Is the Chihuahuan Desert or the Darien Gap a wall? Is the Caribbean Sea a border? What happens to the narrative when it emerges under the sign of exile? How does the figure of the migrant destabilize notions of law, nation, and personhood? How is the migrant body constituted, and how do literature, cinema, visual arts, or performance portray it? We will conduct a panoramic analysis of cultural materials and critical interventions produced throughout the continent regarding the figure of the migrant, arriving at the current Venezuelan diaspora--comprising more than seven million people--and its aesthetic, ethical, and political resonances. Primary materials include texts by Reinaldo Arenas, Virgilio Piñera, Manuel Ramos Otero, Valeria Luiselli, Sonia Nazario, Juan Pablo Villalobos, Balam Rodrigo, Adalber Salas Hernández, and Gina Saraceni, as well as works by visual artists José Rafael Perozo and Gerardo Rosales, films by Mariana Rondón and Diego Quemada-Diez, among others. Conducted in Spanish, the course will also have a public orientation, with some activities open to the wider university community.

Requirements/Evaluation: Evaluation is based on active participation, several short compositions, a conference paper, and a final project.
Prerequisites: RLSP 105 or higher; or results of the College Placement Test; or permission of instructor.
Enrollment Limit: 20
Enrollment Preferences: Spanish majors and certificate candidates; comp lit majors with a focus on Spanish.
Expected Class Size: 20
Grading: no pass/fail option, no fifth course option

RLSP 220 (S) Women on the Verge

Cross-listings: WGSS 222

Primary Cross-listing

From the early twentieth century to the present day, the radical changes in the lives of Spanish women have clearly reflected the tug of war between progress and tradition in recent Spanish history. The dramatic upheavals in Spanish politics have marked and transformed the lives of women to such a great extent that one can often gauge the political and social climate of any given historical moment by considering how the role of women was defined by the law, the Catholic church, education, and other social and political institutions. Using literary and historical texts as well as films, newspapers and other media, this course will look at the transformations in the public and private lives of Spanish women during the following periods: the turn of the century, the Second Republic, the Spanish Civil War, the Franco years, the transition to democracy, and the present day.
Requirements/Evaluation: This course is conducted entirely in Spanish.

Prerequisites: RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Spanish and Comparative Literature majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

RLSP 231 (F) Indigenous Writers of Colonial Mexico and Peru (DPE) (WS)

This course examines the writings of 16th and 17th Century Indigenous authors of New Spain and colonial Peru. We will study the works of well-known Indigenous writers such as Hernando de Alvarado Tezozomoc, Fernando de Alva Ixtlilxochitl, El “Inca” Garcilaso de la Vega, and Guaman Poma de Ayala, as well as writings by lesser-known and anonymous Indigenous authors. Our focus on the historical contexts and formal aspects of their works will be supplemented and enhanced by a study of the critical methods of textual analysis that are particularly relevant to Indigenous texts, as facilitated by a set of selected critical readings. The course, in short, will aim to interrogate the idea of a “Spanish lettered city” (a colonial city dominated by Spanish men of letters) and will explore the possibilities of an “alter-native” lettered city, one in which Indigenous writing flourishes during times of crisis. Conducted in Spanish.

Requirements/Evaluation: Each student will write four 4- to 5-page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner’s papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise the first three papers and submit a final version. Excellent preparation and active, engaged participation in class discussions is required.

Prerequisites: RLSP 105, 107, 200, or 202, placement exam results, or permission of instructor.

Enrollment Limit: 19

Enrollment Preferences: Spanish majors and certificate students, current and potential; LATS concentrators

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE) (WS)

Writing Skills Notes: Each student will write four 4- to 5-page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner’s papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

Difference, Power, and Equity Notes: This course will introduce students to the rich and varied cultural production of colonial Mexico and Peru. It will highlight the often marginalized and neglected intellectual histories of Indigenous peoples and other minoritized sectors of colonial society. As such, students will acquire critical tools to examine and understand the rich and varied cultural production of Mexico and Peru during the Spanish colonial era.

Not offered current academic year

RLSP 232 (S) Islam in medieval and Early Modern Spain

The presence of Islam—in all its diverse manifestations—is not new to Europe, least of all to Spain. In this course we will focus for the most part on the medieval and early modern periods to study the ways in which which Muslims and Islam have inhabited and been portrayed in the Iberian Peninsula. We will cover a wide range of perspectives as well as cultural material. While the bulk of the course is focused on the period prior to 1700 CE, towards the end of the course we will relate our findings to contemporary Spain through social and legal debates, among them topics related to immigration. Conducted in Spanish

Requirements/Evaluation: Several short reaction papers, active and regular class participation, presentations, and one final project.
Although the massive, mechanized wars of the 20th century often overshadow earlier conflicts, the 19th century was also a period of widespread bloodshed in Latin America. First, of course, came the carnage of the Independence Wars, which was followed by decades of civil war (Mexico, Argentina, Peru, Uruguay, Colombia, Venezuela) and two bitter international wars—the Paraguayan War (1864-1870) and the Pacific War (1879-1883)—each of which would have a lasting impact on the countries involved. The restoration of peace brought economic development and new opportunities for dominant groups, but also the return of some of the most violent practices of the colonial period: indigenous peoples were conquered, their lands settled by whites or used for grazing cattle, and blacks (often despite the official abolition of slavery) met with new forms of exclusion, exploitation, and physical violence. In this tutorial we will explore the literary links between some of the violent conflicts listed above and the foundation of national identities in Latin America, reading texts that probe the social and ethical implications of State-sponsored violence. Issues to be explored include militarism and the development of nationalism; genocide and the national community; torture, truth and testimony; and the notion of 'civilization.' We will read one or two key precursors and a variety of 19th century texts that may include works by Juan Francisco Manzano, Esteban Echeverría, Ricardo Palma, Rosa Guerra, Dorotea Duprat de Lassere and Juan Crisóstomo Centurión, and Lucio V. Mansilla. In addition, we will read a few contemporary texts, written in the aftermath of the late-20th century dictatorships in the Southern Cone, that actively reflect on the long history of State-sponsored violence in Latin America (Ricardo Piglia, Diamela Eltit, Augusto Roa Bastos). Students will work in trios throughout the semester, each group meeting with the instructor once a week. Each week one of the students will present a 5-page paper on the assigned reading and one will be designated the official respondent, whose job is to lead a discussion of the paper. The third member of the group will turn in a revision of the previous week's paper. Prerequisites: one 200-level RLSP course or permission of instructor. Heritage learners, international students and second-language learners are all heartily welcome. Conducted in Spanish.

### Course Format:
Conducted in Spanish.

### Requirements/Evaluation:
Each student will write and revise a minimum of three five-page papers during the course of the semester. Students will be evaluated on the basis of their preparation for each tutorial meeting as evidenced by the quality and frequency of their engagement with the material, including their classmates' written work. Essays will be graded after they have been revised and submitted to the professor.

### Prerequisites:
Any 200-level Spanish course.

### Enrollment Limit:
12

### Enrollment Preferences:
Priority given to Spanish majors.

### Expected Class Size:
12

### Grading:

### Distributions:
(D1)  (DPE) (WS)

### Writing Skills Notes:
Students will practice writing throughout the semester, and will receive abundant feedback on their written work from their tutorial partners and the instructor. We are altering the tutorial format from the standard duos to trios of students, so that students will have ample opportunity to revise their written work.

### Difference, Power, and Equity Notes:
This course focuses on issues of diversity, power and privilege within the internal and regional constitution of Latin American countries. We will read with an awareness of some of the ways that differences of race, class, nationality and gender may be mobilized in times of conflict, and consider how the collective narratives that are constructed and imposed in the aftermath tend deal with those conflicts.

### Attributes:

Not offered current academic year
We will devote the semester to the study of one novel: Miguel de Cervantes’ *Don Quijote*, published in the early part of the 17th century. We will try to understand the reasons for the novel’s immense and ongoing influence. We will study Cervantes’ handling of issues that continue to have relevance to our lives today: relationships, the role of fiction in life, the shapes of mental illness, how we show people who we think we are, how our governments, families and friends decide who we are, the fun and annoyance of going on a road trip with someone, the meaning of justice, and the meaning of storytelling, to name a few. In the process, we will set things in context to understand what was going on in Cervantes’ world. Finally, we will find that even an entire semester was not enough to engage fully with this extraordinary work. *Conducted in English using a contemporary translation.*

**Class Format:** lecture/discussion

**Requirements/Evaluation:** active class participation; two to three short projects and one final research project

**Prerequisites:** any 200-level RLSP or Comp lit or English course at Williams

**Enrollment Limit:** 20

**Enrollment Preferences:** Spanish majors and Comp Lit majors and Engl majors.

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1)

Not offered current academic year

**RLSP 304** (S) Environmental Literature and Film in Latin America (DPE) (WS)

**Cross-listings:** ENVI 311 / COMP 311

**Primary Cross-listing**

What use are aesthetics when the world is (literally) on fire? We will take up this question and others in a critical engagement with Latin American cultural production of the twentieth and twenty-first centuries, especially works of literature and film that directly or indirectly engage with environmental crisis. Students can expect to explore a variety of media, forms and genres, including works that range from (more or less) mainstream to cutting edge. Our examinations of literature and film will be supported by theoretical writings produced in the Americas and other places. Writers and directors whose work may be considered include, but are not limited to: Lucrecia Martel, Ciro Guerra, Rafael Barrett, Samanta Schweblin, Ernesto Cardenal, Juan Rufo, María Luisa Bombal, Eduardo Gudynas, Silvia Rivera Cusicanqui, Eduardo Viveiros de Castro, Isabelle Stengers.

**Requirements/Evaluation:** This course will be conducted seminar-style. Students will be expected to prepare thoroughly and be active, engaged participants in class discussions. In addition to day to day preparation and participation, other graded assignments will include discussion-leading, one short (5-7 page) essay and a longer (15-20 page) paper combining research and original analysis.

**Prerequisites:** One college literature of film course at the 200-level or above.

**Enrollment Limit:** 19

**Enrollment Preferences:** Envi majors and concentrators, Comp Lit majors, Spanish majors and those working towards the Spanish certificate.

**Expected Class Size:** 12

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 311(D1) RLSP 304(D1) COMP 311(D1)

**Writing Skills Notes:** All students in the course will write (and rewrite) no less than 20 pages. Major writing assignments will be scaffolded, with explicit discussion of the writing process (pre-writing, drafting, revision) and consultation.

**Difference, Power, and Equity Notes:** The works of literature and film that we will be examining challenge North American conceptions of climate change (and environmental crisis more broadly) by making visible (often uncomfortably so) the colonial and neocolonial history of extractivism.

**Attributes:** ENVI Humanities, Arts + Social Science Electives

Not offered current academic year

**RLSP 311** (F) The Politics of Love in Latin American Literature (DPE) (WS)

Cynical, sincere, confused and confusing, love and politics have a lot of complicated history together in Latin America. This course considers works of literature and other cultural texts in which love and politics are explicitly intertwined: the authors, artists and activists we consider profess love for their
followers and would-be converts, represent love as a (revolutionary) political force, contest the legitimacy of patriarchal heteronormativity, and sometimes all three. We will consider writings by 20th and 21st century political leaders whose speeches and other writings convey the melodrama of *radionovelas* (Eva Perón) as well as the sacrificial love of the guerrillero (José Martí, Che Guevara) and the anarchist (Rafael Barrett). We may also consider the love professed by historical figures including Catholic missionaries (Antonio Ruiz de Rivera) and 19th century abolitionists (Juan Francisco Manzano, Gertrudis Gómez de Avellaneda) and/or nation-builders (Mármol, Sarmiento). We may examine tensions around the domestication of love in writings in translation by Brazil’s Clarice Lispector and the torment of eros in Elena Garro’s political novel *Memories of the Future*. We will likely read poems of grief and love for those murdered in the secret detention centers of the Southern Cone dictatorships (Raúl Zurita, Juan Gelman). We will delve into the politics of queer love, solidarity and mourning with authors such as Mario Puig, Reinaldo Arenas, and Cristina Peri Rossi, and in Sebastián Lelio’s 2017 film, *A Fantastic Woman*. We will conclude by considering the politics of love as articulated by Black Lives Matter, particularly as the movement has taken shape in Latin American countries, and its impact in Colombia and elsewhere. Conducted in Spanish.

**Requirements/Evaluation:** Regular preparation for class is required, as is thoughtful participation in class discussions. Students will be evaluated for both. Students will also be evaluated for discussion-leading and making presentations on their original research in progress. There will be two graded essays, one of 5-7 pages and the other 15-20.

**Prerequisites:** One RLSP course at the 200 level.

**Enrollment Limit:** 19

**Enrollment Preferences:** Students majoring or completing a certificate in Spanish.

**Expected Class Size:** 10

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**Writing Skills Notes:** Students will be writing and rewriting roughly twenty pages. Longer assignments will be broken down into stages (proposal, bibliography, research, analysis, draft, revision) with feedback from the instructor at every stage.

**Difference, Power, and Equity Notes:** Using literary texts, we will delve into the ways a wide variety of political actors -- from the mainstream to the radical fringe -- talk about love in Latin American contexts. Some of them will seem comparatively cynical, but in other cases we will be looking at how people contest the hegemony of patriarchal, capitalistic and heteronormative definitions of what "counts" as true love.

*Not offered current academic year*

**RLSP 319 (F) Dictatorship and the Latin-American Novel** (DPE)

Military dictatorship is among the most crucial factors in Latin-American society and history, and some of the continent’s leading novelists have taken it upon themselves to depict the experience in their work. In this course we will examine both the fact of dictatorship itself and the diverse representation thereof in Spanish-American fiction. Novels by García Márquez, Vargas Llosa, Poniatowska, and Tomas Eloy Martínez will be closely studied. Students will also read *Absalom! Absalom!* by Faulkner, whose influence on Latin-American authors' techniques of representation has been decisive and profound.

**Class Format:** In-person.

**Requirements/Evaluation:** three 8-page papers, response journals, an oral report, a final 3-page paper, and class participation

**Prerequisites:** RLSP 105, or RLSP 200, or results of Williams College Placement Exam, or permission of instructor

**Enrollment Limit:** 12

**Enrollment Preferences:** Spanish majors, Latina/o Studies concentrators

**Expected Class Size:** 5-10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** This course focuses on the ultimate sort of power-namely, military dictatorship. And it focuses on the historical fact of such a phenomenon within the U.S. political sphere of influence—Latin America. To study dictatorship and its depiction in literature is a means of understanding the nature of that power imbalance and of taking a first step toward some sense of equity.

**Attributes:** GBST Latin American Studies

*Not offered current academic year*

**RLSP 342 (S) Reading Sor Juana: "única poetisa americana, musa décima","** (DPE) (WS)
This course focuses on the writings of one of the most revered women writers in Hispanic Letters, Sor Juana Inés de la Cruz, who was regarded by her contemporaries as the Tenth Muse. Our exploration and study of Sor Juana's writings will focus on the different genres in which she wrote—prose, poetry, and drama—and it will include a survey and analysis of the historical context in which she wrote, the formal aspects of her writings, and critical essays about her work written by leading scholars in the field of Latin American literature. Near the end of the semester, the course will conclude by expanding its focus to examine the ways in which Sor Juana's work has influenced contemporary Latin American and U.S. Latina authors. Conducted in Spanish.

**Requirements/Evaluation:** Each student will write three 5-7 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide two 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version. Excellent preparation and class participation is required.

**Prerequisites:** One RLSP course at the 200-level or above or permission of instructor

**Enrollment Limit:** 19

**Enrollment Preferences:** Spanish majors

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**Writing Skills Notes:** Each student will write three 5-7 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide two 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

**Difference, Power, and Equity Notes:** This course will highlight the intellectual production of one of the most revered women writers in Hispanic Letters. It will explore the challenges women writers faced as well as the social critiques Sor Juana makes in her writings about the exclusion of women and other racial minorities in Spanish colonial society. As such, students will gain critical skills to analyze and understand the diversity of Spanish-American society through Sor Juana's texts.

---

**RLSP 344 (S) Contemporary Latin American Queer Aesthetics (DPE)**

Conducted in Spanish, this advanced seminar examines a panoramic corpus of contemporary cinema, literature, and music in Latin America to trace possible shared political and cultural characteristics of a queer aesthetic. We will explore the works of renowned figures such as Reinaldo Arenas, Chavela Vargas, Pedro Lemebel, and Mariana Rondón, among others, to delve into the intricate layers of queer expression within the region. Is it possible to discern a common transnational queer identity among Latin American countries? What would it look like, sound like? Would it have a shared political mission? What would be its symbols? Primarily focusing on Venezuela, Cuba, Puerto Rico, Dominican Republic, Mexico, Chile, and Argentina, we will analyze a wide range of cultural artifacts—including the work of writers, filmmakers, and musicians—to discuss contemporary debates on identity and representation surrounding sexuality, but also in its intersection with race, gender, and social class. Through an interdisciplinary and intersectional lens, this course will offer a feminist analysis of Latin American counterculture, interrogating the process whereby queer aesthetics enter and sabotage the mainstream. By the end of the seminar, students will have a strong knowledge of contemporary queer artistic practices in Latin America and will be able to identify the most prominent theoretical contributions on sexual and gender dissidence from the region.

**Requirements/Evaluation:** Evaluation is based on active participation, class presentations, a weekly forum debate, and either a final paper or project.

**Prerequisites:** Any 200-level course in Spanish taken at Williams or permission of the instructor.

**Enrollment Limit:** 20

**Enrollment Preferences:** Spanish majors, Spanish certificate candidates.

**Expected Class Size:** 15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE)

**Difference, Power, and Equity Notes:** The course explores the politics and aesthetics of Latin American cultural material from the framework of resistance and queer activism, giving students the opportunity to understand the construction of alternative Latin American identities that go against the mainstream.
RLSP 405 (S) Alternative American Literatures: From the Indigenous Chronicle to the Latin American & Chic. Novel (DPE) (WS)

Do the Americas have a common literature? If so, is it possible to trace their roots and continuity from the colonial era to the present? Literary critic Matin Lienhard suggests that it is indeed possible to trace the origin of a literature common to Latin America from the colonial era and into present by focusing on what he calls "alternative literatures"--literatures that relativize the importance of Europeanized and Creole literatures and valorize the richness of oral traditions in the Americas. Such literatures, he asserts, are closely tied to marginalized sectors of society. In this course, we will take Lienhard's concept of "alternative literatures" as a point of departure to pursue our own examinations of how these "alternative literatures" are constituted. While the primary aim of this course is to focus on the writings of Latin American authors, we will end by exploring the relationship between "alternative" Latin American literatures and Chicana/o/x literatures. Readings will include narrative texts such as Cartas de relación, chronicles of conquest, religious texts, indigenous annals, poetry, and drama, as well as contemporary Latin American and Chicana/o/x novels.

Requirements/Evaluation: Four essays, class presentations, active participation, and regular attendance required

Prerequisites: any 300-level RLSP course or permission of instructor

Enrollment Limit: 15

Enrollment Preferences: Senior Spanish Majors.

Expected Class Size: 15

Grading: yes pass/fail option, no fifth course option

Distributions: (D1) (DPE) (WS)

Writing Skills Notes: Each student will write four 4-6 page papers on which I will provide written feedback regarding grammar, style, and argument. Each student will also provide three 2-page critiques of their partner's papers as a form of feedback. After receiving my feedback and the feedback of their peers, each student will revise each of the papers and submit a final version.

Difference, Power, and Equity Notes: This course will highlight intellectual production of indigenous peoples of the Americas under Spanish colonial rule as well as the writings of more contemporary minority authors of Latin America. It will explore the new identities and textualities that emerge as a result of the encounter and subsequent conquest of the Americas. As such, students will gain critical skills to analyze a diversity of Spanish-American colonial texts from the 16th century as well as more contemporary narrative texts.

Spring 2025

SEM Section: 01 TF 1:10 pm - 2:25 pm Carlos Macías Prieto

RLSP 407 (F) Gender, Race and Nature: Ecocritical Examinations of Latin American Culture (DPE)

This senior seminar brings an ecocritical focus to the study of Latin American cultural production. We are particularly interested in works of literature and other kinds of cultural texts that critique, subvert, or transcend conventionally Eurocentric and patriarchal conceptualizations of the human and its relation to non-human being. Rhetorical tropes linked to extractivist economic practices and their alternatives will be identified and analyzed over the course of the semester as we sample a wide range of literary and non-literary texts (poetry, narrative prose, essay, film, painting, woodcuts, music, digital media) produced throughout the 20th and 21st centuries. We will also read and discuss writings by leading ecocritics and decolonial theorists including Silvia Rivera Cusicanqui, Eduardo Gudynas, Mary Louise Pratt, Walter Mignolo, and more.

Requirements/Evaluation: Thorough preparation and active class participation, discussion-leading, one 5-7 page paper and one 15-20 page paper as well as a paper proposal, abstract, bibliography, and draft.

Prerequisites: Study abroad, one or more RLSP courses at the 200+ level, or permission of instructor.

Enrollment Limit: 19

Enrollment Preferences: Senior Spanish majors, then other interested students.

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: This course brings decolonial theory and ecocriticism together in an approach to Latin American cultural production.

On leave: O. Kim

LANGUAGE STUDY
The department provides language instruction to enable students to acquire all five linguistic skills: understanding, speaking, reading, writing, and culture. Russian 101-W88-102 covers the basics of Russian grammar. Russian 103 through 202 offer additional instruction in grammar and vocabulary acquisition, and provide extensive practice in reading and conversation.

STUDY ABROAD
The department strongly encourages students who want fluency in Russian to spend a semester or year studying in Russia or one of the former Soviet republics. Students generally apply to one of several approved foreign study programs. Russian 104 or the equivalent and junior standing are normally prerequisite for study abroad.

FAQ
Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?
No, generally not until after a student returns and can provide course material for review (e.g. completed work such as exams, portfolios, lab reports and the like).

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?
In addition to course title and description, we always have a conversation with our students about the actual work they completed since sometimes syllabi are vague, or not followed with complete thoroughness.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?
Yes, four courses.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?
No.

Are there specific major requirements that cannot be fulfilled while on study away?
No, the only candidate for this would be the Senior Seminar, and it has never been an issue.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)
No.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:
None to date.

LITERATURE AND CULTURE IN TRANSLATION
The department regularly offers courses on Russian literature, culture, and politics in English for those students who have little or no knowledge of Russian, but who wish to become acquainted with Russian literary, cultural, and social history.

THE CERTIFICATE IN RUSSIAN
To enhance a student’s educational and professional profiles, the Certificate in Russian offers a useful tool for using the language in a wide variety of disciplines. The sequence of language and culture courses is designed to supplement a student’s major at Williams by enabling the student to expand their knowledge in a related field.

Students who enter Williams with previous training in Russian may substitute more advanced courses for all the 100-level courses; they can also be exempted from up to two of the required courses. Thus, in order to earn a certificate a student must take no fewer than five courses (including three
courses in Russian) after enrolling at Williams. The student must achieve proficiency at the level of a B in RUSS 251 or the equivalent.

**Required Courses**

101
102
103
104

one additional course conducted in Russian

**Elective Courses**

at least one course on Russian cultural history

at least one course on Russian intellectual, political, or social history, or post-Soviet economics

**THE MAJOR**

The Russian major offers students an interdisciplinary approach to the intellectual and cultural history of Russia and the former Soviet republics. Students complete the major by combining courses in Russian language and literature with courses in history, political science, music, economics, and art. The major requires a minimum of ten courses of which at least six must be conducted in Russian, at least two must be at the 300-level, and one at the 400-level. In addition, students may take up to four related courses offered by other departments and taught in English.

**Examples of appropriate courses in other departments are:**

HIST 241 Imperial Russia
SOC 248 Post-Soviet Paradoxes
HIST 337 After Stalin: Soviet History
PSCI 286 Russian Politics and Foreign Policy under Vladimir Putin

Students selecting the major must typically complete Russian 104 or 152 (or the equivalent) by the end of the junior year. Majors will normally be expected to take the 400-level seminar offered in their senior year, even if they have previously taken another version of it. Russian majors may receive major credit for summer language study (in consultation with the department) and for as many as four courses taken during study abroad.

**THE DEGREE WITH HONORS IN RUSSIAN**

At the beginning of the second semester of the senior year, students may nominate themselves to candidacy for the degree with honors. By the end of the junior year at the latest, however, they will have established in consultation with the department their qualifications for embarking on the project, the pattern of study to be followed, and the standards of performance.

Students earn a degree with honors by submitting a senior thesis (493-W31-494) of honors quality.

**RUSS 101 (F) Elementary Russian I**

An introduction to contemporary standard Russian, this course provides opportunities to acquire basic proficiency in all five language skills—listening comprehension, speaking, reading, writing, and culture—through immersion, intensive use of authentic materials, and a strong emphasis on the spoken word in all class activities. Greater emphasis is placed on writing in the second semester. For students who already know some Russian, consultation with the department is required before registering for any Russian language course in the sequence 101 through 252.

**Class Format:** this class is hyphenated with RUSS 102 and meets five times a week

**Requirements/Evaluation:** active class participation, completion of all assignments, regular summative exercises, written and oral final exercises

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** first-and second-year students; students expressing an interest in the Russian major or certificate; students who need to learn Russian for research purposes

**Expected Class Size:** 10
Grading: yes pass/fail option, yes fifth course option

Unit Notes: students registered for RUSS 101-102 are required to attend and to pass the sustaining program during the winter study period; credit granted only if both semesters (RUSS 101 and 102) are taken.

Distributions: (D1)

Fall 2024

SEM Section: 01  MWF 10:00 am - 10:50 am  TR 9:55 am - 11:10 am  Peter A. Orte

RUSS 102  (S)  Elementary Russian II

An introduction to contemporary standard Russian, this course provides opportunities to acquire basic proficiency in all five language skills-listening comprehension, speaking, reading, writing, and culture-through immersion, intensive use of authentic materials, and a strong emphasis on the spoken word in all class activities. Greater emphasis is placed on writing in this semester. For students who already know some Russian, consultation with the department is required before registering for any Russian language course in the sequence 101 through 202.

Requirements/Evaluation: active class participation, completion of homework assignments, oral assessments, and summative exercises.

Prerequisites: RUSS 101 or permission of the instructor

Enrollment Limit: 15

Enrollment Preferences: students expressing an interest in the Russian major or Russian-language certificate and students who need to learn Russian for research purposes

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Unit Notes: credit granted only if both semesters (RUSS 101 and 102) are taken

Distributions: (D1)

Spring 2025

SEM Section: 01  MWF 10:00 am - 10:50 am  TR 9:55 am - 11:10 am  Janneke van de Stadt

RUSS 103  (F)  Intermediate Russian I

This course develops all five skills--listening comprehension, speaking, reading, writing, and culture--for students who have completed at least one year of college-level Russian. Coursework includes a systematic review of Russian grammar, as well as an examination of a variety of authentic materials from Russian and Russophone cultures, current events, and daily life.

Requirements/Evaluation: completion of daily homework assignments, oral assessments, summative exercises, active class participation. This course meets three times per week with the instructor and once per week with the course TA at a time to be determined on the first day of class.

Prerequisites: students who passed RUSS102 or its equivalent

Enrollment Limit: 15

Enrollment Preferences: Students who major, or are planning to major, in Russian, or students seeking a Russian-language certificate

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Fall 2024

SEM Section: 01  MWF 10:00 am - 10:50 am  Janneke van de Stadt

RUSS 104  (S)  Intermediate Russian

This course continues to develop all five skills--listening comprehension, speaking, reading, writing, and culture--for students who have completed at least three semesters of college-level Russian. Coursework includes the ongoing study of Russian grammar, especially of increasing complexity, as well as an examination of a variety of authentic materials from Russian and Russophone cultures, current events, and daily life. Significant attention
will be devoted to vocabulary expansion. Students who complete the yearlong sequence of RUSS 103 and RUSS 104 should be well prepared to undertake study abroad in Russia and are encouraged to do so.

**Class Format:** The class meets four hours a week: three with the professor and the fourth with the Russian Teaching Associate (time to be arranged)

**Requirements/Evaluation:** Daily class participation and preparation, completion of all assignments and exercises, in and out of class. This course meets three times per week with the instructor and once per week with the course TA.

**Prerequisites:** RUSS 103 or the equivalent; consult with instructor if unsure

**Enrollment Limit:** 15

**Enrollment Preferences:** Russian Majors and language certificate seekers, then students of Russian language, literature, history or culture.

**Expected Class Size:** 5-10

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

---

**RUSS 201 (F) Advanced Russian I**

This course continues to develop all five skills—conversation, listening comprehension, reading, culture, and writing—for students who have completed at least two years of college-level Russian or the equivalent. Coursework includes the study of higher-level Russian grammar, as well as an examination of a variety of materials—print and other media—from Russian and Russophone cultures, current events, history, and the arts.

**Class Format:** Class meets with the instructor three times per week, and once a week with the Teaching Associate at a time and place TBA.

**Requirements/Evaluation:** regular attendance, active class participation, completion of all daily homework as well regular written and oral assignments both in and out of class

**Prerequisites:** Russian 104 or the equivalent, consult with the instructor if unsure

**Enrollment Limit:** 15

**Enrollment Preferences:** Russian majors and language certificate seekers; students of Russian language, history, and culture

**Expected Class Size:** 5

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)

---

**RUSS 202 (S) Advanced Russian II**

This course continues to develop all five skills—conversation, listening comprehension, reading, culture, and writing—for students who have completed at least two years of college-level Russian or the equivalent. Coursework includes the study of higher-level Russian grammar, as well as an examination of a variety of materials—print and other media—from Russian and Russophone cultures, current events, history, and the arts.

**Requirements/Evaluation:** class participation, oral and written assignments both in and out of class, 2-3 short essays, 2-3 summative exercises, 2 oral assessments. This course will meet several times per week with the instructor and once per week with the course TA at a time to be determined on the first day of class.

**Prerequisites:** RUSS 201 or permission of the instructor

**Enrollment Limit:** 15

**Enrollment Preferences:** Russian majors and language-certificate seekers, as well as students of Russian language, history, and culture

**Expected Class Size:** 5

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D1)
RUSS 203 (F) Nineteenth-Century Russian Literature in Translation

Cross-listings: COMP 203

Primary Cross-listing

Description: Nineteenth Century Russian literature is well known for its exploration of extreme states of consciousness. Because of this, it also contains some of the most compelling diagnoses of the illnesses and malaise of the modern condition: alienation, loss of meaning, suffering in face of the abuse of power, and the destructiveness of hyperrationality. Covering Russian literature's first modern treatments of madness up to the Silver Age, we will take this theme as a path to explore 19th century Russian literature as a whole. We will read works by Pushkin, Gogol, Dostoevsky, Tolstoy, and others in order to better understand the Russian response to modernity and cast our glance along with them into the depths of the human soul.

Requirements/Evaluation: Daily reading and participation 20%; 1 paper illustrating the practice of close reading 1-2 pp. 10%; paper 2: paper comparing two readings 3-4 pp. 15%; paper 3, comparing two readings or a creative assignment "re-writing" a Russian classic 4-5 pp. 20%; Final paper + presentation (essay on a critical work or story that we did not read or an independent creative assignment): 5-6 pp. 25%; Course Test or final essay: 10%.

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: RUSS or COMP

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

RUSS 204 (S) To See the Past: Russian and Soviet Cinema on History

Cross-listings: COMP 204 / GBST 204

Primary Cross-listing

This course surveys Soviet and Russian cultural history of the 20th- and 21st-centuries through the history of the cinematic medium. We will watch and analyze key films of this period--films by Eisenstein, Vertov, Tarkovsky, Muratova, Balabanov, Zviagintsev, and Fedorchenko among others--from a double perspective. On the one hand, we will study the cultural and historical contexts of the Soviet Union and Russia; on the other hand, we will learn the formal and stylistic aspects of the cinematic medium as it developed historically (from silent, to sound, to color, to digital etc.). From this double perspective, we will try to answer a larger question that underlies this course: What kind of historical thinking can we learn through cinema as a medium? In other words, we will take cinema neither simply as a direct reflection of state ideology nor as pure aesthetic form or entertainment for the masses. Rather, we will approach the films of this period as audio-visual texts that are rich in historical content and require our informed and attentive interpretation.

Requirements/Evaluation: For each class you'll watch 1 or 2 film(s) and read typically 1 article under 20 pages. You will submit short viewing response before each class. Additionally, there will be short viewing or creative assignments to familiarize students with formal aspects of film. Evaluation will be based on participation, one presentation, short sequence analysis, and final paper or video essay

Prerequisites: none, open to all students

Enrollment Limit: 15

Enrollment Preferences: declared or prospective Russian or Comparative Literature majors, Russian Certificate seekers, Global Studies concentrators

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

RUSS 209  (F)  Siberia: Region Making and Imperial Imagination in Russia
Cross-listings: ANTH 209

Secondary Cross-listing

Siberia is often framed as an essential part of Russia and a repository of all that is Russian. However, imaginations of Siberia also paint contradictory images of the region: as a heaven or a hell, a wasteland or a breadbasket, a place of freedom or a place of imprisonment, a Russian colony or as the Russian heartland. This course takes as its root that Siberia is not any one thing and not any one place. Rather, Siberia is an idea and set of representations that change over time. In this course, we will analyze and unpack this idea. The course asks: what is Siberia; how did Siberia become so integral to Russia and ideas of Russianness; who defines Siberia; what are the images of Siberia and for whom do they matter; and what do these imaginations of Siberia facilitate and obscure? To answer these questions, we will engage in an interdisciplinary study of Siberia incorporating ethnography, history, film, and literature. The primary goal of the course is to expose students to the various ways Siberia has been imagined, who it has been imagined and represented by, and how these imaginations and representations have lives of their own. In doing so, the course will help students view Russia through its peripheries rather than through Moscow and Saint Petersburg and will enable students to grapple with how "regions" are created.

Requirements/Evaluation:  Regular GLOW posts and participation in classroom discussion, a midterm paper, and a hybrid reflective and analytic paper comparing imaginations of Siberia with place from their own life that has been highly imagined.
Prerequisites: None
Enrollment Limit: 19
Enrollment Preferences: Majors in Anthropology and Sociology and majors and certificate-seekers in Russian.

RUSS 217  (S)  Indigeneity Today: Comparative Indigenous Identities in the US and Russia  (DPE) (WS)
Cross-listings: ANTH 217

Secondary Cross-listing

Indigenous movements for land, rights, and cultural preservation have spread to and originated in all corners of the world. However, the global nature of these movements at times obscures ways of being Indigenous in differing contexts. This course analyzes Indigeneity in both the United States and Russia today. Through reading and analyzing ethnography, theory, and literature, it focuses on Indigenous peoples in a comparative context. Rather than prioritizing concern with Indigenous peoples emerging from the US, it attempts to demonstrate what Indigeneity has been in both the United States and Russia and what it is and means today. It asks the following questions: what is Indigeneity and who is Indigenous; how is Indigenous identity constructed and by whom; and what convergences and divergences exist in Indigeneity between the US and Russia or for that matter in other contexts? To help answer these questions, in this course we will grapple with Indigeneity as a social category and other social formations, especially ethnicity, nationality, and race. Topics include: Indigeneity and the State, Revitalization and Resurgence, Indigenous People and Nature Protection, and Hemispheric and Global Indigeneities.

Requirements/Evaluation:  10 posts to the course Glow discussion page, 3 times leading class discussion on the assigned readings, 1 short
presentation, 1 extended portfolio project with regular shorter and longer writing submissions, and 1 final paper and final presentation (as the final part of the portfolio).

**Prerequisites:** None

**Enrollment Limit:** 16

**Enrollment Preferences:** Majors and certificate-seekers in Russian, then majors in Anthropology and Sociology, and then Global Studies concentrators

**Expected Class Size:** 12-15

**Grading:** no pass/fail option, yes fifth course option

**Distributions:** (D1) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

RUSS 217(D1) ANTH 217(D2)

**Writing Skills Notes:** This course has the following assignments: Weekly post to the Glow discussion page, 1 extended project with regular writing submissions, 1 final paper and final presentation. For the extended project, we will have instructor feedback for all project assignments. In instructor feedback, comprehension of the material and the content of the writing, improvement in writing style and clarity, and development of voice will be discussed. There will also be peer feedback/review.

**Difference, Power, and Equity Notes:** In the course, students will learn about Indigeneity as a context-specific social formation. It understands Indigeneity as a category of difference with past and present importance. We will read about, discuss, and write about Indigeneity as a social category, along with other social categories it arose alongside (such as race, ethnicity, and nationality), and how it has been mobilized by both those who identify as Indigenous and by those who designate others as Indigenous.

Spring 2025

SEM Section: 01 TF 2:35 pm - 3:50 pm Kamal A. Kariem

**RUSS 219 (F) Cults of Personality (WS)**

**Cross-listings:** COMP 215

**Primary Cross-listing**

First uttered by Soviet leader Nikita Khrushchev in 1956, the phrase "cult of personality" was formulated to discredit the hero-worship that accompanied Joseph Stalin's iron-fisted rule of the Soviet Union. Since then, the phrase has gained currency as a condemnation of a variety of seemingly all-powerful leaders in oppressive political regimes, including China's Mao Zedong, Iran's Ayatollah Khomeini, and the ruling Kim family in North Korea. In this course, we will examine the phenomenon of the cult of personality from a variety of perspectives, beginning with the cult surrounding Stalin and ending with that of Vladimir Putin. Our course material will encompass scholarship from multiple disciplines, including history, sociology, political science, cultural and media studies, as well as artistic expression typically labeled propaganda in literature, the visual arts, and film. Although our course will begin in the Soviet Union and end in contemporary Russia, we will explore how the cult of personality has been adapted and updated for different cultural and political purposes in fascist Germany and Spain, China, Iran, North Korea, and Cuba. *All readings will be in English, and all films will have English subtitles.*

**Requirements/Evaluation:** completion of weekly reading and writing assignments, as well as active engagement during tutorial sessions

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** first-year students

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D1) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

COMP 215(D1) RUSS 219(D1)

**Writing Skills Notes:** Students will be writing papers (5-6 pages) every other week and receiving detailed feedback on their writing with the expectation that they will identify areas in need of improvement and work on these throughout the semester. The course will also require that students write one paper together with their tutorial partner and that they rewrite two different papers, one at midterm and the other at the end of the term.
RUSS 305 (F) Dostoevsky and the Meaning of Life
Cross-listings: COMP 305

Primary Cross-listing
This course surveys the works of the great Russian writer Fyodor Dostoevsky, whose oeuvre represents a life-long quest to uncover the meaning of life. Readings include Dostoevsky's major novels, Crime and Punishment, Demons, and The Brothers Karamazov, as well as several shorter works, including Notes from Underground. We will also examine Dostoevsky's journalism, so that we understand how he answers life's most troubling questions in the social and political context of his day, as well as what role artistic representation plays in these answers. All readings will be in English.

Requirements/Evaluation: willingness and ability to complete lengthy reading assignments, active class participation, two short papers, and final project
Prerequisites: none, open to all students
Enrollment Limit: 40
Enrollment Preferences: Russian and Comp Lit majors, as well as those seeking the Russian Certificate
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option

RUSS 306 (S) Tolstoy and the Meaning of Life
Cross-listings: COMP 306

Primary Cross-listing
This course examines the works of the great Russian writer Lev Tolstoy, whose stories and novels represent a life-long quest to uncover the meaning of life. Readings include Tolstoy's two major novels, War and Peace and Anna Karenina, as well as several shorter works, such as The Death of Ivan Ilych and Hadji Murad. We will also examine Tolstoy's aesthetic and didactic writing so that we understand precisely how Tolstoy answers life's most troubling questions, as well as what role artistic representation plays in these answers. All readings will be in English.

Requirements/Evaluation: timely completion of all reading assignments, active participation in class discussions, 2 short papers, and a final project
Prerequisites: none
Enrollment Limit: 50
Enrollment Preferences: RUSS and COMP majors, then students studying Russian
Expected Class Size: 15

RUSS 331 (F) The Brothers Karamazov (WS)
Cross-listings: COMP 331 / ENGL 371
Primary Cross-listing

Widely hailed as one of the greatest novels ever written, Dostoevsky's *The Brothers Karamazov* contains a series of enigmas, not the least of which is precisely who murdered the Karamazov father. In addition to exploring the shared guilt of all four of the brothers Karamazov in the crime of patricide, Dostoevsky poses the most probing questions of his day: Are families tied together merely by blood or by deeper spiritual bonds? Is religious faith possible in an age of reason, science, and technology? Can man's earthly laws ever carry out divine justice? Is humanity prepared to bear the burden of responsibility that comes with freedom? This tutorial will spend an entire semester exploring Dostoevsky's masterwork, and we will read a variety of secondary sources alongside *The Brothers Karamazov*, including history, philosophy, and literary theory. Our goal will be to understand Dostoevsky's answers to these so-called "accursed questions" through the unique artistic form of *The Brothers Karamazov*.

Requirements/Evaluation: completion of weekly reading and writing assignments, as well as active engagement during tutorial sessions

Prerequisites: at least one 200-level literature class

Enrollment Limit: 10

Enrollment Preferences: students majoring or considering a major in Russian, Comparative Literature, or English

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D1) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

RUSS 331(D1) COMP 331(D1) ENGL 371(D1)

Writing Skills Notes: Students will write six 6-page papers in the course of the semester and received detailed feedback on their writing and argumentation for each paper, which they will be expected to incorporate into subsequent papers.

Attributes: JLST Interdepartmental Electives

Not offered current academic year

RUSS 345 (S) Bagging the Monsters: Tolstoy's Other Prose

*War and Peace* and *Anna Karenina*, which Henry James famously described as "baggy monsters," are works that are immediately identified with Leo Tolstoy, a giant of nineteenth-century Russian literature. But Tolstoy wrote so much more! From short works of adult fiction, to stories for children, pedagogical essays, political tracts, aesthetic treatises, and philosophical musings. He produced variously and prodigiously throughout his life and that's not even counting his fascinating diaries and personal correspondence. Our course readings will probe this exceptional variety with the goal of understanding the scope of Tolstoy's thinking in greater depth. All readings and discussion will be in Russian.

Requirements/Evaluation: Active, regular, and substantive class participation; leading discussion; weekly short writing assignments of 1-2 pages; and 1 longer writing piece of 4-5 pages.

Prerequisites: Three years of college Russian or the equivalent. Students who have not taken Russian language at Williams must consult the instructor.

Enrollment Limit: 10

Enrollment Preferences: Russian majors and certificate seekers, then comparative literature majors.

Expected Class Size: 5

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1)

Not offered current academic year

RUSS 346 (S) The Nineteenth-Century Povest'

Among the genres that made nineteenth-century Russian literature famous, perhaps the most elusive is the *povest*. Neither short story nor novella, the term *povest* describes a type of short fiction, which any author aspiring to literary greatness in nineteenth-century Russia felt obliged to take on. This course surveys representative *povesti* by Russian writers from Karamazin to Chekhov, offering a survey of nineteenth-century Russian literature through the lens of its short fiction. Along the way, we will read *povesti* by Pushkin, Lermontov, Gogol, Turgenev, Dostoevsky, and Tolstoy. All works will be read in the Russian original.

Requirements/Evaluation: completion of all reading assignments; two oral presentations in class; two short papers; a final project presented in class

Prerequisites: RUSS 202 or the equivalent, or permission of the instructor.
Enrollment Limit: 10

Enrollment Preferences: Russian majors and those pursuing the Russian certificate.

Expected Class Size: 5

Grading: yes pass/fail option, yes fifth course option

RUSS 348 (F) Altering States: Post-Soviet Paradoxes of Identity and Difference  (DPE)  (WS)

Cross-listings: GBST 348 / SOC 348

Secondary Cross-listing

Critics and apologists of Soviet-style socialism alike agree that the Soviet ideology was deeply egalitarian. Putting aside for a moment the very reasonable doubts about how justified this perception actually was, it is still worth asking, how did people who lived in the world in which differences in rank, class, gender or ethnicity were not supposed to matter, make sense of their post-socialist condition, one in which new forms of difference emerged, and old ones assumed greater prominence? And how do these encounters with difference impact current events, such as Russia’s invasion of Ukraine, or the lingering tensions between East and West Germans? This tutorial will examine new dilemmas through ethnographic studies and documentary films that aim to capture in real time the process of articulating and grappling with newly discovered divides. We will focus especially closely on Ukraine and Russia, but will also read comparative studies, as well as works on East Germany and Georgia. This course fulfills the DPE requirement by exploring comparatively the ways in which people in different countries made sense of the social, cultural and political heterogeneity of the post-socialist condition.

Requirements/Evaluation: 5-page paper every other week, written comments on the partner’s paper in alternate weeks

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: Anthropology, Sociology, and Russian majors

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D1)  (DPE)  (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

GBST 348(D2) RUSS 348(D1) SOC 348(D2)

Writing Skills Notes: This is a tutorial course, with plenty of opportunities to work on writing and argumentation. Tutorial papers receive written feedback from both the instructor and the tutorial partner, and are workshopped during the tutorial meetings.

Difference, Power, and Equity Notes: Students will learn to identify and interrogate processes of social differentiation and exclusion as they take place across Russia and Eastern Europe. We will also train ourselves to identify parallels, as well as differences, between responses to the social and economic uncertainty ushered by the fall of socialism, and the discontents triggered by similar conditions closer to home.

Attributes: GBST Russian + Eurasian Studies

Fall 2024

TUT Section: T1  M 7:00 pm - 9:40 pm  Olga Shevchenko

RUSS 401 (F) Let’s Remember the USSR!  (DPE)

This course is devoted to memories of the USSR. We will focus on memoirs that portray various epochs of Soviet history from different points of view, watch films dealing with the Soviet legacy, and respond to essays that consider the problems of history and myth. In so doing, we will discuss the significance of nostalgia, official vs. unofficial culture, the politics of memory, and the institution of monuments. Much of our course will focus on daily life in the USSR as remembered by the people who lived through it. However, we will also explore the meaning and status of such memories today in former Soviet countries through responses to daily readings, essays, and presentations. Of course, along the way, we will work on improving our spoken and written Russian.
Requirements/Evaluation: Daily work (reading, preparing questions for discussion) 25%; weekly 1-2 page short written assignments (responses to open-ended questions about the daily readings) 25%; 2 short 10 minute presentations (on two illustrious works or figures) 25%; 1 final project, longer researched presentation 10-15 minutes 25%.

Prerequisites: Three years of Russian or instructor's consent.

Enrollment Limit: 15

Enrollment Preferences: RUSS or COMP

Expected Class Size: 5-10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D1) (DPE)

Difference, Power, and Equity Notes: This course will address several issues that directly relate to the DPE description: the lives of dissidents in the USSR; the legacy of imperialism in the countries of the former Soviet Union; and the role that the official version of history plays in Russia today.

RUSS 99  (W) Independent Study: Russian
Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.
Class Format: independent study
Grading: pass/fail only
Not offered current academic year
Science and Technology Studies (STS) is an interdisciplinary program concerned with science and technology and their relationship to society. The community of scholars in the Williams STS program apply methods from diverse disciplines. They seek to illuminate the historical, social, cultural, ethical, and political dimensions of science and technology. By bridging humanities, social sciences, science, and technology, our program seeks to build relationships across campus.

The STS program at Williams takes a broad umbrella approach to the discipline. Topics include: sociology of knowledge production; philosophy of science; history of science and technology; the economics of research and development; science and public policy; technology and the environment; scientometrics; interactions between humans and technology; science fiction and other artistic depictions of science and technology; boundaries between pseudo-science, religion, and science; and the broader ethical issues evoked by science and technology.

Science and Technology Studies concentrators must complete a total of six courses. Five of these must have the STS prefix. Students must take: Introduction to STS; Senior Seminar; and three electives, of which at most two can originate in the same department. In addition, Science and Technology Studies concentrators must complete one course with a laboratory or field work component in natural, social, or computer science; this course may also satisfy one of the divisional distribution requirements.

Students may petition the Chair for recognition of a course as an STS course even if it is not cross-listed in STS. The petitions will be approved or denied on a case-by-case basis.

The program is administered by a chair and an advisory committee of faculty who teach in the program. Students who wish to enroll normally register with the chair by the fall of their junior year.

**STUDY ABROAD**

**FAQ**

Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

**Can your department or program typically pre-approve courses for major/concentration credit?**

Yes, in some cases, if appropriate course information is available in advance (e.g. syllabi and/or course descriptions), though students should be sure to contact the department.

**What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?**

Complete syllabus and course description, including readings/assignments.

**Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?**

No.

**Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?**

No.

**Are there specific major requirements that cannot be fulfilled while on study away?**
No.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. Be sure to check record of enrollment in classes with laboratory of fieldwork components to satisfy program.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

None to date.

STS 101  (S)  Science, Technology, and Human Values

Cross-listings:  SOC 201

Primary Cross-listing
This course offers an introduction to science and technology studies. Attention will be devoted to exploring the nature of science and technology, their relationships to and interactions with one another, society and the natural world, and the influences these interactions exert in shaping what humans value. With widespread use of new social media, controversial developments in such bio-technical practices as gene-editing and the cloning of mammals, rapid advances in various forms of technological surveillance, and the increasing sophistication of technological weaponry in the military, the triumph of technology remains a defining feature of modern life. For the most part, modern humans remain unflinchingly confident in the possibilities technology holds for continuing to improve the human condition. As with other features of modernity, however, technology has also had significant, albeit largely unanticipated, social consequences. This course will focus on the less often examined latent functions of science and technology in modern society. It will consider, for example, the social effects of technology on community life, on privacy, and on how people learn, think, understand the world, communicate, and organize themselves. The course will also examine the effects of technology on medicine, education, criminal law, and agriculture and will consider such counter-cultural reactions to technology as the Luddite movement in early nineteenth century England, Amish agrarian practices, and the CSA (community supported agriculture) movement.

Requirements/Evaluation:  A midterm, final, and two short papers.

Prerequisites:  none

Enrollment Limit:  20

Enrollment Preferences:  first-years and sophomores

Expected Class Size:  20

Grading:  no pass/fail option,  no fifth course option

Distributions:  (D2)

STS 142  (S)  AlterNatives: Indigenous Futurism and Science Fiction  (DPE)

Cross-listings:  AMST 142

Secondary Cross-listing
Indigenous people occupy a paradoxical position in time. As survivors of genocide, they are already post-apocalyptic, occupying what could be called "their ancestors' dystopia." But Indigenous people are also imagined to exist frozen in history, merely one step in the ceaseless march of civilization that brought us to the present. This tutorial explores how contemporary Native science and speculative fiction imagines and enacts futurity from this dynamic temporal position. Looking across numerous national and transnational Indigenous contexts, we will survey a diverse range of media, including short stories, novels, visual art, video games, films, and online platforms like Second Life. Pairing these with works in Science and Technology Studies (STS) and Native American and Indigenous Studies (NAIS), we will explore concepts like the Native "slipstream," eco-erotics, post-post-apocalyptic stress, Native pessimism, biomedical speculative horror, and what it would be like to fly a canoe through outer space.
**Requirements/Evaluation:** participation, weekly 2- to 4-page written responses to class readings, short fiction prompts, and/or your partner's writing

**Prerequisites:** permission of instructor

**Enrollment Limit:** 10

**Enrollment Preferences:** first and second year students, American Studies majors, Science and Technology Studies concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AMST 142(D2) STS 142(D2)

**Difference, Power, and Equity Notes:** Students in this course will explore the relationship between political violence, resistance, and speculation. We will develop close reading practices, analytical methods, and careful discussion dynamics to enable students to make sense and use of concepts like futurity, race, settler colonialism, gender, and technological determinism.

**Attributes:** AMST Arts in Context Electives AMST Comp Studies in Race, Ethnicity, Diaspora

Not offered current academic year

**STS 150 (F) Data for Justice** (DPE) (QFR)

**Cross-listings:** AMST 150 / SOC 150 / WGSS 150 / INTR 150

**Secondary Cross-listing**

This course is a unique and inclusive introduction to data science where quantitative thinking, programming, and social justice intertwine. We will build our data science skills using R, a popular open-source data science tool. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration. But rather than divorcing these techniques from the social issues they can help illuminate, we ground them in a social justice context. Overall, we will apply data science skills to topics drawn from criminal justice, environmental justice, diversity and inclusion in arts and media, education equity, and much more, with the goal of growing our collective capacity to use data science as a tool for social good. During a time when humans are increasingly subjugated to data-driven algorithmic decisions, when there are social media accounts dedicated to highlighting misuses of data, and when artificial intelligence makes faking data a nearly trivial task, using data to ethically and carefully promote justice is more important than ever.

**Class Format:** This course is taught in a highly interactive format and will frequently use a flipped-classroom approach. Students should expect substantial time devoted to in-class collaboration.

**Requirements/Evaluation:** Students will complete regularly assigned activities, problem sets, and other assessments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based approach.

**Prerequisites:** None. This course assumes no prior knowledge of data science or R programming. An interest in social justice and a willingness to engage intensively with data and computing are essential.

**Enrollment Limit:** 18

**Enrollment Preferences:** Students without prior college-level courses in statistics and programming.

**Expected Class Size:** 18

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 150(D2) AMST 150(D2) SOC 150(D2) WGSS 150(D2) INTR 150(D2)

**Difference, Power, and Equity Notes:** This course uses data science as a lens for injustice in spheres such as criminal justice, environmental justice, diversity and inclusion in arts and media, education equity. We will consider race, gender, LGTBQ+, disability, and other axes of identity. Additionally, we will adopt a data-critical perspective, thinking about how social forces shape data and our understanding of it.

**Quantitative/Formal Reasoning Notes:** This course teaches quantitative tools in R, a widely-adopted data science platform. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration.

Fall 2024
STS 153 (S) Androids, Cyborgs, Selves (WS)

Cross-listings: ENGL 153

Secondary Cross-listing

In this expository writing course, we will analyze and argue about how humanoid and partly human bodies appear in legend, fiction, and film. When are these bodies inviting? When are they threatening? How are they gendered, how are they raced, and why? Which technologies fit easily into human forms, and which are resistant? What do the persons who inhabit these near-human bodies desire? Students in this course will develop arguments in reply to these and related questions, developing 3 or 4 essays through multiple stages of planning, drafting, and revising. Because this is an expository writing seminar, we will spend half or more of our class time discussing and practicing writing skills.

Requirements/Evaluation: several response papers (500 words); three or four essays (1200-1500 words, in multiple drafts); class participation

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: See details for ENGL 100-level courses on English Department Website.

Expected Class Size: 12

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
STS 153(D2) ENGL 153(D1)

Writing Skills Notes: This expository writing course is dedicated to facilitating real improvement in students’ written argumentative work. Students will write and revise response papers and 5-page essays (in multiple drafts) over the course of the semester, receiving substantial instructor feedback. Students will practice: drafting, revising, and responding to critique; writing appropriately for given occasions and audiences; grounding their writing in close, analytical reading; and acknowledging sources.

Spring 2025

STS 208 (S) Designer Genes (DPE)

Cross-listings: ENGL 208 / WGSS 208 / AMST 206

Secondary Cross-listing

In this course, we explore cultural texts that attempt to come to terms with—or exploit—the revolution in contemporary genetics with a particular focus on gender, race, class, and sexuality. The mapping of the human genome in 2001 opened incredible opportunities for medicine, law, and society, but it also, as Alice Wexler has written, "opened a vast arena for contests of power over what it means to be human, who has the power to define what is normal, [and] who has access to what resources and when." Wexler was writing before the final sequencing of the human genome. Now we have CRISPR technology, ushering in a new, more pressing set of ethical concerns. We are currently in the midst of a "global race to genetically modify humans," as the anthropologist Eben Kirksey has documented in his new book The Mutant Project. How will we come to define the human? Who gets to decide? Our writers and filmmakers make clear that genetic medicine cannot be thought apart from a profit-driven American health care system or family and gender dynamics. Joanna Rudnick’s documentary In the Family, for instance, explores the personal and political issues associated with hereditary breast cancer and the patenting of genes. Octavia Butler’s Afro-futurist novel Dawn explores black female sexuality, reproduction, and the survival of the species in her character’s encounter with a genetically enhanced alien species. The film Gattaca shows us a fully realized dystopian society where genetically modified humans are the norm—a society that now "has discrimination down to a science." The transgender artist Tamara Pertamina, on the other hand, "hopes to decolonize the science of genetic engineering," as Kirksey has written, with her performance artist projects. Our texts come from a number of different genres, including the memoir, science fiction, film, documentary, art, and non-fiction writing at the intersections of science, medicine, philosophy, anthropology, and law.

Requirements/Evaluation: Personal essay, short analysis papers, final research group project

Prerequisites: none
Enrollment Limit: 25
Enrollment Preferences: None; if class is overenrolled, professor will ask for statements of interest.
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option
Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
ENGL 208(D1) STS 208(D2) WGSS 208(D2) AMST 206(D2)

Difference, Power, and Equity Notes: This course asks students to think deeply about questions of social justice in the context of the revolution in modern genetics. Race, class, gender, and sexuality all play a role in who has access to new life-saving technologies, and how these technologies are used. This course employs critical tools (feminist and queer theory, ethics’ case studies, close reading) to help students question and articulate the social injustices at play in scientific research and bioengineering.

SEM Section: 01 TF 2:35 pm - 3:50 pm Bethany Hicok

STS 212 (F) Ethics and Reproductive Technologies (WS)

Cross-listings: WGSS 212 / PHIL 212

Secondary Cross-listing
In her groundbreaking book, The Tentative Pregnancy, Barbara Katz Rothman writes that "[t]he technological revolution in reproduction is forcing us to confront the very meaning of motherhood, to examine the nature and origins of the mother-child bond, and to replace--or to let us think we can replace--chance with choice." Taking this as our starting point, in this course we will examine a number of conceptual and ethical issues in the use and development of technologies related to human reproduction, drawing out their implications for such core concepts as "motherhood" and "parenthood," family and genetic relatedness, exploitation and commodification, and reproductive rights and society’s interests in reproductive activities. Topics will range from consideration of "mundane" technologies such as contraception, abortion, in vitro fertilization (IVF), prenatal genetic screening and testing, and surrogacy, to the more extraordinary, possibly including pre-implantation genetic diagnosis (PGD), post-menopausal reproduction, uterine transplants, and "artificial wombs." Background readings include sources rooted in traditional modes of bioethical analysis as well as those incorporating feminist approaches.

Class Format: discussion

Requirements/Evaluation: active participation in class discussions, three or four short reflection papers, and two longer papers (5-7 and 7-10 pages)
Prerequisites: none, but introductory-level course in PHIL and/or WGSS recommended
Enrollment Limit: 19
Enrollment Preferences: WGSS and PHIL majors (declared or prospective), PHLH and STS concentrators (declared or prospective)
Expected Class Size: 19
Grading: yes pass/fail option, yes fifth course option
Unit Notes: meets Contemporary Value Theory requirement only if registration is under PHIL
Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
WGSS 212(D2) PHIL 212(D2) STS 212(D2)

Writing Skills Notes: Students will write periodic short papers (2-3 pages each), a midterm paper (5-7 pages) and a final paper (7-10 pages). Short papers focus on concepts, arguments, and writing skills needed in the midterm and final papers, in which students are expected to describe and evaluate arguments from assigned readings, and to present clear and effective arguments in support of their own ethical positions. Students receive feedback on all papers and have the opportunity to revise midterm and final papers.

Fall 2024
STS 219 (F) Realizing Utopias

Cross-listings: REL 219

Secondary Cross-listing

Our world can be better. We are faced with unfolding global catastrophes, such as the pandemic, anthropogenic climate change, economic crises, racialized injustice, and political polarization, and many people seem to have lost their capacity to imagine better futures. Perhaps that is why we as a society have no problem picturing the end of the world--fictional dystopias and apocalypses are abundant while (e)utopias are scarce. This a problem because, as numerous political theorists have observed, it is hard to organize meaningful change around cynicism and nihilism. But our dystopian present makes it even more important to imagine and even realize utopias. This course will help us do so. Our core collective goal will be to explore pragmatic realizations of radical hope. Complementing urgent efforts to resist or mitigate intense injustice in the present, we will aspire to articulate bold visions for emancipatory communities of the future. Rather than primarily focusing on the limitations of existing institutions, this seminar will treat these as problems to be solved rather than as reasons to accept the status quo, and we will embrace affirmative projects of designing the frameworks for better worlds. But we also don't want to blind ourselves to the challenges of being visionary. In brief, we will engage in serious explorations of the underlying principles and rationales for various emancipatory political communities while also pragmatically assessing their potential difficulties. We will spend the first part of the course reading political theory (on issues such as resource allocation, collective decision making, and social justice) alongside various artistic and political manifestos. We will spend one week reading utopian novels (including as possibilities socialist, anarchist, techno-futurist, ecotopias, Afrofuturist, queer utopias, and many more). But the majority of the course will be project-based. Students will form small teams to engage in radical thought experiments and then construct and refine their ideas of better possible societies/political communities. These teams will produce 1) policy papers to address how their utopian societies would deal with real world issues, and 2) artifacts (such as art, manifestos, pamphlets, short stories, videos, or the like) that might appear in the futures they envision, exploring both their ideals and their limits. The semester will culminate in a public exhibition of these works. Thinkers to be considered may include: Marx & Engels, José Esteban Muñoz, Boaventura de Sousa Santos, Lucy Sargisson, David Schweickart, Colin Ward, Erik Olin Wright, and others.

Requirements/Evaluation: attendance and participation, short writing assignments, group policy papers, and artifacts (e.g., art, manifestos, pamphlets, short stories, or videos) for end of semester exhibit.

Prerequisites: none.

Enrollment Limit: 20

Enrollment Preferences: If overenrolled students will be asked for a statement of interest and utopian project idea.

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

This course is cross-listed and the prefixes carry the following divisional credit:
REL 219(D2) STS 219(D2)

Not offered current academic year

STS 221 (S) History of Photography

Cross-listings: ARTH 221

Secondary Cross-listing

This lecture course will examine the history of photography from its beginnings in the 1830s to the present, from the first grainy black and white images to the work of contemporary artists using cutting-edge photographic technologies. We will examine photographs used for documentary, scientific, and aesthetic purposes, and we will trace the medium's emergence and acceptance as a fine art. We will also explore photography's physical and conceptual characteristics as a medium, paying particular attention to its uniquely intimate and frequently contested relationship to "the real." By the end of the course, students will have a broad understanding of photography as a unique medium within the history of art and knowledge of the theoretical frameworks that developed alongside that history.

Requirements/Evaluation: three to four short papers, quizzes, virtual exhibition

Prerequisites: none

Enrollment Limit: 25
Enrollment Preferences: art history majors

Expected Class Size: 25

Grading: yes pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 224 (F) Going Nuclear: American Culture in the Atomic Age

Cross-listings: HIST 273 / SOC 224

Secondary Cross-listing

This course will examine the historical development and use of the nuclear bomb. Among other features of the early atomic age, the course will look at the Manhattan Project, the delivery of the bombs for combat, the destructive effects of the bomb's initial use in Hiroshima and Nagasaki, and the ongoing testing of nuclear weapons in the Marshall Islands after WWII. The class will investigate the role of the nuclear arms race in the Cold War, the consequences of nuclear production on specific communities, and the implications of the atomic age on our critical understanding of technological innovation more generally. We will also consider the saliency of competing narratives interpreting America's decision (and continuing policies) to build, use, and stockpile nuclear weapons. Employing both sociological and historical perspectives, we will explore the interactions between science, politics, and culture in the nuclear age.

Requirements/Evaluation: a midterm, a final exam, and a 10- to 12-page research paper

Prerequisites: none

Enrollment Limit: 20

Enrollment Preferences: Preference given to sociology and history majors.

Expected Class Size: 20

Grading: no pass/fail option, yes fifth course option

STS 226 (F) The Art of Natural History (WS)

Cross-listings: ARTH 229

Secondary Cross-listing

The scientific revolutions of the eighteenth and nineteenth centuries fundamentally changed the way the natural world was seen and celebrated, classified and organized, displayed and manipulated. New discoveries in the natural sciences and competing theories of evolution intertwined with shifting conceptions of natural history, of nature, and of humankind’s proper place within it. This course will investigate the links between art and natural science. It will seek to understand the crucial role of the visual arts and visual culture in the study and staging of natural history from the eighteenth century to the present. We will pursue the questions that preoccupied the artists themselves. How should an artist react to new ecological insights? What is the proper artistic response to newly discovered flora and fauna? What is the role of aesthetics in the communication of knowledge? How are those aesthetics connected to ethics? How might a drawing of a plant convey information that is different from that of a photograph or a glass model of a plant? How might a theatrical diorama frame a scientific idea in a way that is different from a bronze statue? Students will seek to understand the myriad connections between seeing, depicting, and knowing, to question long-held assumptions about the division between "objective" science and "subjective" art, and to recognize that art has the ability not only to interpret, disseminate, and display scientific knowledge, but to create it as well.
**Requirements/Evaluation:** Five 5 page essays, five 1-2 page responses to partner's essays, critical conversation.

**Prerequisites:** None.

**Enrollment Limit:** 8

**Enrollment Preferences:** Sophomores with an interest in art history, art studio, ecology, environmental studies, and science and technology studies, juniors with these same interests, then art history majors, and science and technology majors, in that order.

**Expected Class Size:** 8

**Grading:** no pass/fail option, no fifth course option

**Materials/Lab Fee:** $150  Lab and materials fees for all classes are covered by the Book Grant for all Williams financial aid recipients.

**Distributions:** (D1)  (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

ST5 226(D2) ARTH 229(D1)

**Writing Skills Notes:** This course will require students to write a short paper or a critical response to their partner's paper each week. Students will receive critical feedback on both form and content from their professor and from their peers.

**Attributes:** ARTH post-1800

Not offered current academic year

---

**STS 228 (F) Feminist Bioethics  (WS)**

**Cross-listings:** WGSS 228 / PHIL 228

**Secondary Cross-listing**

In this course we will explore the ways in which feminist approaches to moral thinking have influenced both the methodology and the content of contemporary bioethics. The first portion of the course will address the emergence of the "Ethics of Care," critically assessing its origins in feminist theory, its development within the context of the caring professions, and its potential as a general approach to bioethical reasoning. The second portion of the course will use feminist philosophy to inform our understanding of the ways in which gender structures interactions with and within the health care system. To do this we will explore topics that might traditionally be considered "women's issues" in healthcare, such as medicine and body image (e.g., cosmetic surgery, eating disorders), reproductive and genetic technologies, and research on women and their health care needs. In addition we'll also look at feminist analyses of topics that traditionally have not been regarded as "gendered," such as resource allocation and end of life issues.

**Class Format:** discussion

**Requirements/Evaluation:** active participation in class discussions; periodic short papers (2-3 pages); midterm and final paper ( 5-7 and 7-10 pages, respectively); and one oral presentation

**Prerequisites:** none, although previous coursework in WGSS is desirable

**Enrollment Limit:** 19

**Enrollment Preferences:** prospective and declared majors or concentrators in PHIL, WGSS, STS, and PHLH, especially those who need the course to satisfy major or concentration requirements

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Unit Notes:** meets Contemporary Value Theory requirement only if registration is under PHIL

**Distributions:** (D2)  (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 228(D2) PHIL 228(D2) STS 228(D2)

**Writing Skills Notes:** Students will write periodic short papers (2-3 pages each), a midterm paper (5-7 pages) and a final paper (7-10 pages). Short papers focus on concepts, arguments, and writing skills needed in the midterm and final papers, in which students are expected to describe and evaluate arguments from assigned readings, and to present clear and effective arguments in support of their own ethical positions. Students receive feedback on all papers and have the opportunity to revise midterm and final papers.

STS 229 (S) The Panopticon: Surveillance, Power, and Inequality  (DPE)

Cross-listings: SOC 228

Secondary Cross-listing

Surveillance is built into the very fabric of modern life. From CCTV cameras, to supermarket loyalty cards, to the massive gathering of personal data on social media sites, people participate in today’s “surveillance societies” just by doing everyday activities. This course uses the metaphor of the “Panopticon” as a doorway to engagement with traditional and new forms of surveillance. First described by philosopher and social theorist Jeremy Bentham, the Panopticon is a physical structure that enables one observer to see all inhabitants without those inhabitants knowing when they are being observed. In *Discipline and Punish*, Michel Foucault famously expanded thinking on the Panopticon as a metaphor for the “disciplinary” power that lies at the heart of inequality in modern society. Since Bentham and Foucault’s time, however, surveillance technologies have changed significantly. To what extent does the concept of the Panopticon give us purchase on today’s surveillance societies? How does watching people with new digital and algorithmic surveillance technologies shape the exercise of power and, in turn, (re)produce forms of inequality? Can privacy, convenience, and safety ever be truly balanced? Topics include: the historical origins and expansion of surveillance in modern societies, policing and state surveillance, and social media surveillance.

Requirements/Evaluation: participation, reading responses, midterm essay, final paper

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Anthropology and Sociology majors

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 229(D2) SOC 228(D2)

Difference, Power, and Equity Notes: This course explores how power is distributed unequally through the mechanism of surveillance technologies, particularly in regard to racial and class differences. Among other topics, it will consider the concrete case of surveillance by police in Baltimore City and the question of if and when surveillance is appropriate there, given the city's ongoing crisis of citizen and police violence. Students will discuss police surveillance in a context shaped by racial segregation and class inequality.

Spring 2025

SEM Section: 01  MR 2:35 pm - 3:50 pm  Ben Snyder

STS 231 (S) Africa and the Anthropocene  (DPE)

Cross-listings: ENVI 231 / AFR 231

Secondary Cross-listing

Despite its low contributions to global carbon emissions, the continent of Africa is predicted to experience some of the worst effects of climate change. This interdisciplinary course investigates the causes and consequences of this troubling contradiction. It positions the African continent as an important site for understanding how legacies of empire, racial and gendered inequality, resource extraction, and capital accumulation impact contemporary global environmental politics. Students will engage theoretical texts, reports from international organizations, films, novels, and web-based content. Topics include: humanism/post-humanism; migration and displacement; representations of conflict; and sustainable development.

Requirements/Evaluation: Assignments include: 2 short written commentaries (2-3 pages each), mid-term current event analysis (5-7 pages), final analytical essay (10-12 pages) and class presentation

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Environmental Studies majors and concentrators

Expected Class Size: 19

Grading: no pass/fail option, yes fifth course option
This course is cross-listed and the prefixes carry the following divisional credit:

STS 231(D2)  ENVI 231(D2)  AFR 231(D2)

**Difference, Power, and Equity Notes:** Africa and the Anthropocene considers inequity in environmental politics from the vantage of the African continent. Through selected readings and classroom discussions students will tackle questions of power, racial and gendered difference, empire, and economic stratification. The course contributes to the DPE requirement by helping students to develop skills to better analyze abiding challenges in global society.

Not offered current academic year

**STS 236  (F)  Aesthetics of Automation: From the Mechanical Turk to A.I.**

In this course we will study the changing aesthetics of automation in European and North American cultural contexts from the 18th century to the present. We will also explore the wider cultural and material effects of automation (as imagined and as implemented) upon public and private spheres, craftsmen and courts, wage-laborers, artists, and inventors. The objects we examine will be as various as the dulcimer-playing android presented as a gift to Marie Antoinette, IBM's Deep Blue, and singer-actor Janelle Monae's android alter-ego, Cindi Mayweather. Our primary sources will consist of visual representations in print and film as well as literary and commercial writing; our secondary sources will consist of essays in aesthetic theory, cultural studies, science and technology studies, and the history of technology.

**Requirements/Evaluation:** mid-term and final essays, an annotated bibliography, discussion participation, and brief in-class writing exercises.

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** STS concentrators

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**STS 239  (S)  The Ethics of Artificial Intelligence**

**Cross-listings:** PHIL 239

**Secondary Cross-listing**

Human beings will someday live alongside artificially intelligent beings who equal or exceed us. The rise of AI will be a tectonic shift for culture, technology, and our fundamental sense of ourselves. When AI is fully realized, it is likely to be amongst the most important things to happen to our species. Some challenges we face are broad and about the future. How can we ensure that AI's will act morally? Is a world with AI's overall better or worse for us? How do we create legal and policy frameworks that cover a new kind of thinking being? If they are conscious, will AI's have dignity and rights? Other questions are pressing and immediate: Artificial intelligence techniques are used today to help decide whether someone gets a bank loan, is eligible to be released on bail, or in need of particular medical treatment. And right now there are autonomous vehicles deciding how to behave in traffic, and autonomous weapons capable of delivering lethal force. Is it moral for us to pass along these sorts of decisions to AI's? What if they are biased, unbeknownst to us? What if they are more fair? How should we understand intellectual and creative work in an era of generative models that take on some aspects of thought? In this course we will engage ethical questions surrounding the seeming inevitability of AI.

**Class Format:** mixture of lectures and discussion

**Requirements/Evaluation:** four short (3- to 4-page) writing assignments and a final essay (8-10 pages)

**Prerequisites:** none

**Enrollment Limit:** 25

**Enrollment Preferences:** CSCI or PHIL majors or STS or COGS concentrators

STS 240 (F) Great Astronomers and Their Original Publications (WS)

Cross-listings: ASTR 240 / LEAD 240

Secondary Cross-listing

In this course we will study some of the greatest figures in astronomy and consider their leadership in advancing progress in the field. We will consider their lives and works, especially as represented by original copies of their books and other publications. These great astronomers include: 16th century, Nicolaus Copernicus (heliocentric universe); Tycho Brahe (best pre-telescopic observations); 17th century, Galileo (discoveries with his first astronomical telescope, 1610; sunspots, 1613; Dialogo, 1632); Johannes Kepler (laws of planetary motion, 1609, 1619, Rudolphine Tables 1627); Johannes Hevelius and Elisabeth Hevelius (atlases of the Moon and of stars, 1647, and 1687); Isaac Newton (Principia Mathematica: laws of universal gravitation and of motion, 1687); 18th century, Edmond Halley (Miscellanea curiosa, eclipse maps, 1715, 1724); John Flamsteed and Margaret Flamsteed (Atlas Coelestis, 1729); and William Herschel and Caroline Herschel (1781, 1798). Also, from more recent times in which original works are often articles rather than books: 20th century, Albert Einstein (special relativity, 1905; general relativity, 1916); Marie Curie (radioactivity); Cecilia Payne-Gaposchkin (hydrogen dominating stars, 1929), Edwin Hubble (Hubble's law, 1929); George Ellery Hale (Mt. Wilson Observatory 100" telescope, 1917; Palomar Observatory 200" telescope, 1948), Vera Rubin (dark matter, 1970s); Jocelyn Bell Burnell (pulsar discovery, 1968); and 21st century: Wendy Freedman (Universe's expansion rate, 2000s). First editions will be available in Williams' Chapin Library of rare books, where we will meet in an adjacent classroom. We will also consider how such original materials are collected and preserved, and look at examples from the wider world of rarities, such as a leaf from the Gutenberg Bible (c. 1453) and a Shakespeare First Folio (1623, with a discussion of astronomical references in Shakespeare's plays). The course will be taught in collaboration between an astronomer and a rare-books librarian, with remote lectures by experts from around the world.

Class Format: Meeting on campus in the Chapin Library classroom (Sawyer 452)

Requirements/Evaluation: class participation, two 5-page intermediate papers, and a final 15-page paper; student choice of additional readings from a provided reading list

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: if overenrolled, preference by written paragraph of explanation of why student wants to take the course

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

Not offered current academic year

STS 254 (S) Food, Forests, & Fungi: Environmental Health in the Anthropocene (DPE) (WS)

Cross-listings: ANTH 254 / ENVI 254

Secondary Cross-listing

This tutorial will examine the impacts of the climate crisis on human, environmental, and planetary health via the lens of food systems & plant medicines in the Anthropocene. We use anthropological, environmental, evolutionary, & ecological approaches to explore the ecosystems connecting
humans, plants, animals, and fungi that have been massively disrupted by systems of industrial agriculture, industrial forestry, corporate food systems, and corporate biomedicine. We will dwell on the growing signs of our climate catastrophe including the sharp rise of global temperatures, floods, hurricanes, alongside declining freshwater reserves, melting cryosphere, and falling crop yields, that are helping produce a growing wave of hunger and climate refugees in every world region. Along the way, we will hear from and read about youthful climate activists from Extinction Rebellion, Ende Gelände, Fridays for the Future, 350.org, and the Sunrise Movement who are designing and implementing innovative, local, and sustainable solutions to inaction, apathy, and inertia even as situations of internal migration or displacement, food scarcity, food sovereignty, water shortages, and other climate-related disruptions are increasing in both developing and developed parts of our globe. We learn how activist narratives intersect with wider movements to promote more local and circular economies of regenerative agriculture and forestry, ethically produced and sourced organic food, wild & cultivated botanicals, and complementary medicines that are healing both humans and the planet.

**Requirements/Evaluation:** Weekly attendance, reading 200-300 pages/week, weekly lead essays or oral responses to texts, showing up in mind & body each week.

**Prerequisites:** none, but a class in ENVI or ANTH preferred

**Enrollment Limit:** 10

**Enrollment Preferences:** ANTH, ENVI, STS majors and concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 254(D2) ANTH 254(D2) ENVI 254(D2)

**Writing Skills Notes:** Students will write essays: either a lead essay of 1400 words, or written & oral feedback on the lead essay plus an oral response to text. Students receive intensive weekly feedback on their essays and a mid semester writing chat with instructor to negotiate and understand strengths and weaknesses of their writing.

**Difference, Power, and Equity Notes:** We will examine the ways that food systems reproduce social and structural inequalities within public health, environmental health, climate health. We also examined the interconnected nature of the health of our planet, food systems, forests, and fungal networks and how climate activism and action can fight unequal access to food, forests, nature, and health.

**Attributes:** ENVI Humanities, Arts + Social Science Electives  PHLH Nutrition, Food Security + Environmental Health

Not offered current academic year

**STS 261 (S) Science and Militarism in the Modern World (WS)**

**Cross-listings:** ENVI 261

**Secondary Cross-listing**

In 1961, United States President Dwight D. Eisenhower warned about the global dangers of what he called the "military-industrial complex." In this course, we will interrogate the military-scientific complex, or the imbrication of militarism and scientific knowledge. Surveying conflicts from World War II through to the present-day War on Terror, this course will consider how empire, networks of expert knowledge, resource extraction, environmental contamination, and land degradation have shaped the modern world. Students will engage a range of textual materials including books, films, photographs, and news reports. Course requirements include weekly writing assignments and participation in small group discussions.

**Class Format:** This course adopts a tutorial model. Students will be divided into 5 groups of 2. Each week the groups will meet with me. Each pair will include one "presenter," who shares a 5-7 page paper responding to the week's theme, and one "respondent," who will offer a 2-3 page response to the presenter's paper. The roles of presenter and respondent will alternate each week. Each student will produce 5 papers as "presenter" and 5 papers as "respondent."

**Requirements/Evaluation:** Each student will produce five (5-7 page) papers as "presenter" and five (2-3 page) papers as "respondent." Grades will be issued based on the portfolio of papers and active participation in discussions.

**Prerequisites:** None

**Enrollment Limit:** 10

**Enrollment Preferences:** ENVI and STS majors and concentrators

**Expected Class Size:** 10

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (WS)
This course is cross-listed and the prefixes carry the following divisional credit:
ENVI 261(D2) STS 261(D2)

Writing Skills Notes: This is a writing intensive tutorial. Students will complete weekly written assignments and receive in-depth feedback to improve their writing. Over the course of the semester, students will write 10 papers ranging from 2-7 pages.

Attributes: ENVI Humanities, Arts + Social Science Electives

Not offered current academic year

STS 262  (F)  Paper Trails  (DPE)
Cross-listings: SOC 262 / GBST 262

Secondary Cross-listing

Long before the invention of the passport, states or state-like entities sought to document and manage populations and discipline bodies. This course invites students to critically reflect on documentary practices and systemic violence, particularly against racial, ethnic, sexual, and political minorities. Students will explore identity-making through documentary practices such as the three-generation life history, a biographical form that Soviet-allied countries used to reward loyalty and punish disloyalty. Labels, such as a criminal record or pre-existing health conditions, also trail or precede individuals their whole lives. Students will grapple with what happens when the paper trail goes cold—when identification documents are invalidated, birth certificates withheld, household registries purged, and archives destroyed. Students will explore the rise of surveillance and biometric data alongside the actors, technologies, and industries that try to circumvent them in places such as the Xinjiang Uyghur Autonomous Region and along the US-Mexico border. In this project-based course, students will exhume paper trails and imagine alternative ways to create, alter, and subvert them.

Requirements/Evaluation: thoughtful and consistent class participation, facilitation of guest speakers, Special Collections visit, project memos, and final project and presentations

Prerequisites: None

Enrollment Limit: 15

Enrollment Preferences: Anthropology and sociology majors, Global Studies concentrators; Science and Technology Studies concentrators. If the course overenrolls, the instructor will send out a Google Form to make enrollment decisions.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2)  (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
SOC 262(D2) STS 262(D2) GBST 262(D2)

Difference, Power, and Equity Notes: In this course, students will interrogate some of the key documents that structure our lives and serve as tools for waging systemic violence against ethnic, racial, sexual, and political minorities. Students will synthesize and apply these lessons about bureaucratic documentation toward the benefit of a community partner.

STS 269  (F)  Mindfulness Examined: Meditation, Emotion, and Affective Neuroscience  (DPE) (WS)
Cross-listings: ASIA 269 / REL 269 / ANTH 269

Secondary Cross-listing

This course asks students to practice and study mindfulness while observing their own minds, emotions, and behavior for an entire semester. We examine the historic roots and current applications of mindfulness, both as a Buddhist meditation practice as well as a secular tool to improve our awareness of awareness. Throughout, we are interested in the nexus of mind, brain, and emotions and the ways that mindfulness has been studied within contemplative and affective neuroscience, integrative neurobiology, and evolutionary psychology. How and why has the research on mindfulness and other meditative practices exploded since 2000? How has this research helped us understand and explain how our minds as well as brains shape everyday emotions and behaviors? We examine the ways evolutionary psychologists, clinical psychiatrists, neuroscientists, clinicians, and medical anthropologists have studied and applied mindfulness to better understand human emotions. We consider the applications of mindfulness for clinicians, therapists, and educators—all of whom attend to how emotions impact interpersonal relationships. We will train in a variety of meditation
This course is cross-listed and the prefixes carry the following divisional credit:

- ASIA 269(D2)
- STS 269(D2)
- REL 269(D2)
- ANTH 269(D2)

**Writing Skills Notes:** This class will involve weekly tutorial essays or oral responses, intensive written feedback on every essay, and a mid-semester 'writing chat' with the instructor.

**Difference, Power, and Equity Notes:** This class fulfills the Difference, Power, and Equity requirement because it will explore the ways that mindfulness can address the growing epidemic of anxiety, depression, and other mental health issues we find in the US today. We study mindfulness from an intersectional perspective and relate its benefits to intersecting inequities and intergenerational trauma in the US today.

---

**STS 275 (S) Environmental Science, Policy, and Justice**  (DPE)

**Cross-listings:** ENVI 275

**Secondary Cross-listing**

Environmental science is much more than collecting data. Scientific experts are often called upon—and often position themselves—to guide environmental governance, which means that science has (some) power over public life. What is, and what should be, the relationship between science, on the one hand, and the creation and implementation of environmental policy, on the other? In this seminar we will study how science shapes governance and how science itself is governed. We will explore how legislatures, agencies, and courts respond to scientific information and uncertainty. And we will learn about how communities facing environmental racism and injustice collect data and use it in their advocacy. Along the way, we will challenge the idea of a unified "scientific method," and we will think about how Western scientific knowledge relates to other ways of knowing, including non-Western sciences, embodied knowledge, and traditional knowledge. Topics include: international climate negotiation, chemical exposure, the regulation of biotechnology, agricultural policy, pandemic responses, and plastics and electronics waste.

**Requirements/Evaluation:** several short essays, final essay

**Prerequisites:** none

**Enrollment Limit:** 18

**Expected Class Size:** 12

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

- STS 275(D2)
- ENVI 275(D2)

**Difference, Power, and Equity Notes:** This course will explore how unequal power leads to environmental injustice. Specifically, we will analyze how local and global environmental problems are distributed unevenly according to race, gender, and class. Using case studies we will analyze how communities facing environmental racism interact with scientists and sciences.

**Attributes:**

**STS 281 (F) Religion and Science**

**Cross-listings:** REL 281
Secondary Cross-listing

In the last few years the deniers of religion such as Dennett and Dawkins have forcefully argued that recent scientific developments show the degree to which religion is irrelevant to a modern understanding of what it means to be human. Atran and Boyer have made a similar case, arguing that recent progresses in our understanding of human cognition demonstrate that religion is a purely natural phenomenon that has little if any value for human development. Theologians such as Haught and Polkinghorne have rejected these views, arguing that a proper understanding of scientific developments such as evolution and quantum mechanics suggests religiously relevant views of the universe and our place therein. This course considers these competing perspectives while offering critical reflections on the views and categories involved in these controversies. We also examine the works of reflective naturalists such as Bellah and Herrstein, who argue that far from showing the irrelevance of religious ideas and practices, the new mind and life sciences suggest a much more nuanced view according to which religion is both grounded in the natural world and central to the development of human culture. Hence, it cannot be easily discounted as irrelevant to a scientifically informed understanding of what it means to be human.

Requirements/Evaluation: tutorial format. one paper every two weeks

Prerequisites: none

STS 290 (S) Technologies of Friendship

Cross-listings: ENGL 290

Primary Cross-listing

Contemporary friendships--whether among roommates, near neighbors, or friends living thousands of miles apart--are highly mediated. We communicate and signal our attachment through Zoom windows, apps, and social media platforms, and we create ambiguous relationships with people whom we "follow" or "friend" without having met in person. Sometimes we text as much as we talk even with intimate friends, and carrying on in-person friendships was complicated in myriad ways by the Covid-19 pandemic. But friendships have always been mediated, and in this tutorial we will examine how writers across centuries have described the tools and technologies of friendship: some perhaps quaint or sentimental (for example the written letter) and others creepy or invasive (for example Apple's "Find My" app or social media's "suggestions"). We will ask common and important questions, such as "Can one have too many friends?"; "Are long-distance friendships sustainable?"; and "What health risks do we take for friendship, and what other risks do technologies of friendship carry?" Readings will include works of fiction and journalism, and scholarship from psychology, the history of technology, and science and technology studies. The technologies we will consider include emojis, coffeehouses, memes, letters, telephones, video games, social media, and novels themselves.

Requirements/Evaluation: Students will write essays and critique their partner's essays in alternate weeks. Essays will receive detailed instructor feedback, including writing instruction.

Prerequisites: none

Enrollment Limit: 10

Enrollment Preferences: STS concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

ENGL 290(D1) STS 290(D2)
STS 301  (S)  Social Construction  (DPE)

Cross-listings:  COMP 315 / WGSS 302 / SOC 301 / REL 301

Secondary Cross-listing

"Social construction" can often seem like the great collegial insight. By now, you've all heard that categories such as race, gender, and sexuality are in some sense not part of nature, but instead are created and maintained socially or culturally. The idea of social construction has been vital to critical race theory and queer theory, and, in this course, we will push ourselves into philosophy of science to see whether or not these same insights apply to everything. If we know that "Whiteness," "heterosexuality," and "masculinity," for instance, are all socially constructed, we will ask if the same is true of "electrons," "money," "the solar system," and "climate change." Can it be that all of our reality is socially constructed? Or does social construction have limits? If so, what are they? We will also ask more fundamental questions, such as: What does it mean to say something is socially constructed? How does social construction relate to claims that an aspect of the world is "real" or "not real?" Is social construction a theory about language, power, culture, societies, human perceptions, or the limits of science? What kind of political, ethical, ontological, or epistemological work do theories of social construction do? We will begin with different accounts of the social construction of race, gender, and sexuality. In the second part of the course, we will dig deeper into philosophical debates about social construction as such. Then we will explore constructionism about natural science. In the last part of the course, we will change gears and explore look at cutting-edge work in the theory of social science aimed at explaining the construction and ontology of social worlds. The class will culminate in a project in which students will put their social construction theories into practice.

Requirements/Evaluation:  regular attendance and participation, short weekly reflection papers, a 8-10 page research paper, and final project
Prerequisites:  none
Enrollment Limit:  15
Enrollment Preferences:  Preference will be given to majors and concentrators from STS, ANSO, COMP, REL, PHIL, WGSS, AAS, LATS, JWST, and AFR. If the class is overenrolled students will be asked to submit an email about themselves and why they want to take the course.
Expected Class Size:  15
Grading:  no pass/fail option,  yes fifth course option
Distributions:  (D2)  (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
COMP 315(D1) WGSS 302(D2) STS 301(D2) SOC 301(D2) REL 301(D2)

Difference, Power, and Equity Notes:  Central to REL 301 will be an analysis of the social construction of race, gender, and sexuality. It will show how power and difference are tied up in their construction and maintenance of these categories. Students will be taught how to critically analyze race, gender, and sexuality as well as social construction as such. Students will also learn sophisticated tools for studying systems of social power and difference.

SEM Section:  01  W 1:10 pm - 3:50 pm  Jason Josephson Storm

STS 305  (F)  Environmental Political Thought  (WS)

Cross-listings:  PSCI 305

Secondary Cross-listing

In the face of planetary crisis, it is as difficult as it is crucial to find the time and calm "to think what we are doing" (Hannah Arendt's famous line). This course aims to hold space for that thinking; to collaboratively find the presence of mind to take the measure of the doings that caused, and that may redress, the awful reality of earth’s degradation. To do so, we will read, discuss, and write about some of the most significant book-length works of environmental political thought published in the last five years. These books conceptualize and intervene into the politics of phenomena such as climate change, species depletion, toxic pollution and (a special interest of the instructor) waste by applying--and sometimes reinventing--approaches from political theory, political economy, science & technology studies, philosophy, and critical theory. They consider the enmeshment of environmental problems with racism, colonialism, economic inequality, and speciesism, among other modalities of power, and weigh the promise of political action and organization to reconstitute relationships among earth’s human and more-than-human elements. By interpreting, evaluating, applying and extending the arguments of these books in discussion and writing, students will be challenged to scrutinize their preconceptions and develop, support
and articulate original arguments about politics and the environment.

**Requirements/Evaluation:** Four mini-essays of 2-3 pages each; one final paper of 7-10 pages that incorporates substantially revised material from at least one mini-essay; class participation

**Prerequisites:** None

**Enrollment Limit:** 19

**Enrollment Preferences:** Political theory concentrators, Political Science majors

**Expected Class Size:** 19

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

PSCI 305(D2) STS 305(D2)

**Writing Skills Notes:** Students will discuss and fine-tune their writing processes in class and office hours. Students will be given written feedback on mini-essays, with particular attention to developing a sense of voice and purpose in written argumentation. This feedback will support their revision of at least one mini-essay as part of writing the final paper.

**Attributes:** PSCI Political Theory Courses

---

**STS 308 (S) What is Power?**

**Cross-listings:** REL 308 / SOC 308

**Secondary Cross-listing**

**What is power?** Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures? What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or agency? Or ideology? This course begins with the observation that power is often described as a causal relation—an individual’s power is supposed to equal their capacity to produce a change in someone else’s behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: critical theory about power and philosophy of science about cause and effect. We will touch on classic philosophical accounts of power and causation, but focus our attention on more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt, Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, and Max Weber. (Note that in 2023 this course will also fulfill the senior seminar requirement for STS)

**Requirements/Evaluation:** critical annotations for every class, midterm review essay (4-6 pages), final essay (10-12 pages)

**Prerequisites:** None.

**Enrollment Limit:** 15

**Enrollment Preferences:** STS concentrators, then Religion, Sociology, and Political Science majors.

**Expected Class Size:** 14

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2)

Not offered current academic year
STS 312 (F) Philosophical Implications of Modern Physics (QFR)

Cross-listings: PHYS 312 / PHIL 312

Secondary Cross-listing

Some of the discoveries made by physicists over the last century seem to show that our common sense views are deeply at odds with our most sophisticated and best confirmed scientific theories. The course will present the essential ideas of relativity theory and quantum theory and explore their implications for philosophy. We will ask, for example, what these theories tell us about the nature of space, time, probability and causality.

Requirements/Evaluation: attendance, participation, problem sets, exams, six 1- to 2-page papers and a 12- to 15-page term paper

Prerequisites: MATH 140, high-school physics, and either a 200-level course in PHIL or a 100-level course in PHYS

Enrollment Limit: 20

Enrollment Preferences: Philosophy majors and Physics majors

Expected Class Size: 20

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

PHYS 312(D3) PHIL 312(D2) STS 312(D2)

Attributes: PHIL Contemp Metaphysics + Epistemology Courses

Not offered current academic year

STS 319 (S) Neuroethics (WS)

Cross-listings: PSYC 319 / NSCI 319

Secondary Cross-listing

Neuroscience studies the brain and mind, and thereby some of the most profound aspects of human existence. In the last decade, advances in our understanding of brain function and in our ability to manipulate brain function have raised significant ethical challenges. This tutorial will explore a variety of important neuroethical questions. Potential topics will include pharmacological manipulation of “abnormal” personality; the use of "cosmetic pharmacology" to enhance cognition; the use of brain imaging to detect deception or to understand the ability, personality or vulnerability of an individual; the relationship between brain activity and consciousness; manipulation of memories; the neuroscience of morality and decision making. In addition to exploring these and other ethical issues, we will explore the basic science underlying them.

Requirements/Evaluation: six 5-page position papers and five 2-page response papers as well as participation in discussions

Prerequisites: PSYC 212 (same as BIOL 212 or NSCI 201); or permission of instructor

Enrollment Limit: 10

Enrollment Preferences: Psychology majors and Neuroscience concentrators

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

PSYC 319(D3) STS 319(D2) NSCI 319(D3)

Writing Skills Notes: In alternating weeks, each student in a tutorial pair will write a 5-page essay based on the assigned readings. Essays will be discussed during tutorial meetings and written feedback from the professor will be provided for each essay. At the end of the semester, students will choose one of their prior essays to revise as their final submission. Students will receive from the instructor timely comments on their writing skills, with suggestions for improvement.

Attributes: NSCI Group B Electives PSYC Area 1 - Behavioral Neuroscience

Spring 2025

TUT Section: T1 TBA Noah J. Sandstrom
This creative writing course will pair selected readings in feminist STS and queer theory with science fiction, speculative fiction, and horror stories that together put questions to gender. How and when is sci-fi a home for radical re-imaginings of gender? When and why does "genre fiction" house (and facilitate) radical gender politics—or their opposite? Readings may include works by Octavia Butler, Ursula Le Guin, Brian Evason, and Samuel Delany. Students will both analyze these fictions and take them as inspirations for their own stories and worlds.

Class Format: This course balance seminar-style discussion with workshops examining students' creative writing.

Requirements/Evaluation: Students will be evaluated on three substantial pieces of writing, in multiple drafts. Students will be able to choose their balance of creative and analytical (expository) prose (2-1 or 1-2). Attendance, along with seminar and workshop discussion, will count toward the final grade. There will be no exam.

Prerequisites: none

Enrollment Limit: 25

Enrollment Preferences: STS concentrators; WGSS majors; students who have not taken other creative writing courses at Williams.

Expected Class Size: 25

Grading: yes pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 329(D2) ENGL 329(D1) STS 323(D2)

Difference, Power, and Equity Notes: In this course students will confront and reflect on the operations of difference, power, and equity through readings, class discussions, and assignments. Readings include scholarship on the construction of gender and sexuality, as well as works of fiction that denaturalize the categories of sex and gender. Course assignments will include expository and creative writing, and students will work in both modes to imagine how this world could be otherwise and how other worlds could be.

Fall 2024

SEM Section: 01  W 1:10 pm - 3:50 pm  Ezra D. Feldman

Could you be competing for a job—even after getting a college degree—with a robot or an AI-powered chatbot? As technologies advance, every few years debates emerge: will this new kind of automation increase unemployment, or will it generate new kinds of jobs? Will these new jobs be more interesting and high paying, or will they be boring and poorly paid? To think these questions through, in this course we will study some key attempts to understand the socio-economic and political determinants as well as the repercussions of automation. We will delve into the micro-level dynamics operating between machines and workers involved in concrete production processes. We will also explore the macro-level trends in national and global inequality that social scientists associate with automation. In our investigation of both macro- and micro-levels, we will focus on how the risks and benefits of automation get distributed unevenly along already existing axes of class, race, gender, etc.

Requirements/Evaluation: Class participation; 1 mid-term paper proposal; 1 final paper

Prerequisites: none, open to all students

Enrollment Limit: 20

Enrollment Preferences: Preference given to ANTH/SOC majors and STS concentrators

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

SOC 331(D2) STS 331(D2)
Difference, Power, and Equity Notes: The course is centrally concerned with the iniquitous distribution of risks and benefits of automation. Students will gain familiarity with how social scientists study the impacts of automation on class, racial, and gendered dynamics. We will consider how automation may disempower certain workers, and deepen already existing social segmentations.

Not offered current academic year

STS 340 Science, Religion, and the (post)colony: Critical approaches to the global history of knowledge (DPE)

Histories of science and religion have been deeply intertwined with colonial and postcolonial history. Colonial claims to legitimacy were often rooted in perceptions of scientific and technological superiority, and colonial expansion often marched in lockstep with missionary activity and forced conversions. In the process, race and human difference emerged as concepts at the intersection of scientific and religious discourses and was forged within the colonial framework. This colonial history of science and religion impacted how scientific and religious thought, practices and institutions developed through the period of decolonization and into today. Similarly, the attendant history of race and human difference continues to influence postcolonial and contemporary discourses around race, ethnicity, identity and migration. In this course, we will trace key moments in the history of science and religion and their relation to coloniality. We will start in the sixteenth century with the rise of modern European empires, move into the height of modern colonialism, indigenous genocides and chattel slavery, and trace decolonization from the middle of the nineteenth into today. Throughout, we will investigate how science and religion emerged as concepts, practices and institutions, and how these narratives impacted, and were impacted by colonial expansion and history. We will pay particular attention to questions of race, gender, sexuality and human difference as key concepts and practices that emerged at the intersections of science, religion and (post)colonialism

Requirements/Evaluation: 2 response papers (3-5pages each) + final project (could be a 10-15p paper or creative project of any kind)

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Concentrators, followed by seniors and juniors

Expected Class Size: 15

Grading:

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: The course addresses questions of race, gender, sexuality and human difference as seen through the history of science, technology and medicine. Students will creatively engage with critical race theory, postcolonial theory and queer theory. They will also investigate human suffering as a category that provides a deeper understanding of difference, diversity and equality.

Not offered current academic year

STS 363 (S) Data for Justice Research Practicum (DPE) (QFR)

Cross-listings: WGSS 363 / INTR 350 / AMST 363

Secondary Cross-listing

Civil rights activist, educator, and investigative journalist Ida B. Wells said that “the way to right wrongs is to shine the light of truth upon them.” In this inclusive, collaborative, research-based course, students will bring statistical, computational, and/or mathematical approaches to bear on issues of social justice. Guided closely by the instructor, students will work in groups to carry out original research in an area such as criminal justice, education equity, environmental justice, health care equity, economic justice, or inclusion in arts/media. Prior research experience is not required; one goal of this course is to build skills for advanced research.

Class Format: This course is an intensive research practicum. Formation of research groups and selection of research topics will be facilitated by the instructor. The primary modality of work is peer collaboration.

Requirements/Evaluation: To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based, ungraded assessment framework.

Prerequisites: INTR 150 (Data for Justice), or prior equivalent exposure to computing, statistics, and social justice topics as approved by the instructor.

Enrollment Limit: 10

Enrollment Preferences: Students who have a declared major in Division I or II, who meet the prerequisites of the course, and who fill out the instructor's preregistration survey (contact the instructor for link).

Expected Class Size: 10

Grading: no pass/fail option, no fifth course option
This course is cross-listed and the prefixes carry the following divisional credit:

WGSS 363(D2) STS 363(D2) INTR 350(D2) AMST 363(D2)

**Difference, Power, and Equity Notes:** Students will research issues of social justice in areas such as criminal justice, arts/media, environmental justice, education, and health care, and along identity axes such as gender, race/ethnicity, disability status, and sexual orientation.

**Quantitative/Formal Reasoning Notes:** Students will use multiple mathematical, statistical, and computational frameworks to acquire, model, and analyze real-world data.

**Spring 2025**

**SEM Section: 01** TR 9:55 am - 11:10 am Chad M. Topaz

**SEM Section: 02** TR 11:20 am - 12:35 pm Chad M. Topaz

**STS 370 (S) Campus and Community Health in Disruptive Times (DPE) (WS)**

**Cross-listings:** ANTH 371 / WGSS 371

We study and seek “campuses where students feel enabled to develop their life projects, building a sense of self-efficacy and respecting others, in community spaces that work to diminish rather than augment power asymmetries.” -- *Sexual Citizens* (Hirsch and Khan, 2020). Students will design and pursue innovative ethnographic projects that explore campus or community health. We will learn ethnographic techniques such as observant participation, interviewing, focus groups, qualitative surveys, as well as design thinking and data visualization skills. We use and critique the methods of medical anthropology and medical sociology in order to hone our skills in participatory research. Every week, we collaborate with and share our research with our participants and peers both inside and outside class through a variety of innovative exercises. We attend to the parallel roles of narrative and listening in both medicine and ethnography, as we contrast the discourse of providers & patients along with researchers & participants.

We aim to understand the strengths and limits of ethnographic inquiry while privileging marginalized voices and attending to power and identity within our participatory research framework. We recognize that our campus health projects are always already shaped by power and privilege, as we examine the ways that daily life, individual practices, and collective institutions shape health on and off campus. Our ethnographic case studies explore how systemic inequalities of wealth, race, gender, sex, ethnicity, and citizenship shape landscapes of pediatric care, mental health, maternity care, and campus sexual assault in the US and elsewhere. We consider how lived practices shape health access & outcomes as well as well-being in our communities and on our campus.

**Requirements/Evaluation:** Weekly attendance, 3 written fieldnotes (3000 words), weekly writing & fieldwork exercises in class and out of class, a final presentation that includes data visualizations and analysis of research findings.

**Prerequisites:** A course in Anthropology, Sociology, STS or in DIV II is strongly recommended

**Enrollment Limit:** 19

**Enrollment Preferences:** Majors in Anthropology, Sociology, WGSS; Concentrators in PH, STS, ASIA, ENVI

**Expected Class Size:** 19

**Grading:** yes pass/fail option, no fifth course option

This course is cross-listed and the prefixes carry the following divisional credit:

ANTH 371(D2) WGSS 371(D2) STS 370(D2)

**Writing Skills Notes:** This class assignments includes over 9,000 words of essay assignments, and will help students develop critical writing skills, including use of rhetoric, evidence, argument, synthesizing data, logic, and anticipating counter-arguments.

**Difference, Power, and Equity Notes:** This class uses experiential learning to examine the intersectionality of race, class, gender, & sexuality in impacting healthcare and health outcomes. It explores the ways that intersectionality and implicit bias shapes health and well-being in patient/provider encounters as well as ethnographic research. It engages with and critiques efforts to ‘improve’ community and individual health outcomes in the US and elsewhere across the globe.

**Attributes:** ENVI Humanities, Arts + Social Science Electives EXPE Experiential Education Courses PHLH Methods in Public Health WGSS Racial Sexual + Cultural Diversity Courses

Not offered current academic year
This course is an introduction to theories, methods, sources, and approaches for interdisciplinary research and creativity in and through the interdisciplinary field of American Studies. We will focus on the intersection of race, gender, sexuality, and disability with modern media technologies, from early photography in the mid-19th century to contemporary trends in machine learning and artificial intelligence. Through a process of shared inquiry, course participants will investigate the ways that historical legacies of oppression and futuristic speculation combine to shape human lives in the present under racial capitalism. Whether analyses of the automation of militarized border control in Texas, or of the ways that obsolete, racist concepts are embedded in machine vision and surveillance systems, the readings in the course will chart out the key moments in the co-evolution of race and technology in the Americas. Students will gain a working competence in all four tracks of the American Studies major (Space and Place; Comparative Studies in Race, Ethnicity, and Diaspora; Arts in Context; and Critical and Cultural Theory). Finally, we will also explore alternative paths toward a future where technology might help to effect the abolition of oppressive structures and systems, rather than continue to perpetuate them.

Requirements/Evaluation: Four papers, in-class writing/reflective work, and a final exam.

Prerequisites: none

Enrollment Limit: 16

Expected Class Size: 16

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

AMST 372(D2) STS 373(D2) AFR 374(D2)

Writing Skills Notes: Students in this course develop a capacity to write generative arguments in an interdisciplinary scholarly context. Students will receive feedback not only on structure, substance, and style, but also on how to best build a line of inquiry, how to gather high-quality evidence, and how to make one's thinking productively intersect with more than one scholarly or creative field.

Difference, Power, and Equity Notes: This course requires students to contextualize technologies historically and in relation to one another, with attention to their entanglements with racial discourses and racism. Students gain critical skills that equip them to imagine possible futures where technologies serve increasingly as abolitionist tools.

SEM Section: 01 MR 1:10 pm - 2:25 pm Brian Murphy

---

Human-Computer Interaction principles are practiced in the design and evaluation of most software, greatly impacting the lives of anyone who uses interactive technology and other products. There are many ways to design and build applications for people, so what methods can increase the likelihood that our design is the most useful, intuitive, and enjoyable? This course provides an introduction to the field of human-computer interaction, through a user-centered approach to designing and evaluating interactive systems. HCI draws on methods from computer science, the social and cognitive sciences, and interaction design. In this course we will use these methods to: ideate and propose design problems, study existing systems and challenges, explore design opportunities and tradeoffs, evaluate and improve designs, and communicate design problems and solutions to varying audiences.

Requirements/Evaluation: course projects, in-class group work/participation, and exams

Prerequisites: CSCI 136

Enrollment Limit: 24
Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:
STS 376(D2) CSCI 376(D3)

STS 378 (S) Human Artificial Intelligence Interaction

Cross-listings: CSCI 378

Secondary Cross-listing

Artificial intelligence (AI) is already transforming society and every industry today. In order to ensure that AI serves the collective needs of humanity, we as computer scientists must guide AI so that it has a positive impact on the human experience. This course is an introduction to harnessing the power of AI so that it benefits people and communities. We will cover a number of general topics such as: agency and initiative, AI and ethics, bias and transparency, confidence and errors, human augmentation and amplification, trust and explainability, and mixed-initiative systems. We explore these topics via readings and projects across the AI spectrum, including: dialog and speech-controlled systems, computer vision, data science, recommender systems, text summarization, and UI personalization, among others.

Class Format: Lecture content is delivered via video, and in-class time will be spent doing hands-on activities or in group discussion.

Requirements/Evaluation: homework, programming assignments, group work, participation, and quizzes

Prerequisites: CSCI 136, and at least one of CSCI 237, 256, or 334

Enrollment Limit: 24

Enrollment Preferences: current or expected Computer Science majors

Expected Class Size: 24

Grading: yes pass/fail option, no fifth course option

STS 379 (F) Animals and Society

Cross-listings: ENVI 380

Secondary Cross-listing

How do humans and animals shape each other's lives? People encounter animals in farms, laboratories, zoos, wildernesses, and backyards, on purpose and by chance. They treat animals as family members, entertainment, food, vectors of disease, and objects of scientific wonder. Drawing on the works of biologists, philosophers, and feminist science and technology studies scholars, this seminar will examine our relationships with animals and help clarify our responsibilities to them. We will ask: What are the social and environmental consequences of consuming animals? Should humans swim with dolphins, feed manatees, use gene-editing to create species that can survive climate change? Should moral standing depend upon the ability to communicate or the ability to experience emotions like grief and joy? What can animal models tell us about human health and society, and when is animal otherness too large a gap to bridge? What might human violence toward animals tell us about sexism, racism, or capitalism, and what will human-animal relationships look like in the future?
This course is cross-listed and the prefixes carry the following divisional credit:

STS 411 (F) Monstrosity
Cross-listings: REL 347
Secondary Cross-listing

The history of science is full of monsters. From the grotesque homunculi of alchemical lore, through the stitched-together corpses of the gothic imagination, to the fearsome mutants of the atomic age, each era has birthed its own nightmares as it has strived to unlock the secrets of nature. At the heart of this course lies the premise that monsters--be they born of alchemy, literature, or the lab--serve as critical mirrors to a society's norms, embodying the deviations and transgressions against the constructed "normal" within various cultural and historical contexts. Monsters often challenge and redefine boundaries, reflecting inherent ideas of the natural, anxieties about gender and race, and troubling binary oppositions such as human versus animal, animate versus inanimate, and the living versus the dead. This course will show how the concept of monstrosity has shaped scientific inquiry, medical practices, and technological advancements. We will trace a roughly chronological and thematic journey navigating through different epochs and aspects of monstrosity: from early notions of the connection between demons and disease, through the marvels of the "Scientific Revolution," to the spectacle of anatomical wonders and "freak shows." We will explore the eerie corridors of Gothic and early horror literature, where science births its own type of monsters, and scrutinize how the dawn of evolutionary theory produced new notions of monsters, mutants, and other anomalous bodies. The course will further examine the dark intersections of eugenics, race, and monstrosity, before venturing into the realm of genetic anomalies and anxieties reflecting changing notions of biological inheritance. We will explore the concepts of abjection and the monstrous feminine, revealing how monstrosity intersects with the constructions of gender, sexuality, and desire. We will spend a week on the psychological appeal of horror and speculations about why we love to be terrorized. Finally, we look ahead to the future, contemplating how ongoing scientific and medical innovations continue to redefine the boundaries of what is considered monstrous. (This course will function as a senior seminar for Science & Technology Studies concentrators, but it is also open to students with other concentrations/interests.)
Requirements/Evaluation: Weekly critical reflections, an independent research project culminating in a 10-15 page research paper (Alternatively, students may opt to create a work of fiction paired with a shorter research paper instead of the final research paper, pending the instructor's approval).

Prerequisites: none.

Enrollment Limit: 15

Enrollment Preferences: Preference will be given to STS concentrators.

Expected Class Size: 10

Grading: no pass/fail option, yes fifth course option

STS 412 (S) Cold War Archaeology (DPE) (WS)

Cross-listings: AMST 412 / AFR 394

Secondary Cross-listing

In this advanced American Studies course, we will examine Cold War history and culture with attention to the intersection of racialization and nuclear paranoia. The concurrent unfolding of the struggle for Civil Rights and the national strategy of Civil Defense played out against the backdrop of a global ideological battle, as the United States and the Soviet Union fought each other for planetary domination. From the scientific fantasy of bombproofing and "safety in space," to the fears of both racial and radioactive contamination that drove the creation of the American suburbs, the affective and material dimensions of nuclear weaponry have, from the beginning, been entangled with race. Drawing on the critical and analytical toolkits of American Studies and media archaeology, students will dig beneath the surface of received narratives about the arms race, the space race, and race itself. Students will uncover generative connections between mineral extraction, the oppression of Indigenous populations, the destructive legacies of "urban renewal," and the figure of the "typical American family" huddled in their backyard bunker. Finally, this course will examine the ways in which the Cold War exceeds its historical boundaries, entangles with the ideology and military violence of the Global War on Terror, and persistently shapes the present through its architectural, affective, and cultural afterlives.

Requirements/Evaluation: Three short papers, in-class writing/reflective work, and a final paper.

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: AMST majors or prospective majors.

Expected Class Size: 12

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:

AMST 412(D2) STS 412(D2) AFR 394(D2)

Writing Skills Notes: Students in this course develop a capacity to write generative arguments in an interdisciplinary scholarly context. Students will receive feedback not only on structure, substance, and style, but also on how to best build a line of inquiry, how to gather high-quality evidence, and how to make one's thinking productively intersect with more than one scholarly or creative field.

Difference, Power, and Equity Notes: This course requires students to contextualize historical events during the Cold War in relation to racialization, inequitable distributions of resources, and the stratification of national space in relation to risk and radioactivity. Students gain critical skills that equip them to see the ways in which the Cold War continues to shape processes of racialization, oppression, and imperial extraction, and spatial arrangements.

Attributes: AFR Black Landscapes AMST Comp Studies in Race, Ethnicity, Diaspora AMST Critical and Cultural Theory Electives AMST Space and Place Electives
Are Feminism and Science compatible commitments? What do these nouns mean when paired with one another, when capitalized (or not), when pluralized (or not), and when deployed by a range of authors in different disciplines? Scholars of feminist science and technology studies (FSTS) have addressed these questions in their studies of scientific objectivity, technological vulnerability, environmentalism, and the makings (or doings) of race as well as gender. We will explore these questions and topics with a view to identifying the range of ethical, political, and epistemological practices within feminist and critical technoscience. We will read theoretical texts in FSTS, such as Donna Haraway’s “Situated Knowledges” and Safiya Umoja Noble’s "A future for intersectional black feminist technology studies." We will also read case studies, such as Pat Treusch’s “The Art of Failure in Robotics” and Emily Martin’s "The Egg and the Sperm: How Science Has Constructed a Romance Based on Stereotypical Male-Female Roles.” While our preliminary readings will be set in advance, students will help shape the syllabus as we advance toward a better understanding of feminist technoscience’s potentials and limitations at a time when technical change often outpaces careful consideration of its consequences.

Requirements/Evaluation: discussion participation; five response papers (~2 pages); mid-semester essay (8 pages); annotated bibliography; final research project (12-15 page essay + in-class presentation)

Prerequisites: none

Enrollment Limit: 12

Enrollment Preferences: Science and Technology Studies concentrators

Expected Class Size: 12

Grading: yes pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 413(D2) WGSS 413(D2)

Difference, Power, and Equity Notes: Central to "Feminist Technoscience" is a recognition of and engagement with the historical under-privileging of women, women's work, and women's bodies in capital-S "Science" and in a wide range of other technoscientific practices. We will examine and elucidate several branches of feminist theory. We will also examine feminist accounts of contemporary technoscientific work as well as critical STS with a focus on race.

Winter Study --------------------------------------------

STS 99 (W) Independent Study: Science and Technology Studies

Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.

Class Format: independent study

Grading: pass/fail only

Not offered current academic year
The Self-Instructional Languages Program (SILP) enables students to study important foreign languages relevant to their academic interests but not taught in regular courses at Williams. The program can field a limited number of courses per year; a Self-Instructional Languages course will be scheduled only if and when at least two students are accepted for study and a tutor/examiner have been contracted. In the past, we have offered one-year long American Sign Language Elementary Hebrew, Hindi, Korean, Persian, Portuguese, and Swahili courses. Students work independently with standard language textbooks and audio materials for roughly ten hours per week and attend twice-weekly group review sessions with tutors who are native speakers. Language faculty from other institutions provide the course syllabus, conduct the exams, and determine the final grades. An organizational meeting for enrolled students is held the first week of each semester.

Interested students must complete an application and have it approved before registering for a course. More information can be found on the Self-Instructional Languages site.

Note that like other elementary language courses, the Self-Instructional Languages courses are hyphenated, meaning no credit is given for the first semester if the second semester is not completed. Students must normally begin a course in the fall semester. It cannot be taken Pass/Fail.

A consecutive year of intermediate language study will be considered only upon petition of those students completing a full year of elementary study with the Self-Instructional Languages Program and as long as a minimum of two students are enrolled to continue their language study.

All courses adhere to the guidelines of the National Association of Self-Instructional Language Programs (NASILP).

**SILP 101  (F)  Elementary Hebrew**

Interested students must complete an application through the Self-Instructional Languages Program and have it approved before registering for this course. Introduction to the alphabet and language structure with emphasis on communicative skills. Students will receive a foundation in the language, be able to hold simple conversations, use a range of vocabulary related to daily activities and transactions, and gain familiarity with basic, frequently used grammatical structures and the writing system of the language. Students must be highly motivated in self-instructional learning, and will work with an outside tutor/examiner. This is a hyphenated course and requires a full-year of study in order to receive credit. More information can be found on the Self-Instructional Languages site.

**Class Format:** Twice-weekly review sessions

**Requirements/Evaluation:** Written and oral midterm and final exams.

**Prerequisites:** Sophomore or higher standing with a GPA of 3.0 or higher; application to the Self-Instructional Languages Program in April.

Spring 2025

LEC Section: 01 TBA Shaina Adams-El Guabli
The disciplines of anthropology and sociology aim to teach students how to enter into the social/cultural worlds of others, how to grasp those worlds from the viewpoints of their inhabitants, and how to articulate those denizens’ habits of mind, worldviews, and values to broader audiences.

**Anthropology** critically analyzes social forms and practices in all their local and global diversity, illuminating the cultural grounding of the ideologies, narratives, and structures in which we are all implicated. **Archaeology** extends this analysis to social formations of the historical and prehistorical past. **Sociology** studies the nature and trajectories of modernity, examining the intricacies of industrial and post-industrial societies and the dilemmas that confront individuals in modern social systems. These disciplines introduce students to classical and contemporary theories that illuminate the contours and contradictions of social experience. The Anthropology & Sociology program promotes a critical engagement with these theories while at the same time bringing evidence and case studies into conversation with theory.

The Department emphasizes qualitative fieldwork in its many forms. We teach students how to formulate, frame, and address intellectual problems. We also teach students the empirical methods widely used in anthropology, sociology, and other related disciplines, including, but not limited to ethnography, participant observation, interviewing, discourse and visual analysis, archival research, oral history, and archaeological methods.

Because the program emphasizes critical thinking skills to assess social claims made by others, and the application of anthropological and sociological skills to present day concerns, undergraduate training in Anthropology or Sociology has proven invaluable to majors pursuing a range of careers, including public policy, diplomacy, international development, marketing, social media development, K-12 education, journalism, medicine, and law.

**MAJORS**

The department offers separate majors in both Anthropology and Sociology, with a broad and diverse array of courses in both disciplines. The
department is committed, however, to the unity of the social sciences. To this end, Anthropology and Sociology offer joint core courses in methodology and theory, as well as several elective courses in common. All joint courses are designated "ANSO."

Requirements
For the degree in Anthropology or Sociology, students must complete a minimum of nine courses as outlined below:

Core Courses
Majors in both disciplines must take a sequence of four core courses. Three of these are joint (ANSO) courses. The sequences are:

  Anthropology
  ANTH 101 How to Be Human

  Sociology
  SOC 101 Invitation to Sociology

Joint Courses
  ANSO 205 Ways of Knowing
  ANSO 305 Social Theory
  ANSO 402 Senior Seminar

Elective Courses
Majors in Anthropology or Sociology must take five elective courses from the course listings of their respective disciplines or from the joint ANSO listings. Two of the courses chosen are normally at the 300 level or above. In close consultation with their departmental advisors, students may take some selected courses from other disciplines to fulfill major requirements in either Anthropology or Sociology.

Majors in each wing of the department are allowed to count up to two courses in the other wing towards fulfillment of their major requirements.

STATISTICS AND DATA ANALYSIS
In addition to the nine total courses required for the major, it is recommended that Anthropology and Sociology majors take Statistics 101 or a comparable course in statistics and data analysis.

AREA STUDIES CONCENTRATION
Students who wish to combine a major in Anthropology or Sociology with an Area Studies concentration are encouraged to do so. Courses taken to satisfy an Area Studies requirement may be counted toward the major with prior approval of a student’s departmental advisor. The only exception to this rule is the Area Studies senior seminar, which cannot ordinarily be counted toward the Anthropology or Sociology degree.

LANGUAGE STUDY, STUDY ABROAD, AND WINTER STUDY
Departmental advisors will help interested students integrate a major with study abroad, foreign language study, or field research during the winter study period. The department encourages Williams students to take advantage of established foreign study programs in Egypt, Japan, India, Hong Kong, and other countries. Because some foreign study programs do not offer courses that can be counted toward the Anthropology or Sociology degrees, however, sophomores planning to study abroad in junior year must consult with the departmental advisor before declaring a major.

FAQ
Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?
Yes. In some cases, provisional approval can be granted (students should be sure to contact the department for details). We welcome discussions of curricular plans for those major who travel abroad in their junior year. However, typically, students don't have access to all the salient information until AFTER they have taken the course.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken while on study away?
Course title and description, and complete syllabus including readings/assignments. The syllabus and readings/assignment information is required in cases when the course title and description are not sufficient to ascertain whether a course should count towards the major. We also request information on course hours.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?
Yes. We credit two, and in special cases three courses.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?
Yes. The expectation is for an intellectually rigorous semester-long course with a paper/exam component.
Are there specific major requirements that cannot be fulfilled while on study away?

Yes. ANSO 205, ANSO 305 and ANSO 402 are almost always taken in the department.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)

Yes. ANSO 305 is offered in the fall and ANSO 205 and ANSO 402 only in the spring. We advise our majors to be aware if they plan to spend all or part of their junior year abroad.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:

In one case, a student had assumed that he could take the equivalent of ANSO 205 abroad, and was disappointed to discover that was not the case. He ended up taking ANSO 205 his senior year.

THE DEGREE WITH HONORS IN ANTHROPOLOGY OR SOCIOLOGY

Honors and highest honors are normally awarded for the completion of a year-long research project that has resulted in an original thesis of high quality. Students wishing to write an honors thesis should engage a member of the department faculty as a Thesis Advisor as soon as possible and must submit a proposal for the thesis for department approval no later than the end of spring reading period of the junior year. If the proposal is approved, they will be permitted to register for Anthropology and Sociology 493-W31-494, during which they will write and defend a thesis. If their overall work in the major continues to be of high quality and the thesis is deemed of a similar quality, they may be awarded honors or highest honors in Anthropology or Sociology.

SOC 101  (F)(S)  Invitation to Sociology  (DPE)
This course provides students with an introduction to sociological analysis and an overview of sociology as a discipline. We will focus on the relationship of individuals to the social world and become acquainted with systematic institutional analysis. Students will explore the intersection of biography, history, culture, and social structure as seen in the work of classical and contemporary social thinkers, including Marx, Durkheim, Weber, Simmel, Du Bois, and Goffman. Special consideration will be given to the social and cultural problems of capitalism, rationality and irrationality in modern institutions and organizations, the psychological dilemmas facing the individual in modern society, and the problem of social order and conflict. Students will emerge from the semester equipped with an analytical lens that will enable them to see the social world -- ranging from everyday interactions to broad political struggle -- in a new light.

Requirements/Evaluation: Thoughtful and consistent participation, several research memos and presentations, book review, final research paper

Prerequisites: none

Enrollment Limit: 30

Enrollment Preferences: strictly limited to first-year students and sophomores (with exceptions for declared ANTH or SOC majors)

Expected Class Size: 30

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course interrogates the social construction of identities, and how these differences manifest unequally in institutions.

Fall 2024

SOC 150  (F)  Data for Justice  (DPE) (QFR)

Cross-listings: STS 150 / AMST 150 / WGSS 150 / INTR 150
Secondary Cross-listing

This course is a unique and inclusive introduction to data science where quantitative thinking, programming, and social justice intertwine. We will build our data science skills using R, a popular open-source data science tool. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration. But rather than divorcing these techniques from the social issues they can help illuminate, we ground them in a social justice context. Overall, we will apply data science skills to topics drawn from criminal justice, environmental justice, diversity and inclusion in arts and media, education equity, and much more, with the goal of growing our collective capacity to use data science as a tool for social good. During a time when humans are increasingly subjugated to data-driven algorithmic decisions, when there are social media accounts dedicated to highlighting misuses of data, and when artificial intelligence makes faking data a nearly trivial task, using data to ethically and carefully promote justice is more important than ever.

Class Format: This course is taught in a highly interactive format and will frequently use a flipped-classroom approach. Students should expect substantial time devoted to in-class collaboration.

Requirements/Evaluation: Students will complete regularly assigned activities, problem sets, and other assessments. To move towards a non-hierarchical, transparent, and egalitarian grading system, the instructor adopts a mastery-based approach.

Prerequisites: None. This course assumes no prior knowledge of data science or R programming. An interest in social justice and a willingness to engage intensively with data and computing are essential.

Enrollment Limit: 18

Enrollment Preferences: Students without prior college-level courses in statistics and programming.

Expected Class Size: 18

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE) (QFR)

This course is cross-listed and the prefixes carry the following divisional credit:

STS 150(D2) AMST 150(D2) SOC 150(D2) WGSS 150(D2) INTR 150(D2)

Difference, Power, and Equity Notes: This course uses data science as a lens for injustice in spheres such as criminal justice, environmental justice, diversity and inclusion in arts and media, education equity. We will consider race, gender, LGTQ+, disability, and other axes of identity. Additionally, we will adopt a data-critical perspective, thinking about how social forces shape data and our understanding of it.

Quantitative/Formal Reasoning Notes: This course teaches quantitative tools in R, a widely-adopted data science platform. We will focus on essential stages of data analysis, including data acquisition, cleaning, wrangling, visualization, and exploration.

Fall 2024

LEC Section: 01 TR 9:55 am - 11:10 am Chad M. Topaz

LEC Section: 02 TR 11:20 am - 12:35 pm Chad M. Topaz

SOC 201 (S) Science, Technology, and Human Values

Cross-listings: STS 101

Secondary Cross-listing

This course offers an introduction to science and technology studies. Attention will be devoted to exploring the nature of science and technology, their relationships to and interactions with one another, society and the natural world, and the influences these interactions exert in shaping what humans value. With widespread use of new social media, controversial developments in such bio-technical practices as gene-editing and the cloning of mammals, rapid advances in various forms of technological surveillance, and the increasing sophistication of technological weaponry in the military, the triumph of technology remains a defining feature of modern life. For the most part, modern humans remain unflinchingly confident in the possibilities technology holds for continuing to improve the human condition. As with other features of modernity, however, technology has also had significant, albeit largely unanticipated, social consequences. This course will focus on the less often examined latent functions of science and technology in modern society. It will consider, for example, the social effects of technology on community life, on privacy, and on how people learn, think, understand the world, communicate, and organize themselves. The course will also examine the effects of technology on medicine, education, criminal law, and agriculture and will consider such counter-cultural reactions to technology as the Luddite movement in early nineteenth century England, Amish agrarian practices, and the CSA (community supported agriculture) movement.

Requirements/Evaluation: A midterm, final, and two short papers.

Prerequisites: none
SOC 211  (S)  Race, Environment, and the Body
Cross-listings:  ENVI 211 / AMST 211 / AFR 211
Secondary Cross-listing
This course is organized around three distinct, but overlapping, concerns. The first concern is how polluting facilities like landfills, industrial sites, and sewage treatment plants are disproportionately located in communities of color. The second concern is the underlying, racist rationales for how corporations, in collaboration with state agencies, plot manufacturers of pollution. The final concern is how the environmental crises outlined in the first two sections of the course are experienced in the body. In reviewing a range of Black cultural productions--like literature, scholarship, music, and film--we will not only consider how environmental disparities physically affect human bodies, but also how embodiments of eco-crises lend to imaginaries of the relationship between the self and the natural world.

Class Format: discussion
Requirements/Evaluation:  class participation, 2-3 short papers (5-7 pages), and a self-scheduled final
Prerequisites: none
Enrollment Limit: 20
Enrollment Preferences: preference given to AFR concentrators, ENVI concentrators and majors, and ANSO majors.
Expected Class Size: 20
Grading: no pass/fail option, no fifth course option
Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

ENVI 211(D2) SOC 211(D2)

Not offered current academic year

SOC 216  (F)  The City

Modern humans have moved to the city, a site with concentrated powers of various kinds, this move has effected irreversible change in human life. We will examine these forces through readings in urban theories as well as ethnographic studies. We will address themes such as the organization of urban life, the political economy of cities, housing and homelessness, and urban planning. The city is also the chief site of cultural production and meaning, and our scope of interest will range from studying subcultures, to reading graffiti, to analyzing monuments. Bearing in mind the inexorable social change of past decades, we will reconsider some classical thought on urban life in the context of postmodern discourse, conceptualize the post-industrial and global city, and conclude with an examination of the problems faced by cities in developing countries. This course is designed to provide students with a comprehensive introduction to urban studies. Students will become familiarized with both classical and modern urban theories, and in reading ethnographies they will have an opportunity to understand some fundamental methodological approaches to the study of the city.

Requirements/Evaluation:  response papers, mid term exam and final research paper
Prerequisites: none
Enrollment Limit: 20
SOC 218 (S) Law and Modern Society
This class is designed to introduce students to the field of law and society. The course begins with an overview of the various theoretical perspectives on the subject, including Durkheimian, Marxist, Foucauldian, and Weberian analyses of law and society; as well as the work of those following in the different theoretical schools established by these scholars. Informed by the theoretical overview, the next part of the course considers empirical research in selected areas of law, including tort law, criminal trial procedures, "community justice," jury trials, and the adjudication of drug offenses. Recognizing that understandings of our own legal practices are enlightened through comparisons to other legal systems, the second half of the course is primarily historical/comparative in focus. In this section, through an exploration of several case studies, American legal processes and habits are compared with related legal practices in such places as Japan, England, Scotland, Ireland, Australia, Germany, Norway, and Canada.

Class Format: discussion
Requirements/Evaluation: a short paper and midterm and final exams
Prerequisites: none
Enrollment Limit: 30
Enrollment Preferences: Priority given to sociology majors.

SOC 219 (F) Images and Society
"This is obvious!" is what we say when we believe our point is irrefutable. But images are far less obvious than we may like to think. This course will create a forum for discussing the role of images in our lives, as well as the place of the visual in social inquiry. It will explore the variety of ways in which images--and even vision itself--are shaped by the social and cultural context in which they are embedded, develop skills for critical analysis of existing representations, and address the analytical possibilities and limitations of the study of signs and images. The course will touch upon a range of visual material, from advertising to paintings, but the bulk of the course is dedicated to photography, both as an object of visual analysis and as, increasingly, a research method in social sciences. Topics for discussion include debates around truth in photography and the politics of representation, changing uses of photography in institutional settings, different photographic cultures and their anthropological and sociological significance, as well as the use of photography in social research. Primary sources for the discussions will be drawn from a variety of spheres, from Soviet propaganda posters to Indian studio portraiture, and will include the images we encounter in everyday life, media, politics, academia, "high" art and popular culture.

Requirements/Evaluation: active class participation, several short papers, and a final project
Prerequisites: none; open to all
Enrollment Limit: 15
Enrollment Preferences: Anthropology and Sociology majors

Spring 2025
LEC Section: 01   MR 1:10 pm - 2:25 pm   James L. Nolan
SOC 221 (F) Money and Intimacy

Does money matter in affectionate relationships? Can dollars buy love and care? What impact does market economics have on intimate relationships? This course will examine these questions and their relevance over the course of history, considering what forces have contributed to the shift in thinking about them, and, most importantly, how sociological research and knowledge helps us understand their current status. We will look into a wide range of aspects of private life that require actors to mix personal affairs with financial transactions, including romantic encounters, marriages (and divorces), families of various kinds and compositions, child adoptions, and outsourced care for dependents to name just a few. Intimacy carries different value and content in these contexts, as so does handling exchanges within them, and negotiating the balance of intimate and economic exchanges also necessitates applying diverse strategies vis-à-vis the external social world. The course will simultaneously look into the changing character of the economy as it has responded to shifting social values. We will specifically focus on how previously private concerns have penetrated the public sphere and shaped the evolution of what has been dubbed ‘emotional capitalism’. People skills, teamwork, emotional labor, commodification of intimacy, care, sex, and body parts, are only few examples of the central concepts at stake. Naturally, a reflection on the growth of new technologies and social media will enrich many of the discussed themes.

Requirements/Evaluation: Each student will be expected to write a final research paper. Other requirements will include response papers to assigned readings and films, as well as contributions to both classroom and Glow discussions. There will be no final exam.

Prerequisites: none
Enrollment Limit: 20
Enrollment Preferences: Anthropology and Sociology majors
Expected Class Size: 20
Grading: no pass/fail option, no fifth course option
Distributions: (D2)
Not offered current academic year

SOC 224 (F) Going Nuclear: American Culture in the Atomic Age

Cross-listings: HIST 273 / STS 224

Primary Cross-listing

This course will examine the historical development and use of the nuclear bomb. Among other features of the early atomic age, the course will look at the Manhattan Project, the delivery of the bombs for combat, the destructive effects of the bomb's initial use in Hiroshima and Nagasaki, and the ongoing testing of nuclear weapons in the Marshall Islands after WWII. The class will investigate the role of the nuclear arms race in the Cold War, the consequences of nuclear production on specific communities, and the implications of the atomic age on our critical understanding of technological innovation more generally. We will also consider the saliency of competing narratives interpreting America's decision (and continuing policies) to build, use, and stockpile nuclear weapons. Employing both sociological and historical perspectives, we will explore the interactions between science, politics, and culture in the nuclear age.

Requirements/Evaluation: a midterm, a final exam, and a 10- to 12-page research paper

Prerequisites: none
Enrollment Limit: 20
Enrollment Preferences: Preference given to sociology and history majors.
Expected Class Size: 20
Grading: no pass/fail option, yes fifth course option
Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:
HIST 273(D2) STS 224(D2) SOC 224(D2)
Attributes: HIST Group F Electives - U.S. + Canada
SOC 226  (F)  The Working Globe: North and South Workers in Globalized Production  (DPE)

Cross-listings:  GBST 226

Primary Cross-listing

The course introduces students to the concept of globalization of production by focusing on how workers from distant cities and villages across the Global North and South are joined together in the same transnational labor processes. We will reflect on case studies that trace the real-world production of everyday goods and services like automobiles, garments, retail, and electronics. We will map global supply chains and investigate how they exploit and reproduce global inequalities. Focusing specifically on the labor process and on the condition of workers, students will acquire a grounded perspective on the global economy, as well as on the dynamics underlying precarity, deindustrialization, and uneven development. The key guiding concern for the course will be to understand the relationship between workers of the North and South: Does global production place these workers in a relation of fundamental conflict, or can a community of interest emerge between them?

Class Format: Assignments will require group work and presentations

Requirements/Evaluation:  Class participation; 1-2 group presentations; 1 final paper

Prerequisites:  None, open to all students

Enrollment Limit:  20

Enrollment Preferences:  Preference given to ANTH/SOC majors and GBST concentrators

Expected Class Size:  20

Grading:  no pass/fail option,  no fifth course option

Distributions:  (D2)  (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

GBST 226(D2)  SOC 226(D2)

Difference, Power, and Equity Notes:  Primarily the course investigates how historical inequalities between countries are reproduced by centering production relations and the site of work. Students will delve deeply into the inequality between workers of the global North and South, and they will also encounter situations where these differences intersect with racial and gendered dynamics.

Not offered current academic year

SOC 228  (S)  The Panopticon: Surveillance, Power, and Inequality  (DPE)

Cross-listings:  STS 229

Primary Cross-listing

Surveillance is built into the very fabric of modern life. From CCTV cameras, to supermarket loyalty cards, to the massive gathering of personal data on social media sites, people participate in today's "surveillance societies" just by doing everyday activities. This course uses the metaphor of the "Panopticon" as a doorway to engagement with traditional and new forms of surveillance. First described by philosopher and social theorist Jeremy Bentham, the Panopticon is a physical structure that enables one observer to see all inhabitants without those inhabitants knowing when they are being observed. In Discipline and Punish, Michel Foucault famously expanded thinking on the Panopticon as a metaphor for the "disciplinary" power that lies at the heart of inequality in modern society. Since Bentham and Foucault's time, however, surveillance technologies have changed significantly. To what extent does the concept of the Panopticon give us purchase on today's surveillance societies? How does watching people with new digital and algorithmic surveillance technologies shape the exercise of power and, in turn, (re)produce forms of inequality? Can privacy, convenience, and safety ever be truly balanced? Topics include: the historical origins and expansion of surveillance in modern societies, policing and state surveillance, and social media surveillance.

Requirements/Evaluation:  participation, reading responses, midterm essay, final paper

Prerequisites:  none

Enrollment Limit:  15

Enrollment Preferences:  Anthropology and Sociology majors

Expected Class Size:  15

Grading:  no pass/fail option,  no fifth course option
**Difference, Power, and Equity Notes:** This course explores how power is distributed unequally through the mechanism of surveillance technologies, particularly in regard to racial and class differences. Among other topics, it will consider the concrete case of surveillance by police in Baltimore City and the question of if and when surveillance is appropriate there, given the city's ongoing crisis of citizen and police violence. Students will discuss police surveillance in a context shaped by racial segregation and class inequality.

Spring 2025
SEM Section: 01    MR 2:35 pm - 3:50 pm     Ben Snyder

**SOC 230 (S) Memory and Forgetting (DPE)**

**Cross-listings:** AMST 233

**Primary Cross-listing**

On the surface, remembering generally confronts us as a deeply personal act. What is more private than nostalgic reverie or the secrets of a dark and painful past? Yet even "individual" memories take shape through social frameworks, and we also remember "collectively" through shared myths, narratives, traditions, and the like. This course will explore the social dimensions of memory and remembering as well as their inevitable counterpart--forgetting. How do social frameworks inform our individual understandings of the past and shape our sense of selfhood? How and why are figures from the past cast as heroes or villains? How do collectivities celebrate past glories, and how do they deal with shameful or embarrassing episodes? How do economic and political power relations shape struggles over the past? In an increasingly global society, can we speak of "cosmopolitan" or "transcultural" forms of memory? Topics will include autobiographical memory and self-identity; memorials, museums, and monuments; reputations, commemorations, and collective trauma; silence, denial, and forgetting; and transitional justice, official apologies, and reparations.

**Requirements/Evaluation:** thoughtful and consistent class participation; an autobiographical essay (4-5 pages); four response papers (2 pages each); and a research paper (8-10 pages) with class presentation

**Prerequisites:** none

**Enrollment Limit:** 19

**Enrollment Preferences:** if overenrolled, students will be asked to submit a short statement of interest

**Expected Class Size:** 19

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

SOC 230(D2) AMST 233(D2)

**Difference, Power, and Equity Notes:** This course pays particular attention to how power and inequality shape narratives about the past. We will examine and compare several efforts to transform national memories, such as the Equal Justice Initiative memorial in the United States and the Truth and Reconciliation Commission in South Africa. In doing so, we will also consider the role of memory and memorialization in broader processes of social change.

**Not offered current academic year**

**SOC 241 (S) Meritocracy**

**Cross-listings:** PSCI 241

**Secondary Cross-listing**

Although fewer than 1% of Americans have a degree from the country’s top 30 colleges and universities, 39% of Fortune 500 CEOs, 41% of federal judges, 44% of the writing and editorial staff at the New York Times, 64% of Davos attendees, and 100% of Supreme Court justices do. Is this a positive sign that the United States is governed by its most talented and capable members who have risen through hard work and equal opportunity? Or a negative one pointing to the power of a corrupt and self-selecting elite? This course explores the theme of meritocracy--rule by the intelligent--in comparative perspective. We will look at both old and new arguments regarding the proper role and definition of merit in political society as well as...
take the measure of meritocracy in present-day Singapore, France, and the United States. The course concludes with a focus on the current debate over American meritocracy and inequality.

Requirements/Evaluation: one short paper, one long paper, take-home final exam, discussion questions, class participation

Prerequisites: none

Enrollment Limit: 19

Enrollment Preferences: Political Science and Sociology majors, first-years and sophomores intending a Political Science or Sociology major

Expected Class Size: 19

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

SOC 244 (F) What They Saw in America

Cross-listings: HIST 366 / AMST 244

Primary Cross-listing

This course traces the travels and writings of important observers of the United States, including Alexis de Tocqueville, Max Weber, G.K. Chesterton, Sayyid Qutb, and Wang Huning. The course will consider their respective journeys: Where did they go? With whom did they talk? What did they see? The historical scope and varying national origins of the observers provide a unique and useful outsider's view of America— one that sheds light on persisting qualities of American national character and gives insight into the nature and substance of international attitudes toward the United States over time. The course will analyze the common themes found in the visitors' respective writings about America and will pay particular attention to their insights on religion, democracy, agrarianism, capitalism, and race.

Requirements/Evaluation: A midterm examination, two short essays, and a final paper.

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: Priority given to Sociology, History, Anthropology, and American Studies majors.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

SOC 246 (F) Goals Points Seconds

Sport is sometimes dubbed a civic religion in America. Figuratively, it has its values to uphold and rituals to follow, its professional sport gods to worship. Engaging in sports -- whether actively as athletes or passively as fans -- supplies a sense of personal identity, provides a basis for community, and even injects meaning into their lives. In the broader society, the world of sport anchors social hierarchies and mirrors other social dynamics. Through the analysis of the world of sports and athletics, broader social trends and trajectories can be traced. While some of these trends are a century old, some of them have evolved relatively recently, as sport has moved beyond its traditional role as ritual and recreation and become a centerpiece of capitalism and consumer culture. Particular attention will be paid to changing values and practices associated with amateur and professional sports, the transformation of collegiate sports, social mobility through athletics, the role of media and marketing, the rise of sports betting, esports, and the culture of sports celebrity and fandom.
**Requirements/Evaluation:** 12-page research paper; 2 response papers; group project; active participation in discussions

**Prerequisites:** none

**Enrollment Limit:** 20

**Enrollment Preferences:** seniors; juniors; if relevant no more than 2 students per athletic team (lottery would be applied)

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

---

**SOC 252 (F) Im/mobilities (DPE) (WS)**

**Cross-listings:** AMST 252 / AAS 252

**Primary Cross-listing**

We think of the freedom to move as a mark of privilege. In the United States, passing a driving test, owning a car, and getting a passport are milestones that signal modernity and freedom. Likewise, we think of restrictions on movement as the domain of the underprivileged, such as the current and formerly incarcerated. But as the Covid-19 pandemic revealed, there have always been two sides to immobility: privileged as well as involuntary immobility. There are correspondingly two sides to mobility: those who move because they want to and others because they have no choice. In this class, students will explore conceptions of mobility as adventurous, free, and modern (as with jet-setting international elites). They will compare and contrast when mobility can be threatening, exclusionary, and limited (as recognized by the Black Lives Matter movement). This class invites students to interpret their environment through the lens of mobility and inequality. Drawing on sociology, anthropology, cultural studies, geography, and migration studies, this interdisciplinary course offers a beginning conversation on the causes and consequences of the freedom to move—or to stay still.

**Requirements/Evaluation:** Thoughtful and consistent class participation, several short reflection papers, two drafts of an opinion essay, class presentation

**Prerequisites:** None

**Enrollment Limit:** 15

**Enrollment Preferences:** Given to first-year students and sophomores, particularly those who have demonstrated an interest in AAS/SOC. If the course overenrolls, the instructor will send out a Google Form to make enrollment decisions.

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE) (WS)

**This course is cross-listed and the prefixes carry the following divisional credit:**

AMST 252(D2) AAS 252(D2) SOC 252(D2)

**Writing Skills Notes:** Emphasis on the processes of writing and revising, several short papers on which students will receive close feedback, and drafts of a final written assessment

**Difference, Power, and Equity Notes:** This course explores a politics of im/mobilities: how we move through space through different bodies at the intersection of race, class, gender, ability, and citizenship. Students will use their own bodies as research sites for deepening their understanding of how we navigate the freedom to move or stay still.

---

**SOC 255 (F) Race, Environment, and the Body**

**Cross-listings:** AFR 255 / AMST 257 / ENVI 256

**Secondary Cross-listing**
This course examines the relationship between structural racism and racial/ethnic health disparities. Through class discussions of readings and media images, we will explore three topics: 1) how racism intersects with classism, sexism, and xenophobia to govern the implementation of local, state and federal health care policies; 2) how the uneven enforcement of health care policies ultimately produces differences in mortality, morbidity, and quality of life among various populations; and 3) anti-racist public health scholarship that offers strategies for creating racial health equity.

**Class Format:** Discussion

**Requirements/Evaluation:** Class participation, 2-3 short papers (5-7 pages), and a final presentation

**Prerequisites:** None

**Enrollment Limit:** 25

**Enrollment Preferences:** Preference given to AFR majors, ENVI concentrators and majors, and ANSO majors.

**Expected Class Size:** 20

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

**SOC 262 (F) Paper Trails** (DPE)

**Cross-listings:** STS 262 / GBST 262

**Primary Cross-listing**

Long before the invention of the passport, states or state-like entities sought to document and manage populations and discipline bodies. This course invites students to critically reflect on documentation practices and systemic violence, particularly against racial, ethnic, sexual, and political minorities. Students will explore identity-making through documentary practices such as the three-generation life history, a biographical form that Soviet-allied countries used to reward loyalty and punish disloyalty. Labels, such as a criminal record or pre-existing health conditions, also trail or precede individuals their whole lives. Students will grapple with what happens when the paper trail goes cold--when identification documents are invalidated, birth certificates withheld, household registries purged, and archives destroyed. Students will explore the rise of surveillance and biometric data alongside the actors, technologies, and industries that try to circumvent them in places such as the Xinjiang Uyghur Autonomous Region and along the US-Mexico border. In this project-based course, students will exhume paper trails and imagine alternative ways to create, alter, and subvert them.

**Requirements/Evaluation:** thoughtful and consistent class participation, facilitation of guest speakers, Special Collections visit, project memos, and final project and presentations

**Prerequisites:** None

**Enrollment Limit:** 15

**Enrollment Preferences:** Anthropology and sociology majors, Global Studies concentrators; Science and Technology Studies concentrators. If the course overenrolls, the instructor will send out a Google Form to make enrollment decisions.

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2) (DPE)

**This course is cross-listed and the prefixes carry the following divisional credit:**
SOC 262(D2) STS 262(D2) GBST 262(D2)

**Difference, Power, and Equity Notes:** In this course, students will interrogate some of the key documents that structure our lives and serve as tools for waging systemic violence against ethnic, racial, sexual, and political minorities. Students will synthesize and apply these lessons about bureaucratic documentation toward the benefit of a community partner.

Fall 2024
SOC 291  (F)  Religion and Ecology in America  (WS)
Cross-listings:  ENVI 291 / REL 291

Secondary Cross-listing
This course examines the relationship between religious and environmental thought in American cultural history. Exploring a broad range of practices, stories, and beliefs, we will examine the spiritual roots and branches of modern environmentalism. Rather than survey the formal teachings of organized religious groups, we will explore the creation and contestation of environmental meaning in the public sphere through literature, art, philosophy, and popular culture. How have religious writers, thinkers, and artists shaped the way we think about nature? How have they shaped the way we think about politics, science, and social justice? In pursuit of these questions, we will consider a diverse array of topics and cases, including struggles to protect Native American sacred places, the role of Black churches in fighting environmental racism, Protestant outdoorism, Catholic climate activism, Jewish eco-mysticism, atheist biological theory, Buddhist eco-spirituality, and more.

Requirements/Evaluation:  Each week each student will either write a 5- to 7-page essay on assigned readings or offer a 2-page critique of their partner's paper.
Prerequisites:  None
Enrollment Limit:  10
Enrollment Preferences:  Environmental Studies majors and concentrators
Expected Class Size:  10
Grading:  no pass/fail option,  no fifth course option
Distributions:  (D2)  (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
ENVI 291(D2) REL 291(D2) SOC 291(D2)

Writing Skills Notes:  Each student will write five five-page papers and five two-page papers in this class. They will be given extensive weekly feedback on their writing in the form of one-on-one meetings and written comments, and they will be given multiple opportunities for revision. Emphasis will be placed on the mechanics of argumentation, logic and rhetoric, and the development of a distinctive voice.

SOC 301  (S)  Social Construction  (DPE)
Cross-listings:  COMP 315 / WGSS 302 / STS 301 / REL 301

Secondary Cross-listing
"Social construction" can often seem like the great collegial insight. By now, you've all heard that categories such as race, gender, and sexuality are in some sense not part of nature, but instead are created and maintained socially or culturally. The idea of social construction has been vital to critical race theory and queer theory, and, in this course, we will push ourselves into philosophy of science to see whether or not these same insights apply to everything. If we know that "Whiteness," "heterosexuality," and "masculinity," for instance, are all socially constructed, we will ask if the same is true of "electrons," "money," "the solar system," and "climate change." Can it be that all of our reality is socially constructed? Or does social construction have limits? If so, what are they? We will also ask more fundamental questions, such as: What does it mean to say something is socially constructed? How does social construction relate to claims that an aspect of the world is "real" or "not real?" Is social construction a theory about language, power, culture, societies, human perceptions, or the limits of science? What kind of political, ethical, ontological, or epistemological work do theories of social construction do? We will begin with different accounts of the social construction of race, gender, and sexuality. In the second part of the course, we will dig deeper into philosophical debates about social construction as such. Then we will explore constructionism about natural science. In the last part of the course, we will change gears and explore look at cutting-edge work in the theory of social science aimed at explaining the construction and ontology of social worlds. The class will culminate in a project in which students will put their social construction theories into practice.

Requirements/Evaluation:  regular attendance and participation, short weekly reflection papers, a 8-10 page research paper, and final project
Prerequisites:  none
Enrollment Limit: 15

Enrollment Preferences: Preference will be given to majors and concentrators from STS, ANSO, COMP, REL, PHIL, WGSS, AAS, LATS, JWST, and AFR. If the class is overenrolled students will be asked to submit an email about themselves and why they want to take the course.

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:
COMP 315(D1) WGSS 302(D2) STS 301(D2) SOC 301(D2) REL 301(D2)

Difference, Power, and Equity Notes: Central to REL 301 will be an analysis of the social construction of race, gender, and sexuality. It will show how power and difference are tied up in their construction and maintenance of these categories. Students will be taught how to critically analyze race, gender, and sexuality as well as social construction as such. Students will also learn sophisticated tools for studying systems of social power and difference.

SOC 303  (S)  Cultures of Climate Change

Cross-listings: ENVI 303

Secondary Cross-listing

This course asks why people think and talk about climate change in such very different ways. Climate change is a physical phenomenon that can be observed, quantified, and measured. But it is also an idea, and as such it is subject to the vagaries of cultural interpretation. Despite scientific agreement about its existence and its causes, many people do not see climate change as a serious problem, or as a problem at all. Many others see it as the most serious problem our species has ever faced. What are the sources of this disparity? Why can't we agree about what climate change means? How does something as complex as climate change become a "problem" in the first place? And what can its many proposed "solutions" tell us about the role of culture in environmental policy, politics, and decision-making. This course will explore a broad array of factors, from religion to race, class to colonialism. Emphasizing ethnographic and historical accounts of climate change as lived experience, it will apply a range of theories from the social sciences and humanities to case studies from around the world.

Requirements/Evaluation: a 15- to 18-page research paper and several shorter writing assignments

Prerequisites: ENVI 101 or permission of instructor

Enrollment Limit: 19

Enrollment Preferences: Environmental Studies majors and concentrators first; Anthropology and Sociology majors second

Expected Class Size: 19

Grading: no pass/fail option, yes fifth course option

Not offered current academic year

SOC 308  (S)  What is Power?

Cross-listings: STS 308 / REL 308

Secondary Cross-listing

What is power? Despite the importance of notions of power across the social sciences, there is a broad lack of consensus. Is power essentially domination or resistance? Is it freedom, empowerment, privilege, or oppression? Are there forms of unequal social power which are morally neutral or even good? Is power the kind of thing held by individuals, races, genders, classes, discourses, causal mechanisms, institutions, or social structures?
What is the connection between social and physical power? Does power obey laws? How does power relate to technology? Or knowledge? Or agency? Or ideology? This course begins with the observation that power is often described as a causal relation—an individual's power is supposed to equal their capacity to produce a change in someone else's behavior. This suggests that the better we can understand the nature of cause and effect, the better we can understand power. Fortunately, in recent decades philosophers have made significant progress in theorizing causation. Hence, this seminar will put two very different bodies of theory in conversation: critical theory about power and philosophy of science about cause and effect.

We will touch on classic philosophical accounts of power and causation, but focus our attention on more recent developments in philosophy of science, political theory, and other fields. The insights we gain in this course from analyzing the nature of power should empower us to more effectively transform society. It will help students in the social sciences to understand the nature of causation in the social world, and it will help students interested in political action to better understand the nature of power. Thinkers to be considered may include: Aristotle, Amy Allen, Hannah Arendt, Bourdieu, Judith Butler, Nancy Cartwright, Foucault, Gramsci, Byung-Chul Han, Han Feizi, Giddens, Steven Lukes, Machiavelli, J.L. Mackie, Marx, Nietzsche, and Max Weber.

(Note that in 2023 this course will also fulfill the senior seminar requirement for STS)

Requirements/Evaluation: critical annotations for every class, midterm review essay (4-6 pages), final essay (10-12 pages)

Prerequisites: None.

Enrollment Limit: 15

Enrollment Preferences: STS concentrators, then Religion, Sociology, and Political Science majors.

SOC 313 (S) The 626 (DPE)

Cross-listings: AAS 312

Primary Cross-listing

Ryka Aoki's Light from Uncommon Stars is "a defiantly joyful adventure in California's San Gabriel Valley, with cursed violins, Faustian bargains, and queer alien courtship over fresh-made doughnuts." What sociological insight could a sci-fi novel about intense extracurricular pressure, food, and foreignness have to offer about the San Gabriel Valley, area code 626? In this course, we take the fantastical characters and plots of Aoki's novel as an invitation to delve into the histories of Asian American settlement to Gabrielino/Tongva lands on the eastern fringes of present-day Los Angeles County. The multilingual boba shops, restaurants, and store fronts throughout the valley mask a history of violent backlash and English-only initiatives. Media reports of academic and musical prodigies skew a broader socioeconomic picture that includes crimigration, deportation, and xenophobia. And the figure of an intergalactic refugee mother exposes the toll that crossing borders takes on individuals, families, and communities. In this project-based course, we survey the formation of a particular place and its surroundings. In doing so, students grapple with general questions such as:

How does migration shape intergenerational dynamics? When and with what tools do people confront racism and intersecting forms of discrimination? How do ethnic enclaves form and fracture? And how do communities mobilize for political rights?

Requirements/Evaluation: thoughtful and consistent participation; mock film festival screening and vote; regular writing assignments; teach-ins

Prerequisites: N/A

Enrollment Limit: 15

Enrollment Preferences: ANSO majors and AAS concentrators. If the course overenrolls, the instructor will send out a Google Form to make enrollment decisions.

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

SOC 313(D2) AAS 312(D2)

Difference, Power, and Equity Notes: This course explores the making of the San Gabriel Valley as the "Asian American Holy Land." It delves into actors' diverse responses to the model minority stereotype, class, and belonging. Students will evaluate (pan)ethnicity as something to be explained,
rather than explanatory, and consider the gaps between diversity and inclusion versus equity in the so-called majority-minority context of the 626.

**Attributes:** AAS Core Electives

**Spring 2025**

**SOC 320 (S) Thinking the Family Album**

What is a family? How does it function as a metaphor, and is this metaphor a political one? How does the family remember, and how does it tell its own story? What do everyday forms of family memory, like scrapbooks and family photo albums, do to shape the family? Are they a thing of the past? What comes to replace them? Who talks through them, and who is there to listen? And how can we reclaim the many untold stories and unheard voices by engaging with the idea of a family album? This course will convene as a seminar in which the participants will engage with the notion of the family as a social institution, and with the genre of family photography as one of the key practices through which this institution is experienced and upheld. We will pay particular attention to the idea of a family album, as an object and as a metaphor, as expressed in the controversial exhibition *The Family of Man* (1955) and its critical reception, or in the ongoing participatory project *Family Pictures USA* by Thomas Allen Harris. The seminar's goal is to unsettle the uniform notion of the family, and to experiment with ways of making the genre of family photography better reflect the difficult and varied histories that the notion of the family may conceal.

**Requirements/Evaluation:** Thoughtful and consistent class participation, three position papers and a final project

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Anthropology and Sociology majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

---

**Spring 2025**

**SOC 329 (F) Capitalism and the Future of Work**

What does it mean to work? How does capitalism shape the way we work? What might work look like in the future? In this three-part course, students engage with global capitalism’s past, present, and future, asking analytic and normative questions about work and the trajectory of capitalism. The first part of the course examines the historical origins of capitalism and leading theories about what capitalism is and how it stratifies the world into racialized social classes. A central theme in part one will be how capitalist labor relations shape meaning and subjectivity, particularly the experience of dignity. In part two, we examine recent and emerging trends in capitalist labor, such as the death of the career, the rise of the "gig" economy, platform capitalism, and even the seemingly inevitable end of work itself as entire occupations become automated by machine learning. A key question will be how these transformations exacerbate and/or alleviate longstanding inequalities from capitalism’s 19th century past. The course concludes by asking students to imagine a better vision for work in the next century. Should we continue to work at all? What kinds of productive activity should we value, and how would we go about taming, eroding, or even smashing capitalism to allow them to flourish?

**Requirements/Evaluation:** participation, reading responses, midterm paper, final paper

**Prerequisites:** none

**Enrollment Limit:** 15

**Enrollment Preferences:** Anthropology and Sociology majors

**Expected Class Size:** 15

**Grading:** no pass/fail option, no fifth course option

**Distributions:** (D2)

SOC 331 (S) Automation in an Unequal Society (DPE)

Cross-listings: STS 331

Primary Cross-listing

Could you be competing for a job—even after getting a college degree—with a robot or an AI-powered chatbot? As technologies advance, every few years debates emerge: will this new kind of automation increase unemployment, or will it generate new kinds of jobs? Will these new jobs be more interesting and high paying, or will they be boring and poorly paid? To think these questions through, in this course we will study some key attempts to understand the socio-economic and political determinants as well as the repercussions of automation. We will delve into the micro-level dynamics operating between machines and workers involved in concrete production processes. We will also explore the macro-level trends in national and global inequality that social scientists associate with automation. In our investigation of both macro- and micro-levels, we will focus on how the risks and benefits of automation get distributed unevenly along already existing axes of class, race, gender, etc.

Requirements/Evaluation: Class participation; 1 mid-term paper proposal; 1 final paper

Prerequisites: none, open to all students

Enrollment Limit: 20

Enrollment Preferences: Preference given to ANTH/SOC majors and STS concentrators

Expected Class Size: 20

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

SOC 331(D2) STS 331(D2)

Difference, Power, and Equity Notes: The course is centrally concerned with the iniquitous distribution of risks and benefits of automation. Students will gain familiarity with how social scientists study the impacts of automation on class, racial, and gendered dynamics. We will consider how automation may disempower certain workers, and deepen already existing social segmentations.

Not offered current academic year

SOC 335 (F) Nowheres (DPE)

Cross-listings: GBST 335

Primary Cross-listing

We live in a world of nation-states. The world map, according to journalist Joshua Keating, is "itself as an institution, an exclusive club of countries" that rarely accepts new members. Throughout the course, we question how countries conquered the world and became the taken-for-granted political unit. We do so, paradoxically, by looking at contemporary nations that do not appear on the world map. These include nations without statehood, such as Somaliland; those that span countries, including indigenous nations across the US and Canada; and nations that have lost their countries, such as Palestine and South Vietnam. By interrogating "nowheres," we tease out what it means to be a country, and pinpoint when and why the definitions do not apply uniformly. Students will reflect on why the world map has been so remarkably static since the end of the Cold War. We will further probe the social, political, and human costs of the exceptions to this general rule. Students will raise questions and attempt answers to what our interconnected world means for "nowheres" looming on the horizon--nation-states that, as a result of climate change, will soon vanish.

Requirements/Evaluation: Thoughtful and consistent class participation, visits to Sawyer Library and WCMA, three short response papers, and a final assessment on a "nowhere" of students' choosing

Prerequisites: None

Enrollment Limit: 15

Enrollment Preferences: Anthropology and Sociology majors, Global Studies concentrators

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

SOC 335(D2) GBST 335(D2)

Difference, Power, and Equity Notes: This course asks students to grapple with the asymmetries of modern statehood--why some places meet the
criteria for statehood but are denied it, while others fall short of formal definitions but are still considered states. Students will assess the stakes of statehood for places that cannot achieve it or do not aspire to. They will creatively marshal these lessons to become the class expert on a “nowhere” that provides us with a lens for interrogating the world map as it currently exists.

Not offered current academic year

**SOC 340 (F) Performing Masculinity in Global Popular Culture** (DPE)

**Cross-listings:** AMST 358 / WGSS 347 / THEA 341 / LATS 341

**Secondary Cross-listing**

This course examines popular cultural contexts, asking what it means to be a man in contemporary societies. We focus on the manufacture and marketing of masculinity in advertising, fashion, TV/film, theater, popular music, and the shifting contours of masculinity in everyday life, asking: how does political economy change the ideal shape, appearance, and performance of men? How have products - ranging from beer to deodorant to cigarettes -- had their use value articulated in gendered ways? Why must masculinity be the purview of “males” at all; how can we change discourses to better include performances of female masculinities, butch-identified women, and trans men? We will pay particular attention to racialized, queer, and subaltern masculinities. Some of our case studies include: the short half-life of the boy band in the US and in Asia, hip hop masculinities, and the curious blend of chastity and homoeroticism that constitutes masculinity in the contemporary vampire genre. Through these and other examples, we learn to recognize masculinity as a performance shaped by the political economy of a given culture.

**Requirements/Evaluation:** masculinity reflections, mid-term essay exam (or quizzes), visual rhetorical analyses of pop culture images

**Prerequisites:** none; WGSS 202 would be helpful

**Enrollment Limit:** 15

**Enrollment Preferences:** a short statement of interest will be solicited; a subsection of applicants may be interviewed

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D2) (DPE)

This course is cross-listed and the prefixes carry the following divisional credit:

AMST 358(D2) WGSS 347(D2) THEA 341(D1) SOC 340(D2) LATS 341(D2)

**Difference, Power, and Equity Notes:** This course examines the construction of masculinity as it relates to intersecting identities such as race, sexuality, class, and global political economic considerations. Key to understanding masculinity are questions about the diversity of experiences of masculinity, cultural variations of gender norms, privilege, agency, patriarchy, heteronormativity, and interlocking systems of oppression.

Not offered current academic year

**SOC 348 (F) Altering States: Post-Soviet Paradoxes of Identity and Difference** (DPE) (WS)

**Cross-listings:** GBST 348 / RUSS 348

**Primary Cross-listing**

Critics and apologists of Soviet-style socialism alike agree that the Soviet ideology was deeply egalitarian. Putting aside for a moment the very reasonable doubts about how justified this perception actually was, it is still worth asking, how did people who lived in the world in which differences in rank, class, gender or ethnicity were not supposed to matter, make sense of their post-socialist condition, one in which new forms of difference emerged, and old ones assumed greater prominence? And how do these encounters with difference impact current events, such as Russia's invasion of Ukraine, or the lingering tensions between East and West Germans? This tutorial will examine new dilemmas through ethnographic studies and documentary films that aim to capture in real time the process of articulating and grappling with newly discovered divides. We will focus especially closely on Ukraine and Russia, but will also read comparative studies, as well as works on East Germany and Georgia. This course fulfills the DPE requirement by exploring comparatively the ways in which people in different countries made sense of the social, cultural and political heterogeneity of the post-socialist condition.

**Requirements/Evaluation:** 5-page paper every other week, written comments on the partner’s paper in alternate weeks

**Prerequisites:** none

**Enrollment Limit:** 10

**Enrollment Preferences:** Anthropology, Sociology, and Russian majors
Expected Class Size: 10
Grading: no pass/fail option, no fifth course option
Distributions: (D2) (DPE) (WS)

This course is cross-listed and the prefixes carry the following divisional credit:
GBST 348(D2) RUSS 348(D1) SOC 348(D2)

Writing Skills Notes: This is a tutorial course, with plenty of opportunities to work on writing and argumentation. Tutorial papers receive written feedback from both the instructor and the tutorial partner, and are worked up during the tutorial meetings.

Difference, Power, and Equity Notes: Students will learn to identify and interrogate processes of social differentiation and exclusion as they take place across Russia and Eastern Europe. We will also train ourselves to identify parallels, as well as differences, between responses to the social and economic uncertainty ushered by the fall of socialism, and the discontents triggered by similar conditions closer to home.

Attributes: GBST Russian + Eurasian Studies

Fall 2024
TUT Section: T1 M 7:00 pm - 9:40 pm Olga Shevchenko

SOC 349 (S) Race, Gender, and Labor (DPE)

This course draws on approaches from sociology, labor studies, and Black studies to examine the historical and contemporary intersections of race, gender, and labor. In particular, we will explore the racial, classed, and gendered dimensions of the labor movement, historic economic shifts that impacted and reorganized U.S. labor regimes, Black labor in slavery's afterlife as it relates to prisons, and global analyses of racialized gendered labor regimes for migrant and immigrant labor within the Global South and the U.S. We will begin the course by grounding ourselves in the Black feminist framework of intersectionality, which will guide our analyses of the intersections of race, class, and gender in labor formations. We will then focus on the monumental shift in labor relations that enslaved Black people's toppling of the plantation system in the US South brought forth, as well as the technologies of re-enslavement instituted as a reaction to Black people's emancipation. After that, we will move through different themes and time periods, considering how race, gender, and class intersect in regimes of labor exploitation and the successes and setbacks of labor movements.

Requirements/Evaluation: Major course requirements include engagement in course discussions, reading reflections, a midterm paper, group presentations, and final research paper.

Prerequisites: None

Enrollment Limit: 15

Enrollment Preferences: Anthropology and Sociology, Women, Gender, and Sexuality Studies (WGSS) and/or Africana Studies majors

Expected Class Size: 15
Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course foregrounds intersectional subjectivities and perspectives. It provides interdisciplinary toolkits to strengthen students' ability to identify and address how unequal power dynamics sustain difference and inequity--e.g., in racial and gender pay gaps and inequalities in the globalized care economy--and to practice collective strategies for transformative social change, engaging with critical epistemologies developed by workers fighting for racial, gender, and economic justice.

Spring 2025
SEM Section: 01 TF 1:10 pm - 2:25 pm Venus M. Green

SOC 362 (S) Stories We Tell

Cross-listings: COMP 362

Primary Cross-listing

From The Moth to StoryCorps to Williams College's own Storytime, stories are ubiquitous in contemporary society. Indeed, sociologists have argued that social life is itself "storied"--that we locate ourselves within familiar narrative structures, using them to "construct" identities and "tell" our lives. Stories, in this view, are not only the stuff of literature, but also the very fabric of social life: the foundation for individual and collective identities. This course grapples with the role of stories and storytelling in modern social life. What role do stories play in constituting personal identity? What cultural
templates structure the stories we tell? Why are memoirs so popular, and how can we explain the more recent resurgence of interest in oral forms of storytelling? What role does storytelling play in politics and social movements? Specific topics will include confessional culture, podcasts, memoir, politics, and social change. Along the way, we will pay explicit attention to medium, and consider how sociologists might learn from journalists, documentarians, and memoirists to convey stories from their own research.

Requirements/Evaluation: occasional discussion questions, one 2-page reflective essay, one 6-8 page paper, and a final project (either a 10-page paper or an equivalent podcast or video essay)

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: if overenrolled, students will be asked to submit a short statement of interest

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2)

This course is cross-listed and the prefixes carry the following divisional credit:

SOC 362(D2) COMP 362(D1)

Spring 2025

SEM Section: 01 TR 9:55 am - 11:10 am Christina E. Simko

SOC 380 (S) Who Cares? (DPE)

What does it mean to care--about a person, a situation, or a cause? We often assume that care arises spontaneously and organically. Yet both feelings of care and acts of care always take shape in social contexts. In this course, we will uncover and critically interrogate the norms surrounding caring, caregiving, and care-receiving in our own communities. What social factors influence our willingness to offer care, and to accept it from others? Why is caregiving so heavily gendered and racialized? Is care inevitably corrupted by capitalism? Specific topics will include domestic work and reproductive labor; parenthood; therapy and mental health care; the discourse of self-care; and social movements that center around enacting care. The course will culminate in a significant experiential learning component: as a class, we will work collaboratively to design and implement a project that pushes or challenges the "care norms" in the northern Berkshires.

Requirements/Evaluation: thoughtful and consistent participation, including in-class discussions and shared resources created outside of class time; four journal entries (2-3 pages each); collaboratively designed experiential learning project; annotated bibliography; op-ed style essay (4-5 pages)

Prerequisites: none

Enrollment Limit: 15

Enrollment Preferences: if overenrolled, students will be asked to submit a short statement of interest

Expected Class Size: 15

Grading: no pass/fail option, no fifth course option

Distributions: (D2) (DPE)

Difference, Power, and Equity Notes: This course centers the relationship between structural inequality and the cultural norms surrounding caregiving and care-receiving. Throughout the semester, we will reflect on how care norms both reflect and perpetuate larger systems of inequality, especially race and gender. Through a student-designed experiential learning project, we will strive to create social change in the local community.

SOC 390 (S) Sex Marriage Family

Cross-listings: PSCI 380

Secondary Cross-listing

Something has happened to America over the past fifteen years. Large minorities of young adults, especially young men, are now celibate. Cohabitation has skyrocketed but marriage is disappearing, and the country's birth rate is at an all-time low. Not surprisingly, loneliness has become epidemic. A similar story can be told for most other developed countries. The implications for political polarization, economic growth, social insurance
programs, public health, military defence, even national survival are grim. What is the cause of this loss of faith in the future? Can public policy reverse these trends? This course is an investigation into relations between the sexes in the developed world, the fate of children and the family, and government attempts to shape them. The course investigates family models in historical and comparative context; the family and the welfare state; the economics of sex, gender, marriage, and class inequality; the dramatic value and behavioral changes of Gen Z around sex, cohabitation, and parenthood; and state policies to encourage partnership/marriage and childbearing.

**Requirements/Evaluation:** Two short papers, research paper proposal, every-class discussion questions, class participation.

Winter Study

SOC 31 (W) Senior Thesis: Sociology
To be taken by students registered for Sociology 493-494.
Class Format: independent study
Grading: pass/fail only
Not offered current academic year

SOC 99 (W) Independent Study: Sociology
Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.
Class Format: independent study
Grading: pass/fail only
Not offered current academic year
MAJOR IN STATISTICS
The major in Statistics is designed to meet three goals: to introduce some of the central ideas of information and data science, to develop problem-solving ability by teaching students to combine creative thinking with rigorous reasoning, and to develop interdisciplinary skills by applying statistics to an application area of interest.

REQUIREMENTS (10 courses plus colloquium)
The major in Statistics consists of ten courses plus a colloquium requirement. The major includes courses in mathematics, computer science and statistics. Students interested in continuing their study of statistics in graduate school should strongly consider taking Math 350/351 in addition to the other requirements.

Mathematics (2 courses)
MATH 150 or 151 Multivariable Calculus or equivalent high school course

MATH 250 Linear Algebra

Except in unusual circumstances, students planning to major in statistics should complete the calculus sequence (MATH 130, 140, 150/151) before the spring of the sophomore year, at the latest. MATH 150 is a prerequisite for STAT 201 and MATH 250 is a prerequisite for STAT 346.

Computer Science (1 course)
CSCI 134 Intro to Computer Science or CSCI 135 Diving into the Deluge of Data or CSCI 136 Data Structures and Advanced Programming or some other course in the Computer Science Department with prior approval of the Math/Stat department.

Core Courses (4 courses)
STAT 201 Statistics and Data Analysis, STAT 202 Introduction to Statistical Modeling or STAT 302 Applied Statistical Modeling
STAT 346 Regression and Forecasting
STAT 341 Probability
STAT 360 Inferential Statistics

Continuation (2 courses)
Any two courses among the 300 or 400 level courses in the department with a STAT prefix.

Capstone Course (1 course)
The capstone course is a 400-level STAT course taken in the senior year. Although the specific methodological emphasis of the course may vary from year to year, an in-depth project with both a written report and an oral presentation is typically part of the capstone course.

Pass/Fail policies during the Academic Year 2020-2021
Information about the Department of Mathematics and Statistics Pass/Fail policies during the Academic Year 2020-2021 can be found here.

Colloquium Requirement
Participation in the Department Colloquium, in which each senior major presents a talk on a mathematical or statistical topic of their choice. Each major must also attend at least 20 colloquia (15 during the Academic Year 2020-2021), and up to 5 attendances may be counted in their junior year. Up to 5 colloquia in mathematics or computer science may also be counted. Students engaged in study away may petition the department in advance to count up to 5 suitable colloquium attendances from their study away program.

PLACEMENT
Students with an AP Stat score of 5 or 4 are placed in the advanced introductory course Stat 202.

NOTES
Substitutions, Study Abroad, and Transfer Credit: In some cases, and with prior permission of the Mathematics and Statistics Department, appropriate courses from other institutions may be substituted for the application and continuation requirements, but at least eight courses must be taken from the Department of Mathematics and Statistics at Williams.

These can, with prior permission, include courses taken away. Students with transfer credit should contact the department about special arrangements.

Double Counting: No course may count towards two different majors.

Early Senior Capstone Course: In exceptional circumstances, with the prior permission of the department, a student may be allowed to satisfy the Senior Capstone Course requirement in the junior year, provided that the student has completed at least three 300-level statistics courses before enrolling in the capstone course.

Planning Courses: Core courses are normally offered every year. Other 300 and 400 level statistics courses are offered on an irregular basis. Students should check with the department before planning far into the future.

Course Admission: Courses are normally open to all students meeting the prerequisites, subject to any course caps. Students with questions about the level at which courses are conducted are invited to consult department faculty.

FAQ
Students MUST contact departments/programs BEFORE assuming study away credit will be granted toward the major or concentration.

Can your department or program typically pre-approve courses for major/concentration credit?
Yes, in many cases, though students should be sure to contact the department.

What criteria will typically be used/required to determine whether a student may receive major/concentration credit for a course taken
while on study away?
  Course title and description, and complete syllabus including readings/assignments.

Does your department/program place restrictions on the number of major/concentration credits that a student might earn through study away?
  No.

Does your department/program place restrictions on the types of courses that can be awarded credit towards your major?
  Yes. They have to be approved MATH/STAT courses.

Are there specific major requirements that cannot be fulfilled while on study away?
  Yes. Colloquium requirement, Senior Seminar requirement.

Are there specific major requirements in your department/program that students should be particularly aware of when weighing study away options? (Some examples might include a required course that is always taught in one semester, laboratory requirements.)
  Yes. The highly cumulative structure of the major.

Give examples in which students thought or assumed that courses taken away would count toward the major or concentration and then learned they wouldn’t:
  None to date.

THE DEGREE WITH HONORS IN STATISTICS
  The degree with honors in Statistics is awarded to the student who has demonstrated outstanding intellectual achievement in a program of study which extends beyond the requirements of the major. The principal considerations for recommending a student for the degree with honors will be: Mastery of core material and skills, breadth and, particularly, depth of knowledge beyond the core material, ability to pursue independent study of statistics, originality in methods of investigation, and, where appropriate, creativity in research.
  An honors program normally consists of two semesters (STAT 493 and 494) and a winter study (WSP 031) of independent research, culminating in a thesis and a presentation. During the Academic Year 2020-2021 the winter study requirement for the honors program in Statistics is waved. One of STAT 493 or STAT 494 can count as a continuation course, but not both. Neither counts as the 400-level senior capstone course.
  An honors program in actuarial studies requires significant achievement on four appropriate examinations of the Society of Actuaries.
  Highest honors will be reserved for the rare student who has displayed exceptional ability, achievement or originality. Such a student usually will have written a thesis or pursued actuarial honors. In all cases, the award of honors and highest honors is the decision of the Department.

STAT 101  (F)(S)  Elementary Statistics and Data Analysis  (QFR)
  It is impossible to be an informed citizen in today’s world without an understanding of data. Whether it is opinion polls, unemployment rates, salary differences between men and women, the efficacy of vaccines, etc, we need to be able to interpret and gain information from statistics. This course will introduce the common methods used to analyze and present data with an emphasis on interpretation and informed decision making.
  Requirements/Evaluation: weekly homework, quizzes, exams, and a project
  Prerequisites: MATH 102 (or demonstrated proficiency on a diagnostic test)
  Enrollment Limit: 50
  Enrollment Preferences: juniors and seniors
  Expected Class Size: 35
  Grading:  yes pass/fail option, yes fifth course option
  Unit Notes: Students with MATH150 but no statistics should enroll in STAT201. Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202.
  Distributions:  (D3)  (QFR)
  Quantitative/Formal Reasoning Notes: It is a quantitative course.
  Attributes:  COGS Related Courses  PHLH Statistics Courses

Fall 2024
STAT 161 (F)(S) Introductory Statistics for Social Science (QFR)
This course will cover the basics of modern statistical analysis with a view toward applications in the social sciences. Topics include exploratory data analysis, linear regression, basic statistical inference, and elements of probability theory. The course focuses on the application of statistical tools to solve problems, to make decisions, and the use of statistical thinking to understand the world.

Requirements/Evaluation: Weekly homework, quizzes, two midterms and a final exam (midterms include take-home components), and a data analysis project. Students will need to become familiar with the statistical software STATA.

Prerequisites: MATH 130 (or equivalent); not open to students who have completed STAT 101 or equivalent

Enrollment Limit: 40

Enrollment Preferences: Economics majors, sophomores

Expected Class Size: 40

Grading: yes pass/fail option, no fifth course option

Unit Notes: Students with calculus background should consider STAT 201. Students without any calculus background should consider STAT 101. Students with AP Stat 4 or 5 should consider Stat 202. Please refer to the placement chart on the Math&Stat department website for more information.

STAT 201  (F)(S) Statistics and Data Analysis  (QFR)
Statistics can be viewed as the art and science of turning data into information. Real world decision-making, whether in business or science, is often based on data and the perceived information it contains. Sherlock Holmes, when prematurely asked the merits of a case by Dr. Watson, snapped back, “Data, data, data! I can’t make bricks without clay.” In this course, we will study the basic methods by which statisticians attempt to extract information from data. These will include many of the standard tools of statistical inference such as hypothesis testing, confidence intervals, and linear regression as well as exploratory and graphical data analysis techniques. This is an accelerated introductory statistics course that involves computational programming and incorporates modern statistical techniques.

Requirements/Evaluation: weekly homework and projects, midterm exams, and a final exam.
Prerequisites: MATH 150 or equivalent; not open to students who have completed STAT 101 or STAT 161 or equivalent
Enrollment Limit: 40
Enrollment Preferences: Prospective Statistics majors, students for whom the course is a major prerequisite, and seniors
Expected Class Size: 40
Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students with AP Stat 4/5 or STAT 101/161 should enroll in STAT 202. Students with no calc or stats background should enroll in STAT 101. Students with MATH 140 but no statistics should enroll in STAT 161.
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Students will learn to choose, carry out, interpret, and communicate analyses of data.
Attributes: COGS Related Courses PHLH Statistics Courses

LEC Section: 01  TF 1:10 pm - 2:25 pm  Elizabeth M. Upton

STAT 202  (F)(S) Introduction to Statistical Modeling  (QFR)
Data come from a variety of sources: sometimes from planned experiments or designed surveys, sometimes by less organized means. In this course we'll explore the kinds of models and predictions that we can make from both kinds of data, as well as design aspects of collecting data. We'll focus on model building, especially multiple regression, and talk about its potential to answer questions about the world -- and about its limitations. We'll emphasize applications over theory and analyze real data sets throughout the course.

Requirements/Evaluation: Homework problems; quizzes; exams; a final project (on a topic that interests you!). Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While your assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to class discussions, and working together with classmates on practice problems.
Prerequisites: MATH 140 and STAT 101/161/201/AP Statistics 4/5, or permission of instructor.
Enrollment Limit: 40
Enrollment Preferences: Prospective Statistics majors and more senior students
Expected Class Size: 25
Grading: yes pass/fail option, yes fifth course option

Unit Notes: Students with a 4 on the AP Stats exam should contact the department for proper placement. Students with STAT 201 are strongly encouraged to take STAT 346 or other 300-level statistics electives.
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

STAT 335  (S)  Introduction to Biostatistics and Epidemiology  (QFR)
Epidemiology is the study of disease and disability in human populations, while biostatistics focuses on the development and application of statistical methods to address questions that arise in medicine, public health, or biology. This course will begin with epidemiological study designs and core concepts in epidemiology, followed by key statistical methods in public health research. Topics will include multiple regression, analysis of categorical data (two sample methods, sets of 2x2 tables, RxC tables, and logistic regression), survival analysis (Cox proportional hazards model), and if time permits, a brief introduction to regression with correlated data.
Requirements/Evaluation: Evaluation will be primarily based on weekly assignments (regular homework or mini-projects), two midterm exams, and a final exam.
Prerequisites: Stat 201 or Stat 202, or permission of instructor (prior experience should include a working understanding of multiple linear regression, the basics of statistical inference, and R).
Enrollment Limit: 20
Enrollment Preferences: Statistics majors and prospective majors who have not yet taken Stat 346; public health concentrators
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Students will learn how to choose, implement, and interpret statistical analyses relevant to public health studies.

STAT 341 (F)(S) Probability (QFR)
Cross-listings: MATH 341
Secondary Cross-listing
The historical roots of probability lie in the study of games of chance. Modern probability, however, is a mathematical discipline that has wide applications in a myriad of other mathematical and physical sciences. Drawing on classical gaming examples for motivation, this course will present axiomatic and mathematical aspects of probability. Included will be discussions of random variables (both discrete and continuous), distribution and expectation, independence, laws of large numbers, and the well-known Central Limit Theorem. Many interesting and important applications will also be presented, including some from classical Poisson processes, random walks and Markov Chains.
Requirements/Evaluation: homework, classwork, and exams
Prerequisites: MATH 150 and MATH 250 or permission of the instructor
Enrollment Limit: 50
Enrollment Preferences: Priority will be given to Mathematics majors and to Statistics Majors.
Expected Class Size: 20
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
This course is cross-listed and the prefixes carry the following divisional credit:
STAT 341(D3) MATH 341(D3)
Quantitative/Formal Reasoning Notes: This is a 300-level Math/Stat course.

Fall 2024

Spring 2025
LEC Section: 01 TR 9:55 am - 11:10 am Steven J. Miller

STAT 342 (S) Introduction to Stochastic Processes (QFR)
Stochastic processes are mathematical models for random phenomena evolving in time or space. Examples include the number of people in a queue at time t or the accumulated claims paid by an insurance company in an interval of time t. This course introduces the basic concepts and techniques of stochastic processes used to construct models for a variety of problems of practical interest. The theory of Markov chains will guide our discussion as we cover topics such as martingales, random walks, Poisson process, birth and death processes, and Brownian motion.
Requirements/Evaluation: weekly homework/labs, classwork, and exams
Prerequisites: STAT 341
Enrollment Limit: 30
Enrollment Preferences: senior Statistics majors
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
**Quantitative/Formal Reasoning Notes:** This is a statistics class with a focus on mathematical skills and translating real world phenomena into mathematical descriptions.

Spring 2025

LEC Section: 01    TF 2:35 pm - 3:50 pm    Elizabeth M. Upton

**STAT 344 (S) Statistical Design of Experiments** (QFR)

When you hear the word experiment you might be picturing white lab coats and pipettes, but businesses, especially e-commerce, are constantly experimenting as well. How do you get the most out of both scientific and business investigations? By doing the right experiment in the first place. We'll explore the techniques used to plan experiments that are both efficient and statistically sound. We'll learn how to analyze the data that come from these experiments and the conclusions we can draw from that analysis. We'll look at both classical tools like fractional factorial designs as well as optimal design, and see how these two frameworks differ in their philosophy and in what they can do. Throughout the course, we'll make extensive use of both R and JMP software to work with real-world data.

**Requirements/Evaluation:** Homework problems—both individual and in groups, midterm, final, and projects (on topics that interest you!).

**Prerequisites:** STAT 161 or 201 or 202, or equivalent, and Math 140 or equivalent, or permission of instructor

**Enrollment Limit:** 20

**Enrollment Preferences:** Statistics majors, seniors, juniors, sophomores, first years

**Expected Class Size:** 15

**Grading:** yes pass/fail option, yes fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course uses mathematical tools and computing programs to design experiments, analyze their results, and assess their effectiveness. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.

Spring 2025

LEC Section: 01    MWF 10:00 am - 10:50 am    Richard D. De Veaux

**STAT 346 (F)(S) Regression Theory and Applications** (QFR)

This course focuses on the building of empirical models through data in order to predict, explain, and interpret scientific phenomena. Regression modeling is the most widely used method for analyzing and predicting a response data and for understand the relationship with explanatory variables. This course provides both theoretical and practical training in statistical modeling with particular emphasis on simple linear and multiple regression, using R to develop and diagnose models. The course covers the theory of multiple regression and diagnostics from a linear algebra perspective with emphasis on the practical application of the methods to real data sets. The data sets will be taken from a wide variety of disciplines.

**Requirements/Evaluation:** Weekly homework, quizzes, theory and data analysis exams, and final course project.

**Prerequisites:** MATH/STAT 341, MATH 250, and at least one of STAT 201 or 202. Or permission of the instructor.

**Enrollment Limit:** 30

**Enrollment Preferences:** Statistics Majors

**Expected Class Size:** 20

**Grading:** yes pass/fail option, no fifth course option

**Distributions:** (D3) (QFR)

**Quantitative/Formal Reasoning Notes:** This course prepares students in the use of quantitative methods for the modeling, prediction and understanding of scientific phenomena.

Spring 2025
STAT 355 (F) Multivariate Statistical Analysis (QFR)
To better understand complex processes, we study how variables are related to one another and how they work in combination. In addition, we want to make inferences about more than one variable at a time. Elementary statistical methods might not apply. In this course, we study the tools and the intuition that are necessary to analyze and describe such datasets with more than multiple variables. Topics covered will include data visualization techniques for data sets with more variables, clustering algorithms, parametric and non-parametric techniques to estimate joint distributions, techniques for combining variables, performing dimension reduction, and making inferences.
Requirements/Evaluation:  Homework, projects, quizzes, and exams.
Prerequisites:  MATH 250, and STAT 346 or permission of instructor
Enrollment Limit:  15
Enrollment Preferences:  Juniors/seniors
Expected Class Size:  10
Grading:  yes pass/fail option,  no fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes:  It is an advanced statistics class with prerequisites that are QFR courses

Fall 2024
LEC Section: 01    TF 1:10 pm - 2:25 pm     Xizhen Cai

STAT 356 (F) Time Series Analysis (QFR)
Time series -- data collected over time -- crop up in applications from economics to engineering to transit. But because the observations are generally not independent, we need special methods to investigate them. This course will include exploratory methods and modeling for time series, including descriptive methods and checking for significance, and a foray into the frequency domain. We will emphasize applications to a variety of real data, explored using R.
Requirements/Evaluation:  Evaluation is primarily based on quizzes and projects (on topics that interest you!). You'll be given the opportunity to assess your own work and resubmit/reattempt assignments as you gain mastery of a topic. Participation matters! Engagement with your peers is an important part of learning, of being a statistician in the Real World...and of your evaluation in this course. While most assignments will be submitted (and graded) individually, you'll be responsible for giving and receiving peer feedback, contributing to live and online discussions, and working together with classmates on practice problems.
Prerequisites:  STAT 346 (may be taken concurrently) or permission of instructor
Enrollment Limit:  15
Enrollment Preferences:  Statistics majors, seniors
Expected Class Size:  15
Grading:  yes pass/fail option,  yes fifth course option
Distributions:  (D3)  (QFR)
Quantitative/Formal Reasoning Notes:  This course uses mathematical tools and computing programs to create models, make predictions, assess uncertainty, and describe data. We'll also emphasize choosing appropriate mathematical tools and interpreting their results in a real-world context.
Not offered current academic year

STAT 360 (F) Statistical Inference (QFR)
How do we estimate unknown parameters and express the uncertainty we have in our estimate? Is there an estimator that works best? Many topics from introductory statistics such as random variables, the central limit theorem, point and interval estimation and hypotheses testing will be revisited and put on a more rigorous mathematical footing. The focus is on maximum likelihood estimators and their properties. Bayesian and computer intensive resampling techniques (e.g., the bootstrap) will also be considered.
Requirements/Evaluation:  Homework, Quizzes, Exams
Prerequisites:  MATH 250, STAT 201 or 202, STAT 341
Enrollment Limit: 15

Enrollment Preferences: Statistics majors

Expected Class Size: 15

Grading: no pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: A rigourous mathematical course laying the foundation for reasoning with data

Fall 2024
LEC Section: 01 MWF 10:00 am - 10:50 am Richard D. De Veaux

STAT 365 (S) Bayesian Statistics (QFR)
The Bayesian approach to statistical inference represents a reversal of traditional (or frequentist) inference, in which data are viewed as being fixed and model parameters as unknown quantities. Interest and application of Bayesian methods have exploded in recent decades, being facilitated by recent advances in computational power. We begin with an introduction to Bayes' Theorem, the theoretical underpinning of Bayesian statistics which dates back to the 1700's, and the concepts of prior and posterior distributions, conjugacy, and closed-form Bayesian inference. Building on this, we introduce modern computational approaches to Bayesian inference, including Markov chain Monte Carlo (MCMC), Metropolis-Hastings sampling, and the theory underlying these simple and powerful methods. Students will become comfortable with modern software tools for MCMC using a variety of applied hierarchical modeling examples, and will use R for all statistical computing.

Requirements/Evaluation: weekly homework and exams
Prerequisites: MATH/STAT 341 and STAT 346, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: juniors and seniors, Statistics majors, students who have taken STAT 360

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Not offered current academic year

STAT 372 (S) Longitudinal Data Analysis (QFR)
This course explores modern statistical methods for drawing scientific inferences from longitudinal data, i.e., data collected repeatedly on experimental units over time. The independence assumption made for most classical statistical methods does not hold with this data structure because we have multiple measurements on each individual. Topics will include linear and generalized linear models for correlated data, including marginal and random effect models, as well as computational issues and methods for fitting these models. As time permits, we will also investigate joint modeling of longitudinal and time-to-event data. We will consider many applications in the social and biological sciences.

Requirements/Evaluation: Weekly homework, midterm exams, a final exam, and a data analysis project
Prerequisites: STAT 346 (and an appropriate introductory statistics course, typically STAT 201 or 202)

Enrollment Limit: 20

Enrollment Preferences: junior and senior Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: The course will cover a variety of statistical analysis methods for longitudinal data.

Attributes: PHLH Statistics Courses

Not offered current academic year
STAT 397  (F)  Independent Study: Statistics
Directed independent study in Statistics.
Prerequisites: permission of department
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)
Not offered current academic year

STAT 398  (S)  Independent Study: Statistics
Directed independent study in Statistics.
Prerequisites: permission of department
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3)
Not offered current academic year

STAT 440  (S)  Categorical Data Analysis  (QFR)
This course focuses on methods for analyzing categorical response data. Traditional tools of statistical data analysis for continuous response data are not designed to handle such data and pose inappropriate assumptions. We will develop methods specifically designed to address the discrete nature of the observations and consider many applications in the social and biological sciences as well as in medicine, engineering and economics. The first part of the course will discuss statistical inference for parameters of categorical distributions and arising in contingency tables. The longer second part will focus on statistical modeling via generalized linear models for binary, multinomial, ordinal and count response variables, using maximum likelihood.

Requirements/Evaluation: Class participation and performance on exams, homework, and a project.
Prerequisites: STAT 346 and STAT 360
Enrollment Limit: 15
Enrollment Preferences: seniors and statistics majors
Expected Class Size: 12
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: Arguing with data.
Attributes: PHLH Statistics Courses
Not offered current academic year

STAT 442  (S)  Statistical Learning and Data Mining  (QFR)
In both science and industry today, the ability to collect and store data can outpace our ability to analyze it. Traditional techniques in statistics are often unable to cope with the size and complexity of today's data bases and data warehouses. New methodologies in Statistics have recently been developed, designed to address these inadequacies, emphasizing visualization, exploration and empirical model building at the expense of traditional hypothesis testing. In this course we will examine these new techniques and apply them to a variety of real data sets.

Class Format: Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.
Requirements/Evaluation: class participation, weekly homework, exams and an end-of-term project
Prerequisites: MATH/STAT 341 and STAT 346, or permission of instructor
Enrollment Limit: 20
Enrollment Preferences: Statistics majors, juniors and seniors. Students cannot take both STAT 315 and STAT 442. Only one of the two can be taken for credit.
Expected Class Size: 15
Grading: yes pass/fail option, yes fifth course option
Distributions: (D3) (QFR)
Quantitative/Formal Reasoning Notes: This is an advanced statistics class involving theory and application of statistical methods to data.

Spring 2025
LEC Section: 01  MR 2:35 pm - 3:50 pm  Anna C. Neufeld

STAT 458 (F) Generalized Linear Models- Theory and Applications (QFR)
This course will explore generalized linear models (GLMs)--the extension of linear models, discussed in Stat346, to response variables that have specific non-normal distributions, such as counts and proportions. We will consider the general structure and theory of GLMs and see their use in a range of applications. As time permits, we will also examine extensions of these models for clustered data such as mixed effects models and generalized estimating equations.

Requirements/Evaluation: Weekly homework consisting of theoretical exercises and data analyses carried out in R. Short frequent quizzes and one midterm (with an in-class and take-home component). Final project and final exam.

Prerequisites: STAT 346, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: Seniors and Statistics majors

Expected Class Size: 10

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This is an intensive statistics course, involving theoretical and mathematical reasoning as well as the application of mathematical ideas to data using software.

Fall 2024
LEC Section: 01  TF 2:35 pm - 3:50 pm  Elizabeth M. Upton

STAT 465 (S) Bayesian Statistics (QFR)
Prior knowledge being constantly updated by empirical observations -- the essence of Bayesian thinking provides a natural, intuitive, and more importantly, mathematically sounded, probabilistically principled way to characterize the process of learning. With some of its key ideas formulated based on Bayes’ Theorem dating back to 18th century, Bayesian inference is one of oldest schools of statistics (more than a century earlier than the Frequentist!). Yet it was not until the recent developments in sampling algorithms and computational powers that Bayesian inference gained its revival. Bayesian, and Bayesian-based methods, with their flexibilities in modeling (generative) process of data, interpretability with posterior probability statements, and coherent principles to incorporate empirical evidence a priori, have played key roles in modern data analysis, especially for those "big data" with enhanced complexity and connectivity. This course is designed to provide students a comprehensive understanding to what is Bayesian and the how's and why's. Students will be introduced to classic Bayesian models, basic computational algorithms/methods for Bayesian inference, as well as their applications in various fields, and comparisons with classic Frequentist methods. As Bayesian inference finds its roots and merits particularly in application, this course puts great emphasis on enhancing students' skills in statistical computation (mostly with R) and data analysis.

Requirements/Evaluation: Homework, exams, and project

Prerequisites: MATH/STAT 341, STAT 346, and STAT 360, or permission of instructor

Enrollment Limit: 20

Enrollment Preferences: seniors, Statistics majors

Expected Class Size: 15

Grading: yes pass/fail option, yes fifth course option

Distributions: (D3) (QFR)

Quantitative/Formal Reasoning Notes: This course utilizes mathematics and computer-based tools for the Bayesian approach for analyzing data and making statistical inferences.

Winter Study  ---------------------------------------------------------------

STAT 11 (W) Introduction to Statistical Analysis of Network Data
Networks are everywhere in our connected world, from social networks like facebook and twitter, to information networks like citation and coauthors, from biological network like neural and ecological networks, to technological networks like internet connections or power grids. In recent years, there has been an explosion of network data. How do we learn and represent information from these data? In this course, you will see examples from different types of networks. We will learn how to organize, visualize and describe network data using proper tools in R. Additionally since things are connected in networks, we will explore statistical methods to overcome this challenge with dependent data. Tentatively coursework includes 2-3 class meetings per week for lectures and hands-on computer labs. Students will finish a final project analyzing a network dataset of their interest and share their findings in written or oral form.

Requirements/Evaluation: class participation, lab assignment, final project (short paper or oral presentation)
Prerequisites: one introductory statistic course (STAT 201 or STAT 202) with R experience before, or permission of the instructor
Enrollment Limit: 10
Enrollment Preferences: Students with a statistics background and prior experience working with R
Expected Class Size: NA
Grading: pass/fail only

Not offered current academic year

STAT 12 (W) Data for the Public Good: Uses and Abuses of Data in Society
This class, accessible to statisticians and non-statisticians alike, will explore some of the many uses (and abuses) of data, statistics, and algorithms in society. We will discuss topics such as how our view of the world both informs and is formed by the data we collect and present; how to understand data in context; how algorithms intended to reduce bias have in several situations---criminal justice, credit and insurance, employment, and more---had the opposite effect of perpetuating human biases; and ways in which we might work with data more ethically and responsibly. We will meet three times a week for two-hour sessions as a group. Students will be asked to complete readings in advance and write short reflections before each class. The class will also involve a final project in which students investigate the use of data or statistics in an area of their choice and present their findings to their classmates (orally, through a short paper, or through designing a website).

Requirements/Evaluation: readings and written reflections; class participation; final project resulting in a presentation, short paper, or student-designed website
Prerequisites: an introductory statistics course (Stat 101/161/201/202) or permission of instructor
Enrollment Limit: 15
Enrollment Preferences: short application form/statement of interest, with priority given to having a group of students with diverse (prospective) majors and levels of experience in statistics
Expected Class Size: 15
Grading: pass/fail only

Not offered current academic year

STAT 30 (W) Senior Project: Statistics
To be taken by candidates for honors in Statistics other than by thesis route.

Class Format: senior project
Grading: pass/fail only
Not offered current academic year

STAT 31 (W) Senior Honors Thesis
Statistics senior honors thesis.
Class Format: thesis
Grading: pass/fail only
Not offered current academic year

STAT 99 (W) Indep Study: Statistics
Open to upperclass students. Students interested in doing an independent project (99) during Winter Study must make prior arrangements with a faculty sponsor. The student and professor then complete the independent study proposal form available online. The deadline is typically in late September. Proposals are reviewed by the pertinent department and the Winter Study Committee. Students will be notified if their proposal is approved prior to the Winter Study registration period.
Class Format: independent study
Grading: pass/fail only
Not offered current academic year
THE MAJOR IN SPANISH

Students who major in Spanish can expect to acquire linguistic fluency along with in-depth knowledge of the cultures of Spain and Latin America. Through the study of the major writers and historical events of the Spanish-speaking world, our program offers training in literary analysis and linguistic expression, as well as a deep appreciation of Hispanic civilizations.

The major consists of nine courses above the 102 level. In exceptional circumstances, the Department may decide to accept RLSP 101-102 for the Spanish major. One of the nine courses must be the 400-level senior seminar taken during the student's final year at the College; another must be a course that substantially focuses on literature or cultural texts produced before 1800. Students entering at the 200-level may, with the permission of the Department, choose as part of their major program one course not conducted in Spanish but offered by faculty in Romance Languages or another Department or Program, such as Latino/a Studies, Comparative Literature, History, etc., provided that the subject matter relate to and broaden their study of Spanish. Students entering at a very advanced level may, in some cases and with the permission of the Department, include two such courses in their major program. Working with a member of the Spanish faculty, the student will formulate a curricular plan that will ensure balance and coherence in courses taken prior to declaring a major in Spanish. This is especially imperative for students who are planning to spend a part or all of their junior year in Latin America or Spain.

THE DEGREE WITH HONORS IN SPANISH

Students majoring in Spanish may apply to be admitted to the Honors Program in Spanish upon demonstrating the following: (1) fluency of spoken and written language; (2) potential for successful independent research, as demonstrated by strong performance in advanced-level coursework; (3) interest and motivation; and (4) overall quality and feasibility of the proposal. Two routes are available to those who wish to apply for the degree with honors.

The first of these involves the writing of a senior thesis.

By May 15th of their junior year, candidates will have found a thesis advisor, and given the Department a three- to five-page proposal and a preliminary bibliography. (In some cases, and upon consultation with the Department, candidates will have the option to choose a second reader in addition to their primary advisor; for example, when the thesis is interdisciplinary enough in nature that it requires the expertise of an additional reader). This proposal will be discussed by the Department; by June 1st, the candidate will be informed whether they can proceed with the thesis, and if so, what changes need to be made to the focus and scope of the project. The summer before the senior year will be spent compiling a more detailed bibliography and reading.

Upon their return to Williams, candidates will devote to their theses two semesters of independent study (beyond the nine courses required for the major) and the winter study period of their senior year (493-W31-494). The thesis will be written in Spanish and will usually not be shorter than fifty pages. By the end of the Fall semester, students will normally have a clear outline of the project, have done substantial research, and produced the draft of at least the first half of the project. During January this draft will be suitably rewritten and edited with a view to a final version, while the candidates will also begin work on remaining chapters.

Candidates will submit what they have written to the department on the last day of Winter Study.

On the Tuesday of the first week of the spring semester candidates will make a presentation of the project at a departmental colloquium in Spanish. The thesis will be promptly discussed and evaluated to determine whether or not the student should continue in the honors program. The second semester of independent thesis work will be spent writing more chapters, as well as revising, rewriting, and polishing the project where necessary. The completed thesis in its final form will be due on April 25th. At the end of the Spring term, the student will present and defend the final project before members of the Department and others by invitation. The grade will be awarded once members of the Department have consulted after the defense.

The second route is a group of three clearly related courses (offered by the Department of Romance Languages or by other departments, such as History, Art, Philosophy, English, etc.), only one of which may be counted in the nine courses comprising the major. One of the courses will be an Independent Study (plus senior year WSP 30) in the spring of the senior year, at the end of which the student will write an essay that synthesizes the
content of the three related courses. Students may apply for this route by November 2 of the senior year.

In the case of both routes to the degree with honors, the department’s recommendation for graduation with honors will be based on the originality and thoroughness of the finished project.

THE CERTIFICATE IN SPANISH

The Certificate in Spanish Language and Culture consists of a sequence of seven courses for which the student must earn a cumulative grade average of B or higher. Those so interested should express their intent to the chair of the department by March 1 or earlier.

For students with no prior Spanish background, the course sequence will consist of Spanish 101-102, Spanish 103 and 104, and three courses in Spanish above the 104 level, with at least one of these courses at the 200-level or higher taken at Williams. If the student starts out the sequence at Spanish 103, in addition to the three courses in Spanish beyond the 104 level (including a 200-level course or higher), two electives may be taken in other departments. One elective should be in Spanish or Latin-American cultural history (art, literature, drama, music) and the other in Spanish or Latin-American intellectual, political, or social history. Spanish 200, 201, or 208 can be counted for the elective requirement.

Electives may be considered from a variety of departments and programs. However, students should consult with the chair of Romance Languages before making any enrollment decisions.

PLACEMENT

Students come to study Spanish at Williams with a wide range of backgrounds and prior experiences. Some will have studied Spanish for many years in high school and earlier. Others will have grown up speaking Spanish with family and friends but had little opportunity to study the language at school. Others have lived in Spanish-speaking countries or otherwise studied in immersive contexts. And for others, Spanish is a brand-new language that they are eager to begin learning.
